290. GUY M. WHIPPLE. *Manual of Mental and Physical Tests*. (1910. p. 286.)¹ *Tests of Description and Report*. The two tests which are described in this chapter have certain features in common which demarcate them on the one hand from the tests of perception and attention of the previous chapter, and on the other hand from the memory tests of the succeeding chapter, though, in many other respects, they resemble these tests. The essential idea in both of the present tests is to determine capacity, not merely to attend and observe, or to recall what has been observed, but to put the results of this observation into linguistic form. (If the observer gives his account of the experience at the time of his observation, this constitutes "description"; if at some time subsequent to his observation, this constitutes "report.")

It is evident that this giving of an account of an experience, particularly if the experience be somewhat complicated in form, is a more complex psychical process than those under discussion in the tests of attention and perception. This greater complexity makes the reduction of the observer's performance to exact quantitative terms a matter of greater difficulty, but, on the other hand, the activity called forth is more akin to that demanded in everyday life, and it is for this reason that these tests have been felt to possess a peculiar value, particularly in the study of individual differences in mental constitution and mental efficiency. Again, language occupies so strikingly prominent a place in our mental economy that tests which seek to bring out the observer's ability to cast experience into linguistic form are, on that account, well worth while. This is particularly the case in the second form of test, that of the report, which, in connection with the "psychology of testimony," has of late had a prominent place in psychological research.

Test 32. Fidelity of Report ("Aussage" test). Capacity to observe, or range of observation, may be tested by methods previously described (Tests 25 and 31); native retentiveness or capacity for recall may be tested by methods such as those that are described in subsequent sections; capacity to describe what is seen may be tested as has been indicated in Test 31. But there exists also a type of activity, that of reporting a pre-

¹ Published at Baltimore, by the Warwick & Yorke Co.

vious experience, which in a way combines these several activities, in that it demands both attentive observation, retention, recall, and an ability to marshal and formulate the items of experience in a *verbal report* ("Aus-sage"). In studying the "psychology of testimony," interest has been developed of late in the direct examination by experimental methods of the capacity to report, itself, and it has been found that reports may exhibit varying degrees of fidelity or reliability, more or less independently of the capacity that the reporters possess to observe or to retain experience. In other words, discrepancies or inadequacies may appear in reports, which are due, not only to misdirected attention, malobservation and errors of memory, but also to lack of caution or of zeal for accurate statement, to scanty vocabulary, to injudicious phraseology, or, of course, to deliberate intent to mislead. . . .

Method. 1. Choice of material. Of the several types of material that have been elaborated for the study of the report, *e.g.*, the picture test, the event test, the rumor test, etc., the first mentioned has many advantages for our present purposes. . . . 2. Choice of exposure time. For pictures, times ranging from 5 sec. to 7 min. have been used, though 45-60 sec. is most usual. The principle which has controlled the choice of exposure time for the two tests that follow is to select such a period as will permit an average S¹ to examine each detail of the object once. 3. Choice of time interval. For the sake of brevity, the instructions that follow prescribe a report directly after the exposure. If circumstances permit, E¹ will find it of interest to extend the interval to several minutes, or even hours or weeks. The effect of a lengthening time interval has not as yet been satisfactorily determined. 4. Choice of form of report. There are two distinct forms of report. (1) The "narrative" ("Bericht," "récit"), (2) the "interrogatory" ("Verhör" of Stern, "Prüfung" of Wreschner, "interrogatoire" of Borst, "forage de mémoire" or "questionnaire" of Binet). The *narrative* is a free account, delivered by S, either orally or in writing, without comment, question, or suggestion by E. The *interrogatory* is a series of prearranged questions; the replies to these questions constitute the *deposition* ("Verhörsprodukt"). The constituent parts of the narrative or the deposition may be termed "statements" or "items." Each form of report has its advantages; both should be employed whenever possible. 5. Choice of form of interrogatory. An interrogatory is "complete" when its questions cover all features of the experience exhaustively, and are propounded to all S's in the same order and manner: an interrogatory is "incomplete" when its questions are restricted to such as refer only to those items not mentioned by S in his narrative. . . . 6. Choice of questions. The form of questioning very materially affects S's deposition, particularly if the questions are of the type known as "leading" or "suggestive" questions. If we follow Stern, at least six types of questions may be framed, viz.: determinative, completely disjunctive, incompletely disjunctive, expectative, and consecutive. A completely disjunctive question is one that forces the reporter to choose between two specified alternatives, *e.g.* "Is there a dog in the Picture?" An incompletely disjunctive question is one that offers the reporter a choice between two alter-

¹ [S=the person who is the subject of the experiment; E=the person managing the experiment. — ED.]

natives, but does not entirely preclude a third possibility, *e.g.* "Is the dog white or black?"... An expectative question is one that arouses a moderately strong suggestion of the answer, *e.g.* "Was there not a dog in the picture?" (This is the form used by Binet to induce moderate suggestion.) An implicative question is one that assumes or at least implies the presence of a feature that was not really present in the experience, *e.g.* "What color is the cat?" . . . The consecutive question is any form of question that is used to augment a suggestion that has been developed by previous questions. 7. Choice of method of grading. Treatment of data. In general, the adequacy of a report depends both upon its quantity and its quality: quantity is measured by the number of items mentioned or the number of questions answered (in absolute or in relative terms) and is referred to as the range of report ("Umfang," "étendue"): quality is measured by the fidelity of the statements made, and is referred to as the accuracy of report ("Treue," "fidélité").

We have also at our command useful indications of the positiveness or degree of assurance that S places in his report. Besides (1) complete uncertainty ("I don't know" or "I have forgotten"), we may distinguish (2) hesitancy ("I think" or "I believe"), (3) positive statement or assurance of ordinary degree, and (4) attestation or attestable assurance, *i.e.* the highest degree of assurance, as indicated by S's willingness to take his oath that the statement is correct. . . .

A. Report Test with a Card of Objects. Method. Give S the following instructions: "I want to try an experiment with you to see how good your memory is. I am going to show you a large card with a number of things fastened on it. You will have just half a minute to look at it. Half a minute is a pretty short time, so you must look very carefully, because afterwards I shall want you to tell me what you have seen, and I shall ask you questions about many little details, and I want you to answer these questions exactly, if you can. Do you understand?" Place the card directly before S in a good light. At the end of 30 sec., remove it and keep it well concealed. Direct S at once: "Now tell me everything you saw: describe it so clearly that if I had never seen the card I should know all about what was on it." The narrative is given orally by S, and recorded verbatim by E, without comment, query, or suggestion. Reread the report to S, and ask him to indicate what statements he is so sure of that he would swear to their accuracy. Underline these statements. Proceed next with the interrogatory. If possible, ask S the following questions in the order given. Record his replies by number, verbatim, and underline all attested replies.

B. Report Test with a Colored Picture. Materials. Set of four colored pictures: "Australians," "A Disputed Case," "Washington and Sally," and "The Orphan's Prayer." Watch. . . . Suggestions for interrogatories for two of the pictures follow.

*Interrogatory for "A Disputed Case."*¹ (1) How wide is the picture (horizontally)? (2) How high is the picture (vertically)? (3) Is there any border: if so, what color? (4) How many persons are there in the

¹ [This picture is recommended to be used by law school instructors in collating results of uniform experiments on this subject. It can be obtained from the Taber-Prang Art Co., Springfield, Mass., at 50¢ per copy, post paid; the order number is 1235, color print, 14½" × 16½". — ED.]

picture? Take the person on your right: (5) Is he young, middle-aged, or old? (6) What is his posture, — sitting, standing, or lying down? (7) What is he doing? (8) What is his facial expression? (9) Is he bald or has he abundant hair? (10) What color is his hair? (11) Is he smooth-faced or has he a mustache or a beard? (12) What color is his beard? (13) Does his mustache conceal his mouth? (14) Does he wear eyeglasses or spectacles? (15) Has he a hat on? What kind? What color? (16) Where is his right hand? (17) Where is his left hand? (18) What color is his coat? (19) What color is his shirt? (20) Has he a collar on? (21) What color is his necktie? (22) What color is his vest? (23) What color are his trousers? (24) Does he wear slippers or shoes or boots? Take the person on your left: (25–44) Repeat questions 5–24. (45) What kind of light or lamp is used? (46) Where is it placed? (47) Where is the inkwell? (48) Is there not a pen in it? (49) What color is the dog? (50) Is there a table or a bench? (51) How long is it really? (52) What color is the tablecloth or covering? (53) Is the fringe of the same or a different color? (54) Name the objects on the table. (55) How many chairs are there in the room? (56) Is the rocking-chair on your left or your right? (57) Is there an umbrella? (58) Do you think it is jet-black or dark blue? (59) In what position is it? (60) Name the objects in front of the table on the floor. (61) Is there a satchel or dress-suit case in the room? Which? (62) Is it open or shut? (63) What do the pictures on the wall represent? (64) How many windows are visible? (65) Can you see any detail of outdoor scenery through them? (66) How many hats are there in the room? (67) Describe and locate them. (68) Can you recall the time indicated by the clock on the wall? (69) What object is on your extreme right? (70) Are there any books in this part of the room? (71) What color is the wall? (72) Where is the newspaper? (73) How long did you see the picture? . . .

Typical Results. The following narrative by a college senior, a man of varied experience, mature, much traveled, and well trained, though of mediocre native ability, shows clearly the tendency of an adult S to describe a situation, a meaningful whole, rather than merely to enumerate details, as do many children. Indeed the detail here is distinctly subordinated to the interpretative rendering. The *narrative* tells what the picture is about rather than what it is. "The picture, about 10×10 inches, represents a scene that would be typical of a rural justice of the peace and a man who has come to ask his advice on some subject. The justice sits before his desk, an old manuscript before him, one hand on his head as if he had not yet given his decision. The office is filled with books and on one of them in the left of the picture rests his top hat. The visitor seems to be troubled very much. His clothing denotes that he is of a different station in life. He has placed his carpetbag on the floor and his hat near it, as a sign of great mental strain, which seems to increase as he awaits the decision. On the wall to the right is a double map of the world, showing, perhaps, that the justice is a man of wisdom and a source of information to his neighbors. The room, furniture, the manner of dress would have denoted a time long before ours. The men seem to be about 65 or 70 years of age."

In his *deposition*, this student rendered an unusually full list of answers: the reply — "I don't know" — is given only twice (Questions 34 and 72).

The range of report is, therefore, large, but the fidelity is relatively small, since the following erroneous statements appear (those italicized are attested statements): "The picture is 14×14 inches. The man on the right is *bald, wears spectacles, has his right hand on a paper*, wears a collar, a *purple tie*, black trousers, and slippers. The man on the left is thinking hard, has a troubled expression, wears a sandy mustache: he has his right hand in his pocket, *his left on his knee*: he wears a light-colored vest and brown trousers. The room is lighted by a candle which stands on the pile of books. There is a pen in the inkwell. The table is fourteen feet long, has a light-colored cloth top *with fringe of a different color*. There are three chairs in the room, the rocker being at the left. *The umbrella is dark blue in color and lies on the floor*. *There is a coat on the floor* in front of the table; there is a basket on the table. *The satchel is shut*. *One window is visible*. There is a chair at the extreme right of the picture. The wall is white. (The cuspidor and the newspaper are not recalled.)"

General Results of Tests of Report. (1) *Accuracy.* The chief single result of the "Aussage" psychology is that an errorless report is not the rule, but the exception, even when the report is made by a competent S under favorable conditions. Thus in 240 reports, Miss Borst found only 2 per cent errorless narratives and 0.5 per cent errorless depositions. The average S, when no suggestive questions are employed, exhibits a coefficient of accuracy of approximately 75 per cent. (2) *Range and accuracy.* There is no general relation of range to accuracy, though, for a given S, it is doubtless true that there is an inverse relation between these two coefficients.¹ . . . (4) *Accuracy and attestation.* Generally speaking, attestation does not guarantee accuracy: on the contrary, though the number of errors is nearly twice as great in unsworn as in sworn testimony (according to Stern, 1.82 times, according to Borst, 1.89 times as great), there still remains as high as 10 per cent error in sworn testimony. These relations are shown clearly in Table 44. (5) *Dependence on sex.* In all of Stern's work, both in narratives and depositions, with pictures, or events, or estimations of times and distances, whether under oath or not, the reports of men have been more accurate (by from 20 to 33 per cent), though less extended, than those of women, and a similar sex difference has appeared in tests of school children. This superior accuracy of boys becomes more evident when the report is difficult to make. Stern's conclusions have, however, been criticized by both Wreschner and Miss Borst. Wreschner found that among adults women did better than men. Miss Borst likewise found women superior to men in accuracy and range, but inspection of her results shows that the superiority of women consisted in the fact that they returned a larger number of correct statements, and that the men did not make less accurate statements in their more limited reports. (6) *Dependence on age.* The reports of children are in every way inferior to those of adults: the range is small, the inaccuracy large, and, since the assurance is high, the warranted assurance and reliability of assurance are both very low. During the ages 7 to 18 years, the range, especially the range of knowledge, increases as much as 50 per cent, but the accuracy,

¹ The reason for this lack of general relation between range and accuracy is presumably that there are two kinds of good witnesses — the one possesses good capacity of observation, recall and report, and hence exhibits a large range and a high degree of accuracy; the other is cautious, and therefore restricts his range, which may be poor at best.

save in the deposition, does not increase as rapidly (20 per cent). This development of capacity to report is not continuous, but is characterized by rapid modification at the age of puberty. The one factor that more than any other is responsible for the poor reports of children is their excessive suggestibility, especially in the years before puberty. (7) *Dependence on intelligence*. We have as yet no conclusive experiments upon the relation between accuracy of report and general intelligence. (8) *Defectives*. The reports of defectives, paralytics, epileptics, the insane, etc., show, as one might expect, a very high degree of inaccuracy, even when the pathological condition is not seriously developed. Such persons are also highly suggestible (de Placzek). (9) *Dependence on time interval*. Lengthening of the time interval between experience and report exerts, as one might expect, a generally unfavorable influence, but there is nothing like the loss in efficiency shown in curves of memory for nonsense syllables, as in the familiar tests of Ebbinghaus: indeed, for some S's the report seems to be somewhat improved after several days have elapsed, and, in general, the conditions are so complex as to demand further special investigation. (10) *Dependence on contents or features*. Not all the features of the original experience are reported with the same frequency or with the same accuracy: there is rather a process of selection, both in the process of observation, and also, probably in memory and in the formulation of the report. In general, we may say, that persons and their acts, objects, things, and spatial relations are reported with considerable accuracy (85–90 per cent), whereas secondary features, especially quantities and colors, are reported with considerable inaccuracy (reports on color have an error of from 40 to 50 per cent).¹ . . . (13) *Dependence on the ideational type of the reporter*. The best reports are given by observers of a mixed ideational type, *e.g.* acoustic motor or visual motor (Borst): even in a picture test, the purely visual-minded observer is inferior, though less open to suggestion (Lobsien). A characteristic analysis of reports, for the purpose of classifying reporters into ideational types has been given in the description-of-an-object test (No. 31), in which Binet distinguishes four types of reporter — the observer, the describer, the emotionally minded, and the erudite. . . . (14) *The effect of repeating a report*. When S is called upon to make his report several times, the effect of this repetition is complex, for (a) it tends in part to establish in mind the items reported, whether they be true or false, and (b) it tends also to induce some departure in the later reports, because these are based more upon the memory of the verbal statements of the earlier reports than upon the original experience itself, *i.e.* the later reports undergo distortion on account of the flexibility of verbal expression. (15) *The effect of practice*. Simple practice in reporting, even without special training or conscious effort to improve, facilitates and betters the report, as is shown in Table 47, from Miss Borst. It will be noted that the tendency to attestation and oath are both particularly improved by practice, and that there is also an appreciable improvement in range, accuracy, warranted assurance, and reliability of assurance, whereas assurance and accuracy of assurance are scarcely affected. Similar practice effects may be discerned in the deposition. From these results, it is clear that the several coefficients of report may vary more or less independently.

¹ [For the summaries here numbered 11 and 12, dealing with the effect of suggestive interrogatories, see *ante*, No. 257. — Ed.]

291. **KANSAS UNIVERSITY EXPERIMENT.** (WM. A. M'KEEVER. *Psychology in relation to Testimony.* Kansas Bar Association Proceedings. 1911. p. 113.)

As a means of testing the actual worth of eyewitnesses to a tragic act, I recently planned to stage a little drama of one act in the presence of a class of twenty-five junior and senior psychology students. It was arranged that at a given moment, without any warning to the members of the class, three men should burst into the room and go through the movements of a "holdup," of a running fight. The act had been carefully rehearsed under my personal direction, and I am satisfied that each actor carried out his part very accurately. The parts enacted and the personal "makeup" of each one was carefully recorded in a notebook.

The participants in the act rushed into the room to a distance of 25 or 30 feet, then, pausing for a moment, ran out. Jones, the first to enter, was to have the appearance of being hotly pursued by Smith and White. As they left the room the pursuers changed the order of their places. While all were, of course, acting at the same time, each of the three and the instructor as well had time to recite his oral part in succession. After the players had left the room I turned immediately to the class, the most of whom were visibly ex-

cited, and enjoined silence while the paper was passed and their written testimonies were asked for under the headings given below. From the twenty-five papers I copied verbatim the many inaccuracies given in the accounts printed with this. The correct statements were much fewer than the incorrect ones.

In an actual criminal trial the testimony would perhaps be most unfair and damaging in the case of Smith. Although entirely unarmed, and inoffensive in his statements, yet three witnesses testified that he carried a revolver, snapped it several times at Jones, or that he cried, "Stop, or I'll shoot!" White, on the other hand, who carried a revolver minus the cylinder, was little noticed. There was even more confusion of the testimony as to the wearing apparel of the participants, as is clearly indicated.

Whatever may be said as to the results of this little experiment, it is my opinion that it represented very satisfactorily a true and natural situation, and that the testimonies of the eyewitnesses were no less and no more accurate than if the scene had been enacted upon the stage of real life.

VARIATIONS OF THE STUDENTS' TESTIMONY

Jones' Appearance

Tall man; hat on; black mask over eyes, nose, and mouth; gray raincoat; salt bag half full of nails in left hand; small monkey wrench in right hand; streak of red paint across left cheek.

Testimony

- 1 Black coat; light-colored mask.
- 2 Red mask; cheeks painted red.
- 3 Black coat; mouth painted red.
- 4 Carried pistol.
- 5 Cheeks more than natural redness; club in his hand; dark suit.
- 6 Dark suit.
- 7 Dark suit.
- 8 Black clothes.
- 9 Red mask on; black clothes.
- 10 Hatless.
- 11 Dressed in blue suit and handkerchief around his neck. Medium sized; bare-headed.
- 12 Red mask.

Jones' Conduct

Rushed in ahead, turned inside of door, pointed wrench at pursuers, and exclaimed, "Stay back, or I'll shoot!" Ran across room, fell to knees, dropped bag, saying, "There it is, take it!" and rushed out.

Smith's Appearance

Medium size and weight; wore hat and black coat borrowed from White.

Smith's Conduct

Rushed in close after Jones, exclaimed, "Give it up, you scoundrel!" Grabbed bag which Jones dropped, and ran out behind other

White's Appearance

Short and stout; wore cap and blue serge coat, borrowed from Smith. Came in third.

White's Conduct

Came in last, went out second; carried small revolver with cylinder removed. Yelled, "Take it from him, Eddie; he won't hurt you!"

Testimony

- 1 Pointed his finger at Smith; said, "Get out of here, Ed."
- 2 The whole class was paralyzed with fear, says a witness.
- 3 Pointed a revolver.
- 4 Pointed imaginary pistol and said, "I dare you to come further."
- 5 The other jerked him up and started him toward the door.
- 6 Pointed heavy object at others as he went out.
- 7 Came in after the others. (I was too afraid to look up.)
- 8 Held a revolver in hand; wore dark suit. (Witness recognized Jones.)
- 9 Had something like a revolver.

Testimony

- 1 Wore a gray suit.
- 2 Husky six-footer.
- 3 Dark gray suit.
- 4 Bare-headed.
- 5 Blue suit on.

Testimony

- 1 Carried pistol and snapped it several times.
- 2 Came in last, went out second, said, "Get out of here!"
- 3 Carried pistol, snapped it several times, cried, "Stop, or I'll shoot!" aiming at Jones.
- 4 Dropped umbrella on floor.
- 5 A witness, "So excited I didn't know what it was."
- 6 Snapped gun.
- 7 Came in last, stayed behind; "Catch that man!" he yelled.

Testimony

- 1 Dark suit and raincoat.
- 2 Bareheaded.
- 3 (Was scarcely observed by any of the witnesses.)

Testimony

- 1 Had a club of some kind.
- 2 Yelled, "Get out of here!"

Instructor's Appearance and Conduct

Probably showed some agitation; rose from chair and exclaimed, "Men, what are you up to here?"

Testimony

- 1 Looked very much astonished; said, "What's all this?"
- 2 Said, "What does all this mean?"
- 3 Said, "Here!"
- 4 Said, "Here, what's going on here?"
- 5 Showed signs of great surprise and said, "Well!" (Witness was rather frightened.)
- 6 Grew pale, said, "Here!"
- 7 Said, "Who are those men?"
- 8 Seemed badly scared.
- 9 Looked scared.

292. ARNO GUNTHER. *A Dramatic Incident as reported by Witnesses and Reconstructed by a Jury.* (Beiträge zur Psychologie der Aussage. 2d Series, 1905-1906, pt. 4, p. 33.)

[In March, 1905, the author conducted a testimonial experiment. The scene was a lecture room, where on Sunday a lecture was being delivered. Ten persons, four men and six women, were present, but with no warning that any testimony was expected. The testimony was taken down on the succeeding Friday and Saturday, with certain precautions designed to make the proceeding a fair test of their accuracy in reporting an incident not known to them at the time of its occurrence to be the subject of future investigations, nor at the time of their testimony to be a mere experiment.

The incident began with the entry of a man into the lecture room; and the various features of the incident were subdivided into points, as follows: (1) The time was 3.45 P.M. (2) The man was medium height, medium large. (3) His hair was brown. (4) He had a small brown mustache, no beard. (5) He wore glasses, *i.e.* spectacles. (6) He had on an overcoat, of black cloth, and buttoned. (7) He had on a dark suit. (8) A soft hat, dark brown. (9) No gloves. (10) In his hands he carried cane, hat, and a letter; the cane was brown, with a black handle. (11) His cravat was dark red. (12) The man was

21 $\frac{3}{4}$ years old. (13) On entering he did not knock. (14) After entering, he said: "Excuse me, Mr. G, may I speak with you a moment?" (15) Mr. G replied, "Certainly. Come in." (16) The visitor stepped forward and handed a letter, (17) saying, "I have here a letter to be handed to you." (18) Mr. G was standing at his desk, (19) and replied, "Thank you. Won't you sit down?" but the visitor did not do so. (20) Mr. G then perused the letter, (21) with some emotion, (22) first saying, "Excuse me a moment." (23) The visitor meanwhile carelessly turned over the leaves of some books lying on the table. (24) There were 6 books. (25) The visitor asked Mr. G, during his perusal, "May I look at these books more particularly?" and Mr. G replied, "Certainly"; whereon the visitor sat down and read in the books (26) Mr. G, after perusing the letter, proceeded fruitlessly to stick it into his pocket, and finally placed it on the desk. (27) He then continued the delivery of his lecture. (28) The visitor then turned, and said, "May I take this" (holding up a book) "into the next room?" Mr. G consenting, the visitor went out, (29) carrying his hat, his cane, and

2 books; one of them was red, the other blue. The visitor did not stop in the next room. (30) The whole incident occupied 3 minutes.

On the basis of points, a valuation was made of testimonial correctness and of verdict correctness. The accounts are here much abbreviated for the former.]

I. *Testimonial Correctness.* (1) *Description of the visitor's person.* The average correctness of the testimony was 80.6 per cent; for the men, 84.2 per cent; for the women, 76 per cent. The best single testimony reached 100 per cent, by a man; the best by a woman was 90.5 per cent. The poorest by a woman was 37.5 per cent; by a man 73.3 per cent. . . .

(2) *Description of the action of the parties.* The average correctness of the testimony was 79.7 per cent; for the men, 80.8 per cent; for the women, 78.9 per cent. The best single testimony reached 96.2 per cent, by a woman; the best by a man was 85.7 per cent. The poorest by a woman was 60 per cent; by a man, 71 per cent.

(3) Thus the averages for the *whole incident* were: men, 81.8 per cent; women, 78.4 per cent; total persons, 79.9 per cent. The best single testimony averaged: a man, 87.8 per cent; a woman, 94.6 per cent. The poorest averaged: a man, 77.5 per cent; a woman, 58.7 per cent. . . .

II. *Verdict Correctness.* The written testimonial reports were submitted separately to T, a lawyer, and D, an assistant judge, with the request to make special findings on the facts of the incident as therein disclosed. Their finding was valued by the same system of points used in valuing the testimony. The result was as follows: . . .

(1) *Description of the visitor's person.* It is pleasing to note that, in spite of the great differences of correctness in the individual testimonies, a correct finding was made. Both jurors made a finding 100 per

cent correct (though the average for the testimony was only 80.6 per cent). . . .

(2) *Description of the action of the parties.* Here the finding of T was 86.5 per cent correct, and that of D 82.4 correct (the witnesses averaging only 79.7 per cent).

T's narrative reconstruction was as follows: "The visitor, who exhibited some restlessness, handed to the lecturer a sealed letter, with some such remark as 'Excuse me.' The lecturer opened the letter and read it, exhibiting some marks of emotion. The lecturer had risen from his chair and stood in front of it while reading, and then stuck the letter in his pocket and continued his lecture; the statement of one of the witnesses that the lecturer laid the letter on his desk is contradicted by the other witnesses and appears to be an error. The visitor took a seat without further remark, and the lecturer while reading the letter stood at a table to the left of the desk. On the table were some books (how many the witnesses do not agree), of which the visitor turned the leaves. He then asked the lecturer's permission to take one of the books, and went off after getting this permission. Whether he took one or two books was not clearly proved." Here we observe an error of half a point in finding "Excuse me" as the visitor's second remark. The actual words were: "I have here a letter to be handed to you." How T could make such a finding is inexplicable; for five of the witnesses testified that the visitor said nothing, four that they did not know whether he said anything, and one that he had said something which the witness could not recall. T's second error is interesting, in that he refused to trust the one witness who was right in saying that the lecturer placed the letter on the table. On the most important item in the whole experiment, viz. how many books the visitor took off with him, T's report is that the

visitor asked permission for one book only, but that the number actually taken is doubtful. Yet a comparison of the testimonies reveals the curious fact that there was no basis for this discrimination on his part; the witnesses differed no less radically on the one item than on the other. . . .

D's narrative reconstruction was as follows: "The visitor knocked, entered, and asked if he might speak with Mr. X. The lecturer said that he was that person; whereon the visitor entered and handed over the letter. The lecturer took it, cut it open, and read it, after asking the audience to excuse him and requesting the visitor to take a seat. The visitor remained standing a moment, then approached the table, on which lay 4 books, and asked if he might look at them; and on being told 'Certainly,' he sat down at the table and turned over the pages. The lecturer meanwhile read the letter, glancing occasionally at the visitor. While reading, the lecturer was noticeably pale. After finishing its perusal, he stuck it in his pocket and went on with the lecture. The visitor continued reading a short while; then he asked permission to take away to the next room two books, which he had been

looking at. Permission was granted, and the visitor then went out, carrying his cane and the two books." D reports that the visitor knocked before entering; here he was incorrect, but followed the majority of the testimonies. A more important point is his finding that the visitor asked "if he might speak with Mr. X." The actual words were: "Excuse me, Mr. G, may I speak with you a moment?" . . . This part of D's finding, covering both remarks of the visitor, was debited with two errors. . . . D also erroneously found that the lecturer put the letter, after reading it, into his pocket. Moreover, he makes the error of finding that the visitor, not only took off, but asked consent to take, *two* books.

(3) On the *whole incident*, the percentage of correctness for T's finding was 90.6 (24 correct points, and $2\frac{1}{2}$ incorrect), and for D's finding 87.4 ($41\frac{1}{2}$ correct and 6 incorrect); the two averaging 88.5. The average correctness of the testimonies, 79.9 per cent, was thus 10.7 per cent below T, and 7.5 per cent below D. Put in another way, the average percentage of error in the testimonies was about twice as great as in the findings. . . .

293. NORTHWESTERN UNIVERSITY EXPERIMENTS. TESTIMONIAL AND VERDICT EXPERIMENTS AT NORTHWESTERN UNIVERSITY LAW SCHOOL. 1905, 1911.¹

April 11, 1905. A. The Dramatic Incident as agreed upon beforehand. [The scene is an ordinary lecture room, about 30'×60', having 10 rows of narrow note-tables, with 2 seats at each; there are in each row 4 tables, each 3' long, with 2 aisles between. The floor is tiered, rising 10' at the back. The four student participants sit near together in the 7th and 8th rows. The lecturer is on a small raised

platform at the front. About 60 students are in the class.] The lecturer will open the lecture by saying: "Mr. Candee, please state the case of *Smith v. Jones*." Mr. Candee will say nothing; but Mr. Brothers will slowly and promptly say, "Mr. Stowe is a cad, and I can prove it." Mr. Stowe will then rise and shout, "That is an insult, and I shall here resent it." Then Mr. Candee will strike the table

¹ [These experiments are not supposed to have any scientific value; but are here printed, for lack of better material, to illustrate the possibilities of correction of testimonial errors in the verdict. — Ed.]

with two sticks, immediately and very loud. Mr. Dickinson will then promptly rise, turn, and throw a book at the door of Mr. Woodward's office, next south of the lecture room; immediately Mr. Brothers will start forward across the benches to grapple with Mr. Stowe. Mr. Candee will try to hold back Mr. Brothers, Mr. Stowe will start towards Mr. Brothers, and Mr. Dickinson will try to hold back Mr. Stowe. Messrs. Stowe and Brothers will not touch. All will make as much noise as possible. In the meantime Mr. Crossley, in Mr. Woodward's room at the rear of the lecture room, will break a piece of glass, enter the lecture room from Mr. Woodward's door, and exclaim, "Who broke my window?" Then the lecturer will pound on the desk with a stick; and all will stop.

B. The Testimony. [Immediately an adjournment took place to the school court room; a jury of six was in waiting, selected from members of other law classes. Thirteen witnesses were arbitrarily selected from those present at the drama. The following questions were put to each:

1. What was the first incident?
2. Who spoke first?
3. What did he say?
4. Who spoke next?
5. What did he say?
6. Who first used any weapon or missile, and of what sort?
7. Who was struck or assailed with it?
8. Who else participated, and what did he do?
9. Who else was struck or injured by any one?

The stenographic report of the answers was as follows:]

Answers.

First Witness, Mr. Krause (who sat four or five rows in front of the actors).

1. I turned around and saw Mr. Brothers on top of two other gentlemen.

2. I don't remember, I could not distinguish whose voice it was. I heard somebody hallo "Scab."

3. I don't remember.

4. I don't remember.

5. I don't remember.

6. I did not see any weapon.

7. I did not see anybody.

8. When the noise was at its height, I saw Mr. Crossley put his head through the rear door.

9. I don't know.

Second Witness, Mr. Thomason.

1. I turned round and saw Mr. Candee move towards Mr. Stowe and Mr. Dickinson.

2. Mr. Candee.

3. Mr. Stowe is a cad and I can prove it.

4. I don't know.

5. I don't know.

6. I didn't see any.

7. I didn't see any.

8. I saw Mr. Crossley, and heard, at the same time I saw him, the crash of some glass.

9. I did not see any one else.

Third Witness, Mr. Moore (who sat about two rows in front and to the right of the actors).

1. I looked back of me and saw Mr. Candee, who seemed to be holding some one. They had their arms around each other. I think Mr. Brothers was one.

2. I don't know.

3. Mr. Somebody is a cad and I can prove it; but I did not hear the name.

4. I don't know.

5. I don't know.

6. I didn't see any weapon.

7. I don't know.

8. My attention was called to the front of the room, and I did not see anything else after that.

9. I don't know.

Fourth Witness, Mr. Gannon (who sat straight in front of the actors).

1. I heard some noise and looked around, and several of the men were in a scuffle, and I heard a crash of glass.

2. I do not remember who spoke first.

3. I did not distinguish any speech.

4. I did not hear.

5. I did not hear.

6. I did not see any weapon or missile.

7. I did not see any.

8. I did not distinguish.

9. I did not distinguish.

Fifth Witness, Mr. Shultis (who was sitting the row in front).

1. I heard Mr. Wigmore state a certain case.

2. Mr. Candee.

3. Mr. Stowe, you are a cad and I can prove it.

4. No one spoke.

5. No one spoke.

6. The only weapon I could see was a stick in the hand of Mr. Wigmore.

7. The desk.

8. I saw Mr. Brothers, Mr. Stowe, and Mr. Candee in a scuffle.

9. I did not see any one struck.

Sixth Witness, Mr. Strause (who sat down in the front, about the 3d row).

1. I heard somebody speaking.

2. Mr. Brothers.

3. Mr. Stowe is a cad and I can prove it.

4. I didn't hear any one else.

5. I heard nothing.

6. I saw none.

7. I saw none.

8. I saw no one in connection with it until the affray was over. Then I saw Mr. Dickinson. I saw no one participating, when I saw him.

9. I saw Mr. Candee force Mr. Brothers down in the seat.

Seventh Witness, Mr. Nordhold (who was sitting four or five rows in front of the actors).

1. I saw Mr. Brothers.

2. I do not know who was the first one to speak.

3. Mr. Stowe is a cat.

4. I do not remember.

5. I do not know.

6. I do not know of any.

7. I do not know of any.

8. Mr. Candee was wrestling with Mr. Brothers. Mr. Stowe was among the rest of them. He came

towards Mr. Brothers, and that is all I saw.

9. I do not know of any one else being struck.

Eighth Witness, Mr. Anderson (who sat directly in front of the actors, in the very front row).

1. I saw Mr. Candee hold Mr. Brothers in his chair.

2. Mr. Candee spoke first.

3. Stowe is a cad.

4. I did not hear any one speak after that.

5. I heard nothing.

6. I did not see any one throw any missile.

7. I saw none.

8. The same instant I heard a crash and saw Mr. Crossley walking out of the back door.

9. I did not see any one else participating.

Ninth Witness, Mr. Milchrist (who sat in the same row with Mr. Stowe on the left, and one row in front of Mr. Candee and Mr. Brothers).

1. I heard Mr. Brothers say to Mr. Stowe, "You are a cad." Mr. Brothers had something in his hand. Mr. Stowe jumped up from his seat.

2. Mr. Brothers.

3. Mr. Stowe, you are a cad and I can prove it.

4. I saw Mr. Stowe get up.

5. I do not know.

6. I did not see any weapon or missile.

7. I saw none.

8. I saw Mr. Candee and Mr. Dickinson appear to be holding Mr. Brothers to keep him away from Mr. Stowe.

9. I did not see him do anything but jump up.

Tenth Witness, Mr. Haight (who sat about 15 feet from the actors, to the left and in front).

1. The first I saw was that Mr. Otjen and Mr. Brothers were standing up in the rear of the room.

2. Mr. Wigmore was the first one to speak.

3. Mr. Stowe, will you state the case of Smith v. Jones?

4. I am not positive, but I think Mr. Brothers did not.

5. Stowe is a cad.

6. I did not see any weapon or missile used and did not hear any, but I heard some glass fall.

7. I did not see any one struck or assailed.

8. I saw Mr. Candee and Mr. Stowe.

9. No one that I saw.

Eleventh Witness, Mr. Steinbrecher (who was sitting in the same row with Mr. Brothers, to the left across the aisle).

1. I heard Mr. Wigmore call on Mr. Candee for a case.

2. Then Mr. Brothers said, You are a cat.

3. As above.

4. I heard no one speak afterwards.

5. Nothing.

6. Mr. Dickinson jumped forward slightly, and it was a yellow brown book which Mr. Dickinson aimed at Mr. Brothers, and just at that moment there followed a crash.

7. No one was struck. I saw the book thrown, but did not see the result, until Mr. Crossley opened the door and said, "Who struck at my window?"

8. As above.

9. I saw no particular person struck or injured.

Twelfth Witness, Mr. Romans (who was sitting two rows ahead, next to the wall on the left).

1. I heard the declaration and immediately turned around.

2. Mr. Candee started to state his case.

3. I don't know.

4. Mr. Brothers.

5. He shook Mr. Stowe and said, Stowe, you are a cad.

6. I was impressed with the fact that Mr. Dickinson stuck a small parcel at Mr. Candee. I do not know whether it left his hand or not.

7. Mr. Candee.

8. I think I have named all the men I have seen in the fray.

9. Nobody.

Thirteenth Witness, Mr. Otjen (who was sitting directly in the rear of Mr. Stowe and to the right of Mr. Brothers).

1. The calling of the case from the chair.

2. Mr. Brothers.

3. He struck the desk in front of him, and said, "Mr Stowe, you are a cad and I can prove."

4. I could not distinguish anything next. There was a roar. Mr. Stowe made an exclamation. The roar came from Mr. Stowe. The exclamation was more like a roar.

5. I did not distinguish anything else.

6. Mr. Dickinson threw a book.

7. I don't think any one was struck. It was aimed at Mr. Candee, but did not strike any one.

8. I did not see it hit any one.

9. No one else was struck or injured.

C. The Verdict of the Jury. [The jurors then retired, without the stenographic report, and after deliberation, brought in the following verdict:] Mr. Wigmore called on Mr. Candee for a case. Mr. Brothers created a disturbance by rising and calling Mr. Stowe a cad, saying, "Mr. Stowe is a cad and I can prove it." Mr. Stowe started towards Mr. Brothers. Mr. Candee took hold of Mr. Brothers and tried to hold him down. Mr. Dickinson threw a book at Mr. Candee and missed him, and it lit near the window. There was a crash, as though the book went through the window, but it did not. Nobody was hit and nobody injured.

Mr. Crossley put his head in at the back door, and said, "Who threw at my window?" Mr. Wigmore struck the desk with a shingle. (Signed.)

C. W. Whitcomb, Foreman; Geo. A. Finley, C. C. Colton, Frederick Secord, J. A. Bugee, W. Capron, Jr.

November, 1911. A. The Dramatic Incident agreed upon beforehand. [Scene the same as before.] At 10.55 A.M., the lecture being in progress, Mr. Keedy enters the lecture room from the south door at the rear. The lecturer says "Stop" to Mr. Keedy, strikes a table twice with a ruler, and says: "I showed a cup of coffee, and then an examination broke loose. Why not give them poison?" He then sits down, but goes out after the others cease speaking. At the close of his speech, Mr. Grubb and Mr. Luther, students sitting in the second row from the front, rise and say together: "Gompers has geology. Where is the breed? Next time you will not throw a pistol at the bread." Charles Caldwell, the janitor, then enters from the side (east) door, walks up to Mr. Richie, sitting in the front row, taps him on the shoulder; Mr. Richie follows Charles out of the front (north) door. Mr. Grubb and Mr. Luther follow them out. The lecturer during this latter stage exclaims: "Do not give up the ship. Taft and Bryan forever." The class then adjourns to Hoyne Hall, at the lecturer's request.

B. The Testimony. [Immediately upon adjournment to the court room, a jury of six, made up from members of other classes, is in waiting. A stenographic report is taken of the answers to the following questions:

1. Who came in first?
2. What did he do?
3. What did he say?
4. What became of him?
5. Who was the second man to speak?
6. What did he say?
7. Who was the third man to speak?
8. What did he say?
9. What did Charlie do?
10. What did Charlie say?
11. What became of the second man?
12. What became of the third man?

13. What did Mr. Wigmore do?

The actors being all at the front of the room, except one who was at the extreme rear, the precise position of each witness was not noted. Six witnesses were arbitrarily selected from those present.]

Answers.

G. Fowler. — 1. I never saw any one enter.

2. Mr. Keedy rapped on the desk.

3. He said, "I would like a cup of coffee."

4. He sat down.

5. I do not know his name. He was a student.

6. His words were not audible to me.

7. I don't know.

8. I could not tell you.

9. He walked up and touched Mr. Richie.

10. He did not open his mouth.

11. He rushed toward the door.

12. I don't know.

13. He said to retire to Hoyne Hall.

B. L. Goldberg. — 1. I don't know.

2. I don't remember.

3. I am not sure. I don't remember.

4. I don't know.

5. Mr. Grubb.

6. I don't know.

7. Mr. Luther.

8. I don't know.

9. He walked in front of the desk, and went out other door.

10. I think he said nothing.

11. He walked out ahead of Charlie.

12. He did the same thing as Mr. Grubb.

13. He said to adjourn to Hoyne Hall.

A. H. Marshall. — 1. Mr. Keedy.

2. He jumped up and made several statements, to create a commotion.

3. I don't know.

4. I don't know.

5. Mr. Grubb.

6. "Coffee," "Toast," and "Outrage."

7. Mr. Luther.

8. I believe he said the same thing.

9. He entered by one door, and tapped a gentleman on the shoulder, and walked out of the room, and this gentleman followed him.

10. Nothing.

11. He walked out the north door.

12. He did the same as Mr. Grubb.

13. He was standing up, but said nothing.

R. Fernald. — 1. Mr. Keedy.

2. He made a racket with something.

3. Quite a few words I could not understand. Some were, "Examination papers." "Why not poison them?"

4. I don't know.

5. I don't remember his name.

6. "I protest. I protest," and other words.

7. I don't know his name.

8. He tried to follow directly after the first man, then continued in chorus to say the same thing.

9. He came into the east door, and walked along the front of the room, tapped a man in the front row, Mr. Richie, and he went out with him.

10. Nothing.

11. He went out the north door.

12. He went out the north door.

13. Nothing, except to appear surprised.

N. S. Blumberg. — 1. Mr. Keedy.

2. He slammed a book on a desk, and sat down in the last seat.

3. I could not get all he said, but I distinguished "examination papers" and "poison."

4. He sat down in the first chair in last row on left-hand side, near the door.

5. Mr. Grubb.

6. "I protest. I protest, the coffee spilled over the bread." I believe this is all he said.

7. Mr. Luther.

8. Both said the same thing, at the same time.

9. He walked in from east door, and placed his hand on the desk where Mr. Richie was sitting, and walked out, after Mr. Luther and Mr. Grubb, through the north door.

11. Mr. Grubb walked out by the north door.

12. Mr. Luther also walked out by the north door.

13. When Mr. Keedy came in Mr. Wigmore was astonished, and when Mr. Grubb and Mr. Luther spoke, he said "This is an outrage."

T. M. McKinney. — 1. Mr. Keedy.

2. He slammed something which I could not see on the desk; evidently lifted a chair and placed it down rather abruptly.

3. I distinguished the word "poison."

4. He immediately left the room, back through the north door.

5. Mr. Grubb.

6. "Gompers has geology. Where is the thread (or bread)." Something relative, I think, to a pistol.

7. Mr. Luther.

8. I do not know.

9. He simply walked in the east door, and tapping Mr. Richie on shoulder, Mr. R. followed him out of the room, through north door.

10. Nothing.

11. I don't recall.

12. I don't recall.

13. He stood there and gazed on. Said "this is a most extraordinary proceeding."

C. The Verdict. [The jurors immediately retired and deliberated, without the stenographic report. They brought in a verdict in the form of answers to the specific questions put to the witnesses; as follows:]

1. Mr. Keedy, through the south door.

2. He slammed a book on the desk, and made a noise with a chair.

3. Examination papers. Why not poison then?
4. He sat down in a chair at the rear of the room, in the last row center section nearest the left aisle.
5. Mr. Grubb.
6. I protest, I protest; the coffee spilled over the bread.
7. Mr. Luther.
8. The same as Mr. Grubb.
9. He came in by the east door, tapped Mr. Richie on the shoulder, and walked out by the north door, followed by Mr. Richie.
10. Charlie walked out at the north door, followed by Mr. Richie. See answer to No. 9.
11. He walked out at the north door.
12. He walked out at the north door.
13. He seemed astonished, and said, "This is an outrage."

294. JOHN H. WIGMORE. *The Psychology of Testimony*. (1909. Illinois Law Review. III, 426.) . . . The question has been asked whether the alleged percentages of testimonial error, as found in the laboratory experiments, do really, in trials, produce misleading results in the verdicts. The way to answer this is to include a jury (or judge of facts) in the experiment, and observe whether the findings of fact follow the testimonial errors or whether they succeed in avoiding them and in reaching the actual facts. In some of the experiments this method has been used, and the results are enlightening. For example, in Radbruch's experiment at Heidelberg (the subject being a dialogue of two persons L and E, about a telegram, with nine witnesses), one of the judges made two errors of finding — that L did not take his hat off, and that E had not reproved L for omitting to knock on the door — while the other judge "gave a finding substantially without error — which was not the case with the witnesses on whom he relied." Again, in Zavadski's experiment, "The findings were much more harmonious than the testimony; they unanimously avoided the grossest errors of the witness; and their average error, 20.6 per cent, was not so high as the witnesses' average, 27 per cent; . . . moreover, they all picked out the very same witness as the most trustworthy, and this witness was in fact the best one." Again in Detmold's experiment, he found that "in spite of the numerous omissions and errors in the testimony, it is possible by comparison of a number of them to put together a correct picture of the occurrence, at least in its essentials." And finally, in Gunther's experiment, he reports, "It is very satisfactory to note that, in the identification of the person charged, in spite of the great inconsistencies of the testimony, the correct result was found; for both findings were 100 per cent correct, though the average correctness of the witnesses was only 80.6 per cent. . . . The average for correctness of the entire finding was 90.6 per cent for one judge, and 87.4 per cent for the other, though the average of correctness for the witnesses was only 79.9 per cent." Is it not safe to say that neither the absolute nor the relative inefficiency or untrustworthiness of a jury's or judge's finding of fact ought to be positively asserted until after an extended series of experiments in which such a finding has been included?

The few such experiments hitherto made give some ground for assuming that the testimonial errors, as detected in the experiments, are to a greater or less extent without influence on the verdict.

TITLE III (continued): TESTIMONIAL INTERPRETATION

SUBTITLE B: EXTENT AND SOURCES OF ERROR AS INDICATED BY SOME COMMON TESTIMONIAL INCIDENTS

Topic 1. Defective Basis of Perception

296. ELIZABETH CANNING'S TRIAL. (1754. HOWELL's *State Trials*. XIX, 576.)

[One of the facts in issue was whether the woman Squires, alleged to have kidnaped Canning and imprisoned her near London, was at the very time more than a hundred miles distant, at Enfield. Canning is here tried for perjury in having accused Squires of the kidnaping.]

Hannah Fensham sworn [for the prosecution.]

Mr. *Williams*. — Where do you live? — I live at Enfield.

Are you a married woman? — I am; my husband's name is John Fensham; he is a gardener.

How long have you lived at Enfield? — Fifteen or sixteen years.

Look at that old woman, take a full view of her. — I know her; I have seen her before.

When? — On the 16th of January, 1753, I mean after New Christmas-day, I saw her in Trotts-walk, on the side of Madam Crow's garden, in Enfield, pretty near the highway.

What was she doing? — I met her in the walk.

What time of the day? — In the fore part of the day.

What day of the week? — I can't recollect what day of the week. . . .

Did you see her often between the 16th of January and 1st of February? — I did divers times.

Did you see her after she was taken up? — I did in Newgate, and I recollected her then.

Look at her again; are you certain this is the same person? — Yes, Sir, I am certain of that.

What may be your reason for recollecting the 16th of January? — There was a snow on the 15th at night, and the 16th it was wet; and walking along, I had like to have fell, as my pattens were on; she stopped and looked at me, and I at her; when I came home, my neighbors said, this snow is come in the right season, yesterday was the 15th; then I said, this must be the 16th; and not only that, but I went to the almanac, and looked that very day.

Did she speak to you? — No, nor I to her; but her person is so particular, that I can swear she is the same.

What did she appear to be? — A gypsy, which I had heard of before; I was asked, if I had seen the gypsy, because she went up and down telling fortunes. . . .

By Mr. *Willes* [for the defense].

Did you look directly to the almanac? — No, Sir, not till the 16th at night.

Are you very well skilled in almanacs? — Why not? I can read and write a little.

Do you know what day of the week it is by the almanac? — I can, I think so; my head is good enough for that.

Look in this almanac, and tell me what day of the week it is? —

(She takes it in her hand, which was a common sheet almanac, folded up into a book.) I can't see by this, it is so small.

Look at it again, and take your time. — I cannot see without my spectacles (she puts them on); you shall not fool me so.

Tell me by this the day of the week for the 14th of December. — This is not such an almanac as I look in; I look in a sheet almanac; I cannot tell by this.

Give it me again, if you cannot tell. All the reason you have to

fix it is, that the snow fell on that day upon which you refer to your almanac; and now you have shown your skill in almanacs.

By Mr. Williams —

How long was it after New Christmas? Was it a fortnight, or three weeks, or a month? — It was not much above a fortnight after.

Do you know which is Sunday in the almanac? (She takes it again.) Look in the month of January. (She tells down from the 1st to the 7th day, and said that was Sunday, which happened to be Tuesday.)

297. HEATH'S TRIAL. (1774. HOWELL'S *State Trials*. XVIII, 65.)...

[Mrs. Cole had testified to the presence of Mrs. Heath, another witness, on an important occasion;] cross-examined: "Madam, do you remember that Mrs. Heath came to awaken your mother?" "I do remember that she came." — "Was there a light in the room?" "There was not." — "Had Mrs. Heath a light with her?" "She might have had a candle in her hand." — "Was there light or not?" "There was

not; I believe there might be a fire." — "Had she a candle in her hand?" "Indeed, I cannot tell." . . . — "The reason of the question is this; look at that woman; will you swear positively that that is the woman that came into the room to call your mother?" "Mrs. Heath was the person, and I believe that is the same." — "How can you tell it was her when there was no light?" "I knew her voice."

298. BROOK'S CASE. (W. WILLS. *Circumstantial Evidence*. Amer. ed. 1905. p. 160.)

In a case of burglary before the Special Commission at York, January, 1813, a witness stated that a man came into his room in the night, and caused a light by striking on the stone floor with something like a sword, which produced a flash near his face, and enabled him to observe that his forehead and cheeks were blacked over in streaks, that he had on a dark-colored topcoat and a dark-colored handkerchief, and was a large man, from which circumstances and from his voice, he believed the prisoner to be the same man. (*Rex v. Brook*, 31 St. Tr. 1135, 1137.) But see "Traité de la Preuve," par Desquiron, 274, where it is stated that after the condemnation of a man for murder, on the testimony of two witnesses, who deposed that

they recognized him by the light from the discharge of a gun, experiments were made, from which it appeared that such recognition was impossible.

The late learned Recorder of Birmingham (M. D. Hill, Esq., Q.C.) gave the Editor the particulars of a remarkable case, in which he was retained as counsel for a prisoner accused of shooting at a young woman, and in which the intended victim was prepared to swear that she recognized the prisoner by the flash of the gun which was fired at her. The trial, which was to have taken place at the Derby Spring Assizes, 1840, was prevented by the suicide of the prisoner, after the business of the Assizes had begun; but Mr. Hill was present at a series

of experiments made with a view to test the possibility of the alleged recognition, and the conclusion he drew was "that all stories of recognition from the flash of gun or pistol must be founded upon a fallacy." There were many circumstances in the case calculated to produce a strong impression on the young woman's mind that the prisoner was her assailant, and she doubtless mistook the impression

so created for ocular demonstration. On the other hand, it is asserted in Taylor's "Medical Jurisprudence" (4th ed. 1894, Vol. I, p. 729) that from information which the author was able to collect on this point, there appears to be no doubt that an assailant may be thus occasionally identified. No doubt it depends largely upon the quickness of individual sight.

299. CAL ARMSTRONG'S CASE. [Printed *post*, as No. 339.]

300. THE BEER-WAGON CASE. (AMOS C. MILLER. *Examination of Witnesses*. Illinois Law Review. 1907. Vol. II, p. 247.)

I remember two cases in my own experience, both of which have always been very interesting to me, as they illustrate how easy it is for one to be mistaken as to the real facts in a case which he has studied well. The first one was a personal injury suit where a boy about twelve years of age was suing for the loss of a leg, claiming to have been carelessly run down by the driver of a brewer's wagon while crossing South Halstead street upon a crosswalk. In preparing the defense of this case I several times talked with the driver of the wagon which was alleged to have caused the injury. He appeared perfectly honest, but insisted that he knew nothing of the accident, and that he did not run over anybody. He was a purely negative witness, and in the presence of anything like a strong array of positive evidence, his testimony would manifestly amount to nothing. Just before the trial, he came in with a new idea; our evidence showed that the accident had happened at 3.30 P.M. on the 17th of December, 1896, one of the shortest days of the year. This driver said that he had discovered and could prove by other witnesses in the employ of the defendant that while he ordinarily passed the point of the accident at 3.30 o'clock P.M., on this particular day he went to a

funeral and left the brewery an hour late, which brought him to the point of the accident at 4.30 P.M., an hour after the accident. I replied, "Then your story is that on 364 days of that year you passed the point of the accident at the hour of the accident, but on the 365th day you passed there an hour later." He said that was right. I did not believe it; and my fear that we were in the wrong was strengthened by this apparent willingness of the person charged with the delinquency to put forward an unbelievable story; and I went into the trial not very hopeful.

What then was my surprise to hear the plaintiff's counsel, an able and well-known trial lawyer, state to the jury in his opening statement that he would prove that the accident happened at 4.30 P.M. That he would show out of the mouths of the defendant's witnesses that this driver, while he ordinarily passed that point at 3.30 P.M. was late and did not get there until 4.30 P.M. As a matter of fact, that driver had told me the truth, and the plaintiff's counsel by a careful investigation had learned that it was the truth, and had therefore shaped his other testimony to meet it.

I lost no time in shifting my own course to suit this sudden develop-

ment. As luck would have it, this trial began on the 15th of December, 1899, three years after the accident, lacking two days. In my opening statement I said nothing about the time of the accident; but in cross-examining the large number of plaintiff's witnesses I incidentally brought out the fact that it was broad daylight at the time of the accident and for more than a half-hour thereafter, and that the witnesses had read the name upon the wagon and the number of the telephone, and had recognized the driver when the wagon was almost a block away. The plaintiff's counsel put upon the stand the driver of the wagon, and showed by him that he had left the brewery an hour late.

On the 17th day of December at 4.30 o'clock, just three years to a minute from the time the defendant's wagon was at the scene of the accident, I arose and interrupted the proceedings and called the attention of the court and the jury to the clock upon the wall recording the hour of 4.30, and then to the looks of things outdoors. Every one, of course, looked out of the windows. The sun had set long since, a heavy snow was falling, and it was as dark as the blackest midnight.

The facts were so clear that there was scarcely room for argument. The boy *had* been run over, by a wagon, but *not* by *our* wagon, and the driver had been telling me the exact truth.

301. **THE BOTTOMRY BOND CASE.** (Boston "Transcript," July 15, 1910; reprinted from the "National Magazine.")

The master of a vessel in a port in the Gulf of Mexico being in need of money borrowed it and to secure its repayment executed what is called a bottomry bond. By this bond it was agreed that if the money was not paid within so many days after the vessel arrived at New York proceedings might be taken to have the vessel sold and the debt paid out of the proceeds. The money was not paid and I was retained to enforce the bond and began a suit. Some one interested in the vessel appeared in the suit and denied that the bond had been executed by the master, as had been alleged.

It became necessary to take the testimony on this point of a sailor whose name was subscribed to the bond as having witnessed its execution. In answer to my questions the sailor said that the captain called him into the vessel's cabin and asked him to be a witness to the bond, and he signed his name to it as a witness, and he spoke of the paper as the bottomry bond. The opposing counsel in a sharp cross-examination asked him how he knew it was a bottomry bond, and the witness

answered that he read enough of it to know what it was. Some other skillful questions brought out the fact that when the sailor came into the cabin the captain was sitting on the other side of a table with the paper before him and the sailor sat down at the side of the table facing the captain, so that the paper was between them; that the paper was not read to him, that the captain turned over the first leaf of the paper and signed his name at the end of it, and told the sailor where to sign his name, which he did and then left the cabin.

My heart sank, for I saw that it was open to the other side to say that the document lay on the table upside down to the sailor, and that his statement that he read enough of the document to know it was a bottomry bond was false, because, of course, he could not read writing which was upside down, and, therefore, his whole evidence should be disbelieved. The lawyer opposed to me saw the point also; but, instead of leaving the matter where it was, he concluded to clinch it, and taking the document he laid it down on the

table before the witness upside down, and said to him, "Let us see you read the paper now." To my great surprise and relief the witness *read the writing*, upside down as it was, with nearly as much fluency as if it had been right side up.

That ended the contest over the execution of the bond. This sailor's ability to read writing when it was upside down was a curious instance of the many curious things which sailors do to occupy their time during idle watches on long voyages.

302. THE POISONED COFFEE CASE. (JOHN C. REED. *Conduct of Lawsuits*. 2d ed. 1912. § 403.)

We add some illustrations. A master one morning at breakfast suspected that there was poison in his coffee, and he immediately accused his cook. The negro was thought to evince manifest signs of guilt. The whole family showed alarming symptoms, and the master in his rage made the cook drink all the remaining coffee. She fell into convulsions. Of course it was poison. They all saw in the coffee grounds fragments of the fatal buckeye. The doomed slave was hurried through an examination. A lawyer, whose heart went out in yearning love to the poorest and lowliest in distress, inquired into her case and quietly learned all of the testimony against her. Every one who had drunk the coffee had sworn to its unusually bitter taste. It chanced that our lawyer had been lately prescribed by his dentist a decoction of buckeye for toothache, and he knew that its taste was sweet and not bitter. He was too prudent to proclaim his dissent, for, the infuriated family learning, the mob might have balked him. He waited until the trial, when he volunteered to defend the friendless woman. The court of course assigned him to her as counsel. He made all of the witnesses for the State dilate upon the bitterness which they had testified to at the examination; he almost made them quarrel with him by appearing to doubt what they said on this point: bitter tasted the coffee was; they had never tasted anything so bitter. His only evidence was a glass of fluid, proven by the dentist — a man well known to the jury —

to be a decoction of buckeye. The glass was handed to the judge; he tasted; then to the jury, and all of them took a timid sip; and in a few minutes there was an acquittal. The bitterness had no doubt been the result of negligence with the coffeepot, and fright had caused the convulsions of the cook. Witches however have been burnt, and other women both bond and free have been convicted on evidence less satisfactory than that produced against this slave before the magistrate, and, with sadness be it said, executed. This great advocate [Alexander H. Stephens] had often delivered prisoners from the dread penalty, and his name was in all men's mouths for his matchless tact and unrivaled eloquence. But to his immortal honor be it told that he ever counted his unfeared and unostentatious defense of this helpless slave among the proudest of his victories.

The following is related by David Paul Brown: A young and interesting girl, of respectable position, had trusted and been betrayed. She became a mother. At the age of three weeks the child died somewhat suddenly. A post-mortem examination took place. The death was said to have been produced by arsenic, and the medical witnesses strengthened that opinion by testimony. The mother was indicted for murder, and was tried before Judge Symser, of Montgomery County, a humane and industrious and eminent judge. In addition to the scientific evidence and in strong corroboration of it, it was

shown that a day or two before the death of her infant the mother had sent for half an ounce of arsenic to a grocer's; that after the death the arsenic was taken to the grocer's and weighed, and had lost twenty-four grains in weight. The circumstance, together with the opinion of the chemist, presented a strong case. Neither was sufficient in itself, but together they were dangerous. Of course the cross-examination as to the weight was very rigid and severe. Upon this particular point it ran thus: "When the arsenic was purchased, how did you weigh it?" "I weighed it with shot." "How many shot?" "Six." "Of what description?" "No. 8." "When it was returned to you, did you weigh it in the same scales?" "Yes." "Did you weigh it with the same shot?" "I weighed it with shot of the same number, for I had no other number." "How much less did it weigh?" "Twenty-four grains less." It was plain that the testimony bore hard upon the prisoner, but at this stage of the case the court adjourned. Immediately my colleague (Mr. Boyd) and myself visited the stores of all the grocers and took from various uncut bags of No. 8 the requisite number of shot, subjected them to weight in the most accurate scales, and found that the same number of these different parcels of shot varied more in weight than the difference referred to as detected in the arsenic at the time of its return. The shot, the grocers, the apothecary, the scales, were all brought before the court. They clearly established the facts stated. . . .

We give another example from the practice of a celebrated lawyer. Action for a cargo of goods sold on credit. Plea, that plaintiff had represented the goods to be mer-

chantable, and that defendant, relying on the representation, had bought and shipped the goods to a foreign market, where he suffered great damage because they proved to be unmerchantable. The main witness for the defense appeared to be reliable. He had been employed in the ship that carried the goods, he explained how they were made of bad material, not fit for use, and he alone testified to the false representation alleged. The counsel who had brought the action and prepared the case said to Choate, whom he had called in at the last moment, that the witness was inventing. "No," replied the leader, "he is truthful, but mistaken." He began his cross-examination by establishing a friendly understanding. He made the witness report the appearance of the seller of the goods as to size, dress, complexion, and whiskers. The picture given was so unlike the plaintiff that it became manifest he had a different person in mind. When he was made to name the ship, the plaintiff easily proved that his goods were sold two weeks later and shipped in another vessel; whereupon the defense collapsed. At the beginning of the trial, Choate, noticing the indignation which the defense excited in the plaintiff, said of him to his associate, "He is honest, and we shall find our way out of the scrape." The certainty with which he discerned the honesty of the plaintiff and the witness at the first glance made him see that the only possible explanation of their apparent conflict was that the latter had mistaken a seller of other goods for the former, — a solution which had not occurred to the associate, who had had sole charge of the plaintiff's case until the trial.

304. CAPTAIN BAILLIE'S TRIAL. (1778. HOWELL'S *State Trials*. XXI, 216.)

[Captain Baillie, Lieutenant Governor of the Greenwich Royal Hospital for Seamen, had published a pamphlet exposing the abuses in its management, due to political spoilsmen on the Board of Directors. After a prosecution for libel against Captain Baillie had fallen through, the House of Lords undertook an investigation into the abuses. One of the charges was that "in many parts of the clothing, such as shoes, stockings, linen, beds, washing, etc., there are great abuses."]

Thursday, March 25, 1779.

Captain *Baillie* called in.

Whether there have been any abuses in the linen in Greenwich Hospital?—There have been many complaints made to me by the pensioners of Greenwich Hospital, that the quality of the linen has been very different from what it used to be, that it has decreased in size as well as in goodness.

Inform the House whether you made any experiments, to know whether it was decreased in size?—In consequence of that information, I sent the proper people, as I thought they were, the boatswains and nurses, into the different quarters of the hospital, to measure the linen throughout the hospital, in particular in the infirmary, where I thought it was of the most consequence; the persons who measured the linen there, brought reports to me that all the men's sheets, upon an average, were deficient in half a yard in every pair, one with the other; some wanted a yard, some three quarters of a yard, and the average about half a yard upon the whole, generally throughout the hospital.

Is there anybody here that can speak to that?—There are the people here who measured it; they likewise measured the shirts; Thomas Field measured them. . . .

Thomas Field, one of the boatswains, called in.

Did you measure any linen belonging to the hospital at any time?—Yes.

How much did you measure?—I measured 388 pair of sheets in the infirmary.

How much did they measure?—They measured half a yard short and better in each pair of sheets.

Half a yard of what?—Of the cloth; I had been told by the lieutenant governor, that they were to be two yards and one half long, five yards in each sheet.

Upon an average, how much did they measure short of that?—Better than half a yard.

In each pair, or in each sheet?—In each pair.

Upon what number of sheets did you say you made this measurement?—388 pair.

And upon each of the 388 pair, if I understood you right, there was a deficiency of half a yard?—There was in each pair.

Did you measure any other linen?—Yes, all the boatswains in the House had orders to measure the linen that belonged to the pensioners that were in their division.

Did you measure them?—I measured the linen that was in the division that I belonged to; they run 95 yards short upon shirts and sheets, 160 sheets and 160 shirts.

What you mentioned before related to the infirmary?—Yes.

What you speak of now relates to your ward?—Yes.

And in your ward how much did you find short in the sheets and shirts?—95 yards.

What do you imagine was the allowance for shirts?—I was told three yards and a half.

Did you measure the linen in any other wards?—No, none at all but the division I belonged to, and the infirmary sheets. (*Thomas Field* withdrew.)

Mr. Godby, the Steward, called in.

Is there any allowance made in the hospital for the measure of sheets and shirts?—Three yards and a half for a shirt, and five yards for a sheet.

Were the sheets less than they used to be the last time they were cut, at the time that they mention?—I believe they are full as long now as ever they were, and are made in the same manner in every respect.

But were they not half a yard less in each pair of sheets than before?—No.

Are you positive and clear in that?—Yes; it cannot be; if any sheets are shorter than the standard, it is because the pieces of sheeting run a certain length, and we cut them so as not to leave any remnants; that is the establishment in the hospital, and has been always the practice; at least for 40 years back to Mr. Bell's time; I have pursued the same method, and employed the same people, and I have no reason to believe that they have made away with any of it.

You say there is the same quantity now in the sheets as formerly?—The same.

How could it happen, that the sheets, when measured, appeared to be half a yard less?—I fancy it will not appear so, when your lordships call upon the clerk-of-the-check's clerk, who is a check upon my office; he receives these sheets, and is a check upon them.

You are positive they are the same size as usual?—Yes, the same size as usual.

Whether you speak absolutely from having measured the present sheets?—I have seen a great many of them measured, and I believe all the linen is accounted for very clearly; it appears so to me.

I wish to have a direct answer; have you measured all these sheets yourself?—Not all: it is impossible I can measure eight or nine thousand pair of sheets; that cannot be supposed, I should imagine; I have seen a great many of them measured.

. . . What quantity may you have measured yourself?—When there have been two or three hundred pair delivered into my office, I have measured three or four, and have been satisfied. If I have found a deficiency in any respect, I have looked farther into it.

What is the measure?—Of the sheets five yards.

Did those you measured measure five yards?—They measured something under, because we cut them so as not to make any remnants.

I ask you the positive measure of what you measured yourself?—Sometimes a nail of a yard short, sometimes two nails short.

But none of them were positively five yards long?—Some of them were.

Of what length were the sheets that you did measure yourself?—Sometimes a full length, sometimes wanting a nail of a yard, at other times two nails perhaps. But then, when I came to inquire into the matter, I found that it should be so. A piece of sheeting, if it runs 40 yards, would make five pair of sheets, but they run 38 and a half, and 39, and 39 and a half; they are generally about that length, and then we make just the same sheets as if they run 40; it is an advantage to the hospital, and is the method that was always adopted by the former stewards.

Is it not somebody's province to measure all the sheets?—The people in my office measure a number of them, but not all of them, I dare say.

Whether or not the measurement you have taken of these sheets was before or after the complaint was made by Captain Baillie?—I have measured them since the complaint, and I have measured them before.

Is it your office properly to measure this linen?—It is, with the clerk of the check, never without him. . . .

Have you always took the measure upon the faith of the contractor to be according to the contract?—No, I measure here and there a piece; if I find a deficiency of a yard, or

half a yard, I go farther, and measure more, and if there is a yard deficient in any one of those pieces, I deduct a yard from every one of those pieces I receive.

If from the number of sheets you have spoken to, you had found a deficiency of half a yard upon every pair of sheets, should not you have thought it worth your while to complain to somebody of the hospital, in order to rectify that abuse?—Certainly not, these sheets have been delivered out of my care a twelvemonth.

If in the measurement of the sheets you yourself had discovered a deficiency, whether you would not have thought the hospital greatly defrauded by such a deficiency?—It could not happen in my office.

But I ask you if you had discovered a deficiency?—If so, certainly.

If again, if in the measurement of 388 pair of sheets, you had discovered, as the witness discovered, a deficiency of 195 yards, which he has sworn to upon his measurement, would not you have thought that a fraud too?—Not if it was accounted for some other way.

I ask you, if upon your measurement you had found the deficiency?—No doubt of it; if there was a deficiency of 190 odd yards, there must be a fraud somewhere.

Do you know of any complaints being made to the council of a deficiency in the linen?—None. . . .

How far is your rule to go by, when you find a piece short of its measure? You say forty yards ought to make five pair of sheets?—Yes.

Suppose a piece of linen is thirty-nine yards?—Then we will make an allowance accordingly, we divide it equally.

Suppose it is thirty-eight yards?—We divided it accordingly; but if it is only thirty-seven or thirty-seven and a half, so that we think the piece would be too short for use,

that there would be a complaint, we make only seven sheets and leave a remnant.

What is the precise rule you go by to term the piece too short, whether it is thirty-seven yards, or thirty-seven yards and a half?—It is left to the judgment of the persons that cut them.

Who are those persons?—Two of the clerks' wives have cut them for late years before my appointment, and before my predecessor's, I believe. . . .

Mr. *Maule* called in.

Whether the sheets are of the right length at present?—I believe so.

What reason have you to think that they are?—I have known the hospital a great many years, and, till very lately, I never heard of a complaint at all of the kind.

What reason have you to think that they are not shorter than they were formerly?—I don't know that they are shorter than they were formerly.

Did you never hear a complaint of the kind?—Not till very lately. . . .

Are the pieces of linen not always of the same length?—They run from 37 to $37\frac{1}{2}$, 38, and so on to $39\frac{1}{2}$; very seldom to 40.

You seldom find any pieces of the full length?—Very seldom.

Do you speak from your certain knowledge, that the sheets are not now shorter than they were before?—I don't say that they are at present.

You say they are not shorter now; whether they were not shorter before the complaint was made by Captain Baillie?—I believe they are now as they have been made for many years past.

Do you speak from your certain knowledge that the sheets are now no shorter than they were before?—I never heard till very lately, as I said before, that the sheets were shorter now than they were formerly.

Answer that question directly;

do you know of your own knowledge, that the sheets are now of the same length as they were before? — All that have come within my knowledge.

How many have come within your knowledge? — A great many.

How many? — I suppose 100 pair or more.

Out of how many? — Some thousands.

How many thousands? — Very likely three or four thousand.

How many hundred pair, out of these three or four thousand, have you measured? — I suppose an hundred pair I have seen measured.

And were those equal to the standard? — I have already told your lordships, that I never knew that they were to the standard.

What rule have you to go by to say, that in former times the sheets were shorter than the standard? By how much were they shorter? — I cannot speak particularly to that; but I do, from my own knowledge, know that the sheets were formerly made as they are now, and in the same manner, and by the same people.

You say they were shorter, but don't know by how much; I desire you will say then, how you can possibly know that the present sheets are not shorter than those were? — I said, at the same time, that though it was a nominal thing that the sheets were to consist of five yards, yet I believe they never were of that quantity.

But how much were they shorter? — I cannot particularly say.

If you don't know by how much they were shorter, how can you possibly say, that you don't know that they are now shorter than they were then? — I never heard a complaint.

That is not the question; you say, that from your knowledge, the hundred sheets you measured were the same length as those before; now you say, you don't know the exact length of those before; how then can you know that these are of

the same measure? — I have measured them frequently formerly, when I was a clerk in the clerk of the cheque's office; and I have seen them measured since I have been in the present office, and since I have been clerk of the cheque myself I have often seen them measured, and I don't know that there is any difference between those made formerly and those made now.

When you measured the sheets formerly, of what length were they? — . . . I believe short a quarter of a yard; I have seen them so very often.

Have you measured any number of sheets latterly? — I have seen a great many measured lately.

Have you made any computation, and cast it into an average, to see how much they were short? — No; but I apprehend they were not more than that short; none that I have measured have been more than that short. . . .

Can you speak to any certain number that you have seen measured, that do all of them come within a quarter of a yard exactly, or nearly? — No; I have only seen here or there some measured when a quantity have been delivered in. . . .

Whether you have any reason to believe that the measurement that Mr. Field made was not a fair measurement? — I believe a fair one. (Mr. Maule withdrew.) . . .

Captain *Baillie* called in.

Whether you know anything of the method in which the linen is cut out in Greenwich Hospital? — Do you speak of sheets or shirts?

The sheeting. — A piece of sheeting is generally cut into sixteen lengths, to make eight sheets; each length ought to consist of two yards and a half; a piece of Russia sheeting generally contains thirty-seven yards and a half; that being cut into sixteen lengths, does not run to the standard of the hospital; instead of sixteen lengths, it ought to be cut into fifteen only; by which means two pieces will make fifteen sheets; and by cutting four pieces in that man-

ner, they will make exactly fifteen pair of sheets; instead of which the practice is, to cut four pieces into sixteen pair of sheets, by which means there is a pair of sheets more than there ought to be by the establishment. . . .

Whether the pieces of linen in general run thirty-seven yards and a half?—They are bought for thirty ells, that is exactly thirty-seven yards and a half; and if you search Cheapside, from one end to the other, I believe it will be found to be the length. . . . There is a gentleman I have seen here to-day, who is a draper, he can tell the exact length of the pieces.

What is his name?—His name is

Price; I do not know his Christian name, for I never saw him before. (Captain Baillie withdrew.) . . .

Mr. Price was therefore called, and sworn at the bar. The House being again resolved into a committee.

What is your name?—Edward Price.

Where do you live?—I live in Blackmoor street, Clare market.

Are you a linen draper?—I am.

Do you deal in Russia linen?—I do.

What length are pieces of Russia sheeting, upon an average?—The fabric is thirty ells, or thirty-seven yards and a half each piece, seldom more or less. (Mr. Price withdrew.)

305. JAMES BYRNE'S TRIAL. [Printed *post*, as No. 350.]

306. HANS GROSS. *Criminal Investigation*. (transl. J. and J. C. Adam. 1907. p. 22.) . . . A thousand mistakes of every description would be avoided if people did not base their conclusions upon premises furnished by others, take as established fact what is only possibility, or as a constantly recurring incident what has only been observed but once. . . . I am assuming that the witness is really desirous of speaking the truth and is merely a bad observer.

In general, the matter should be elucidated by experiment, by ocular demonstration. Suppose a witness affirms that he was beaten by H for ten minutes. Let a watch be placed before him and ask him to take good note of how long ten minutes lasts and then say whether it was really ten minutes. After a quarter of a minute he will exclaim, "It certainly did not last longer than that." . . . Again, a witness declares, "When once I see a man I alway recognize him again." "Did you see the prisoner who was being taken out as you came in?" you ask him. "Certainly, I saw him very well," he answers. "All right, go and pick him out from ten other persons." A witness estimates an important distance at, let us say, 200 yards; let him be brought out of doors and say how far might be 100, 200, 300, 400 yards; if now these distances be measured, one can easily judge if and with what degree of accuracy, the witness can judge distances. . . . Such checks give the most instructive and remarkable results; whoever practices them will soon be convinced that their importance cannot be exaggerated. . . .

Topic 2. Incomplete Recollection

308. LANGHORN'S TRIAL. (1679. HOWELL'S *State Trials*. VII, 452.)

[Oates, the informer, had testified that the Popish Plotters met in

London on April 24, and that he had come over to the meeting from the

Jesuit College at St. Omer in France with Sir John Warner. One of the Jesuit attendants was put on by the defense to prove that Warner had not left the College at that time.] *Witness*: "He lived there all that while."

Mr. J. Pemberton: "Was Sir John Warner there all June?" *Witness*: "My lord, I cannot tell that; I only speak to April and May."

L. C. J. Scroggs: "Where was Sir John Warner in June and July?" *Witness*: "I cannot tell."

L. C. J.: "You were gardener there then?" *Witness*: "Yes, I was."

L. C. J.: "Why cannot you as well tell me, then, where he was in June and July, as in April and

May?" *Witness*: "I cannot be certain."

L. C. J.: "Why not so certain for those two months as you are for the other?" *Witness*: "Because I did not take so much notice."

L. C. J.: "How came you to take more notice of the one than the other?" *Witness*: "Because the question that I came for, my lord, did not fall upon that time."

L. C. J.: "That, without all question, is a plain and honest answer."

Mr. J. Dolben: "Indeed, he hath forgot his lesson; you should have given him better instructions."

L. C. J.: "Now that does shake all that was said before, and looks as if he came on purpose and prepared for those months."

309. QUEEN CAROLINE'S TRIAL. (1820. Linn's ed. I, 67, 91, 96.)

[Among the various charges of adultery and improper intimacy between the Queen (then Princess) and her servant Bergami during her tour in Germany, Austria, Italy, and the Mediterranean, one charge was made of adultery on board a polacca during a sea voyage to Palestine. The witness Majocchi, a servant in her suite during most of her journeys, had testified specifically to this charge, under the following questions from]

Mr. Solicitor-General Copley: "Did the Princess sleep under that tent [placed on deck] generally on the voyage from Jaffa home?" *Majocchi*: "She slept always under that tent during the whole voyage from Jaffa to the time she landed."

Mr. Sol.-Gen.: "Did anybody sleep under the same tent?" *Majocchi*: "Bartolomo Bergami."

Mr. Sol.-Gen.: "Did this take place every night?" *Majocchi*: "Every night." . . .

[On cross-examination Mr. Brougham sought to test his trustworthiness by inquiring as to other

details of the sleeping arrangements of the suite].¹

"[On this voyage] Where did Hieronimus sleep in general?"

Majocchi: "I do not recollect [*Non mi ricordo*]."

Mr. Brougham: "Where did Mr. Howman sleep?" *Majocchi*: "I do not recollect."

Mr. Brougham: "Where did William Austin sleep?" *Majocchi*: "I do not remember."

Mr. Brougham: "Where did the Countess Oldi sleep?" *Majocchi*: "I do not remember."

Mr. Brougham: "Where did Camera sleep?" *Majocchi*: "I do not know where he slept."

Mr. Brougham: "Where did the maids sleep?" *Majocchi*: "I do not know."

Mr. Brougham: "Where did Captain Flynn sleep?" *Majocchi*: "I do not know."

Mr. Brougham: "Did you not, when you were ill during the voyage, sleep below [in the hold] under the deck?" *Majocchi*: "Under the deck."

Mr. Brougham: "Did those excellent sailors always remain be-

¹ These questions were not all put in direct sequence; a few intervening questions are here omitted.

low in the hold with you?" *Majocchi*: "This I cannot remember if they slept in the hold during the nighttime or went up."

Mr. *Brougham*: "Who slept in the place where you used to sleep down below in the hold?" *Majocchi*: "I know very well that I slept there, but I do not remember who else."

Mr. *Brougham*: "Where did the livery servants of the suite sleep?" *Majocchi*: "This I do not remember."

Mr. *Brougham*: "Were you not yourself a livery servant?" *Majocchi*: "Yes."

Mr. *Brougham*: "Where did the Padroni of the vessel sleep?" *Majocchi*: "I do not know."

Mr. *Brougham*: "When her Royal

Highness was going by sea on her voyage [at another time] from Sicily to Tunis, where did she sleep?" *Majocchi*: "This I cannot remember."

Mr. *Brougham*: "When she was afterwards going from Tunis to Constantinople on board the ship, where did her Royal Highness sleep?" *Majocchi*: "This I do not remember."

Mr. *Brougham*: "When she was going from Constantinople to the Holy Land on board the ship, where did she sleep then?" *Majocchi*: "I do not remember."

Mr. *Brougham*: "Where did Bergami sleep on those three voyages of which you have just been speaking?"

Majocchi: "This I do not know."¹

310. THE DOCTOR'S CASE. Brief," III, 10.)

One of the neatest effects ever witnessed was produced by a single question put by one of the young leaders at our bar in the course of an inquiry on habeas corpus as to the sanity of an interested party. A medical expert had testified to his mental unsoundness, and had detailed with great clearness the tests he applied to his case, and the results which established to his satisfaction an advanced stage of paresis. He finished his direct examination one afternoon, and next day was cross-examined for the purpose of eliciting that many of the conditions he described could be found in every sane person. After

(1900. HON. J. F. DALY, in "The

being questioned as to the first indication of mental feebleness he had specified, he was then asked what was the second feature of the cases he had mentioned as indicating paresis. The witness was unable to recall which he had mentioned second.

"What, Doctor, you can't recall the second indication of progressive mental decay which you spoke of yesterday?"—"No, I cannot, I confess."

"Well, that's funny. Your second indication was 'loss of memory of recent events'!"

The doctor admitted cheerfully that he had the symptoms himself in a marked degree.

311. LORD GEORGE GORDON'S TRIAL. (1781. HOWELL'S *State Trials*. XXI, 511.)

[Since the Revolution of 1688, Roman Catholics had been kept under serious disabilities, political and religious; and a movement was

¹[In his opening address for the defense (II, 33), Mr. Brougham made forcible use of these significant answers of Majocchi, prophesying that "as long as the words 'I don't remember' were known in the English language, the image of Majocchi, without the man being named, would forthwith arise to the imagination"; and his iteration of that betraying phrase "*non mi ricordo*" has indeed become an indelible episode of forensic history.

But the notable thing is that the main assertion of Majocchi, so discredited by his collateral failures of memory as to the tent and Bergami's sleeping there, was, after all, correct. This has been pointed out by Mr. G. Lathom Browne, in his "*Narratives of State Trials, 1801-1830.*" (1882. Vol. II, p. 418.)—Ed.]

begun to abolish these discriminations. Popular prejudice against popery was thus revived; and a monster petition was presented to Parliament to dissuade it from legislation. Lord George Gordon was a prime mover in the Protestant Association formed for this purpose. But the movement was believed by many to tend to violence and the overthrow of government; and in fact, on the night when the petition was taken to Parliament, a vast mob formed, burned the Fleet Prison, and other places, and pillaged the city. The important issue was whether Lord George Gordon's action was that of encouraging this violence, or merely of presenting peaceably a lawful petition.] . . .

William Hay sworn. Examined by *Mr. Solicitor-General*.

Do you know the prisoner, Lord George Gordon? — Yes.

Do you remember seeing him at any time at Coachmaker's hall? — I saw the prisoner at Coachmaker's hall on the 7th of January, 1780.

Did you see him at different times at that meeting between the 7th of January and the 2d of June, the day the multitude went to the House of Commons? — Five or six times, but not at that place, the association.

What association? — The association, called the Protestant Association, was adjourned from place to place. It was adjourned to Greenwood's rooms, in the Hay-market; to the Old Crown and Rolls, in Chancery-lane; to the London tavern, in Bishopsgate street; and to St. Margaret's hall, in the borough of Southwark.

Did you see the prisoner at all or any of those places? — Not at all, but at most of them.

Do you recollect which of them you saw him at? — I saw him at St. Margaret's hall, at Greenwood's rooms, at the Old Crown and Rolls tavern, Chancery-lane, and at Coachmaker's hall.

Do you remember seeing him at

Coachmaker's hall, at the last meeting previous to their going up to the House of Commons? — I remember it very well.

Do you recollect at that time anything said by the prisoner, and if you do, mention what it was? — It was on the 29th of May I heard the prisoner announce to a very numerous assembly, the hall was crowded, "That the Associated Protestants (as they were called) amounted to upwards of 40,000 in number; that on Friday the 2d of June, it was resolved, they should meet, at ten o'clock in the morning, in St. George's fields, in four separate divisions or columns, arrayed or dressed in their best clothes."

. . . His lordship gave orders how these four different bodies should take their ground, and what fields they should assemble in. I cannot charge my memory exactly with the positions of those four columns, but I think the London division were to go to the field on the right of the road.

Did you go to the meeting in St. George's fields, on the 2d of June? — I went there, but did not mix among the people.

Did you see a multitude of people gathered together there? — A vast multitude. . . .

Had they any particular marks or badges? — They had all cockades, and there were banners.

Was anything written upon the banners or the cockades? — Nothing on the cockades that I observed. On the banners I think I saw Protestant Association; and one banner I believe had No Popery! on it. . . .

Which way did this multitude march? — I can say nothing of their marching, further than what I saw in Fleet street. I came home and saw them come through Fleet street, and march by St. Dunstan's church, in their way to the House of Commons.

Was there a large number came that way? — Yes.

Had they the same cockades and

banners?—Yes, the same cockades, and one or two of the banners.

Did you afterwards on that day come down towards the House of Commons?—I did.

Did you see a number of the same people about the house?—I did; they appeared to be the same people.

Had they the same cockades and banners?—Yes, they had.

Did you get into the lobby of the House of Commons?—I was there about three hours.

Was that filled with some of this multitude?—The lobby was crowded with them.

What was their behavior?—Very riotous. The noise was generally occasioned by chiming of Lord George Gordon's name. . . .

Do you remember the mob crying out to the people in the lobby?—I cannot pretend to say, there was such great confusion and noise. . . .

Do you recollect seeing any flags at any other place in the course of the mischief which followed?—I saw one of the flags at the burning of the Fleet Prison; that flag which had the words No Popery! on it.

Could you perceive whether the person who had the flag at the Fleet Prison was one you had seen in St. George's fields, or about the House of Commons?—I am very clear it was the same man, for I looked at him.

Where was it you had before seen that man, you saw with the flag at the Fleet Prison?—I saw him carrying that flag in Fleet street.

Do you mean at the time when the multitude marched to the House of Commons?—Yes; and I saw that very man at Westminster. . . .

What was the cry of the people who were employed in that business?—It generally was, No Popery! . . .

Did the people with blue cockades join with the people who were crying No Popery?—It was while I was within the chapel, I heard the cry without the chapel. The person who did all the mischief, whom I saw in the chapel, had no hat on; there

were about five or six people in the chapel, but that man was the most active. . . .

Cross-examined by Mr. *Kenyon*.

Pray what are you?—By trade, a printer.

Do you print on your own account, or are you a servant to any person?—I print on my own account.

I believe you have had misfortunes in the world, you were a bankrupt?—Yes.

When did you first resort to these meetings of the Protestant Association, as they called themselves?—I said on the evening of the 10th of December.

Was that the first time?—Yes.

And you went, from time to time, to all the meetings that were held afterwards?—Yes, to the public meetings.

You were at several places where Lord George Gordon did not attend?—Yes.

You have mentioned one place where Lord George Gordon was, at Greenwood's rooms; now I desire you to recollect, and say, whether you saw him at Greenwood's rooms?—I think I saw my lord once there, and I was there once when he was not; I was there twice.

I caution you to be upon your guard.—I will; it is a very serious matter; I think Lord George was once at Greenwood's rooms, and that the association was there once without his lordship.

Then you cannot speak with certainty?—Unless I look at some notes I cannot tell; I have some notes here.

Did you make them at the time?—Yes, I generally made them that evening.

Court.—You may refresh your memory with them. (Looks at his notes.)—On the 21st of January, Lord George Gordon was not, I find, present at Greenwood's.

Then you were mistaken in that part of your evidence?—I was mistaken.

How came you, from time to time, to make notes of what passed at these several meetings? — I shall be very free in telling you, that I had an idea then, that this would be the consequence of these meetings, I went almost purposely to take notes of them.

And you went on that account to take notes of what passed? — A curiosity first led me there; but, when I saw what sort of people they were, I was willing to look farther after them, for I dreaded the consequence of their meetings.

How soon had you this foresight of what would happen? In the month of December you foresaw what would happen? — I did not, I said no such thing; I foresaw it on the 20th of February.

Then the first time you foresaw it was on the 20th of February? — I had foreseen the evil consequences, as far as man could, before that time, but on the 20th of February I had even written my thoughts upon it.

Then the 20th of February was the first time you began to draw your conclusions? — It was.

Then how came your notes and memorandums to have a date prior to that, you have notes so early as the 21st of January? — Without those notes, I could not come to that conclusion in my own mind about the consequences; I took notes on the 10th of December.

I must return again to the question I asked before; how came you first to take notes? — I never go to any public meeting but I have an errand; I wished to learn what those gentlemen would be at; I put down then what occurred, and then entered it down after I came home.

That is your constant course in all occurrences of life? — Yes.

Can you tell us any one occurrence of your life, where you have committed to writing everything that passed? — I do not know any one meeting of that kind, but I have put down as much as my memory would help me to.

How many meetings of this kind have you resorted to? — I never resorted to any others of this kind.

You said you never attended any meetings respecting this kind of business, where you did not commit to writing what passed; now I want to know, what other meetings besides the Protestant Association you have attended? — I have attended a great many meetings, but I cannot pretend to recite them.

Have you, upon your oath, before God and your country, put down everything that passed at those meetings? — I do not comprehend the nature of your question.

Have you set down any transactions at any other meetings, except those of the Protestant Association? — I have many times undoubtedly.

Tell me when and where? — The first notes I made in my life, were in the general assembly of the church of Scotland, the very first church I was ever in, in my life.

How long is that ago? — Twenty-two years ago; so early as that, and in 1765 and 1766, I took notes again.

Did you do that because you had a foresight of any ill consequences that would ensue from those meetings? — I wished to know what was going on there, or to oblige a friend to inform him what was doing. . . .

You say you were in the lobby of the House of Commons? — I was.

Did you go into the lobby with persons who had blue cockades in their hats? — They were all there long before me. I went down after I had dined. . . .

You say at the time you were in the lobby, there was a great riot and confusion, and you could not hear what passed there? — I heard exceeding well. . . .

The lobby is not a very large room. Were there a good number of people of the same description as yourself, that were there merely from curiosity? — I saw none such, it did not come from curiosity.

Then you were the single indi-

vidual, that stood distinguished from all the rest who were there? — There were more than I there; there was that man M'Millan, and an apprentice of my own, I took them on purpose with me.

That they might be of what use? — I wanted to inquire after some particular friends; I was afraid they might be hurt, I was afraid of myself.

Being afraid of yourself, you who were not in the crowd before, nor in danger of being hurt, under ideas you might be hurt you went into the crowd in the lobby? — I was willing to see what they were about.

Which of your friends did you conceive to be in danger? — When an alarm of that kind is gone out, one cannot but have some friend in danger; I cannot charge my memory with any particular friend. . . .

In St. George's fields, you were a considerable distance from Lord George; how near were you to the persons who carried the two flags? — I saw one of the flags carried by a constable on my left hand; I was in the road; I did not go into the field. . . .

By what good luck then did you happen to see the flag in Fleet street? Where is your house? — Next St. Dunstan's church; I went upon the leads on purpose to see them with this Mr. M'Millan.

One of the persons you saw with a flag in Fleet street you saw afterwards? — Yes; at the Fleet Prison and in Westminster.

Can you describe his dress? — I cannot charge my memory; it was a dress not worth minding, a very common dress.

Had he his own hair or a wig? — If I recollect, he had black hair; shortish hair I think.

Was there something remarkable about his hair? — No; I do not remember anything remarkable; he was a coarse-looking man; he appeared to me like a brewer's servant in his best clothes.

How do you know a brewer's ser-

vant when he is in his best clothes from another man? — It is out of my power to describe it better than I do; he appeared to me to be such.

I ask you how, by what mark, do you distinguish a brewer's servant from another man? — There is something in a brewer's servant, in his condition of life, different from other men.

There may be, for what I know; but tell me how *you* distinguish a brewer's servant from another man? — Be so good as to state the question again.

If there can be a doubt what the question means in any one of this audience, you shall have it repeated; you said this man was like a brewer's servant; I asked you by what mark *you* are able to distinguish a man to be a brewer's servant rather than of any other trade? — I think a brewer's servant's breeches, clothes, and stockings have something very distinguishing.

Tell me what, in his breeches, and the cut of his coat and stockings, it was by which you distinguished him? — I cannot swear to any particular mark.

Then you had no reason upon earth to use that word which came so flippant over your tongue, that he was like a brewer's servant? — I cannot answer that question if you put it to me a hundred times. . . .

The Hon. *Thomas Erskine* (for the defense):

Gentlemen of the jury: Mr. Kenyon having informed the court that we propose to call no other witnesses, it is now my duty to address myself to you, as counsel for the noble prisoner at the bar, the whole evidence being closed. . . . The first witness to support this prosecution is William Hay — a bankrupt in *fortune*, he acknowledges himself to be, and I am afraid he is a bankrupt in *conscience*. Such a scene of impudent, ridiculous inconsistency, would have utterly destroyed his credibility, in the most trifling civil suit; and I am, therefore,

almost ashamed to remind you of his evidence, when I reflect that you will never suffer it to glance across your minds on this solemn occasion. This man I may now, without offense or slander, point out to you as a dark Popish spy, who attended the meetings of the London Association, to pervert their harmless purposes. . . . Attend to his cross-examination. He was *sure* he had seen Lord George Gordon at Greenwood's room in January; but when Mr. Kenyon, who knew Lord George had *never* been there, advised him to recollect himself, he desired to consult his notes. First, he is positively sure, from his memory, that he had seen him there; then he says he cannot trust his memory without referring to his papers; on looking at them, they contradict him; and he then confesses, that he *never* saw Lord George Gordon at Greenwood's room in January, when his note was taken, *nor at any other time*.

But *why* did he take notes? He said it was because he foresaw what would happen. How fortunate the crown is, gentlemen, to have such friends to collect evidence by anticipation! *When* did he begin to take notes? He said on the 21st of *February*, which was the first time he had been alarmed at what he had seen and heard, although not a minute before he had been reading a note taken at Greenwood's room in *January*, and had sworn that he attended their meetings, from apprehensions of consequences, as early as *December*. Mr. Kenyon, who now saw him bewildered in a maze of falsehood, and suspecting his notes to have been a villainous fabrication to give the show of correctness to his evidence, attacked him with a shrewdness for which he was wholly unprepared. You remember the witness had said, that he always took notes when he attended any meetings where he expected their deliberations might be attended with dangerous consequences. "*Give me one instance*"

says Mr. Kenyon, "*in the whole course of your life, where you ever took notes before.*" Poor Mr. Hay was *thunderstruck*; — the sweat ran down his face, and his countenance bespoke despair, — not recollection. "Sir, I must have an instance; tell me when and where?" Gentlemen, it was now too late; *some* instance he was obliged to give, and, as it was evident to everybody that he had one still to choose, I think he might have chosen a better. *He had taken notes at the General Assembly of the church of Scotland six and twenty years before!* . . . Mr. Hay thought it of moment to *his own* credit in the cause, that *he himself* might be thought a Protestant, unconnected with Papists, and not a Popish spy.

So ambitious, indeed, was the miscreant of being useful in this odious character, through every stage of the cause, that after staying a little in St. George's fields, he ran home to his own house in St. Dunstan's churchyard, and got upon the leads where he swore he saw *the very man* carrying the *very same flag* he had seen in the fields. Gentlemen, whether the petitioners employed the same standard man through the whole course of their peaceable procession is certainly totally immaterial to the cause, but the circumstance is material to show the wickedness of the man. "How," says Mr. Kenyon, "do you know that it was the same person you saw in the fields? Were you acquainted with him?" — "No." — How then? Why, "he looked like a brewer's servant." *Like a brewer's servant!* — What, were they not all in their Sunday's clothes? — "Oh! yes, they were all in their Sunday's clothes." — Was the man with the flag then alone in the dress of his trade? — "No." Then how do you know he was a brewer's servant? Poor Mr. Hay — *nothing but sweat and confusion again*. At last, after a hesitation, which everybody thought would have ended in his running out of

court, he said, he knew him to be a brewer's servant, *because there was something particular in the cut of his coat, the cut of his breeches, AND THE CUT OF HIS STOCKINGS.* You see, gentlemen, by what strange means villainy is sometimes detected; perhaps he might have escaped from me, but he sunk under that shrewdness and sagacity, which ability, without long habit, does not provide. Gentlemen, you will not, I am sure, forget, whenever you see a man, about whose apparel there is "anything particular," to set him down for a brewer's servant!

Mr. Hay afterwards went to the lobby of the House of Commons. What took him there? He thought himself in danger; and therefore, says Mr. Kenyon, you thrust yourself voluntarily into the very center of danger! *That would not do.*

Then he had a *particular friend*, whom he knew to be in the lobby, and whom he apprehended to be in danger. "Sir, who was that particular friend? Out with it: Give us his name instantly." *All in confusion again. Not a word to say for himself; and the name of this person, who had the honor of Mr. Hay's friendship, will probably remain a secret forever.*

It may be asked, Are these circumstances material? And the answer is obvious: *they ARE material*; because, when you see a witness running into every hole and corner of falsehood, and as fast as he is made to bolt out of one, taking cover in another, you will never give credit to what that man relates, as to any possible matter which is to affect the life or reputation of a fellow citizen accused before you.

312. WILLIAM WINTERBOTHAM'S TRIAL. (1793. HOWELL'S *State Trials*. XXII, 878.)

[The Rev. Mr. Winterbotham had attracted attention by his sermons with liberal political bearings. The French Revolution then being at its height, and liberal views in England being much suspected, Mr. Winterbotham was charged with seditious utterances in one of his sermons.] . . .

Edward Lyne examined by Mr. Sergeant *Lawrence*.

Were you at the meeting in How's lane on the evening of the 18th of November last? — Yes; I went there with Mr. Darby, in consequence of a report that Mr. Winterbotham had preached a seditious sermon on the 5th of November.

Were you there before the defendant began his sermon? — Yes, we were; we heard him begin.

Do you recollect the text he preached from? — Yes, it was from Rom. 13th ch., 12 ver.: "The night is far spent, the day is at hand, let us therefore cast off the works of darkness, and let us put on the armor of light."

How did he treat this text? — After the preamble to his sermon, he said, he felt himself bound by the present juncture of affairs, to apply the text politically. We were then in the aisle, but on Mr. Winterbotham's proposing his intention to treat his subject politically, we went into a pew and sat down. He then repeated the words of his text, and said, "Darkness has long cast her veil over the land, persecution and tyranny have carried universal sway." He then expatiated on that head, and proceeded, "Magisterial powers have long been a scourge to the liberties and rights of the people; it does not matter by what names these usurped powers were known, whether by king, senate, potentate, or stadtholder, they are in either sense usurped." This he endeavored to prove by the following part of his discourse, which I do not recollect. He then adverted to the affairs of France, and said, "The yoke of bondage amongst our neighbors seems now to be pretty well

broken, and it is expected the same blessing is awaiting us; when persecution and tyranny shall be no more, when enjoying the liberties of a free people we shall boast of having introduced amongst us that equality our neighbors have acquired." He then immediately, or soon afterwards, rejoined, "To possess such an acquisition, we were to cast off the works of darkness and put on the armor of light."

Do you recollect anything more of the sermon?—There is no other particular passage that I can recollect the words of.

Did you ever take minutes of what you heard?—Immediately on leaving the meeting, with those observations strongly impressed on my mind, I went home to my lodgings, and there made minutes; and I am sure these are the very expressions the defendant used.

Cross-examined by Mr. *Gibbs*.

Pray, Mr. Lyne, how came you to go to the meeting on the evening on which this sermon was preached?—I went with Mr. Darby, in consequence of the rumors which were circulated respecting the former sermon.

You say you went in consequence of certain rumors which had been circulated respecting the former sermon; I would ask you if you believed those rumors?—No; I disbelieved the report.

I believe you are not one of Mr. Winterbotham's congregation?—No, I am not.

Then as you are not in the habit of attending Mr. Winterbotham, and as you disbelieved the reports in circulation respecting the former sermon, I would ask you what were the motives with which you went on that evening?—I went as the friend of Mr. Winterbotham, to take his part, that I might have an opportunity to defend him against the accusations concerning him.

You say you went as the friend of Mr. Winterbotham, that you might have an opportunity to take his

part; that was your motive for going?—Yes; and if I had thought he would have been prosecuted I would not have gone.

Then it was your general Christian philanthropy that led you to the meeting as the friend of Mr. Winterbotham?—Yes, it was my general Christian philanthropy that led me to go there.

As the friend of Mr. Winterbotham, I would ask you, what is your opinion of the whole of the sermon?—I considered the whole of the sermon as totally seditious.

Was there no part of it but what was seditious?—There were many moral and religious sentiments, but the whole, in a chain, was seditious.

Pray how long do you think Mr. Winterbotham was in preaching this sermon?—About three quarters of an hour.

And though you went to the meeting as the *friend* of Mr. Winterbotham, and though Mr. Winterbotham was three quarters of an hour in preaching, you do not recollect any passage in the discourse but what was seditious?—At that time I did not wish to recollect any that were not seditious.

Though you were the *friend* of Mr. Winterbotham, you had no wish to retain any passage in your memory but those you thought seditious?—I endeavored to retain in my mind those which were so strong.

But you don't recollect any other sentence in the whole sermon, but those you have given in evidence?—I can't repeat any other sentence.

In what part of the meeting were you, during the time Mr. Winterbotham was preaching?—I remained in the aisle till he talked upon politics, and then I sat down in a pew.

I think you said, if you had thought Mr. Winterbotham would have been prosecuted you should not have attended; pray how came you then to be an evidence?—When he said he should treat his subject politically, I then determined to

attend to what he said, intending to take part against him if called upon.

Pray in what manner did Mr. Winterbotham begin his sermon?—He gave a moral exposition of the text at first; but I don't remember what he said, neither the words nor the tenor of them.

Then there was nothing seditious in the first part of the sermon?—I really think the first exposition of the text was such as any clergyman might have used in any place of devotion.

But you don't remember anything of this part of the subject which you think was unexceptionable?—I cannot repeat any sentence; I did not endeavor to store in my mind any part of it.

Though you went to the meeting as the friend of Mr. Winterbotham, and for the express purpose of vindicating him from what you conceived to be false accusations, yet you did not endeavor to store in your mind any sentence of that part of the sermon which you conceived to be unexceptionable?—No, I did not.

As you say you cannot repeat any sentence that Mr. Winterbotham uttered besides those you have given in evidence, I'll endeavor to call a few passages to your mind. . . . Do you recollect Mr. Winterbotham's saying, the man who could entertain an idea of equality, either in character or property, was a fool or a madman, and ought to be dealt with as such?—If such arguments had been used, they would appear quite inconsistent; they would appear quite contrary to the drift of the sermon.

Might it not have escaped your notice?—I do not know whether it could or not.

I think Mr. Winterbotham in his sermon insisted on some motives, which ought to induce persons to obey the powers ordained?—I do not know whether he did nor not. . . .

Pray did not Mr. Winterbotham say something in his sermon about

the Africans, about their deliverance from slavery?—I have some faint idea that there was something said about the Africans, but I cannot tell what; I do not recollect anything of the sermon but what I have already proved.

You say you don't recollect anything of the sermon but what you have already proved; I'll endeavor to refresh your memory: I think Mr. Winterbotham, in his sermon, stated the absolute necessity of a chief magistrate, whether dignified with the title of emperor, king, stadtholder, doge, president, or any other?—I do not recollect. . . .

Did you see Mr. Darby at any time afterwards that evening?—Yes, Mr. Darby came to me the same night.

And then I suppose you made minutes?—Mr. Darby did not then see the minutes I had made.

Has he ever seen them since?—Yes, perhaps in the space of ten days after, or it might be a shorter space.

Then you had no communication with Mr. Darby that night about the sermon? you did not say anything to him that you had made minutes of it?—I had no communication about the minutes; I only expressed my resentment to Mr. Darby. . . .

John Darby sworn. Examined by Mr. Fanshawe.

Were you at the meeting in How's—lane, on the 18th of November? Yes; I went there with Mr. Lyne.

Do you remember who preached?—Yes, Mr. Winterbotham preached; the text was 13th Rom., 8th verse.

And what did he say about the text?—He made some observations which I did not attend to, and then said, at this juncture it was necessary to apply it politically; I then paid attention, and Mr. Lyne went into a pew, and sat down, but I remained in the aisle; Mr. Winterbotham then proceeded: "Darkness has long cast her veil over the land; persecution and tyranny have car-

ried universal sway." He then expatiated upon that head, and proceeded: "Magisterial powers have long been a scourge to the liberties and rights of the people; it does not matter by what means these usurped powers are known, whether by king, senate, potentate, or stadtholder, they are in either sense usurped." He then introduced the former part of his text — "the night is far spent, the day is at hand," and followed it up with this observation: "The yoke of bondage amongst our neighbors seems now to be pretty well broken, and it is expected the same blessing is awaiting us, when persecution and tyranny shall be no more; when enjoying the liberties of a free people, we shall boast of having introduced amongst us that equality our neighbors have acquired." I then had occasion to leave the meeting: I afterwards returned, and found the service done, and Mr. Lyne gone.

Are you certain that what you have given in evidence are the defendant's exact words?—I am certain it was the sense, if not the exact words.

Cross-examined by Mr. *East*.

Did you make any minutes of what you heard?—I made no minutes at that time, but have done it since.

Pray was what you have given in evidence connected together in one connected sentence?—These expressions which I have stated did not follow each other immediately.

How long was it before you took the minutes?—The day after I heard the sermon.

When did you see Mr. Lyne's notes?—The next day.

Then the minutes you made were copied from Mr. Lyne's?—Mr. Lyne's minutes recalled the words to my recollection.

How came you by Mr. Lyne's minutes?—I asked him for them; that which I recollected I copied merely for my own satisfaction.

You had no idea then that you should be called on as an evidence?

—At that time I had no idea of a prosecution.

Mr. *Gibbs*. — As you only copied from Mr. Lyne's minutes what you recollected to have been spoken, those words must at the time of their delivery have made a very deep impression on your mind?—I never heard a sermon that struck me so forcibly.

What were the parts that made such an impression?—I do not recollect the particular parts.

I believe there were no particular parts but what you found in Mr. Lyne's minutes?—There was a part of Mr. Lyne's minutes I did not copy, what passed after I left the meeting.

You copied all that was in Mr. Lyne's minutes that was said before you left the meeting?—I did copy all that part.

How long were you at the meeting?—About twenty minutes.

And you take upon you to swear that what you have given in evidence were Mr. Winterbotham's identical words?—I do not say the defendant used the identical words, but only words to that tendency. . . .

Mr. *Gibbs* (arguing for the defense).—A miracle was once stated to have happened relative to the translation of the Septuagint. Seventy old men were put into different cells to translate the Testament, and they all translated it in the same words. It is necessary for the jury to believe that the same kind of a miracle has again happened, if they think that the two witnesses for the crown — one of them a clerk to the collector of excise, the other a midshipman in the navy — could both go to a meeting — hear a sermon preached which lasted three quarters of an hour — come out again, collect a great number of sentences in the sermon — retain them in their memory — and come here nine months afterwards, and repeat them precisely in the same words. This I have not stomach to digest. One of the witnesses took notes of the particular passages, which the other saw

and copied; yet he said he did not speak from them, but from his own recollection of what passed at the time. If that witness spoke from what he copied from the notes of the other, all his evidence is to be left out of the case; and the jury are either to believe the miracle of the Septuagint to be again realized — they are to believe that those two witnesses recollected exactly the same words — and no other; or they must lay out of the case the evidence of the last witness. . . . The witnesses for the prosecution are both young men, the latter at least, not very likely to carry off in his memory such a string of sentences as those he repeated. On the credit of those witnesses, I shall not much trouble the jury.

And yet Mr. Lyne (the first witness) gave such an account that I think he could not well be believed. . . . He told the jury that it was his “general Christian philanthropy” (those were his words) that brought him there, thinking Mr. Winterbotham would not again preach a seditious sermon. . . . And yet he should not recollect a single passage in the whole sermon but what had a contrary tendency? He went there not with a view to accuse, but to defend: his attention then must have been to those points of the sermon which would rather exculpate than accuse Mr. Winterbotham. We generally attend to what we wish, and yet the witness could remember no one passage in the course of the defendant’s sermon, but those which he had given in evidence to criminate him, and which Mr. Darby had echoed back to Mr. Lyne again. This witness has said he did not recollect a single sentence of all those passages in the sermon which I asked him about; but I shall prove that those passages which I questioned the witness to the truth of, were uttered by Mr. Winterbotham, and are to be found in Mr. Winterbotham’s sermon.

The line of defense which I shall

adopt is, that the words used by Mr. Winterbotham are explained by other sentences in the sermon, and that they bear quite a different sense from that stated by the witnesses for the crown, which is inconsistent with the context. . . . It is true that Mr. Winterbotham chose the text which they have mentioned, but he did not confine his discourse to that verse; he went through the whole of the chapter, and the sermon was a running commentary upon it; he explained the former part of the chapter, which breathed nothing but loyalty, and a proper subordination to government, and he particularly stated “that every soul was to be subject to the higher powers — that the powers that be are ordained of God”; yet of this the witness does not remember a single passage. . . . Mr. Lyne said he could recollect nothing in the sermon that recommended obedience to the civil magistrates, nothing of subordination, when every passage of the chapter was explained. And yet he went as the friend of Mr. Winterbotham! He could not recollect that the defendant said, the magistrate was the minister of God for good; that the good was mentioned, or that he mentioned any motives for obeying the magistrate! He had no recollection that the former words of the text were commented upon. . . . The general scheme of this sermon, I contend, was that we were to obey the rulers that were set over us for good; and that this was the duty of Christians. . . . He stated, that the power of government could only be exercised by a chief magistrate, whether emperor, king, stadtholder, doge, president, or any other; and those are the words which the witnesses for the crown have so misunderstood, and who supposed the following were the words: “Magisterial powers have long been a scourge to the liberties and rights of the people; it does not matter by what names these usurped powers

are known, whether by king, senate, potentate, or stadtholder, they are in either sense usurped." . . . The witnesses I shall call are used to attend to the sermons of Mr. Winterbotham; I doubt not but their testimony will gain credit with candid, disinterested, and impartial men. . . .

Mrs. *Jane Pearce* was sworn. Examined by Mr. *East*.

Were you at the meeting in How's lane on the 18th of November last? — Yes, I was.

Were you there when Mr. Winterbotham preached this sermon? — I was.

Were you there the whole time? — Yes; and paid attention to the sermon.

I would ask you then — did Mr. Winterbotham utter the words laid in the first count? — No, he did not; nor anything like them; he said nothing about darkness having cast her veil over the land, or that magisterial powers were usurped. . . .

Then Mr. Winterbotham did not say magisterial powers had long been a scourge to the liberties and rights of the people? — No, he said "they were a terror to evildoers," but not to others; he on the contrary said they were the ministers of God for good.

Do you recollect Mr. Winterbotham's saying anything about the titles and dignities by which magistrates are known or distinguished? — He said there must be a chief magistrate, whether dignified with the title of emperor, king, stadtholder, doge, president, or any other.

He said there must be a chief magistrate, did he? — He did, under whatever form government was administered.

Then he did not say that magisterial powers were usurped? — If he had said they were usurped, it would have made nonsense of what he said before — on the contrary, he said they were God's ministers. . . .

Cross-examined by Mr. Sergeant *Rooke*.

Pray how comes this sermon to be so very fresh in your memory? — Because the very next day after it was preached, I heard persons had said it was seditious.

Did you ever see the sermon? — Yes, three or four days after it was preached.

Who showed it to you? — It was lying in the parlor and I perused it.

Mr. *William Pearce* sworn. Examined by Mr. *Dampier*.

Were you at the meeting in How's lane on the evening of the 18th of November last? — I was.

Did Mr. Winterbotham preach that evening? — He did.

Did you hear the whole of the sermon? — I did, and heard distinctly.

Did Mr. Winterbotham utter the words laid in the first count? — No, he did not.

Did the defendant say anything about magisterial power? — There was some part of his sermon about magisterial powers; he said they were of God, and to be obeyed.

Then Mr. Winterbotham did not say they were a scourge to the liberties and rights of the people — did he? — No, he did not; he said, "magisterial powers were a terror to evildoers, and a protection to the good." . . .

Did the defendant utter the words in the second count? — No, he said nothing similar or tending that way. I attended the mayor of Plymouth a few days after the sermon was preached, and was astonished at the time to hear of such a charge against him. . . .

Had the sermon any seditious tendency? — The whole sermon was as contrary to sedition as light differs from darkness. . . .

Cross-examined by Mr. Sergeant *Lawrence*.

Pray Mr. Pearce, how can you be so particular in remembering this discourse? — . . . I heard of Mr. Lyne's intention to prosecute, and therefore called up my recollection, and made minutes of it. . . .

witness for the prosecution was Anne M'Garahan, the supposed victim of the defendant; and upon her cross-examination by Mr. Daniel O'Connell, the following passages took place:]

Mr. O'Connell: "Did you ever take a false oath about the business?" Witness: "Not that I recollect."

Mr. O'Connell: "Great God, is that a thing you could have forgotten?" Witness: "I believe I did not. I am sure I did not."

Mr. O'Connell: "Oh, I see I have wound you up. Perhaps, then, you will tell me now, did you ever swear it was false?" Witness: "I never took an oath that the charge against Mr. Maguire was false. I might have said it, but I never did swear it." . . .

Mr. O'Connell: "Did you ever say that your family was offered £500 or £600 for prosecuting Mr. Maguire?" Witness: "I don't recollect." . . .

Mr. O'Connell: "Did you ever say that you would get £600 for prosecuting him?" Witness: "I never did."

Mr. O'Connell: "Or write it?" Witness: "Never."

Mr. O'Connell: "Is that your handwriting?" here a letter was handed to her. Witness: "It is."

Mr. O'Connell: "And yet you never wrote such a letter!" The letter read in part: "Dear Mr. Maguire, . . . I am the innocent cause of your present persecution. . . . Is there a magistrate in this county you can safely rely upon? If there is, let him call here, as it were on a journey to feed his horse; let him have a strong affidavit of your innocence in his pocket; let me in the meanwhile know his name, that I may have a look out for him, and while his horse is feeding, I will slip downstairs and swear to the contents; I have already sworn to the same effect, but not before a magistrate. . . . £600 have been offered our family to prosecute you, but money shall never corrupt my heart." Witness: "I did not think when you were questioning me that you were alluding to this letter. I could not have supposed Mr. Maguire would have been so base as ever to have produced this letter, after swearing three solemn oaths that he would not. If I thought he would, I should have certainly told my counsel about it."

After further questioning, "the witness seemed overcome; and she turned to the defendant, exclaiming, 'Oh, you villain! you villain!'"

317. PARNELL COMMISSION'S PROCEEDINGS. (1888. 54th day, Times' Rep., pt. 14, pp. 194, 195.)

[This was virtually an action by Mr. Parnell and others, against the London "Times," for defamation, in charging among other things that Mr. Parnell had approved the Phoenix Park assassination; this charge was based on alleged letters of Mr. Parnell, plainly admitting complicity, sold to the "Times" by one Richard Pigott, an Irish editor, living in part by blackmail, who claimed to have procured them from other Irishmen. Pigott himself turned out to have forged them; but the case for their authenticity

seemed sound, until Pigott was placed on the stand for "The Times" and came under the cross-examination of Sir Charles Russell. The object of the ensuing part of the cross-examination was to bring out Pigott's shiftiness in first selling the letters as genuine to the "Times," and then offering to the Parnell party for money to enable them to disprove the letters' genuineness. The letters had been first published in a series of articles entitled "Parnellism and Crime," beginning March 7, 1887, and bringing temporary obloquy

to the Parnell party and causing the passing of the Coercion Act. Archbishop Walsh, mentioned in the examination, was an intimate friend of Mr. Parnell. Pigott, in his prior examination, had claimed that he had handed the letters to the "Times" merely for the latter's protection, to substantiate the articles, and that the publication of the letters "came upon me by surprise"; the falsehoods exposed in the following answers were in a sense partly immaterial, but they served all the more to show the man's thoroughly false character.]

Q. You were aware of the intended publication of that correspondence? A. No, I was not at all aware.

Q. What? A. Certainly not. . . .

Q. You have already said that you were aware, although you did not know they were to appear in the "Times," that there were grave charges to be made against Mr. Parnell and the leading members of the Land League? A. I was not aware till the publication actually commenced.

Q. Do you swear that? A. I do.

Q. No mistake about that? A. No.

Q. Is that your letter (produced)? Don't trouble to read it. A. Yes; I have no doubt about it.

Q. My Lords, that is from Anderton's Hotel, and is addressed by the witness to Dr. Walsh, Archbishop of Dublin. The date, my Lords, is March 4, 1887, three days before the first appearance of the first series of articles known as "Parnellism and Crime." (Reading.) "Private and confidential. My Lord, — The importance of the matter about which I write will doubtless excuse this intrusion on your attention. Briefly, I wish to say that *I have been made aware of the details of certain proceedings that are in preparation* with the object of destroying the influence of the Parnellite party in Parliament." (To

witness.) What were these certain proceedings that were in preparation? A. I do not recollect.

Q. Turn to my Lords, Sir, and repeat that answer. A. I do not recollect.

Q. Do you swear that, writing on the 4th of March and stating that you had been made aware of the details of certain proceedings that were in preparation with the object of destroying the influence of the Parnellite party in Parliament less than two years ago, you do not know what that referred to? A. I do not know really.

Q. May I suggest? A. Yes. . . .

Q. Did that passage refer to these letters, among other things? A. No, I rather fancy *it had reference to the forthcoming articles.*

Q. I thought you told us you did not know anything about the forthcoming articles? A. Yes, I did. I find now that I am mistaken, but I must have heard something about them.

Q. Try and not make the same mistake again, if you please. (Reading.) "I cannot enter more fully into details than to state that the proceedings referred to consist in the publication of certain statements, purporting to prove the complicity of Mr. Parnell himself and some of his supporters with murders and outrages in Ireland, to be followed in all probability by the institution of criminal proceedings against these parties by the government." Who told you that? A. I have no idea.

Q. Did that refer, among others, to the incriminatory letters? A. I do not recollect that it did.

Q. Do you swear it did not? A. I will not swear it did not.

Q. Do you think it did? A. No.

Q. Very well; *did you think that these letters, if genuine, would prove, or would not prove, Mr. Parnell's complicity with crime?* A. I thought they were very likely to prove it.

Q. Now, reminding you of that opinion, and the same with Mr.

Eagan, I ask you whether you did not intend to refer—I do not suggest solely, but among other things—to the letters as being the matter which would prove, or purport to prove, complicity? A. Yes, I may have had that in mind.

Q. You can hardly doubt that you had that in your mind? A. I suppose I must have had.

Q. (Reading.) “Your Grace may be assured that I speak with full knowledge and am in a position to prove beyond all doubt or question the truth of what I say. “Was that true? A. It could hardly have been true.

Q. Then you wrote that which was false? A. I did not suppose his Lordship would give any strength to what I said. I do not think it was warranted by what I knew.

Q. Did you make an untrue statement in order to add strength to what you had said? A. Yes.

Q. A designedly untrue statement, was it? A. Not designedly.

Q. Try and keep your voice up. A. I say, not designedly.

Q. Accidentally? A. Perhaps so.

Q. *Do you believe these letters to be genuine?* A. I do.

Q. And did at that time? A. Yes.

Q. (Reading.) “And I may further assure your Grace that *I am also able to point out how the designs may be successfully combated and finally defeated.*” (To witness.) Now if these documents were genuine documents, and you believed them to be such, how were you able to assure his Grace that you were able to point out how the designs might be successfully combated and finally defeated? A. Well, as I say, I had not the letters actually in my mind at that time, so far as I can remember. I do not recollect that letter at all.

Q. You told me a moment ago without hesitation that you had both in your mind? A. But, as I say, it had completely faded out of my memory.

Q. That I can understand. A. I have not the slightest idea of what I referred to.

Q. Assuming the letters to be genuine, what were the means by which you were able to assure his Grace you could point out how the designs might be successfully combated and finally defeated? A. I do not know.

Q. Oh, you must think, Mr. Pigott, please. It is not two years ago, you know. Mr. Pigott, had you qualms of conscience at this time, and were you afraid of the consequences of what you had done? A. Not at all.

Q. Then what did you mean? A. I cannot tell you at all.

Q. Try. A. I cannot.

Q. Try. A. I really cannot.

Q. Try. A. It is no use.

Q. Am I to take it, then, that the answer to my Lords is that you cannot give any explanation? A. I really cannot. . . .

Q. Now you knew these impending charges were serious? A. Yes.

Q. Did you believe them to be true? A. I cannot tell you whether I did or not, because, as I say, I do not recollect. . . .

Q. First of all, you knew then that you had procured and paid for a number of letters? A. Yes.

Q. Which, if genuine, you have already told me would gravely implicate the parties from whom they were supposed to come? A. Yes, gravely implicate.

Q. You regard that as a serious charge? A. Yes.

Q. Did you believe that charge to be true or false? A. *I believed that to be true.* . . .

Q. Now I will read you this passage: “P.S. I need hardly add that *did I consider the parties really guilty of the things charged against them, I should not dream of suggesting that your Grace should take part in an effort to shield them.* I only wish to impress on your Grace that the evidence is apparently convincing, and would probably be suffi-

cient to secure conviction if submitted to an English jury." What have you to say to that? *A.* I say nothing, except that I am sure I could not have had the letters in my mind when I said that, because I do not think the letters convey a sufficiently serious charge to warrant my writing that letter.

Q. But as far as you have yet told us the letters constituted the only part of the charge with which you had anything to do? *A.* Yes, that is why I say that I must have had something else in my mind which I cannot recollect. I must have had some other charges in my mind.

Q. Can you suggest anything that you had in your mind except the letters? *A.* No, I cannot. . . .

[On the next day, when Pigott resumed his examination:]

Q. Then I may take it that since last night you have removed from your mind — I think your bosom was the expression you used — that this communication of yours [to the Archbishop] referred to some fearful charge, something not yet mentioned? *A.* No, I told you so last night, but I am sure that it is not so. I will tell you my reason.

Q. You need not trouble yourself. *A.* I may say at once that *the statements I made to the Archbishop were entirely unfounded.* . . .

Q. Then in the letters I have up to this time read — or some of them — you deliberately sat down and wrote lies? *A.* Well, they were exaggerations; I would not say they were lies.

Q. Was the exaggeration such as that it left no truth? *A.* I think very little.

318. NETHERCLIFT'S CASE. (*C. AINSWORTH MITCHELL. Science and the Criminal. 1911. p. 88.*)

. . . Netherclift, who was the chief expert in the days when Lord Brampton was at the bar, had such faith in his methods that finally he came to believe that he could never make a mistake. This belief received an amusing check in a case in which he was under cross-examination by Lord Brampton (then Mr. Hawkins). Netherclift had claimed that his system gave infallible results, and had further stated that his son, whom he had trained, made use of the same system. "Then," said the wily advocate, "your son working on your system is as good as you are?" — "Yes," replied the

(*C. AINSWORTH MITCHELL. Science*

father with some pride in his voice, "he is." — "That is to say, he, too, is infallible?" — "Yes," again replied the witness. — "Well, now, Mr. Netherclift, was there ever a case in which you and your son appeared on opposite sides?" — Netherclift tried to evade the question, which, he complained, was an unfair one, but on being pressed was forced to admit that on a certain occasion he had given evidence on one side and his son upon the other. Swift came the unanswerable retort, "How comes it then that two infallibles appeared on opposite sides?"

319. CHRISTOPHER RUPPRECHT'S CASE. (*ANSELM VON FEUERBACH. Remarkable German Criminal Trials. transl. Gordon. 1846, p. 116.*)

[The facts of the assault on Rupprecht are set forth in No. 159, *ante.*] Something, it was hoped, would be learned from the wounded man himself when he should have recovered consciousness. On the

evening of the following day, the 8th of February, the judge and two other officers of the court visited him. . . . The judge asked him the following questions, which were thus answered by the wounded man:

"Who struck you the blow?" — "Schmidt." "What Schmidt?" — "Woodcutter." "Where does he live?" — "In the Most." "With what did he strike you?" — "Hatchet." "How did you recognize him?" — "By his voice." . . .

The first though not the sole object of the judge now was to discover the Schmidt of whom Rupprecht was thinking. But in this town, as everywhere else, there were a vast number of people called Schmidt, several of whom were woodcutters. Three of these especially engaged the attention of the court. The first was a certain Abraham Schmidt, who lived in the Hohes Pflaster. The second was one John Gabriel Schmidt, commonly known as "big Schmidt," who lived in a street called the Walch. The third was big Schmidt's half-brother, distinguished from him by the name of "little Schmidt." . . . As equal suspicion attached to the three Schmidts above named, Abraham, as well as the big and the little Schmidt, were arrested that evening. . . . Abraham Schmidt behaved far differently: when asked whether he knew the man in bed, he at first answered, "I do not know him," but immediately added, "That is Mr. Rupprecht, I know him well; what is the matter with him?" When asked why he at first said he did not know him, he answered, "Because that is Mr. Rupprecht." He was then desired to give a proper answer, but only exclaimed, "I can give no answer; I did not do it; ah! good Lord! I did not do it; I am not the man; as I hope for mercy, I am innocent. I am a poor woodcutter. You may ask my neighbors, my wife, and my mother. On Friday night I was cutting pegs at the house of my mother-in-law till eleven o'clock, and on Saturday and Sunday I was at home." On being asked at what hour he had gone home on Friday night, he said, "I stayed until past nine with my mother-in-

law." When the manifest contradiction in his statement was pointed out to him, he only repeated, "From nine to eleven." . . .

Meanwhile suspicion strengthened against Abraham Schmidt. The police handed the hatchets belonging to the three suspected men into court and that of Abraham Schmidt was spotted apparently with blood. . . . He asserted that he was perfectly innocent of the murder of Rupprecht, whom he had neither known or seen. Hereupon he was reminded that when the wounded man was shown to him, he had at first said that he did not know him, but had immediately after recognized him as Rupprecht: how was this? He then replied, "I do not know why I said that, and I said it was Rupprecht directly, but I never saw him in my life before!" He was asked how then he had recognized him, and answered that "every one was talking of the murder, and that he had heard of it at the public house." Whenever he was questioned as to where he was on Friday evening at the time of the murder, he invariably involved himself in contradictions. The judge questioned him as follows: "Where were you last Friday?" — "I went to the house of my mother-in-law at nine o'clock in the morning, to help her cut pegs. I dined with her, and did not leave her house till nine o'clock at night, when I took my little boy home, went to bed directly, and did not get up again until seven o'clock Saturday morning." "When did your wife leave her mother's house?" — "At ten o'clock." "Why did you not go together?" — "Because she was still at work, and as the boy would not go to sleep, she asked me to take him home, which I did." "At what o'clock then did you go home on Friday?" — "At nine o'clock." "Yesterday you said it was at eleven; how is that?" — After some hesitation, "I don't know what you want of me; I went home with my wife

at eleven." "Just now you asserted that you went home at nine?" — "All my neighbors can testify that I always come home at nine." — "That answer will not suffice; first you say nine, and then eleven: which is the truth?" — "At nine o'clock with my wife and child. No, my wife stayed a little longer with her mother." "Who took the child home?" — "I took him home with me at nine o'clock." "When did your wife come home?" — "After ten o'clock." "How do you know that?" — "Because she always comes home at that time; I was asleep when she came, and can't tell exactly when it was. I did not wake, though I sleep in the same bed with her and the child." "Have you a key of the house?" — "Yes, but my mother has got it." "How then did your wife get in?" — "My wife took the key with her." "You said at first that your mother had the key the whole night through?" — "Yes, it lay upon the table." "Then your wife could not have used it to let herself into the house?" — "So I said, for my wife went home with me and put the boy to bed, and then she took the house-door key and went back to her mother." "How long did she stay there?" — "Till eleven." "You said before that she came home at ten?" — "I was asleep, I can't tell whether it was ten or eleven when she came home." . . .

[But Abraham Schmidt, nevertheless, was quite innocent.] The evidence of one Anna Keinitz, an

old woman of seventy-eight, proved that on the eighth of February Abraham Schmidt was in all probability ignorant of the murder committed on the previous evening. . . . His strange conduct in the presence of the dying man, and his contradictory statements, were thus accounted for. According to his mother's testimony, he was hard of hearing, timid, and awkward. The smallest trifle made him lose all presence of mind, and he was often so confused as to say the very opposite of what he meant about things the most familiar to him. "I believe," said the magistrate of his district, "that there is not any one in my whole district who is so blundering. For instance, he seldom calls any one by his right name; and when he does not understand what is said to him, or cannot express his meaning, he is apt to be angry." . . . The contrary statements which he made concerning many important details, were manifestly the result of the prisoner's habitual confusion of ideas and defective memory. His recognition of Rupprecht, joined to his declaration that he did not know him, would have appeared perfectly consistent had he possessed the power of expressing himself intelligibly; without ever seeing Rupprecht he must have guessed that the wounded man lying before him could have been none other than the Rupprecht whose accident was in every one's mouth.

320. FRANCIS WILLIS' TRIAL. (1710. HOWELL'S *State Trials*. XV, 618.)

[The defendant was charged with riot and sedition. The rioters pulled down meeting-houses and made bonfires of them. The leader was seen jumping hilariously about the bonfire. He was said to have worn a footman's dress with green coat and brass buttons, and was waving a flag made out of a curtain. The

accused's mistress testified that she had sent him out merely to find where the fire was, after it started. The principal witness for the prosecution was one Grove.] . . . Then *William Grove* was sworn.

Atty.-Gen. — Pray, acquaint my lord, and the jury, whether you saw the prisoner the first of March last.

— I never saw him till that night I saw him with a long pole and a curtain upon it, and he cried out, A High-Church standard! He stopped several coaches, and got money from them, and made them cry, High-Church. But to swear that this is the man, I cannot.

How many were there together? — Five or six hundred.

Was there anything like colors before them? — Yes, there was a curtain, and he that carried it, cried, High-Church standard! He stopped many coaches, and got money from them, and made them cry, High-Church!

Sol.-Gen. — Whence did he bring it? — From Mr. Bradbury's meeting, in Fetter-lane.

Did he carry it nowhere else? — I saw it nowhere but at the fire at Holborn.

Was there any fire in Hatton-garden? — Yes, there were three.

What were they made of? — Of the materials of Mr. Taylor's meetinghouse.

Do you know of any others that were pulled down? — Yes, Mr. Burgess's.

Do you know of any others? — I have heard of others, but do not know them.

Atty.-Gen. — After Willis was taken, you went to Newgate; now give an account, did you make any particular observations at the time you saw the man display the banner? Did you take any notice of him? — Yes.

What did you take notice of him? — I took such notice, that I thought I should know him again.

Now, did you go to Newgate to see him? — Yes; but the place was dark, and his clothes and wig were altered.

What did you think of the man you saw in Newgate? — I did think it was the same man.

Now look at him, and see whether this is the same you saw in Newgate? — His clothes were so much altered, that I cannot tell.

Tell us, is that man the same? — I never saw him but that night, and in Newgate; and it was so dark, that I cannot say this is the man.

Sol.-Gen. — Do you remember what clothes he had? — I cannot tell whether they were blue or green.

Were there more that flourished colors; more than one? — I saw but one.

Mr. Darnell [for the defense]. — Pray, at the time you saw that banner displayed, was there any other fire in Hatton-garden? — No; I believe this was made first; and then the mob said, they would go to Mr. Taylor's.

What time was it that the fire was in Holborn? — About ten.

What time was that in Hatton-garden? — About eleven.

You say this curtain was brought out of Fetter-lane meeting. How do you know? Did you see it brought out of the meeting? — No; but I saw it brought out of the lane, and the people said it came from thence.

Do you remember what colored coat he had on? — I cannot tell; it was either blue or green.

Do you remember what sort of hat he had on? — No.

Was it a laced hat, or a plain one? — I cannot tell indeed.

You say you looked hard at him? — Yes; but I never minded his hat.

Sol.-Gen. — You heard people say, the curtain was taken out of Mr. Bradbury's meeting; who were they that said so? The people that were concerned in the fire, or them that stood by? — Them that stood by, as I might.

L. C. Baron. — You say you went to Newgate shortly after this, to see this man? — Yes, my lord.

And the man that you saw there, do you believe, or do you not, to be the prisoner at the bar? — Yes, I do believe it was.

Mr. Darnell. — Are you positive this is the man? — No, I am not.

L. C. J. — When you went to Newgate, the man that you saw

there, did you believe him to be the person that you saw displaying the colors? — Yes, I did.

How long was that after you saw him at the fire? — About ten days.

L. C. Baron. — Pray, what makes you less knowing, or believing, now, than you was then? — My lord, his clothes are altered, and he has another wig on.

Mr. Darnell. — Pray tell us any one thing you had, to know this man by? — No other instance, but that he flourished the colors.

Do you know the color of his coat? — I believe it was blue.

Are you sure it was not green? — I am not sure.

When you saw him in Newgate, what did you know him by? — By his features, I thought he was the same man.

Pray describe any one feature you knew him by.

L. C. J. — It is difficult to describe a man's face, and so it is to describe his hand. If you were asked how you knew a man's hand, it would be difficult for you to describe it; and so if you were asked, how you know any man's face in court, unless there was something very particular in his face: and yet there is something in the composition of a face, by which it is known, which none perhaps but a painter can describe.

Sol.-Gen. — You say he is altered from what he was in Newgate? Has he not the same clothes on? — He has quite another dress, and another wig; he had blue clothes on there.

And you say, you believed the man that had the colors, had blue clothes? — Yes, indeed I take them to be blue; but cannot be positive whether they were blue or green.

You have spoken about this matter already, on your examination, you have formerly considered it coolly, you ought to consider what you have said before, and to recollect yourself. The man you saw in

Newgate, what coat had he on? — He had blue.

I ask you, whether the man that flourished the colors had blue? — It was blue or green.

Which of the two do you believe it to be? — Indeed I cannot well tell.

The man in Newgate; what kind of wig had he? — A wig that fell more off from his face.

What sort of wig had the man with the colors? Was it that kind of a wig which the man had in Newgate? — I think it was not.

Do you believe this man to be him that you saw in Newgate? — Indeed I cannot believe him to be the same.

Pray who brought that man to you? — It was Mr. Hill, the keeper.

Is he here? Let him be called.

Then Mr. *Hill* was sworn.

Atty.-Gen. — Do you remember Mr. Grove's coming to see the prisoner in Newgate? — I never saw anybody come while I was there.

Do you remember that he came to see any of the prisoners? *Grove.* — Justice Blackerby's clerk came with me, and we had a quartern of brandy.

Hill. — I did not remember him before, but I remember Justice Blackerby's clerk came, and somebody with him.

Sol.-Gen. — Who did you show him? — The prisoner at the bar.

What dress was he in then? Do you remember? *Hill.* — No.

Did you carry him to any other but the prisoner? — No; there were others upon the stairs, but they were women.

Was there any other prisoner? — No.

And is this the man? — Yes.

L. C. J. — Do you remember what clothes he had when he first came to Newgate; or at any time after? — I do not know any but them he has on; I was not in the way when he came in.

Mr. Darnell. — Did you go up with that man? — Yes.

Did you go into the room where the prison was? — I went to the grates.

Atty.-Gen. — When I asked you at first whether he was at Newgate, you could not remember till he refreshed your memory with a quarter of brandy.

L. C. J. — Are you sure you showed him the prisoner at the bar? — Yes.

Did you show him any other? — No. . . .

Then *Robert Cubwidge* was sworn.

Sol.-Gen. — Do you know Mr. Grove? — Yes.

Do you remember you went with him to see a prisoner? — Yes.

What prisoner did you see there? — The prisoner at the bar.

Did you see any other prisoner but him? — No; we saw Dammaree and Purchase below, but no other above.

What clothes had he on then? — He had a blue livery on. . . .

Then *Stephen Fletcher* was sworn [for the defense].

Mr. Darnell. — Had you any discourse with Grove after he had seen the prisoner in Newgate? — When he came from Newgate on Good-Friday at night, and had been to see the prisoner, I asked him what he said to him? Nothing, says he; for he was not the man that carried the curtain; for the man that carried the curtain had a green coat and brass buttons.

Atty.-Gen. — Are you an acquaintance of Grove's? — Yes; I lived in the same house.

Was it Good-Friday at night, after he had been at Newgate, that he told you this? — Yes.

Did you ask him any questions about the prisoner; or did he tell you of himself? — He told me he had been at Newgate to see Mrs. Miles's man; I asked if he said anything? He said no; that is not the young man that I saw with the curtain.

Mr. Darnell. — The account I have of Grove, is, that he was a

tradesman, and broke, and now lives by gaming.

L. C. J. — If you have anything to examine to his reputation, you will do well to call your witnesses to it. Grove, what do you say to this? *Grove.* — When I came from Newgate, I thought it was the man; and I told him no such thing; I told everybody I spoke with, that I believed it was the man.

L. C. J. — Did you tell him that you believed the man that had the curtain was in a green coat? — No, not that night.

Mr. Darnell. — Did you tell him so at any time? — Yes; but that was the Wednesday night; but when I went to Newgate, he had a blue coat; but I always believed him to be the same man.

L. C. J. — Did he tell you he had a green coat on that night he had been at Newgate, or before? — *Fletcher.* — It was before.

L. C. J. — I understood you, that when he came back from Newgate, he told you he had nothing to say to this man, for that the man that had the curtain had a green coat and brass buttons? — He said he could not be positive, for that man had a green coat and brass buttons.

Did he tell you that night that he had a green coat and brass buttons? — I cannot tell whether it was that night.

Mr. Darnell. — You say, once he told you he had a green coat and brass buttons; what did he say when he came from Newgate? — He said he could not be positive, for that he had a blue coat on.

Just. Tracy. — Did you, after you came from Newgate, say, you could not be positive he was the man? *Grove.* — I did tell him I could not be positive.

Mr. Thomson. — Did you tell him you believed him to be the man? *Grove.* — Yes; I said I did believe it, but I would not swear it was he. . . .

Mr. Darnell. — My lord, we will

not trouble your lordship with any more witnesses; we hope we have well accounted for the time he was out of his mistress's house, for that seems to be all that sticks upon him, that his being out so long might give room for him to be concerned in this tumult. But by the witnesses it appears, that the curiosity of seeing a mob, which he had never seen before, might take up some part of his time; and the two fires being so near, that he could not go from one, without seeing the other, engaged him to go to them both. There was a friend too that met him, with whom he walked up and down the street an hour; but we think it shows that he was not a ringleader, or aiding or assisting in pulling down the meetinghouses. . . .

But upon the main question, we must humbly insist, that there is no evidence to fix it upon the prisoner. There are not two witnesses to any overt act for the same treason, nor do those witnesses ascertain it to be the prisoner; for now it appears a little plainer, that his first charge was against a footman in a green livery; he declared it was a footman in green with brass buttons; and when he came to Newgate to see this man, he believes him to be the same man; that is the most of his evidence; but when he came home then to his companion, that he lived in the house with, he believed it was not the same man, and he could not swear it was the same man, because he had a blue coat; and now he would carry his belief so far as to believe, that he then had a blue coat, with black buttons; and surely, nobody could mistake a blue coat with black buttons, for a green coat with brass buttons; whatever may be supposed of the color of blue by firelight, altering by that light towards a green, yet it cannot turn black buttons into brass ones. . . .

Attorney-General. — My lord, we think the proof is sufficient; and notwithstanding anything that has been said by the counsel for the

defendant, it stands unimpeached, and it is clear, that the prisoner is guilty of this treason. . . . Mr. Darnell does not deny but that, in point of law, all those people that were gathered together, to execute this design, are equally guilty of high treason: so that the question is only, whether this prisoner was one of those people that were gathered together? That which he insists upon is, that though this man was there, yet no proof is made that he was aiding towards the carrying on this design; therefore we think what our witnesses say is consistent, and not impeached by what was said of the other side.

The first witness that we called, though he was not acquainted with the prisoner, yet he says, there was a man in a blue livery, that was so remarkable in leading the mob, with a curtain on a pole, that he could not but take notice of it; and that when he went to Newgate, to see the prisoner, he took him to be the same man that carried the colors; and though he cannot be so positive as to swear directly, yet he now believes it is the same man, though he cannot be positive. I am sure I should be very far from pressing anything further than the nature of the evidence will bear: therefore I hope I do not misrepeat what he says. Therefore it leaves it somewhat uncertain, yet, whether the prisoner at the bar was the man that carried those colors? But that which puts this out of dispute, and makes it clear that this is the man, is Lunt's evidence. . . . As to what they insist on, that they have called witnesses to invalidate the testimony of Grove, that he made some mistake about the color of his clothes, that is no great matter to be relied on; for blue and green, by candlelight, are pretty much of the same cast, especially at a transient view; but you see the view he had was sufficient to know his face, but the light of the fire occasioned

another cast upon his clothes, therefore his thinking it to be green when it was blue, will make no difference: and though he does not speak positively, but speaks with caution, and not as a man would do, that was prejudiced, and came to take away a man's life: though he says he cannot positively say this is the man, yet he says he does really think it is. . . .

L. C. J.—Gentlemen of the Jury, Francis Willis, the prisoner at the bar, stands indicted before you, for that he, upon the first day of March last, with a great number of others, did levy public war against her majesty. . . . You are to consider what is proved on him that he did. You observe what is objected as to Grove, that there is a great uncertainty as to his evidence, and that his credit is not fair. He does not charge the prisoner positively, nor ever did. He differed as to the color of his clothes. And though it is rightly observed, that blue and green are not easily distinguished

by the light of the fire, yet that is not the objection; the objection is, that the witness at first declared, he believed it to be green, and now he has told you, that he believes it to be blue, and that is not consistent, and does therefore a little concern his credit in this matter, that he has changed his evidence. . . . If you believe Willis was the person that did make use of these colors, and that he was assisting in pulling down the meetinghouse in Hatton-garden, then you are to find him guilty. If you think he was not the person, you will acquit him.

Then the Jury withdrew, and the court adjourned till five o'clock, when the Jury brought in their verdict.

Cl. of Arr.—Francis Willis, hold up thy hand. Look upon the prisoner. How say you? Is he guilty of the high treason whereof he stands indicted, or not guilty?
Foreman.—Not guilty.

Cl. of Arr.—Did he fly for it? —
Foreman.—Not that we know of.

321. **LOUCKS v. PADEN.** (1895. APPELLATE COURT OF ILLINOIS. 63 Ill. App. 545.) . . .

This was a bill in chancery filed by appellant, in which she alleged that she and one Margaret A. Tinnin, from about the year 1886 to January, 1892, were partners, engaged in selling notions and small articles in the city of St. Louis, Mo.; that they were both deaf mutes; that they accumulated a partnership fund which they kept in money, at their room at 300 South Broadway, St. Louis, in a trunk belonging to said Margaret A. Tinnin, because her trunk was stronger and more secure in its fastenings than the trunk of appellant, that the money in said trunk was the joint earnings of appellant and said Tinnin. That in February, 1892, said Margaret A. Tinnin, who had for two years previous been in poor health, was taken seriously ill and was removed by

her friends to Litchfield, Illinois; that appellant also went to Litchfield to assist in the care of said Tinnin; that the said trunk of Margaret A. Tinnin containing the partnership moneys therein was taken to Litchfield, and that said joint earnings and partnership money amounted to \$1400, being the accumulation of six years' partnership business; that appellant and said Tinnin frequently conversed about said money in the sign language; that the money was to be equally divided; that appellant would have to receive \$700. That said Margaret A. Tinnin died intestate March 7, 1892, leaving certain heirs named in the bill; that Robert N. Paden was, on March 9, 1892, appointed administrator of her estate by the County Court of Montgomery County, Illinois; that

he took possession of said trunk including the said \$1400; that appellant applied to said administrator for her one half of said money, but he refused to give it to her, claiming that the money was the exclusive property of said Tinnin, and will distribute same to the legal heirs of said Tinnin. Payer of bill is to have said money decreed to be partnership property, and said administrator be ordered to deliver one half thereof to the complainant. The defendants answered denying the alleged partnership and claiming all the money belonged to Margaret Tinnin. The cause was referred to the master, to take and report the proof, and was submitted to the court upon the testimony taken before and reported by the master, and upon the deposition of witnesses taken in St. Louis. The Court found the complainant had not supported her case by the proof, and dismissed the bill, from which decision she appealed to this Court.

W. A. Howett and Amos C. Miller, attorneys for appellant.

R. McWilliams and James M. Truitt, attorneys for appellees.

OPINION, PER CURIAM. — Only questions of facts arise herein. They are stated by counsel for appellee to be — First. — Were the complainant and said Maggie Tinnin partners? Second. — If they were partners, is the money in dispute partnership funds? . . .

Patrick Coughlin testified substantially as follows: "I am forty-five years old; live at 1248 Carr Street, St. Louis; got acquainted with Maggie Tinnin and Mary Loucks about eleven years ago at 1236 N. Broadway, wholesale supply house; they came to my house to buy laces, with a note from the house of Rice, Stix & Co., telling me what they wanted; they both came together. Maggie's health was delicate from the first day I saw her. They were both deaf mutes. I communicated with them in writing; Mary Loucks would buy

the goods and Maggie would pay the bill; Maggie would sit in the coolest place we could get, and the goods would be brought to her and she and Mary would examine them and when satisfied they would go into the pile of things they wanted to buy. Maggie told me they were partners. Many a day Maggie would come to the house alone to buy goods, and when I asked her where her partner was, she would tell me in such and such a place; then she used to come and buy goods and would ship them to Mary in different parts of Missouri, and she would remain here. I would get letters from them ordering so much goods, and the goods were always shipped to Mary Loucks. The letters were always written and signed by Mary Loucks; the returns were sent by Mary Loucks. All that Maggie Tinnin told me was they were partners. About eight years ago the express drove to the door with a trunk with Mary Loucks' name on it; after a while Maggie and Mary came in; they said they were going to buy a nice bill of goods; they went off together, and when they came back Maggie was fainty; Maggie told me that she had lost \$800 and could not buy any goods; I told Maggie, "You can have all the goods you want." They bought \$50 or \$60 worth of goods. I asked both in writing who I should charge them to and they both said charge the goods to both of them; they sent me the money from some place in Illinois; this was eight years ago; they continued to buy goods of me until about three years ago; they would buy \$35 and \$40 worth of laces every week. Every time Maggie came in I would say, "Where is your partner?" she would write down where she was then. It was Maggie who told me she lost the \$800. It was out in the paper for a week and a reward offered; she said she carried it in her bosom. When I asked who the goods should

he charged to, Maggie said they were equal partners. Maggie was the general manager in buying and Mary in selling.

Andrew Eichoff, who was in the employ of the Standard Hosiery Mills in St. Louis, in 1884, and until and including the year 1889, testified the appellant and the deceased bought articles such as hosiery, linen, towels, notions, etc., from the establishment with which he was connected, almost every week during the five years he was there. They came to the store together; Miss Loucks did the buying; Mrs. Tinnin "looked on"; Miss Loucks made the payments and on some occasions the goods were sent to No. 300 Broadway, where the women had a room rented in which they lived together.

They leased the room of Mrs. Frederick Woydt. She testified that the "deaf mute women" were engaged in selling stamping goods, hosiery, etc., and that she was frequently in their room and learned the sign language; that Maggie Tinnin (appellee's intestate) was often ill and always in delicate health and was confined to the room nearly all the time, but that Mary Loucks went out to sell goods every day "rain or shine"; that the witness was frequently in the room when Mary Loucks returned in the evening, and saw Mary give Maggie the pocketbook and the money she had taken in, and that Maggie told her they were partners. . . .

The other question — whether the money found in the trunk was the property of the firm? The position of appellee upon this question is, the money received from the sale of goods was divided at the close of each day, or from time to time, and the money found in the trunk was the individual property of the owner of the trunk. There was proof tending to show the partners divided sums received from daily sale, and perhaps tending to show each had separate parcels of money;

but the evidence was conclusive that all the money, whether belonging to them jointly or to each separately, was kept in the same trunk. Each had a trunk, but it was their custom to keep all the money in Mrs. Tinnin's trunk, as they did many of the articles on hand for sale. . . . Mrs. Starr, a cousin of Mrs. Maggie Tinnin, testified that Maggie came to her house from St. Louis and remained there until she died; that both the trunks were there and that Mary Loucks had the keys to both trunks all the time and that Maggie left the keys with Mary when she left St. Louis. . . .

The appellant after the death of Mrs. Tinnin produced the keys to the trunks and at the request of the administrator opened both trunks. Money in bank bills to the amount of \$1550 was found in Mrs. Tinnin's trunk, and also in the same trunk were found hose, corsets, stamping goods, patterns, and notions confessedly of the stock in trade of the firm. Upon the statement of the administrator that she should lose none of her rights thereby, and he would see she got whatever interest she was entitled to, the appellant allowed him to take the money. The conclusion sought to be drawn from the appearance of the bank bills and the fact they adhered together, that they had been in the package for a much longer period of time than as stated by the appellant, was, we think, entirely overcome by the testimony of the cashier of the bank, whose experience in handling money and keeping it in packages peculiarly qualified him to throw light upon the subject.

Counsel for appellee urge the appellant made many contradictory statements as to the amount she was entitled to have out of the money in the trunk, and attach much importance to such contradictions as tending strongly to show she had no real interest whatever

in the money. These contradictions are, as we think, apparent only, at least are explainable upon theories entirely consistent with the honesty and justice of her claim to one half of the money as partner of the deceased. Her claim to all the money was based, in part, upon the alleged expressed intention of Mrs. Tinnin that she should have all of it in case of her (Mrs. Tinnin's) death, and in part because she insisted she had earned Mrs. Tinnin's half of the money by working for her and attending upon and caring for her when she was sick. These supposed contradictions are based largely upon questions asked and answered in a conversation carried on by means of signs between appellant and Miss Jennie Paden. As to this conversation Miss Paden testified, "some of the questions were asked a number of times before the appellant could understand their meaning"; that she (the witness) "thought she interpreted the answers correctly, but there might have been misunderstandings"; she understood "the appellant claimed all the money because Mrs. Tinnin wanted her to have it all; also claimed it as a partner; claimed all as a gift; then all because she had earned Mrs. Tinnin's half by working for and boarding her," etc., etc. The appellant testified Mrs. Tinnin wanted her to have all the money

except \$100, which was to be given to Miss Jennie Paden. In stating her supposed interest in the money under these various claims of right therein the appellant, of course, claimed different amounts, but we find nothing in any of her claims inconsistent with the justice of her demand for one half the money in her right as partner.

The case was presented to the learned chancellor who presided in the Circuit Court upon depositions and written testimony — we have before us the same testimony, and our facilities for determining as to the credibility of the witnesses and as to their truthfulness are not less or inferior to those enjoyed by the trial judge. After a thorough investigation and careful consideration thereof we are constrained to declare the preponderance thereof manifestly supported the position that the money in question was the property of the appellant and the deceased in equal parts. For this reason the decree is reversed and the cause remanded with directions to the Circuit Court to enter an order and decree requiring the administrator to deliver to the appellant one half of the money found in the trunk of deceased, viz. the sum of \$775, and to pay the costs in due course of administration.

Reversed and remanded with directions.

322. G. F. ARNOLD. *Psychology applied to Legal Evidence*. (1906. p. 401.) . . . "A person," says a legal author, "may equally persistently adhere to falsehood once uttered, if there be a motive for it." A person may no doubt adhere to a falsehood; but it is not equally easy to repeat a true story and a made-up one, and the longer and more detailed it is, the harder it becomes. This follows from the nature of memory itself; events that have really happened will always be recalled in the same chronological order, because that is the order in which we originally attended to them, and cross-questioning is not so likely to confuse that order. With a story learnt off by heart it may easily happen that the same question put in different forms and in different contexts will not receive the same answer, for it is not based on any firm association of ideas, as in the case of ordinary memory. Real events are also better recollected because we localize

them in time and space and so give them Definiteness, assigning them a particular place in our past experience. It would seem that conditions favorable to memory, such as interest, attention, impressiveness of the original experience, its intensity and distinctness, duration in the happening, etc., are less likely to be present in the mere learning of a tale than in the occurrence of facts, and hence retention and revival will become more difficult. The statement then that a "person may equally persistently adhere to a falsehood once uttered, if there be a motive for it, if by "equally" is meant "equally successfully," is open to criticism on the basis of memory. It has always seemed to us that for this reason a statement does gain value by repetition, if the second statement is substantially in accord with the original, and especially if it has stood the test of cross-examination. For a good cross-examination will by suggesting other mental associations be likely to break down the association of ideas in the mind of the witness unless that association has some basis in reality; if it fails to do that, there is reason to think the story has a foundation of fact.

To apply this view to what has become an axiom with the lawyers, viz. that "the statement of an accomplice does not at all improve in value by repetition" we are inclined to dispute this if any attention is to be paid — as we think it should be — to consistency. . . . Whether the previous statement of the accomplice is a *sufficient* corroboration of his evidence at the trial or not, is a question of fact to be decided in each case, and we have little doubt that in some cases it may be so. But however this may be, it is a different matter from the question whether the statement gains *at all* in value from repetition. It gains to just the same extent as that of the evidence of a non-accomplice witness gains, neither more nor less, because consistency is the test here and not the moral character of the witness: and to say that it does not improve in value because it "is still only the statement of an accomplice" is simply to fail to grasp the principle on which the idea of corroboration in § 157 of the Indian Evidence Act is founded. It is just one of those silly dicta that will not bear examination; but because it has never been examined but has been repeated with parrot-like fidelity by legal writers, it has come to be regarded as an axiom instead of being rejected as fallacious.

323. JOHN H. WIGMORE. *Principles of Judicial Proof*. (1913.)¹ The significance of the present sort of impeaching evidence is in general the same as that of the Contradiction, namely, to show the witness to be in general *capable of making errors* in his testimony (*post*, No. 355); upon perceiving that the witness has made an erroneous statement upon one point, we are ready to infer that he is capable of making an error upon other points. But the method of showing this is here slightly different; for, instead of invoking the assertions of other witnesses to prove his specific error, we resort simply to the witness's own prior statements, in which he has given a contrary version. We place his contradictory statements side by side, and, as both cannot be correct, we realize that in at least one of the two he must have spoken erroneously. Thus, we have detected him in one specific error, from which may be inferred a capacity to make other errors. Two important features of this method of proof are to be noticed.

¹ [Adapted from the same author's *Treatise on Evidence*. (1905. Vol. II, § 1017.)]

(1) The result is the same indefinite one reached by the other method (*post*, No. 355), *i.e.* some *undefined capacity to err*; it may be a moral disposition to lie, it may be partisan bias, it may be faulty observation, it may be defective recollection, or any other quality. No specific defect is indicated; but each and all are hinted at. It has been often said that a Self-contradiction shows "a defect either in the memory or in the honesty" of the witness:

SHAW, C. J., in *Com. v. Starkweather* (1852, 10 Cush. 60): "It is founded on the obvious consideration that both accounts cannot be true, and tends to prove a defect of intelligence or memory on the subject testified of, or, what is worse, a want of moral honesty and regard to truth; and so, in either case, that the witness is less worthy of belief."

COLE, J., in *Knox v. Johnson* (1870, 26 Wis. 43): "This circumstance is well calculated to throw suspicion on her accuracy and credibility. It shows that her memory is exceedingly unreliable and treacherous in reference to the times of payment of moneys by her, or that she does not realize the importance of adhering to actual facts when making statements under oath."

This may be roughly true in the majority of instances; but there is no such invariable, certain indication; the scope is much broader and more intangible. There has also sometimes been an inclination on the part of the bar to argue as if every Self-contradiction involved a lie, and illustrated the maxim, *Falsus in uno, falsus in omnibus*; but this also is without foundation; the discrediting effect of a Self-contradiction is not dependent on whether or not the jury believe it to involve a conscious lie.

(2) The process of using a Self-contradiction to show error is in one respect weaker, in another respect stronger, than the process of using Contradiction by other witnesses. It is *weaker*, in that the proof of the specific error can never be as *positive* as is possible by the other mode. For example, if five credible witnesses testify that the assailant had a scar upon his face, contradicting the first witness, a belief in his present error is more readily reached than if a single former contradictory statement of his own is brought forward; in the latter case we are by no means compelled to believe that his statement on the stand is erroneous. On the other hand, in the present mode, the process of discrediting is in its chief aim incomparably *stronger*, because it *always* shows that the witness has made *some sort of a mistake* at some time, and thus demonstrates a capacity to make errors. In other words, both of his statements cannot be correct; one of the two must be incorrect; therefore, he shows a capacity to err. It is the repugnancy of the two that is fatal.

Thus, the process of discrediting by prior Self-contradiction is on the whole the more effective. The capacity to err invariably appears, from the very fact of Self-contradiction; while in the other process it does not appear unless we believe the opposing witnesses' assertions. Logically, therefore, the present process is more direct and effective, because self-operative. Practically, however, it may fall to the same level as the other, if the utterance of the self-contradiction is denied by the witness and is obliged to be evidenced by calling other witnesses; for then it requires (as in the other process) that we first believe the other witnesses. Yet, even then, in compensation, it may acquire a double force, for if we believe the other witnesses, the first witness has twice erred and perhaps twice falsified, — once, in his self-contradiction, and once again in denying that he uttered it.

Topic 4. Contradictory Testimony by Witnesses called on the Same Side**324. THE HISTORY OF SUSANNA. (Apocrypha.)**

[Two elders coveted Susanna, a very fair woman and pure, the wife of Joacim. They tempted her, but she resisted. Then they plotted, and charged her with adultery; and she was brought before the assembly.] And the elders said: "As we walked in the garden [of Joacim] alone, this woman came in with two maids, and shut the garden doors, and sent the maids away. Then a young man, who there was hid, came unto her, and lay with her. Then we that stood in the corner of the garden, seeing this wickedness, ran unto them. And when we saw them together, the man we could not hold, for he was stronger than we and opened the door and leaped out. But having taken this woman, we asked who the young man was, but she would not tell us. These things do we testify." Then the assembly believed them, as those that were the elders and judges of the people. . . . But [Daniel] standing in the midst of them, said: . . . "Are ye such fools, ye sons of Israel, that without examination or knowledge of the truth ye have condemned a

daughter of Israel?" . . . Then Daniel said unto them, "Put these two aside, one far from another, and I will examine them." So when they were put asunder one from another, he called one of them, and said unto him: "Now, then, if thou hast seen her, tell me, under what tree sawest thou them companying together?" who answered, "Under a mastick tree." And Daniel said, "Very well; thou hast lied against thine own head." . . . So he put him aside, and commanded to bring the other, and said unto him, . . . "Now therefore tell me, under what tree didst thou take them companying together?" who answered, "Under an holm tree." Then said Daniel unto him, Well; thou hast also lied against thine own head." . . . With that, all the assembly cried out with a loud voice, and praised God who saveth them that trust in him. And they arose against the two elders, for Daniel had convicted them of false witness, by their own mouth. . . . From that day forth was Daniel had in great reputation in the sight of the people.

325. KERNE'S TRIAL. (1679. HOWELL'S *State Trials*. VII, 707, 709.) . . .

[Charge of being a priest. Two women, Edwards and Jones, were offered to testify to hearing him say mass.] *Defendant*: "I desire to ask her what discourse she had with Mary Jones, the other witness, for she has been instructing her what to say, and that they may be examined asunder;" which was granted. *L. C. J. Scroggs*: "Did she [Jones] tell you what she could say?" *Edwards*: "She did." *L. C. J.*: "What?" *Edwards*: "She went once to hearken, and she heard Mr. Kerne say something in Latin, which she said was mass." *L. C. J.*: "Call the other woman; you shall now see how these women agree." *Clerk*: "Call Mary

Jones." *L. C. J.*: "Let the other woman [Edwards] go out. . . . What did you tell her you could say?" *Jones*: "I told her . . . he said somewhat aloud that I did not understand." *L. C. J.*: "Did you not tell Margaret Edwards that you heard him say mass?" *Jones*: "No, my lord." *L. C. J.*: "Call Margaret Edwards again. Margaret Edwards, did Mary Jones tell you that she heard Mr. Kerne say mass?" *Edwards*: "Yes, my lord." *Jones*: "No, I am sure I did not, for I never heard the word before, nor do not know what it means." *L. C. J.*: "So they contradict one another in that."

326. THE ATTESTING WITNESSES' CASE. (JOHN C. REED. *Conduct of Lawsuits*, 2d ed., 1912, § 118.)

. . . The first instance was on a caveat to a will propounded for probate, the issue being whether the witnesses signed in the presence of the testator. There was no doubt that he and all of the witnesses were present when the execution commenced, but the caveators contended that he left the room before the witnesses signed. The recollection of the subscribing witnesses was not clear, and the court held that by reason of this testimony there was a *prima facie* presumption of due execution. To rebut this presumption, the caveators read the testimony of two women which had been taken by commission. These two were in the room during the execution of the paper, and both of them testified positively that the testator went out in company with themselves before the subscribing witnesses had signed.

This testimony seemed to overwhelm the propounders. But when it was criticized, it was shown that in every other respect save that they carried the testator off before the subscription by the witnesses, these two were in irreconcilable conflict with each other. One said that the testator accompanied her and her companion to the room, while the other said that the testator was

already in the room when they came and she did not know whence he came. They disagreed as to the order of leaving. One said that the testator went out with the two and at her side, the other said that he came behind them. According to one of them, the two went out into the hall and passed up to the door of the sitting-room, where they stopped; the other carried the whole party at once into the sitting-room. Again, each one of them was at variance in other particulars with the weight of the evidence; in many instances the variations being trivial, to be sure, but yet of great importance for testing the accuracy of their memories. The paper, at the time of its execution, was primarily intended as a settlement, and it was not known by the subscribing witnesses nor the women to be also a will, and none of them pretended to have closely observed the details of its execution. Many years had elapsed since the occurrence under investigation. One of the women was interested with the caveators and the other strongly biased in their favor. The jury could not trust their memories in the solitary particular where they agreed, and they found a verdict setting up the will.

327. FRANK ROBINSON'S CASE. (T. DUNPHY and T. J. CUMMINS. *Remarkable Trials of all Countries*. 1873. pp. 146, 156, 163.)

[On April 9, Saturday, 1836, in New York City, Helen Jewett, an inmate of a house of ill-fame, was murdered at night in her room, probably with an axe. In the back yard next morning were found an axe and a cloak. The cloak had a cord or string to tie it, and was said to be the accused's; the axe was said to be tied to the same string.]

Richard Eldridge, examined by *Mr. Phenix*. — "I am a watchman. On Sunday morning the 10th of April,

. . . in a yard next to Mrs. Townsend's, belonging to a lot on Hudson street, I found a hatchet and a cloak.

. . . I went towards the southwest corner of the yard, and there I perceived, about six inches at the other side of the railing, the hatchet which has been produced. The fence between Mrs. Townsend's yard and the yard belonging to the house in Hudson street is about nine feet high, and in some places twelve feet. The cloak was about fifteen

feet from the fence of Mrs. Townsend's yard in the yard belonging to the lot in Hudson street. . . . When I first discovered the cloak I did not see that it had any string attached to it. . . . The axe and cloak were both deposited in a back room on the first floor of the house immediately under the room in which the body was lying. . . . I did not, until they were pointed out to me at the coroner's inquest, observe either the string or the hatchet or the string upon the cloak." . . .

William Schureman, who, being sworn, was examined by Mr. *Phenix*, and deposed as follows: "I am the coroner for the City and County of New York. . . . I was at the house when a cloak was found in one of the yards in the rear. That cloak was handed to me in the yard of the house. . . . The string now attached to the cloak was attached to it when it was found, and from certain circumstances and conversation which then took place between me and some of the persons in the house, I was induced to notice it particularly. I saw the string attached to the cloak before it was taken into Mrs. Townsend's house, and shortly after I received it from the watchman. . . . There was a hatchet also found in the rear of the house. . . . When the hatchet was handed to me, I looked at it, but did not discover anything at that time very particular upon it. It was wet as if with dew; at that time I did not perceive a string upon the hatchet — I mean when it was handed to me in the yard. I did not observe the string upon the hatchet until it was brought to me a second time before the jury. I think it was handed to me by Mr. Brink and he called my attention to it; then myself in company with some of the jurors compared the string upon the coat and the string upon the hatchet, and they were similar in all respects; the string appeared to be new, and to have

been recently cut off. . . . I did not notice any blood on the hatchet, but it had a reddish appearance the same as it has now. I gave particular direction, when I handed the hatchet and cloak to a person to keep until I impaneled a jury, to be sure to keep safe. I gave this injunction more particularly in relation to the string that was upon the cloak, as I understood from some of the persons in the house that a person had been there who wore a cloak. I did not then notice or know anything about the string upon the hatchet, and my directions therefore had not such particular reference to it." . . .

By the Judge. — "The string might have possibly been on the hatchet. My attention was drawn to the string on the cloak, before I saw the hatchet, and it is now, on reflection, my impression that if the string had been on the hatchet when it was found I should have noticed it in connection with the circumstance. . . . It is possible that some of the persons to whom I gave the cloak, having the string then attached to it, might have tied the hatchet to the string, and subsequently broken it off." . . .

George W. Noble, examined for the prosecution by Mr. *Morris*. — "I am an assistant captain of the watch. . . . When I got into the yard both the cloak and hatchet were found. I saw the hatchet and examined it myself. I examined it before it was taken into the house. I saw the string upon the cloak before it was taken into the house. . . . I saw the string on the hatchet as it is now upon it, in the yard, before it was taken into the house, and directly after it was found. I did not compare the string upon the hatchet and the string upon the cloak, but Mr. Brink, the officer, did in my presence. He examined and compared them, and he concluded as I did that they were both alike." . . .

Denis Brink, police officer, examined by Mr. *Phenix* for the pros-

ecution.—“I was at the house of Mrs. Townsend, in Thomas street, on the morning of the tenth of April. . . . I was there when the cloak and hatchet were found. . . . I had both the cloak and hatchet in my hand before they were taken into the house. . . . The string that now appears upon this cloak was in the yard before it was taken into the house. It was fastened to the end of the cloak. I had the hatchet in my hand before it went into the house. I saw a string upon the handle of the hatchet. I compared the string on the handle of the hatchet with the string that was fastened to the cord of the cloak. . . . I saw the

string on both the coat and the hatchet not more than two minutes after they were found. . . . There was not a particle of difference between the strings on the hatchet and cloak when I first saw them in the yard.” . . .

Mr. *Schureman*, recalled for the defense, and examined by Mr. *Maxwell*. — “I did not see or hear of any comparison of the string on the cloak with the string on the hatchet by Mr. Brink or Mr. Noble. . . . I have expressed it as a somewhat singular circumstance, that neither Brink nor Noble mentioned to me in especial manner about their comparing the strings on the hatchet and the cloak.”

328. LAURENCE BRADDON'S TRIAL. [Printed *post*, as No. 391.]

329. LORD CHANCELLOR MACCLESFIELD'S TRIAL. (1725. HOWELL's *State Trials*. XVI, 843, 1118.)

[Sir Thomas Parker, after being Chief Justice, was made Chancellor. He was impeached on the charge of having taken money for the appointment of masters in chancery and other offices. One of the issues in the particular charge here involved was whether the money was merely a present offered and accepted, or a price exacted by way of sale and extortion.] . . .

Mr. *Thomas Bennet* sworn.

Serg. *Pengelly*. — My lords, Mr. Bennet was the person who was possessed of the office of the Clerk of the Custodies, at the time of the resignation of it for the benefit of Mr. Hamersley, who has now a patent. . . . We beg leave to ask Mr. Bennet, what application he made for liberty to resign this office, and for Mr. Hamersley to be admitted?

Thomas Bennet. — My lords, as soon as I was admitted a Master of the Court of Chancery, which was on the 3rd of June, 1723, I thought it inconsistent to hold this office of Clerk of the Custodies, which I had before; and therefore I intended to

surrender it to some person that was proper; and after I had found Mr. Hamersley, and made an agreement with him, I applied to Mr. Cottingham, then secretary to my Lord Chancellor. I told him I was possessed of an office in the gift of the crown, and was willing to surrender, and was going to apply to a secretary of state, to get the king's leave to surrender, for the benefit of Mr. Hamersley. I told him that the office being in the Court of Chancery, the Secretary of State would naturally ask my Lord Chancellor, whether the person I proposed was well affected to the government and qualified for the place; and therefore, for that reason, I thought it my duty to acquaint my Lord Chancellor with my intention, and who the person was I intended to succeed me. I desired Mr. Cottingham to acquaint my Lord Chancellor that Mr. Hamersley was the person. Mr. Cottingham replied, he would acquaint my Lord Chancellor, and I should have an answer as soon as possible. He appointed me to meet him the next day, when

he told me he had acquainted my Lord Chancellor who the person was, and that my Lord Chancellor said he had not any knowledge of him. I told Mr. Cottingham he might have acquainted his lordship that he [Mr. Cottingham] knew him, for he lived the next door to him. He is a gentleman at the bar well known; and I do assure you he is in the interest of the government. Says Mr. Cottingham, my Lord Chancellor don't know him, nor do I. I was surprised at that. But however, said he, Mr. Bennet, there is a present expected by my Lord Chancellor, and if I made that present, the thing might be made easy, and my Lord Chancellor would do what I desired; that is, to acquaint the Secretary of State, that Mr. Hamersley was a person well affected to the government; and that I desired he might succeed me in my place. Mr. Cottingham said, there must be a present. On this, I told Mr. Cottingham, that it was not usual to give any present upon this occasion; that, in my own case, when I came in, I gave none to my lord Cowper; and my brother told me that he gave none; and that at his coming in, he asked lord Cowper if anything was due to him, and my lord Cowper denied that anything was due, and absolutely refused anything. Besides, said I, it is very hard for my Lord Chancellor to ask or accept anything from me, because I so lately paid him so great a sum as 1,500 guineas for my Master's place; but if he will have it, I will give him 100 guineas. He said he would acquaint my Lord Chancellor with it; and the next day, or the day after, he told me that my Lord Chancellor would accept of that; but it was a very small present, and it was a favor my lord accepted it; and my lord would send over to Hanover for the king's warrant, and I need have no further trouble besides passing the patent.

Serg. Pengelly. — My lords, I de-

sire he may be asked, whether he paid the 100 guineas to Mr. Cottingham, and in what manner?

Thos. Bennet. — I did pay it; I think it was in a Bank bill of £105.

Serg. Pengelly. — Do you remember at what time? — It was long before the resignation. . . .

Serg. Pengelly. — We have done with Mr. Bennet.

Serg. Probyn. — If the gentlemen have done with him, we beg that he may be asked a few questions on behalf of my lord Macclesfield. What was it you desired Mr. Cottingham to say in your favor to my lord Macclesfield? — I desired Mr. Cottingham to acquaint my Lord Chancellor, that I intended to apply myself to the Secretary of State for leave to surrender the place of Clerk of the Custodies, and to beg the favor, that if the Secretary of State should inquire of him after the abilities and circumstances of Mr. Hamersley, he might assure the Secretary of State, that he was a man qualified for the place, and well affected to the government.

Serg. Probyn. — Was that all? — I think that was all.

Serg. Probyn. — Was that all that Mr. Cottingham told you he had asked? — I don't remember anything more, but only Mr. Cottingham returned for answer, my lord did not know Mr. Hamersley, and I must make a present, and then what I desired would be complied with.

Serg. Probyn. — I think you say you had some treaty with Mr. Hamersley about the surrender of your office? — Yes.

Serg. Probyn. — Had you come to any agreement with him for the office, if you could procure a surrender and admittance? — Yes. . . .

Mr. Robins. — My lords, I desire he may be asked, whether Mr. Cottingham told him that the lord Macclesfield insisted upon any particular sum? — Mr. Cottingham told me, that my lord insisted upon one hundred guineas; and I argued the unreasonableness and hardship of it.

Com. Serg.—My lords, I desire Mr. Bennet may acquaint your lordships, whether ever he made any application to the noble lord for permission to resign?—I never spoke to my lord myself.

Serg. Pengelly.—If the gentlemen have done with him, we beg leave to explain this matter, and to ask him upon what account it was that Mr. Cottingham, from my lord Macclesfield, said a present was expected?—I cannot say what was Mr. Cottingham's reason; but he said My Lord Chancellor did not know Mr. Hamersley; and then he went on and said, a present was expected. I apprehended Mr. Cottingham took it, that I could not do it without my Lord Chancellor's consent. . . .

Serg. Pengelly.—My lords, if they have done with this witness, we beg leave to call Mr. Cottingham, who was an agent, and paid over this money to my lord Macclesfield.

Mr. Peter Cottingham sworn.

Serg. Pengelly.—My lords, we only call Mr. Cottingham, to acquaint your lordships when he paid over these 100 guineas to my lord Macclesfield. — *Cottingham.* — In July, I think it was.

Serg. Pengelly.—How long after you received it from Mr. Thomas Bennet? — *Cottingham.* — I believe I paid it over that day, or the day after. . . .

Com. Serg.—If the gentlemen of the House of Commons have done with him, I beg that he would give your lordships an account what discourse he had with Mr. Bennet?

L. C. J. King.—You hear the question.

Cottingham.—Mr. Thomas Bennet told me he had agreed with Mr. Hamersley for the place of Clerk of the Custodies; and that he did not think it convenient to keep two such considerable places, which depended upon his own life only; that is, the Master's place, which he had before purchased, and this. He told me he had disposed of this place to Mr.

Hamersley, in order to reimburse himself part of the money he had paid to Mr. Hiccocks, for his Master's place that he had purchased of him, and for that reason he did not care to keep both.

Com. Serg. Did he tell you how much he had disposed of it for? — No, he did not.

Com. Serg.—My lords, I desire Mr. Cottingham may be asked, what it was Mr. Bennet desired him to request of my lord Macclesfield? —To the best of my remembrance, he said, he hoped that his lordship would accept of 100 guineas, because he had received from him so lately a present for his Master's place, and he desired his lordship to forward his petition to his majesty.

Dr. Sayer.—Was this on the first application?—Yes; he never made but one application to me.

Dr. Sayer.—It is of consequence; and therefore I desire it may be asked, whether, at the first time he applied, he made this offer of 100 guineas?—He did, and I paid it over to my lord Macclesfield.

Dr. Sayer.—I desire Mr. Cottingham may be asked whether he knew Mr. Hamersley before this time?—I knew him very well, he was my next door neighbor both in town and country.

Dr. Sayer.—Did you tell Mr. Bennet you did not know him? No, I never told him so, it was impossible I should; he was my next door neighbor both in Bell-yard, and at Hampstead.

Dr. Sayer.—What character had Mr. Hamersley?—A very good one.

E. of Macclesfield.—When you first spoke to me of this matter, what did you tell me?—I told your lordship, Mr. Hamersley was my next door neighbor both in town and country; and that he was a gentleman of as unquestionable a character as any at the bar; and your lordship was pleased to depend upon me for his character. . . .

Serg. Pengelly.—If they have

done, we beg leave to ask Mr. Cottingham, since he informed my lord of the circumstances of Mr. Hamersley, whether he acquainted my lord of Mr. Hamersley, before or after the time he paid the 100 guineas? — I acquainted his lordship before.

Serg. *Pengelly*. — I beg leave to ask another question: If this gentleman can inform your lordships upon what account it was he received the 100 guineas from Mr. Bennet? — I received the 100 guineas upon account of his surrender of his office.

Serg. *Pengelly*. — We beg leave to ask another question: whether before he agreed with Mr. Bennet, he had informed my lord Macclesfield of any proposal, or what was to be expected? — No, I don't remember I did. All that passed on that occasion was, Mr. Bennet said he was willing to give 100 guineas, and he hoped his lordship would not insist upon more.

Serg. *Pengelly*. — I beg he may be asked another question; whether when he came back from my lord Macclesfield to Mr. Bennet, with the account of the acceptance of the 100 guineas, he did not tell Mr. Bennet, he ought to take it as a favor that his lordship accepted so little? — I can't remember, but I think I did not.

Serg. *Pengelly*. — Can you say you did, or you did not? — To the best of my remembrance, I did not.

Serg. *Pengelly*. — We desire he may inform your lordships what answer he brought to Mr. Bennet from my lord Macclesfield? — The answer my lord Macclesfield ordered me to give Mr. Bennet, was, that he agreed to accept of the 100 guineas according to his proposal.

Serg. *Pengelly*. — Whether was this offer of the 100 guineas the first time, or after Mr. Cottingham had spoken to my lord Macclesfield about it? — Mr. Bennet proposed to me to give the 100 guineas before I spoke to my lord about it.

Serg. *Pengelly*. — Whether it was the first time he offered the 100

guineas, or some time after? — He offered the 100 guineas the first time.

Serg. *Pengelly*. — Whether Mr. Cottingham did not say the first time, that something was expected? — I believe he did say the great seal would expect something.

Mr. *Lutwyche*. — Mr. Cottingham says, he believes he did say something was expected. Then I desire to refresh his memory, and that he would acquaint your lordships whether that was mentioned before the 100 guineas were offered? — No, not as I remember.

Mr. *Lutwyche*. — What did you say on that occasion? I said on that occasion, as he offered 100 guineas, I told him my lord was willing to accept of it.

Mr. *Lutwyche*. — I am speaking of the first discourse he had with him, I think he does recollect that he said my lord expected something on the account of this office. — The first discourse when that was mentioned, I told him my lord expected something to be paid by way of compliment.

Mr. *Lutwyche*. — Was that the first discourse? — The first that I remember.

Mr. *Lutwyche*. — I beg another question. If Mr. Cottingham told Mr. Bennet that my lord expected something by way of compliment, how came Mr. Cottingham to know that? — Mr. Bennet asked me if I believed his lordship would not expect a compliment. — I told him I believed his lordship would; and then he said he would give 100 guineas.

Mr. *Lutwyche*. — Had you any discourse with my lord Macclesfield before? — No, none at all. I told him it was usual to make a present; and then he told me he was willing to give 100 guineas.

Mr. *Plummer*. — I know Mr. Cottingham is a very honest gentleman. I desire to ask him, if Mr. Bennet did not then tell him, that when his brother was admitted, my lord Cow-

per would take nothing?—He did not, upon the oath I have taken; this is the first word I heard of it; I did not know whether his brother paid anything or nothing.

Serg. *Pengelly*.—There is some little variation, though not material, between Mr. Bennet and Mr. Cottingham; we beg that Mr. Bennet may come to the bar again.

E. of *Macclesfield*.—My lords, I don't oppose Mr. Bennet's coming to the bar again; but I think it is very extraordinary for persons to produce witnesses to confront their own witnesses.

Mr. *Lutwyche*.—We do it to confirm the testimony of our witness.

Serg. *Pengelly*.—In an affair of this nature it is impossible to produce direct evidence, without producing the agent employed. Mr. Cottingham was the agent made use of by the Chancellor, and we beg leave to ask of Mr. Bennet, what answer Mr. Cottingham brought, or said he brought, from my Lord Chancellor relating to this affair.

Thos. Bennet.—When Mr. Cottingham went from me to my Lord Chancellor, there was not a word of money mentioned the first time. I would not so much as put it into his head; and he returned to me the next day and told me my Lord Chancellor insisted upon a present. Then I said it was very hard, and I would give my lord 100 guineas if it must be so.

Serg. *Pengelly*.—Was it not at the second meeting that he insisted on a present to my lord? *Thos. Bennet*.—At the second meeting. At the first time he did not, because there was no mention made of money.

Cottingham.—All that Mr. Bennet said to me on that occasion was, that in regard a compliment of 1500 guineas had been so lately given to his lordship, he hoped his lordship would take no more of him than 100 guineas.

E. of *Macclesfield*.—These gentlemen are pleased to differ in their evidence. I would ask Mr. Bennet

a second time whether Mr. Cottingham told him that he did not know Mr. Hamersley?—*Thos. Bennet*.—I am sure Mr. Cottingham told me that my Lord Chancellor did not know him, and I think he told me that he did not know him. That made me say, Why, Sir, that is strange you should not know him, when he lives the next door to you!

E. of *Macclesfield*.—Before he said, Mr. Cottingham said he did not know Mr. Hamersley. I think he told your lordship so, that he did not know him. *Thos. Bennet*.—It is impossible to swear to a conversation at so great a distance.

E. of *Macclesfield*.—You are not positive? *Thos. Bennet*.—I am not positive.

E. of *Macclesfield*.—Then, if he is not positive whether Mr. Cottingham told him so; I desire he may be asked whether he is positive that he answered Mr. Cottingham, Why, Sir, that is very strange that you should not know him, when he lives the next door to you? *Thos. Bennet*.—I am as positive of the one as of the other. This conversation passed between us, as near as I can remember.

Cottingham.—It is very strange I should say so of my very next-door neighbor, and a gentleman at the bar. *Thos. Bennet*.—Therefore I wondered at it.

Cottingham.—It is very strange, sure, Mr. Bennet, that I should not know him. He is a gentleman at the bar; I see him every day at Westminster hall. *Thos. Bennet*.—That was the wonder I made of it I might mistake you; I am sure you said my lord did not know him, and I believe you said you did not know him. Mr. Cottingham is very deaf, and he might mistake me. . . .

Com. Serg. (Mr. *Lingard*).—My lords, the gentlemen that have gone before me upon this occasion have so fully opened the nature of the noble Earl's defense in general, that I shall not presume to take up any more of your lordships' time, by

following them in that method; but shall confine myself to the Fifth, Sixth, Seventh, Eighth, and Ninth articles. . . . My lords, we must beg leave to submit it to your lordships' consideration, what credit is to be given to Mr. Bennet's evidence, so far as it does go, for this purpose. The gentlemen of the House of Commons have thought fit to call Mr. Cottingham, as a witness to this Article; who owns that in his first discourse with Mr. Bennet upon this occasion, he told him he believed a present would be expected to the great seal, and that Mr. Bennet freely offered 100 guineas, before Mr. Cottingham spoke to the Earl about that affair. He expressly contradicts Mr. Bennet in what he said of Mr. Cottingham's insisting upon 100 guineas, and Mr. Bennet's agreement to give that sum at the second meeting, Mr. Cottingham swearing, that the offer of 100 guineas was voluntary on Mr. Bennet's part; and that it was at their first meeting. There are several other contradictions in their evidence; but I shall only

take notice of that, where Mr. Bennet pretends that Mr. Cottingham asserted he did not know Mr. Hamersley, his next-door neighbor. This Mr. Cottingham denies, and Mr. Bennet is forced in some measure to retract what he had so positively sworn; and comes down to a belief only that Mr. Cottingham said so, but will not be positive. It is something surprising, that after they have done Mr. Cottingham the honor to call him as a witness, and give him a credit by so doing, hints should be flung out, that Mr. Cottingham knows nobody, except where there is gold in the case; that gold is a great clearer of the eyesight, and the like insinuations, to the lessening his character. But why then did they call him as a witness? Surely, my lords, if he is a person not to be believed, it was not altogether so proper to produce him as a witness before this august assembly. . . . We hope your lordships will then find no difficulty in determining whether Mr. Bennet or Mr. Cottingham deserves most to be credited.

330. **JOHN BEGGS' TRIAL.** (1803. *HOWELL'S State Trials.* Vol. XXVIII, p. 852.) . . .

Mr. Attorney-General. — My Lord, and Gentleman of the Jury: We shall shortly submit to your consideration such evidence, as we trust will be sufficient to satisfy your minds, that a rebellious and traitorous insurrection existed in this city of Dublin upon the 23d day of July last, and then it will be your duty, gentlemen, to attend with every possible degree of diligence to the evidence which will be adduced to show, how far the prisoner was connected with that insurrection. . . . The prisoner at the bar, standing sentinel at Bonham-street, was discovered at no great distance from the frame of timber which you will hear described. . . . A soldier of the ninth regiment, who first perceived the prisoner, said, "There

is a man with a pike," and upon hearing the exclamation, the prisoner fled into a timber yard; he was pursued and arrested, in a situation in which he endeavored to conceal himself. If these facts shall be clearly established by evidence, there can be no doubt that the prisoner was armed with a pike for the purpose of aiding those who were engaged in the conspiracy. If he took up the pike with that intention, he is guilty of the crime charged against him. . . .

Wheeler Coultman, Esq., sworn.
Examined by Mr. Townsend.

Do you remember the night of the 23d of July last? — I do.

Had you any party with you that night? — I had about twenty-eight men.

To what place did you proceed?—To the left of Bonham-street, where a box of ball cartridge had been found. I saw eight pikes there.

. . . Look at the prisoner at the bar; did you see him?—I did.

Where and when?—I saw him in a timber yard in Bonham-street. . . .

Had he any arms?—Not that I saw. It was a quarter past twelve at the time; a private of the ninth mounted upon the wall, and said, "Here is a rebel with a pike." I handed him a pistol, and desired him to jump down, and not let the man hurt him, but to open the gate; I then got into the yard, and saw the prisoner dragged from under some fresh timber, the roots of trees I believe; there was little more than his legs seen, and by them he was dragged out; I seized and tied him, and gave him to a party of the thirty-eighth regiment. . . .

Was any person with him?—No; and I saw but one pike there, within a yard of where the prisoner was lying.

How far was this yard from the beam of timber which you said was across Bonham-street?—About twenty yards, not reckoning the space over the wall.

Was it easy to get over the wall?—It was; for there was a quantity of pipe timber raised against the wall upon which we climbed. . . .

Wheeler Coultman, Esq., cross-examined by *Mr. MacNally*. . . .

Court.—Did the prisoner say anything by way of excuse?—I asked him, "what brought him there?" he said, "he ran away to avoid the pikemen."

He told you he ran away from a number of pikemen?—He did.

From all you saw, from the instruments of destruction across the street, and the depot of arms, do you not believe there was a great number of pikemen there?—I do believe it, because Colonel Browne had been killed there that evening. . . .

Sergeant *Thomas Rice* sworn. Examined by *Mr. Mayne*.

Were you with lieutenant Coultman upon the 23d of July last?—I was under his command.

Were you in Bonham-street?—I was.

Was any prisoner taken there?—There was one taken out of a timber yard.

Who was that person?—The prisoner at the bar; I know him very well.

What did you first see of him?—I found him under some timber.

Was he concealed?—He was; I could only see his legs and feet. . . .

Was any weapon found there?—I believe there was, but I cannot say positively; when taken out from under the timber he had nothing in his hand. . . .

John Gallagher sworn. Examined by *Mr. Solicitor-General*.

Do you remember the night of the 23d of July?—I do very well.

Do you know the prisoner?—He is there (pointing to him).

Did you see him upon that night?—I did.

Where did you first see him?—I first saw him running up Bonham-street. . . .

How did he get off?—He mounted on large beams of timber which were next the yard gate.

And what did he do then?—He jumped over the wall.

Had he any arms at that time?—He was armed with a pike.

Did you pursue him?—Over the wall straight; and when I was upon the wall, some of the party desired me not to go down; I said I would go; if I was killed, it would be the first time; I called out to my officer, and said there was the man there; he immediately dropped his pike, and he sunk under some timber. I jumped down with my bayonet, and threw the pike under the wall, lest some mischief might be done, and I called for a hatchet which the party had, and I broke open the gate. The sergeant came, and I said, the man sunk there, and I desired the sergeant to take him out.

Was there any other person there ?
— No, there was not. . . .

John Gallagher cross-examined by
Mr. MacNally.

. . . What arms had you ?—I had
no musket, but I had this bayo-
net. . . .

You took this man with your
bayonet ?—No, I desired the ser-
geant to take him. . . .

You said you threw the pike over
the wall ?—I did, certainly.

Then there was no pike in the
yard ?—There was no pike when I
threw it from the yard ; he dropped
it in the yard, when I called out,
“he was there” ; he sunk under the
timber, and I let the officer in.

You threw the pike into the
street ?—I did, and afterwards
opened the gate.

When you went in, you did not
know but there might be more men
than one, and therefore you threw
the pike over the wall ?—For fear
of mischief I did ; for fear there
might be more there to sacrifice
me while I was opening the gate. . . .

Why did you not fire at the rebel
as you supposed the prisoner to be,
when you saw him in the yard ?—
Because I had no pistol ; my officer
gave me one afterwards.

Court. — Be accurate as to the time
when you threw the pike over the
wall ; did you throw the identical
pike which you saw the man drop ?
—The very pike.

Before you opened the gate ?—
Yes.

Was there any other there ?—Not
that I saw. . . .

Was any of the party with you
in the yard at the time you threw
the pike over the wall ?—No one
but myself. . . .

(The witness was desired to with-
draw, and *Lieut. Coultman* was
called again and examined by the
Court.)

You have been present when the
last man was examined ?—I was,
my lord.

In your direct examination you
said you found a pike, and but one

within the yard, when the prisoner
was dragged from under the timber ?
—I have.

You heard the last witness say,
the pike was let fall by the prisoner,
and thrown over the wall by him, the
witness, before he opened the gate ;
of course it must of necessity follow,
that it was not the pike which you
got in the yard ?—I could not answer
for that ; I say I got a pike in the
yard near where the man lay.

Do you recollect a pike being
thrown over the wall ?—I do not ;
there was a gentleman with me who
may recollect better.

When the prisoner was taken,
what conversation passed respecting
the pike ?—I asked him what
brought him there ? He said he ran
away from a number of pikemen.
I asked him why he was out so late ?
He said he had been at a tailor's.

Did you say anything about the
pike ?—I asked him about his pike ;
he said he knew nothing of it.

Jury. — You said you gave the
soldier a pistol ?—I say so still ; I
gave him a pistol when I mounted
the wall. . . .

Jury. — What did the soldier say
when he got upon the timber ?—He
said, “here is a man with a pike in his
hand.”

Was it then, or after his going
over, that you gave him the pistol ?
—He was upon the timber, looking
over the wall, and I drew my pistol
from my belt and gave it to him ;
for we desired him not to go over
the wall without it.

John Gallagher called again. Ex-
amined by *Mr. Attorney-General*.

Did you get any weapon from
your officer upon the night of the
23d of July ?—I did—a pistol when
I was mounting the stores.

Did he give you a pistol when you
were mounting the wall of the yard,
where the prisoner was ?—No, but
in Marshal lane, after we went from
the timber yard.

Court. — What did you say when
you looked into the yard where the
prisoner was ?—I said, “here is a

rebel with a pike in his hand"; and he then dropped the pike and sunk under the timber. . . .

Defense

Mr. *MacNally*.—My Lords and Gentlemen of the Jury: . . . What will be the question for your determination, when you have weighed all the evidence? It is this, whether the prisoner has to your full satisfaction, and beyond all rational doubt, been guilty of any one of those overt acts? Now what is his defense? It is too short to bear the appearance of a statement; it is confined to a single point. . . . He is a journeyman carpenter; and it is a truth that he was at work on the 23d of July; it is true that he was in his working dress, had his apron on, and was with his master from the commencement of the day, down to that terrific hour, when the inhabitants of this city were roused from their peaceful firesides and domestic comforts, by the drums beating to arms. On the firing being heard, he departed from his employer's house, and went to a house in Dirty lane, where he lodged, deviating a little way indeed to call at a tailor's for a pair of breeches. It was Saturday night, he wanted his new clothing for Sunday morning. This is a material part of the case. . . . He states to me, gentlemen of the jury, that on his way to his lodgings, it being then dark, he met in the neighborhood of the depot an armed body of men, from whom he fled in terror, supposing them to be rebels. The house where his tailor resided, and from whence he came, is exactly opposite to the wall where it is alleged he was first discovered, that is, according to the vague and equivocal evidence of the soldier. . . . If you believe he spoke truth, when he alleged to the officer, that he fled from a party whom he supposed to be rebels, you will then acquit him, from a conviction that he is innocent. . . .

Margaret Carr sworn. Examined by Mr. *MacNally*.

Where do you live?—In Bonham-street.

Do you follow any business?—My husband is a poor man, a carpenter, and works at a bench in the street. . . .

Can you remember whether you saw the prisoner on the night of the 23d of July?—I did indeed.

Where did you see him?—In my place.

At what hour did he leave your place?—In or about ten o'clock.

Do you know what brought him there?—He had left a pair of small clothes with the young man the week before, and he came about them.

Was the tailor at home that time?—He was not.

Did he return while the prisoner waited there?—No.

And upon that he went away?—He did. . . .

Mr. *Ball*. My Lords and Gentlemen of the Jury: . . . What is the evidence tending to support the accusation against the prisoner? Is there any other circumstance of guilt, except the evidence of the soldier, who swears that he saw a pike in the prisoner's hand, and upon that single fact, which is the whole strength of the prosecution, is to be found, in my opinion, the most deplorable weakness: if he had not the pike, there is no more reason to impute guilt to him, than to any one of you, or to any man in the court. Who is it tells you the prisoner had a pike? He is a man who has either told you a deceit, or intentional falsehood, or who has so confused and so uncertain a knowledge of the facts, that he is unable to give an accurate statement of them. . . . But attend him farther, examine his evidence, step by step, and see whether you can give him credence in any part of his story. Now, gentlemen, see what his evidence is; he says that there were large pieces of timber lying against the wall in Bonham-street, and that he saw the prisoner running over it, and that he, the witness, went after him; upon his evidence,

taken altogether, the guilt or innocence of the prisoner rests; and I will shortly analyze that evidence. He saw the prisoner run over the wall with a pike in his hand; he runs upon the wall after him; what is his account then of the transaction? I entreat you to attend minutely to his expressions. Does he say, "the fellow I saw with the pike is here still?" which is the very form of words he would have used, if the fact be true. No, but he cried out, "here is a rebel, and he has a pike in his hand." These are the words he would have used if he had unexpectedly seen a man for the first time, not if he had again seen one whom he knew to be there, and whom he had seen immediately before. They are words of discovery, not of ascertainment; the witness then says he drew his bayonet in order to defend himself, and you will remember, gentlemen, that armed with that bayonet he went and took the prisoner lurking under the timber, that the pike was within a yard of him, and so cautious was the witness that, though the man sunk as was described, under the root of the tree, and there was no danger from him, and although the witness had no arms but the bayonet to defend himself against the others, he took up that pike, and to be more upon his guard, threw it over the wall, lest he should be assailed by other rebels, while he was opening the gate as he was desired by his officer. Observe, gentlemen, how circumstantially he tells his story — he states to you his fears, the nature of them, and the means he took to avert the danger. If he has stated those circumstances falsely, he has done it through design; it is impossible he could invent them through forgetfulness. A man may through weakness of memory forget what he has known, but cannot from the same cause remember what he never knew.

I will undertake to show you, that he has invented all those facts

which he has detailed with such precision. First, the story the soldier tells is in itself improbable; for, gentlemen, according to my reasoning, if one person whom I was pursuing should throw away his pike, I would rather use it, as putting myself upon a level with any other person who might attack me, than throw it over the wall. But the fact is not corroborated by any other evidence, which, if it were true, that the pike had been tossed over the wall, might easily have been done, for all the party waiting at the outside must have seen it. Was there any other pike there? "No," says the soldier. "What became of it?" — "I threw it over the wall before lieutenant Coultman came in." What is lieutenant Coultman's evidence? That he found a pike in the yard; he said he did not find it with the prisoner, nor near him, so it could not be the pike of the prisoner. The only witness that attests the fact of the pike being in the prisoner's hands shows it was not the prisoner's pike that lieutenant Coultman saw, because the prisoner's pike was thrown over the wall, and therefore if a pike was found afterwards in the yard, as lieutenant Coultman says, it was not brought in by the prisoner; if not, who brought it there? It is utterly inconsistent with the prisoner's case, that he could prove it, but beyond all manner of contradiction the one found by lieutenant Coultman was not the pike of the prisoner. . . .

Upon the whole, which of the witnesses will you believe — lieutenant Coultman or the soldier? Will you be asked to say, It is of very little consequence and makes no difference whether there was one pike or two pikes, that the prisoner had a pike and that is sufficient? No, gentlemen, this cannot be expected from you: if you cannot speak with certainty, you cannot convict: the criminality of the prisoner rests upon the identity of the pike; which then will you believe? Can you say

that the pike which he had was the one which was found by lieutenant Coultman? No; for that was not near him, nor is it pretended that the prisoner knew anything of that pike; besides, the soldier denies and falsifies that account by saying, he threw the pike which the prisoner had into the street. The evidence at best is calculated to puzzle and perplex you, and if you give implicit credit to such contradictory, vague, and uncertain accounts, unless you cut the gordian knot, you cannot satisfy your minds. But, gentlemen, you will not do that violence, when a plain and obvious rule of common sense will gently untie and unravel the difficulty — namely, that a witness contradicted by others equally entitled to credit, must not be believed; — that no man's life should fall beneath such evidence; — that it is better one hundred guilty persons should escape, than one innocent person suffer.

I have, however, gentlemen, farther observations to make upon the evidence of the soldier, as contrasted with that of the officer, which will, in my opinion, strongly corroborate (if they have any weight at all), those which I have already made. There is one other important circumstance which I think it necessary to observe upon — it is an unconnected, single, detached fact — nothing more is necessary than barely to state it — speaking trumpet tongued that the evidence of the soldier ought not to be believed; he either forgets the transaction *in toto*, or he forgets most important facts, and those facts of a nature to make a strong and lasting impression upon his mind — because clearly and immediately connected with his own personal safety — because, being connected with his own self-defense — the strongest passion of nature — their impression must be indelible. He admits that there were fears for his safety — but he forgets that it was the officer who first suggested these fears. He

admits that he was armed for his defense, but he forgets the nature of these arms. The officer tells you, he armed the soldier with a pistol — the soldier tells you that he armed himself with his drawn bayonet only. The soldier tells you he threw away the pike, lest some unseen rebel might seize it, because he had no arms that could resist a pike. But, gentlemen, he had arms that might have defended him against a pike — he had a pistol — and that fact he denies. I do not wish to cast the stigma of intentional falsehood on any witness brought forward by the government of the country. That he has sworn falsely cannot be denied; can this falsehood be accounted for in any way favorable to the witness? . . .

I sincerely hope that those falsehoods and contradictions have arisen from the confusion of the man, his inaccuracy of recollection and judgment; but are you, gentlemen, to hang a wretched prisoner, because a man tells a story comprising a number of facts of which his recollection, his judgment, and his observation as to the persons, time, and circumstances of the transaction have been confused, indistinct, inconsistent, and contradicted? Is there not in all this something upon which you should long and long hesitate, before you would consign an individual to death? . . .

Reply

Mr. Solicitor-General. — My Lords, and Gentlemen of the Jury: It falls to my lot to conclude this trial, by a few observations upon the evidence; and I should not pay that respect to Mr. Ball which he is entitled to, unless I assigned the reason of my troubling you. . . . When the party arrived at the corner of Bonham-street, Gallagher swears he saw a man running, and that he leaped over the wall. That must have been the case; because he would not have noticed the wall unless he saw something that way;

neither would he have been induced to quit his party, unless something was presented to his view which required investigation. This demonstrates that he could not be mistaken in that respect; when he got upon the timber, he exclaims, "Here is a man with a pike." Mr. Ball relies upon it, that the soldier's testimony is to be considered solely by itself. But you will observe, that the other witnesses confirm him; they agree that he did exclaim, "There was a man with a pike!" What object could the soldier have had in stating a falsehood at that time? It was a sudden exclamation, when there was no time to deliberate upon plan or contrivance, without any motive of falsehood; it was in the moment of danger, when nothing but truth was likely to escape his lips. There was no other person found in the yard, save the prisoner; and that he was the man who jumped over the wall upon the approach of the military, there can be no doubt upon any reasonable mind.

Then the whole difficulty which has been attempted to be raised is the transaction immediately following—in the account of which, there, in truth, is no contradiction; but even if there were, it is of no consequence in the case. The finding of the pike, one way or the other, is perfectly immaterial to the point in issue, namely, the identity of the man; and this enables me to apply a rule which was stated by Mr. Ball himself, upon a former case, that trifling inconsistencies do not defeat the testimony, of witnesses, but rather serve to corroborate them, because they show that the witnesses do not come with prepared stories, but declare the truth, and slight trifling deviations appear, according as the mind or recollection of each particular witness was affected. But I do not rest upon that: I shall show, that there was no contradiction whatever.

Two points of contradiction have

been relied upon. The soldier says, he did not get a pistol when going over the wall; the officer says he did. But it appears upon another occasion, in the course of the same night, the soldier acknowledges he got a pistol, and that was, when he entered the depot; for it appears, that being a courageous man, he was foremost in every danger, and the transaction of the pistol having taken place might be mistaken by the officer, and not by the soldier, because he was the actor in the business. The pistol was not necessary in the deal yard, because the prisoner threw away his pike and hid himself before Gallagher jumped down. But let which of the witnesses be mistaken, or whether there be a mistake or not, it is not material, because the main question is, as to the identity of the man. The next contradiction relied upon is, the account respecting the pike. One of the witnesses states, that it was thrown over the wall; the other states, he found a pike in the yard: now, gentlemen, consider their situation. The soldier was within the yard, looking with attention towards the prisoner and the pike, while those without were collected at the gate, waiting for admission—so that the pike might have been thrown over the wall without the officer perceiving it, and it might have been found there by the officer when he was giving the prisoner up to another party. Now, what could induce the witness to tell a falsehood in this respect? If the pike were found in the yard by the officer, it might have been brought in by some of his party and dropped, when they were dragging the prisoner from under the timber. . . . It is not an important point upon which this variation appears, but this fact is certain, that a pike was there, and there is no way of accounting for it but by the prisoner having had it. That fact is confirmed by the testimony of lieutenant Coulتمان; he says, the soldier called

out, "Here is a man *with a pike*." Can you believe, in saying that, he concerted a falsehood before so many who could detect him in a moment, when there was no opportunity for concert or design?

And therefore, gentlemen, I submit, that there is no important contradiction whatever, and that the material fact is strongly confirmed. . . . There is no dispute as to his identity or his jumping over the wall — the finding of the pike is not contradicted — and the only question is, what was his intent in having it, and what could have induced him to fly from his majesty's troops. The prisoner found it necessary to account for this conduct, and the evidence produced confirms the case of the prosecution, and leaves no reasonable doubt of his guilt. . . .

Summing Up

LORD NORBURY. — Gentlemen of the Jury: . . . No doubt remains of that which is the primary consideration, namely, that there did exist a rebellious insurrection, and a levying of war in the city of Dublin, at the period in question. . . . The existence of the treason and conspiracy being thus established, the principal question is, whether the prisoner was concerned in it; because you must be satisfied, before you find him guilty, that he did take some active part in forwarding that conspiracy. In order to bring the guilt home to him, lieutenant Coultman describes his going after twelve o'clock of the night in which the disastrous events are sworn to have happened. . . . One private in military uniform appears to have been somewhat advanced more than the rest, that was Gallagher, and there seems to be no doubt that he made use of the expressions which called upon the attention of the rest of the party; he exclaimed that "there was a rebel with a pike;" that was when he approached the timber yard in which the prisoner was afterwards

found. Some timber was also piled against the wall, by which the soldier climbed and got access without opening the gate; when Gallagher had ascended this timber, and looked over the wall, he exclaimed, "here's the rebel, he is throwing away his pike and hiding himself." . . . When the gate was opened, the party entered, and saw the prisoner concealed, all but his legs, by which he was dragged from under the timber. There was no person with him at the time, and here you will have much to investigate. Lieutenant Coultman says, he got a pike within a yard where the prisoner lay, and Gallagher says, that he threw the pike which the prisoner had over the wall. . . .

Gentlemen, you are to judge whether the person whom Gallagher first saw, was the same person whom he saw afterwards in the timber yard: the pursuit was made by the witness over the timber to the wall, and in consequence of that pursuit some person was seen. The witness called out, that he saw a man with a pike — that he was letting it fall, was diving under the timber; whether the witness could be so inspired as to pursue without seeing a party fly, you are to judge; the pursuit and the finding of a man seemed to be connected with the preceding circumstance of seeing a man run: the officer followed, and the fact of finding the prisoner is incontrovertible. Gallagher says, he threw the pike over the wall; in that he disagrees with lieutenant Coultman; whether that circumstance did not draw the officer's attention, if it happened, or whether it escaped his observation, will be for you to consider, because in all cases of this kind, it is natural to catch at every circumstance where there is even an apparent contradiction. But I am bound to tell you — what may perhaps occur to you yourselves — that it is extremely possible, that a witness intending

to tell the whole truth upon the subject matter, concerning which several witnesses have been examined, may differ in collateral points, which are not essential, and do not bear upon the main subject of inquiry. But still, if the witnesses do differ, it is a matter which ought to be taken into consideration.

. . . There is a variance, marking the fallibility and a defect of memory in one witness or the other, and if such incorrectness appears, even in collateral points, as would induce you to doubt that part which is essential, undoubtedly it will weigh much in the conclusion that you shall form. But if it arise from equivocation in either witness, it bears close affinity to deliberate falsehood, and it ought to go strongly against the credit of the witness. You will consider, however, whether this difference between the witnesses arose from a different view of the transaction, in a matter that seemed

not essential to the case of the prisoner, and by no means illustrative of innocence or guilt, and whether from a frail recollection by one witness, and a clear recollection in the other; or whether there was intentional falsehood in either. There are various gradations in accuracy of account and consistency of detail, from whence you are to draw the inference as to the intention of the witnesses and the degree of credit their evidence should have.

It is for you to judge upon all the circumstances of the case; but the most important fact for you to determine is, whether the prisoner was armed with a pike, in furtherance of the treason charged upon him. . . .

The jury retired, and after deliberating for twenty-five minutes, returned a verdict of guilty; at the same time recommending him to mercy, on account of the character given of him by his employer.

331. RICHARD HARRIS. *Hints on Advocacy*. (Amer. ed. 1892. p. 55.) A witness whose evidence is untrue must lie with wonderful skill if he go through even his examination-in-chief without betraying himself. He is, I think, the easiest of all to dispose of, and once discovered to the jury in his true character will do more harm to a cause than half a dozen truthful witnesses will undo. The greatest instances in modern times of this class of witness were the notorious Tichborne claimant and his supporter Luie. It was wonderful how Orton told the story of the wreck, of his having been rescued and conveyed to Australia, of his life in the bush, of his return and his recognition by persons who had known the real heir to the baronetcy. There was, doubtless, falsehood stamped unmistakably upon the whole story, but what gave it the appearance of truth which it presented to some minds was, not the probability of any part of it, but the improbability that so ignorant a man could so skillfully have constructed so wonderful a story; that it should not have broken down by its own inherent weakness even while being narrated in chief to the jury. We know as a fact that it did not, and it therefore follows that a tissue of lies may support itself before a tribunal constituted for the purpose of eliciting the truth. Even after he had been discovered and exposed as an impostor, there were thousands who believed his story, and believe it to this day. A lying witness, therefore, is not always to be disposed of by a flourish of the hand. In most cases, if you have had any experience, you will be able to refute his statements by his own lips.

The witness comes up with a well-concocted story, and tells it glibly enough. Now you are well aware that events in this world take place in

connection with or in relation to other events. An isolated event is impossible. The story he tells is made up of facts which, if true, fit in with a great many other facts, and could not have happened without causing other facts or influencing them. If his story be untrue, the matters he speaks of will not fit in with surrounding circumstances in all their details, however skillful the arrangement may be. The multitude of surrounding circumstances will *all* fit in with a true story, because that is part and parcel of those circumstances carved out from them, no matter how extraordinary it may seem; just as the oddest shaped stone you could cut from the quarry would fit in again to the place whence it was taken. It is therefore to the rock, of which it once formed a part, that you must go to see if the block presented be genuine or false. You must, in other words, go to the surrounding circumstances. The witness, however clever he may be, cannot prepare himself for questions which he has no conception will be put to him, and if you test his imaginary events by comparing them with real events, you will find the real and the false could not exist in their entirety, there must be a displacement of facts which have actually occurred, which is impossible.

Will a lying story fit in? It is certain it will not; but it may not be possible to obtain an accurate view of the surrounding circumstances — that is the principal difficulty. But you may almost always get at some of them, and these, however few, will answer your purpose. Did the Claimant go to Wapping? Did he know the houses of the neighborhood, and the names and trades of the respective owners? If he did, who was the Claimant? Orton telling the story of himself would tell a true story, and all the surrounding circumstances would fit in and form with it a complete whole. But when he says, I am Tichborne, he places there a man who from his position in life and mode of bringing up could not possibly have been acquainted with the minute details concerning the families of Wapping and its neighborhood. Transpose the men, and you then have one whose antecedents just qualified him for possessing that knowledge which he displayed of the minute particulars of past events and persons, and which no one in any other situation of life could possess.

In cross-examining such a witness, or a witness who lies, you must therefore apply the test of surrounding circumstances, and compare his testimony with that of other witnesses. The latter will be the severest and the surest test if you apply it to the smaller details. It need hardly be said, that the greater the number of witnesses to prove a concocted story the greater the certainty of exposure by a skillful cross-examiner. The main facts of a story may be so contrived as to be spoken to by all the witnesses; but they cannot agree upon details which never occurred to them, or concoct answers to questions which they have no conception of.

It was the great complaint of Brougham in Queen Caroline's trial, that the story was so well concocted that two witnesses were never called upon one important fact. This, of course, was contrived so that there should be no possibility of contradiction. It is not difficult, if there are several witnesses telling an untrue story, to break them down in cross-examination; and one of the best instances I have met with is that narrated in the story of Susannah and the elders. This example of cross-examination further shows how necessary it is that the other witnesses should "be out of court" while one is under examination.

It is when you have to deal with an untruthful witness who speaks only to one set of facts, and stands alone with regard to that evidence, that your skill is put to the test. How are you to shake his testimony?

You must proceed to test him by surrounding circumstances, leading the witness on and on, until, encouraged by his apparent success, he will soon tell more than he can reconcile, either with fact or with the imagination of the jury. At a trial at Warwick some years ago a remarkably well-planned *alibi* was set up. The charge against the prisoner was burglary. An Irish witness was called for the defense, and stated that at the time the burglary was committed the prisoner was with him and four or five other persons some miles from the scene of the crime. The time, of course, was a material element in the case, and the witness was asked how he fixed the *exact* time. He said there was a clock in the room where he and the prisoner were, and that he looked at it when they went in and when they left. He was then told to look at the clock in court and say what time it was. The witness stared vacantly for a considerable time, and then said it was "such a rum 'un he couldn't tell." "Can't you tell a clock?" "Shure, sor, I can't tell that 'un!" What was still more strange, the same question was put to every witness, and there was only one out of some six persons who could tell what o'clock it was. And yet they all swore to the exact time deposed to by the first witness, and repeated the answer as to how they knew it. Of course the *alibi* totally broke down, and the prisoner was convicted.

I come now to a subject which has always been considered, in criminal cases especially, one of the most difficult tasks that presents itself to the cross-examiner. It is that which is known under the title of a *false alibi*; that is, where an *alibi* is set up, and every fact is true except the *date*. It has been said that you cannot break down an *alibi* of this kind. That, I think, is an erroneous idea: and although it is a difficult task, I believe, in the majority of cases, it can be accomplished. A false *alibi* may be described in this way: A has committed a burglary, say, between the hours of eleven and twelve on a particular night. B, C and D are resolved to secure his acquittal, and undertake to prove that, at the time mentioned, the prisoner was in their company ten miles away from the scene of the crime. If this be proved, and the witnesses withstand the cross-examination, they will succeed.

They know that they will be cross-examined apart as to the main events of their meeting as well as the minor circumstances — the time they started, the road they took, where they stopped, what refreshments they had, how they were employed, and even the relative position each individual occupied with regard to his companions. If the meeting were altogether imaginary, nothing would be more easy than to demolish the whole story. But if A, B, C and D went on some other day for the purpose of subsequently describing their proceedings, each would be able to stand against the most subtle cross-examination that could be administered, as to the circumstances of their meeting. All would be true, and the more they were cross-examined the more clearly the truth would appear. The only thing they would have to make up their minds upon and remember would be that it occurred upon the night of the burglary. This was doubtless an ingenious device, and must have succeeded for a considerable time. It must have been exposed, however, on the first occasion, when it was discovered that the events were

all true, and yet the prisoner was guilty. It could be capable of one explanation only. Now comes the question, "How is such an *alibi* to be broken down?" The time-worn questions, such as, "Where were you the day before? The day after?" and so on, are obviously too weak as well as too clumsy to succeed. It cannot be doubted that there must be a way to break down such an *alibi*, but up to the present time no one seems to have formed any scientific mode of proceeding, although the best cross-examiners have furnished portions of a system which I have endeavored to piece together.

In the first place it must be ascertained whether the *alibi* be true or false (a very different thing from *proving* it to be one or the other), and this will be easily accomplished by a skillful advocate in three or four questions, for as spurious metal answers to the test, so a fictitious story will discover its nature to a good cross-examiner. Having satisfied yourself on this point, the next question and the only one will be how to break down the witnesses as to *date*? As all the incidents deposed to actually occurred, cross-examination as to them will be not only a waste of time, but will tend, as before observed, to prove their truth. You must, consequently, proceed to the incidents which are *outside* the witness' story.

If I take an absolutely obvious example by way of illustration, it will probably be more useful than any attempt to define a theory by reasoning. I will suppose, then, the burglary to have been committed on the Thursday immediately preceding Good Friday, in a country village, and that the meeting for the purpose of concocting the *alibi* took place on Good Friday. The witnesses will have come prepared to speak of the incidents of that meeting. They will surmise that, in all probability, they will be asked, because it is a common and, as it seems to me, a clumsy question, "Where were you the day before?" and, "When were you with the prisoner before that?" These questions and many others of a similar kind are as familiar to the class of persons now referred to as they are to the counsel asking them. "I knowed what he was going to arx," says one — "allays axes where you was the day afore." They are obvious, every-day, stereotyped questions, and the witnesses come prepared to answer them accordingly.

But suppose you take him entirely out of the circumstances, and ask something which he does *not* anticipate. In the first place, he will be afraid to answer, for fear you are laying a trap, and the more the question is unconnected with the circumstances of the case, the greater will be his alarm. Follow that up by another and another alike incomprehensible to his baffled mind, and then ask him where he was *in the morning*. That is quite far enough from the time he has deposed to to set him wondering what it has to do with eleven o'clock at night. As he cannot guess your meaning he will be puzzled what answer to return, and as he will be afraid, on the spur of the moment, to attempt to invent a story, and may not be ingenious enough to do so, he will probably tell the truth. Having got thus far, you start with a *fact*. By the same process you may get another and another fact. He will be drawn on to give you facts, because he does not know what answers his companions may give. He will feel sure that you will put the same questions to them. Presently, you may get from him, if a little caution and skill be used, what people he met, and where and at what time — what they did and where they went. He has not come, by any means, prepared

to set up a dozen *alibis* at once — some for himself and some for his friends — so he must necessarily become confused, and as he will tell the truth and lie at the same time, you will find him pretty much at your mercy. It may be that he saw several people on that morning, and he may place so many of them together, by a little gentle humoring, that you may, at least, safely put the question, “Were not the people coming out of church?” Outwitted, the rogue will smile and say no, *it was Thursday!* but the effect of this, if done with tact, will utterly destroy the whole story. The jury will readily accept the suggestion which, indeed, you may be able to prove by independent testimony — that *the day he is speaking of must, from the incidents you have drawn from him, have been Good Friday, and not the preceding Thursday.*

But you will not rest there: at present you have only gone a little portion of the way. The next witness will fall into the same blunder, and may add another minute fact to the particles of evidence. Suppose Thursday was a fine and Friday a wet day. Here is a field for the exercise of ingenuity which counsel should hail with delight; and he ought not to sit down till he has proved from the witness that the day he and his companions were together was a *wet day*. . . . You would not be weak enough to let him suspect that you were cross-examining for a rainy day, otherwise you would fail; it is only by keeping him in the dark that you can succeed. His mind will be working intensely the whole time you are questioning him, and as his great object will be to find out what you are aiming at, yours must be to conceal it. As a policeman once said of an eminent friend of mine on the Midland circuit, “He’s a good cross-examiner, sir, he never lets you know what he’s driving at.”

If you succeed in getting from these two witnesses an incident, however small, that even *tends* to show that the meeting took place on Friday you will have almost demolished the *alibi*. But C comes into the box, and may by a stretch of memory recollect for whom he worked at the time and what particular work he was engaged upon: and it might possibly have happened that some portion of the machinery broke on that particular morning. Nothing outside the case is too trivial if it throw but the faintest gleam upon it. If he answers flippantly he will be caught in two or three questions without much difficulty. If he answers overcautiously he will betray himself by his demeanor, and you may follow him up and give him line like a pike that has taken the bait. But if no work was done and no machinery broken, you will still be able to find out his *habits*, his *mode of living*, and his surroundings, and it will be strange if from all these you do not lay hold of some event which will be shown by its connection with some other event to have happened on the latter and not the former of the days in question. *The smallest incident may be linked to a greater, which may be either patent of itself or notorious as to the day of the week on which it took place.* Other witnesses may be dealt with in like manner, *none of them being cross-examined to the same facts unless for the purpose of contradiction*, but all of them questioned as to incidents which, small though they be, will in their united strength destroy the *alibi* altogether.

On the other hand, an honest case is sometimes spoiled by just such discrepancies, which give the impression that the witnesses are wrong on some of the more vital facts. It is extremely important that you should not try to prove too much, or you may in consequence prove too little. “Overlay-

ing the case," as it is called, is a dangerous proceeding. It is like taking a feather-bed, bolster, and two pillows to smother a mouse with, when the feather-bed would be amply sufficient if well applied. A number of witnesses cannot agree on all points; I do not mean in words, because that would at once damn their evidence, but I mean as to facts themselves; and if you call a number of witnesses, the chances are that you will call a number of contradictions, and the moment you get one witness to contradict another upon any point how little material soever, if it be material, the jury, as a rule, will determine that portion of the evidence in favor of the accused, unless other circumstances lead them to a different conclusion. You will have given him already the benefit of one doubt.

. . . I may here mention (with all reverence) one great prosecuting institution which is very apt to overlay its infants, and that is THE CROWN. I remember one very important case in which the Crown was cruelly hoodwinked, and I have always had a feeling of deep sympathy with the Crown ever since. It was a case of murder. A very bad case. Horribly brutal. The public was shocked and intensely interested throughout the length and breadth of the land. It was a murder that ranks among the great murders of the world. In consequence whereof there was more bungling among the police, and more conflict among police authorities than usual. . . . The "proofs" came thick and fast you may be sure; almost everybody had a "proof." The whole country seemed to have been called from its avocations to see the murder done. The prisoner was seen here and seen there; he was buying in this shop and visiting in that; he was singing in one place and dancing in another; courting in one lonely spot and murdering in another. There never were so many "clews" to a single crime. At last the perpetrator of one horrible murder, at all events, to the satisfaction of one section of the police, would be brought to justice. It would make up for many undiscovered and thrilling crimes. Let no one henceforth say the police cannot "find out anything." Into the office where they take the evidence, or "proofs," there stepped witness after witness — scores of witnesses. Evidence was taken down, sifted, weighed, measured, as it might have been by the yard; and there stepped in among the crowd one or two of the simplest-looking, "innocentest" looking young men that could be found in all London, and an innocent looking woman or two, if I remember rightly. Now, the Crown being incapable of doing any wrong, is equally incapable of thinking any evil; so it thought no evil of these interesting witnesses, who gave their story with solemn faces, and went away with proper subpoenas in their pockets, proper Crown Office subpoenas.

The trial came on, as, after so much elaborate preparation, it was only proper that it should; and the evidence looked uncommonly black against the unhappy prisoner. An anxious and highly sensational public watched for justice to be avenged. But it was curious that amid the Crown witnesses, interspersed, were witnesses who made some matters deposed to impossible, who undid fastenings and knocked the heads off several of the Government rivets; in fact, who seemed altogether to upset the elaborately constructed evidence of the prosecution. Crown became confused, looked at the notes taken down at the institution, compared them with the evidence in court to-day, questioned the witnesses — no use, there were contradictions, irreconcilable disagreements, all in favor of the prisoner. Dates were wrong;

prisoner was in two or three places at once. And so it went on, until the judge summed up. The judge did not reconcile the discrepancies — could not, in fact; jury never attempted to. So the man was acquitted. Evidence not sufficient because too much.

332. JAMES RAM. *On Facts as Subjects of Inquiry by a Jury*. (3d Amer. ed. 1873. p. 193.) A question of credit often arises on different, or contradictory, evidence given by two witnesses. When two persons have been present when a fact took place, when something was heard or seen, and each gives an account of the fact, their stories sometimes quite, or at least very nearly, agree. But at other times it is found that the account which one gives of the fact, or if not of the fact itself, the main fact, yet of some accompanying circumstance, differs much from the account given by the other. A discrepancy of this kind necessarily raises a question of credit; and this whether the witnesses are honest or dishonest.

Assuming that each of the two is an honest witness, the disagreement in their accounts is to be sought for in each one's perception of the thing seen or heard, the impression it made on him, and his remembrance of it. From inattention, interruption, a less acute sense of hearing or sight, distance from the sound or object heard or seen, or from some other cause, one may not have had the same perception or impression which the other had of the particular thing; or the memory of the one may be better than that of the other.

It may happen that when one person does one thing, and another another, each may think and say he did that which the other did. Here each is mistaken, but his mistake need not at all affect his credit. On the same trial of Frost, part of the evidence for the Crown was that a large and armed mob had assembled in front of an inn, in which soldiers were placed, the soldiers being in a room looking toward the front, and having in it one projecting window, namely, a bow with three windows, one of which, that nearest to the passage or entrance to the inn, being, to a person in the room, and looking toward the projecting window, on the left of the middle of the three windows. The lower half of the shutters of each of the three windows was closed; and it becoming necessary, for the purpose of firing on the mob, to open the shutters, they were opened by Phillips and Gray, witnesses on the trial. On the fact that the shutters were opened, Phillips and Gray agreed in their evidence; but they differed in their evidence of the person who opened the shutters of the left-hand window and those of the middle window. Phillips said that he opened the shutters of the window on the left, and that Gray opened the shutters of the middle window. On the contrary, Gray said that he opened the shutters of the window on the left, and that Phillips opened the shutters of the middle window. Lord Chief Justice Tindal told the jury the point was perfectly immaterial, unless the variance and discrepancy between the witnesses was of such a nature as to impair their confidence in the one or the other.¹

Also, when a thing is done by one person, and the like may be done by another, and each of two persons thinks and says he did a something, which may correspond either with the thing first mentioned, or with that like it, it will not follow that the two persons mean the same thing; and there may consequently be no contradiction between them, and their credit may be in

¹ Frost's Trial (taken by Gurney), pp. 238, 248, 249, 707.

no wise affected by what they say. On the same trial of Frost, the two witnesses, Phillips and Gray, agreed so far that the soldiers were ordered to load; and Phillips said he ordered them, and Gray said he did. "It is possible," said the Lord Chief Justice Tindal, "that both might have done it, and that Gray did not hear the order given by Phillips. It is very immaterial to the main question, because such discrepancies as this may exist very well between witnesses, without at all breaking in upon the weight due to the testimony of each."¹

"I know not," says Paley, "a more rash or unphilosophical conduct of the understanding, than to reject the substance of a story, by reason of some diversity in the circumstances with which it is related. The usual character of human testimony is substantial truth under circumstantial variety. This is what the daily experience of courts of justice teaches. When accounts of a transaction come from the mouths of different witnesses, it is seldom that it is not possible to pick out apparent or real inconsistencies between them. These inconsistencies are studiously displayed by an adverse pleader, but oftentimes with little impression upon the minds of the judges. On the contrary, a close and minute agreement induces the suspicion of confederacy and fraud. When written histories touch upon the same scenes of action, the comparison almost always affords ground for a like reflection. Numerous, and sometimes important, variations present themselves; not seldom also absolute and final contradictions; yet neither one nor the other are deemed sufficient to shake the credibility of the main fact. The embassy of the Jews to deprecate the execution of Claudian's order to place his statue in their temple, Philo places in harvest, Josephus in seed-time; both contemporary writers. No reader is led by this inconsistency to doubt whether such an embassy was sent, or whether such an order was given. Our own history supplies examples of the same kind. In the account of the Marquis of Argyle's death, in the reign of Charles the Second, we have a very remarkable contradiction. Lord Clarendon relates that he was condemned to be hanged, which was performed the same day; on the contrary, Burnet, Woodrow, Heath, Echard, concur in stating that he was beheaded; and that he was condemned upon the Saturday, and executed upon the Monday. Was any reader of English history ever skeptic enough to raise from hence a question, whether the Marquis of Argyle was executed or not?"²

333. JOHN H. WIGMORE. *Principles of Judicial Proof*. (1913.)³ *Sequestration of Witnesses*. The probative service rendered by this expedient is somewhat different according as the witnesses separated are called for opposing parties or for the same parties.

(1) If the hearing of an *opposing witness* were permitted, the listening witness could thus ascertain the precise points of difference between their testimonies, and could shape his own testimony to better advantage for his cause. The process of separation, then, is here purely preventive; *i.e.* it is designed, like the rule against leading questions, to deprive the witness of suggestions as to the false shaping of his testimony.

(2) But the separation of *witnesses on the same side* may do something

¹ Frost's Trial (taken by Gurney), pp. 237, 248, 251, 707.

² Paley's Evidences of Christianity, part iii, chap. i.

³ [Adapted from the same author's *Treatise on Evidence*. (1905. Vol. III, § 1838.)]

more than this. It is equally preventive, in that it deprives the later witness of the opportunity of shaping his testimony to correspond with that of the earlier one. But it is, additionally, detective in its effects; *i.e.* it exposes their difference of statement on points on which, had they truly spoken, they must have made identical statements. This variance of statements is the significant achievement of the witnesses' separation, and seems to rest for its probative cogency on two salient circumstances, namely, (*a*) that the witnesses speak upon the same side, and (*b*) that the subject of their statements is the details of a single occurrence. (*a*) The first circumstance serves to remove uncertainty, by fixing unmistakably upon one party's case the whole burden of error. Where two persons, claiming to have been present on the same occasion with equal opportunities of observation, are called upon opposite sides and contradict each other, the contradiction does not of itself establish anything; it may indicate that one of the two is falsifying, but it does not indicate one rather than the other as the falsifier; it is still open to either side to claim its witness as the truthful one, so that neither side is clearly fixed with the error of falsity. But where both speak for the same party, contradicting each other, it is manifest without anything further that the error is upon that particular side; the result is achieved by mere comparison of statements, without the necessity of first granting credit to an opposing witness and without any of the troublesome uncertainty which arises from being forced to weigh their respective credits. (*b*) The second circumstance, mentioned above, emphasizes the probability of a downright manufacture of testimony. The truth of the main fact is put forward by the party as confirmatively established by the harmony of their joint testimony; and, where two persons come purporting to have observed the same event in the same way, the details of that fact, necessarily and equally open to their observation at the same time, ought to produce the same harmony of impression, and therefore of testimony. If, then, that harmony disappears upon further questioning as to these details, one of two inferences follows: Either (*b*) there is an honest mistake, in observation or in memory on the part of one; but the former is less likely to the extent that the one fact was necessarily connected in observation with the other, and the latter is almost impossible where (as is usual) the statements are positive, and therefore mere failure of memory does not serve to explain; moreover, even an honest mistake as to details shows the probability of a mistake on the main fact. Or, (*bb*) there is a collusive arrangement, or a deliberate intention by one, to testify falsely; for if, on connected matters of detail, which by the operation of the senses ought equally to have produced identical impressions and therefore identical statements, there is no harmony, then the apparent harmony of statement on the principal fact can be explained only as artificial (*i.e.*) as the result of an individual plan or a combination to manufacture false testimony. This not only discredits one or both of the witnesses in all their testimony, but also throws suspicion on the entire mass of evidence of that party, if this fabrication by the witnesses may seem to have been known to him. More concisely and less accurately: If matters A, B, C, and D must have happened together, then a disagreement as to the tenor of matters B, C, and D, by witnesses called on the same side to prove A, indicates probable perjury by one or more as to A. and possible subornation of perjury by the party.

The weight of this exposure of contrary statements is of course diminished according to the degree of possibility of honest mistake, which in turn depends upon the necessariness of connection between the facts testified to and upon the extent to which one or more of the witnesses venture positive statements as to details. Moreover, the expedient is not invariably successful even where perjury does exist, because either a concerted working out of false details, or a cautious failure of memory, beyond the circle of the main fact, may sometimes baffle all efforts at detection. But when all allowances are made, it remains true that the expedient of sequestration is (next to cross-examination) one of the greatest engines that the skill of man has ever invented for the detection of liars in a court of justice. Its supreme excellence consists in its simplicity and (so to speak) its automatism; for, while cross-examination, to be successful, often needs the rarest skill, and is always full of risk to its very employers, sequestration does its service with but little aid from the examiner, and can never, even when unsuccessful, do serious harm to those who have invoked it.

**Topic 5. Contradictory Testimony by Witnesses on Opposing Sides;
and Collateral Error in General**

335. ROBERT HAWKINS' TRIAL. (G. L. CRAIK. *English Causes Célèbres*. 1844. p. 147.)

[The accused, a clergyman, was charged at Aylesbury, in 1668, with robbing one Larimore at his house on a certain day. Further facts are given in No. 207, *ante*. Larimore himself was the only witness to the alleged robbery; he described it as taking place on the afternoon of Friday, September 18, when he came home alone to his house, and found the accused there.] For the defense was called. . . .

Mr. *Wilcox*. — If it may please your Honor, my Lord, upon Friday the 18th of September, 1668, I was at Larimore's house in Chilton, from noon until it was near night, with Larimore, a driving of some bargain about tiles and other things; and, my Lord, Mr. Hawkins was not at Larimore's house all that afternoon, nor did I hear anything at all then that Larimore was robbed, which, my Lord, I must needs have done if he had been robbed that afternoon I was there.

L. C. B. *Hale*. — At what time came you to Larimore's house, Mr. Wilcox? Take heed what you say.

Mr. *Wilcox*. — Before noon, my Lord.

L. C. B. — Mr. Wilcox, how long did you stay there? Mr. *Wilcox*. — Until it was near night, my Lord.

L. C. B. — Was Larimore with you all that time? Mr. *Wilcox*. — Yes, my Lord, for we were about to bargain for some tiles and other things.

L. C. B. — Are you sure that it was on the 18th of September that you were at Larimore's house? Mr. *Wilcox*. — I am sure, my Lord, that it was upon the 18th of September that I was there, and the day before Mr. Hawkins's house was broke open.

L. C. B. — What day of the week was it upon? Mr. *Wilcox*. — It was upon a Friday, my Lord, and Mr. Hawkins' house was broke open on the next day, it being Saturday.

Lar. — It was upon Thursday, my Lord, that Mr. Wilcox was at my house, it was not upon that day that my house was robbed, but the day before. Sir *Ralph Verney*. — No, no, Larimore, it could not be on

the Thursday that Mr. Wilcox and you were together at your house, for that was the 17th day of September, and that was the day you were busied in fetching your warrant from Sir Richard Pigott.

L. C. B. — It is well observed, sir, and so he was, and therefore it could not be on the Thursday that Mr. Wilcox was with him at his house.

Sir Richard Pigott. — I am sure, my Lord, that Larimore and that fellow, the constable, were both at my house upon the 17th of September, as my warrant testifieth.

L. C. B. — Larimore, do not you

remember that he was at your house on Friday, the 18th of September, 1668?

Larimore. — No, my Lord, sure it was not upon that day that I was robbed.

L. C. B. Hale. — Larimore, no, in my conscience thou sayest well, for it seems you were not robbed upon the same day that you have sworn you saw the prisoner at the bar commit this robbery.

Hawk. — My Lord, nor upon any other day (as I do verily believe).

And here many of the people cried out, that they believed as much.

336. **SMYTH v. SMYTH.** (W. O. WOODALL. *Reports of Celebrated Trials.* 1873. Vol. I, p. 130.)

[The plaintiff claimed to be Richard Hugh Smyth, son of Sir Hugh Smyth, and Jane Vandenberg, a relative of Mrs. Jane Bernard, formerly Jane Gookin. The plaintiff's mother's marriage to Sir Hugh would have made him the heir to vast estates. He claimed to have been born in 1798, and to have been placed by his father in another family, to keep secret his relation to the father's family. He lived a long time abroad. On his return in 1826, he learned of his parentage. He produced two deeds of testament, signed and sealed by Sir Hugh Smyth, purporting to acknowledge in explicit detail all the facts of his mother's marriage and his own birth. The deeds bore date January 27, 1822, and September 10, 1823. They had not come into his possession, however, till 1852 or 1853.

The trial in ejectment for the estates came on in August, 1853. The last witness was the claimant himself, who thus continued.] . . . "I was going away from my father's house, and he called me back, took me upstairs to his bedroom, opened his bureau and gave me the Bible and the jewelry. The large picture said to be that of my father hung in the

room below. He also asked me to pledge my word to him that I would follow his directions. I assured him I would. He then gave into my hands a bundle of papers, sealed up with directions to take them to Mr. Phelps, an eminent solicitor, at Warminster. I then left him, and never saw him more. I brought the Bible and jewelry away without opening them. That is the Bible [produced], and this the jewelry."

Much interest was caused by the production of the jewelry. The Claimant brought out a new-looking morocco case containing a miniature portrait supposed by him to be his mother's, four gold rings, and two brooches. One ring was marked with the initials "J. B.," suggested to be those of Jane Bernard, and one of the brooches with the words "Jane Gookin" at length. . . .

[He testified:] "I first saw the large parchment [the deed of 1823] some time in March last. It came to me by railway from London. There was a letter inclosed with it. The letter is dated March the 7th, but I think I did not receive the parcel until the 17th. I first heard of the small parchment of 1822 when my

attorney spoke of it to me. I first saw this parchment (the small one) to-day. I do not know where it came from. . . . I did not order any seals of Moring, seal engraver of Holborn, in December, 1852. It was in March, 1853. . . . The second seal was taken from the document of 1823, the only one I had. . . . I got the seal, I think, the 7th of June. I had correspondence with Mr. Bennett, of Ballinadee . . . stating that he had the certificates of his mother's marriage and wanted specimens of Mr. Lovett's writing. . . ."

[This letter to Mr. Bennett, being produced, was found to bear the date 13th March, 1853. Upon the envelope was a seal with the motto "Qui capit capitor," which was the same as the seal he said he did not have till 7th June.] In explanation of this witness said: "It must be a mistake of the engraver; he should make out his bill better and not lead me astray with wrong dates. I could not have had the seal long before I wrote to the Rev. Mr. Bennett. After I received the deed on the 17th March, I sent the impression to Mr. Moring. He was not long executing it. . . ."

Sir *F. Thesiger* then asked how it was that he sealed a letter, dated the 13th March, with a seal made from a document which he did not see until the 17th. The plaintiff in explanation said Sir Frederick had explained it—he must have received the seal *before* the 13th. Sir *F. Thesiger* then asked how he could account for receiving the seal before he received the document; and the plaintiff replied that he could not tell—he could not explain, and asked to be allowed to retire.

Sir *Frederick*. — "That cannot be. My lord [addressing the court], I have just had a telegraphic message from London of the greatest importance." Sir Frederick then read from the message to the wit-

ness — "Did you on the 19th of January last apply to a person at 361, Oxford Street, to engrave the ring with the Bandon crest, and the brooch with the words Jane Gookin?" *Witness*. — "I did, sir."

The excitement in court at this unexpected avowal was intense. Sir Frederick himself sat down, and was so much affected as to be quite unable to proceed or even to repeat the question. Mr. Bovill was also deeply moved. Mr. Alexander then repeated to the court, at the request of the judge, the question asked of the witness, Sir Frederick being quite unable to do so. The ring and brooch were then produced, and admitted by the plaintiff to be the ones referred to. Hitherto he had faced all the previous questions; but at this stage of the case he appeared cowed and crestfallen. . . . His lordship thereupon appealed to Mr. Bovill whether he meant to go on. . . . Application was then made to the court by Sir *F. Thesiger* that the plaintiff should not be permitted to go at large, and he was accordingly taken into custody on a charge of perjury. The jury then returned a verdict for the defendant, and the extraordinary case came to an end. . . .

All trinkets, deeds, etc., were then impounded; and in the course of the day the plaintiff was taken before a magistrate and committed for trial on a charge of forgery. . . .

Mr. *Alexander*, on the part of the prosecution, stated the circumstances under which the previous action had been brought and its termination in the committal of the plaintiff to take his trial for perjury and forgery; and the shorthand notes of the plaintiff's examination in chief and cross-examination having been read,

Mr. *Moring*, a seal engraver of Holborn, was called. He deposed that in December, 1852 (only a few months before the trial), he had been employed by the prisoner to engrave a crest, garter, and motto

on a seal, from a pattern which the prisoner furnished him with. The proper motto was "Qui capit capitur," but the "u" being blotted, an error was made in the engraving, and the motto was made to read "Qui capit capitor." He also made a second seal at the request of the prisoner, with the arms of the Smyths of Ashton Court, in which the same error arose. The seal on the document purporting to be the will of Sir Hugh Smyth was made with this second seal, as also the seal on the letter from Sir Hugh to his pretended wife. He further proved that there had been an alteration in the mode of engraving seals within the last four or five years, and the seals on the will had been engraved in the new manner. The prisoner had subsequently called upon him and desired he would not give any information about the seals. Another witness, a seal engraver, corroborated the evidence as to the seal on the will having been made with the seal engraved by Mr. Moring, and also as to the new mode of engraving.

Mr. *Robert Cox*, a jeweler, of No. 351, Oxford Street, London, through whose instrumentality the plaintiff had been so effectually confounded on the third day of the trial, proved

that on the 5th January, 1853, the prisoner came to his shop and said he was trustee of some children, and had the care of some jewels which he had lost; but the jewels had been asked for, and he was desirous of buying some others in their place. As the children had never seen the originals the prisoner said the new ones would do just as well. He also asked for a miniature or miniature frame, which he said he should wish to pass off as that of the mother of the children. He selected two brooches and a wedding and a mourning ring. The engraving on the mourning ring, "Mary, wife of Sir Hugh Smyth, m. 1796, d. 1797," was done by order of the prisoner. On one of the brooches the name "Jane Gookin" was engraved, also by his order, and on the signet ring the Bandon crest. The witness deposed that it was by casually reading a report of the proceedings of the first day's trial in the "Times" newspaper that he had been led to communicate with the defense at the last trial. . . .

The jury after a few minutes' deliberation returned a verdict of guilty both of forgery and of the uttering, and the prisoner then received the well-merited sentence of twenty years' transportation.

337. LAURENCE BRADDON'S TRIAL. [Printed *post*, as No. 391.]

338. THE GENERAL RUCKER. [Printed *ante*, as No. 171.]

339. CAL ARMSTRONG'S CASE. (ISAAC N. ARNOLD. *Life of Abraham Lincoln*. 1885. p. 87.)

One of the great triumphs of Lincoln at the bar was won in the trial of William D. ("Cal") Armstrong, indicted with one Norris, for murder. The crime had been committed in Mason County, near a camp meeting. Norris was convicted and sent to the State prison. Armstrong took a change of venue to Cass County, on the ground that the prejudices of the people in Mason

County were so strong against him that he could not have a fair trial. He was the son of Jack Armstrong, who had been so kind to Lincoln in early life. Jack was dead; but Hannah, who, when Lincoln was roughing it at New Salem, had been so motherly, thought that Lincoln only could save Bill from disgrace and death; he could do anything. She went to Springfield, and begged

him to come and save her son. He at once relieved her by promising to do all he could.

The trial came on at Beardstown, in the spring of 1858. The evidence against Bill was very strong. Indeed, the case for the defense looked hopeless. Several witnesses swore positively to his guilt. The strongest evidence was that of a man who swore that at eleven o'clock at night he saw Armstrong strike the deceased on the head. That the moon was shining brightly and was nearly full, and that its position in the sky was just about that of the sun at ten o'clock in the morning, and that by it he saw Armstrong give the mortal blow. This was fatal, unless the effect could be broken by contradiction or impeachment. Lincoln quietly looked up an almanac, and found that at the time this, the principal witness, declared the moon

to have been shining with full light, there was no moon at all. There were some contradictory statements made by other witnesses, but on the whole the case seemed almost hopeless. Mr. Lincoln made the closing argument. "At first," says Mr. Walker, one of the counsel associated with him, "he spoke slowly and carefully, reviewed the testimony, and pointed out its contradictions, discrepancies, and impossibilities. When he had thus prepared the way, he called for the almanac, and showed that, at the hour at which the principal witness swore he had seen, by the light of the full moon, the mortal blow given, there was no moon at all."

This was the climax of the argument, and of course utterly disposed of the principal witness. But it was Lincoln's eloquence which saved Bill Armstrong.

340. NETHERCLIFT'S CASE. (*C. AINSWORTH MITCHELL. Science and the Criminal. 1911. p. 89.*)

. . . Netherclift's dogmatic manner rendered him peculiarly liable to fall into traps like this, and many were the occasions on which he was found tripping. Readers of Lord Brampton's book will recall another amusing instance in which the expert was "put in a hole" by his opponent, who tells the story in these words: "When I rose to examine I handed to the expert six slips of paper, each of which was written in a different kind of writing. Netherclift took out his large pair of spectacles, magnifiers, which he always carried. Then he began to polish them with a great deal of care, say-

(*C. AINSWORTH MITCHELL. Science*

ing, as he performed that operation, 'I see, Mr. Hawkins, what you are going to try to do — you want to put me in a hole.' 'I do, Mr. Netherclift, and if you are ready for the hole, tell me — were those six pieces of paper written by one hand about the same time?' He examined them carefully, and after a considerable time, answered, 'No; they were written at different times, and by different hands.' 'By different persons, do you say?' 'Yes, certainly.' 'Now, Mr. Netherclift, you *are* in the hole! I wrote them myself this morning at this desk.'"

341. PITTSBURG, C. C. & ST. LOUIS R. CO. v. STORY. (1896. ILLINOIS APPELLATE COURT. 63 Ill. App. 241.)

Trespass on the case, for personal injuries. Appeal from the Superior Court of Cook County; the Hon. James GOGGIN, Judge, presiding. Heard in this court at the March term, 1896. Remittitur ordered, etc. Opinion filed March 31, 1896. . . .

Mr. Justice SHEPARD delivered the opinion of the Court.

The appellee was a passenger, bound from Chicago to New York, on one of the appellant's passenger trains. Near a station named Tuscarawas, Ohio, the train in

which appellee was so traveling collided with a west-bound mail train on the same road, and the claimed injuries suffered by appellee were thereby incurred. The trial in the Superior Court resulted in a verdict for \$12,000, from which appellee remitted the sum of \$3000, and thereupon a judgment for \$9000 in favor of appellee was entered, and this appeal is from such judgment. The appellee was about forty-six years of age, and resided on a farm in Wisconsin with her two sons and a daughter. She had lived there twenty-six years, and performed all the usual household duties, and was in good health before the accident. She testified that previous to the collision she averaged from 135 to 140 pounds in weight, and that at the time of the trial (four years after) her weight was 170 pounds. In the collision the baggage-master was killed and another employee severely hurt, but no passenger except appellee was injured. The collision occurred about eleven o'clock in the forenoon of May 7, 1891. The locomotive and the express and baggage cars were disabled, but the passenger coach in which appellee traveled was, at least, left fit for present use; and about the middle of the afternoon it was attached to another train, and appellee continued onward in her journey to New York, where she arrived about eleven o'clock the following day, and on the day after that proceeded on to her ultimate destination in Connecticut.

The only evidence the record furnishes of what her condition was after the accident, and prior to her reaching Connecticut, is found in the testimony of the appellee. After she had been in Connecticut a "few days," according to her testimony, and some time in "the latter part of May, 1891," according to his testimony, a physician was for the first time called to treat her. That physician visited her twelve or

fourteen times between his first call and June 17th following, and on the faith of her representations of pain and disability suffered by her, and of certain external bruises, contusions and discolorations seen by him on her person, he prescribed for her during that period. Appellee remained visiting at her niece's house in Connecticut some six months, and until in November, 1891, when she returned to Chicago, visiting on the way her sister in Linesville, Pennsylvania, and a cousin in Pierrepont, Ohio. She remained in Chicago for a while and then went to Wisconsin for a short time, after which she returned to Chicago, and through the intervention of a friend was accepted at St. Luke's hospital as a patient, and remained there three weeks, in February, 1892. It was while in St. Luke's hospital that she for the first time had medical treatment after that referred to in Connecticut.

There were not many objective symptoms (to use the language of the doctor) of physical injury to her visible at the time she entered St. Luke's hospital, nor do we understand from the evidence that any such have become apparent since that time. The evidence from that time on, and there is a great deal of it, with reference to her injuries, deals wholly with subjective symptoms, and for its weight rests upon her own statements and actions; and there is in some of the medical testimony, in her own testimony, and in the clinical report or record of her case, made when she was an inmate of St. Luke's hospital, considerable evidence of a lack of genuineness in her case — probably not of actual simulation of an injury not received, or of actual malingery, as recorded against the record of her case in St. Luke's hospital, but of an exaggeration of the injury, owing to a highly wrought up condition of the nervous system, produced primarily by the injury and intensified by brooding over it. The only pecuni-

ary loss suffered by the appellee, that is shown by the evidence, is her disability to pursue her usual avocations as before, and her expenses in endeavoring to be cured.

As to what such expenses were, appellee was asked by her counsel if she could state to the jury, or approximate, the amount of money she had expended for such purpose, and she replied that she could not, but added, "I should say in the neighborhood of \$3000;" and upon being asked if she were able to give the items, answered: "I am not; no, sir." Her treatment in St. Luke's hospital was free, and that received by her in the sanitarium at Joliet, for the two days that she remained there, was in return for services rendered by her. And the physician who attended her in Connecticut testified that \$15 would cover his entire bill for services to her. Drawing all reasonable inferences from all the other evidence concerning what may have caused expense to her, it seems as if her estimate of \$3000 was needlessly extravagant, if not recklessly so. . . .

Looking only at the record, the appellee does not inspire us with much confidence in her statement of facts concerning which other proof is preserved, and hence we cannot avoid a distrust as to those facts of which her testimony furnishes the only evidence. That circumstances "should admonish us to look with suspicion upon whatever else he (she) may choose to swear to," as was said by Mr. Justice Caton in a case (*Fryrear v. Lawrence*, 5 Gil. 325, p. 329) where one swore to hearsay matters as being within his own knowledge. See also *Earle v. Earle*, 60 Ill. App. 360, p. 367. Appellee testified among other things concerning the results of the collision to the car that she was in, as follows: "The stove was overturned, the lamps were shattered and broken, the oil falling all over the passengers; the window glass was shattered and the car took fire, and the rear

end of the car seemed to be thrown up a great distance." We have not exhausted the record with reference to each of the details she so testified to; but it was clearly established by other evidence that the stove was not overturned, that the car did not take fire, that the windows, with perhaps one exception, were not broken, and that if any lamp was broken, no one complained of oil falling upon them. This testimony of the appellee was probably not at all material to her right of recovery, but it shows her unreliability and tendency to exaggeration. If she is so prone to magnify immaterial matters, what confidence can we place upon her testimony as to material facts? Moreover, her testimony heretofore referred to, regarding the expense she had incurred in her endeavors to become cured, is so utterly and recklessly exaggerated beyond any facts shown, and is so entirely improbable, considering her apparent means, as to cast further suspicion upon all her statements.

Considering, therefore, appellee's own testimony in connection with the uncertainty of much of the medical evidence and the records of St. Luke's hospital, wherein the diagnosis of her case is set down as "Malingery," we feel that there has not been that certainty obtained regarding the extent of her injuries as warrants us in sustaining a judgment which of itself amounts to a small fortune, and is far in excess of what we think the record shows would constitute full compensation. . . .

It seems, however, from a careful consideration of the whole record, that the appellee should have recovered a reasonable judgment, and if appellee shall elect within ten days to enter in this court a remittitur of six thousand dollars from the judgment of the Superior Court, the judgment will be affirmed for the amount so remitted down to; otherwise the judgment will be reversed and the cause remanded.

342. JOHN HAWKINS' CASE. (S. M. PHILLIPPS. *Famous Cases of Circumstantial Evidence.* No. XXII.)

John Hawkins and George Simpson were indicted for robbing the mail, about 2 A.M. on the 16th of April, 1722. Hawkins, in his defense, set up an alibi, to prove which, he called one William Fuller, who deposed, that Hawkins came to his house on Sunday, the 15th of April, and lay there that night, and did not go out until the next morning. Being asked by the court, "By what token do you remember that it was the 15th of April?" he replied, "By a very good token, for he owed me a sum of money for horse hire, and on Tuesday, the 10th of April, he called upon me and paid me in full, and I gave him a receipt; and I very well remember, that he lay at my house the Sunday night following." The receipt was now produced. "April the 10th, 1722. Received of Mr. John Hawkins, the sum of one pound ten shillings, in full of all accounts, per me, William Fuller." Upon inspecting the receipt, the court asked Fuller who wrote it. He replied, "Hawkins wrote the body of it, and I signed it."

Court. — "Did you see him write it?" *Fuller.* — "Yes."

Court. — "And how long was it after he wrote it, before you signed?" *Fuller.* — "I signed it immediately, without going from the table."

Court. — "How many standishes [inkwells] do you keep in the house?" *Fuller.* — "Standishes?"

Court. — "Aye, standishes; it is a plain question." *Fuller.* — "My Lord, but one; and that is enough for the little handwriting we have to do."

Court. — "Then you signed the receipt with the same ink that Hawkins wrote the body of it with?" *Fuller.* — "For certain."

Court. — "Officer, hand the receipt to the jury. Gentlemen, you will see that the body of the note is written with one kind of ink, and the name at the bottom with another very different; and yet this witness has sworn, that they were both written with the same ink, and one immediately after the other. You will judge what credit is to be given to his evidence!"

Thus, the authenticity of the receipt, and the credit of the witness, were overthrown.

343. THE BOND PAYMENT CASE. (JOHN C. REED. *Conduct of Lawsuits.* 2d ed. 1912, § 434.)

. . . There are still others, who belong to a much less numerous class, where perjury is palpably detected. And as the lawyer should be ready to deal with such reckless swearers, we will give instances where some were brought to grief. The first is told by Judge Sharswood. "He (a gentleman of the bar of Philadelphia) allowed nothing that occurred in a cause to disturb or surprise him. On an occasion, in one of the neighboring counties the circuit of which it was his custom to ride, he was trying a cause on a bond, when a witness for the defendant was introduced, who testified that the defendant had taken the amount of

the bond, which was quite a large sum, from his residence to that of the obligee, a distance of several miles, and paid him in silver in his presence. The evidence was totally unexpected. His clients were orphan children; all their fortune was staked on this case. The witness had not yet committed himself as to how the money was carried. Without any discomposure, without lifting his eyes or pen from paper, he made on the margin of his notes of trial a calculation of what that amount in silver would weigh, and when it came his turn to cross-examine, calmly proceeded to make the witness repeat his testimony

step by step, — when, where, how, and how far the money was carried, — and then asked him if he knew how much that sum of money weighed, and upon naming the

amount so confounded the witness, party, and counsel engaged for the defendant that the defense was at once abandoned and a verdict for the plaintiff rendered on the spot."

344. THE FARM BURGLARY CASE. (A. C. PLOWDEN. *Grain or Chaff; The Autobiography of a Police Magistrate*. 1903. p. 102.) . . .

The prisoner was a young woman employed as a servant on a farm in an out-of-the-way part of the country. The charge against her was the ordinary one of stealing money. The facts were as follows. One night the farmer was roused from his sleep by the prisoner's knocking at his door and telling him there were burglars in the house. Seizing his gun, the farmer, in company with the prisoner, cautiously descended the stairs and made his way to the sitting room. It was evident that some one had been there, for the furniture had been shifted about, and a purse and one or two other trifles were missing from the mantelpiece. The farmer rushed to the front door, and hearing, as he thought, the sound of retreating footsteps down the gravel path, fired his gun in the direction without effect. The burglars had effected their escape. The next day the police were duly informed of the occurrence, and thanks to the very clear description the prisoner was able to give — one of the burglars she had particularly noticed as having a golden mustache and patent leather boots — placards were posted at the different Police Stations, and a general hue and cry took place over the length and breadth of the country.

Days and weeks passed without any trace of the burglars, but the police, though baffled, had not been listless. The golden mustache and the patent leather boots were a clew indeed, but not in the direction they had been seeking. They began to suspect their clever little informant, and when it was discovered that she had been spending money be-

yond the amount of her wages in the nearest town within a few days of the burglary, out of the very purse which was missing, the police felt certain that they had got the real criminal, and she was duly arrested and committed to the Quarter Sessions. I was instructed for the defense. It transpired that the prisoner was much given to reading penny dreadfuls, and that for weeks before the burglary, she had discussed the possibility of such a thing happening with a fellow servant who shared her room. There was also of course the damaging fact that she was in possession of the missing purse and had been spending money freely. In fact there was little or no moral doubt that she was guilty.

On the other hand there was a good deal to be said for the defense. If the prisoner was guilty, she was evidently a very clever actress, for beyond all question she had made the whole countryside believe in the genuineness of her story; and there was of course the admission of the farmer that he had heard the footsteps of the retreating burglars and fired a shot at them. I made the very most of this, and though the farmer tried to get out of it by saying that he must have imagined the footsteps, as no doubt he had, I succeeded in convincing the jury, at the end of a hard-fought case, that it would be dangerous to convict, and my client was acquitted. I have only given an imperfect outline of the case. The extraordinary feature of it was the amazing imagination of an uneducated servant girl, and the skillful way in which she built up the details of a story which deceived her master, hood-

winked the police, and created a general feeling of uneasiness throughout the country. If she had but left out of her description the mustache and patent leather boots,

probably suspicion would never have been excited against her, and the burglary would have taken its place in the list of crimes beyond the ingenuity of the police to discover.

345. DR. RANNEY'S CASE.
Cross-examination. 1908. p. 66.)

. . . During the lifetime of Dr. J. W. Ranney, there were few physicians in this country who were so frequently seen on the witness stand, especially in damage suits. So expert a witness had he become that Chief Justice Van Brunt many years ago is said to have remarked, "Any lawyer who attempts to cross-examine Dr. Ranney is a fool." A case occurred a few years before Dr. Ranney died, however, where a failure to cross-examine would have been tantamount to a confession of judgment, and the trial lawyer having the case in charge, though fully aware of the dangers, was left no alternative, and as so often happens where "fools rush in," made one of those lucky "bull's eyes" that is perhaps worth recording.

It was a damage case brought against the city by a lady who, on her way from church one spring morning, had tripped over an obscure encumbrance in the street, and had, in consequence, been practically bedridden for the three years leading up to the trial. She was brought into the court room in a chair and was placed in front of the jury, a pallid, pitiable object, surrounded by her women friends, who acted upon this occasion as nurses, constantly bathing her hands and face with ill-smelling ointments, and administering restoratives, with marked effect upon the jury. Her counsel, Ex-chief Justice Noah Davis, claimed that her spine had been permanently injured, and asked the jury for \$50,000 damages. It appeared that Dr. Ranney had been in constant attendance upon the patient ever since the day of her

(FRANCIS L. WELLMAN. *The Art of*

accident. He testified that he had visited her some three hundred times, and had examined her minutely at least two hundred times, in order to make up his mind as to the absolutely correct diagnosis of her case, which he was now thoroughly satisfied was one of genuine disease of the spinal marrow itself. Judge Davis asked him a few preliminary questions, and then gave the doctor his head and let him "turn to the jury and tell them all about it." Dr. Ranney spoke uninterruptedly for nearly three quarters of an hour. He described in detail the sufferings of his patient since she had been under his care; his efforts to relieve her pain; the hopeless nature of her malady. He then proceeded in a most impressive way to picture to the jury the gradual and relentless progress of the disease as it assumed the form of creeping paralysis, involving the destruction of one organ after another until death became a blessed relief. At the close of this recital, without a question more, Judge Davis said in a calm but triumphant tone, "Do you wish to cross-examine?"

Now the point in dispute — there was no defense on the merits — was the nature of the plaintiff's malady. The city's medical witnesses were unanimous that the lady had not, and could not have, contracted spinal disease from the slight injury she had received. They styled her complaint as "hysterical," existing in the patient's mind alone, and not indicating nor involving a single diseased organ; but the jury evidently all believed Dr. Ranney, and were anxious to render a verdict on his testimony. . . . The cross-

examiner first directed his questions toward developing before the jury the fact that the witness had been the medical expert for the New York, New Haven, and Hartford R. R. thirty-five years, for the New York Central R. R. forty years, for the New York and Harlem River R. R. twenty years, and so on; until the doctor was forced to admit that he was so much in court as a witness in defense of these various railroads, and was so occupied with their affairs that he had but comparatively little time to devote to his reading and practice.

Counsel (perfectly quietly). — "Are you able to give us, doctor, the name of any medical authority that agrees with you when you say that the particular group of symptoms existing in this case points to one disease and one only?"

Doctor. — "Oh, yes, Dr. Ericson agrees with me."

Counsel. — "Who is Dr. Ericson, if you please?"

Doctor (with a patronizing smile). — "Well, Mr. —, Ericson was probably one of the most famous surgeons that England has ever produced." (There was a titter in the audience at the expense of counsel.)

Counsel. — "What book has he written?"

Doctor (still smiling). — "He has written a book called *Ericson on the Spine*, which is altogether the best known work on the subject." (The titter among the audience grew louder.)

Counsel. — "When was this book published?"

Doctor. — "About ten years ago."

Counsel. — "Well, how is it that a man whose time is so much occupied as you have told yours is, has leisure enough to look up medical authorities to see if they agree with him?"

Doctor (fairly beaming on counsel). — "Well, Mr. —, to tell you the truth, I have often heard of

you, and I half suspected you would ask me some such foolish question; so this morning after my breakfast, and before starting for court, I took down from my library my copy of Ericson's book, and found that he agreed entirely with my own diagnosis in this case." (Loud laughter at expense of counsel, in which the jury joined.)

Counsel (reaching under the counsel table and taking up his own copy of *Ericson on the Spine*, and walking deliberately up to the witness). — "Won't you be good enough to point out to me where Ericson adopts your view of this case?"

Doctor (embarrassed). — "Oh, I can't do it now; it is a very thick book."

Counsel (still holding out the book to the witness). — "But you forget, doctor, that thinking I might ask you some such foolish question, you examined your volume of *Ericson* this very morning after breakfast and before coming to court."

Doctor (becoming more embarrassed and still refusing to take the book). — "I have not time to do it now."

Counsel. — "*Time!* why there is all the time in the world." (Counsel and witness eye each other closely.)

Counsel (sitting down, still eyeing witness). — "I am sure the court will allow me to suspend my examination until you shall have had time to turn to the place you read this morning in that book, and can re-read it now aloud to the jury."

Doctor (no answer).

The court room was in deathly silence for fully three minutes. The witness *wouldn't* say anything, counsel for plaintiff *didn't dare* to say anything, and counsel for the city *didn't want* to say anything; he saw that he had caught the witness in a manifest falsehood, and that the doctor's whole testimony was discredited with the jury unless he could open to the paragraph referred to, — which counsel well knew

did not exist in the whole work of Ericson.

At the expiration of a few minutes, Mr. Justice Barrett, who was presiding at the trial, turned quietly to the witness and asked him if he desired to answer the question, and upon his replying that he did not intend to answer it any further

than he had already done, he was excused from the witness stand amid almost breathless silence in the court room. . . .

After ten days' trial the jury were unable to forget the collapse of the plaintiff's principal witness, and failed to agree upon a verdict.

346. PARNELL COMMISSION'S PROCEEDINGS. (1888. 48th day, "Times" Rep., pt. 13, p. 102.)

[In support of the charge, against Mr. Parnell and others, of using the Land League to commit crime and intimidation, the speeches to the public and the doings at the League meetings were often proved by Government constables, spies, or other prejudiced persons, and the reports were apt to be partial and misleading; every such witness was accordingly tested with reference to the correctness of his report; this testing turned out for one of them as follows:]

A. "Some months before Lyden's murder I was at a meeting at Mrs. Walsh's house. There were several persons assembled there. Varilly took the chair."

Q. "Was anything proposed or said about any person's cattle?"

A. "Yes. . . . A resolution was come to about the killing of these cattle. Some of those present left the room for the purpose of killing them." . . .

On cross-examination: Q. "My learned friend has put several rather big words to you about some gentle-

man taking the chair. Was there a chair to take at Walsh's?" A. "I cannot understand you."

Q. "Well; but you know you said that Mr. Varilly took the chair?" A. "He did."

Q. "What do you mean?" A. "He was the chairman."

Q. "What did he do?" A. "To attend the meetings."

Q. "What did he do?" A. "He told them that there should be cattle drowned."

Q. "You have been asked by my learned friend whether a resolution was passed. What is a resolution?"

A. "I could not tell you."

Q. "You have told us there was a resolution. Do you know what that meant?" A. "No."

Q. "Was there a secretary?" A. "Yes."

Q. "What is it?" A. "Not to tell anybody."

Q. "Were you secretary?" A. "I was not."

Q. "Was there a secretary?" A. "I do not know whether there was or not."

347. MOBILE & O. R. CO. v. STEAMER NEW SOUTH. (*circa* 1875. U. S. District Court, Southern District of Illinois, ex rel. Prof. Barry Gilbert, of Iowa State University.)

An action was brought by one steamboat company on the lower Mississippi against another for injuries sustained in the sinking of one of its vessels in a collision caused by the careless backing out of the Cairo harbor of a boat of the defendant company. Because of the harbor

and pilot regulations, it was essential to the plaintiff's case to show that the collision had taken place in the middle of the river, and not two thirds of the way across, as the defendant contended. Several colored deck hands of the defendant had sworn that the collision took place

two thirds of the way across. One in particular was vehement in his declarations that he *knew* it was two thirds across, as he had noticed it definitely at the time. The counsel for the plaintiff, Mr. *W. B. Gilbert*, on the cross-examination, took a sheet of paper, folded it once at the center, and said: "Now, that's half, isn't it?" "Yes, suh." Folding it over in halves again, he said, "Now, that's a third, isn't it?" "Yes, suh!" (promptly). Then

opening out the sheet, thus creased, into four divisions, the lawyer said, pointing to the first, "John, here's one third?" "Yes, suh." To the second, "Here's two thirds." "Yes, suh." To the third, "That's three thirds." "Yes, suh." "John, we've got four thirds. What are we going to do?" "Dunno, suh; throw away the fourth one, I reckon. But I know, suh, that the two boats struck *right there at the end of the second third!*"

348. **LADY IVY'S TRIAL.** (1684. *HOWELL'S State Trials*. X, 555, 569.)

[This suit of ejectment involved the defendant Lady Ivy's title to a large estate containing numerous small parcels of land. She proved her title to some of them by a chain of old deeds discovered (as alleged) by one Knowles, a neighbor, while searching some musty deed boxes in his own garret. The particular parcel of land here under inquiry depended on the title of a prior grantee, one Stepkins, and the deed that would give Stepkins title would be from one Marcellus Hall as grantor to intervening parties. This old deed having been produced, Knowles was now called for the defendant to testify to the circumstances of his discovery of it. It should be remembered, in following Knowles's story, that by his own account he knew nothing, when searching, about Hall's connection with the title; he was searching only for some Stepkins deed.]

Att.-Gen. — Mr. Knowles, do you know anything of that deed? When did you first see it? *Mr. Williams.* — And where had you it?

Knowles. — My lord, I had it in a garret, in a kind of a nook, about six foot long, and three foot and a half wide, in my own house, in the garret among other writings.

L. C. J. JEFFREYS. — How came you to have them? *Knowles.* — As I was executor to Winterburn.

Mr. Powis. — Pray, Mr. Knowles,

will you tell upon what occasion you looked there and found them? *Serg. Pemberton.* — Ay, pray give an account of the whole. *Knowles.* — My lord, upon the 2d of August, 1682, was the first time I ever saw my Lady Ivy to my knowledge; and she was informed by one Mr. Vicarier, that I had several writings of Winterburn's: I told her I had so, and my lady desired me to search among them, if there were any writings that concerned Stepkins's estate; I told her it would take up a month's time to look them all over, for there was a great quantity of them. She said, I would do her a great kindness, if I would look; I promised her I would: and upon the 4th of September, I think, I found the deed. . . .

L. C. J. — Read it; read the demise. . . . But, Mr. Knowles, let me ask you a question or two: as I understood, you said my Lady Ivy desired you to look among Winterburn's writings, for deeds that concerned Stepkins's estate? *Knowles.* — Yes, my lord.

Where was that? — That was at her house.

And when did you find this deed? — I found the deed in September, before anybody came to look with me, or was in the place with me.

Was there anybody with you, when you found the deed? — No.

Then you found it yourself? — Yes.

Did you read it? — I did the outside; what was I concerned further?

Nay, do not be angry; when thou art most calm, thou speakest so fast a man can scarce understand thee; answer my question fairly: you say you read it, what part was it you read? — The backside, the outside. . . .

L. C. J. — . . . When first saw you that deed? — In September, 1682.

How do you know that? — I put my hand to it.

Did you read the inside of that deed? — No, I did not.

L. C. J. — Look you, then, we ask you how you came to know it was a deed belonging to Stepkins? — I read the backside, and put my hand to it.

L. C. J. — How came you to put your hand to this deed as belonging to Stepkins, when you never looked into the deed [as you have already sworn]? — When I found this deed to have written upon it “Marcellus Hall,” I did believe it was something that concerned the Stepkins.

L. C. J. — Let us see the deed now. You say that was the reason, upon your oath? — Yes, it was.

L. C. J. — Give Mr. Sutton [the defendant’s attorney] his oath. Look upon the outside of that deed, and tell us whose handwriting that is. *Sutton.* — All but the word “Lect.” is my handwriting.

L. C. J. — Then how couldst thou [Knowles] know this to belong to the Stepkins by the words “Marcellus Hall” when you first discovered this deed in September, 1682, and you found it by yourself and put your hand to it, and yet that “Marcellus Hall” be written by Mr. Sutton, which must be after that time?

Sol.-Gen. (for defendant). — Here are multitudes of deeds, and a man looks on the inside of some and the outside of others; is it possible for a man to speak positively as to all the particular deeds, without being liable to mistake?

L. C. J. — Mr. Solicitor, you say well. If he *had* said, “I looked upon the outside of some and the inside of others, and wherever I saw *either* on the outside *or* in the inside the name of Stepkins or Marcellus Hall, I laid them by and thought they might concern my Lady Ivy,” that had been something. But when he comes to be asked about this particular deed, and he upon his oath shall declare that to be the reason why he thought it belonged to Stepkins [namely] because of the name of “Marcellus Hall” on the outside, and never read any part of the inside, when Sutton swears “Marcellus Hall” was [later] written by him, what would you have a man say?

Sol.-Gen. — My lord, I have but this to say; if there were never a deed delivered by Knowles to my Lady Ivy, or Sutton, where Marcellus Hall’s name was written on the backside of it, but by Mr. Sutton; I confess it were a strong objection. But where there are other deeds, and a great many, a man may easily be mistaken. It is impossible for any man, in a multitude of deeds that he finds among a great parcel, and delivers many of them out, to take it upon his memory particularly, which he looked on the inside of and which he looked on the backside or outside of.

L. C. J. — Did he not give it as a particular reason of his knowledge that they belonged to my Lady Ivy? . . . And you shall never argue me into a belief, that it is impossible for a man to give a true reason, if he have one, for his remembrance of a thing.

Sol.-Gen. — I beg your pardon, my lord; as I apprehend him, he swore he looked into the inside of some, and the outside of others, and there were a great many of them.

L. C. J. — And I beg your pardon, Mr. Solicitor, I know what he swore as well as anybody else: if indeed he had sworn cautiously, and with care, it might have been taken for a slip, or a mistake.

Att.-Gen. — My lord, we must leave it upon its own weight. But we are not come to our title yet: I have the deed in my hand, which is a very old one, and therefore needs not such exact proof. He is mistaken, we do own it; and I must appeal to the court, whether a man may not be mistaken in a great multitude of deeds.

L. C. J. — Well, now, after all this is done, let him give an account how he came to know this to belong to Stepkins, or my Lady Ivy, if he can. I speak it not to prejudice your cause, but only to have the truth come out. But for the witness that swears, it may affect him I assure you. Give him the deed, and let him look upon it. Look upon the inside, and look upon the outside too. *Knowles.* — I believe, my lord, upon better consideration, I have read this deed before now.

L. C. J. — Very well; and yet you swore the contrary just now. *Knowles.* — I was in a maze, my lord.

L. C. J. — I am sure thou swore wildly.

Sol.-Gen. — Pray what deed did you take it to be at first? *Knowles.* — The lease of 128 years.

L. C. J. — Prithee read it now to us. *Knowles* (reads). — "This indenture made the 22d day of December."

L. C. J. — Between whom? *Knowles* (reads). — "Between Marcellus Hall of Radcliff, miller, of the one part, and John Carter, oar-maker, of the other part, witnesseth, that the said Marcellus Hall hath demised, granted, and to farm letten to the said John Carter, all that wharf lying in Radcliff, where late a mill stood, and called Radcliff Mill."

L. C. J. — Can you say you ever read so much before? *Knowles.* — I believe I did.

L. C. J. — When was it? *Knowles.* — In September, 1682.

L. C. J. — Then you read it before you showed it to my Lady Ivy? *Knowles.* — Yes, my lord.

L. C. J. — And you found what the contents were by reading? *Knowles.* — Yes, my lord.

L. C. J. — Did you read it through? *Knowles.* — No, I did not, I believe.

L. C. J. — How far do you think you read? *Knowles.* — As far as I have read now.

L. C. J. — Did you find anything there of the name of Stepkins? *Knowles.* — No, not in that I did not.

L. C. J. — I would desire to know of you, who it was that came to my Lady Ivy, to inform her you had such and such writings? *Knowles.* — . . . The first time that I saw her was the 2d of August, as near as I can remember, and then I told her, I was executor to Winterburn, and had a great many writings. Said she, do you know the hand of Stepkins? if you do, and can find any writings that relate to Stepkins, you will do me a great kindness.

L. C. J. — Did she name anybody else to you? *Knowles.* — She named one Lun, and one Barker, and one Holder, and several others; I do not remember all.

L. C. J. — Was there any mention made of one Collet? *Knowles.* — No.

L. C. J. — Was there of one Donne? *Knowles.* — Of one Lun there was.

L. C. J. — Of one Fecknam? *Knowles.* — No.

L. C. J. — Of one May? *Knowles.* — No.

L. C. J. — One Joan Hall? *Knowles.* — No.

L. C. J. — Was there any mention made of any Hall? *Knowles.* — Yes, there was.

L. C. J. — What Hall did she speak of? *Knowles.* — I am not certain whether any Hall was named or no.

Att.-Gen. — He says, he is sure there was of Stepkins, and several others, but not of any Hall.

L. C. J. — He does so, Mr. Attorney. But now I would ask him this question; if there were no mention of any Hall, how came

you to find out that this deed from Marcellus Hall to Carter should affect Stepkins, or any Lady Ivy? *Knowles*. — My lord, I will give you an account of that.

L. C. J. — Ay, do if you can. *Knowles*. — This was at the first time that I saw my Lady Ivy, that this discourse was between us; upon another discourse, at another time, Hall was mentioned to me. . . .

L. C. J. — Who was it first spoke to you to inquire about the Halls? *Knowles*. — My Lady Ivy spoke to me about Hall when I gave her account of some deeds I had found. . . .

L. C. J. — The first time, did you give my Lady Ivy an account that you had found anything? *Knowles*. — Yes, I gave her an account of the lease of 128 years. . . .

L. C. J. — Did you find that lease, or this deed first? *Knowles*. — The lease.

L. C. J. — When did you first

find this deed? *Knowles*. — The 4th of September I found the lease, and within fourteen or fifteen days after I found the rest. . . .

L. C. J. — What day was it my Lady Ivy first spoke to you to look after the Halls? *Knowles*. — Within a week after I first saw her.

L. C. J. — Was it before you found the lease you speak of? *Knowles*. — Yes, it was before.

L. C. J. — How comes it to pass then, that you did not find this deed at the first looking, which was the 4th of September, when you found that lease, you say?

Att.-Gen. — We must lay aside the testimony of this man.

L. C. J. — Ay, so you had need.

[The defendant was afterwards indicted for forging these deeds; and it was amply proved that she and Knowles had manufactured and aged a large quantity of such documents.]

349. THE POPISSH PLOT. (1678–79. HOWELL'S *State Trials*, *ubi infra*.)

[Charles II had been restored to the throne in 1660. But the political antagonism between Protestants and Romanists continued. Extremists in each party hated and feared the other. Charles II was nominally a Church of England Protestant; but his brother and to-be successor, James II, then duke of York, was an avowed Romanist. Fanaticism and popular excitement would believe anything against the opponents. In 1678 the so-called Popish Plot was discovered, — a plot by certain Jesuit priests and others to assassinate the king, massacre the Protestants, and burn London. The principal accused were Whitebread, Ireland, Harcourt, Langhorn, Wakeman, Grove, and Gavan. All were tried in 1678–1679, found guilty, and executed. The two principal witnesses against them were Titus Oates and William Bedlow, who became informers and recounted the various plans of the conspiracy,

which they had originally entered, or pretended to enter. In Oates's testimony, a principal fact was the alleged meetings of the conspirators at London, in August, 1678. The accused denied these meetings; Ireland, in particular, asserted that he was not in London during that month. Testimony as to that fact in the trials of Ireland and Whitebread here follows.]

(a) *Ireland's Trial* (1678. HOWELL'S *State Trials*, VII, 110). . . .

Fenwick. — Where was this meeting, and when? *Bedlow*. — Last August, at Harcourt's chamber.

Who were present there? *Bedlow*. — Be pleased to give me leave to go on; I will tell you by and by: Then I understood, as I said, that the plan was to kill the king, but that Pickering and Grove failing of it, they had hired four ruffians that were to go to Windsor, and do it there. . . . About the latter end

of August, or the beginning of September (but I believe it was the latter end of August), I came to Harcourt's chamber, and there was Ireland and Pritchard, and Pickering, and Grove.

L. C. J. — What part of August was it? — The latter end.

Do you say it positively, that it was the latter end of August? — My lord, it was in August; I do not swear positively to a day.

But you say it was in August? *Ireland.* — And that we were there present? *Bedlow.* — You were there, and Grove, and Pickering.

Ireland. — Did you see me before? *Bedlow.* — You were present there, and Grove, and Pickering, and Pritchard, and Fogarthy, and Harcourt, and I.

L. C. J. — What did you talk of there? *Bedlow.* — That the ruffians missing of killing the king at Windsor, Pickering and Grove should go on, and that Conyers should be joined with them; and that was to assassinate the king in his morning walks at Newmarket. . . .

L. C. J. — Now, gentlemen, you shall have liberty to make your full defense.

Defense.

Ireland. — First, I shall endeavor to prove there are not two witnesses against me: for that which he says, of my being at Harcourt's chamber in August, is false; for I will prove I was all August long out of town, for I was then in Staffordshire.

L. C. J. — Call your witnesses. . . .

Recorder. — To save him that labor, the king's evidence will prove, that he was in town at that time.

Serg. Baldwin. — Swear *Sarah Paine.* Which was done.

Serg. Baldwin. — My lord, this person was Mr. Grove's maid.

L. C. J. — I believe you know your maid, Mr. Grove, don't you? Look upon her, she was your servant. *Grove.* — Yes, my lord, she was so, she is not so now.

L. C. J. — Do you know Mr.

Ireland? *Sarah Paine.* — Yes, my lord.

Do you know whether Mr. Ireland was in town in August last, or no? *Sarah Paine.* — I saw him at his own house about a week before I went with my lord Arlington to Windsor.

L. C. J. — When was that? *Sarah Paine.* — That was about a week after the king was gone thither.

L. C. J. — Sir Thos. Doleman, what day was it the king was gone thither? *Sir T. Doleman.* — About the 13th of August.

L. C. J. — Thirteen and seven is twenty; then you went to Windsor about the 20th, it seems, and you say that eight days before you saw Mr. Ireland at his own house? *S. Paine.* — Yes, my lord, about eight or nine days before that; I did see him at the door of his own house, which was a scrivener's in Fetter-Lane. He was going into his own lodging.

L. C. J. — How long had you known him before that time? *S. Paine.* — My lord, I knew him, for he came often to our house, when I lived at Mr. Grove's; he was the man that broke open the packet of letters that my master carried about afterwards, and he sealed all the packets that went beyond the seas. And he opened them still when the answers returned back again.

Ireland. — Now must all the people of my lodging come and witness that I was out of my lodging all August.

L. C. J. — Call them. *Ireland.* — There is one, Anne Ireland.

L. C. J. — Crier, call her.

Crier. — Anne Ireland: Here she is.

L. C. J. — Come, mistress, what can you say concerning your brother's being out of town in August? *A. Ireland.* — My lord, on Saturday the 3d of August he set out to go into Staffordshire.

L. C. J. — How long did he con-

tinue there? *A. Ireland.* — Till it was a fortnight before Michaelmas.

L. C. J. — How can you remember that it was just the 3d of August?

A. Ireland. — I remember it by a very good circumstance, because on the Wednesday before, my brother and my mother, and I were invited out to dinner; we stayed there all night, and all Thursday night, and Friday night my brother came home, and on Saturday he set out for Staffordshire.

L. C. J. — Where was it, maid, that you saw him? *S. Paine.* — I saw him going in at the door of their own house.

L. C. J. — When was that? *S. Paine.* — About a week before I went with my lord chamberlain to Windsor, which was a week after the king went thither.

L. C. J. — That must be about the 12th or 13th. Are you sure you saw him? *S. Paine.* — Yes, my lord, I am sure I saw him.

L. C. J. — Do you know this maid, Mr. Ireland? *Ireland.* — I do not know her, my lord.

L. C. J. — She knows you by a very good token. You used to break open the letters at her master's house, and to seal them.

S. Paine. — He knows me very well, for I have carried several letters to him, that came from the carrier as well as those that came from beyond sea.

L. C. J. — They will deny anything in the world.

Ireland. — I profess, I do not know her. Twenty people may come to me, and yet I not know them; and she, having been Mr. Grove's servant, may have brought me letters, and yet I do not remember her. But, my lord, here is my mother, Eleanor Ireland, that can testify the same.

L. C. J. — Call her then.

Crier. — Eleanor Ireland. *E. Ireland.* — Here.

L. C. J. — Can you tell me when

your son went out of town? — He went out of town the 3d of August, towards Staffordshire.

Ireland. — My lord, there is Mr. Charles Gifford will prove that I was a week after the beginning of September and the latter end of August in Staffordshire.

L. C. J. — That will not do: for she says that she saw you in London about the 10th or 12th of August; and she makes it out by a circumstance, which is better evidence than if she had come and sworn the precise day wherein she saw him; for I should not have been satisfied unless she had given me a good account why she did know it to be such a day. She does it by circumstances by which we must calculate that she saw you about the 12th or 13th day. . . . You say you went out of town the 3d of August; who can swear you did not come back again? *Ireland.* — All the house can testify I did not come to my lodging. *E. Ireland.* — He went out of town the 3d of August, and did not return till a fortnight before Michaelmas. . . . *Oates.* — My lord, . . . when we pretended to go into the country, we have gone and taken a chamber in the city, and have had frequent cabals at our chambers there. Mr. Ireland writ a letter as dated from St. Omers, when I took my leave of him at his own chamber, which was betwixt the 12th and 24th in London. He was there; and afterwards when I went to Fenwick's chamber he came thither; a fortnight or ten days at least, I am sure it was in August.

L. C. J. — Here are three witnesses upon oath about this one thing. . . . *Oates.* — Whereas he says, that the beginning of September he was in Staffordshire, he was in town the 1st of September, or 2d¹ for then I had of him twenty shillings.

Ireland. — This is a most false

¹ This is the statement on which one of Oates' subsequent indictments for perjury was based.

lie; for I was then in Staffordshire. And the witnesses contradict themselves; for the one saith, he took his leave of me, as going to St. Omers the 12th; the other saith, it was the latter end of August I was at Harcourt's chamber.

L. C. J. — He does not say you went, but you pretended to go.

A. Ireland. — Here is one Harrison, that was a coachman that went with them.

L. C. J. — Well, what say you, friend? Do you know Mr. Ireland? *Harrison.* — I never saw the man before that time in my life, but I met with him at St. Albans.

L. C. J. — When? *Harrison.* — The 5th of August. There I met with him, and was in a journey with him to the 16th.

L. C. J. — What day of the week was it? *Harrison.* — Of a Monday.

L. C. J. — Did he come from London on that day? *Harrison.* — I cannot tell that. But there I met him.

L. C. J. — What time? *Harrison.* — In the evening.

L. C. J. — Whereabouts in St. Albans? *Harrison.* — At the Bull-inn where we lodged.

L. C. J. — Mr. Ireland, you say you went on Saturday out of town, did you stay at St. Albans till Monday? *Ireland.* — No, I went to Standon that day, and lay there on Saturday and Sunday night; on Monday I went to St. Albans.

L. C. J. — What, from thence? *Ireland.* — Yes, my lord.

L. C. J. — Why did you go thither? Was that in your way? *Ireland.* — I went thither for the company of Sir John Southcot and his lady.

L. C. J. — How did you know that they went thither? *Ireland.* — I understood they were to meet my lord Ashton and lady there.

L. C. J. — What, on Monday night? *Ireland.* — Yes, my lord.

Harrison. — From whence I went with him to Tixwel, to my lord Ashton's house, there we were all with him.

L. C. J. — Were you my lord Ashton's coachman? *Harrison.* — No, my lord, I was servant to Sir John Southcot.

L. C. J. — How came you to go with them? *Harrison.* — Because my lord Ashton is my lady Southcot's brother.

L. C. J. — How long was you in his company? *Harrison.* — From the 5th of August to the 16th, and then I was with him at West-Chester.

Mr. Just. Atkins. — You have not yet talked of being at West-Chester all this while. *Ireland.* — My lord, I must talk of my journey by degrees.

L. C. J. — Before you said you were all August in Staffordshire; come, you must find out some evasion for that. *Ireland.* — In Staffordshire, and thereabouts.

L. C. J. — You witness, who do you live with? *Harrison.* — With Sir John Southcot.

L. C. J. — Who brought you hither? *Harrison.* — I came only by a messenger last night. . . .

L. C. J. — Fellow, what town was that in Staffordshire? tell me quickly. *Harrison.* — It was Tixwel, by my lord Ashton's; there we made a stay for three or four days, then we went to Nantwich, and so to West-Chester.

L. C. J. — Were not you at Wolverhampton with him? *Harrison.* — No, my lord, I was not there, left him at West-Chester. *Ireland.* — My lord, I was at Wolverhampton with Mr. Charles Gifford, and here he is to attest it.

L. C. J. — Well, sir, what say you? *Gifford.* — My lord, I saw him there a day or two after St. Bartholomew's day, there he continued till the 9th of September; the 7th of September I saw him there, and I can bring twenty, and twenty more, that saw him there. Then, as he said, he was to go towards London, I came again thither on the 9th, and there I found him. And this is all I have to say.

Oates. — My lord, I do know that day in September I speak of by a particular circumstance.

Ireland. — My lord; there is one William Bowdrel, that will testify the same, if I might send for him.

L. C. J. — Why haven't you him here? *Ireland.* — She hath done what she can to bring as many as she could. . . . We could have had them, if we had time. . . .

L. C. J. — Well, if you have any more to say, say it. *Ireland.* — My lord, I have produced witnesses that prove what I have said.

L. C. J. — I will tell you what you have proved, you have produced your sister and your mother and the servant of Southcot; they say you went out the third of August, and he gives an account you came to St. Albans on the 5th, and then there is another gentleman, Mr. Gifford, who says he saw you at Wolverhampton till about a week in September. Mr. Oates hath gainsaid him in that, so you have one witness against Mr. Oates for that circumstance. It cannot be true what Mr. Oates says, if you were there all that time, and it cannot be true what Mr. Gifford says, if you were in London then. And against your two witnesses, and the coachman, there are three witnesses, that swear the contrary, Mr. Oates, Mr. Bedlow, and the maid; so that if she and the other two be to be believed, here are three upon oath against your three upon bare affirmation. . . .

Then the Lord Chief Justice directed the jury thus:

L. C. J. — Gentlemen, you of the jury. . . . It may seem hard, perhaps, to convict men upon the testimony of their fellow-offenders, and if it had been possible to have brought other witnesses, it had been well: but, in things of this nature, you cannot expect that the witnesses should be absolutely spotless. . . . Ireland objects, that Bedlow charges him in August, when he was out of town all that time, and that there-

fore the testimony of one of the witnesses cannot be true. And, to prove this, he calls his mother, his sister, and Sir John Southcot's man, and Mr. Gifford. His mother and sister say expressly, that he went out of town the third of August, and the servant says, that he saw him at St. Albans the 5th of August, and continued in his company to the 16th (so that as to that, there is a testimony both against Mr. Bedlow and against Mr. Oates); and Mr. Gifford comes and says, he saw him at the latter end of August and beginning of September at Wolverhampton; whereas Mr. Oates hath sworn, he saw him the 12th of August, and the 1st or 2d of September, and tells it by a particular circumstance. Wherein, I must tell you, it is impossible that both sides should be true. But if it should be a mistake only in point of time, it destroys not the evidence, unless you think it necessary to the substance of the thing. If you charge one in the month of August to have done such a fact, if he deny that he was in that place at that time, and proves it by witnesses, it may go to invalidate the credibility of a man's testimony, but it does not invalidate the truth of the thing itself, which may be true in substance, though the circumstance of time differ. And the question is, whether the thing be true? Against this, the counsel of the king have three that swear it positively and expressly, that Ireland was here. Here is a young maid that knew him very well, and was acquainted with him, and with his breaking up of letters; and she is one that was Grove's servant: She comes and tells you directly, that about that time, which, by computation, was about the twelfth of August, she saw him go into his own house; which cannot be true, if that be true which is said on the other side; and she does swear it upon better circumstances than if she had barely pitched upon a day; for she must

have satisfied me well, for what reason she could remember the day so positively, ere I should have believed her: But she does it, remembering her going to my lord Arlington's service, which was a week after the king went to Windsor; which is sworn to be about the 13th of August, and a week before her going it was that she saw Ireland at his own door. What arts they have of evading this, I know not. . . . But the fact against them is here expressly sworn by two witnesses; if you have any reason to disbelieve them, I must leave that to you.

(b) *Whitebread's Trial* (1679. HOWELL'S *State Trials*, VII, 327).

Oates.—Now, my lord, we are arrived to our business in August; about the 12th of August, as near as I remember, but it was between the 8th and the 12th, therein I am positive, Ireland, who is executed, took his leave of us,¹ as if we were to go to St. Omers.

L. C. J. — Where did he take his leave? *Oates*. — At his chamber in Russel street. Ireland went out of town, and Fenwick, by that means, was to be treasurer and procurator to the society altogether. . . .

L. C. J. — I am mistaken, if you have not testified that Ireland was in town in August and September with Harcourt. *Oates*. — Ireland took his leave of London betwixt the 8th and the 12th of August, as to go to St. Omers.

L. C. J. — Here is the matter; they must have right, though there be never so much time lost, and patience spent. Say they, we must prove and contradict men by such matters as we can; people may swear downright things, and it is impossible to contradict them; but we will call witnesses to prove those particulars that can be proved: say where Mr. Ireland was in August. *Oates*. — He took his

leave of us in town in August, and that was between the 8th and 12th at Harcourt's chamber. . . .

L. C. J. — Look you now, mind what he says, Ireland and Fenwick were together in August, between the 8th and the 12th. . . .

[*Defense*. After calling some of the former witnesses to prove Ireland's departure from London on Aug. 3,]

Lady *Southcot* stood up.

L. C. J. — How long were you in Mr. Ireland's company? — From the 5th of August to the 16th.

L. C. J. — What, every day? — Yes, every day. . . .

Then Sir *John Southcot* was called, and appeared.

L. C. J. — Did you know Mr. Ireland? — Yes, I did know him by face.

Where did you see him? — I saw him the 5th of August, at St. Albans.

And did he travel along with you? — Yes, he did travel along with us the 6th, 7th, 8th, and 9th.

How many days did he travel along with you? — He traveled along with us four days together, I am sure.

L. C. J. — What, from the 5th to the 9th? — Yes, sir.

Is this all that you can say? — Yes, my lord. . . .

Then Mr. *Edward Southcot* stood up.

L. C. J. — Were you here when Ireland was tried? — No.

Did you see Mr. Ireland in August last? — The 3d of August he came down to my lord Ashton's at Stanmore, they said so; but I cannot swear he came that night; but I saw him very early the next morning; the 5th we went to St. Albans, and we kept on till we came to Tixall; and I was in his company from the 4th to the 16th.

L. C. J. — Why, you hear what he says, he was in company with him every day from the 4th to the 16th. . . .

¹ This was the perjury assigned in the second count of the indictment upon which Oates was convicted, May 9th, 1685.

Sir *Cr. Levinz* [for the prosecution]. — Gentlemen of the jury, you have heard the prisoners, and they have had a great deal of time to make their defense. . . . By chance we have a witness still to give you satisfaction, that Mr. Ireland was in London at that time that Mr. Oates did swear him to be. We will begin with that witness about Ireland. And then we will call our witnesses to prove that Mr. Oates was in England, and did come over when he said he did. Call Sarah Paine. (Who was sworn.)

Sir *Cr. Levinz*. — What time did you see Mr. Ireland in London? did you see him in August last? *S. Paine*. — I saw him about seven or eight days before I came to my Lord Chamberlain, and that was about a week before the king went to Windsor.

L. C. J. — Where did you see him? — At his own door in Russel street.

L. C. J. — Did you speak to him? — No, I know him very well, and saw him as I came by. . . .

Sir *Cr. Levinz*. — How long did you look upon him? Did you see him go in? Did you see his face or his back? — I saw his face, and made him a curtsy.

L. C. J. — This she said to Ireland's face.

Justice *Dolben*. — Your evidence is, that Mr. Ireland went out of town the 5th of August, and she says she saw him about that time, which must be the 12th or 14th of August.

Gavan. — How does she prove it? She does not say she spoke with him.

Justice *Dolben*. — She swears it.

Sir *Cr. Levinz*. — Now we must prove what time the king went to Windsor.

L. C. J. — Sir Thomas Doleman, what time in August did the king go to Windsor last summer? — Sir *Thos. Doleman*. — I believe (I cannot charge my memory so well) it was the 13th; it was about the 12th or 13th. . . .

L. C. J. — And when do you say you saw Ireland? *S. Paine*. — I saw him seven or eight days before I went to my Lord Chamberlain's, which was before my lord went to Windsor, and that was a week after the king went thither.

Sir *Cr. Levinz*. — Now I will tell you what she says; she says she saw Ireland a week before she went to my Lord Chamberlain's, and she saw him go into Grove's house, where he did usually go for letters; she says she saw his face, and made him a curtsy; and that this was a week before she went to my Lord Chamberlain's, and that was a week after the king went to Windsor. Now the time that Mr. Oates pitches upon is between the 8th and 12th of August, which by computation is the time she speaks of.

Gavan. — And our witnesses go from the 3d of August to the 14th of September.

(c) *Oates's Trial* (1685. *Howell's State Trials*, X, 1239).

[After the panic of the Popish Plot had subsided, suspicion began to arise that it had been a false alarm, and that Oates and Bedlow had composed a story to take advantage of the state of popular excitement. Upon this reaction, Oates was put on trial for perjury.] . . .

Att.-Gen. — May it please your lordship, and you gentlemen of the jury; Mr. Oates stands indicted for having perjured himself; the instances, gentlemen, that we charge him with, are these: first, what he swore at the trial of Ireland; and we say, that at that trial he did swear Ireland was in town the 1st or 2d of September, 1678. The second instance is, what he swore at the trial of the Five Jesuits; and there we say, he did swear, that Ireland was in town between the 8th and 12th of August, and that he took his leave of him here in town at his chamber in Russel street; and we do charge him by this indictment, that he has forsworn himself in both

instances; and that Ireland, gentlemen, was neither in town between the 8th and 12th of August, nor the first or second of September. And we shall make it out very evidently: for, gentlemen, as to the proof in this case, our case stands thus: we say, that the 3d of August, 1678, Ireland went into Hertfordshire, to a house of my lord Ashton's, and from thence went into Staffordshire. . . . and did not return till after the 9th of September. And for this, we call Ann Ireland (who was sworn).

Sol.-Gen. — Mrs. Ireland, pray where did you take your leave of your brother, Mr. Ireland, who was executed in summer, 1678, and when? *Mrs. A. Ireland.* — I took my leave of him the beginning of August.

Sol.-Gen. — What day in August, do you remember? *A. Ireland.* — The 3d of August.

Sol.-Gen. — Where was it? *A. Ireland.* — In my own lodging.

L. C. J. — Where was your lodging? *A. Ireland.* — In Russel street, Covent garden.

L. C. J. — Now tell us again the time when it was? *A. Ireland.* — It was on Saturday morning, as I remember, the 3d of August, the Saturday after St. Ignatius's day.

L. C. J. — How come you to remember so particularly, that it was then? *A. Ireland.* — Because upon St. Ignatius's day, we were invited to Mr. Gifford's, at Hammer-smith; my brother, my mother, and I were invited to stay all night: but my brother refused to stay, because —

L. C. J. — Which brother? What was his name? *A. Ireland.* — William Ireland.

L. C. J. — Did they stay there? *A. Ireland.* — No, my lord, my brother came home on foot, but we stayed all night.

Att.-Gen. — Here is an almanac of that year; and the 3d of August was on Saturday. *A. Ireland.* — He said he could not stay, because

he was to go into the country upon Saturday. I asked him, "Why he would set out on Saturday?" And says he, "I'll go to Standen, there I shall meet with my lord Ashton, and his family; and have an opportunity to go with him into Staffordshire." . . .

Att.-Gen. — What day of the week was St. Ignatius's day? *A. Ireland.* — St. Ignatius's day was on Wednesday.

L. C. J. — What day of the month is St. Ignatius's day? *A. Ireland.* — It is either the last day of July, or the 1st of August. . . .

Att.-Gen. — Mrs. Ireland, when did you see him again? *A. Ireland.* — Just a fortnight before Michaelmas, and not before. . . .

Att.-Gen. — Pray swear Mrs. Duddle, and Mrs. Quino. (Which was done.)

Sol.-Gen. — Come, Mrs. Duddle, do you remember when Mr. Ireland went out of town in the year 1678? *Mrs. Duddle.* — To the best of my remembrance it was the 3d of August.

Sol.-Gen. — Why do you think it was the 3d of August? *Duddle.* — He went for a recreation out of town three days before, which was upon an holiday, St. Ignatius's day; and he went out of town one night then, and he came and stayed but two nights after; and went out of town upon the Saturday.

L. C. J. — Did he stay out of town one night? *Duddle.* — Yes, he stayed out of town all night.

L. C. J. — Are you sure he stayed there all night? *Duddle.* — I am sure he stayed but one night.

L. C. J. — But what say you to that, Mr. Attorney? this witness contradicts the other?

Just. Withins. — Ay, plainly. *Duddle.* — Mrs. Ireland, and Mrs. Anne Ireland, and he went out upon a recreation out of town, it being a holiday; and I remember well, that was of a Wednesday; and that Saturday he went away, and never

came again till a fortnight before Michaelmas.

L. C. J. — But mind my question, woman. *Duddle.* — Yes, my lord.

L. C. J. — Did he come home that night he went on the recreation? *Duddle.* — I do not know.

L. C. J. — But just now, you swore he stayed out all night. *Duddle.* — No, my lord.

L. C. J. — Yes, but you did though; prithee mind what thou art about. *Duddle.* — I do not say he, but I am sure his sister and the company stayed out that night. I remember very well, he went the third day after, which was Saturday. And Mr. Jennison came to ask him for three weeks after; and there was a person of quality with him in the coach, I think it was Sir Miles Wharton. And he asking for him, they gave him an account, that they had not heard from him since he went; which was then three weeks after he was gone. And I remember well, he did not come to town again till a fortnight before Michaelmas.

L. C. J. — How can you tell that? *Duddle.* — My lord, I can tell it very well; for I was almost every night in the room where he used to lie; and there lay a gentlewoman there that I knew.

L. C. J. — What was her name? *Duddle.* — Mrs. Eagleston.

L. C. J. — How came she to lie there? *Duddle.* — Her maid fell sick, and she changed her own chamber, and lay there all the time he was out of town.

Oates. — My lord, is this good evidence?

L. C. J. — Ay, why not? *Oates.* — My lord, I think she contradicts the other witness; for she says he lay out two nights.

L. C. J. — No, there you are mistaken too. But I tell you what I did observe before. Mrs. Anne Ireland swore, that they did stay all night; but Mr. Ireland refused to stay there, but would go home, because he was to go his journey on

Saturday. Then this woman comes, and she said at first, that he went out of town on the Wednesday, and stayed out all night, and lay at home but two nights, and then went away. But now, when I put her in mind to take care what she said, she swears, she is sure the sister lay out, but she is not sure of Ireland's lying out; but she is positive he went away on Saturday, the 3d of August, and returned not till a fortnight before Michaelmas.

Oates. — My lord, I humbly conceive, she having once sworn false —

L. C. J. — Ay, but she immediately recollected herself. . . .

Att.-Gen. — Now swear my lord Ashton. (Which was done.) We will bring Ireland now upon the 3d of August at night, to my lord Ashton's house, at Standen.

Sol.-Gen. — Pray will your lordship give my lord and the jury an account, when Mr. Ireland came to your house, and how far he traveled with you afterward? *Lord Ashton.* — My lord, being in town, I was spoke to, and desired that Mr. Ireland might have the opportunity of going in my company down into Staffordshire; which I consented to. I went out of town, as I remember, the latter end of July, 1678, and this same Mr. Ireland came to me at my house in Hertfordshire, at Standen, upon the 3d of August, at night.

L. C. J. — What day of the week was that, my lord? *Lord Ashton.* — As I remember, it was Saturday, and in the evening.

L. C. J. — How long did he stay with your lordship? *Lord Ashton.* — My lord, I stayed till Monday at Standen; and upon Monday he went into my company to St. Albans, which was the 5th of August.

Att.-Gen. — Whither then did you go, my lord? *Lord Ashton.* — There I met with my brother and sister Southcot.

L. C. J. — Sir John Southcot you mean, my lord? *Lord Ashton.* — Yes, my lord. And thence, in four days we went to my house at Tixhall.

L. C. J. — Did Mr. Ireland travel with you all the way? *Lord Ashton.* — I cannot charge my memory, my lord, that he did, so as particularly to swear it; but there he came into my company sometimes at Tixhall; but I cannot tell the particular days; nor could I speak positively to those things that I have spoke to now, but that I find in my Notebook, that at that time he did come to my house at Standen, and did go with me to St. Albans.

Att.-Gen. — Pray, my lord, did he go that journey to Tixhall along with you? *Lord Ashton.* — I cannot say positively that, Mr. Attorney, but I have a general notion that he did. . . .

Att.-Gen. — Swear Sir Edward Southcot. (Which was done.) . . .

Att.-Gen. — We desire Sir Edward Southcot would give an account, whether he met Mr. Ireland at my lord Ashton's? And when? *Sir Edward Southcot.* — I was with my lord Ashton in his company.

L. C. J. — When was that, Sir? *Sir E. Southcot.* — The 4th of August I saw Mr. Ireland at my lord Ashton's. . . .

L. C. J. — Pray, Sir, go on with your evidence. *Sir E. Southcot.* — Upon Monday we began our journey to Tixhall, and went that night to St. Albans, where we met my father and mother, and thence we continued on our journey the next day.

L. C. J. — Was he with you there that day you went to St. Albans? *Sir E. Southcot.* — He was with us, I remember very particularly. It was hot weather, and my lord Ashton invited him into the coach; for before he was riding by the coach side, and there I remember a particular discourse that he and my lord Ashton had; from thence we went on to Northampton, and came there Tuesday night. . . .

Where did you lie there? *Sir E. Southcot.* — We lay at the sign of the George; it was Sir William

Farmer's house, but made use of for an inn, because the town was burnt down.

L. C. J. — Was Mr. Ireland with you all that day? *Sir E. Southcot.* — He rode with us all the day.

L. C. J. — And you took notice of it, because of his horse, you say? *Sir E. Southcot.* — Yes, he had a very pretty horse, my lord; and my brother bought the horse of him after we came back again.

L. C. J. — Whither went ye the next day? *Sir E. Southcot.* — The next night we lay at the Bull in Coventry, and from thence on Thursday, we arrived at my lord Ashton's at Tixhall. . . .

Att.-Gen. — So then, my lord, we are gotten to Tuesday, the 13th of August, which is past the time of the perjury that is laid second on the Indictment; but in point of time, is the first that happened, for he swore that Ireland took his leave of him, and others here in town, between the 8th and 12th of August.

Sol.-Gen. — Where did you go on Tuesday, Sir? *Sir E. Southcot.* — Towards Wales. . . .

L. C. J. — Where were you the next night? *Sir E. Southcot.* — The next day we reached to St. Winifred's Well.

L. C. J. — Where did you lie there? *Sir E. Southcot.* — At the Star, which is the great inn there.

L. C. J. — It is so.

Att.-Gen. — Was Mr. Ireland there with you? *Sir E. Southcot.* — Yes, he was.

Att.-Gen. — Whither did ye go then? *Sir E. Southcot.* — We stayed not but one day at Holy-well; for we arrived there pretty late at night, and all the morning we spent there, and went away in the afternoon, and came that evening to Chester, and lay there only one night, and came the next day to Tixhall again.

Att.-Gen. — Which was Friday, the 16th of August. . . .

Att.-Gen. — Swear Mr. George Hobson. (Which was done.)

Sol.-Gen. — Were you in the journey to Tixhall with Mr. Ireland and my lord Ashton in 1678?

Hobson. — Yes, I was so, my lord.

Sol.-Gen. — Pray tell all your knowledge of the matter. *Hobson.* — From the 3d of August till the 16th at night, I was present with him every day. . . .

Att.-Gen. — So, my lord, you see, that the 17th of August he departed from my lord Ashton's. Now we shall call Mrs. Harwell to give you an account whither he went on the 17th. Swear Mrs. Jane Harwell. (Which was done.)

Sol.-Gen. — Where do you live, Mrs. Harwell? *Mrs. Harwell.* — I live now in town, my lord.

Sol.-Gen. — Where did you live in the year 1678? *Mrs. Harwell.* — At Wolverhampton.

Sol.-Gen. — Did you know Mr. Ireland, he that was executed?

Mrs. Harwell. — Very well, my lord.

Sol.-Gen. — When did he come to your house at Wolverhampton? *Mrs. Harwell.* — The 17th of August, 1678.

Sol.-Gen. — What day of the week was it? *Mrs. Harwell.* — Upon Saturday.

Sol.-Gen. — From whence did he say he came at that time? *Mrs. Harwell.* — I do verily believe it was from Tixhall that he came; I cannot positively say.

Sol.-Gen. — How long stayed he there? *Mrs. Harwell.* — He came to my house the 17th of August, 1678. He stopped there that night, and I think he lay in my house every night till the 26th of the same month. Upon the 19th day, after dinner, I went with him a good part of the town of Wolverhampton; and upon Friday following, which was the 23d, he went a little way out of town, to a fair hard by, and returned the same day, and stayed at my house the next day, being Bartholomew day. The next day being the 25th, being Sunday, he was at my house, and he stayed, as I said, every night, and lay at my

house; and went away on Monday the 26th of August. It was, to the best of my remembrance, in the morning.

Sol.-Gen. — Whither did he say he was going, when he went from your house on the 26th? *Mrs. Harwell.* — I think to Tixhall, he said.

Sol.-Gen. — When did you see him again after that? *Mrs. Harwell.* — He returned to me again the 4th of September following. That night he supped at my house, and lay there; and he stayed at my house Thursday the 5th of September, Friday the 6th, and he went away on the 7th from me for good and all.

Att.-Gen. — Whither did he go then? *Mrs. Harwell.* — To Tixhall, I think, I cannot tell. . . .

Oates. — I desire to know, whether this gentlewoman was at Ireland's trial? *Mrs. Harwell.* — No, my lord; but I heard that upon the 17th of December following, Mr. Ireland was tried at the Old Bailey for High Treason. Upon the 19th, I was informed by the post what was sworn against him; and particularly as to this time, which I knew to be false. And upon my own costs and charges I sent an express away to town here to a friend that I knew, upon reading the letter that was written to me, that Mr. Ireland was falsely accused; and by that express also I sent a petition, humbly beseeching his late majesty, that we might bring in witnesses to prove, that Mr. Ireland was in Staffordshire, when Mr. Oates swore he was in town; and upon that the king stayed the execution about five weeks. We did hope for a second trial, but we could not obtain it; and he was executed. I did it at my own cost and charges; for I thought it my duty, if I could, to save his life, knowing that to be false which was sworn against him.

L. C. J. — She speaks gravely and soberly, upon my word.

Just. Withins. — So she does indeed.

Att.-Gen. — We have abundance of them, my lord. . . .

Att.-Gen. — Well, for the present, we do not design to call any more witnesses.

L. C. J. — Then let us hear what you say to it.

Oates. — My lord, here is an indictment exhibited against me, which sets forth, that I should swear at Mr. Ireland's trial, that Mr. Ireland was in town the 1st and 2d of September; and it sets forth, that in truth he was not in town; and likewise it sets forth, that I swore at the trial of the Five Jesuits, that Mr. Ireland took his leave of me and others here in town at his lodgings in Russel street, between the 8th and 12th of August; whereas the perjury there assigned, is this. That he did not take his leave of me, or any other person, betwixt the 8th and 12th of August, at his lodging in Russel street. . . . Here is nothing but a bare point of time upon which this perjury is assigned; when the substance of the testimony that I gave at the trials of Mr. Ireland and the rest, about the Popish Plot, is not assigned as any perjury at all; it is only a circumstance of time and place. . . . 'Tis hard and unreasonable to tie up witnesses that come to discover plots and conspiracies, to speak positively as to circumstance of time and place, and every little punctilio in their evidence, to bind them up to such niceties in the delivery of their testimonies, as to time and place. It is usual to speak with latitude as to such kind of things, and 'tis probable my evidence which is now in question was not that Ireland was the 1st or 2d of September positively here in town; but, my lord, I did, I believe, give myself a latitude, and would not confine myself to either the 1st or 2d, 5th, 6th, 7th, or 8th; but my lord, that he was in September there, I am positive. . . .

Then, my lord, I shall begin with my proofs: . . . Mr. Jennison

was used as a witness in the trial of Sir George Wakeman, and so was Mr. Bowes, and Mr. Burnet, who was produced to prove the circumstance of Mr. Jennison's evidence; but, my lord, since I cannot have the benefit of his evidence, nor of Sarah Paine's, I must only sum up all I have to say in two or three words. My lord, besides that what I did deliver in evidence at those trials, I gave in upon oath; you have Mr. Bedloe's evidence at the trial of Ireland, testified by Mr. Blaney: and the testimony of him as a dying man, given in to my now lord keeper, wherein he averred, that what he had spoken of the plot, was all true. And you hear that he swore, Mr. Ireland was here in town in August, and so did Sarah Paine too; and I think upon myself as very hardly used, to have such a part of my testimony brought in question, after witnesses are dead, or gone out of the way. . . .

Sol.-Gen. — May it please your lordship, and you, gentlemen of the jury, the question that you are to try, is a perjury, which is charged on the defendant Titus Oates, for swearing that William Ireland was in town upon the first or second of September, 1678. And likewise, for swearing, that he took his leave of him at his chamber in Russel street, between the eighth and twelfth of August, 1678. . . . And now, let all the world be judge, if there be any possible room left, that any one word Mr. Oates has said can be true; even giving him the latitude of time he himself desires, and says all witnesses must be allowed. No, there is not one minute for him, wherein he can be verified in any one tittle of his evidence, as to Ireland's being in town. And this is that which I call (and sure, well I may so call it) a demonstrative proof, that what Oates did swear is utterly false. Gentlemen, the jury had not this evidence at the trial of Ireland: some there were that went out of the town with him; and some,

one or two of Wolverhampton, were at the Five Jesuits' trials; but not above five or six in all of these forty odd, that now appear. True indeed it is, all these were not there; and Ireland upon that, unfortunately suffered; for so I may take leave to say, it was unfortunately. . . .

L. C. J. — Gentlemen of the jury, this case has taken up a great deal of time; but it is a case of that moment and consequence, that sure no time ought to be thought too long, that is employed for the discovering of the truth, so necessary to be discovered, as the matter now in question. . . . First, You must observe, that this indictment against Oates, is for committing willful and corrupt Perjury; which is also said to be done maliciously. And if it were false, surely it was malicious; because by his false oath have innocent men been convicted, condemned, and executed. Secondly, You are to consider, how far the thing goes, to make it material to the issue: for if it were upon a nicety only, or a catch, or any of those fine words, that he has been pleased to make use of, it were not fit to perjure him upon it. But it is certainly very material: for time and place are matters substantial to discover truth and falsehood by; as in the case of Susannah, the perjury of the Elders, as you may remember, was detected by those very circumstances. . . . Besides, I must observe to you, with what caution, care, and sobriety, both of expression and action, all these gentlemen and women have delivered their testimony, with the greatest tenderness and care that possibly could be: and as well as they have given it with caution, so I cannot but put it home to you, gentlemen at the bar, to give it its due consideration.

For though the other juries did believe Oates, and not them, at

that time; yet that is not to be your measure, because you have not the same reason to do it. Could any person think, that there should be such villains upon earth as impudently to swear downright treason, against their fellow subjects, if there were no truth in the accusation? That was the thing that guided those juries, who were all of them, no doubt, very honest men; and that was it, which influenced the parliament to do what they did in the matter. For it was morally impossible to be thought, any such wickedness could be so publicly attempted. But, God be thanked, the eyes of all honest and understanding men are opened; and we see the fault was in our credulity.

. . . And this I say to you, gentlemen, with a purpose to vindicate those persons who were concerned as jurors in the trials of all those causes; because that is the thing much harp'd upon, and aimed at: That because he was believed before, to disbelieve him now would cast a reflection upon the juries; whereas, if that opinion hold, never will there be any such thing as perjury detected, so long as the sun and moon endure: for if a verdict be obtained upon false testimony, and it shall be enough for the witness to say, I was believed at such a trial, and therefore do not you offer to prosecute me for perjury: That would be the finest doctrine that could be taught, to give a license to destroy all truth, justice, and human society. Therefore, I leave it home upon you. Upon your consciences be it. . . .

Then the Jury withdrew, to consider their Verdict; and, after half an hour's recess, returned to the bar; and answering to their names, delivered in their Verdict, "That the defendant was Guilty of the Perjury whereof he stood indicted."

350. JAMES BYRNE'S TRIAL. (1803. HOWELL'S *State Trials*. XXVIII, 808.) . . .

Mr. *O'Grady* opened the indictment [for treason].

Mr. *Attorney-General*. — My Lords and Gentlemen of the Jury: The indictment has been read. . . . According to the information which I have, it is stated, that this man appeared a little on one side of the party of rebels in Thomas street, who were met by lieutenant Brady — he came suddenly upon the prisoner, who had a pike in his hand; upon perceiving the persons who came near him, he threw away his pike and endeavored to run, but was immediately seized. After a soldier had taken him he struggled to escape, so that it was necessary for a second soldier to assist in securing him. Gentlemen, the prisoner as I understand, is not a native of Dublin, he is a baker in the town of Naas. I cannot conjecture what brought him to Dublin that evening, unless for the treasonable purpose with which we charge him. It is for him to show that he was occupied in that hour upon lawful business, notwithstanding the agitation which then prevailed in the street. . . .

Felix Brady, Esq., sworn. Examined by the *Solicitor-General*.

You are a lieutenant of the 21st regiment? — Yes.

Where were you stationed upon the 23d of July last? — At Cork street barracks.

Did you at any time of the night see any number of people, and mention what happened? — I went out with a party, between forty and fifty men, for the purpose of going to Usher's island, to report to Col. Browne the information I had received, of an armed mob being in the city. . . . I then ordered my men to form subdivisions, and prime and load. I heard an huzza in front, and a great noise of men coming forward — I heard their feet, but could not see them. When they advanced near me, the leading

subdivision fired a volley; then the men kept up an independent fire, and from their light I observed near me on the left, some men with pikes; they fled in all directions when the firing was kept up about two minutes, leaving six killed and one dying close by me. . . . I saw the prisoner at the bar at the guardhouse in James's street; he was brought there by the men with me, and lodged in the guardhouse. . . .

Felix Brady, Esq., cross-examined by Mr. *MacNally*.

You mentioned that the night was very dark? — It was.

Had you or your party any kind of light? — None, but the flashing of the pans.

Upon the discharge of the pieces by your men, there must have been a smoke between the rebels and the soldiers? — That of course, if the wind blew it against the soldiers.

But it was a calm night? — It was.

Then the smoke would form a screen between the two parties? — I think it would go up.

But for some time, would not the smoke create a darkness between your men and the opposite party? — It is reasonable that it would.

Court. — Could you see the men with pikes, notwithstanding the smoke? — I could, and did see them with pikes like white poles; the men I saw were upon my left, not in front, so I saw them distinctly. . . .

Robert Watt sworn. Examined by Mr. *Townsend*.

Look about and try if you know the prisoner at the bar? — I do.

You belong to the 21st regiment? — I am a private in that regiment.

When did you first see the prisoner? — I saw him in Thomas street.

Upon what day? — On the night of the 23d of July.

Were you there upon duty? — Yes.

Under whose command? — Under lieutenant Brady.

You were one of his party? — Yes.

In what situation were you? — I was in the second division, the left-hand man, close by the pavement when the firing began.

Where did you see the prisoner? — I saw the prisoner on the pavement with a pike on his shoulder about two yards from me.

Do you know the distinction between the pavement and what we call the flags? — I call them both pavement; one is called broad pavement.

That is the flagged part? — Yes.

Was it there you saw the prisoner? — Yes.

What did you do? — I cried out to him, to stop; when I said that, he threw his pike from him, and I seized him.

Why did you desire him to stop? — He was endeavoring to pass us.

Did he stop when you bid him? — He then threw his pike from him, and I caught him by the breast and brought him among the men.

Did he submit? — No; he struggled to get off, and I was obliged to get another soldier to my assistance. . . .

Did you take the prisoner into the barrack? — Yes; he was taken inside. . . .

Robert Watt cross-examined by *Mr. Ball*. . . .

You say when the firing began you saw this man? — Yes. . . .

In what direction was the volley? — Straight down the street.

How far was the first division advanced before the second? — About six paces.

Were you in front or rear of the second subdivision? — In front.

When you saw this man he was endeavoring to pass? — He was. . . .

Your face was to Thomas Street? — Yes, down towards the market house.

And his was to James's Street? — It was.

Was he running fast? — He was.

It was when he moved you saw him? — Yes.

The night was dark? — It was.

Suppose you had moved sideways to the left and he had stopped, how near would he be to you? — When I bid him stop, I only stepped to the flags and gripped him.

Then he was close to you, and you were in the second division? — Yes.

Five or six paces behind the first division? — Yes.

They fired towards the market house? — Yes.

And he was upon a line with you behind the first division? — Yes.

How many feet do you reckon in a pace? — Five feet.

Then you were thirty or five and twenty feet behind the first division? — Not so much. . . .

James Waddle North sworn. — Examined by the *Attorney-General*.

You are a private in the 21st regiment? — I am.

Where were you on duty the night of the 23d of July? — I was taken from Cork street to James's street and Thomas street, under the command of lieutenant Brady.

Did you ever see the prisoner at the bar before? — I did.

When did you first see him? — As near as I recollect about ten o'clock on the night of the 23d of July in Thomas street.

Mention the circumstances attending your having taken notice of him? — I was in the second subdivision under lieutenant Brady's command, and seeing Watt go out of his rank to take a prisoner, I made after him, and came up as the prisoner threw down his pike; I came up time enough to hear the pike fall, but did not actually see the pike in the prisoner's possession.

What did you do then? — Watt brought the prisoner to the division, he was struggling very hard for liberty. . . .

Did you see him by candlelight that night? — Not till I saw him at the commander of the forces; but I had no occasion, being so close to him, and by the lamp I could see his person.

Jury. — What became of the pike? — It was taken by the men of the division with the rest. . . .

You said you did not see the pike, but heard it fall; how do you know it fell from him? — From the place in which it fell.

Was there any other person near him? — No one but Watt. . . .

Defense.

Mr. MacNally. — My Lords and Gentlemen of the Jury: . . . The case of my client as to matter of fact is simply this: He has been called upon to account for the occasion which brought him to Dublin from his place of usual residence. . . . The prisoner, gentlemen, is a baker, and he will satisfy you, that some time previous to the rebellion, in consequence of a failure of business in the county of Kildare, he came to Dublin, and determined on taking a house in Rings-end, for the purpose of carrying on trade in that village, and thereby earning an honest livelihood for himself and family. But it may be asked, what brought him to Thomas street at so critical a time? I answer, as instructed, a brother-in-law of his dwelt there, and, while seeking for a proper habitation, he resided with him. It appears that on the 20th of July he was at Rings-end making arrangements for his business. Upon returning to Thomas street to the house of his brother-in-law, on the 23d, he was taken into custody. . . . Consider whether he might not have repaired to Thomas street utterly ignorant of the disturbance which had commenced and raged in his absence, and which at the time of his arrival there had nearly subsided. . . .

As to the witnesses produced for the purpose of identifying the prisoner as one of the acting conspirators — as one of those who were levying war against the Crown by opposing the king's troops, I do not impeach the testimony of the soldiers, by imputing to them willful perjury — I see no motive for

their swearing falsely; on the contrary, I cannot say they do not deserve credit as to many of the facts they have sworn to. But in a scene of such darkness and confusion, without impeaching their integrity, I may fairly advance the probability of their having been mistaken — and, upon discrimination of their evidence, taking it in a comparative view, you will find they have been inconsistent. What is the evidence?

One soldier says, "the prisoner was taken and he struggled, but he had no pike." The other soldier says, "I heard a pike fall"; but he candidly admitted he did not see the weapon; — then observe, there is no proof from either of those men, that the prisoner had a pike, and a jury are not to conclude guilt from inferences. Again, I do say, one of those soldiers swore rashly, and inconsiderate swearing goes strongly to create doubt in the mind of the hearer; I repeat it, I do not charge the man with willful want of veracity, but with rashness, resulting perhaps from too much zeal. He swears he knew the prisoner by the flashes of the pan when the soldiers fired. Does that evidence deserve implicit credence? I say the flash from the pans could not have assisted the sight of the soldier, so as to enable him to discern the features of a stranger with sufficient accuracy to identify his person upon oath. It has been known that the light of the sun has deceived men of great sense and sagacity; it so happened a few years ago in England. Sir Thomas Davenport an eminent English barrister, a gentleman of acute mind, and strong understanding, swore positively to the persons of two men, whom he charged with robbing him and his lady in the open daylight. He was positive, and the hour he stated was about two o'clock in the afternoon. But it was proved, by the most conclusive evidence, that the men on trial were, at the time of the robbery, attending a company at

dinner, one as master of the tavern, the other as waiter, at so remote a distance from where Sir Thomas was robbed, that the thing was impossible. The consequence was, the men were acquitted; and some time after the robbers were taken, and the articles taken from Sir Thomas and his lady found upon them. Sir Thomas, on seeing these last men, candidly acknowledged his mistake — and, as I have heard, gave a recompense to the persons he prosecuted, and who narrowly escaped conviction. I obtrude this anecdote on your consideration, gentlemen of the jury, to show that evidence of identity, however positive the witness may be, or however credible, ought to be received with the most delicate caution. When a man discharges a gun with the lock close to his eye, in my humble opinion, so far from the flash assisting the sight, it would dazzle and render the object before him confused. The flash may illumine for an instant, the figure of a man, and make it perceptible, if near, but cannot distinguish his features with sufficient accuracy to enable the party discharging the piece to swear to them — the flash throws a light on the object, but that light has no continuance, it is momentary, and there is not time for the mind to be impressed by a certain idea of any object seen through such a medium. Consider, gentlemen, all the circumstances — the night was dark, every shot was increasing the smoke collecting about them, and the smoke increased the darkness. The bravest man is not without feeling on such occasions; when the battle rages, even the soldier looks more to himself than to others. I ask you, then, how is it possible for one man to swear to the identity of another man on such an occasion? . . .

Jeremiah MacShee sworn. Examined by *Mr. Ball*.

Where do you live? — I have a house at Rings-end.

Who occupied it lately? — One James Carroll.

When did he leave it? — Six months ago.

Have you let it? — I was going to let it.

To whom? — To James Byrne, the prisoner.

What business was he about to follow there? — As I understood from himself, it was for the baking business. . . .

James Kearney sworn. Examined by *Mr. MacNally*.

Do you know the prisoner at the bar? — I do.

Do you know the last witness? — I do.

Were you at the residence of the last witness with the prisoner? — I was.

Upon what day? — On Thursday.

In what month? — Three days before the disturbance in Thomas street.

What occasion had you to go with the prisoner? — When Mr. Byrne came to town he called to me at Rings-end, and inquired of me, if I knew any place at Rings-end, or about the place, that would answer for public business for his wife, and that he would build an oven in; I told him of a house in Rings-end, with a bill upon it, which I thought would answer; he said after some time when the business would go on, he would knock up an oven, and I would be a partner.

What business were you? — A baker.

A master, or journeyman? — A master formerly; but have dropped it, not making anything of it.

Of what business is the prisoner? — A baker.

How long have you known him? — Thirty years. I worked journey work for him. We went to Shee's

and had some porter; he was lame from an accident of the mail coach going over his leg, and we returned to my house, where Mr. Byrne slept.

Did Byrne go to see the house? — He did not.

He slept at your house? — He did, two nights, Thursday and Friday.

Was he there on Saturday? — He was.

How long did he stay? — Till two o'clock, we were waiting for Shee, who was to come down to show the house, but he did not come.

Did Corcoran show the house? — The taproom belonged to one Brennan, and Corcoran had the setting of it; Brennan said a tailor, next door, had offered money for it.

Can you tell whether it was at a sufficient price? — I cannot tell.

At what time did the prisoner leave Rings-end on Saturday? — After two, drawing to three.

Where did he go? — To my house, No. 13, Townsend street.

Were you with him? — Yes.

How long did he stay there? — Why, by the time we parted at the new street, it was half past nine o'clock.

What new street? — Near the New-bridge.

Then you parted with him? — Yes; he told me he intended to go over the water, to see if Mr. Kennedy had come from Tullamore.

Is Mr. Kennedy a corn factor in Abbey street? — Yes.

James Kearney cross-examined by *Mr. Plunket*.

You have known the prisoner a long time? — Yes, thirty years. . . .

At what time of the day did he come to you on Tuesday? — About two o'clock. . . .

You went immediately with the prisoner? — I did, as soon as I drew a batch of bread.

You went down to MacShee's? — Yes.

It was then near three o'clock? — It was.

Did you return home after leaving him there? — No, we returned together. We stopped at Lynch's, my employer, who disputed with me because I was getting this house for Byrne.

But then you returned to Town-

send street? — Yes, and stripped and went to bed.

So that it was bedtime when you returned to town? — It was late. What hour was it? — About nine.

It was two o'clock when Byrne went to you? — Yes.

Then you arrived at MacShee's about half past three, and returned home at nine, so that you must have delayed four hours with the artillery? — I do not say that; I was there three quarters of an hour.

How do you account for four hours, after allowing sufficient time for walking? — I went to Mr. Toole's and got some bread and cheese.

But how do you explain the four hours? Were you not at the Pigeon-house looking at the stores and cannon? — I never did; I did not advance the breadth of my nail. . . .

At what time did you and Byrne separate? — About half past nine.

Where? — At the new street, between the college and the bridge.

Why did he not sleep with you that night? — He said, he wanted to see Mr. Kennedy; and said he would go to his brother-in-law's, as he wanted to be off in the packet next morning.

That was to go home to Naas? — Yes.

At six in the morning? — Yes. . . .

You heard of no disturbance on Saturday, the 23d of July? — No, not a word till the next day.

When on the next day? — Between ten and eleven, when I got up. I worked very hard, and I sleep generally on Sunday morning; when a man is twenty hours on foot, he sleeps a good deal afterwards.

Had you worked that Saturday? — No, I did not work at all that day; but from the habit of working hard upon Saturday, I generally sleep upon Sunday; and having to go to work early the next morning, I slept upon that morning.

Did you work any that night between ten and eleven o'clock? — No.

When you heard of the disturb-

ance in Thomas street, did you go to inquire whether your friend had gone in the packet?—I did not; I thought there was no danger of an innocent fellow at any time.

Why did he go without seeing Mr. Kennedy?—How can I tell?

Did he not tell you?—No; not whether he was come home or not.

Peter Butler sworn. Examined for the prisoner by Mr. *Ball*.

Where do you live?—In Abbey street.

What is your business?—A baker.

Do you know Mr. Kennedy?—I do.

Does he live in Abbey street?—He does.

Whom do you work for?—I carry on business for myself.

What business does Mr. Kennedy follow?—He bakes biscuits for government.

Did you ever see the prisoner at Mr. Kennedy's house?—Often.

How near do you live to Mr. Kennedy?—Almost opposite his door.

Did you see the prisoner the night of the 23d of July?—I did.

Where?—At my own house.

At what hour did you first see him that evening?—Very near nine.

When did he leave you?—About half past ten; he would stay till morning if I could drink with him; I was not well, and I said to him, it was a shame for him to stay so long in town. He said he had been taking a house in Rings-end with Kearney and had been drinking with him; I said, it was a shame for him to keep such company; he said the man lived in the place, and he was taking his assistance.

Where did the prisoner lodge?—At Gilligan's house in Thomas street.

Whereabouts?—In the middle of the street, up beyond Dirty lane, near James's gate.

Peter Butler cross-examined by Mr. *Townsend*. . . .

You drank with him that night?—Yes, we had some porter; he stayed

with me some time, about three quarters of an hour, the girl was washing the parlor and we agreed to go to another place, after he had been half an hour at my house, and then we went to another place and had some porter, he stayed till I am sure it was past ten o'clock.

Perhaps it was eleven?—No, it was not.

What night was it?—Saturday night.

Was not his lodging at Townsend street?—He slept there, as I understood.

And lived with Kearney?—I believe so; nobody would treat him as that man did.

Then after ten o'clock he was to go to Thomas street after sleeping two nights at another place?—He would have stayed with me all night: I said it was a shame for him to be so late; he said the hostler would let him in.

You say, he would have stayed longer with you?—He would; he wanted me to go to another place to drink more; but I pushed him away and said he was an unfortunate fellow. . . .

. . . (Here the evidence on behalf of the prisoner closed.)

Felix Brady, Esq., again called and examined by the court.

Be as accurate as you can as to the time the action took place in Thomas street?—To the best of my recollection, it could not be more than half past nine, and as far as I recollect we were returning from James's street by ten o'clock and rather before it.

Jury.—Are you positive that the action was over at half past ten?—I am positive of that. . . .

Mr. *Ball*.—My Lord, and Gentlemen of the Jury: I have a more oppressive feeling in rising to address you upon this case, than has ever attended me upon any other occasion, though even in itself of equal importance, from the nature of the evidence that has been given—a series of evidence de-

manding a most minute examination and comparison of facts and circumstances. . . . There is not a single *fact* of any sort imputed to the prisoner by the witnesses for the prosecution, nor any circumstance in the smallest degree affecting him, except the one circumstance of the pike; and out of a guard of fifty soldiers and their officer, not one person has been able to say anything as to that fact, except one single soldier; of the evidence of that single soldier, and the circumstances accompanying the facts which he has stated, I entreat your cool and cautious investigation; — consider the position of the several parties concerned in the transaction — the soldiers were proceeding in an easterly direction, the rebels were before them, the first division of the military were advanced five or six paces before the second, the prisoner was discovered on a line with the second division, his face towards the west — the night was extremely dark — there was no ray of light to exhibit any object except that which proceeded from the fire of the musketry. A volley was fired by the front division, and by the light of that volley, fired behind the prisoner's back and five or six paces from him the soldier affects to say, that he not only saw the pike fall from the prisoner's hand, but that he also saw and distinguished his face, and it is in evidence that the wind was blowing from the east, and therefore by throwing the smoke back upon the party must have materially increased the obscurity and darkness of the scene. I do not wish to argue on the intentional truth or falsehood of the evidence of the soldier; it is possible he may have intended to deceive, or he may have intended to give just and true evidence according to his view and conception of the facts — which at best must be confused, if not absolutely doubtful and uncertain — but you, gentlemen, will consider whether it is possible, that

the light of muskets fired from the west, when the wind was easterly, could show the face of a man at such a distance, and in such a relative position — back to back with the soldiers who fired. And even though you should think it physically possible, your next consideration will be, whether such a light may not possibly have misled the soldier, and whether with a good intention, he may not state that to you which he may believe to be true, and yet you may be of opinion, that he could not have such an accurate knowledge of, as to authorize you to take away the life of a fellow creature — and the more especially as, independent of any case made out by the prisoner, he was stated by the witnesses for the crown to be in a situation not consistent with his being a party in the rebellion. . . .

Gentlemen, with regard to the times sworn to by the different witnesses, there appears to be something like a contradiction between the time stated by the witnesses for the prisoner, and that stated by the witnesses for the prosecution. I do think, that is the only part of the evidence upon which it is immediately necessary to argue in support of the evidence for the prisoner; and convinced as I am myself, that the apparent variance between the evidence is not fatal to the credit of the prisoner's witnesses, I have but little doubt that I shall be able to satisfy your minds on that point. — If two men, upon a certain defined and single fact, shall each give a different account, one certainly must speak intentionally false. But if the fact be of such a nature as at all rests in conjecture, to which the common usage of mankind has given great and general latitude, such as time, exact precision cannot be expected, and a complete coincidence would be the very circumstance which would induce a reflecting man to suspect that there was some practice to deceive. Mr. Brady says, it was

half past ten when the transaction took place in Thomas street; he speaks upon *belief*, not having resorted to a watch or clock upon the occasion. . . . I would appeal to your own tried and frequent experience on this subject; I would venture to say, if any of you were called upon to say what the hour is at this moment, you would all mention different hours or parts of hours, and that not one of you would name a time that would not be refuted by looking at his watch, and in your watches would be found perhaps as much variety as in the several guesses you should make yourselves; nay, even the public clocks of the town do not agree. Then see what the supposed contradiction is — he was in company with a poor sickly man, who was anxious to get to his bed, which he could not do till he had first got rid of his friend, that friend too (the prisoner) something intoxicated — the night advanced — the state of his mind calculated to make the time hang heavy and appear long — he is of opinion, it was half past ten o'clock before they separated. . He did not say it was so by his watch — he did not refer to a clock, and, if he had, it might have misled him: his computation then might also deceive him. Gentlemen, you cannot but be of opinion, that two men, intending each of them to speak truth, may differ in the hour at which a shot was fired, or any other fact happened, and may, of course, without fraud or crime or moral falsehood, give a different, and one of course innocently a false account. — But what is the inaccuracy here? it is, in my humble judgment, such an inaccuracy as sets up the witness, Butler, and his credit, instead of putting them down. — Does not the prisoner know at what time he was apprehended, as far as the time could be ascertained? — And is he to be charged with suborning a witness to state a fact which is utterly inconsistent with his defense?

If the defense were fabricated, the witness would ask, "what time am I to state you were with me?" and that time would be made correspondent with the other circumstances: the witness would have been tutored to state an hour or time that should not be contradicted and refuted by the known and indisputable fact of the prisoner's being in custody at the time he should be said to have parted with the witness. But no such thing is done; no preconcerted accuracy is resorted to, and you, gentlemen, can best collect the truth from the evidence which has been given. The difference between the witnesses is, that lieut. Brady states the prisoner to have been arrested at half past ten in Thomas street; Butler states him to have left Abbey street at half past ten; this amounts to a variance evidently proportioned to the time the prisoner would occupy in walking from Abbey street to Thomas street; twenty minutes would be a large allowance for that purpose; either of the witnesses may easily be mistaken to the amount of twenty minutes; the error may be all on one side, and it is impossible to decide upon which; or both parties may be equally mistaken, each to the amount of ten minutes.

I have said thus much upon this subject — upon the place where the prisoner was found — on the direction in which his face was turned, and the species of light by which the soldier attempted to justify the accuracy of his eye; because, taking all these circumstances together, it is impossible but they must raise a doubt in your minds. . . . I will not undervalue your understandings and your hearts so much as to believe it possible, but that everything taken together — the utter impossibility of accurate vision in the soldier — the insignificance of the difference, or inaccuracy in point of time — the consistency of the prisoner's case with his occupation — . . . I say, taking all these

things together, you must entertain doubts upon the case. . . . The language of the law in such cases is concise and imperative — you must acquit the prisoner. . . .

Reply.

Mr. Solicitor-General. — My Lords and Gentlemen of the Jury : . . . In this case, no questions of law or difficulties in matter of fact arise. The only question for your consideration is “what part the prisoner took in the insurrection of the 23d of July?” In order to ascertain that, I will first call your attention to the evidence which has been given upon the part of the Crown, and then to the exculpatory evidence on behalf of the prisoner. It appears, that at half past nine o'clock, a party of the army arrived at Thomas street. . . . It appears, that this firing kept up, — and which from its nature spread a continued glare, not sudden like a volley, but constant, the men firing one after another, — afforded a sufficient degree of light to distinguish objects. The witness Watt was upon the left of the division, next the flag way, and the prisoner was upon the flags. The soldier did not observe him till he came close, — which is accounted for, not from want of light, but that the attention of the soldier was directed toward the enemy in front, rather than to the place where the prisoner was. The prisoner approached within a yard, when he was called upon to stop ; — at the time he was thus called upon he was armed with a pike, which was described as a white pole. Is there any doubt, that the witness could distinguish that weapon clearly, when the firing was going on in front, and lamps were on the same side of the street with the prisoner? Is it credible or doubtful in the slightest degree, that a soldier could see the weapon under such circumstances? But see how he is fortified by the other witness, North ; — he heard something fall the moment the first soldier called

out ; and a pike is found at the feet of the prisoner. The first soldier called to the prisoner, and there being only a short interval of space between them, he stepped out and seized the prisoner. North at the same time heard the pike fall, and there was no other person near the prisoner who could throw it down. Can you believe that the soldier threw it down? and therefore when the learned counsel insinuates, that some other person threw down the pike, he must mean the soldier, which you cannot believe. Watt and North both appear to be men of very clear understandings, more capable of ascertaining and describing facts accurately, than usually occurs in their rank of life. . . . Thus is the evidence for the Crown of that kind and character that you cannot well refuse your assent to it. The veracity of the witnesses is not impeached, and it is only said, that they may be mistaken. But it appears to me that there is no circumstance in the case upon which that allegation can be supported. The two witnesses correspond in their testimony, and all they say is irresistibly corroborated by the conduct of the prisoner himself, in making violent resistance, not only at the moment of his arrest, but long after he was in the custody of the king's forces. Such, gentlemen, is the case, as resting on the evidence given by the witnesses for the Crown. . . .

At a quarter past nine, Kearney tells you, he and the prisoner separated. Where does he go? — To a baker in Abbey street — he arrives at Butler's, and stays with him till half past ten — so that there is no mistake by Butler with regard to the time, as alleged by the prisoner's counsel; he and Kearney agree and tally exactly; at half past nine, he quits one and arrives with the other; so that the inconsistency which was relied upon to prove there was no confederacy amongst the witnesses, is not

founded, because they are perfectly consistent. — But, says Mr. Ball, it would be ridiculous to fix upon an hour, when the soldiers, who took the prisoner, could ascertain it. — And why keep back the prisoner from Thomas street? — Because they knew that all the outrages, all the murders of that melancholy night, were committed in Thomas street before ten o'clock — so that upon that account you can reconcile their anxiety for keeping the prisoner out of Thomas street till after ten o'clock. The prisoner produces no companion from Abbey street to Thomas street, because there were none there but such as were implicated in this transaction, and it might not be convenient to them to appear. . . . Then how does he get into the situation in which he is found? It is impossible he could but as one of the rebel party. In addition to all this, it appears, that the house, to which he alleges he was going, is situated upon the opposite side of the street from the place where he was found. But when I allude to the circumstance of his going to Gilligan's house, I must remind you, that the declaration of the prisoner himself is the only evidence in the case to support the assertion. When a man makes an assertion, which becomes material upon his trial, and has witnesses to prove it, if true, it is not to be regarded unless the witnesses are produced. . . .

I have attempted to draw back your attention to the evidence on the part of the Crown. It is a plain and simple narrative against which there is no objection, and I have gone through the evidence of the prisoner, only to meet the observations of his counsel. . . .

Summing up.

Mr. Baron DALY. — Gentlemen of the Jury: . . . the defense set up is of a peculiar nature; not so much contradicting or controverting directly the facts which have been proved, as a defense by way of in-

ference, from which you are called upon, if you believe it, to pronounce him an innocent man. It appears that the prisoner is an inhabitant of Naas, a town situated sixteen miles from the city of Dublin, and it certainly was incumbent upon the prisoner, — not being an inhabitant of Dublin, being found in such a place, and upon such an occasion, — to show why he was in the city at that time. — His defense is offered to show, that he was in the city upon an innocent occasion. . . . With regard to the hour, at which the prisoner (if you believe his witnesses) was in Abbey street, it differs from the time stated by the witnesses for the prosecution. If you believe the testimony of lieut. Brady, the prisoner was in Thomas street at a much earlier hour than he could have been, if the witnesses on his part swear true. It is for you to judge with regard to that contradiction; and if you should believe the witness for the Crown as to the hour, the conclusion which would naturally follow, but which is for your determination, is, that the defense is fabricated. The material fact to ascertain is, whether the prisoner was found in Thomas street armed with a pike against the king's troops. That he was there is not disputed; that he struggled is not disputed; and the only circumstance upon which a shade of doubt is cast, is, whether he had a pike? — That is not contradicted by direct evidence; nor could it from the nature of the case. But it is controverted by inference — by showing, that he came from Naas with an innocent intention, and therefore was not likely to have a pike. There is one thing remarkable, however, that though he said he resided for the occasion in Thomas street, there is no evidence that he did reside there. He himself said, that he lodged at Gilligan's in Thomas street, but there is no evidence of the fact. . . . If you believe from his own assertion, that he lodged

in Thomas street, and that he was in Abbey street at the time his witnesses say, and notwithstanding what the witnesses for the Crown say, that he innocently went to Thomas street, and was standing innocently there during the action—or if you have any reasonable doubt of that you ought to acquit the prisoner. But in doing so, you must reject the testimony of the

soldier, and many circumstances that flow from the evidence of the prisoner. . . .

The jury retired, and in five minutes returned a verdict of Guilty. . . .

Prisoner.—I am as innocent as the child unborn. I leave it to my God, I never saw a pike in my life.

He was executed the following day in Townsend street.

351. WM. C. ROBINSON. *Forensic Oratory; a Manual for Advocates.* (1893. p. 210.) . . . The cross-examiner may attack a willful liar by attempting to involve him in contradictions with other witnesses whose credibility is above suspicion. The points of inquiry selected for this purpose must be related to the cause, and either conclusively established by evidence already offered, or capable of being proved by that which is about to be produced. They must also be such as the witness clearly knows, or clearly knows that he does not know; for the contradiction sought is one that demonstrates the liar's evil will, and therefore has no reference to matters of opinion, about which upright witnesses may widely differ, nor to long past sensations into which errors of memory or perception may have innocently entered. On any of these points the cross-examiner may test the witness by questions which do not disclose their actual purpose, in the hope that he will make some statement by which his disposition to pervert the truth will be revealed. A single instance of willful falsehood will be sufficient to destroy him. The maxim, "*falsum in uno, falsum in omnibus*," expresses not merely a rule of law, but the natural instinct of all honest men, who will unhesitatingly repudiate a witness when once his voluntary untruthfulness appears.

352. CHARLES C. MOORE. *A Treatise on Facts, or the Weight and Value of Evidence.* (1908. Vol. II, § 1073.) . . . "*Falsus in Uno, Falsus in Omnibus*." It is a maxim that if a witness willfully and corruptly swears falsely to a material fact in the case, the Court or jury is at liberty to disregard the rest of his testimony, except in so far as it may be corroborated by other credible evidence. . . . It is said that there is no maxim of the law of evidence requiring greater caution in its application, than that of "*falsus in uno, falsus in omnibus*." A witness may, under great temptations, and in some isolated case, swear falsely; and yet, where the temptation is removed, where there is nothing to operate on his hopes and fears, his passions and prejudices, where he has no interest in the matter except to tell the truth, his testimony may be of great value. . . . In a bastardy case in Massachusetts the following admonitions in the Court's instructions to the jury were pronounced free from objection: "It is not true that because a witness is inaccurate as to some of the circumstances and incidents connected with the story, the story is necessarily false as to the main fact. Illustrations might be given without number of this principle. If one of your friends tells you that he has been fishing, and proceeds to tell you how many fish he caught, and what they weighed, you may distrust somewhat the accuracy of his

count, or the correctness of his scales, without disbelieving the main fact that he went fishing. The weight or significance of such discrepancy is always a question of fact. It may be such as to induce distrust of the whole story; but it is not necessarily so. . . .

Strictly speaking, this maxim is not applied to testimony merely because the witness has committed innocent mistakes. . . . An unintentional mistake respecting a material fact may, and usually does, affect the general credit of the witness to a greater or less degree; but it is often the case under such circumstances that no sufficient cause exists for disregarding his testimony respecting other material matters. . . . Nevertheless, if a witness is proved mistaken in all his statements except one which is incapable of investigation, the Court is quite likely to apply the maxim in an inverted form by concluding that he is mistaken in that one. . . . If a witness testifies emphatically to a series of events identical in character, and is found to be mistaken as to one of them, perhaps the Court will say: "But he swears to this as positively as to the others, and therefore his evidence, as to all, should receive some corroboration before implicit reliance can be placed upon it." *E.g.* where a witness testified that no whistle was blown or bell rung by a locomotive on approaching a crossing, and it was clearly shown that he was mistaken as to the whistle, the Court remarked that he "was equally liable to be as to the ringing of the bell."

353. JOHN C. REED. *Conduct of Lawsuits*. (1912. 2d ed. § 512.) We think that this subdivision [Contradiction] occupies the largest place of all in practice. There is serious disagreement of testimony in the large majority of cases, and it is nearly always the main problem to deal with. To mention but one instance of frequent occurrence, the parties, with their families, are often arrayed against each other. We drop the thread of our connection for a moment to say that it is better for you, if you can, to show that there is actually nothing but apparent clashing with your side, or that both sides can be reconciled in a way to save your case. Jurors, and judges too, trying facts, are loath to discredit witnesses. But if a conflict lies right in your way, you must needs try to show that the evidence of the other side on the point is to be disregarded, while yours is to be accepted. Where the former is palpably suspicious or grossly improbable, you will have but little trouble. But the common difficulty is where the colliding witnesses are all honest and intelligent, or where there are circumstances strongly opposing you. Here you must have the acumen to find the turning point, and the talent to show with patience that what seems to be the superiority of the adversary upon it is deceptive, and is really unequal to your side. One witness of yours, from his greater experience upon the subject, his better means of knowing, his more complete agreement with the probabilities and the indisputable evidence, or a stubborn and speaking fact in your favor, may decidedly overbalance the more numerous proofs offered.

354. HANS GROSS. *Criminal Investigation*. (1907. transl. J. and J. C. Adam, p. 104.) The witness may pretend that a certain man has read him something, whereas the man in question can neither read nor write. Again, a witness affirms that his house was in danger of catching fire, although it was not in the direction in which the wind was blowing at the time; or he

asserts he remained out of doors half an hour with naked feet, although the snow was knee-deep. The witness states that the river frequently rises so high that it overflows; we have only to look at the stones emerging but a little above the water, to see that they are covered with a thick bed of moss which would not be there if the stones were frequently submerged. The witness says his son had already drawn his attention to something; a small calculation shows that at the time in question the son was only four years old. Similar examples of contradictions and self-evident impossibilities are frequently met with in our records; they supply the surest method of demonstrating to the witness the falsity of his deposition, — but we must first discover them. This is never very difficult if one gives sedulous attention to the examination, listens carefully to the reading of the record, and always pictures to one's self in imagination what the witness has related. The last is indispensable and of the greatest assistance. Words alone do not contradict each other so strongly or clearly as facts, or at least one does not notice so clearly the contradiction in the words. But if we compel ourselves to build up in our mind the scene as the witness has described it, or as we know it from previous recitals, and to adjust what we are told with what we already know, if in the course of the narrative of the witness we follow closely the facts and allow in thought the whole scene to unroll itself at the very spot where, according to our previous information, it must have taken place, it is almost impossible for an improbability or an impossibility to escape us.

355. JOHN H. WIGMORE. *Principles of Judicial Proof*. (1913.)¹ If an eye witness to a homicide swears that the murderer bore a scar upon his cheek, and the accused is perceived by the jury to have no such scar, it is plain that on that particular point the witness is wholly in error. If the same witness should testify, among other circumstances, that the killing was done at night, by the light of the full moon, and a reference to an almanac should show that the moon did not appear in that place on that night, in a similar way his error on that point would be apparent. If his testimony should assert, among other things, that the assailant wore a white hat, and on the other side five unimpeachable eye witnesses should attest that the assailant wore a black hat, then the same result would follow, provided the testimony of the opposing witnesses were believed. Suppose, again, that he makes the same assertion as to a white hat, and five unimpeachable witnesses swear that the accused never owned or possessed a white hat, the same result would follow, provided, first, that the testimony of the opposing witnesses were believed, and, secondly, that the impossibility also be accepted of the accused having been able to obtain temporarily a white hat. Now in all four of these instances the immediate probative effect is the same, namely, the witness is perceived by the tribunal *to be in error on a particular point*; the difference between the instances consists merely in the method of making the error clear to the tribunal. In the first instance, the senses of the tribunal itself determine by inspection and without ordinary evidence; in the second instance, the error appears by means of hearsay testimony of an ordinarily incontrovertible sort; in the third instance it is necessary that faith be given to the opposing testimony before the error can be accepted; in the fourth

¹ [Adapted from the same author's *Treatise on Evidence*. (1905. Vol. II, § 1000).]

instance, it is necessary, not only that the opposing testimony be believed, but also that certain circumstantial facts additionally be accepted as existing and as probative before the error can be accepted. Whatever the method of proving the contrary of the witness's asserted fact, the ultimate result aimed at is the same, namely, to persuade the tribunal that the witness has completely erred on that particular point. Now the commonest instances in practice are the third and the fourth, *i.e.* the marshaling of one or more witnesses (with or without other circumstantial evidence) who deny the fact asserted by the first witness and maintain the opposite to be the truth. Thus, the dramatic feature of the attempt to prove the error is a *contradiction* of the first witness by one or more in opposition. Yet this contradiction in itself does nothing probatively, nor unless the contradicting witness or witnesses are believed in preference to the first one, *i.e.* unless *his error* is established. It is not the contradiction, but the truth of the contradicting assertion as opposed to the first one, that constitutes the probative end. Nevertheless, the contradiction, being the usual and prominent feature of the process by which that end is aimed at, has served as the common name to designate the probative end itself. This is not wrong, provided it be clearly understood what that end is.

Such being the real probative end which the contradiction is intended to serve, what is the exact nature of that probative effect? Assume that the end is accomplished, and that the tribunal accepts as a fact that the witness is completely in error on that particular point, what is the place of this fact in the general system of discrediting or impeaching evidence?

The peculiar feature of this probative fact of Error on a particular point is its deficiency with respect to definiteness and its potency with respect to possible significance. Looking back over the various other kinds of testimonial phenomena considered already, it will be seen that the evidence was aimed clearly and specifically at a particular defect; it showed either that or nothing. Former perjury would indicate probably a deficient sense of moral duty to speak truth; relationship to the party, a probable inclination to distort the facts, consciously or unconsciously;—misjudgment of a test specimen of handwriting, a probable lack of skill in judging of writings; and so on. Now the present sort of fact is not offered as definitely showing any specific defect of any of these kinds, and yet it may justify an inference of the existence of any one or more of them. We know simply that an erroneous statement has been made on one point, and we infer that the witness is capable of making an erroneous statement on other points. The source might be a mental defect as to powers of observation or recollection; it might be a lack of veraciousness; it might be bias or corruption; it might be lack of experiential capacity; it might be lack of opportunity of knowledge. As to all this, nothing can be specified. The inference is only that since, for this proved error, there was *some unspecified defect* which became a source of error, the same defect may equally exist as the source of some other error, otherwise not apparent. No doubt the repetition of instances affects the strength of the inference; *i.e.* if a witness has testified to ten separate points, and if his assertions are proved to be incorrect not merely upon one but upon six of these points, one is more inclined to believe that the underlying defective quality, whatever it may be, is radical and complete, and to assume easily that it applies to and annuls his assertions on all the remaining

points. But it is still true that the error in itself does not definitely indicate any one specific defect; that there is no attempt consciously to analyze its bearings in that respect; and that the typical probative process is that of inferring a general defective trustworthiness on other points from proved defective trustworthiness on one point.

It will thus be seen, as above suggested, that the *strength* and usefulness of this sort of evidence consists in the wide range of defective qualities which it opens to our inference; and that its *weakness* consists in the indefiniteness of its inference.

In view of this source of its weakness, is there no way of determining more accurately the significance of such errors?

In so far as the point on which the proved error exists is removed in conditions and circumstances from the point as to which the inference of other error is desired to be drawn, the possible explanations (in the way of defective qualities) multiply which may be accepted without necessarily accepting one which applies to the desired point; conversely, in so far as the conditions and circumstances are the same, then the explanations tend to become identical, *i.e.* so that the defective quality, whatever it was, that caused the proved error, must have operated, more or less certainly, to cause error also on the point at issue, so closely connected with it in conditions and circumstances. For example, suppose a witness' main assertion to be that the accused struck the first blow in an affray. Suppose it then to appear that this witness, four years ago, incorrectly asserted that a street car conductor had not returned him the right amount of change after payment of fare; or that two years ago he incorrectly asserted that Yankton was the capital of South Dakota; or that one year ago he incorrectly asserted that his brother was in California; or that one month ago he incorrectly stated the day of the month; in all these instances the significance of the error is felt logically to be trifling, because the defect which was the source of any one of those errors may not be operating with respect to his assertion now in question, and the probability of its operating is so indefinite as not to be worth considering. But suppose it to appear that another assertion of this witness, that the deceased had no weapon in his hand when struck, is incorrect; now we may begin to attach significance to this error, because the source of it, while it *need* not be also operating as to the main assertion in question, is much more likely to be operating. Or, if the error consist in asserting that the deceased was knocked down by the accused's blow (when in truth he remained standing), the error is vital, because the defective source of that assertion must almost necessarily have operated also for the assertion that the accused struck first; and, if the former assertion appears to be untrustworthy, the latter must fall with it (so far as this witness's testimony is concerned).

Thus, an error upon a distant and distinct matter is logically much inferior in value to an error upon a closely connected matter, in its bearing upon the trustworthiness of the assertion in question. This seems to be the logical foundation for the readiness of our law to draw a distinction, in allowing proof of such errors between matters "collateral" and other matters. But it remains true that "collateral" errors, though only remotely probative, may be still probative.

TITLE III (continued): TESTIMONIAL INTERPRETATION

SUBTITLE C: SUNDRY ILLUSTRATIONS OF THE FALLIBILITY OF TESTIMONY

356. THE DISBELIEVED CHILD'S CASE. DR. BUCHHOLZ. (*Testimony*. H. Gross' Archiv für Kriminal-Anthropologie und Kriminalistik, 1909, Vol. XXXV, p. 128.)

Some years ago my wife, with our six-year-old son, was paying a visit to her parents. One day the boy went out for a walk with his grandmother. On his return he told us that, while they were out, his uncle had shaken hands with him and asked to be remembered to my wife. The grandmother, however, on hearing this statement, said that no such thing happened, or could have happened; for during the whole walk she had had the boy with her by the hand and no one had spoken to him. But, on being questioned, the little fellow stuck to his story; and added this particular, that his uncle had spoken to him while his grandmother was talking with another lady. All this the grandmother positively denied; she had not talked with any lady while out walking. The grandfather, who took part in the ensuing discussion, was

experienced in criminal cases (being at that time an examining magistrate), and took occasion to deliver himself on the untruthful tendencies of children; when just at that moment the said uncle himself appeared on the scene, and his first remark was to ask if the boy had delivered the message just given him!

The little fellow had been entirely in the right as to the occurrence. The grandmother acknowledged, the moment the lady's name was mentioned, that she had met and conversed with her for one minute; during that minute the uncle's incident with the boy took place.

But in a trial in court, who would have been believed, the boy or the grandmother? And how would it have turned out if the alibi to some crime had depended on these two witnesses?

357. THE COPIED WILL. (JOHN C. REED. *Conduct of Lawsuits*. 1912. 2d ed. § 56.)

. . . I add an example of a number of examiners of an important paper falling into the same error. A testator had thus limited certain property: "To be used only for the support and maintenance of each of them (his daughters), and the education and maintenance of the children of each of them." Some three or four copyists, each acting independently of the others, gave

the item just quoted as follows: "To be used only for the support of the children of each of them." Several certified copies had been made, and but one had the words as first quoted. A controversy occurred between the counsel on different sides of a case involving the construction of this will, as to the true contents of the item mentioned. To settle it, one of them, interested

to increase the estate of the testator's grandchildren, wrote to the surrogate of another county, who had the custody of the paper, stating the contention, without disclosing his side, and asking for the truth. The surrogate, thus put upon the alert, inspected both the record and the original will with

particular pains and certified the same mistake. Of course our lawyer felt that his case was sure. But as he could not get his adversaries to admit the words to be as he contended, he examined for himself and, to his great surprise, found that the solitary copy was right and all the others wrong.

358. PHILIP CLARE'S CASE.
1876. p. 60.)

In Stafford, in the year 1857, the body of a girl named Elizabeth Hopley was found in the canal at Bradley, early on the morning of the 30th of April. There were no marks of violence. About ten o'clock on the previous evening she had left the house of her aunt for the purpose of going to the place where a young man, to whom she was engaged to be married, was in the habit of working. Her road led past the place where her body was found, and it was supposed that, dazzled by the light of some coke fires, she had missed her way, and fallen over the low wall by which the canal was, at that spot, very insufficiently guarded.

About three weeks, however, after the girl's death, a neighbor, of the name of Samuel Wall, declared that Elizabeth Hopley had been murdered, and that he had been present when the crime was committed. A day or two afterwards he was summoned before the magistrates, when he told the following story. He said that on the night of the 29th of April he was on duty as a private watchman on some premises near a bridge which crossed the railway; that he saw two persons, a man and a woman, on the bridge, and heard a woman's voice say, "Philip, don't kill me! You said you would kill me before!" That the man then raised his hand and struck the woman a violent blow on the head, which knocked her down. Upon this he went up, and instantly recognized the man as one Philip

(JOHN PAGET. *Judicial Puzzles*.)

Clare, whom he well knew. He exclaimed, "Philip, you'll have to suffer for this!" Clare turned round and replied, "If you speak, I'll serve you the same!" Clare then lifted the young woman up from the ground, and, followed by Wall, carried her over the railway bridge, and down a road past some cottages, until he came to the canal. Here he paused, and turning round again upon Wall, said, "Now, if you speak or tell any one, I will kill you. I will serve you the same way as I served her, and set some one else to watch instead." He then, in Wall's presence, plunged the woman, who still seemed helpless and insensible, into the canal, close to the spot where, the next morning, her body was discovered. Wall fixed the time when this occurred as twenty minutes after midnight; and it must be remarked that he was employed as a watchman, and was likely to be habitually observant of the time. He said that he returned to his employer's premises, being prevented by his fear of Clare from giving any alarm; that after about a quarter of an hour had elapsed, Clare came to him and renewed his threats, when, terrified by the apprehension of immediate violence, he locked himself up in the engine house until daylight.

Upon this statement, Clare was taken into custody, and committed for trial. At his trial Wall repeated the story he had told the magistrates. There was a total absence of confirmation. It was met by

proof that the body showed no sign of having received any blow of the kind described by Wall; that there had been men at work pumping water during the whole night in the immediate neighborhood, who must, in all probability, have heard something, had the affair taken place as Wall described. It was shown, moreover, that from half past six until about eleven P.M., Clare had been in a public house at Bilston, which he left, in company with four other men, one of whom accompanied him till within half a mile of his own house. An-

other witness, a neighbor, proved that about twelve o'clock he met Clare, and entered into conversation with him near his own door; that they remained together until two o'clock next morning. There could not be the slightest doubt of Clare's innocence, and the jury, of course, at once acquitted him.

Nor could there be any doubt that Wall believed the story told. The minuteness, the particularity, the graphic details, the conversation, all bear the stamp of that *subjective* truth, which our language has no word to distinguish from *objective* truth.

359. JOSEPH LESURQUES' CASE. (JAMES RAM. *On Facts as Subjects of Inquiry by a Jury.* 1873. 3d Amer. ed. p. 420.)

In the month of April, 1796, a young man named Joseph Lesurques arrived in Paris from Douai, his native town. He was thirty-three years of age, and possessed a fortune equal to six hundred pounds a year. He hired apartments, and made preparations for residing permanently in Paris. One of his first cares was to repay one Guesno, of Douai, two thousand francs he had borrowed of him. On the following day Guesno invited Lesurques to breakfast. They accordingly went to a refreshment room, in company with two other persons, one of whom, named Couriol, happened to call just as they were sitting down to table. After breakfast they proceeded to the Palais Royal, and having taken coffee, separated. Four days afterwards, four horsemen, mounted on hired horses, were seen to drive out of Paris. They all wore long cloaks and sabers hanging from the waist. One of the party was Couriol. Between twelve and one o'clock the four horsemen arrived at the village of Mongeron, on the road to Melun.

There they dined, and then proceeded at a foot pace towards Lieursaint. They reached Lieursaint about three in the afternoon, and made a long halt at the inn, amusing themselves with billiards, and one of them having his horse shod. At half past seven they remounted and rode off towards Melun. About an hour later the mail courier from Paris to Lyons arrived to change horses. It was then half past eight, and the night had been for some time dark. The courier, having changed horses, set out to pass the long forest of Leuart. The mail at this period was a sort of post-chaise, with a large trunk behind containing the dispatches. There was one place only open to the public, at the side of the courier; and the place was occupied on that day by a man about thirty years of age, who had that morning taken it in the name of Laborde.

The next morning (9th Floreal, year IV = 28th April, 1796) the mail was found rifled, the courier dead in his seat, and the postilion lying dead in the road—both being evi-

¹[This world-famous case, dramatized in French under the title "Le Courier de Lyon" (played by Sir Henry Irving as "The Lyons Mail"), has been recently studied critically by Professor Jean Appleton of Lyon, in an article entitled "L'histoire vraie du Courier de Lyon," in the "Archives d'anthropologie criminelle," 1912, vol. XXVII, p. 401. — Ed.]

dently slain with sabers. One horse only was found near the carriage. The mail had been robbed of seventy-five thousand livres in silver and bank bills. The officers of justice soon discovered that five persons had passed through the barrier on their way to Paris between four and five in the morning after the murders. The horse of the postilion was found wandering about the Place Royale; and they ascertained that four horses, covered with foam and quite exhausted, had been brought, about five in the morning, to a man named Muiron, Rue des Fosses, Saint Germain l'Auxerrois, by two persons who had hired them the day before. These two persons were named Bernard and Couriol. Bernard was immediately arrested; Couriol escaped. A description was obtained of the four who had ridden from Paris and stopped at Mongeron and Lieursaint, and also of the man who had taken his place with the courier under the name of Laborde. Couriol was traced to Château Thierry, where he was arrested, together with Guesno, the Douai carrier, and one Bruer, who happened to be in the same house. Guesno and Bruer proved alibis so clearly that they were discharged on arriving at Paris.

The magistrate, after discharging Guesno, told him to apply at his office the next morning for the return of his papers, which had been seized at Château Thierry; at the same time he had sent a police officer to Mongeron and Lieursaint to fetch the witnesses, of whom he gave a list. Guesno, being desirous to obtain his papers as soon as possible, left home the next day earlier than usual. On his way to the office he met Lesurques, who consented to accompany him. They went to the office, and as Daubenton, the juge-de-Paix, had not yet arrived, they sat down in the antechamber to await his arrival. About two o'clock the juge-de-Paix,

who had entered his room by a back door, was thunderstruck on being told by the police officer who had come back with the witnesses, that two of them declared that two of the actual murderers were in the house. "Impossible!" he exclaimed, "guilty men would not voluntarily venture here." Not believing the statement he ordered the two women to be introduced separately; and examined each of them, when they repeated their statement and declared they could not be mistaken. . . . The two friends were immediately arrested.

No time was lost in pushing on the prosecution. Seven persons were put upon their trial, amongst whom were Couriol, Madeleine Breban (his mistress), Lesurques, and Guesno. Lesurques was sworn to most positively by several, as being one of the party, at different places on the road, on the day of the robbery and murder. "I attended them (said one witness) at dinner at Mongeron; this one (Lesurques) wanted to pay the bill in assignats, but the tall dark one (Couriol) paid it in silver." A stable boy at Mongeron also identified him. A woman named Alfroy, of Lieursaint, and the innkeeper and his wife of the same place, all recognized him as of the party there—Lesurques declaring that he had never been present at either place. But the witnesses were positive, were unimpeached, were believed. Lesurques called fifteen persons of known probity to prove an alibi.

Eighty persons of all classes declared the character of Lesurques to be irreproachable.

Legrand, a wealthy jeweler and a fellow countryman of the prisoner, deposed that on the day the crime was committed, Lesurques passed a great part of the morning at his (Legrand's) house. His testimony was confirmed by another jeweler, named Aldenof. Ledru and Chauiser, two other witnesses, deposed that Lesurques dined in company

with them on the same day, in the Rue Montorgueil; that they afterwards went with him to a café to take coffee and *liqueurs*, and then they walked with him to the door of his house. Beaudart, a painter, strengthened this evidence, by declaring that he was with Lesurques at his apartment at night, and remained with him until he got into bed. Several workmen employed at the apartment of Lesurques deposed to their having seen him at different times in the days of the 8th and 9th Floreal.

This mass of evidence so effectually contradicted the testimony of the nine persons who declared that they recognized Lesurques as one of the four horsemen at Mongeron and Lieursaint, and produced such a favorable effect on the minds of the jury, that they could not help showing it by their countenances. But a fatal incident occurred which entirely changed the face of things. The jeweler, Legrand, in order to corroborate his evidence, and put the day of Lesurques being with him beyond all doubt, stated that on the 8th Floreal, he, before dinner, made an exchange of jewelry with the other jeweler, Aldenof, which transaction was entered in his books. These books being now brought into court and examined, it appeared sufficiently clear that the original date of the entry was the 9th, and that an attempt had been made, by scratching, to change the nine into an eight. On this discovery, and the consequent observations and questions of the court, Legrand became confounded and unable to give any satisfactory explanation.

The president thereupon ordered him into custody, and, thus terrified, Legrand retracted his previous depositions, and said that he was not certain of having seen Lesurques on the 8th, and that he had altered the book in order to give greater force to his evidence in favor of the prisoner, whom he firmly believed to be

innocent, and whose life he determined to save, even by perjury. This circumstance was of a nature to excite great suspicion in the minds of the judges and the jury as to the whole of the evidence in favor of Lesurques, and to create a belief that all of the depositions already received were nothing more than an act of connivance. Scarcely were those which remained to be heard listened to, and the conviction of the accused from this moment seemed certain. To so many appearances against him, Lesurques constantly replied by an energetic denial. When the jury had retired to consider their verdict, a woman overcome by emotion requested to speak to the president. She was, she said, urged on by the voice of her conscience and desired to spare that court a dreadful error. She declared that she knew positively that Lesurques was innocent, and that the witnesses, deceived by an inexplicable resemblance, had mistaken him for the real culprit, who was named Duboscq. The court would not receive her evidence; and, under the impression that she had been suborned, ordered her to withdraw. This woman, whose name was Madeleine Breban, was the mistress of Couriol and the confidante of his most secret thoughts.

The jury returned a verdict of guilty against Lesurques, and the court condemned him to death. Guesno's alibi was believed, and he was acquitted. Couriol was found guilty. Scarcely had the judgment been passed, when Lesurques, rising up, calmly addressed the judges as follows: "I am innocent of the crime which is imputed to me. Ah! citizens, if it is frightful to murder on the highway, it is not less so to punish an innocent man." Couriol, also condemned to death in his turn, pronounced these words: "I am guilty, and I acknowledge my crime, but Lesurques is innocent." He reiterated this declaration four times, and when he returned to

prison, wrote to his judges a letter full of sorrow and repentance. "I never was acquainted with Lesurques," said he; "my accomplices are Vidal, Roussi, Durochat, and Duboscq. The likeness between Duboscq and Lesurques has misled the witnesses."

Madeleine Breban presented herself, after judgment, to renew her declaration. Two other persons also joined her in declaring that before the condemnation she had told them that Lesurques had never any connection with the prisoners, and that he was the victim of his resemblance to Duboscq. The declaration of Couriol, that he was justly condemned, and his demand for a reprieve in favor of Lesurques caused a doubt to arise in the minds of the judges. They hastened to demand a reprieve from the Directory, which, alarmed at the idea of seeing an innocent man perish, had recourse to the legislative body, all judicial resources having been exhausted. The message of the Directory to the Council of the Five Hundred was pressing. It demanded a delay of the execution, and some indication as to the course to be pursued in the case. It concluded in these words: "Ought Lesurques to perish on the scaffold because he resembles a criminal?"

The Legislative Body passed to the order of the day, saying all had passed legally, and that a particular case could not warrant an information of form previously determined on, and that to put aside for such reasons a condemnation formally pronounced by a jury, would be to overturn all ideas of justice and equality before the laws. The right of pardon had been abolished, and neither resource nor hope remained to Lesurques. He supported his fate with firmness and resignation, and on the day of his death he wrote to his wife: "My dear love, no one can avoid his destiny. Since I am to be murdered juridically, I will at least undergo my fate with

the courage of a man. I send you my hair, and when your children shall have grown up you will divide it amongst them." In a farewell note to his friends, he confined himself to expressing this regret: "Truth has not been able to make itself heard; I am to perish, the victim of a mistake." After his condemnation, and during his appeal, Lesurques published a letter in the journals addressed to Duboscq, whose name had been revealed by Couriol. In this he says: "You, in whose place I am about to die, be satisfied with the sacrifice of my life. If ever you are brought before a court of justice, bear in mind my three children, covered with opprobrium, their mother in despair, and do not prolong so many misfortunes caused by the most funeste resemblance." On the 10th of March, 1797, Lesurques was executed. He was dressed in white as a symbol of his innocence. It happened on Holy Thursday, and he regretted he was not to die on the day after, which was Good Friday. During the passage from the prison of the conciergerie to the Place de Greve, Couriol, who was placed on the cart by his side, kept constantly crying out, with a loud voice, to the people. "I am guilty, but Lesurques is innocent." When Lesurques mounted the scaffold already red with the blood of Bernard, he pronounced the following words in delivering himself to the executioner: "I pardon my judges, also the witnesses whose error caused my condemnation; and Legrand, who has in no small degree procured my judicial murder. I die innocent."

The protestations of innocence of Lesurques, and above all the declarations of Couriol at the scaffold, caused a great sensation in the public mind; and Daubenton, the juge de paix who first commenced the proceedings against him, being a conscientious man, resolved to devote all his energy to the investigation of the truth. His first step was to

endeavor to arrest the three persons who had been mentioned by Couriol as his accomplices. Two years passed in fruitless efforts, but at length Durochat, who, according to the declaration of Couriol, was the man who, under the name of Laborde, occupied the seat next to the courier, was in custody for theft. For this offense he was sentenced to imprisonment for fourteen years; but Daubenton, resolved upon arriving at the truth, accompanied him for some distance on the way to prison, and whilst at breakfast, at a village on the road, pressed him so hard that he said, "Citizen, you are an honest man, and as it is all over with me, I will tell you what you want to know." He then entered into a history of the whole affair, declaring that the criminals were himself, Couriol, Roussi, Vidal, and Duboscq, whose great resemblance to Lesurques had caused the death of that unfortunate man. In consequence of the disclosures of Durochat, Vidal was arrested a few days afterwards and was sworn to by several witnesses as having been of the party who robbed the mail; Durochat was brought to trial and condemned to death, and Vidal was kept in prison to await his trial.

Four years after the commission of the crime, Duboscq was arrested and thrown into prison at Versailles with Vidal. Here they attempted to escape. Vidal succeeded, but Duboscq fell, and, breaking his leg, was again confined. Soon afterwards, however, Duboscq, having been cured, made another attempt to escape, which was successful; but Vidal being retaken was brought to trial, found guilty, condemned to death, and executed.

At the end of another year, Duboscq was again captured, and being confronted with all the witnesses who had sworn to the guilt of Lesurques, they declared that they had been deceived by the extraordinary resemblance of the two, but they had now not the slightest doubt that Duboscq was the criminal. On the trial, this testimony was reproduced, and the declaration of Madeleine Breban had due force. Duboscq was condemned to death, and was executed on the 3d Ventose, year X. Roussi, the remaining criminal, was afterwards taken, and being tried was also condemned to death. He went to the scaffold full of repentance, after having signed the following paper: "I declare that Lesurques was innocent; but this declaration which I have made to my confessor is not to be published for six months." In consequence of this unequivocal evidence of the innocence of Lesurques, strenuous efforts were made by Daubenton, on behalf of the family of the victim, to obtain all that was then possible from human justice, namely, the revision of the sentence, and the public acknowledgment of the error which led to his untimely fate. All his efforts, however, were fruitless. The right of revision no longer existed in the French code. Under the Directory, the Consulate, and the Restoration, the applications of the widow and family were equally unsuccessful. All that they could obtain was the restoration, in the last two years of the elder Bourbons, of a part of the property sequestrated at the condemnation of the unoffending husband and father.

360. GREEN McDONALD'S CASE. (A. G. W. CARTER. *The Old Court House*. [of Cincinnati] 1880. p. 144.)

But about this business of identity, notwithstanding all the aforesaid, Judge Read was more than two thirds right in what he said;

for it is a fact that I, as prosecuting attorney for this county, had a man sent to the penitentiary a few months before this, for a crime of

which not the convicted was guilty, but this very veritable aforesaid Joseph Andrews himself. The way of it was thus: A midnight burglary and larceny had been committed on a certain night, a long time ago, in one of the rooms of the Dennison House, then on Fifth Street, near Main. One Green McDonald, notorious among the police, and men, women, and children of this city, was arrested as the burglar and thief, and was completely identified as the very thief by the lady in whose room the burglary and theft was committed, and with whom the robber had quite a tussle in the commission of the crime. Green McDonald was convicted, on her evidence, as the robber, and, as his character was already infamous, sent to the penitentiary for a long term of years. After Joseph Andrews was convicted for the daylight burglary and theft of silver in Dr. Wood's mansion, he one day sent for me as prosecuting attorney to come and see him at the jail. I went over and found him, deliberate and composed, and he said to me: "Look at me; view me well. Don't I look like some one in this city?" I surveyed him, closely inspected his form and features, and in surprise I answered: "Yes; you look like Green McDonald." "That's it," said he; "that's it. You sent that poor fellow, Green McDonald, to the

penitentiary for what I myself did at the Dennison house." "Can it be possible?" said I. "Yes," said he, "it is more than possible; it is a fact." And to show me that he was the man, that he alone was guilty of the Dennison house affair, and not Green McDonald, he told me all about it, told and described all the particulars of the room, and the lady, and all about the tussle, and his own escape with the booty, etc. I was thoroughly astounded, but as thoroughly convinced that a great wrong had been officially and judicially done; and I immediately wrote an official letter to the Governor of the State, and had Green McDonald pardoned out of the penitentiary as the only remedy of the wrong left, alas! . . . Ever after this, I was exceedingly careful about this most important question of identity of prisoners, and more than one I let go, when there was a particle of doubt about his or her identity.

What lessons we get about humanity in the administration of so-called justice. From my experience as a man, a lawyer, a prosecuting attorney, and a judge, and a long and observing experience it has been, too, I am compelled to say, that the most uncertain thing I know of, is human testimony. And yet we, poor mortals as we are, cannot make a move in life without reliance upon it.

361. THE PERREAUS' CASE. *of Crime.* ed. 1891. Vol. I, 244.)

The circumstances of the cases of these prisoners are of a very remarkable description. It appears that the accused persons were twin brothers, and were so much alike that it was with difficulty that they were known apart. Robert Perreau carried on business in Golden-square as an apothecary, and was in great practice; while his brother lived in a style of considerable fashion, a Mrs. Margaret Caroline Rudd living with him as his wife.

(CAMDEN PELHAM. *The Chronicles*

At the sessions held at the Old Bailey in June 1775, Robert Perreau was indicted for forging a bond for the payment of 7500*l.* in the name of William Adair, Esq. (then a great government contractor), and also for feloniously uttering and publishing the said bond, knowing it to be forged, with intent to defraud Messrs. Robert and Henry Drummond, bankers. From the evidence which was adduced at the trial, it appeared that on the 10th

of March, 1775, the prisoner under trial, whose character up to that time had been considered unimpeachable, went to the house of Messrs. Drummond, and seeing Mr. Henry Drummond, one of the partners, said that he had been making a purchase of an estate in Norfolk or Suffolk, for which he was to give 12,000*l.*, but that he had not sufficient cash to pay the whole purchase money. That he had a bond, however, which Mr. Adair had given to his brother Daniel, for 7500*l.*, upon which he desired to raise a sum of 5000*l.*, out of which he was willing to pay 1400*l.*, which he had already borrowed of the firm.

Mr. Drummond, on the production of the bond, had no sooner looked at the signature than he doubted its authenticity, and very politely asked the prisoner if he had seen Mr. Adair sign it. The latter said he had not, but that he had no doubt that it was authentic, from the nature of the connection that subsisted between Mrs. Rudd, who was known to live with Daniel, and that gentleman; a suggestion having previously been thrown out that she was his natural daughter. Mr. Drummond, however, declined advancing any money without the sanction of his brother, and he desired Perreau to leave the bond, saying that it should either be returned on the next day, or the money produced. The prisoner made no scruple to obey this suggestion, and he retired, promising to call again the next day. In the interim, Mr. Drummond examined the bond with greater attention; and Mr. Stephens, secretary of the Admiralty, happening to call, his opinion was demanded, when, comparing the signature to the bond with letters which he had lately received from Mr. Adair, he was firmly convinced that it was forged. When Perreau came on the following day, Mr. Drummond spoke more freely than he had done before, and told him that he imagined he had been imposed on;

but begged, that to remove all doubt, he would go with him to Mr. Adair, and get that gentleman to acknowledge the validity of the bond, on which the money would be advanced. This was immediately acceded to; and on Mr. Adair seeing the document, he at once declared that the signature was a forgery. The prisoner smiled incredulously, and said that he jested; but Mr. Adair remarked that it was no jesting matter, and that it lay on him to clear up the affair. On this he went away, requesting to have the bond, in order to make the necessary inquiries — a request which was refused; and persons being employed to watch him, it was found that immediately on his arrival at his house, he and his brother and Mrs. Rudd got into a coach, carrying with them all the valuables which they could collect, with a design to make their escape. They were, however, stopped, and taken into custody, and being conveyed to Sir John Fielding's, at Bow-street, they there underwent an examination, and upon the evidence adduced, were committed to prison. Other charges were subsequently brought against them by Sir Thomas Frankland, from whom they had obtained two sums of 5000*l.* and 4000*l.* on similar forged bonds, as well as 4000*l.* which they had paid when the amount became due; and by Dr. Brooke, who alleged that they had obtained from him 1500*l.* in bonds of the Ayr bank, upon the security of a forged bond for 3100*l.*; and Mrs. Rudd was then admitted as evidence for the Crown.

Her deposition then was, that she was the daughter of a nobleman in Scotland; that, when young, she married an officer in the army named Rudd, against the consent of her friends; that her fortune was considerable; that on a disagreement with her husband, they resolved to part; that she made a reserve of money, jewels, and effects, to the amount of 13,000 pounds, all of

which she gave to Daniel Perreau, whom she said she loved with the tenderness of a wife; that she had three children by him; that he had returned her kindness in every respect till lately, when, having been unfortunate in gaming in the alley, he had become uneasy, peevish, and much altered to her; that he cruelly constrained her to sign the bond now in question, by holding a knife to her throat, and swearing that he would murder her if she did not comply; that, being struck with remorse, she had acquainted Mr. Adair with what she had done; and that she was now willing to declare every transaction with which she was acquainted, whenever she should be called upon by law so to do.

Upon the cross-examination of Mr. Drummond, however, he swore that Mrs. Rudd, on her being first apprehended, took the whole on herself, and acknowledged that she had forged the bonds; that she begged them "for God's sake to have mercy on an innocent man," and that she said no injury was intended to any person, and that all would be paid; and that she acknowledged delivering the bond to the prisoner. They then entertained an opinion that the prisoner was her dupe; and Mr. Robert Drummond having expressed a notion that she could not have forged a handwriting so dissimilar from that of a woman as Mr. Adair's, she immediately, in order to satisfy them of the truth of what she said, wrote the name "William Adair" on a paper exactly like the signature which appeared attached to the bond.

Mr. Watson, a money scrivener, also deposed, that he had filled up the bonds at the desire of one of the brothers, and in pursuance of instructions received from him; but he hesitated to fix on either, on account of their great personal resemblance; and being pressed to make a positive declaration, he fixed on Daniel as his employer.

The case for the prosecution being concluded, the prisoner entered upon his defense. In a long and ingenious speech, which he addressed to the jury, he strove hard to prove that he was the victim of the artifices of Mrs. Rudd.

He said that she was constantly conversing about the influence she had over Mr. W. Adair; and that Mr. Adair had, by his interest with the king, obtained the promise of a baronetage for Daniel Perreau, and was about procuring him a seat in parliament. That Mr. Adair had promised to open a bank, and take the brothers Perreau into partnership with him. That the prisoner received many letters signed "William Adair," which he had no doubt came from that gentleman, in which were promises of giving them a considerable part of his fortune during his life; and that he was to allow Daniel Perreau two thousand four hundred pounds a year for his household expenses, and six hundred pounds a year for Mrs. Rudd's pin money. That Mr. Daniel Perreau purchased a house in Harley-street for four thousand pounds, which money Mr. William Adair was to give them. That when Daniel Perreau was pressed by the person of whom he bought the house for the money, the prisoner understood that they applied to Mr. William Adair, and that his answer was, that he had lent the king seventy thousand pounds, and had purchased a house in Pall Mall at seven thousand pounds, in which to carry on the banking business, and therefore could not spare the four thousand pounds at that time. He declared that all attempts at personal communication with Mr. Adair were strenuously opposed by Mrs. Rudd as being likely to destroy the effects of her exertions on his behalf, and contended that his conduct throughout the whole transaction with Mr. Drummond, showed that he was innocent of any guilty intention, and that he firmly believed

that he was acting honestly and justly.

He then proceeded to call the following witnesses, whose evidence we shall give in the most concise manner:—

George Kinder deposed that Mrs. Perreau (the only name by which he knew Mrs. Rudd) told him “that she was a near relation of Mr. James Adair; that he looked upon her as his child, had promised to make her fortune, and with that view had recommended her to Mr. William Adair, a near relation and intimate friend of his, who had promised to set her husband and the prisoner up in the banking business.” He also deposed that she said that Mr. Daniel Perreau was to be made a baronet, and described how she would act when she became a lady. The witness further deposed that Mrs. Rudd often pretended that Mr. William Adair had called to see her, but that he never had seen that gentleman on any visit.

John Moody, a livery servant of Daniel Perreau, deposed that his mistress wrote two very different hands; in one of which she wrote letters to his master, as from Mr. William Adair, and in the other the ordinary business of the family. That the letters written in the name of William Adair were pretended to have been left in his master’s absence; that his mistress ordered him to give them to his master, and pretend that Mr. Adair had been with his mistress for a longer or shorter time, as circumstances required. This witness likewise proved that the hand at the bottom of the bond and that of his mistress’s fictitious writing were precisely the same; that she used different pens, ink, and paper, in writing her common and fictitious letters; and that she sometimes gave the witness half a crown when he had delivered a letter to her satisfaction. He said he had seen her go two or three times to Mr. J. Adair’s, but never to William’s; and that Mr.

J. Adair once visited his mistress on her lying-in.

Susannah Perreau (the prisoner’s sister) deposed to her having seen a note delivered to Daniel Perreau, by Mrs. Rudd, for nineteen thousand pounds, drawn as by William Adair, on Mr. Croft, the banker, in favor of Daniel Perreau.

Elizabeth Perkins swore that a week before the forgery was discovered, her mistress gave her a letter to bring back to her in a quarter of an hour, and say it was brought by Mr. Coverley, who had been servant to Daniel Perreau; that she gave her mistress this letter, and her master instantly broke the seal.

Daniel Perreau swore that the purport of this letter was “that Mr. Adair desired her to apply to his brother, the prisoner, to procure him five thousand pounds upon his (Adair’s) bond, in the same manner as he had done before; that Mr. Adair was unwilling to have it appear that the money was raised for him, and therefore desired him to have the bond lodged with some confidential friend, who would not require an assignment of it; that his brother, on being made acquainted with his request, showed a vast deal of reluctance, and said it was very unpleasant work; but undertook it with a view of obliging Mr. William Adair.” The counsel for the prosecution demanding “if he did not disclaim all knowledge of the affair before Mr. Adair,” he said he denied ever having seen the bond before, nor had he a perfect knowledge of it till he saw it in the hands of Mr. Adair.

David Cassady, who assisted Mr. R. Perreau as an apothecary, deposed that he lived much within the profits of his profession, and that it was reported he was going into the banking business.

John Leigh, clerk to Sir John Fielding, swore to the prisoner’s coming voluntarily to the office before his apprehension, and giving

information that a forgery had been committed. Mr. Leigh was asked if Mrs. Rudd "ever charged the prisoner with any knowledge of the transaction till the justices were hearing evidence to prove her confession of the fact;" and he answered that he did not recollect that circumstance, but that on her first examination she did not accuse the prisoner.

Mr. Perreau now called several persons of rank to his character. Lady Lyttleton being asked if she thought him capable of such a crime, supposed she could have done it as soon herself. Sir John Moore, Sir John Chapman, General Rebow, Captain Ellis, Captain Burgoyne, and other gentlemen, spoke most highly to the character of the prisoner; but the jury found him guilty.

It will be unnecessary now to give anything more than a succinct account of the trial of Daniel Perreau, which immediately followed that of his brother. He was indicted for forging and counterfeiting a bond, in the name of William Adair, for three thousand three hundred pounds, to defraud the said William Adair, and for uttering the same knowing it to be forged, to defraud Thomas Brooke, doctor of physic. Mr. Scroope Ogilvie, clerk to Mr. William Adair, proved the forgery; and Dr. Brooke swore to the uttering of the bond. The defense set up by the prisoner was, that Mrs. Rudd had given the bond to him as a true one; and he asserted, in the most solemn manner, that he had had no intention to defraud any man. Like his brother, he called several witnesses to show the artifices of which Mrs. Rudd had been guilty; and many persons proved the great respectability of his character.

The jury, however, returned a verdict of guilty, and both prisoners were sentenced to death; but the execution did not take place until January 1776, in consequence of the

proceedings which were subsequently taken against Mrs. Rudd.

After conviction the behavior of the brothers was, in every respect, proper for their unhappy situation. Great interest was made to obtain a pardon for them, particularly for Robert, in whose favor seventy-eight bankers and merchants of London signed a petition to the king: the newspapers were filled with paragraphs, evidently written by disinterested persons, in favor of men whom they thought dupes to the designs of an artful woman: but all was of no avail.

On the day of execution the brothers were favored with a mourning coach, in which to be conveyed to the scaffold; and their conduct throughout was of the most exemplary description. After the customary devotions were concluded, they crossed hands, and joining the four together, in that manner were launched into eternity. They had not hanged more than half a minute when their hands dropped asunder, and they appeared to die without pain.

Each of them delivered a paper to the Ordinary of Newgate, which stated their innocence, and ascribed the blame of the whole transaction to the artifices of Mrs. Rudd; and, indeed, thousands of people gave credit to their assertions, and a great majority of the public thought Robert wholly innocent.

Daniel Perreau and Robert Perreau were executed at Tyburn on the 17th of January, 1776. . . .

On the 16th of September, 1775, Mrs. Rudd was put to the bar at the Old Bailey, to be tried for forgery; but the counsel for the prisoner pleading that, as she had been already admitted an evidence for the crown, it was unprecedented to detain her for trial, and the judges differing in opinion on the point of law, she was remanded to prison till the opinion of the judges could be taken on a subject of so much importance.

prisoner at the bar, and had known him a number of years; that witness and Parker were jointly engaged, in the latter part of the year 1800, in loading a vessel for Capt. Tredwell, of New York; that they began to work on the 20th day of December, 1800, and were employed the greater part of the month of January, 1801, in the loading of the vessel; that during that time the witness and Parker worked together daily; the witness recollected well that they worked together on the 25th day of December, 1800; he remembered it, because he never worked on Christmas day, before or since; he knew it was in the year 1800, because he knew that Parker lived, that year, in a house belonging to Capt. Pelor, and he remembered their borrowing a screw for the purpose of packing cotton into the hold of the vessel they were at work at, from a Mrs. Mitchell, who lived next door to Parker; that witness was one of the city watch, and that Parker was also at that time upon the watch; and that witness had served with him from that time to the present day, upon the watch, and never recollected missing him any time during that period from the city.

Aspinwall Cornwall testified, that he lived in Rutger street, and had lived there a number of years; that he kept a grocery store; that he knew Parker, the prisoner at the bar, in 1800 and 1801; that Parker then lived in Capt. Pelor's house; that he lived only one year in Pelor's house; that Parker, while he lived there, traded with witness; that witness recollected once missing Parker for a week, and, inquiring, found he had been at work on Staten Island, on board one of the United States frigates; that, excepting that time, he never knew him to be absent from his family, but saw him constantly.

Elizabeth Mitchell testified, that she knew Parker, the prisoner at the bar, well; that in the years

1800 and 1801 Parker lived in a house adjoining to one in which witness lived; that the house Parker lived in belonged to Capt. Pelor; that witness was in habits of intimacy with Parker's family, and visited them constantly; that Parker being one of the city watch, she used to hear him rap with his stick at the door, to awaken his family, upon his return from the watch in the morning; that she also remembered, perfectly well, Parker's borrowing a screw from her on Christmas day, in 1800; she offered him some spirits to drink, but he preferred wine, which she got for him; the circumstance of her lending the screw to him she was the more positive of, from recollecting, also, that it was broken by Parker in using it: that Parker never lived more than one year in Capt. Pelor's house, and from that time to the present day, witness had been on the same terms of intimacy with Parker's family; she therefore considered it as almost impossible that Parker could have been absent from town, any time, without her knowing it; and she never knew him to be absent more than one week, while he lived at Pelor's house.

James Redding testified, that he had lived in the city a number of years; that he had known Parker, the prisoner at the bar, from his infancy; that Parker was born at Rye, in Westchester county; that Parker, in the year 1800, lived in Capt. Pelor's house; that witness saw him then continually, and never knew him during that time to be absent from town, during any length of time; that witness particularly remembered that, sometime in the beginning of the month of January, 1801, while Parker lived in Capt. Pelor's house, witness assisted Parker in killing a hog.

Lewis Osborne testified, that he had been acquainted with Parker, the prisoner at the bar, for the last four years; that witness had been one of the city watch: that from

June, 1800, to May, 1801, Parker served upon the watch with witness; that, at first, Parker served as a substitute; that witness remembered that Parker, a few days after Christmas, in 1800, was placed upon the roll of the regular watch, in the place of one Ransom, who was taken sick; witness was certain it was in the period above mentioned, because that was the only time witness ever served upon the watch; that during the above period, witness and Parker were stationed together, while on the watch, at the same post; witness was certain that Parker, the prisoner at the bar, was the person with whom he had served upon the watch, and was confident that during that time Parker was never absent from the watch, more than a week, at any one time.

The prisoner's counsel here rested his defense, and testimonies on behalf of the prosecution were continued.

Moses Anderson testified, that he had lived at Haverstraw, Rockland county; that he had lived there since the year 1791; that he knew prisoner at the bar well; that he came to the house of the witness in the beginning of September, 1800; that he then passed by the name of Thomas Hoag; that he worked for the witness eight or ten days; that from that time till the 25th of December, prisoner passed almost every Sunday at witness's house; that during prisoner's stay in Rockland county witness saw him constantly; and if prisoner was the person alluded to, he had a scar on his forehead, which he told witness was occasioned by the kick of a horse; he had also a small mark on his neck [those marks the prisoner had]; he had also a scar under his foot, between the heel and ball of the foot, occasioned, as he told witness, by treading on a drawing knife; *that that scar was easy to be seen*; that his speech was remarkable, his voice being effeminate; that he spoke quick and lisped a little [these pecul-

iarities were observable in prisoner's speech]; that prisoner supped at witness's house on the night of his marriage in December, 1800; that witness had not seen prisoner until this day, since prisoner left Rockland, which was between three and four years ago; that witness was perfectly satisfied in his own mind that prisoner was Thomas Hoag.

Lavinia Anderson testified, that she knew prisoner at the bar; his name was Thomas Hoag; that in September, 1800, he came to witness's house in Rockland county, and worked for her husband eight or ten days, then worked for Judge Suffrein; every Saturday night until the prisoner was married, he and a person who passed for his brother, came to witness's house and stayed till Monday morning; that witness washed for him; there was no mark upon his linen; that prisoner, if he is Thomas Hoag, has a scar upon his forehead, and one also under his foot; was certain of the mark under his foot, because she recollected that the person who passed as his brother, having cut himself severely with a scythe, and complaining very much of the pain, Thomas Hoag told him he had been much worse wounded, and then showed the scar under his foot. Witness also testified, that about a year ago, after a suit had been brought in the justices' court in New York, wherein the identity of the prisoner's person came in question, witness was in town, and having heard a great deal said on the subject, she was determined to see him and judge for herself; that accordingly she went to prisoner's house, but he was not at home; she then went to the place where she was informed he stood with his cart; that she there saw him lying on his cart with his head on his hand; that in that situation she instantly knew him; that she spoke to him and when he answered she immediately recognized his voice; that it was very singular, shrill,

thick, hurried, and something of a lisp; that Hoag had also a habit of shrugging up his shoulders when he spoke, which she also observed in prisoner; that prisoner said he had been told she was coming to see him, and it was surprising people could be so deceived, and asked witness if she thought he was the man, to which witness replied that she thought he was, but would be more certain if she looked at his forehead; that she accordingly lifted up his hat, and saw the scar upon his forehead, which she had often before seen; that prisoner then told her it was occasioned by the kick of a horse. Witness added that it was impossible she could be mistaken — prisoner was Thomas Hoag.

Margaret Secor testified, that about four years ago she lived at Rockland with her father, Moses Anderson; that prisoner at the bar, Thomas Hoag, came to their house in September, 1800; that he remained in Rockland five or six months; that he had a scar on his forehead, that Hoag used to come every Saturday night to her father's to pass Sunday with them; that she used to comb and tie his hair every Sunday, and thus saw the scar; that witness married about two years ago, and came immediately to live in the city of New York; that after she had been in town a fortnight, she was one day standing at her door, when she heard a cartman speaking to his horse; that she immediately recognized the voice to be that of Thomas Hoag, and upon looking at him, saw the prisoner at the bar, and instantly knew him; that as he passed her he smiled and said, "How d'ye do, cousin?" that the next day he came to her house and asked her how she knew he was the man; witness replied she could tell better if he would let her look at his head; that accordingly she looked and saw a scar upon his forehead, which she had often remarked upon the head of Hoag. Witness admitted she had mentioned

her suspicions to her husband, and that her husband had told prisoner of it, and had brought him to the house. Witness added that she was confident prisoner was the person who passed at Rockland as Thomas Hoag.

James Secor testified, that he had been married about two years and a half; that he brought his wife to town about a week after his marriage; that he knew Hoag in Rockland, and had repeatedly seen him there; when he saw prisoner at his house in town, thought him to be the same person; witness's wife had mentioned to him that Hoag had a remarkable scar on his forehead, and when prisoner was at witness's house, he saw on his head the scar that his wife had described.

Nicholas W. Conklin testified, that he lived in Rockland county; that he knew the prisoner at the bar; that his name was Thomas Hoag; that he could not be mistaken; that Hoag had worked a considerable time for him; that during that time he had eaten at witness's table; that Hoag being a stranger, and witness understanding that he was paying his addresses to Catharine Secor, witness took a good deal of notice of him; thought him a clever fellow; saw a great deal of him; lived in a house belonging to witness. When witness saw prisoner at this place, he knew him instantly; his gait, his smile, which is a very peculiar one, his very look was that of Thomas Hoag. Witness endeavored, but in vain, to find some difference in appearance between prisoner and Hoag; he was satisfied in his mind that he is the same person. Hoag, he thought, was about twenty-eight or thirty years of age; he thought Hoag had a small scar on his neck.

Michael Burke testified, that he lived in Catharine street; that he formerly lived in Haverstraw; he saw prisoner several times at Haverstraw, before and after his marriage in December, 1800; that he was as well satisfied as he could be of any-

thing, that prisoner was the same person he knew in Haverstraw, that about two years ago he met the prisoner in the Bowery, at the time of the Harlem races; prisoner spoke to witness, and said, "Am I not a relation of yours?" Witness replied, "I don't know." Prisoner said, "I am; I married Katy Secor." Upon cross-examination witness admitted that he and prisoner had had a quarrel respecting witness calling prisoner Thomas Hoag; that the above conversation was after the trial in the justice's court, and witness when asked if he was at the trial, said he was not, though when interrogated particularly whether he was not in the court room admitted that he was.

Samuel Smith was called, merely as to the character of one of the witnesses on the part of the prosecution, a Mr. Knapp, and testified that he bore an unexceptionable character.

Abraham Wendell testified, that he knew one Thomas Hoag in the latter end of the year 1800; he was then in Haverstraw; that he had been very intimate with him, and knew him as well as he knew any man; that he had worked with him, had breakfasted, dined, and supped with him, and many a time had been at frolics with him, and that the prisoner at the bar was the same man; that he had no doubt whatever about it. That about a year ago, witness being in this city, was told by some persons that Hoag had beat the Haverstraw folks in an action wherein his identity had come in question; that witness told them he could know him with certainty; that they said they would send him down to him that day; that witness was aboard his sloop, saw prisoner at a distance of a hundred yards, coming down the street, and instantly knew him; prisoner came up to him and said immediately, "Mr. Wendell, I am told you will say you know me"; to which witness replied, "So I do;

you are Thomas Hoag"; that witness was as confident prisoner is the person, as he was of his own existence.

Sarah Conklin testified, that she lives in Haverstraw; that in September, 1800, a person calling himself Thomas Hoag was at witness's house, was very intimate there, used to call her aunt; is sure prisoner is the same person; never can believe two persons could look so much alike; would know Hoag from among a hundred people by his voice; prisoner must be Thomas Hoag; had not seen prisoner since he left Haverstraw till the present day.

Gabriel Conklin testified, that he lived in Haverstraw; that he knew Thomas Hoag; that he was at witness's house in September, 1800, and often afterwards; prisoner is the same person, unless there can be two persons so much alike as not to be distinguished from each other; prisoner must be Thomas Hoag; Thomas Hoag had a scar on his forehead and a small scar just above his lip, and prisoner had also these marks.

Further testimony was now produced on behalf of the prisoner, as follows:

James Juquar testified that he had known Joseph Parker, the prisoner at the bar, for seven years past; that he had been intimate with him all that time; that they had both worked together as riggers until Parker became a cartman; knew Parker when he lived in Capt. Pelor's house; never knew him absent from the city during that time, for a day, except when he was working on board one of the United States frigates, about a week at Staten Island. In the year 1799, prisoner hurt himself on board the Adams frigate, and then went to his father's in Westchester county, and was absent near a month; he was very ill when he left town; witness went with him, and brought him back again, before he was quite

recovered; recollects Parker and some other company passing Christmas eve at witness's house the year that Parker lived in Capt. Pelor's house, which was in 1800.

Susannah Wendell testified, that she had known prisoner for six years past; that he married witness's daughter; knew him when he lived in Capt. Pelor's house. Parker's wife was then ill, and witness had occasion frequently to visit her; saw prisoner there almost daily. Prisoner, excepting the time when he was sick and went to his father's in Westchester, has never been absent from the city more than one week since his marriage with witness's daughter.

Here it was agreed between the attorney-general and the counsel for prisoner, that the prisoner should exhibit his foot to the jury, in order that they might see whether there was that scar which had been spoken of in such positive terms by several of the witnesses on the part of the

people. Upon exhibiting his foot, not the least mark or scar could be seen on either of them.

In further confirmation of prisoner's innocence, there was adduced on his behalf one more witness:

Magnus Beekman, who testified, that he was captain of the city watch of the second district; that he was well acquainted with the prisoner, Joseph Parker; that he, Parker, had been for many years a watchman, and had done duty constantly on the watch; that witness, on recurring to his books, where he keeps a register of the watchmen and of their times of service, found that prisoner, Joseph Parker, was regularly upon duty as a watchman during the months of October, November, and December, 1800, and January and February, 1801, and particularly that he was upon duty the 26th of December, 1800.

The jury, without retiring from the bar, found a verdict of not guilty.

363. Another account of **THOMAS HOAG'S CASE.** (CAMDEN PELHAM. *The Chronicles of Crime.*

A man was indicted for bigamy under the name of James Hoag. He was met in a distant part of the country by some friends of his supposed first wife, and apprehended. The prisoner denied the charge, and said his name was Thomas Parker. On the trial, Mrs. Hoag, her relations, and many other credible witnesses, swore that he was James Hoag, and the former swore positively that he was her husband. On the other side, an equal number of witnesses, equally respectable, swore that the prisoner was Thomas Parker; and Mrs. Parker appeared, and claimed him as her husband. The first witnesses were again called by the Court, and they not only again deposed to him, but swore that by stature, shape, gesture, complexion, looks, voice, and speech, he was

ed. 1891. Vol. I, p. 238.)¹

James Hoag. They even described a particular scar on his forehead, by which he could be known. On turning back the hair, the scar appeared. The others, in return, swore that he had lived among them, worked with them, and was in their company on the very day of his alleged marriage with Mrs. Hoag. Here the scales of testimony were balanced, for the jury knew not to which party to give credit. Mrs. Hoag, anxious to gain back her husband, declared he had a certain more particular mark on the sole of his foot. Mrs. Parker avowed that her husband had no such mark; and the man was ordered to pull off his shoes and stockings. His feet were examined, and no mark appeared.

The ladies now contended for the

¹ [This account illustrates how untrustworthy the report of a case may become when transmitted from one chronicler to another. — Ed.]

man, and Mrs. Hoag vowed that she had lost her husband, and she would have him; but during this strife, a justice of the peace from the place where the prisoner was apprehended entered the Court, and turned the scale in his favor.

His worship swore him to be Thomas Parker; that he had known, and occasionally employed him, from his infancy; whereupon Mrs. Parker embraced and carried off her husband in triumph, by the verdict of the jury.

364. GEORGE CANT'S CASE. (CAMDEN PELHAM. *The Chronicles of Crime.* ed. 1891. Vol. II, p. 490.)

At the Central Criminal Court on Thursday the 31st of October, 1839, George Cant, a publican, aged forty years, was indicted for a rape upon Jane Bolland; and in order that the course which the case took may be understood, we shall repeat the evidence which was given by the witnesses at the trial, in preference to a general narrative of the proceedings.

Jane Bolland deposed that she resided with her brother in Solomon-terrace, St. George's-in-the-East. On the 30th of September she went to live as barmaid at the Windsor-castle, public house, Holborn, kept by the prisoner. She slept in one of the attics, and the prisoner and his wife slept in the room underneath. The prisoner called her on the morning of Thursday, the 3d of October; when she came down to the bar the prisoner patted her on the cheek with something; he laid his hand upon her breast, and insisted upon kissing her. She threatened to inform Mrs. Cant of his conduct, and he said, "What the eye did not see the heart would not believe." He then wished her to leave the door of her room open that he might come in when he came to call her in the morning; but she told him that she was not the sort of person he imagined her to be, and left the parlor. In the course of the day her brother and a person named Balfour called upon her, and she communicated to them what the prisoner had said and done to her. Mr. Balfour said, that after what had passed he did not think the prisoner would again attempt to use indecent liberties with her, and her brother,

at the suggestion of Mr. Balfour, advised her not to leave her situation. Subsequently on that day she became unwell, and about eight o'clock in the evening she was conveyed upstairs to bed, but she was then so ill that she could not recollect who went up to her room with her. She was insensible when she reached her bed, but during the night she partially recovered, and then she found the prisoner at the bedside. He placed one of his hands upon her mouth to prevent her calling out, and a struggle took place and she fainted. There was a candle on the table in the room. About six o'clock in the morning she recovered her senses, and found her clothes, which had not been taken off, in disorder, and the bone of her stays broken. The offense charged in the indictment had been committed when she was in a state of insensibility. The prisoner was then standing at the door of her room, and she cried out to him, "You villain, you shall not come in." He answered, that she was a drunkard and should not again enter his bar. She went downstairs to inform Mrs. Cant of what the prisoner had done; but when she told that person that her husband had used indecent liberties with her, Mrs. Cant said, "I will not hear you, you drunken hussy." She immediately left the house, and went to her brother's, where she told what had happened to her. On the Saturday following she was examined by a medical gentleman.

On her cross-examination by Mr. C. Phillips, who appeared for the

now said. On the way home on Friday, the prosecutrix said that Mr. Cant had called her a drunkard, and she would fix him for it. She then seemed happy enough.

Murphy corroborated this statement by declaring that the witness had told him of what he had done, after the time at which the communication had been made to Mr. Williams.

A number of witnesses were then called, who gave the prisoner an excellent character, and

Mr. Adolphus proceeded to reply. He rejoiced that Mr. Phillips had not attempted to cast any aspersion upon the character of the prosecutrix, and declared his belief that no attempt could be successfully made to show that she was unworthy of belief. The case depended entirely now upon the testimony of Edwards, and the simple question was, whether the jury would credit his statement in preference to that of the girl Bolland. No attempt was made to deny the advances which Cant had made to the girl on the morning of the 3d of October; and he asked the jury first, whether having made those advances, it was improbable that he should have followed them up; and secondly, whether they could believe a person who came forward and told such an improbable tale as Edwards. The testimony of the prosecutrix was materially sustained in many particulars — that of Edwards received no important confirmation. True, he had gone to two persons to relate his story before he told it here, but at that time the prisoner was at large on bail; and it was to be observed that he might have done so for the express purpose of propping up an improbable story. He had said nothing about it at the police

office, although he had heard the prosecutrix examined there; and the whole relation bore so much of the impress of fiction, that the jury, he was sure, would attach no credit to his declaration.

The learned judge (Mr. Baron GURNEY) in summing up contrasted the statements of the prosecutrix and Edwards with great force, and having instructed the jury upon the law affecting the case, informing them that the offense of rape might have been committed upon the prosecutrix while she was in a state of insensibility, although no resistance had been made by her, left the whole case to them for decision.

After about two hours' consideration, a verdict of "Guilty" was returned. The prisoner appeared somewhat astonished at this conclusion of the case, and loudly declared his innocence. Judgment of death was, however, recorded against him, and he was removed from the bar.

The very peculiar circumstances of this case attracted a large share of public attention; and a feeling was commonly entertained that the verdict was founded upon an erroneous view of the facts of the case. The persons who adopted this impression lost no time in conveying their opinion to the Secretary of State for the Home Department; but in spite of their most strenuous exertions in favor of Mr. Cant, the Government declined to give a decision in opposition to that which had been arrived at by the jury, although it was resolved that the sentence of death should be changed for a punishment of transportation for life.

In obedience to this determination Mr. Cant was subsequently sent out of the country.

365. **CHICAGO & ALTON R. CO. v. GIBBONS.** (1895. APPELLATE COURT OF ILLINOIS. 65 Ill. App. 550.) . . .

Mr. Justice HARKER delivered the Opinion of the Court. — This is an

action on the case to recover for the use of the widow and next of kin of

Thomas Comeford, killed on a crossing of appellant's railroad at Dwight, while driving in front of freight cars being switched on a side track. There was a recovery for \$2500. . . . The main ground upon which a reversal is asked is that the evidence fails to show any cause of action. The facts as disclosed by the record are as follows:

Thomas Comeford was a farmer, living near Dwight and engaged in the milk business. It was his habit to serve his customers from a covered milk wagon drawn by two horses from house to house. While making his rounds on the evening of October 18th, 1894, he had occasion to cross appellant's railroad at its intersection with Chippewa street and Prairie avenue. Chippewa street runs east and west, Prairie avenue north and south, and they intersect at right angles where the railroad crosses them diagonally from southwest to northeast. It was near seven o'clock and quite dark. Comeford approached the railroad from the east on Chippewa street. Before reaching the track he discovered that a freight engine was switching cars, and stopped. The engine with several cars had just gone north over the crossing when the conductor, who was upon the ground assisting in the switching, signaled the engine to back south over the crossing. Just after the signal was given Comeford started his team over in a sharp trot. Before he could clear the side track on which the cars were moving, his wagon was caught and crushed and he was killed.

A witness for appellee named George Webster, testified that just before the signal to back was given he heard some one say, "Come on, get a move on you." Two other witnesses testified that they heard some one say, "Come on," just before the accident. Neither one of these witnesses testify that the words were addressed to Comeford, or were spoken by anyone connected with the train. A boy named John W.

Maiden testified that he stood talking with Comeford while the latter was waiting at the crossing; that he heard Comeford ask one of the railroad men if he could go across; that the man said, "Yes, get a hustle on yourself," and that Comeford then started on a trot, when he was struck. Several persons testified that the reputation of this witness for truthfulness was bad. No testimony was introduced to contradict the impeaching evidence, and no one seems to have seen Maiden on the ground. The main point in dispute is whether Comeford was invited to cross by some one of appellant's servants. It is insisted that he was, by the words, "Come on, get a move on you," and that Waugh, the conductor uttered them. If Waugh did thus invite him, then clearly appellant is liable. Under the evidence heard it is the only ground upon which a recovery can be based; for if Comeford, without such invitation, attempted to cross, his recklessness in so doing must debar a recovery.

Charles Montague, a brakeman, assisting in the switching, testified that just before the accident, after the train had pulled north and was about to back south, he saw a man passing around the end of the train and he called out to him, "Hurry up, get a move on you," but there is no pretense that such remark was made to Comeford. Waugh and Montague, the conductor and brakeman who were controlling by signals the movements of the train at this crossing, both deny that any invitation was given Comeford to cross. They both testify that when he attempted to cross they called out loudly for him to stop and by waving their lanterns before the team tried to stop him. Two other witnesses, Daniel Morris and James Williams, testify to hearing the calls of Waugh and Montague for Comeford to stop and their efforts to keep him from crossing. Williams himself called out several times for him to stop. It

is uncertain whether Comeford heard the calls to stop or saw the signals. He was almost lifeless when picked up and died within a few minutes after.

He was sitting well back in his covered wagon and in the rapid movement of the team and wagon much noise was made.

The clear preponderance of the testimony shows that the deceased was not invited to cross. Maiden was so thoroughly impeached and his testimony is so in conflict with the other testimony that we cannot believe him.

The witnesses who testified to hearing the call of "Come on, get a move on you," do not pretend to say that it was made by Waugh or made to Comeford. We think it was the one made by Montague to the man he saw passing around the end of the train. In view of the uncertainty in the testimony of Webber, Patterson, and Boyer, and the positive denial of Waugh and Montague, and the testimony showing the efforts of Waugh and Montague to stop Comeford from crossing, we do not see how the verdict can stand.

366. HANS GROSS. *Criminal Investigation*. (transl. J. and J. C. Adam, 1907. Introd., p. XXV.) . . . It must be admitted that at the present day the value of the testimony of even a truthful witness is much overrated. The numberless errors in perceptions derived from the senses, the faults of memory, the far-reaching differences in human beings as regards sex, nature, culture, mood of the moment, health, passionate excitement, environment, all these things have so great an effect that we scarcely ever receive two *quite similar* accounts of one thing; and between what people really experience and what they confidently assert, we find only error heaped upon error. Out of the mouths of two witnesses we *may* arrive at the real truth, we may form for ourselves an idea of the circumstances of an occurrence and satisfy ourselves concerning it, but the evidence will seldom be true and material; and whoever goes more closely into the matter will not silence his conscience, even after listening to ten witnesses. Evil design and artful deception, mistakes, and errors, most of all the closing of the eyes and the belief that what is stated in evidence has really been seen, are characteristics of so very many witnesses, that absolutely unbiased testimony can hardly be imagined. If Criminal Psychology teaches us this much, so the other parts of the subject show us the value of facts, where they can be obtained, how they can be held fast and appraised — these things are just as important as to show what can be done with the facts when obtained. The trace of a crime discovered and turned to good account, a correct sketch be it ever so simple, a microscopic slide, a deciphered correspondence, a photograph of a person, or object, a tattooing, a restored piece of burnt paper, a careful survey, a thousand more material things are all examples of incorruptible, disinterested, and enduring testimony from which mistaken, inaccurate, and biased perceptions, as well as evil intention, perjury, and unlawful co-operation, are excluded. As the science of Criminal Investigation proceeds, oral testimony falls behind and the importance of realistic proof advances; "circumstances cannot lie," witnesses can and do. The upshot is that when the case comes for trial, we may call as many witnesses as we like, but the realistic or, as lawyers call them, circumstantial proofs, must be collected, compared, and arranged beforehand, so that the chief importance will attach not so much to the trial itself as to the Preliminary Inquiry.

TITLE III (continued): TESTIMONIAL INTERPRETATION

SUBTITLE D: CLASSIFICATION OF "IMPEACHING" OR DISCREDITING FACTS

367. JOHN H. WIGMORE. *Principles of Judicial Proof*. (1913.) A testimonial assertion comes, as evidence, in the same logical form as a circumstantial evidential fact (*ante*, No. 2); *i.e.*, the form of proposed inference is: A asserts the existence of fact X; therefore, fact X exists. Hence, the problem of the cogency of this inference involves (as all other judicial inferences do) the question how many and what other hypotheses there are which explain away the evidential fact of A's assertion as due to some other cause than the existence of fact X (*ante*, No. 2). The evidential fact is simply that A makes the assertion; the problem is, Can it be explained away, so that we need not accept fact X as the conclusion? In short, the whole process of Impeachment or Discrediting of a witness, as known to practitioners, is nothing but the general logical process of Explanation (*ante*, No. 2, § 5). So, too, the process of corroboration or support of a witness is the logical process of closing up the possible avenues of Explanation, and thus making the proposed inference more and more necessary and unavoidable.

What, then, is the distinction, if any, between Explanation for circumstantial evidence and Explanation for testimonial evidence? Practically the distinction is a real one, — is in fact the chief basis for the time-honored division of all evidence into these two classes. Circumstantial evidence is heterogeneous and multifarious in its varieties; testimonial evidence is homogeneous. Circumstantial evidence has no single common feature, and few features partly in common; testimonial evidence has one great feature in common, and numerous large classes having common features. *E.g.* the finding of an old coat in an empty baker's wagon on a back lot in Halsted street, Cook county, — the presence of a broken oil can in a grain car on a sidetrack near Onondaga, New York, — the lack of one ten-dollar bill in a roll of ten-dollar bills in a Louisville bank on Monday, January 4, — these are unique, isolated facts which have never happened before in precisely the same way; hence there are no generic truths or laws involved in our inference from them; it is purely empiric. But A's assertion that a street lamp was lighted at a given time or place is generically of a piece with hundreds of thousands of former evidential data, *viz.* it is a human assertion, resting for credit on human qualities. The human element in this testimony is an element in common, running through the vast mass of prior human testimonies. And even though human beings differ, yet their differences also are generic, each on a vast scale. Moral character, bias, experience, powers of perception in light and dark, powers of memory after a lapse of

time, susceptibility to falsify under torture, — these and other qualities have been under observation in so many thousands of instances under varying conditions that we have built up generalizations (more or less correct or uniform), which pass for general truths (or at least, as working guides) on those subjects. In short, we *possess a fund of general principles*, applicable to specific instances of this class of evidence, and almost totally lacking for specific circumstantial evidence. It does not here matter whether those general principles are all sound or not; the point is that we believe them to be, and that we are always disposed to use them in our reasoning upon the probative value of specific human assertions.

How does this bear upon the process of Impeachment or Explanation? In this way: Through this more or less explicit appeal to such general principles, *most of our reasoning upon the credit of witnesses is put into the Deductive form*; in which form these general principles or truths come out into the open as the avowed basis of our inference.¹ Thus they can and must be tested for their validity; and thus, if well founded, they may serve as aids to the valuing of other testimony. These aids are generally lacking for circumstantial evidence; their possession is a great advantage in valuing testimonial evidence, and is its prime feature for practical purposes.

1. *Classification of Impeaching Evidence.* Since, then, the process of Impeachment or Explanation (*i.e.* the valuation of the discount to be made from the credit of a testimonial assertion) rests usually on a more or less explicit deduction from some generalized truth, and since the force of the Explanation will depend much on the number, nature, and correctness of

¹ This distinction between the Deductive and the Empiric processes of inference is here so important that the following exposition of it will be useful:

Professor ALFRED SIDGWICK, *Fallacies; A View of Logic from the Practical Side* (1884, 212 ff.): "The real foundation of Proof is always the recognition of resemblance and difference between things or events known and observed, and those which are on their trial, — whether such recognition is based (1) on knowledge already reached and formulated in names or propositions or (2) on direct observation and experiment. In proportion as we openly and distinctly refer to known principles (already generalized knowledge) is Proof *deductive*; in proportion as we rapidly and somewhat dimly frame new principles for ourselves from the cases observed is Proof *inductive, empiric, or* (in its loosest form) *analogical*. . . . The whole history of the rise and growth of knowledge (it has been also already remarked) is a record of fruitful rivalry and interaction between two opposite processes. Observation of facts has demanded theory — statement of 'laws' or uniformities — to explain, and even to name, the things and events observed; theory in its turn has always been more or less liable to purging criticism of 'fact.' . . . Strictly speaking, all Proof, so far as really *proof*, is deductive. That is to say, unless and until a supposed truth can be brought under the shadow of some more certain truth, it is self-supporting or circular. . . . But there is yet a meaning in the distinction [between inductive and deductive], and, with certain limitations and apologies, I propose to make some use of it.

"Although the dependence of any Thesis on its Reason must be rationalized — *i.e.* must have the underlying principle made clear — before the testing operation can be called complete, yet in regard to special dangers it makes considerable difference whether that principle is at first definitely apprehended or not, — whether (as it is commonly expressed) the Proof professes to rely (1) upon laws known or supposed to be true, or (2) upon facts observed or supposed to be observed. We must distinguish, then, as far as possible, between that kind of Proof which rests openly and distinctly upon already generalized knowledge — Deductive Proof — and that which rests upon what may be loosely described as 'isolated facts' or 'perception of resemblance and difference' or 'observation and experiment' . . . or however the phrase may run, — that which is commonly known in its highest form as Inductive Proof, and in its lowest form as the Argument from Analogy. . . . However we choose to name the two different kinds of arguments, the distinction between them has a certain real importance, as already shown; and all that is intended to be done with it is to recognize that so far as the given argument may be seen to belong to one or the other class, so far we are already on the track of special dangers."

the general principles thus involved, it would seem that the classification of the data should attempt an answer to these questions: What data are virtually Deductive? What data are virtually Empiric? Under the former head, we should further classify according to the number of general principles or deductions involved. Under the latter head, we should endeavor to analyze the possible general principles latent, and thus to learn the force of the explanations.

a. Deductive Impeachment. The generic human qualities affecting testimony, and the state of knowledge on the subject, have already been considered (*ante*, Part II, Title I). The tripartite elements of the testimonial process — perception, memory, narration — have also been examined (Part II, Title II). But the latter do not form separate steps in the inference; they are merely modes in which the deduction operates; hence they do not need to figure separately in the inference. *E.g.* in estimating the witnesses' credit for an assertion as to a midnight explosion, the facts are offered that one witness has no special experience in explosion sounds, and that another is afflicted with insane delusions; the forms of the inferences are: (1) Persons not experienced in explosion sounds are apt to obtain erroneous impressions of direction and intensity; this witness lacks such experience; therefore he is possibly in error as to the fact perceived; (2) Persons of insane delusions are apt to imagine non-existent facts; this witness is insane on a certain subject; therefore he is likely to be in error either by his original perception or by the subsequent operation of his memory. Now the former discrediting fact affects only the element of perception, in the testimonial process; the latter affects either or both perception and recollection. Whichever of such elements may be the one affected, it enters as a term of the truth used deductively, and not as a separate step of deduction. Hence, we may ignore those three elements in classifying the separate steps.

Proceeding to the impeaching facts, then, we premise further that they may be first grouped (merely for convenience) as comprising external and internal conditions. *External* conditions include general truths as to the effect of light, distance, temperature, position, time, etc., on the functions of perception, memory, and narration. *E.g.* that an object in a strong light may give misleading impressions as to color; that events observed ten years ago cannot be as well remembered as more recent ones; that a threat of violence usually deters from telling the exact truth, — these (if there are such truths) may roughly be grouped as external conditions. *Internal* conditions include general truths as to moral disposition, emotions, sex, experience, etc.; *e.g.* that a strong emotion disturbs the powers of correct perception and correct memory; that moral unscrupulousness makes correct narration less likely, and so on.

All the foregoing generalities form the first class of data, *i.e.* data of *Immediate* deduction. There is a single step of inference from them to the supposed discrediting conclusion. The formal statement would be: Persons affected by a strong emotion of revenge are apt to distort the facts; this witness has such an emotion; hence, his assertion may not represent the facts as they are. Notice that here we have but one (supposed) general truth to deal with, — the major premise; the minor premise is a concrete fact, *viz.* this man's specific emotion.

The next class is formed by the data of *Mediate* deduction. Here the above minor premise comes under analysis. Do we get it from a simple concrete fact, interpreted empirically, or do we get it by the aid of another general truth coupled with another concrete fact as a minor premise? If by the latter way, we must note and test that second general truth also. In this particular instance, either way may be available. *E.g.* the witness's language of hostility, on or off the stand, may be the simple concrete fact from which the emotion may be inferred; or, the witness may be an accomplice or a policeman (concrete fact), to which we may couple some supposed general truth about accomplices or policemen having generically an emotion of hostility. In the latter case, we thus have a second general truth, upon whose correctness or force our ultimate conclusion will depend. There are scores of such supposed general truths current in the books and in tradition. They are drawn from the more or less extensive experience of life, accumulated and compared and condensed. Sometimes these partial experiences are puzzlingly contradictory, *e.g.* the views as to the bias of experts and of policemen. Sometimes they are relics of former experience now practically discarded, *e.g.* the rooted distrust of a convict's testimony.

It is at this point that we meet most of the doubtful general truths affecting testimonial evidence. The data of immediate deduction are seldom formulated; their generality is obviously so broad and loose (at least, for what are above called internal conditions) that they seldom do harm by receiving an exact phrasing; and so far as they have fallen within the range of the scientific psychologist (*e.g.* the effect of light on color) there are as yet established few general laws having any exact tenor. But the supposed general truths falling within the mediate class, which have mostly grown up empirically in judicial practice, are apt to need special caution, by reason of their plausible verities.

By insisting on the foregoing two processes — those of stating explicitly the immediate data and the mediate data, with one or both of their general truths — we shall have forced out into the open the real basis of our proposed inference. We may verify our concrete fact or facts (*i.e.* we may settle whether this man *is* a policeman or an accomplice or a convict or has uttered hostile language, by asking him or by calling another witness); and we may lay aside our general truth or truths for reflection and testing. This process we could seldom use for circumstantial evidence; but we can and must use it most of the time for testimonial evidence.

Such is the practical application of the logical process of Explanation in making use of the data set forth in Titles I and II for the valuation of testimonial evidence. Thus, when the process of analysis has been completed for a given witness, we shall have passed in review all the possible immediate data affecting the topics of his testimony, noting the supposed general truths, if any, on which they rest, — all the concrete mediate data which complement the former as minor premises, — all the further general truths therein involved, — and all the further concrete data which complete the supposed inference. After the appropriate rejections and acceptances, we are ready to estimate the probability that the witness's assertion is due rather to some other cause than to the actuality of the fact asserted by him.

b. Empiric Impeachment. The common varieties of empiric impeachment are few. Most of them have been illustrated in Title III, Subtitle

B, — specific circumstances forming a defect in basis of perception, specific instances of lack of recollection, specific errors involved in contradiction and self-contradiction, usually in some detail "collateral" to the main issue. Now the ordinary use of these data is purely empiric or inductive in form; *e.g.* "A erroneously asserted that the defendant wore a black hat, instead of a light one; therefore A's main assertion that the defendant struck first is erroneous." Occasionally, when the arguer is questioned as to the soundness of the inference (for, as Professor Sidgwick says, "the whole cogency of inductive proof depends upon the extent to which the principle, hitherto out of sight, is rendered definite"), he will offer some general truth which fortifies the inference by giving it a deductive form, *e.g.* "falsus in uno, falsus in omnibus." But such general truths, when then examined, usually are found to be either inapplicable or too loose to be forceful. Hence, until we arrive at a more accurate knowledge of the general truths applicable in this field, we must class these inferences as essentially empiric.

This is not saying that they are not strong. At times, none can be stronger. Indeed, in the ordinary course of trials none are more sought after or more relied upon than this class of data; which at least shows how highly their force is valued by practitioners. All we are concerned for here is that their distinct nature shall be understood, and that their weaknesses shall not be ignored.

So far as they are sometimes intangible and sometimes supportable by various general truths, these proposed inferences are sufficiently analyzed in prior passages (*ante*, Nos. 306, 313, 322, 323, 332, 333, 352-355). In charting them for a given witness, it is prudent to assume some undetermined general truth or quality as the immediate datum, add the specific instance, etc., as the mediate datum, and then, after reflection, fill in tentatively the description of the immediate datum.

2. *Corroborating Evidence.* Corroborating evidence has several aspects. Some data usually spoken of as corroborating are not such, in a strict sense. Corroboration, applied to testimonial evidence, is merely the complement of Explanation (Impeachment). The logical process of accepting an inference as to a fact in issue has only two results, — belief (in some degree) or non-belief. Non-belief consists in regarding some other hypothesis (than the fact alleged) as equally or more probable; the process of showing those other hypotheses and their probability, and thus of preventing belief, is that of Explanation (*ante*, No. 2). This the opposing party will usually undertake to do. But even if he does not, the tribunal may see for itself that some such other hypotheses are possible. Hence the first party (whether or not the opponent suggests these explanatory hypotheses) may well strengthen his case by certain data which demonstrate those hypotheses to be not available. Thus he stops up possible exits for non-belief, and makes it more unavoidable to believe his own alleged conclusion. And this process of stopping up exits is Corroboration (*ante*, No. 2).

As applied to testimonial evidence, Corroboration consists in establishing data which refute possible discrediting circumstances. And (as above noted) this may properly be done even though the opponent has made no attempt to establish any of the impeaching hypotheses; for the mere possibility of them may cause the tribunal to hesitate, and the Corroboration will remove these grounds of hesitation. The mere fact of the witness's making an

assertion does not require us to believe the matter asserted; our knowledge of human nature forbids this.¹ Hence the tribunal, in view of possible discrediting hypotheses, may cautiously be disinclined to believe until those hypotheses have been shown groundless. For example, a witness Smith, whose name and face signify nothing to the tribunal and whose moral character may or may not be trustworthy, may receive instantly more credit when it appears that he is the well-known citizen Smith. This class of data may appear on the "voir dire" of the direct examination, quite as well as on the case in rebuttal after an attempted impeachment, and on the witness's own examination as well as from the testimony of others. Thus the rule of practice which forbids most sorts of so-called corroboration until after an attempted impeachment is a rule of orderly convenience only, and its distinction has no correspondence to any logical feature of Corroboration.

Every fact, then, which closes up an exit of *possible* distrust of the testimony, *i.e.* which prevents or refutes a possible discrediting hypothesis, is a corroborative fact. Hence the varieties of corroboration are as numerous as the varieties of impeachment.

There is, however, little occasion for the use of new or different general truths by way of deduction. The general truths, so far as used, would be the same as those used in impeachment, with a reverse application. *E.g.* in a street-car collision, the testimony of a bystander waiting on the corner is strengthened by the fact that he was a cool spectator; *i.e.* the general truth that persons excited by a catastrophe are not likely to observe correctly is negatived as a possible impeachment of him, and thus one possible source of distrust is removed.

As to empiric data, only a very few types are common. The prior consistent narration of a witness's story is one of these. For such data the same cautions apply as for empiric impeaching data.

3. *Opposing Assertions.* Suppose that on a specific fact in issue, three witnesses on one side assert its existence and one witness on the other side denies its existence; what belief should ensue? We assume that the respective witnesses' assertions have been duly valued, after noting all impeaching and corroborating circumstances. We assume also that we value them somewhat differently, for one reason or another. Is there any canon for reaching a conclusion as to the due total effect?

Negatively, there is the canon that numbers in themselves count for nothing. The medieval conception as to numerical weight² no longer finds any acceptance in logic, — however it may persist in crude popular judgment. Any method we may use must at least be qualitative, not quantitative.

Moreover, numbers may in themselves signify something qualitatively, so far as the witnesses on the same side are concerned, and irrespective of opposing assertions. *E.g.* if three persons, standing in the same place at the same time, see a lamplight, the possible chances of error by individual peculiarity are lessened; they corroborate each other. But that is not the present problem. That corroboration would be just as strong if there were no opposing witness.

¹ To be sure, judges sometimes caution juries that they need not believe a witness simply because he is uncontradicted; but this is merely a precaution against jurors' lack of intelligence.

² Wigmore, *Treatise on Evidence*, § 2032.

Assume, then, that the three have testified, and that we have reflected upon their combined testimony and given it a combined value; add the fact that the fourth witness makes a contrary assertion, and value that assertion in itself. Now contrast the two opposing assertions. Is there anything in the mere numerical preponderance which should control our belief?

Current judicial language is apt to answer in the affirmative.¹ There are reasons for doubting this, and for saying that any such conclusion can rightly be based on a qualitative superiority only, not a quantitative one. But this problem is really only a part of the greater and general problem of the ultimate effect to be given to a mass of opposing evidence. Logically the problem is the same for opposing circumstantial evidence and for mixed circumstantial and testimonial evidence, and cannot be solved for either class independently of the other. No systematic guidance to this conclusion seems yet to have been discovered. What little can be offered in the present work is set forth in No. 376, *post*.

¹ Moore, *Treatise on Facts*, § 62.

TITLE IV: RELATIVE PROBATIVE VALUE OF CIRCUMSTANTIAL AND TESTIMONIAL EVIDENCE

369. DANIEL DEFOE. *Robinson Crusoe*. (1719. Dent's ed. p. 108.)

It happened one day, about noon, going towards my boat, I was exceedingly surprised with the print of a man's naked foot on the shore, which was very plain to be seen in the sand. I stood like one thunder-struck, or as if I had seen an apparition. I listened, I looked round me, I could hear nothing, nor see anything. I went up to a rising ground, to look farther. I went up on the shore, and down the shore. But it was all one; I could see no other impression but that one. I went to it again to see if there were any more, and to observe if it might not be my fancy; but there was no room for that, for there was exactly the very print of a foot—toes, heel, and every part of a foot. How it came thither I knew not, nor could in the least imagine. But after innumerable fluttering thoughts, like a man perfectly confused, and out of myself, I came home to my fortification, not feeling, as we say, the ground I went on, but terrified to the last degree, looking behind me at every two or three steps, mistaking every bush and tree, and fancying every stump at a distance to be a man; nor is it possible to describe how many various shapes affrighted imagination represented things to me in, how many wild ideas were found every moment in my fancy, and what strange unaccountable whimsies came into my thoughts, by the way. When I came to my castle, for so I think I

called it ever after this, I fled into it like one pursued. Whether I went over by the ladder, as first contrived, or went in at the hole in the rock, which I called a door, I cannot remember; no, nor could I remember the next morning, for never frightened hare fled to cover, or fox to earth, with more terror of mind than I to this retreat. I slept none that night. The farther I was from the occasion of my fright, the greater my apprehensions were; which is something contrary to the nature of such things, and especially to the usual practice of all creatures in fear. But I was so embarrassed with my own frightful ideas of the thing, that I formed nothing but dismal imaginations to myself, even though now I was a great way off it.

Sometimes I fancied it must be the devil, and reason joined with me upon this supposition; for how should any other thing in human shape come into the place? Where was the vessel that brought them? What mark was there of any other footsteps? And how was it possible a man should come there? . . .

I presently concluded then, that it must be some more dangerous creature, viz. that it must be some of the savages of the mainland over against me, who had wandered out to sea in their canoes, and, either driven by the currents or by contrary winds, had made the island, and had been on shore, but were gone away again to sea, being as loath,

perhaps, to have stayed in this desolate island as I would have been to have had them. . . . Then terrible thoughts racked my imagination about their having found my boat, and that there were people here; and if so, I should certainly have them come again in greater numbers, and devour me; that if it should happen so that they should not find me, yet they would find my inclosure, destroy all my corn, carry away all my flock of tame goats, and I should perish at last for mere want. . . .

In the middle of these cogitations, apprehensions, and reflections, it came into my thought one day, that all this might be a mere chimera of my own; and that this foot might be the print of my own foot, when I came on shore from my boat. This cheered me up a little too, and I began to persuade myself it was all a delusion, that it was nothing else but my own foot; and why might not I come that way from the boat, as well as I was going that way to the boat? Again, I considered also, that I could by no means tell, for certain, where I had trod, and where I had not; and that if, at

last, this was only the print of my own foot, I had played the part of those fools who strive to make stories of specters and apparitions, and then are frightened at them more than anybody. . . . But I could not persuade myself fully of this till I should go down to the shore again, and see this print of a foot, and measure it by my own, and see if there was any similitude or fitness, that I might be assured it was my own foot. But when I came to the place, first, it appeared evident to me, that when I laid up my boat, I could not possibly be on shore anywhere thereabout; secondly, when I came to measure the mark with my own foot, I found my foot not so large by a great deal.

Both these things filled my head with new imaginations, and gave me the vapors again to the highest degree; so that I shook with cold, like one in an ague; and I went home again, filled with the belief that some man or men had been on shore there; or, in short, that the island was inhabited, and I might be surprised before I was aware. And what course to take for my security, I knew not.

370. MR. (later Attorney-General) H. M. KNOWLTON, arguing for the prosecution, in *COMMONWEALTH. v BORDEN*. (1893. Massachusetts. 27 Amer. Law Rev. 837): What is sometimes called circumstantial evidence is nothing in the world but a presumption of circumstances. It may be one or fifty. There is no chain about it. The word "chain" is a misnomer, as applied to it. Talk about a chain of circumstances! When that solitary man had lived on this island for twenty years, and believed that he was the only human being there, and that the cannibals and savages that lived around him had not found him and had not come to his island, he walked out one day on the beach, and there he saw the fresh print of a naked foot on the sand. *He* had no lawyer, to tell him that was nothing but a circumstance! *He* had no distinguished counsel, to urge upon his fears that there was no chain about that thing which led him to a conclusion! His heart beat fast; his knees shook beneath him; he fell to the ground in fright, — because Robinson Crusoe *KNEW*, when he saw *THAT* circumstance, that a man had been there that was not himself!

It was circumstantial evidence!

It was *nothing* but circumstantial evidence!

But it satisfied *HIM*!

371. *COMMONWEALTH v. WEBSTER*. (1850. 5 Cush. 295, 311.) *SHAW, C. J.* Each of these modes of proof has its advantages and disadvantages; it is not easy to compare their relative value. The advantage of positive evidence is, that it is the direct testimony of a witness to the fact to be proved, who, if he speaks the truth, saw it done and the only question is, whether he is entitled to belief. The disadvantage is, that the witness may be false and corrupt, and that the case may not afford the means of detecting his falsehood. But, in a case of circumstantial evidence where no witness can testify directly to the fact to be proved, it is arrived at by a series of other facts, which by experience have been found so associated with the fact in question, that in the relation of cause and effect, they lead to a satisfactory and certain conclusion; as when footprints are discovered after a recent snow, it is certain that some animated being has passed over the snow since it fell; and, from the form and number of the footprints, it can be determined with equal certainty, whether they are those of a man, a bird, or a quadruped. Circumstantial evidence, therefore, is founded on experience and observed facts and coincidences, establishing a connection between the known and proved facts and the fact sought to be proved. The advantages are, that, as the evidence commonly comes from several witnesses and different sources, a chain of circumstances is less likely to be falsely prepared and arranged, and falsehood and perjury are more likely to be detected and fail of their purpose. The disadvantages are, that a jury has not only to weigh the evidence of facts, but to draw just conclusions from them; in doing which, they may be led by prejudice or partiality, or by want of due deliberation and sobriety of judgment, to make hasty and false deductions; a source of error not existing in the consideration of positive evidence.

372. *W. WILLS. A Treatise on Circumstantial Evidence*. (1838. p. 26.) The best writers, ancient and modern, on the subject of evidence, have concurred in treating circumstantial as inferior in cogency and effect to direct evidence; a conclusion which seems to follow necessarily from the very nature of the different kind of evidence.¹ But language of a directly contrary import has been so often used of late, by authorities of no mean note, as to have become almost proverbial.

It has been said that "circumstances are inflexible proofs; that witnesses may be mistaken or corrupted, but things can be neither."² "Circumstances," says Paley, "cannot lie."³ It is astonishing that sophisms like these should have passed current without animadversion. The "circumstances" are assumed to be in every case established, beyond the possibility of mistake; and it is implied, that a circumstance established to be true, possesses some mysterious force peculiar to facts of a certain class. Now, a circumstance is neither more nor less than a minor fact, and it may be admitted of all facts, that they cannot lie; for a fact cannot at the same time exist and not exist: so that in truth the doctrine is merely the expression of a truism, that a fact is a fact. It may also be admitted that "cir-

¹ Menochius, *De Præsumptionibus*, lib. 1. quest. 1. 6; Mascardus, *De Probationibus* vol. I, quest. 8. n. 8; Burnett on the *C. L. of Scotland*, p. 506; Starkie's *Law of Evidence* vol. I, pp. 515, 521 (2d ed.). *The Theory of Presumptive Proof; Benth. Jud. Ev.*, vol. III, c. XV, s. IV.

² Burnett on the *C. L. of Scotland*, p. 523.

³ *Principles of Moral and Political Philosophy*, b. VI, c. IX.

cumstances are inflexible proofs," but assuredly of nothing more than of their own existence: so that this assertion is only a repetition of the same truism in different terms. It seems also to have been overlooked that circumstances and facts of every kind must be proved by human testimony; that although "circumstances cannot lie," the narrators of them may; and that, like witnesses of all other facts, they may be biased or mistaken. So far then, circumstantial possesses no advantage over direct evidence.

A distinguished statesman and orator has advanced in unqualified terms the proposition, supported, he alleges, by the learned, that "when circumstantial proof is in its greatest perfection, that is, when it is most abundant in circumstances, it is much superior to positive proof."¹ Paley has said, with more caution, that "a concurrence of well-authenticated circumstances composes a stronger ground of assurance than positive testimony, unconfirmed by circumstances, usually affords."² Mr. Baron Legge, upon the trial of Mary Blandy for the murder of her father by poison,³ told the jury that where "a violent presumption necessarily arises from circumstances, they are more convincing and satisfactory than any other kind of evidence, because facts cannot lie." Mr. Justice Buller, in his charge to the jury in Captain Donellan's case, declared, "that a presumption which necessarily arises from circumstances is very often more convincing and more satisfactory than any other kind of evidence, because it is not within the reach and compass of human abilities to invent a train of circumstances which shall be so connected together as to amount to a proof of guilt, without affording opportunities of contradicting a great part if not all of those circumstances."

It is obvious that the doctrine laid down in these several passages is propounded in language which not only does not accurately state the question, but implies a fallacy, and that extreme cases — the strongest ones of circumstantial, and the weakest of positive evidence — have been selected for the illustration and support of a general position. "A presumption which necessarily arises from circumstances," cannot admit of dispute, and requires no corroboration; but then it cannot in fairness be contrasted with and opposed to positive testimony, unless of a nature equally cogent and infallible. If evidence be so strong as necessarily to produce certainty and conviction it matters not by what kind of evidence the effect is produced; and the intensity of the proof must be precisely the same, whether the evidence be direct or circumstantial. It is not intended to deny that circumstantial evidence affords a safe and satisfactory ground of assurance and belief; nor that in many individual instances it may be superior in proving power to other individual cases of proof by direct evidence. But a judgment based upon circumstantial evidence cannot in any case be more satisfactory than when the same result is produced by direct evidence, free from suspicion of bias or mistake. Perhaps no single circumstance has been so often considered as certain and unequivocal in its effect, as the anno-domini watermark usually contained in the fabric of writing paper, and in many instances it has led to the exposure of fraud in the propounding of forged as genuine instruments. But it is beyond any doubt (and several instances of the kind

¹ Burke's *Works*, *ut supra*, vol. II, p. 624.

have recently occurred) that issues of paper have taken place bearing the watermark of the year succeeding that of its distribution, — a striking exemplification of the fallacy of some of the arguments which have been remarked upon. How often has it been iterated in such cases, that circumstances are inflexible facts, and facts cannot lie !

373. ALEXANDER M. BURRILL. *A Treatise on Circumstantial Evidence*. (1868. p. 207.) Some lamentable mistakes have, in times past, been made in the application of circumstantial evidence, in judicial investigations of crime ; and jurors, acting either in the exclusive exercise of their own discretion, or under the influence of narrow or erroneous views of the law of evidence, as expounded by the courts, have drawn conclusions entirely at variance with truth and justice ; condemning innocent persons to suffer death for the crimes of others. This has led to the opinion that a species of evidence which not only admits but actually requires a certain latitude and discretion of reasoning in its application, is a dangerous instrument of investigation ; and that its use, at least in cases where human life is put in jeopardy, should be discouraged or disallowed. Jurors are constantly accustomed to hear from eloquent advocates for prisoners, the open condemnation, and sometimes the unmeasured denunciation of the use of indirect evidence, as a basis and means of conviction in capital cases. . . . Jurors, instead of acting, as in former days, with an undue desire to enforce the effect of circumstances, as evidence, even where the life of the accused was at their disposal ; have been found to entertain, and openly to express a determination not to convict upon such evidence, however strong and clear, in any case where life should be placed in peril.

It may tend to a clearer understanding of the subject of this chapter, to consider this adverse view of circumstantial evidence, with a more particular reference to the grounds upon which it has been formally maintained. These are, first, that it is intrinsically *liable* to mistake and abuse ; and secondly, that it *has* actually led to gross injustice, in the conviction and execution of innocent persons.

The liability to error is said to arise from the very process of reasoning and inference which is inseparable from its application. Men, it is said, may and constantly do reason inaccurately, and form opinions, in the way of deduction and presumption, without any sufficient foundation ; and human life, in being made to depend upon the correctness of such conclusions, is exposed to great and obvious peril : whereas, by the exclusive employment of direct or positive evidence, which admits of no such latitude of reasoning or range of discretion, this source of error and consequent danger is entirely cut off. But it may well be doubted whether the process of inference can be wholly avoided, in the application of judicial evidence of any kind. . . . As the jury must always observe with the senses of the witness, putting themselves, mentally, in his place ; and thus transferring themselves to the scene and time of the occurrence related ; they must see and hear as the witness saw and heard ; and, if they believe him, must of course infer, as he did.

The other reason which has been urged against the propriety, and, indeed, the justice and safety of circumstantial evidence, as a medium of proof in capital cases, is that a reliance upon it *has* repeatedly led to the execution

of persons whose entire innocence of the crimes for which they suffered, has afterwards been clearly demonstrated. In support of this position, several actual cases, taken chiefly from the records of English courts, have been referred to, and some of them so repeatedly and uniformly on criminal trials, as to justify the appellation given to them by Mr. Justice Story,¹ of being "the common-places of the law" on such occasions. Among the earliest of these are the case of the uncle and niece, given by Lord Coke [*ante*, No. 151], and that of the person executed for stealing a horse, mentioned by Sir Matthew Hale.² But the most elaborate collection of cases, considered applicable to the point in question, is to be found in the Appendix to the work published in England, some years ago, under the title of *The Theory of Presumptive Proof*.³ The composition of this work appears to have been occasioned by the result of the trial of Captain John Donellan [*post*, No. 379], who was convicted and executed in 1781, for the murder of his brother-in-law, Sir Theodosius Boughton, by poisoning him with laurel-water: its immediate object being to prove that the accused in that case was convicted on insufficient evidence. The drift of the work itself is, on the whole, unfavorable to the employment of circumstantial evidence, as an instrument of capital conviction. But the object of the Appendix is not to be mistaken; the cases there presented going to show (and in fact being intended to show) the actual and extreme danger of relying upon such evidence as proof in any capital case. So clearly did this appear on their publication in this form, that great and confident use soon came to be made of them, by advocates for prisoners; and sometimes to such an extent as to draw special remark from the courts.

Considered superficially, these cases (of which there are eleven) appear entirely adequate to produce the impression intended. But, upon a close analysis, they will all, with a single exception, be found to be possessed of characteristics which deprive them of their appositiveness and applicability to the object in question: the convictions, in some of the cases, being founded on palpable fraud, perjury and conspiracy; in others, being attributable to professional error, the prejudice or superstition of juries, or the honest mistakes of witnesses; and in others, to the admixture of direct evidence itself. The only case in the collection, of purely circumstantial evidence, in which the conviction, had it taken place, could not, in itself, have been censured, is the sixth (anonymous) in the series, which, it must be admitted, was an extraordinary one. But even had the whole eleven been cases of purely legitimate circumstantial evidence, rationally applied, and, thus applied, fatal to innocence, it might have been said of them, in the words of an American judge,⁴ "the wonder is that there have not been more." They are scattered over a space of more than a century, and are taken from the

¹ *The United States v. Gibert*, 2 Sumner, 19, 27.

² A man was convicted and executed for stealing a horse, on the strength of the presumption of the animal's being found in his possession on the same day on which it was stolen; but it afterwards appeared that the real thief, being closely pursued by the officers of justice, had met the unfortunate man, to whom he was a total stranger, and requested him to walk his horse for him, while he turned aside upon a necessary occasion: and so escaped. Best on Pres. § 210. 2 Hale's P. C. 289.

³ This work was published anonymously, but has always been considered to have proceeded from the pen of Mr. Phillipps, the author of the well-known *Treatise on the Law of Evidence*.

⁴ Gibson, C. J., in *Commonwealth v. Harman*, 6 Am. Law Journal, 321.

records of a country whose criminal code then made a great variety of offenses capital. It would probably not be difficult to find, on an investigation of the same sources of information, during an equal period, eleven cases in which a reliance on *direct* evidence itself was attended with results equally disastrous and unjust.¹

On a review of the two leading grounds just considered, upon which the unfavorable view of circumstantial evidence is sought to be maintained, the following considerations present themselves.

First. Intrinsic liability to error is no sufficient objection against the employment of any species of otherwise legitimate evidence. All human evidence is imperfect and fallible, simply because it all comes and must come through an imperfect and fallible medium. The only species of infallible evidence is one which, it has been well said, it would be absurd to require; namely, that which, without the intervention of human testimony, presents itself directly to the senses of the tribunal.

Secondly. If the fact that courts and juries have actually been misled by a species of evidence, even to the extent of convicting innocent persons in capital cases, be a sufficient ground for excluding that species of evidence from use, then direct evidence itself must be discarded; for it is known that innocent persons have sometimes been convicted and executed on what is called "positive" proof; the witnesses against them either designedly swearing to what they knew to be false, or, with an honest intention, having been led by mistake to testify to facts which had no actual existence.

"But to what just conclusion," we may, on the whole, ask in the language of the same eminent judge, "does this tend? Admitting the truth of such cases, are we then to abandon all confidence in circumstantial evidence, and in the testimony of witnesses? Are we to declare that no human testimony to circumstances or to facts is worthy of belief, or can furnish a just foundation for a conviction? That would be to subvert the whole foundations of the administration of public justice."²

From the consideration of the opinion that circumstantial evidence is a dangerous and unreliable medium of proof, on account of its liability to mislead the judgment of human tribunals, especially in cases where the consequences of error cannot be repaired, we turn next to the opposite opinion which has sometimes been maintained, — that such evidence is worthy of all confidence, because *it cannot mislead*. The essence of this opinion seems to be summed up in the brief expression, which has been used even in judicial opinions, — that "facts or circumstances cannot lie."³ Before uniting, however, in the condemnation which has been bestowed on this proposition by some able writers on judicial evidence,⁴ the actual meaning of the expression, or the idea intended to be conveyed by it, should be clearly ascertained.

In the literal sense of the term "lie," — the utterance of a known falsehood, — the proposition is undoubtedly true, to its fullest extent. Facts cannot lie, and never lie. They are not moral agents, who alone are capable

¹ Story, J., in *United States v. Gibert*, 2 Sumner, 19, 27. 3 Phill. Evid. (Cowen & Hill's notes), Note 305, p. 556.

of such action, nor are they subjects of those moral influences which divert human beings from the path of truth. They are inanimate existences, and thus, in their nature, inflexible; — in the common phrase, “stubborn things.” Hence they have sometimes been significantly called “mute” or “dumb witnesses.”¹ But, giving to the term “lie” a sense more appropriate to inanimate subjects (and probably the one intended), that of deceiving or misleading the senses or the judgment, let us see whether facts or circumstances can ever be said to possess this most undesirable quality.

The expression that “a fact” — that is, a reality or verity — “cannot lie” — that is, express a falsehood — may very properly be regarded as a truism, or another form of saying that a fact is a fact. But this is not the only sense in which the term “fact” is used; for, however paradoxical it may appear, there may be such things as *false facts*. In order to be available for any human purpose, facts must become the subjects of human observation. In this point of view, a fact, as observed, is often the real fact as it exists; and the impression made through the senses, upon the mind, is, so to speak, an exact copy of it. But frequently this is otherwise; an *appearance* resembling the fact, or a “counterfeit presentment” of it, impresses the sense so strongly, that it is allowed to take its place, and is believed and reported as such; as may be explained by a few familiar examples.

A sees an act done by B, who, to his view, and possibly to that of many others, so closely resembles C as to convey the impression that it is actually C himself. Here the real and absolute fact of the case is, that the person seen is B. The fact, as it appears to A’s sense, and as it impresses his mind and memory, is, that it is C. In this there is manifest delusion and error. The *semblance* of a fact has deceived the observer or witness. . . . To honest mistakes of this kind, direct as well as indirect evidence is constantly liable.

Again, A has been showing to B a valuable coin from the drawer of a cabinet. B, after handling and closely examining it, returns it to the drawer, and soon after takes his leave. Immediately on his departure, the coin is missed; it is carefully and repeatedly sought for, but cannot be found. No other person except B has been present. The fact, as it appears to A and as he would no doubt be willing to state it on oath, is that the coin is not in the cabinet; the inference being that it has been taken by B. But the real fact is just the reverse. It is actually in the cabinet; but having slipped into an unknown or unperceived crevice, it has been entirely overlooked in the search. Here again, the deception or error is in the observer himself, and it arises from the same cause, as that intimated in the last example, — neglect or omission to carry the process of observation *far enough* to reach the fact *as it exists*.²

But there is a class of facts, of which it has been confidently said that they may and do “lie”; namely, such as are *fabricated* or forged by the perpetrators of crimes, with the express and only intent of deceiving those who may observe or witness them. A intending to commit a murder, and being desirous to avert suspicion from himself, by fastening it on another, gets possession of the shoes of B, the soles of which have certain peculiar marks, and also a knife belonging to B; puts on the former and proceeds unob-

¹ “Témoins muets,” Mittermaier, *Traité de la Preuve*, ch. 53.

² A case resembling this is said to have occurred a few years since, at the British Museum.

served to the scene of the crime, leaving the prints of his feet distinctly impressed on the snow or ground; perpetrates the crime with the knife, which he places near the dead body; and then returns to B's house, leaving the knife and the footprints to tell the story of the transaction. The impressions are seen as soon as the crime is discovered, traced to the house of B, compared with the shoes found upon his person, and ascertained to correspond with all the peculiar marks upon the soles. The knife is also found, bloody and proved to belong to B. The observer of these facts concludes that B was the murderer; and hence it is said that the facts or circumstances "lied" to him. He states them to a jury, on the trial of B for the crime. If they take his view, adopt his conclusion, and declare B guilty, the facts are said to lie to them, and to lie "wickedly and cruelly." They undoubtedly do "speak," in the figurative language of Mr. Bentham, to the inculcation of a wholly innocent person, because they have been made to speak so. But the criminal has been the liar, rather than the facts or appearances which he has fabricated; they being merely passive, senseless instruments in his hands. The facts reported and acted upon in such a case are not, as in the preceding examples, *false facts*; that is, facts existing only in statement. . . .

From the preceding explanation, it may be seen that, in a judicial point of view, and as materials of evidence, facts or circumstances are of several kinds: first, the genuine *facts of a case*, properly so called, that is, the facts as they actually occurred, proceeding in a natural way from the criminal, and indicating truly and consistently their connection with the crime: secondly, *extraneous* facts, having in themselves a real existence, but interpolated into the case, either by some natural accident or by the fraudulent act of the criminal himself, or the innocent or unconscious act of some other person; and thirdly, facts reported by witnesses as such, but having *no existence* whatever, being the offspring either of honest mistake or corrupt design. It is obviously to the last two only, that the mendacious or deceptive quality under consideration can, with any propriety, be attributed; and the (so-called) facts of the third class are full as likely to be encountered where the evidence is direct, as where it is circumstantial. And even in the case of fabrication, the deception has been shown to be produced as much by the *absence* of facts as by their presence.

The proposition that "facts or circumstances cannot lie," that is, cannot indicate a wrong conclusion, is strictly true in the case of circumstantial evidence of the *certain* kind, as has already been explained.

There is also another sense in which it may be said of facts or circumstances, that they cannot lie; that is, where they are presented as actual verities, to the senses of the tribunal itself. In this aspect, they have been well called "inflexible proofs"¹ and "dumb witnesses";² speaking to the sight only. . . . But facts of this kind, dispensing with the usual channel of judicial communication, are of extremely rare occurrence. In the vast majority of cases, facts must come through witnesses, and here the objection to the expression, that "facts cannot lie," occurs in another form. Granting that facts cannot lie, the witnesses who report them to the jury can and may. Unquestionably; and they may honestly misrepresent also, with results

¹ Burnet's *Criminal Law of Scotland*, ch. 21, p. 523.

² Mittermaier, ch. 53, cited *ante*.

equally disastrous and unjust. That the great source of deception and inlet of error lie in the *medium* of evidence has perhaps been seen in the analysis of facts already given. . . .

Both the opinions respecting circumstantial evidence which have just been reviewed, considered in their broadest expression, are extravagant propositions, occupying opposite extremes: the one placing circumstantial evidence far below direct, — and, in some cases, wholly excluding its use; while the other elevates it to a rank far above direct evidence. They thus present the two species of evidence in an adverse relation to each other, as though they were naturally in conflict and as though one species could be employed or relied on, only at the other's expense. But this is obviously an incorrect view of the subject, — the two species being parts of *one* system of means, natural as well as judicial; intended, where they are faithfully used in the cause of truth to aid, and not to thwart, each other; and, when legitimately employed, having constantly such effect. As distinct species, however, they undoubtedly possess characteristic peculiarities; and, in this point of view, they have often been made the subjects of comparison. . . . But, in truth, these two kinds of evidence ought not, in a general view of their merits, to be contrasted or set in opposition to each other. "In the abstract," observes Mr. Starkie, "and in the absence of all conflict and opposition between them, the two modes of evidence do not in strictness admit of comparison; for the force and efficacy of each may, according to circumstances, be carried to an indefinite and unlimited extent, and be productive of the highest degree of probability, amounting to the highest degree of moral certainty."¹ If the object of comparison were to determine the question which of the two should be exclusively adopted, as a medium of proof, there would be greater reason in insisting upon the supposed superior merits of the one or the other. But as long as it is admitted that *both must* continue to be employed as instruments of judicial investigation, the only legitimate and rational object of comparison is to bring out more prominently the respective excellencies and imperfections, or advantages and disadvantages of each, with the view of more effectually and safely regulating their application in practice.

¹ 1 Stark. Evid. 526.

PART III: PROBLEMS OF PROOF, IN MASSES OF MIXED EVIDENCE

[COMPILER'S EXPLANATION. The ensuing Problems may be used for thorough analysis and study, by the method expounded in No. 376, or merely for mental entertainment and stimulus as curious problems of fact.

For purposes of study (by whatever method) they are here arranged in a sequence graded so as to lead on from the simplest to the highest order of probative task.

First come eleven cases stated in narrative form; the cases increasing in complexity. The narrator (a judge or a commentator) has done the main work of perusing the original evidence and arguments, selecting the salient data, and arranging them in groups and stating their connection. This leaves only the final process of reflection for the reader. He is still far short of the task which falls to every counsel and juryman. The probative process is in no sense realistic.

Next comes a case similarly stated (No. 388, Franz' Case), but in three different accounts, each variant from the others. Here is presented a new item of effort, in their piecing together. The defects and variances of the three accounts begin to suggest the difficulties, in reconstructing the data for belief, which are inherent in every remove from the original sources, and help to cultivate a proper skepticism.

Next comes another narrative (No. 389, the Hillmon Case), partly stating the testimony also and the counsel's arguments; the case being the most complex of the series to that point.

Next comes a trial with the testimony substantially in full, but reported by a journalist (No. 390, Throckmorton *v.* Holt). This furnishes an element lacking in the verbatim reports (and indeed in all printed reports), viz. the personal impression of the respective witnesses' probative status and importance. The lack of this personal impression is what makes forever impossible a realistic conviction of certainty for one studying the mere printed trial. To supply this in some degree, a journalist's report has a value.

Next come three trials in which the original testimony, as reported "*ipsissimis verbis*," is set out (No. 391, Braddon's Trial; No. 392, Thanet's Trial; No. 393, Knapp's Trial). In each of these, special elements of testimonial untrustworthiness are illustrated; so that the trials cover different fields.

In the last of these (Thanet's Trial and Knapp's Trial), the arguments of counsel also are given, practically in full. This enables the reader to

construct his own scheme of proof, from the original testimony, and to compare it with the probative scheme used by the respective counsel. The arguments of Erskine, Dexter, and Webster are masterpieces worthy of careful study. In several different ways such a trial can be used as an exercise in the study of individual testimony, masses of evidence, and methods of presentation. With this example the student finally arrives at the highest form of the probative task as it is presented in actual controversy.

In the Appendix will be found a List of Trials suitable for the further study of probative problems.]

375. ALEXANDER M. BURRILL. *A Treatise on Circumstantial Evidence*. (1868. p. 598.) The course of illustration, thus far adopted, exhibits the process of constructing a body of evidence out of elementary facts. It is in this way, too, that the infirmative considerations which are always necessary to be taken into view are most effectually presented, and, at the same time, most readily expunged from the process.

The theory of judicial investigation, however, requires that the juror should keep his mind wholly free from impression, until *all the facts* are before him in evidence; and that he should then frame his conclusion from *all these facts, taken together*. The difficulty attending this mode of dealing with the elements of evidence (especially in important cases requiring protracted investigation) is that the facts thus surveyed in a mass and at one view are apt to confuse, distract, and oppress the mind by their very number and variety, especially as they are only mentally contemplated, with little or no aid of the bodily senses. They are, moreover, necessarily mixed up with remembrances of the mere machinery of their introduction, and the contests (often close and obstinate) attending their proof; in the course of which attempts are sometimes made to suppress or distort the truth, in the very act of its presentation. And the reservation of the use of infirmative hypotheses, as a *final* means of testing a presumption or conclusion provisionally formed, is attended with more or less of danger of overlooking some single hypothesis, which, though not readily suggested, might be at the same time not unreasonable in itself, and might eventually prove to be the absolute truth of the case.

On the other hand, the manner in which the facts of a case are presented before a jury on a trial is attended with advantages peculiar to itself. In order to construct the required body of evidence out of the materials or elements which may be available for the purpose, with the nearest approach to truth, or to the actual case as it occurred, it is requisite not only that *all* the materials should be got *together*, but that they should be arranged, as far as possible, in their *proper places*, or in the relative positions which they occupied, or are reasonably supposed to have occupied, in the actual case; it being, in fact, as already observed, a process of reconstructing and representing, with more or less of completeness and truth, the original case itself. These relative positions cannot always be effectually ascertained until all the attainable facts have been brought together, examined, and compared, or adjusted temporarily (as it were) to each other, so as to develop the traces of their former actual connections; much as an architect would proceed who was required to reconstruct a demolished edifice, out of the

same materials which originally composed it, with the nearest possible approach to identity in every particular. This preliminary process is essentially performed by the public prosecutor, and the course of his proceedings in submitting its results to the jury may be briefly described as follows :

His investigations having resulted in connecting, to his own satisfaction (as sanctioned by the action of the grand jury), the two fundamental facts of a crime and a criminal, he frames out of them the compound fact or proposition that the prisoner at the bar committed the crime charged (which is the essence of the indictment as found) and presents it formally to the jury, as the "*factum probandum*" of the case. Placing this in a central position, in connection with the hypothesis of guilty agency, as he has extracted it from the facts, he proceeds to present and prove in detail the particular circumstances or indicatory facts themselves; giving to them their necessary relative positions, grouping them around the assumed central point, and in this way establishing lines or links of connection between it and them; and finally compacting and, as it were, crossing, this framework of evidence, by lines connecting the facts with each other; thus realizing the common but significant figure of a *network* of circumstances. . . .

The defense is made in a corresponding course, by means of exculpatory facts proved and supposed; it being insisted that the criminative facts presented are not the genuine facts of the case; that the positions assigned them are not the true ones; that the connections claimed to have been established do not exist; that, in their indications, they do not converge upon the point or fact assumed, or upon any one common point or center, or that they may converge upon other points as well as that occupied by the principal fact in issue; in other words, that they may be explained and accounted for, on one or more hypotheses consistently with the innocence of the accused, as reasonably as upon the affirmative hypothesis, or more so. And, in fine, these adverse hypotheses are specifically placed before the jury; thus relieving them, in most cases, from the necessary duty of seeking for them themselves. . . .

The figure which has, thus far, been used in illustrating the process of circumstantial proof, and which has been suggested by the meaning of the word "circumstance" itself, is that of a *framework* of facts, arranged in certain positions of relation to the fact sought, and connected with it and with each other by lines expressive, at once, of their separate and united significance. Another figure more frequently used as descriptive of the same process, or rather of the body of evidence constructed by it, is that of a *chain* connecting the two great and fundamental points of a case, — the crime committed, and the individual charged with its commission, — the links of such chain answering to the evidentiary facts proved. This figure expresses, with great force and aptness, the historical order of the facts, and the necessity of a continuous connection between them throughout, but it does not represent that other feature of the process, which has been prominently presented in the present section; namely, the aggregation of *distinct* elements, or elements drawn from distinct sources into one consistent and homogeneous body.¹ The evidence does not always present a

¹ Mr. Bentham has taken some pains to expose the inaccuracy of the application of the metaphorical term "chain" to a body of circumstantial evidence. In such a body, the more numerous the constituent facts, if relevant, the greater its strength and efficacy.

single line of continuous and connected circumstances, but often exhibits lines of connection from different points in *collateral* positions. Supposing, however, a chain to be composed of a number of minor and constituent chains, the figure acquires aptness in every sense.

The evidentiary facts, with their inferred and assigned meanings, may also in many cases be very appropriately compared to the strands of a rope or cable, forming so many lines of connection with the principal fact, each continuous in itself, though weak in its connecting power; but, when woven together in sufficient numbers, constituting a medium of connection which cannot be broken.

376. JOHN H. WIGMORE. *Principles of Judicial Proof*. (1913.) The problem of collating a mass of evidence, so as to determine the net effect which it should have on one's belief, is an everyday problem in courts of justice. Nevertheless, no one hitherto seems to have published any logical scheme on a scale large enough to aid this purpose.¹ What is here offered is therefore only an attempt at a working method, which may suffice for lack of any other yet accessible.

Three questions naturally arise. What is the *object* of such a scheme? What are the necessary *conditions* to be satisfied? What is the *apparatus* therefor?

1. THE OBJECT. The object, of course, is to determine rationally the net persuasive effect of a mixed mass of evidence. Many data, perhaps multifarious, are thrust upon us as tending to produce belief or disbelief. Each of them (by hypothesis) has some probative bearing. Consequently, we should not permit ourselves to reach a conclusion without considering all of them and the relative value of each. Negatively, therefore, our object is (in part) to avoid being misled (it may be) through attending only to some fragment of the mass of data. We must assume that a conclusion reached upon such a fragment only will be more or less untrustworthy. And our moral duty (in court) is to reach a belief corresponding to the actual facts; hence it is repugnant to us to contemplate that our belief is not as trustworthy as it could be.

Why is there such a danger of untrustworthiness? Because *belief* is *purely mental*. It is distinct from the external reality, or actual fact.²

But "take an iron chain," he observes, "the more links you add to it, the weaker you will make it, not the stronger; and, by adding link to link, you will at last make it break by its own weight." 3 Jud. Evid. 223, 224, 225, note.

[Ex parte Hayes, Oklahoma Court of Criminal Appeals (1912; 118 Pac. 609). "We think that the application of the chain theory to circumstantial evidence is improper. No chain is stronger than its weakest link, and will never pull or bind more than its weakest link will stand. With its weakest link broken, the power of the chain is gone. But it is altogether different with a cable. Its strength does not depend upon one strand, but is made up of a union and combination of the strength of all its strands. No one wire in the cable that supports the suspension bridge across Niagara Falls could stand much weight, but when these different strands are all combined together they support a structure which is capable of sustaining the weight of the heaviest engines and trains. We therefore think that it is erroneous to speak of circumstantial evidence as depending upon links, for the truth is that in cases of circumstantial evidence each fact relied upon is simply considered as one of the strands, and all of the facts relied upon should be treated as a cable."]

¹ See what was said in the Introduction.

² W. Stanley Jevons, *The Principles of Science; a Treatise on Logic and Scientific Method*, 2d ed., 1877, reprint of 1907, p. 198: "Probability belongs wholly to the mind. This is proved by the fact that different minds may regard the very same event at the same time

Hence the approximation of our belief to a correct representation of the actual fact will depend upon how fully the data for that fact have entered into the mental formation of our belief. But those data have entered into the formation of our belief *at successive times*; hence a danger of omission or of inferior attention. "Knowledge in the highest perfection would consist in the *simultaneous* possession of a multitude of facts. To comprehend a science perfectly, we should have every fact present with every other fact. We are logically weak and imperfect in respect of the fact that we are obliged to think of one thing after another."¹ And in the court room or the office the multitude of evidential facts are originally apprehended one after another. Hence the final problem is to coördinate them. Logic ignores time; but the mind is more or less conditioned by it. The problem is to remove the handicap as far as possible.

It may be answered that psychologically each evidential detail, when originally apprehended, did have its due effect, and that subconsciously the total impression is meanwhile being gradually produced. For example, when a thousand bales of cotton are piled one by one in a warehouse, the whole original thousand will finally be found there, available for sale, even though they went in there piecemeal at different times. To rebut this argument, it is enough to say that we do not yet know by psychological science that this analogy is true of the mind in its successive apprehension of sundry facts; hence we cannot afford to assume it. But furthermore, even if it were true under certain abstract conditions, it is not the fact in the ordinary conduct of justice. So many interruptions and distractions occur, both to the lawyer in preparation and to the jurors in the trial, that facts cannot be properly coördinated on their first apprehension. Hence our plain duty remains, to lift once more and finally into consciousness *all* the data, to attempt to coördinate them consciously, and to determine their net effect on belief.

Our object then, specifically, is in essence: *To perform the logical (or psychological) process of a conscious juxtaposition of detailed ideas, for the purpose of producing rationally a single final idea. Hence, to the extent that the mind is unable to juxtapose consciously a larger number of ideas, each coherent group of detailed constituent ideas must be reduced in consciousness to a single idea; until the mind can consciously juxtapose them with due attention to each, so as to produce its single final idea.*

2. THE NECESSARY CONDITIONS. Any scheme which will aid in the foregoing purpose must fulfill certain conditions, at least to a substantial degree.

(a) It must employ *types* of evidence, suitable for representing all kinds of cases presented. And these types must be based on some logical *system*, i.e. a system which includes all the fundamental logical processes.

(b) It must be able with these types to include *all the evidential data* in a given case. This requirement is mechanically the most exacting. The types of evidence and the processes of logic are few; but the number of instances of each one of them in a given case varies infinitely. *E.g.* there may be in

with widely different degrees of probability; as when a steam vessel, for instance, is missing; . . . the steam vessel either has sunk or has not sunk, and no subsequent discussion of the probable nature of the event can alter the fact. . . . Probability thus belongs to our mental condition."

¹ Jevons, p. 34.

one case fifteen witnesses to a specific circumstance and two each to two others; while in the next case there may be neither circumstance nor witness of that sort, but thirty separate groups of other sorts; and this would be a simple example. Hence, the desired scheme must be capable mechanically of taking care of all possible varieties and the repeated instances of each.

(c) It must be able to show the *relation* of each evidential fact to each and all others. The process leading to belief is one of successive subsumings of single instances into groups of data and of the reduction of these groups into new single instances, and so on; hence the relations of the data to each other must be made apprehensible, and not merely the data per se. By "relations" of data is here meant that each believed fact does or does not tend to produce in the mind a belief or disbelief in some other specific alleged fact.

(d) It must be able to show the distinction between a "*fact*" as *alleged* and a *fact as believed* or disbelieved; i.e. between the evidential data as *first proffered* for a purpose, and the effect of those data for the purpose *after* the mind has passed on them. *E.g.* the party offers a witness as proving that the defendant was on a near-by street corner at a certain hour; yet when the tribunal proceeds to reckon that alleged fact as an item towards the main issue, it must have had some way of noting for later use whether it does or does not believe the witness and accept that alleged fact as an actual fact. Any scheme which fails to provide this would be like a bridge with the bolts left out of the truss angles; there would be nothing to show that it does not rest merely on an aggregation of hypotheses.

(e) It must be able to represent all the data as potentially *present in time to the consciousness*. The very aim of the scheme is to enable all the data to be lifted into consciousness at once. To be sure, the mind itself is not completely capable of this task, in other than the simplest cases. Numerous groups of subordinate data have to be first subsumed into other single data by separate acts, until the number of these is small enough to be considered in a single continuous consciousness. Hence, the scheme in question *may* be so constructed that the records of these preliminary mental acts are not all exhibited at once. Nevertheless, the mind will have to be sent back over these preliminary acts, from time to time, to verify, amplify, and correct them. And so (as first stated above) all of them must be at least *potentially* presentable to the consciousness, if the scheme is to be efficient.

(f) It must, finally, be *compendious* in bulk, and *not too complicated* in variety of symbols. These limitations are set by the practical facts of legal work. Nevertheless, men's aptitudes for the use of such schemes vary greatly. Experience alone can tell us whether a particular scheme is usable by the generality of able students and practitioners who need or care to attack the problem.

(g) But, negatively, the scheme need *not* show us what our belief *ought* to be. It can hope to show only what our belief actually *is*, and *how* we have actually reached it.

For example, assuming that the mind has accepted certain subordinate facts A, B, C, D, and E; and that A, B, and C point to X, the defendant's doing of an act, while D and E point to Not-X, i.e. his not doing it; there is no law (yet known) of logical thought which tells us that $(A + B + C) + (D + E)$ *must* equal X, or *must* equal Not-X. We know only that our mind, reflecting upon the five evidential data, *does* come to the conclusion

X, or Not-X, as the case may be. All that the scheme can do for us is to make plain the entirety and details of our actual mental process. It cannot reveal laws which should be consciously obeyed in that process.

This is because no system of logic has yet discovered and established such laws.¹ There are no known rules available to test the correctness of the infinite variety of inferences presentable in judicial trials. Much indeed has been done that is theoretically applicable to circumstantial evidence; *e.g.* the method of differences, in inductive logic, may enable us, with the help of a chemist, to say whether a stain was produced by a specific liquid. But these methods must be pursued by a comparison of observed or experimental instances, newly obtained for the very case in hand, and usually numerous; hence they are impracticable for the vast mass of judicial data. Moreover, even so far as practicable in theory (so to speak), the required consumption of time would forbid their use in trials for any large masses of varied evidence. Hence, they do not serve our purpose. For testimonial evidence, also, those methods would be to some extent applicable in modern psychological experimentation. Yet merely to imagine two or three witnesses elaborately tested to determine their degree of trustworthiness as to memory or observation of sundry subjects of testimony, is to realize that such methods, by reason of the consumption of time alone, are not yet feasible in judicial trials. Finally, even so far as logic and psychology have gone with methods for estimating the probative force of individual inferences, they have apparently done nothing practical towards a method for measuring the net effect of a series or mass of mixed data bearing on a single alleged fact.

For these and other reasons, then, it must be understood that the desired scheme is not expected to tell us what *ought* logically to be our belief, — either as to individual subordinate data or as to the final net fact in issue.

What it *does* purport to achieve is to *show us explicitly* in a single compass how we *do reason and believe* for those individual facts and from them to the final fact. To achieve this much would be a substantial gain, in the direction of correctness of belief. Each separate proffered fact is tested in our consciousness, and the result is recorded. Perhaps we cannot explain *why* we reach that result, but we know at least that we *do* reach it. And thus step by step we set down the separate units of actual belief, — connecting, subsuming, and generalizing, until the subfinal grouping is reached; then dwelling in consciousness on that; until at last a belief (or disbelief) on the final fact evolves into our consciousness.

Hence, though we may not be able to demonstrate that we *ought* to reach that belief or disbelief, we have at least the satisfaction of having taken every precaution to reach it rationally. Our moral duty was to approximate, so far as capable, our belief to the fact. We have performed that duty, to the limits of our present rational capacity. And the scheme or method, if it has enlarged that capacity, will have achieved something worth while.

¹ They will perhaps some day be discovered. But the methods of observation and experiment in all inductive search for psychological laws involve inevitably a lengthy study of large masses of data. Moreover, the data available from judicial annals, though perhaps numerous enough, are almost always defective, in that the objective truth, necessary to test the correctness of any belief, can seldom be indubitably ascertained. *E.g.* if we were to study one hundred murder trials, so as to ascertain some law of thought lurking in certain combinations of evidence, the very basis of the study, *viz.* the actual guilt or innocence of the accused, cannot usually be known to us, and our study is useless without that fact.

We now proceed to the third and final topic: an Apparatus suitable as a working method for attaining the foregoing purpose while fulfilling the necessary conditions just set forth.

3. EXPLANATION OF APPARATUS FOR CHARTING AND LISTING THE DETAILS OF A MASS OF EVIDENCE.

The apparatus consists of a Chart for symbols and a List for their translation. The types of evidence and logical processes have already been set forth in Nos. 2 and 367.

1. *Symbols for Kinds of Evidence.* (Each human assertion, offered to be credited, is conceived of as a testimonial fact; each fact of any other sort is a circumstantial fact).

 Testimonial evidence affirmatory (M testifies that defendant had the knife).

 Testimonial evidence negatory (M testifies that defendant did *not* have the knife).

 Circumstantial evidence affirmatory (Knife was picked up near where defendant was; hence, defendant had it).

 Circumstantial evidence negatory (Knife was found in deceased's hand; hence, defendant did *not* have it).

 } Same four kinds of evidence, when offered by the *defendant* in a case. (These are the same four kinds of evidence; it is merely convenient to note which party offers them.)

 Any fact judicially admitted, or noticed as a matter of general knowledge or inference, without evidence introduced.

 Any fact presented to the *tribunal's own senses*, *i.e.* a coat shown, or a witness' assertion made in court on the stand. Everything actually evidenced must end in this, except when judicially noticed or judicially admitted.

 *Explanatory* evidence; *i.e.* for *circumstantial* evidence, explaining away its effect (Knife might have been dropped by a third person); for *testimonial* evidence, discrediting its trustworthiness (Witness was too excited to see who picked up the knife).

 *Corroborative* evidence; *i.e.* for *circumstantial* evidence, strengthening the inference, closing up other possible explanations (No third person was near the parties when the knife was found); for *testimonial* evidence, supporting it by closing up possibilities of testimonial error (Witness stood close by, was not excited, was disinterested spectator).

 } Same two kinds of evidence, when offered by the *defendant* in a case.

2. Relation of Individual Pieces of Evidence, shown by Position of Symbols

A supposed fact tending to prove the existence of another fact is placed *below* it.

A supposed explanatory or corroborative fact, tending to lessen or to strengthen the force of fact thus proved, is placed to *left* or *right* of it, respectively.

A single *straight* line (continued at a right angle, if necessary) indicates the supposed relation of one fact to another.

The symbol for a fact observed by the tribunal or judicially admitted or noticed (\P , ∞) is placed directly below the fact so learned.

3. Probative Effect of an Evidential Fact

When a fact is offered or conceived as evidencing, explaining, or corroborating, it is noted by the appropriate symbol with a connecting line. But thus far it is merely *offered*. We do not yet know whether we believe it to be a fact, nor what probative force we are willing to give it, if a fact. As soon as our mind has come to the necessary *conclusion* on the subject, we symbolize as follows :

- (1) *Provisional credit* given to *affirmatory* evidence, testimonial or circumstantial, is shown by adding an arrow-head.
- Provisional credit given to *negatory* evidence, testimonial or circumstantial, is shown by adding an arrow-head above a small cipher.
- Particularly *strong credit* given to those kinds of evidence respectively is shown by doubling the arrow-head ; this is usually applicable where several testimonies or circumstances concur upon the same fact.
- (2) A small interrogation mark, placed alongside the connecting line, signifies *doubt* as to the probative effect of the evidence.
- Similarly, for each kind of symbol, a small interrogation mark within it signifies a mental balance, an uncertainty ; the alleged fact may or may not be a fact.
- (3) A dot within the symbol of any kind of alleged fact signifies that we now *believe* it to *be* a fact. Particularly strong belief may be signified by two dots ; thus $\odot\odot$.
- A small cipher within the symbol of any kind of alleged fact signifies that we now *disbelieve* it to be a fact. Particularly strong disbelief may be signified by two such ciphers ; thus $\ominus\ominus$.
- (4) If a single supposed *explanatory* fact does, in our estimation after weighing it, detract from the force of the desired inference (in case of a witness, if it discredits his assertion), we signify this by an arrow-head pointing to the left, placed halfway across the horizontal connecting line.

If a single *corroborative* fact is given effect in our estimation, we signify this by a short Roman letter X, placed across the connecting line.

Doubling the mark indicates particular strength in the effect, *i.e.* \llcorner , or \times .

Ultimately, when determining the total effect, in our estimation, of *all* explanatory and corroborative facts upon the *net probative value* of the specific fact explained or corroborated, we place a short horizontal mark or a small X, respectively, upon the upright connecting line of the latter fact.

Thus, for *net probative value*, several grades of probative effect may be symbolized: \dagger signifies that the inference is a weak one; \ddagger signifies that it has

no force at all; \uparrow signifies that it is a strong one; \uparrow signifies that it is conclusive. When the supposed inference is a *negatory* one, the same symbols

are used, with the addition of the negatory symbol, *i.e.* \uparrow (Witness

asserts that defendant had *not* a knife in his hand; witness's credit is supported by the fact that he is a friend of the deceased).

4. Numbering the Symbols

Each symbol receives a number, placed at the upper left outside margin. These numbers are then placed in the Evidence List; they are written down consecutively, and opposite each one in the list is written a brief note of the evidential fact represented by it.

The List is thus the translation of the Chart.

The separate pieces of evidence are given *consecutive* numbers in the List as they are being analyzed and noted in symbols, till all the evidence is charted. They need not run consecutively on the *Chart*; though naturally the numbers in any one chain of inferences will be consecutive. Should a further analysis of a particular piece of evidence develop new appurtenant evidence, the additional evidence can be given a decimal of the main number (so that on the Evidence List it will be found conveniently near to the main fact). *E.g.* if \circ is found later to have two new explanatory facts, one of them, with its appurtenant witnesses, may be numbered 27.1, 27.2, 27.3; the other may be numbered 27.4, 27.5, 27.6. N. B. that on the *Chart* it is immaterial whether the numbers are consecutive; the numbers serve merely to guide the eye quickly to the description of the fact on the Evidence List.

5. Analyzing and Classifying the Evidence

a. Each supposed piece of evidence must be *analyzed*, so far as practicable and reasonably necessary, into all its *subordinate inferences*. Only in this way can the possibilities of explanation and corroborative facts be discovered. *E.g.* the defendant's threats in *Com. v. Umilian*; the inference really is: threats show a plan to kill, and plan to kill shows actual killing. This enables us to chart separately the possible explanations weakening the inference from threats, and the testimony, if any, asserting those explanatory facts.

b. Where a *Human Act* is the issue, the classification in Part I of this work will be found convenient, *i.e.* Moral Character, Motive, Design, etc. Under Motive (Emotion) it is sounder to separate at the outset the distinct alleged motives, if any; *e.g.* desire for money, desire for revenge, etc., because they are in effect distinct and perhaps inconsistent probative facts.

c. In the same way, the *discrediting* (explanatory) *facts for a witness's assertion* should be separated into their component items. Thus, if bias is the general nature of the impeachment, let *e.g.* ¹⁸ be the supposed general fact of actual bias and let ¹⁹○ and ²⁰○ be the two circumstances tending to evidence it, 19 being the witness's relation to the defendant as a discharged employee, 21 being another witness who testifies to this, and 20 being the impeached witness's strong demeanor of bias while on the stand.

Thus the whole representation would be:

Here the added symbols of belief show that the probative effect has been that we refuse belief (if we do) to the fact asserted by this witness, because of his bias as shown by those facts.

Note that 19 is here supplemented by 19 *a*, *i.e.* the supposed general truth that discharged employees are apt to have an emotion of hostility; the letter *a* added to the main number will indicate the appurtenant relation of this fact to 19.

In accordance with the analysis of impeaching evidence (as set forth in No. 367, *ante*) it is usually desirable to note separately on the Chart any supposed general truth implicitly or explicitly relied upon. This is more commonly the case where a *mediate* or second step of inference is involved, as in the above example. But even there a general truth may not always be involved; *e.g.* in the above example 20 ○ is the specific language or demeanor from which an inference is made, without aid of a general truth, to the supposed emotion. Where an *immediate* inference is involved, the only cases where the supposed general truths need to be explicitly noted will usually be those involving external conditions, — light, sound, etc.; in such a case the first symbol can be doubled, using the letter *a* with the main number to indicate the appurtenant general truth. For example, if the location of the witness is said to have obstructed his vision and thus to discredit his statement, it would be thus indicated:

Here: 7 is the witness to be impeached; 8 is the facts of his location on the sidewalk, and 9 is a witness to those facts; 8 *a* is the impossibility of correct vision from such location, and 10 is a witness to experiments showing such impossibility.

A special advantage in thus plotting separately the concrete facts and the general truths is that the witnesses thereto may then be plotted separately, and thus all the evidence thereon can be more clearly distinguished and weighed.

6. *Plotting the Chart*

Use an oblong sheet of unruled paper.

Allot the right-hand half to the plaintiff or prosecution, the left-hand half to the defendant.

Allot the right-hand quarter to the plaintiff's testimonial evidence directly on the fact in issue; the next quarter (towards the left) to his circumstantial evidence; and so on for the defendant. If there are two or more distinct facts necessary in law to the issue, use a separate chart sheet for each; unless the mass of evidence is small enough for a single sheet (as in the annexed examples of charts).

Since the quantity of each kind of evidence varies in each case, the above allotments of one quarter each are of course provisional only. In practice, a smaller or larger fraction will usually be needed. But by beginning at the right-hand end and disposing of all of each kind of evidence before proceeding to the next, the spacing will adjust itself. If desired, a line can be drawn perpendicularly to mark off the mass of one kind of evidence when charted.

When beginning on the next kind, allow a little extra space for later discoveries in the kind of evidence just finished.

Use right-angled continued lines freely in connecting the symbols, so as to economize space and to keep together the same kind of evidence.

Use a sharpened lead pencil.

If new inferences are later discovered and no space is left, erase some former symbols and rechart them, prolonging the lines so as to leave the new space needed.

Wherever a disbelief or doubt symbol is found, there ought to be some explanatory fact (>) to account for it. Hence, if such has been inadvertently omitted, analyze it into consciousness, chart it, and describe it in the Evidence List.

Where two or more witnesses, as to whose credit no question is raised, testify to the same fact, one symbol in the Chart may serve for all; but as many numbers should be given it as there are witnesses, bracketing these numbers to one description in the Evidence List.

A fact is to be classed as negatory or affirmatory in itself, and not according to the party offering it. Thus, as in Nos. 51, 52, 48, 49, of *Hatchett v. Com.* (see Chart), the defendant may offer an affirmatory fact to prove another fact which is negatory of his guilt.

7. *Sundries*

For clearness and quickness in studying the total effect of the mass of evidence when charted, colored pencils may be used.

Use a *blue* pencil for important facts favoring the plaintiff's or prosecution's contention, and a *green* one for those favoring the defendant's. Mark the arrow point of the belief symbol (↑), or the cross of the disbelief symbol (†), respectively blue or green. Thus the subfinal facts can be conveniently concentrated in the mind, for the purpose of the net total effect on the mind. Varieties of detail in the use of the colored pencil can be invented as convenient; *e.g.* a simple arrow point (↑), blue or green, can be used for the subordinate facts at the basis of a long line of inference, and a triangular arrow point (⤴) for the subfinal facts when reached.

When ready to reach a final verdict, refresh the memory from the List,

so that the tenor of the Chart symbols is as clear as possible in the mind. Then go over the whole Chart in the mind, force the subfinal facts into juxtaposition, and determine the net impression as to the ultimate fact in issue.

8. Finally, remember that

The logical (or psychological) process is essentially one of mental juxtaposition of detailed ideas for the purpose of producing rationally a single final idea. Hence, to the extent that the mind is unable to juxtapose consciously a larger number of ideas, each coherent group of detailed constituent ideas must be reduced successively to a single idea, until the number and kind is such that the mind can consciously juxtapose them with due attention to each. And the use of symbols has no other purpose than to facilitate this process. Hence, each person may contrive his own special ways of using these or other symbols.

As examples of the use of the Chart and List, the cases of *Com. v. Umilian* (No. 377) and *Hatchett v. Com.* (No. 378) are charted and listed in the following pages. Note that these Examples might have been charted with more economy of space, but in their present shape they show how the Chart develops in the actual making. The charter cannot know beforehand how many data will be found under each inference; hence he must allow space, which may not afterwards be needed.

EXAMPLE A. COMMONWEALTH v. UMILIAN (No. 377).**Evidence Chart.** [See Plate.]**Evidence List** (*Com. v. Umilian, No. 377*).

- 1 Design to kill J.
- 2 Threats of unstated tenor, made on discovery of J.'s interference in prevention of marriage.
- 3 Anon. witnesses thereto.
- 4 Threats might have meant merely some lesser harm.
- 5 Threats of revenge at later time.
- 6 Anon. witnesses thereto.
- 7 Threats might have meant merely some lesser harm.
- 8 Revengeful murderous emotion towards J.
- 9 J. had charged him with intended bigamy Nov. 18., and had tried thereby to prevent his marriage.
- 10 Letter received by priest, stating that U. already had family in old country.
- 11 Anon. witnesses to this.
- 12 J. was author of letter, though it was in fictitious name.
- 13 Anon. witnesses to this.
- 14 Letter communicated by priest to U., with refusal to perform marriage; refusal later withdrawn.
- 15 Anon. witnesses to this.
- 16 Letter's statements were untrue.
- 17 Anon. witnesses to this.
- 18 U. being innocent, and marriage being finally performed, U. would not have had a strong feeling of revenge.
- 19 J. remaining in daily contact, wound must have rankled.
- 20 Wife remaining there, jealousy between U. and J. probably continued.
- 21 U. uttered threats and other hostile expressions between Nov. 18 and Dec. 31.
- 22 Anon. witnesses to this.
- 23 U., on Dec. 31, charged J. to K. with stealing K.'s goods.
- 24 Anon. witnesses to this.
- 25 Does not appear that these charges were false, hence not malicious.
- 26 U.'s opportunity in time and place was almost exclusive.
- 27 On Dec. 31 U. was on premises.
- 27.1 Witnesses to this.
- 28 U. was only man so seen.
- 28.1 Anon. witnesses to this.
- 29 U.'s wife and a woman visitor were there.
- 30 Anon. witnesses to this.
- 31 Passing tramp-villain might have been there.
- 32 In time between Dec. 31 and April others had access to J., if alive still.
- 33 U. had uneasy consciousness of guilt about J.'s disappearance.
- 34 U. lied about J.'s going to Granby.
- 35 U. said J. had gone there, though J. was then dead.
- 36 Anon. witnesses to this.
- 37 J. might really have gone there, not being killed till later.

- 38 U. was conscious that the well was a place where damaging things would be discovered.
- 39 He watched those who searched there.
- 40 Anon. witnesses to this.
- 41 That might have been due to natural curiosity of a farm hand at strange doings.
- 42 U. lied about the reason for Olds and K. searching the well.
- 43 Anon. witnesses to this.
- 44 U. did not go to the well to see the body when found.
- 45 Anon. witnesses to this.
- 46 Several other reasons would explain this.
- 47 U. knew that J. was dead, though others did not.
- 48 He gave away J.'s boots and said that J. would not come back; this was about the middle of January.
- 49 Anon. witnesses thereto.
- 50 Like others, U. may merely have believed that J. had given up work at the farm.
- 51 Data of slayer on J.'s body were of a person having free and intimate access to horse barn of K.
- 52 Wound-marks were those of a horse-cutter from barn.
- 53 Anon. witnesses thereto.
- 54 Precise correspondence not stated; might have been a different weapon.
- 55 No other person but U. had at that time such access.
- 55.1 Anon. witnesses to 55; and see 26.
- 56 Sacks holding body and clothes came from horse barn.
- 57 Anon. witnesses thereto.
- 58 Stone in sack fitted wall near barn.
- 59 Anon. witnesses thereto.
- 60 Clothing in sack had marks of mud from barn cellar.
- 61 Anon. witnesses thereto.
- 62 Mud not specifically identified.

EXAMPLE B. HATCHETT v. COMMONWEALTH (No. 378).**Evidence Chart.** [See Plate.]**Evidence List** (*Hatchett v. Com., No. 378*).

- 1 Y. himself, just before dying, declared that the drink of whisky was the source of his pains and illness.
- 2 } His wife, O. N., and C. N. testified to this statement; but see 17-24,
- 3 } as discrediting them.
- 4 }
- 5 Y. might have had his colic cramps, and could not have had skill enough to *know* that the drink was the cause of the pain.
- 6 Same possibility for ptomaine or other poisoning in food at supper.
- 7 Y. died, being apparently in health, within three hours after the drink of whisky.
- 8 }
- 9 } Same witnesses to this as 2, 3, 4.
- 10 }
- 11 Y. might have died by colic, from which he had often suffered.
- 11.1 Colic would not have had as symptoms the leg cramps and teeth clenching; only strychnine could produce these.
- 11.2 O. N., and C. N. and wife, witnesses to cramps, etc.
- 11.3 Expert witnesses to significance of symptoms.
- 11.4 No testimony as to strychnine traces in body by post mortem.
- 12 Anon. witnesses to his former attacks.
- 13 Y. might have died from the former injury in his side.
- 14 Anon. witnesses to that injury.
- 15 Y. himself declared when dying that the whisky drink was killing him.
- 16 Y.'s wife Sallie, witness to this.
- 17 Sallie's bias to save herself at H.'s expense discredits her.
- 18 } Sallie had a paramour, and might herself intend the death of Y.,
- 18a } hence might desire to fix crime on H.
- 18.1 Anon. witnesses to 18.
- 19 O. N. witness also to 15.
- 20 O. N.'s bias to save Sallie discredits him.
- 21 } O. N. knew of Sallie's paramour and of her probable wish to get rid
- 21a } of the old man; hence probably biased to support Sallie's story.
- 21.1 Anon. witnesses to 21.
- 22 C. N. witness also to 15.
- 23 C. N.'s bias to save Sallie discredits him.
- 24 }
- 24a } Same as 21, 21a, 21.1.
- 24.1 }
- 25 Y. died apparently in good health, within three hours after drinking deft.'s whisky.
- 26 }
- 27 } Sallie Y., O. N. and C. N. witnesses to time of death.
- 28 }
- 28.1 H. witness to time of drink.

- 29 Neither H. nor his father are shown to have possessed any strychnine to put in the drink.
- 30 Y. might have died by colic, from which he had often suffered.
- 31 Y. might have died from the former injury in his side.
- 32 Y. might have died of ptomaine poisoning in supper-food.
- 33 Y. might have died from poison put in his supper-food by third person; the only third person having access being Sallie his wife.
- 34 Sallie had desire for Y.'s death.
- 35 Her illicit relation with Henry Carroll points to 34.
- 36 Anon. witnesses to this relation with H. C.
- 37 Sallie possessed means of strychnine poisoning; see 38.
- 38 Sallie had a plan to kill Y.
- 39 Sallie had received strychnine from H. C. three weeks before, with instructions to put it in Y.'s coffee or food.
- 39.1 Witnesses to 39.
- 40 Sallie's failure to use it during those three weeks' opportunity indicates abandonment of her design.
- 41 Secrecy of H.'s mode of giving drink indicated consciousness of something wrong.
- 42 Same witnesses as 26-29.
- 43 This perhaps due to desire not to waste whisky on Sallie.
- 43.1 Transaction was not really secret, for he knew Sallie and others were there when he summoned the old man.
- 44 His confession that his father had told him the whisky would fix Y. shows that he knew something was wrong.
- 45 Anon. witnesses to this confession.
- 46 H.'s second statement, retracting on that point, makes it doubtful whether he knew.
- 47 Anon. witnesses to this second statement.
- 48 Lack of any desire in H. to kill Y.
- 49 H. was even unacquainted with Y. up to this time.
- 50 Anon. witnesses to 49.
- 51 H. himself drank of whisky; hence did not know of strychnine in it.
- 52 This is shown by bottle being only one-third full on return.
- 53 Anon. witnesses to 52.
- 54 Y. might have drunk two thirds of the bottle.
- 55 H. might have been deterred, by father's directions, from drinking any.

377. COMMONWEALTH v. UMILLAN. (1901. SUPREME JUDICIAL COURT OF MASSACHUSETTS. 177 Mass. 582.)

Indictment for murder, returned June 12; 1900. At the trial in the Superior Court, before SHERMAN and STEVENS, JJ., the defendant at the close of the evidence asked the judges to rule and instruct the jury: first, that there was not sufficient evidence to warrant the jury in finding a verdict of guilty; and, second, that there was not sufficient evidence to warrant the jury in finding a verdict of guilty in the first degree. The judges declined to give either of these rulings. The jury found a verdict of guilty of murder in the first degree; and the defendant alleged exceptions.

J. B. O'Donnell, for the defendant.
J. C. Hammond, District Attorney, for the Commonwealth.

KNOWLTON, J. — The defendant was found guilty of murder in the first degree, and the only question before us is whether there was any evidence to warrant the verdict. He and Casimir Jedrusik were working together as farm laborers for one Keith in Granby. On Sunday, December 31, 1899, Jedrusik disappeared, and was never afterwards seen alive. On April 10, 1900, his headless, mutilated body was found inclosed in a bran sack in an unused well between four hundred and five hundred feet from Keith's horse barn. His clothing was found inclosed in another sack in the same well. His skull was afterwards found buried in the cellar of the horse barn. The sacks were similar to those which Keith had in the horse barn. The stone, which was inclosed in the sack of clothing, exactly fitted a vacant place in a stone wall about in line between the old well and the north door of the horse barn. On the day of the disappearance there was no snow on the ground, and the surface of the ground was entirely frozen. In the cellar of the horse barn pigs were kept, and there was soft mud

there. The clothing which was exhibited to the jury had mud upon it which the Commonwealth contended on the evidence was like that in the cellar. Mr. and Mrs. Keith drove away to church on December 31st, leaving the defendant and Jedrusik about the barn. The defendant's wife was in the house, where she was employed as a housemaid, and there was evidence tending to show that the only other person who came there during that day was a young woman who came to visit her. The defendant was outside of the house, about the premises, for some hours after Mr. and Mrs. Keith went to church, and when he came in he said that Jedrusik had gone to Granby. There were wounds on the head of Jedrusik, which the Commonwealth contended were made by a corn cutter that was in the horse barn, and was exhibited to the jury. The evidence tended to show that the defendant had ample opportunity to commit the murder, and that no other person had an opportunity to do it without discovery.

On November 18th the defendant went to Chicopee to the house of a Polish priest, to have the ceremony of marriage performed between him and a young woman who had been living as a maid at Keith's house, and he found that the priest had received a letter in a name which proved to be fictitious, charging him with having a wife and children in the old country, and with receiving letters from his wife asking for money for the support of herself and her children. The priest refused to marry him, and sent a trusted person with him to investigate. It turned out that Jedrusik wrote the letter, and that its contents did not appear to be true. The defendant was then married by the priest, and the evidence tended to show that he was very angry with Jedrusik,

and that he made strong threats of vengeance against him. There was evidence from several witnesses that at different times between the defendant's marriage and Jedrusik's disappearance, the defendant manifested deeply hostile feelings towards him, and made threats against him. On the morning of December 31st there was a new manifestation of this feeling in charges made to Mr. Keith that Jedrusik had stolen a plane and had stolen butter. There was evidence that, between the time of the disappearance and the discovery of the body, the defendant was seen to take up one of the planks covering the unused well, and also that when he was told in the daytime that Keith and one Olds had gone out of the house with a lantern, he said he "knew what they were going to do. Mr. Olds wants to buy the pump in the old well." There was evidence that nothing had ever been said by Olds about buying the pump.

Immediately after being told this the defendant went into the horse barn, and was seen looking out of a window from which the well could be seen. When others went to the well after the body was found, he did not go. There was also evidence that about the middle of January he gave away Jedrusik's rubber boots, and said that he did not think Jedrusik would come back. There were many other things in his language and conduct after Jedrusik's disappearance which the Commonwealth relied on as tending to show guilty knowledge, and much of his testimony in explanation of facts was in direct contradiction of other witnesses.

Without going more at length into the evidence, which was voluminous, we are of opinion that it would have been error to take the case from the jury. So far as we can judge from the bill of exceptions the evidence well warranted the verdict. *Exceptions overruled.*

378. **HATCHETT v. COMMONWEALTH.** (1882. COURT OF APPEALS OF VIRGINIA. 76 Va. 1026.) . . .

LEWIS, J., delivered the opinion of the Court. The plaintiff in error was indicted in the county court of Brunswick county for the murder of Moses Young, by administering to the said Young strychnine poison in whisky. . . . The facts proved, as certified in the record, are substantially these: That on the night of the 17th day of December, 1880, Moses Young died at his house in Brunswick county, and under such circumstances as created suspicions that he had been poisoned. He was an old man, 65 years of age, and was subject to the colic, and a short time previous to his death had been hurt in his side by a cart. In the afternoon of that day the father of Oliver Hatchett, the prisoner, gave him a small bottle of whisky, with instructions to take it to Moses Young; at the same time telling him not to drink it himself. The deceased lived about three miles from the prisoner's father, to whose house the prisoner at once proceeded. It seems that he was not acquainted with the deceased; or, if so, very slightly, and that he succeeded in finding the house only by inquiry of one of the neighbors. Soon after his arrival at the house of the deceased, he took supper with him, and a few minutes thereafter requested the deceased to go with him into the yard, and point out the path to him — it then being dark. After getting into the yard, the prisoner produced the bottle and invited the deceased to drink — telling him that it was a little whisky his father had sent him. The deceased drank and returned the bottle to the prisoner, who at once started on his return home. The deceased then returned into the house. In a short while thereafter he complained of a pain in his side, began to grow worse, and told his wife that the man (meaning the prisoner) had

tricked him in a drink of whisky. He then got up, but fell immediately to the floor. Osborne and Charlotte Northington, two near neighbors, were then called in by his wife; and these three, whom the record describes as ignorant negroes, were the only persons present with the deceased until his death, which occurred about three hours after he drank of the whisky from the bottle handed him by the prisoner. They described his symptoms as follows: The old man had the jerks, complained of great pain, and every now and then would draw up his arms and legs and complained of being cramped; that he put his finger in his mouth to make him vomit, and his teeth clinched on it so that one of his teeth was pulled out in getting out his finger. They also testified that his dying declaration was that the man had killed him in a drink of whisky. From the symptoms as thus described, two physicians, who were examined as witnesses in the case, testified that as far as they could judge from the statements of the ignorant witnesses, they would suppose that Moses Young died from strychnine poison. No post-mortem examination of the deceased's body was made or attempted; nor was any analysis made of the contents of the bottle, which was returned about one-third full by the prisoner to his father, and was afterwards found.

After the arrest of the prisoner, and while under guard, he stated to the guard in charge of him that he would not be punished about the matter; that he intended to tell all about it; that his father, Littleton Hatchett, gave him that mess and told him he would give him something, to carry it and give it to Moses Young, and that it would fix him. He further stated that he went to Moses Young's house, called him out and gave him a drink,

and returned the bottle and put it where his father had directed him to put it. The next day he made a statement on oath before the coroner's jury, and when asked by the foreman whether he was prepared, upon reflection, to say that what he had stated on the previous day was not true, he answered: "I am prepared to say that a part of what I said yesterday was true." He then made a statement in which he said that he carried the whisky to the deceased by direction of his father, who told him not to drink of it; that he went to the house of the deceased and gave him a drink, and returned the bottle as directed by his father. But he did not state that his father told him that the whisky would "fix" the deceased, or that he (the prisoner) knew that it contained poison or other dangerous thing.

It was also proved that Henry Carroll, who was jointly indicted with the prisoner, gave to Sallie Young, wife of the deceased, about three weeks before his death, something in a bottle which he said was strychnine, and which he told her to put in the coffee or food of the deceased; and that Osborne and Charlotte Northington knew of the fact, but did not communicate it to the deceased. It was also proved that Henry Carroll was the paramour of Sallie Young, which fact was also known to Osborne and Charlotte Northington.

Such are the facts upon which the plaintiff in error was convicted and sentenced to death. Now, under the allegations in the indictment, it was incumbent upon the prosecution, to entitle the Commonwealth to a verdict, to establish clearly and beyond a reasonable doubt these three essential propositions: (1) That the deceased came to his death by poison. (2) That the poison was administered by the prisoner. (3) That he administered it knowingly and feloniously. These propositions, we

think, are not established by the evidence in this case.

In the first place, there is no sufficient proof that the deceased died from the effects of poison at all. From the symptoms, as described by ignorant witnesses, one of whom at least was a party to the conspiracy to poison the deceased, and who had been supplied with the means to do so (a fact known to the others), the most that the medical men who were examined in the case could say was that they *supposed* he died from strychnine poison. Strange to say, there was no post-mortem examination of the body of the deceased, nor was there any analysis made of the contents of the bottle from which he drank at the invitation of the prisoner, and which was returned by the latter to his father and afterwards found — all of which, presumably, might easily have been done, and in a case of so serious and striking a character as this ought to have been done. . . . Great strictness should be observed, and the clearest proof of the crime required, to safely warrant the conviction of the accused and the infliction of capital punishment. Such proof is wanting in this case to establish the death of the deceased by the means alleged in the indictment.

Equally insufficient are the facts proved to satisfactorily show that if in fact the deceased died from the effects of poison, it was administered by the prisoner; and if administered by him, that it was done knowingly and feloniously. It is not shown that if the whisky he conveyed to the deceased contained poison, he knew or had reason to know the fact. It is almost incredible that a rational being, in the absence of provocation of any sort, or the influence of some strong and controlling motive, would deliberately take the life of an unoffending fellow man. Yet in this case no provocation or motive whatever on the part of either the prisoner or

his father, from whom he received the whisky of which the deceased drank, to murder the deceased, is shown by the evidence. It is true that the facts proved are sufficient to raise grave suspicions against the prisoner; but they fall far short of establishing his guilt clearly and satisfactorily, as required by the humane rules of the law, to warrant his conviction of the crime charged against him. On the other hand, the facts proved show that the wife of the deceased, three weeks before his death, had been supplied by her paramour with strychnine to administer to her husband; and there is nothing in the case to exclude the hypothesis that the death of the deceased may

not have been occasioned by the felonious act of his own unfaithful wife. It was not proven that the prisoner at any time procured, or had in his possession, poison of any kind; nor was the attempt made to connect him with, or to show knowledge on his part of, the poison which was delivered by Henry Carroll to Sallie Young, to be administered to her husband.

In short, the facts proved are wholly insufficient to warrant the conviction of the plaintiff in error for the crime for which he has been sentenced to be hanged: and the judgment of the circuit court must, therefore, be reversed, the verdict of the jury set aside, and a new trial awarded him.

379. **JOHN DONELLAN'S CASE.** (CAMDEN PELHAM. *The Chronicles of Crime.* Ed. 1891. Vol. I, 302.)

The case of Mr. Donellan is one of a very remarkable nature, and from the character of the testimony produced has been the subject of much conversation and remark amongst persons connected with the professions of medicine and chemistry.

The accused, Mr. Donellan, had been a captain in the army, and was the son of Colonel Donellan. At the age of twelve years he entered into the Royal Regiment of Artillery, with part of which he went to the East Indies in 1754. On his arrival there he changed his service into the 39th foot; but on that regiment being ordered home, he, with many other of his officers, had his majesty's leave to remain in the service of the East India Company, without prejudice to their rank in the army. He then obtained a company, and certainly distinguished himself as a good soldier, not only having been much wounded in the service, but, if his own account may be credited, being singularly instrumental to the taking of Mazulapatam. Being appointed, however, one of the four agents for prize-money, he condescended to receive presents from some black merchants, to whom part of their effects had been ordered to be restored, for which he was tried by a court-martial, and cashiered. He subsequently purchased a share in the Pantheon, where he figured for some time as master of the ceremonies; and after a variety of applications he at length obtained a certificate from the War-office, that he had behaved in the East Indies "like a gallant officer"; in consequence of which he was put upon half-pay in the 39th regiment. But notwithstanding the most strenuous memorials and petitions representing his great services, and insisting that the offense for which he was broke was of a civil nature only, and not cognizable by a court-martial, he never could obtain a

restoration into the Company's service. In June, 1777, he married Miss Boughton; and on Friday, March 30th, 1781, he was tried at the assizes at Warwick for the willful murder of Sir Theodosius Edward Allesley Boughton, Bart., his brother-in-law. The evidence was of such a nature that the fairest mode of stating it will be by repeating it as it appeared on the trial.

Mr. Powell, apothecary of Rugby, deposed that he had attended Sir Theodosius Boughton for two months before his death, on account of a slight complaint of a certain description.

On Wednesday morning, the 27th of February, he was sent for to Lawton Hall, and on his arrival there at a little before nine o'clock, Captain Donellan conducted him to the apartment of Sir Theodosius. On his entering, he perceived that the baronet was dead, and on his examining the body he concluded that it was about an hour since life had fled. He had some conversation with Captain Donellan with regard to the deceased, and he was told by him that he had "died in convulsions." He could not recollect the precise nature of the conversation, but the general effect of what Captain Donellan said was, that the deceased gentleman had taken cold.

Lady Boughton, the mother of the deceased, deposed that Sir Theodosius was twenty years old on the 3d of August last. On his coming of age, he would have been entitled to above 2000*l.* a year; and in the event of his dying a minor, the greater part of his fortune was to descend to his sister, the wife of Mr. Donellan. It was known in the family on the evening of Tuesday, the 26th, that Sir Theodosius was to take his physic the next morning. He used to put his physic in the dressing-room. He happened once

to omit to take it; upon which Mr. Donellan said, "Why don't you set it in your outer room? then you would not so soon forget it." After this he several times put the medicines upon his shelf over the chimney-piece in his outer room. On the evening of Tuesday, the 26th, about six o'clock, Sir Theodosius went out fishing, attended only by one servant, Samuel Frost. Witness and Mrs. Donellan took a walk in the garden, and were there above an hour. To the best of her recollection she had seen nothing of Mr. Donellan after dinner till about seven o'clock, when he came out of the house-door in the garden, and told them that "he had been to see them fishing, and that he would have persuaded Sir Theodosius to come in, lest he should take cold, but he could not." Sir Theodosius came home a little after nine, apparently very well; and he went up into his own room soon after, and went to bed. He requested her to call him the next morning and give him his physic.

She accordingly went into his room about seven in the morning, when he appeared to be very well. She asked him "Where the bottle was?" and he said "It stands there upon the shelf." He desired her to read the label, which she accordingly did, and found there was written upon it "Purging draught for Sir Theodosius Boughton." As he was taking it, he observed, "it smelled and tasted very nauseous;" upon which she said "I think it smells very strongly like bitter almonds." He then remarked that "he thought he should not be able to keep the medicine upon his stomach."

Here a bottle was delivered to Lady Boughton, containing the genuine draught, which she was desired to smell at and inform the Court whether it smelt like the medicine Sir Theodosius took. She answered in the negative. She was then desired to smell at another, containing the draught with the addition of laurel-water, which she

said had a smell very much like that of the medicine she gave to Sir Theodosius. Lady Boughton then proceeded with her evidence. In two minutes after Sir Theodosius had taken the draught, he struggled very much. It appeared to her as if it was to keep the draught down. He made a prodigious rattling in his stomach, and guggling; and these symptoms continued about ten minutes. He then seemed as if he was going to sleep, or inclined to doze; and perceiving him a little composed, she went out of the room. She returned in about five minutes after, and to her great surprise found him with his eyes fixed upwards, his teeth clenched, and foam running out of his mouth. She instantly desired a servant to take the first horse he could get and go for Mr. Powell. She saw Mr. Donellan in less than five minutes after. He came into the room where Sir Theodosius lay, and said to her, "What do you want?" She answered that she wanted to inform him what a terrible thing had happened; that it was an unaccountable thing in the doctor to send such a medicine, for if it had been taken by a dog it would have killed him; and she did not think her son would live. He inquired in what way Sir Theodosius then was; and on being told, he asked her where the physic bottle was; on which she showed him the two draughts; when he took up one of the bottles, and said, "Is this it?" She answered "Yes." He then, after rinsing it, emptied it in some dirty water that was in a wash-hand basin; and on his doing so she said, "What are you at? you should not meddle with the bottles." Upon that he snatched up the other bottle and rinsed it, and then he put his finger to it and tasted it. She repeated that he ought not to meddle with the bottles; upon which he replied, that "he did it to taste it." Two servants, named Sarah Blundell and Catherine Amos, afterwards came into the room, and he desired

the former to take away the basin and the bottles, and he put the bottles into her hands. The witness, however, took the bottles from her, and set them down, bidding her not to touch them; and the prisoner then desired that the room might be cleaned, and the dirty bottles thrown into the inner room. This being done, the witness turned her back for a moment, on which the prisoner again handed the servant the bottles, and bid her take them away, and she accordingly removed them. Witness soon afterwards went into the parlor, where she found Mr. and Mrs. Donellan; and the former told his wife "that her mother had been pleased to take notice of his washing the bottles, and that he did not know what he should have done, if he had not thought of saying that he put the water into them to put his finger to it to taste." The witness made an answer to this observation, and the prisoner directed his wife to ring the bell in order to call up the servant. When the servant came, he ordered him to send in the coachman; and when he came, the prisoner said, "Will, don't you remember that I set out of these iron gates at seven o'clock this morning?" "Yes, sir," said he. "And that was the first time of my going out; I have never been on the other side of the house this morning: you remember that I set out there this morning at seven o'clock, and asked for a horse to go to the wells?" "Yes, sir." Mr. Donellan said, "then you are my evidence." The servant answered, "Yes, sir." She did not recollect that the prisoner made any observation. The witness further said that Mr. Donellan received a letter from Sir William Wheeler, desiring the body might be opened, and that he showed her his answer to this letter. She told him he had better let it alone, and not to send such a letter as that; but she did not tell him the reason of her disliking it. He replied, that "it was necessary to send an answer, and

he would send that." She afterwards attended before the coroner and the jury in order to be examined, when Mr. Donellan also was present; and she mentioned to the jury the circumstance of the prisoner's rinsing the bottles. Being returned to Lawford Hall, the prisoner said to his wife before the witness, that she had no occasion to have told the circumstance of his washing the bottles: she was only to answer such questions as were put to her; and that question had not been asked her. Being asked whether Mr. Donellan did not endeavor to account to her for her son's death, she answered, that when the things were removed, in order to be put in the inner room, he said to the maid, "Here, take his stockings; they have been wet; he has caught cold, to be sure: and that might occasion his death." On that she examined the stockings, and there was no mark or appearance of their having been wet. In answer to some further questions, she denied that she or any of the family had ever declined eating of the same dishes that Sir Theodosius did. Mr. Donellan, indeed, had recommended to her not to drink out of the same cup, because he was affected with a certain disorder; nor to touch the bread he did, because there might be arsenic about his fingers, as he used that poison when he was fishing.

Catherine Amos corroborated the testimony of her mistress, and said, that she was called upstairs to the room where Sir Theodosius lay, at the time when the surgeons were engaged in opening the body, and she heard Mr. Donellan say "that there was nothing the matter; and that it was a blood-vessel which broke, which had occasioned the death of his brother-in-law." About a fortnight afterwards Mr. Donellan brought her a still, which had been recently washed, and he desired her to put it into the oven to dry, in order that it might not rust.

Mr. Kerr, surgeon of Northampton deposed, that he attended Sir Theo-

dosius when he was at Mr. Jones's. His disorder was so slight that he did not think it a subject of medicine at all. He ordered him some lotion to wash with, and dissuaded him from the use of medicine.

Two days afterwards, Sir William in consequence of the rumors which had reached him of the manner of his ward's death, and that suspicions were entertained that he had died from the effect of poison, wrote a letter to the prisoner, requesting that an examination might take place, and mentioning the gentlemen by whom he wished it to be conducted. He accordingly sent for them, but did not exhibit Sir William Wheeler's letter alluding to the suspicion that the deceased had been poisoned, nor did he mention to them that they were sent for at his request. Having been induced by the prisoner to suppose the case to be one of ordinary sudden death, and finding the body in an advanced state of putrefaction, the medical gentlemen declined to make the examination, on the ground that it might be attended with personal danger. On the following day, a medical man, who had heard of their refusal to examine the body, offered to do so; but the prisoner declined his offer, on the ground that he had not been directed to send for him. On the same day the prisoner wrote to Sir William a letter, in which he stated that the medical men had fully satisfied the family, and endeavored to account for the event by the ailment under which the deceased had been suffering; but he did not state that they had not made the examination. Three or four days afterwards, Sir William, having been informed that the body had not been examined, wrote to the prisoner insisting that it should be done; which, however, he prevented by various disingenuous contrivances, and the body was interred without examination.

Dr. Rattray, of Coventry, deposed, that in consequence of a request

from the coroner, who desired him to bring Mr. Wilmer with him, in order to open the body of Sir Theodosius Boughton, they went together and met Mr. Bucknell, Mr. Powell, and Mr. Snow, in Newbold churchyard on the eleventh day after death. Mr. Bucknell opened the body. The witness then proceeded to describe the external appearances of the body, and its appearances in the dissecting. He was asked whether, as he had heard the evidence of Mr. Powell and Lady Boughton, he could, from that evidence, totally independent of the appearances he had described, form a judgment as to the cause of the death of Sir Theodosius. He answered, that, exclusive of these appearances, he was of opinion, from the symptoms that followed the taking of the draught, that it was poison, and the certain cause of his death. Being desired to smell at the bottle, and asked what was the noxious medicine in it, he said it was a distillation of laurel-leaves, called laurel-water. Here he entered into a detail of several experiments on animals, tending to show the instantaneous and mortal effects of the laurel-water. He knew nothing in medicine that corresponded in smell with that mixture, which was like that of bitter almonds. He further said that the quantity of laurel-water contained in the bottle shown to him was sufficient to be the death of any human creature; and that the appearances of the body confirmed him in his opinion that the deceased was poisoned, so far as, upon the viewing a body so long after the death of the subject, one could be allowed to form a judgment upon such appearances.

Mr. Wilmer and Dr. Parsons, professor of anatomy at Oxford, confirmed the evidence of Dr. Rattray.

Dr. Ashe, of Birmingham, was of opinion, from the symptoms described, that the deceased died by poison. If the laurel-water were distilled strong enough to collect

the essential oil, a teaspoonful of it would destroy animal life in a few seconds; and he believed as strong a poison might be made from bitter almonds.

Dr. Hunter gave his opinion to the contrary.

Mary Lymnes deposed, that she had been servant to Lady Boughton. Mr. Donellan was in the habit of distilling roses occasionally, and he kept his still in an apartment which was called his room, and in which he slept when Mrs. Donellan lay in.

Francis Amos, gardener to Lady Boughton, deposed, that he was with Sir Theodosius the whole time he was fishing, the night before he died. Mr. Donellan was not there. Two or three days after Sir Theodosius died, he brought him a still to clean; it was full of wet lime. He said he used the lime to kill fleas. The witness used to gather lavender for him to distill. In the garden there were laurels, bays, and laurustinus.

William Crofts, one of the coroner's jury, deposed, that on the examination of Lady Boughton, when she said that "Captain Donellan rinsed the bottle," he saw the captain catch her by the gown, and give her a twitch.

John Darbyshire deposed, that he had been a prisoner in Warwick jail for debt; that Mr. Donellan and he had a bed in the same room for a month or five weeks. He remembered to have had a conversation with him about Sir Theodosius being poisoned. On his asking him whether the body was poisoned or not, he said, "There was no doubt of it." The witness said, "For God's sake, captain, who could do it?" He answered, "It was amongst themselves; he had no hand in it." The witness asked, "Whom he meant by themselves?" He said, "Sir Theodosius himself, Lady Boughton, the footman, and the apothecary." The witness re-

plied, "Sure, Sir Theodosius could not do it himself!" He said he did not think he did — he could not believe he would. The witness answered, "the apothecary could hardly do it — he would lose a good patient; the footman could have no interest in it; and it was unnatural to suppose that Lady Boughton would do it." He then said, "how covetous Lady Boughton was! she had received an anonymous letter the day after Sir Theodosius's death, charging her plump with poisoning him; that she called him and read it to him, and she trembled; she desired he would not let his wife know of that letter, and asked him if he would give up his right to the personal estate, and to some estates of about two hundred pounds a year, belonging to the family." The conversation was about a month after the captain came into the jail. At other times he said, "that it was impossible he could do a thing that never was in his power."

This being the chief evidence, the prisoner in his defense pleaded a total ignorance of the fact, and several respectable characters bore testimony to his integrity. The jury, however, found him guilty, and he received sentence of death.

At seven o'clock on the next day, the 2d of April, 1781, he was . . . launched into eternity. When the body had hung the usual time it was put into a black coffin, and conveyed to the Town Hall to be dissected.

It is almost needless to inform our readers, that the poison with which the unfortunate Sir Theodosius was murdered was prussic acid, at that time only recently introduced and little known.

¹The leading point in every case of this sort, is — did the deceased die of poison? For, if he did not, there is an end of the whole. Where there was no poison, there was no poisoner. But this was altogether a question to be decided by the

¹ [From S. M. Phillipps, *Famous Cases of Circumstantial Evidence*, Preface.]

opinion of medical men. Four physicians inspected the body, on dissection, the eleventh day after the death. They gave their opinion to the jury, and described the circumstances on which that opinion was founded; those four said, they believed him to have died of poison. The circumstances on which they had given their opinion, were stated, at the trial, to Doctor John Hunter, the most eminent physician of the age. He declared he could not discover, in any of those circumstances, nor in all of them united, any sign of the deceased having died from poison, nor any symptoms beyond those incident to a man dying suddenly.

Q. From the court to Mr. Hunter. Then, in your judgment, upon the appearance the gentlemen have described, no inference can be drawn from thence that Sir Theodosius Boughton died of poison? *A.* Certainly not: it does not give the least suspicion.

In questions of science, and above all, in those of medical science, the faith to be reposed in any opinion, will be regulated by the professional eminence of the person giving it. Doctor John Hunter

stood, at that time, at the very head of his profession; his opinion gave the law to that profession, both in England and in every country in Europe. Had the profession been to estimate his opinion, and not the jury, a very different verdict would have been given. The case referred peculiarly to Doctor Hunter's line of study,—that of dissection, and the appearances incident to a body on sudden and convulsive death. He pronounced, that the dissection had been irregularly made, and in a way not to afford the true criterion to judge by. And, where the process is irregular, when the experiment is defective, the conclusion must always be vague and doubtful.

The gentlemen composing the jury did not perhaps know the eminence of Mr. Hunter's character; nor, consequently, the weight due to his opinion. But the judge, on the bench, no doubt knew this; and in balancing the evidence, and in summing up, it was clearly his duty to have stated the great weight to be attached to Mr. Hunter's observations. He stated nothing of all this; but took them numerically, "four medical men to one."

380. LORD SACKVILLE'S CASE. (P. BURKE. *Celebrated Naval and Military Trials.* 1866, p. 93.)

In the reign of George II it became quite a fashion for both king and people to run down to degradation, and even to death, any commander who should be unsuccessful through even a mere fault of judgment or misapprehension of the circumstances under which he might be acting. Admiral Byng was a sad and shameful instance of this kind of treatment towards men who were honorably doing their best in the public service. Another example is afforded in General Lord George Sackville. . . . He became a Lieut. General of the Ordnance in 1757, and so high had his reputation risen, that in 1758 he was appointed to succeed Charles, second Duke of Marlborough, a distinguished military leader, as commander in chief of the British forces in Germany, then acting under Prince Ferdinand of Brunswick.

This brings us to the Battle of Minden. England, and, indeed, almost all Europe, were at the time fiercely engaged throughout the globe in that memorable war. . . . And latterly England confined herself, in the European part of the contest, to sending British troops as auxiliaries to her allies. These troops were commanded in chief, in 1758 and 1759 as stated, by Lord George Sackville, but, somehow or other, he could not approve of or agree with his generalissimo, Prince Ferdinand of Brunswick, George II's relative, and Prince Ferdinand in consequence owed him a spite. With the famous Lieutenant General the Marquis of Granby, who acted under him, Lord George was also not on the best of terms. Amid such a state of feeling among the commanders of the allies, the Battle of Minden was fought and won by them against the French, under Marshal de Contades, on the 1st August, 1759.

The action, which was a tre-

mendous struggle, commenced at five in the morning and raged with varied success during the day, but it is to the latter portion of the contest that the reader's attention should, as far as Lord George Sackville was concerned, be directed. After much firing on both sides, the allied army, advancing in eight columns, occupied the ground between Halen and Hemman, and the space between the last village and Dodenhausen was filled with Vangenheim's corps. Against this force the enemy directed their principal effort on the left; but the Duke de Broglie experienced a severe check from a battery of thirty cannon prepared by the Count de Buckeburg, Grand Master of the Artillery, which, under his directions, were fired with admirable effect. Towards the right of the allies, six regiments of English infantry and two battalions of Hanoverian guards had to sustain the charge of the French carabineers and gendarmerie. Such, however, were their firmness and courage, that every corps of cavalry, as well as infantry, that assailed them on the left and in the center not only failed of piercing their ranks, but was itself absolutely broken.

The cavalry on the right had no opportunity of engaging. They were destined to support the infantry of the third line, and consisted of the British and Hanoverian horse, commanded by Lord George Sackville, whose second was the Marquis of Granby. They had been posed at a considerable distance from the first line of infantry, divided from it by a scanty wood that bordered on a heath. During the action they were ordered up, but through some error, and this was the offense charged on Lord George Sackville, did not arrive in time to take part in the struggle. Originally it was not intended that

they should be engaged, and there was no occasion for their services. About noon the French gave way, and withdrew from the field of battle. They were pursued to the ramparts of Minden, having lost a great number of men, with forty-three large cannon and many colors and standards. The loss of the allies was much less severe. On the following day the garrison of Minden surrendered at discretion, when many French officers who had been wounded in the engagement fell into the hands of the victors. Immediately after the victory, Prince Ferdinand published orders relative to the troops under him, and by confining himself to complimenting the Marquis of Granby, clearly implied a severe reflection on that nobleman's superior in command, Lord George Sackville; and the rumor flew to England at once that the complete rout of the French was prevented by Lord George, through cowardice or disobedience, not charging at the opportune moment with the cavalry under his command. Lord George was furious at the imputation. He flung up his appointments and demanded a court-martial. . . .

The court-martial thus earnestly demanded by Lord George was held at the Horse Guards at the end of March and beginning of April, 1760. . . . The charge against Lord George was: "That he, being a lieutenant general in His Majesty's army in Germany, under the command of Prince Ferdinand of Brunswick, and being by his instructions (which were read in court) directed to obey the orders of the said Prince Ferdinand, did, notwithstanding all this, on August 1, 1759, disobey the orders that were sent to him by his Serene Highness." The deputy judge-advocate, Mr. Gould, in a short speech, explained the nature of the charge, and observed that by his lordship's not advancing with the cavalry, agreeably to repeated orders sent him

by three aides-de-camp, a signal opportunity was left of ruining the French army, and the cavalry was thereby prevented from gathering the laurels which the infantry had prepared.

The evidence which bore most upon the charge was as follows: Captain Winchenrode, Prince Ferdinand's Prussian aide-de-camp, deposed that he was sent early in the morning with orders from the Prince to Lord George Sackville to march to the left with the cavalry, in order to sustain the infantry. At the end of the second line he saw Lord Granby, of whom he inquired where Lord George was, saying that he was going with orders to him. His lordship answered, "At the head of the first line," where, accordingly, the deponent found him. He delivered to him the Prince's orders in French and afterwards repeated them in French; upon which his lordship said he did not understand them, and asked him twice how it was to be done. The deponent then told him, in English, that he was to march to the left through a little wood (to which he pointed) after which he would come on a heath, where he was to form, and from thence he might see our infantry. After this, the deponent left him. Being asked, at the desire of Lord George, whether it did not seem, by our dispositions, that the enemy's cavalry were expected to have been on their flanks, and their infantry in their center, he replied that he knew nothing of that, nor could pretend to form a judgment either of their dispositions or ours; all he knew was, that he was sent with orders to his lordship.

Lieutenant Colonel Ligonier (brother of the famous General John Earl Ligonier) deposed that he carried orders from the Prince to Lord George, to march to the left with the cavalry, in order to sustain the infantry and to form a third line behind them on the plain. He

livered them accordingly to his lordship, and told him that he was to march to the left through the wood. Lord George asked him who was to be their guide, and if he would undertake to lead the line. He answered that he could not promise, but would endeavor to do his best. His lordship then ordered swords to be drawn, and bid them march; and soon after came up Colonel Fitzroy, with orders from the Prince to march up immediately with the British cavalry. On which Lord George, turning to the deponent, said, "Only in numbers, my lord, but their destination is the same; that is to the left." Soon after his lordship and Colonel Fitzroy rode away together. Being asked, at Lord George's desire, if he did not insist on his orders being obeyed, he answered, "Yes," peremptorily.

Lieutenant Colonel Fitzroy deposed that the reason of his being sent to Lord George was, that the Duke of Richmond had been reconnoitering, and having observed to the Prince that the enemy's cavalry were in disorder, he said, "*Voici le beau moment pour la cavalerie,*" and bid the deponent go with orders to Lord George Sackville, to march up as fast as possible with the British cavalry. He delivered them accordingly, when his lordship bid him repeat them, and speak slowly and distinctly. He did so, when his lordship told him that his orders disagreed with those just brought him by Colonel Ligonier, and added, that the Prince could never intend to break the line. He insisted on his having been exact in delivering the orders just as he received them. On which Lord George said he would go to the Prince himself, and away they went together. Being asked "What pace?" answered, "A half gallop"; but that soon after they set out, Lord George, stopping to speak to Captain Smith, his aide-de-camp, the deponent then pushed on full gallop, and got to the Prince time enough to make his report

before his lordship came up. When he told his highness that Lord George was coming himself, he expressed his surprise strongly, not by words, but actions. What passed between the Prince and Lord George, he did not hear. Being asked if he carried afterwards an order to Lord George Granby, he answered, yes, and the occasion of it was this: he was with the Prince at Captain Philips's battery, when his highness seeing the enemy's cavalry in great disorder, said that he thought our cavalry might, even then, be of service. On which the deponent asked if he should go and fetch them. His highness replied, "Yes, make haste, and deliver the order to Lord Granby, for I know he will obey me." He went accordingly, and delivered the order, as directed, to Lord Granby, whose wing, he observed, was farther advanced than the other, which his lordship also mentioned to him. He asked the deponent why he did not deliver his orders to Lord George Sackville. He replied that as Lord George had disobeyed a former order which he carried, he had now the Prince's direction to deliver this order to him (Lord Granby) — upon which his lordship immediately put the second line in motion. Being asked, by Lord George, whether he had ever reconnoitered the wood, and whether it was close or open, he replied, that he looked at it as he passed through, and the part through which he went was very open; and, as to the breadth, two squad might march in front. Being asked whether, if our infantry had been broken by the enemy, the consequence would not have been very fatal, he replied, "Undoubtedly, as the action was on a plain, and there was no cavalry to cover them while they rallied."

Lieut. Colonel Sloper (of Bland's Dragoons) deposed that on August 1, about four in the morning, Captain Pentz came to his tent,

with orders from the Prince for the men to mount; he added, "In order for action." The deponent himself went around the regiment, and found the men lying down in their tents, booted, and the horses saddled, as they had been ever since one o'clock, by an order issued the night before. In about half an hour after they were drawn out Lord George Sackville came to the head of Bland's, where the deponent was, and bid them march. They had not gone far before Captain Winchenrode, Prince Ferdinand's aide-de-camp, came up and told his lordship, in French, that it was the Prince's orders that he should march to the left and sustain the infantry on the plain. He repeated it in French. Lord George replied, "Mais comment, mais comment?" The captain then said in English, waving his hand, that he was to march through those trees (that was his expression), on the left, and then he would come on a heath, where he would see our infantry and the enemy. Winchenrode then went away, and Lord George, saying that he could not understand the orders, the deponent said that it was clear to him that this was to be done by the left of the right wing of cavalry. For about a quarter of an hour after this he did not see his lordship, and they still remained where they were; till at last Lord George came up, and said to him, "Colonel, move your regiment." He replied, "To the left, my lord?" His lordship answered, "No, straight forward." Soon after Colonel Ligonier came to Lord George, with orders from the Prince to march immediately with the cavalry to sustain the infantry on the plain. (The deponent then desired to know if he must inform the court what he said to Colonel Ligonier, and being told, if it related to Lord George, he must, he then proceeded.) The deponent then said to Colonel Ligonier, "For God's sake, sir, repeat your orders, that that man

(meaning Lord George Sackville) may not pretend he does not understand them, for it is now near half an hour since we received orders to march, and yet we are still here. [He was sorry (he said) that his oath obliged him to mention what he also added.] For you see, sir, the condition he is in." Colonel Fitzroy then came up, but what he said to Lord George he did not hear, only his lordship then turning to Colonel Ligonier, said, "Sir, your orders are contradictory." He replied, "In numbers only; not in destination." Soon after his lordship and Colonel Fitzroy rode away together, and in about a quarter of an hour more the cavalry moved. Being asked to explain what he meant by those words, "You see, sir, the condition he is in," he replied, that his lordship seemed to him to be greatly alarmed; that when he gave him the orders to march the regiment, he was in the utmost confusion, as appeared by his ordering them to march straight forward, when the original orders were to go to the left; Colonel Ligonier's orders were to go to the left; and when the cavalry did move, it moved to the left.

Prince Ferdinand's Prussian aide-de-camp deposed that on Lord George's not bringing up the cavalry on Colonel Fitzroy's order, the Prince, being very impatient, directed him to go and hasten Lord George. That on his way, Colonel Fitzroy passed him at a distance, and soon after he saw his lordship coming himself. On which he hastened back to inform his highness that Lord George was coming to take his orders from his own mouth, rather than from him; but that before he could speak, the Prince cried out, "What, will he not obey me?"

The Marquis of Granby (a celebrated commander, son of John, third Duke of Portland, and ancestor of the present duke) deposed to the same effect as Captain Winchenrode in regard to his seeing him

both in going and returning from Lord George Sackville.

Lord George Sackville made an eloquent speech in his own behalf on the nature of the evidence that had been brought against him. The substance of the defense was as follows: Orders were given the night before the battle for the troops to be in readiness at one the next morning; the horses of the cavalry to be then saddled, but not to strike tents or march till further orders. These orders having been frequently given for a fortnight before, were not alone sufficient to apprise Lord George of an engagement next morning. The first notice that Lord George, Lord Granby, and other general officers had of an attack was from the firing of cannon between five and six. Lord George immediately arose, being waked by the sound, and rode from the village where he was quartered to the head of the cavalry, which was then mounted, and he was there before any other general officer of the division; that he marched them, although no orders to march had yet reached them, toward a windmill in front. When he had advanced a considerable distance, he received an order to halt and wait until he should receive further orders. While he remained on or near the ground, the artillery had also marched from its ground, though neither had received any orders; and Lord George imagining that orders to the artillery had been forgotten in the hurry usual upon a surprise, he ordered it to advance in front, where it was of signal service. Captain Winchenrode soon after brought him an order to form a line as a third line to support the infantry, and advance. He said nothing about going to the left, between trees, or coming out upon a heath, nor told him where the infantry to be sustained were to be found, but only repeated his orders twice in French which Lord George requested him to do,

not from any difficulty he found in comprehending the general intention of them, but because they were at first expressed indistinctly through hurry. Lord George supposing that to advance was to go forward, immediately began to execute these orders, by sending an officer to a Saxe-Gotha regiment of foot that obstructed his way in front, to cause it to remove out of his way, thinking it better so to do than to cause our artillery, which obstructed the only other way he could have advanced, to halt, dispatching at the same time a second officer where the infantry he was to sustain was posted, and a third to reconnoiter the situation of the enemy. While this was doing, Colonel Ligonier came up with an order to advance with the cavalry in order to profit of a disorder which appeared in the cavalry of the enemy; and that neither did he mention, or at least, was not heard to mention, any movement to the left. The Saxe-Gotha regiment being by this time removed from the front, Lord George, in obedience to the concurrent orders of Captain Winchenrode and Colonel Ligonier, as he understood them, and as they were understood by his witnesses, ordered the troops to advance straight forward. This could not be more than eight minutes after he received the order that had been brought by Captain Winchenrode, because Captain Winchenrode, as he was riding back from Lord George, met Colonel Fitzroy riding to him very fast; and when Colonel Fitzroy arrived, the troops were in motion. It appears from all the witnesses that they could not be put in motion in much less than eight minutes, as five minutes were given even by the witnesses for the prosecution of the Saxe-Gotha regiment to remove out of the way. Almost immediately after the troops were in motion, Colonel Fitzroy came up and brought the first orders he heard for moving to the left, at

the same time limiting the movement to the British cavalry. Then, being in doubt what to do, he halted; the order that arrived last, by Colonel Fitzroy, not superseding the former by Colonel Ligonier; as Lord George and those about him understood, both from Fitzroy and Ligonier, that they brought the same order, having received it at the same time, and brought it at different times by having taken different routes. Not being able to agree, each earnestly pressing the execution of his own orders, Lord George took the resolution to go to the prince, who was not far distant. Colonel Ligonier went forward, and that as Lord George was riding on with Colonel Fitzroy, he perceived the wood on the left more open than he had thought it, which inclined him to think it possible the Prince might have ordered him to the left; and Colonel Fitzroy still vehemently pressing the execution of the order he brought, he sent Captain Smith with orders for the British cavalry to move to the left; the motion to the left and the limitation of the movement to the British being connected in the same order, and both peculiar to that brought by Colonel Fitzroy. By this means scarcely any delay was made, even by the differences of the orders brought by the two aides-de-camp, Captain Smith not having advanced above two hundred yards beyond the left of the British cavalry; the time, therefore, could only be what he took up in galloping twice that space. This period included all the time in which Lord George is supposed to have disobeyed orders by an unnecessary delay.

Numerous witnesses were called in support of this statement — viz. Lieut. Colonel Hotham, Captain Smith, and Captain Lloyd, Lord George's aides-de-camp, Lieut. Colonel Preston of the Greys, Captain William, R.A., Captain McBean of the train, Captain Hugo, Lord George's German aide-de-camp,

Captain Brome, R.A., and the Rev. Mr. Hotham, chaplain to the staff. Their evidence bore out the defense, and among their testimony the most important was that of Lieut. Colonel Hotham and Captain Smith.

Lieut. Colonel Hotham deposed that the orders which he received on July 29, for generals to reconnoiter the overtures leading from the camps to the plains of Minden, and on the 31st, for the horses to be saddled, etc., at one the next morning, were communicated to, and obeyed by, his lordship, and that such orders as the last had been frequently issued during the fortnight before. Being asked (as were all the following witnesses) if he perceived any difference in Lord George's looks or behavior that day from what was usual, he answered (as did the rest), "None in the least."

Captain Smith deposed that he and Colonel Watson reconnoitered the overtures by his lordship's orders, on the 30th; and then Lord George himself went as far as he could, consistent with his picket-duty, being lieutenant general of the day. By orders from the Prince, the cavalry was first formed into squadrons, and then into line. That while they were forming he was on a rising ground, from whence he observed, that by the time four or five squadrons were formed, Lord George marched them, which occasioned disorder in the rear, they not being able to keep up, which he went and informed his lordship of, who upon that made them halt; and he (the deponent) returned to his post. Soon after they moved again, when a Hanoverian officer, whom he knew, came up to him and said that they marched so fast in front that they could not keep up, and that their horses would be blown, etc., which the deponent went again and told Lord George of, who then said that he would halt no more, but that he would march slow, and that then the rear, when

it was formed, might soon overtake him, but desired them not to hurry. The place where they were forming the line, he observed, was not wide enough, but riding forward, he observed that there was room enough a little farther, which he mentioned to his lordship, who then ordered them to move on, and the line was soon well formed.

As to alteration in his lordship's looks or behavior that day, he was sure there was none; and that he would have gone to death if it had been needful.

The court-martial pronounced the following sentence: "This court, upon due consideration of the whole matter before them, is of opinion that Lord George Sackville is guilty of having disobeyed the orders of Prince Ferdinand of Brunswick, whom he was by his commission

and instruction directed to obey, as commander in chief, according to the rules of war; and it is the farther opinion of the court, that the said Lord George Sackville is, and he is hereby adjudged, unfit to serve His Majesty in any military capacity whatever." . . .

Lord George outlived his disgrace, and rose to high position and power again. . . . In a few years after that George III restored him to favor and to his seat in the Privy Council, and he was, in Lord North's Administration, appointed American Secretary of State, and as such, strongly evinced his hostility to American independence. He held office from 1755 to 1782, when, on retiring, he was created in the latter year Baron Bolebrooke and Viscount Sackville.

381. **ALFRED SCHWITOFSKY'S CASE.** (FRANK MARSHALL. Fair Play. 1912. Vol. I, p. 13.)

Is it possible that in the city of New York, in the twentieth century, a man tried before one of the fairest and ablest judges by repute on the criminal bench, and defended by counsel assigned and indorsed by that judge, may be convicted of a crime he did not commit; that in spite of all safeguards of trial by jury, because this man has served one term for crime, though he has since led an honest life, he may be doomed to spend the best years of his maturity behind prison walls on evidence procured by unscrupulous enemies?

If the story is true (and it may be proved, in part at least) that is told by Alfred Schwitofsky, who is now serving a sentence of twenty years in Clinton prison, all his misfortunes since he expiated the one crime he admits having committed are primarily due to enemies in the police department.

Among several letters called forth by an article in the *New York Herald* last June, dealing with the shysters of the Tombs, or City Prison, I received one from Schwitofsky, who was then confined in the Tombs awaiting his removal to Sing Sing, whence he was afterward transferred to Clinton prison. In this letter he declared himself to be a victim of persecution by the police and of the negligence of his lawyers. "I am convicted and sentenced to 20 years imprisonment," he wrote, "and God knows that I go to prison an innocent man." The letter closed with a pathetic appeal to me to visit him in the Tombs, and hear his story. Now there is scarcely a prisoner in the Tombs (or any other prison in this or any other country, for that matter) who, given the remotest chance to stay execution of sentence or secure a new trial, will not proclaim to the last that he is guiltless of any crime with which he may be charged, even

in the face of convincing evidence against him, in the hope that some fortunate accident may bring about betterment of his condition. Hence it was not with any serious expectation that I would find an innocent man in the coil of the law that I visited my correspondent.

I found Schwitofsky to be a little bit of a man, only five feet and one half inch tall, of pronounced Hebraic type. He speaks English with a foreign accent, for though he was born in the United States he was taken to Austria, the home of his parents, when only two years of age. He is an electrician by profession and a man of intelligence and education, who speaks several modern languages and is capable of a Latin quotation on occasion. While he admits the commission of a crime in 1903, and that, owing to circumstances that he was not always able to control, his associations in New York have not been of the best, he claims that he has kept within the law since he served his first term of punishment.

I found Schwitofsky in a pitiably neurotic condition, as he was indeed on the occasions of my subsequent visits. His emotion was such that his words ran over one another alternately with periods of stammering, while his hands trembled with increasing violence as he told the story, that was frequently interrupted by tears, of his alleged wrongs and their culmination. As he had spent the best part of the last eight years in prisons and hospitals, and was contemplating 20 more years like them, his agitation may be considered excusable.

Schwitofsky had been last arrested on the night of the first of last February. He had been locked up at police headquarters overnight, and the following day was charged in the Fifty-seventh Street police court with "unlawful entry"

before City Magistrate Keyran J. O'Connor, who committed him to the Tombs to await trial in the Court of Special Sessions. A day or two later the case had been taken before the district attorney, where the charge against the prisoner had been changed to burglary in the second degree and felonious assault. As only misdemeanors are tried in Special Sessions, and as Schwitofsky was now indicted for felony, his place of trial had been changed to the Court of General Sessions.

He had first been arraigned before Judge Warren W. Foster, who had assigned former Assistant District Attorney William D. Bosler to defend him at his trial; and, the case being afterward transferred to Judge Thomas C. O'Sullivan and Mr. Bosler falling ill, the latter judge had named William H. Carpenter and William G. Keir for the defense. Both Mr. Bosler and Mr. Carpenter had reported, the former to Judge Foster and the latter to Judge O'Sullivan, that they doubted Schwitofsky's sanity. In consequence Judge Foster had asked Dr. Frank A. McGuire, the Tombs physician, with Dr. Goldstein and Mr. Kimball, to make an examination as to the mental condition of the prisoner; and, when the case had come before him, Judge O'Sullivan had appointed a regular commission in insanity to pass upon the question. Both the formal and the informal inquiry had resulted in Schwitofsky being declared sane. In the early part of June he had finally been tried before Judge O'Sullivan, defended by Messrs. Carpenter and Keir; found guilty, and sentenced. . . .

This is the story of the charge as it finally unraveled itself: On Wednesday, the eighteenth of last January, a ladies' tailor named Theodore W. Dale, residing and doing business at 71 West Forty-fifth Street, was called up on the telephone and informed (by officers of the company, as he supposed) that a man would be sent to

make some slight repairs to his telephone early the following morning. On Thursday, about 9.30 o'clock in the forenoon, a man called at 71 West Forty-fifth Street with what appeared to be a bag of tools; announced himself as coming from the telephone company, and was admitted. He had been accompanied almost to the door of the house by a good-looking and well-dressed youth of twenty-two, named Leo Gelsky, a recent graduate of the House of Refuge — *not* one of the young men who reflect credit upon the training recently received at that institution.

As to just what occurred in Dale's house immediately after the presumed workman entered, there is some doubt. About ten minutes afterward, however, the alleged artisan rushed out of the house, flourishing a pistol and followed by the tailor — upon whom as he ran the fugitive visited verbal indignities in the Rabelaisian manner. Passers-by in the street took up the pursuit, and halfway between the tailor's place and Fifth Avenue the man was grappled by a stalwart chauffeur named Frank Harold, then taxicab starter for the Hotel Webster on the south side of the thoroughfare. Harold took the pistol away from the man, and then by reason of certain animadversions on the character of the pursuing tailor allowed his captive to go, when he and his companion, Gelsky, vanished.

In the struggle for the possession of the pistol Harold had scratched the back of the right wrist of the man from whom he took the weapon so severely that the chauffeur afterward found minute particles of the other's skin under his finger nails. This fact should be borne in mind as having a most important bearing upon the guilt or innocence of Schwitofsky. The man who invaded the tailor's shop on the morning of January 19th, and committed the crime for which Schwitofsky was punished, still bears on his

right wrist the traces of his encounter with Frank Harold.

Dale, on returning to his house that morning, at once telephoned to the East Fifty-fourth Street police station, and Detective Edward J. Cousin was sent to Forty-fifth Street. He was, of course, too late to make an arrest, but Harold gave him the pistol the fake workingman had carried, which had contained only two *blank* cartridges — a fact also to be remembered, in view of the circumstance that Schwitofsky was convicted of felonious assault.

The matter of the visit of the bogus telephone repairer to 71 West Forty-fifth Street was reported to the detective bureau at police headquarters the same day, and Lieutenants William Browne, John F. Talt, Edward Dungate, and Patrick Donnelly were assigned to the case. They got Gelsky ten days later, he having sent a messenger to Dale's house with a note demanding one hundred dollars, which the youth insists the tailor had agreed to pay him as remuneration for injuries sustained at his hands. Talt made the arrest, following the messenger when he left Dale's house, and finding Gelsky waiting for him at the corner of Fifth Avenue.

On information furnished by Gelsky, Schwitofsky was arrested and identified by him two days afterward as the man who, representing himself to be a telephone repairer, had obtained admission to Dale's place on January 19th and escaped at the point of his pistol. Gelsky was arraigned in the West Fifty-fourth Street police court on the day of his arrest on a charge of attempted blackmail, to which he afterward pleaded guilty before Judge O'Sullivan (who later tried and sentenced Schwitofsky) in General Sessions, and was committed to the State Reformatory at Elmira.

Schwitofsky's story, told to me from behind the bars of his cell, was that he had never seen Gelsky to know him in his life, though he had learned since his arrest that both had

lived at the Mills Hotel in Rivington Street at the same time last winter. He assured me that the first time he ever heard of the Dale case was when he was arrested in his bed in the Mills Hotel on the night of February 1st by Detectives Browne and Donnelly, and charged with the offense of illegal entry to the tailor's house. When the detectives told him what he was arrested for he insisted on being confronted with Dale immediately, and was taken by them to 71 West Forty-fifth Street, although it was nearly midnight. On the way they had stopped at the taxicab starter's box in front of the Hotel Webster, where (for what reason Schwitofsky says he did not then know) he was made to show the backs of his hands and wrists to the boss chauffeur. He says that this man examined his wrists carefully, and then shook his head. Schwitofsky was then taken into Dale's house, where the tailor being roused from sleep, took one glance at him under a gas jet and said, "That is the man!"

There were no traces of scratches on Schwitofsky's hands or wrists that night, although it was only twelve days from the time that Frank Harold's nails had dug the skin from the back of the wrist of the man who had unlawfully entered Dale's house on January 19. A microscopic examination in Clinton prison in November by Dr. Julius B. Ransom of Dannemora, a medical practitioner of thirty years' standing, showed that not so much as the scarfskin of either of the prisoner's wrists had been penetrated for at least five years. At his trial, however, two deep scars on the front of Schwitofsky's left wrist, where he had severed an artery in his attempt to commit suicide in the Tombs three years before, were shown to the jury as the marks of the chauffeur's finger nails; and, in spite of the prisoner's protests Judge O'Sullivan refused to permit him to bring evidence to show how he actually came by those scars.

The one crime that Schwitofsky admits having committed was larceny, for which he was sentenced to five years in the Eastern Penitentiary in Philadelphia. There is, however, a previous crime recorded against him, he told me, of which he declares he was not guilty. He had, he said, purchased some wearing apparel offered for sale by a peddler in a cafe in Hoboken, for a young woman in his company, and he had been apprehended in a dance hall immediately afterward and charged with their theft, being subsequently fined though he had ten witnesses in court to prove his purchase of the articles.

Schwitofsky told me that he had been led into the commission of his one crime by evil companions, after dissipating in stock gambling and horse racing a fortune of about \$25,000 that had been left him by his father in 1899, soon after his arrival in this country. He was twenty-six years of age when he first entered prison; and, coming out at the age of thirty with a full knowledge of what the continuation of his earlier follies would mean, he asserts that he registered a solemn mental vow to live down his past and create for himself an honorable career. He has spent most of the ensuing four and a half years in prison, but there is no proof of a crime with which he has been charged since the expiration of his first sentence that is aloof from the possibility of police machination.

On being discharged from the Eastern Penitentiary in the summer of 1907, Schwitofsky went to Gloversville in this State, where he worked at his trade of electrician, coming to New York in October with something like \$100 in cash and \$257 on deposit in the Mechanics Bank of Gloversville, for he had worked overtime and saved his money. He was recognized as an ex-convict a day or two after his arrival, and "tipped off" to Police Lieutenants William Kinsler and William F. Duggan, then connected

with the central bureau of the New York Police Department and at present doing precinct duty in Brooklyn, who were at that time assigned to detective work in and about the lower end of Second Avenue. These detectives arrested Schwitofsky as a suspicious person before he had been in New York a week. He was taken to police headquarters overnight; "lined up" in the morning with the previous twenty-four-hour catch of thieves and suspects, and orders were given to the assembled detectives of the central office squad to arrest him thereafter on sight. He was discharged on being arraigned in Jefferson Market police court, but was a marked man from that time.

Knowing that his reputation as an ex-convict would confront him wherever he might go, Schwitofsky determined to fight his battle in New York. He invested part of his savings in a restaurant at 155 Allen Street, therefore; and, whether Kinsler and Duggan were aware that he was in business or not (they say they were not; he says they were), they arrested him again and again as a suspicious person, and locked him up overnight at police headquarters, to be "lined up" in the morning and discharged. In December he was arrested on a charge of "unlawful entry" in a house to which he had gone to collect a bill from a customer; was held for trial in Special Sessions and discharged several weeks later on the evidence of the customer. In the meantime his partner had sold out the restaurant and disappeared with the proceeds.

Finding it impossible to live unmolested in a part of town where Kinsler and Duggan swayed police power, Schwitofsky says that he opened a delicatessen store and lunch room at 242 East One Hundred Seventeenth Street in partnership with a woman of his own race, the lease being taken in her name, and he occupying a room in the same house. It was just about

this time that a series of burglaries were occurring in Harlem, and Kinsler and Duggan were detailed to duty in that part of town at the head of a squad of four more detectives. On March 7th Kinsler and Duggan as the head of the squad arrested Schwitofsky, charging him with carrying concealed weapons and burglars' tools, and with having stolen property in his possession. He was a widower with one child, which died while he was awaiting trial in the Tombs, whereupon he attempted suicide by cutting his throat and severing the arteries of his left wrist. Recovering in the hospital, he was sent to the asylum for the criminal insane at Matteawan where he spent more than two years.

Schwitofsky claims that his arrest in Harlem was also a police "frame-up." His story is that he had been to the Bowery on the night of his arrest, where he had purchased a pistol for protection in his store and a putty knife and a pair of pliers for use about the premises, all of which had been tied up in a parcel when Kinsler and Duggan arrested him. These represented the burglars' tools and the concealed weapons. The stolen property consisted in two cheap stick-pins, one of which he wore in his cravat and the other in his muffler, and which had been presented to him, he said. There are enough discrepancies in the various reports made by Kinsler and Duggan on Schwitofsky's arrest in Harlem to warrant disbelief in the accuracy of their story, particularly as it may be proved by Deputy Warden Hanlon of the Tombs that Duggan made an attempt to have the prisoner falsely identified by one of the witnesses in the case. Indeed, Police Commissioner Waldo, to whom I made a written report of these discrepancies last October, asked me to take up the matter with the District Attorney. It should be borne in mind that the Commissioner did everything in his power to assist me in getting at the truth with

regard to Schwitofsky's numerous arrests.

Being discharged from Matteawan as sane on June 6th, 1910, Schwitofsky was brought back to New York to be tried on the stolen property and burglars' tools charges. "Again in the Tombs," he told me, "I found that my long stay in Matteawan had resulted in the complete dispersal of my defense. Dr. Radin, the former Jewish chaplain of the prison, who had made a personal investigation of my case, had been dead more than a year. The woman with whom I had been in partnership had sold out our business and gone away two years before, and was not to be found. She had placed in Dr. Radin's hands the proof that the stick-pins found in my possession when I was arrested had been purchased through witnesses who had been in the store at the time. With my defense gone my chances seemed black, and when the assistant district attorney in charge of my case offered to ask the judge to suspend sentence provided that I pleaded guilty I consented to do so. I knew what it meant to have another crime on my record, but I feared that the alternative would be almost certain conviction, and I longed for freedom."

Sentence was suspended in Schwitofsky's case in August, 1910. He tells a complete story of his life from that period, giving names and addresses in the instances where he found employment, until the time of his arrest the following February, the day after he went to work for the Interborough Rapid Transit Company. His story has been corroborated since his arrest in every important particular, although he is unable to prove an alibi for the morning of January 19th, when Dale's shop was invaded.

One of the various occupations Schwitofsky engaged in during his struggle for a livelihood between arrests was that of private detective in the employ of Isaac Silverman, head of the Fidelity Secret

Service Bureau. In this position he says that he discovered that his old enemies, Kinsler and Duggan, were taking pay from Silverman for work they were surreptitiously doing in connection with the cloak makers' strike that was then in progress. It was his threat to expose them, Schwitofsky asserts, that brought about his present predicament.

The circumstance that Schwitofsky's wrists did not bear the marks of Harold's finger nails was conclusive proof to my mind — without the additional evidence I found later — that he was not the man who created the disturbance in the tailor's shop and in Forty-fifth Street on the morning of January 19th. On making inquiries I learned that there were at least four men in a position to form accurate opinions, who had grave doubts as to Schwitofsky's guilt. These four were Dr. Goldstein, the Jewish chaplain, Mr. Kimball of the Prison Association, Mr. Strisik, the lawyer for the Austrian Consulate, and Mr. Hanley, the deputy warden of the Tombs. Dr. Goldstein, indeed, had received a letter from Gelsky, on whose information Schwitofsky had been arrested, written two weeks after that occurrence, in which the informer confessed that, under coercion by detectives, he had identified the wrong man as the bogus telephone repairer whom he had accompanied to Dale's house on the occasion of the scrimmage in the street.

The only possible connection between Kinsler and Duggan and the arrest of Schwitofsky in the Dale matter seems to be through Detective Talt. According to Schwitofsky, Talt met him in the street soon after he had declared his intention to notify police headquarters of the relations of his two enemies with Silverman, and threatened them with vengeance on their behalf, and it is Talt who is accused by Gelsky of coercing him into falsely identifying Schwitofsky as the Dale burglar. Talt denies both

accusations. Schwitofsky asserts positively that he caught a glimpse of Duggan on the opposite side of Rivington Street, when Browne and Donnelly arrested him and took him away from the Mills Hotel on the night of February 1st. Duggan was a witness at Schwitofsky's trial, on which occasion he swore to the jury that he knew the prisoner to be a professional burglar.

Dr. Goldstein had been so much impressed by the discrepancies in the stories told by Schwitofsky's accusers that he had written a personal letter to Judge O'Sullivan before the trial, asking him to give the case unusual attention. Mr. Kimball and Warden Hanley did not believe that Schwitofsky was the Dale burglar, because they knew of his efforts to make an honest living between the suspension of his sentence by Judge Swann in August, 1910, and his arrest the following February. The little electrician had made a point of calling, sometimes as often as twice a week, on the agent of the Prison Association in the Criminal Courts building and on the deputy warden of the Tombs, to let them know how he was getting on.

"I never knew such a change in a man as appeared in Schwitofsky from the time he was half crazy with anxiety and suspense in the Tombs, and afterward when he was a free man for a few months and was for a time in business for himself," says Mr. Kimball. "He would fairly beam with pleasure when he came into my office to tell me of a contract he had secured, or of a purchase of tools. If he was 'leading a double life,' and working ten or twelve hours a day as a cover for burglary at night, he is the first crook to do so in my experience."

Mr. Hanley had definite information that made him believe that Schwitofsky could not always be sure of a square deal from the police, that went back to his arrest in Harlem in 1908, as has been mentioned. The deputy warden had

made a memorandum of this circumstance in the identification book at the Tombs, and is prepared to produce the book in court and give his evidence, should the occasion arise. All things considered, I felt justified in laying before Judge O'Sullivan the information I had gathered with regard to Schwitofsky. I found that the judge was cognizant of all the circumstances, if not of their bearing on each other.

"Schwitofsky was found guilty after a fair and impartial trial," O'Sullivan told me, "and the sentence of 20 years is the lightest I could impose upon him."

Inspection of the papers in the Schwitofsky case in the clerk's office of the Court of General Sessions showed that the prisoner had himself brought certain conditions to the attention of the judge. I found two of his letters on file, in which he set forth the fact that his lawyers had not given proper attention to the case, and that the scars on his wrists that had helped to bring about his conviction were of long standing.

Unable to rid myself of the conviction that if two and two make four, the Dale burglar bore marks of his encounter with Harold, which were conspicuously missing from the wrists of Schwitofsky, I laid the matter before Police Commissioner Rhinelander Waldo. Mr. Waldo at once sent for Second Deputy Commissioner George S. Dougherty, who had only recently come into the department from the celebrated Pinkerton Agency and was then in charge of the detective bureau at police headquarters, and directed him to make a thorough investigation into all the circumstances surrounding Schwitofsky's arrest. A week later Dougherty had been unable to find any irregularities in the arrest and conviction of the little electrician, and Commissioner Waldo took the matter out of his hands and put it into those of Acting Captain August Kuhne, then at the head of the Brooklyn detective bureau, now

a full captain and in charge of the 166th precinct. Kuhne studied the matter for several days, and reported that Schwitofsky was guilty of the crimes charged and justly convicted. Neither Dougherty, Kuhne, nor any of their subordinates employed on the case, could see anything in my contention that, admitting the conditions set forth at Schwitofsky's trial, the Dale burglar *must* carry on his wrists marks of his encounter with the chauffeur.

Visiting Gelsky in the Elmira Reformatory, I had a half-hour talk with him in the presence of the head keeper of the institution, John D. Driscoll. Gelsky told a coherent story of his arrest and of being beaten and kicked by Detective Talt in the Fifty-seventh Street prison, in an effort that was successful to make him falsely identify Schwitofsky as the man who had accompanied him to Forty-fifth Street on the morning of January 19th and entered the tailor's shop. Gelsky declared that the real Dale burglar had left New York before Schwitofsky's arrest, and he voluntarily went on to relate that the fellow's left arm and wrist had been marked by huge "weals," made by a pistol he had in his sleeve during a struggle with a chauffeur.

When Gelsky had been taken back to his cell, I asked Driscoll what he thought of the boy's story.

"He's a tough citizen all right," replied the head keeper, who has made a scientific study of juvenile delinquents, "but he was telling the truth that time."

Frank Harold, the chauffeur who stopped the Dale burglar and took the pistol away from him, scratching the other's wrists during the struggle, and whom I found acting as taxicab starter at the Union League Club, corroborated the story already told of the events in Forty-fifth Street on the morning of January 19th. "I let the man go," he said, "because of what he told me about Dale. After he had gone I opened

the revolver and found two blank cartridges in the chambers. I took them out, and when Detective Cousin came along half an hour later I gave him the pistol and the cartridges separately, and he took them away.

"I have often wondered why I was not called as a witness at Schwitofsky's trial," Harold remarked. "I spoke about the matter several times to Detective Browne, whom I used to see along Broadway before the trial, and expected to be subpoenaed."

Detective Cousin corroborates Harold's story about the pistol and the blank cartridges, and says that he handed them separately to the property clerk at police headquarters. Schwitofsky was indicted for making threats with a *loaded* pistol, however, which constituted assault in the first degree. No evidence was offered on this point at the trial, except that Dale in the course of his testimony said that he saw cartridges in the pistol when it was pointed at him.

I cited Schwitofsky's case to a veteran journalist, who has the reputation of knowing more about the inner workings of the police force than most of the men connected with the department. "Many detectives," he told me, "would consider themselves as acting quite within their sphere of duty in arresting your man whenever they came across him. He was an ex-convict, and doubtless a professional criminal in the minds of Kinsler and Duggan."

"As to the arrest in Harlem being a 'frame up,' that is quite possible. The detectives were out for a record, and if they could put a professional criminal behind the bars, and at the same time gain repute for themselves, they would probably consider that they were doing a public service in laying the criminal by the heels, regardless of the method of doing it. The same proposition goes with the Dale burglary, but under different conditions. Four detectives in this instance devote ten days to the apprehension of Gelsky and his partner. They get Gelsky, and he tells them

that the other offender is beyond their reach. It is not to their credit that he has escaped, and at least one of them knows of an ex-convict, whom we will say he believes to be a dangerous man, who is at large in the community and who has threatened to disgrace two brother detectives. Why not put up a job on the ex-convict, thus not only obtaining credit for the arrest of the Dale burglar, but getting a dangerous criminal out of the way — and incidentally preventing his informing on their brethren?"

Schwitofsky was convicted in the Dale case largely on the evidence of the tailor and his three female servants, who testified that he was the man each of them saw for a few minutes in a semidark hall, and afterward running and fighting in the street — and recognized ten days afterward. . . . Had the real criminal been captured and convicted of the offense actually committed at Dale's house on January 19th, he would probably, as a first offender, have been committed to the State Reformatory at Elmira for a thirteen-month term. Schwitofsky, by reason of his previous record, a part of which at least was manufactured for him, receives what is practically a life sentence, for he is of frail physique and cannot live long in prison.

Mr. Rosenberg argued the motion for a new trial on Tuesday January 2d before Judge O'Sullivan. The motion was opposed by Assistant District Attorney McCormick, whom I had shown the evidence disproving Schwitofsky's guilt some time before, and who had been so much impressed by it then that he told me he would make no objection to the granting of a new trial. Judge O'Sullivan was disinclined to grant Mr. Rosenberg's motion, on the ground that the new evidence might have been produced at the original trial. He finally accepted Mr. Rosenberg's brief, however, and gave Mr. McCormick a week to submit one in opposition.

382. **MOUDY v. SNIDER.** (1895. ILLINOIS APPELLATE COURT. 64 Ill. App. 65.) . . .

. . . Mr. Presiding Justice PLEASANTS delivered the opinion of the Court. — This action, commenced by appellee on March 14, 1894, was tried on the 5th of the following December, and resulted in a verdict and judgment for plaintiff for \$111.70. Defendant appealed. The declaration was in assumpsit on indebitatus counts for money had and received, money loaned, work and labor, and interest, and the pleas were non-assumpsit, payment, set-off, and accord and satisfaction. The claim was for money due plaintiff on a note he left with the defendant in January, 1893, which he collected on March 7, 1894, and refused to pay over the proceeds on plaintiff's demand. It is conceded that the judgment is correct, unless the defendant by a preponderance of the evidence proved the set-off claimed, which was \$100 and interest from August 2, 1892.

Appellant was a farmer living in Champaign county. Appellee was a farm laborer and well borer, and worked for appellant at different times for different periods ranging from days to months. They were on very friendly terms. On August 1, 1892, appellee came to appellant's house to assist him in haying. He finished his job and left in the evening of the next day. Appellant testified that on July 30th he drew from Ford County Bank at Paxton \$125 in three bills of \$100, \$20, and \$5; spent the smaller bills, excepting some change, in Paxton, on that day, and took home the residue in his pocket book — the \$100 bill on one side and the change on the other; that in the afternoon of August 2d, while appellee and he were working alone in the haymow, he wrapped his knife, watch, and pocket book, closed, in his handkerchief, and so placed them under one of the braces in the mow. At quitting time in the evening he went to get them,

found the pocketbook unclasped on the side containing the change — which seemed to be all there — and put it in his pocket. While at the supper table, but after appellee had eaten and gone, the question how it came to be so unclasped suddenly arose in his mind, and on taking it out of his pocket and looking on the other side found it empty. He went to the barn to look for the money, but did not find it.

He at once suspected appellee, because he was the only other person in the mow that afternoon (except a young girl who worked there and came up for fifteen or twenty minutes "to talk a little and gas"). But he said nothing about it to anybody, thinking he would hear of appellee's using it. He hired him for two months of the following winter for the purpose of watching him, and treated him as before, but discovered nothing to confirm his suspicion. Appellee appeared to be friendly as he had ever been. It was during that period of his employment that the appellee left with him \$55 in money, one note for \$110 and another for \$90, and had a balance due him on a horse trade of \$5. In February, 1894, appellant first heard that soon after the money was missed, appellee was seen by several persons at different times to have in his possession a \$100 bill, and thereupon charged him with having taken it from his (appellant's) pocketbook; which appellee defiantly denied. After several talks between them appellant returned the money and uncollected note, and paid him the balance due on the horse trade and a part of the proceeds of the note he had collected, but retained the amount of the missing bill and interest thereon from the day it was missed; and refusing to pay that, this suit was brought. The only ultimate question of fact in the case

was whether appellee got the \$100 bill as charged; upon which the burden of proof to establish the affirmative was upon appellant.

Not one of the circumstances relied on, except that of his being with appellant in the haymow, so far as they were claimed to be significant, was certainly shown, even by the witnesses for appellant, and were all (except the one stated) positively denied by appellee, whose denial was more or less supported by reasonable probabilities and natural inference from their testimony.

Three witnesses testified to as many occasions on which he exhibited a paper that looked like a \$100 bill. — The first was on August 17th, 1892, a fortnight after the one in question was missed. It was on a farm only three or four miles from that of appellant, where they were assisting in threshing. He and Snider were pitching in the field. He says Snider had some paper money there, among which was a \$100 bill; that it was not an advertisement, but genuine money; that he looked at it and had it in his hands; just looked over it as Snider showed it to him, as he would any other money, and that it was genuine money, at least he would take it for that. He did not say he looked at the back of it. He couldn't tell what bank it was on, nor whether it was a bank bill, a greenback, or a gold or silver certificate. He told Snider at the time that he was a fool for carrying his money around in that way. — The next was about the same time, between the 10th and 21st of the month, at a camp meeting in Sugar Grove, nine and a half miles southeast of Paxton. The witness was running a huckster's stand there. He says that Snider, whom he had known very well for seven or eight years, came up to his stand and pulling out what he took to be a \$100 bill said he wanted to smoke and wanted witness to change the bill. Snider laid it out flat. Witness did

not have it in his hands nor see its back; couldn't tell "what issue or what sort of an issue it was," but from what he saw he took it to be a good bill. — The third occasion was on Monday, the 27th of the same month. The witness (Martin) was in a buggy, going northwest to Paxton, and when within a mile and a half or two miles of it, met Snider going in the opposite direction in a wagon with well tools on it. He had been to town. When they met they stopped and had some talk about how they were getting along and how much money they were making. They had been well acquainted for eight or nine years, worked and been much together. Witness had been interested in the huckster stand above referred to and was telling how much they had made on it. Snider doubted it and said, "I will bet you a \$100, you didn't make near that much." Witness replied in a joking way, "Oh, well, you haven't got a \$100"; to which Snider answered, "I will just show you that I have," and pulled out and showed witness what to him appeared, and he believed to be, a \$100 bill. It was folded up when he took it out of his pocket, but he unfolded it and showed both sides of it. The witness said, "Of course I thought it strange that Snider had a \$100 bill loose in his pocket, but didn't think very much about it."

Mr. Shaw, cashier of the First National Bank at Paxton, testified that he knew appellee by sight; that on the 27th day of August, 1892, he received from him at the bank a deposit of \$115; that he "presumed" it was in bills of different denominations, and was "of the impression" that he had one large bill, a \$100 bill, but "would not be positive about that." He said, "to the best of my recollection he had some two or three or four bills, and I think one was for \$100. . . . I don't know that I was particularly impressed at the time. It was a common thing to happen.

. . . We have a large number of depositors, five or six hundred. . . . I can only say that part of this deposit was a \$100 bill, as my best impression." He could not say how many people made deposits that day; supposed the usual number; nor tell who deposited on that day, or within a week of it, but by the books, nor testify as to the denomination of the bills deposited unless it was specified in the deposit slip, or was an unusual amount, or there was some special circumstance to make him remember it. His attention was first called to it by appellant, and only about a week before the trial, which was considerably more than two years after the transaction.

It is worthy of notice that the deposit was made on the same day that appellee, going away from Paxton with tools for well boring, met his friend, the witness Martin, and showed him what he took to be a \$100 bill. Martin said their talk was brief; that appellee was working for some one and seemed to be in a hurry to go on. The time of day at which the deposit was made or the meeting took place was not shown, but the strong probability from the circumstances is that the deposit was made before appellee left Paxton. Banks usually closed long before the day's work of a farm laborer or a well borer ended. He would hardly have gone on to the place of his job, quit work during working hours and returned to Paxton before the bank closed. It is not pretended that there were more than one \$100 bill, or one likeness of it in evidence. If he had previously deposited such bill, he couldn't have shown it to Martin, and if he had such, it was altogether probable he would have deposited it with the others, rather than carry it about loose in his pocket. Hence the almost irresistible conclusions are that he did not deposit it, and also that what he did show to Martin was not such; and if not, then it is

equally probable that what he showed to the other witnesses was not a genuine bill. Appellee, who alone certainly knew the facts, positively testified, that although he saw the handkerchief placed as stated, he did not touch it; did not deposit nor show to anybody a genuine \$100 bill, and never had one; that what he had and showed was not a bank bill, nor paper really representing money of any kind, nor a counterfeit of any, but an advertisement, such as is often seen, in the likeness of such, and so clear an imitation as might deceive anybody who only looked at it, without handling or examining it; that he had carried it in his pocket a long time, forgotten of whom or how he obtained it, paid no particular attention to it and couldn't describe it at all minutely; had shown it occasionally to the young men in the neighborhood, for their astonishment and his own amusement, so handling and exhibiting it as to prevent their "catching on," and finally gave it to Eddie Henry, a grandson of Mr. and Mrs. Strayner, with whom he (appellee) made his home during much of the time. They testified that they saw it — she in his possession at several times in the summer of 1892, and both in that of the little boy, who also testified that appellee gave it to him and that after keeping it a week or so he lost it.

The actual possession by appellee of a genuine \$100 bill, after appellant's was missed, was the vital question in the case. Is it at all strange that the jury found the fact not proved by this evidence? It did not appear that appellant ever saw it after he put it in his pocketbook, nor to what extent, if any, it was exposed to loss before he missed it. If appellee took it he must have done so almost under the eyes of its owner, with whom he was working, in a little space, all the afternoon. His opportunity was hardly as good as that of the

gassing girl in his employ, who was free to roam all about the mow unnoticed, while appellee could not well be out of his sight long enough to disturb the handkerchief, take out the money, wrap and replace the pocketbook, knife, and watch just as he found them, without discovery. If he had any reason to suppose there was money there, he knew the owner would very soon miss what was taken, and might before they left the mow. They worked on together until appellant got his handkerchief and they went to supper. Appellant says there was nothing strange in appellee's leaving as he did, nor had he any recollection afterward of anything in his conduct or manner during the afternoon to excite suspicion. He knew that appellee was going that evening to George Thompson's to work. He had been working for the farmers in the neighborhood many years. He continued to do so up to the time of the trial. Yet it is claimed that within a few days after the theft, so peculiar in its circumstances, and that exposed him to imprisonment for ten years, he was showing the stolen property, of such unusual character as to attract notice and cause remark, to the young men about there, carrying it loose in his pocket, offering it at a camp meeting in payment for a cigar, and finally depositing it in its original form in a bank where the owner was likely to do business. Such circumstances were highly improbable in themselves, even upon the supposition of his guilt. The alleged fact of his taking the money was positively denied, and the circumstances tending to prove it were not unreasonably explained.

When first charged with it, and the name of a person was given as one who had seen such a bill in his possession — the only one given before the trial — he promptly proposed to go with appellant to see him. After some delay on appellant's part, they did go, and appellant was al-

lowed to see him alone while appellee remained outside. Their accounts of the interview, as reported by appellant when he came out, differ, but the fact is, that he did not produce the party as a witness on the trial, although he resided in Paxton.

Two other circumstances were brought into the case on the part of appellant which may deserve a brief notice. One was that appellee had once taken some money of George Thompson, without his special authority or knowledge. This was admitted, and, in our opinion, fairly explained; and if it had not been, was incompetent as evidence.

The other was that a week before the trial, in the course of a conversation with a witness who lived a half mile from him and knew him well, in the presence of Miss Strayner, in which, among other things, they talked about counterfeit money, appellee expressed a wish that he had a counterfeit \$100, and asked the witness if he could get one for him, but did not state what for, particularly, but for a purpose. They both knew this suit was pending and what it was about. The inference drawn is, that he wanted it to produce on the trial and claim it was what appellant's witnesses saw. But for that purpose it would serve no better than his advertisement. He was, doubtless, already committed to the advertisement theory. How could he want to produce a counterfeit bill, if he got one, for any such purpose, with these witnesses ready to prove how lately he got it? But his advertisement had been lost and he couldn't procure another. He might properly want a counterfeit to test the ability of appellant's witnesses to distinguish a counterfeit from a genuine bill, with no better opportunity for examination than they had, and to show, if he could, that his advertisement was as good an imitation of a genuine bill. We think the inference sought to be drawn far-fetched and unreasonable.

Appellee was asked where he got the money he deposited in the bank, and answered that after so long a time—over two years—he could not state positively. But he had been at work most of his time, economical and saving in his habits, and received it from a number of persons who had owed him for work or for loans. He named eight or nine, from three or four of whom he got money that he believed went to make up the \$115 deposited. In support of the motion the affidavits of four or five of these named were submitted, showing how much the affiants, respectively, had paid him, and when; two of whom fixed the time of their payments at a date shortly after that of the deposit, and two others at a considerable time before—one, of an amount not exceeding ten dollars, as early as the year 1889. But he was

shown to have been industrious and saving of his money—having little occasion to spend it except for his clothes. He did not use tobacco nor drink liquor. These affidavits do not tend to impeach his veracity, but rather to show it; nor even his memory. Who could say positively, two years and four months after a deposit of \$115 in several bills of no uncommon denomination, just when, where, of whom, and for what he obtained them? Appellee fully admitted that he couldn't. . . .

This statement of the evidence shows that the question involved was eminently one to be finally determined by a jury, and that there was quite enough to support their finding. . . . We find no material error in the record to the prejudice of appellant, and the judgment will be affirmed.

383. O'BANNON v. VIGUS. (1891. ILLINOIS APPELLATE COURT. 48 Ill. App. 84.) . . .

Appellant's Statement of the Case.—Eliza Vigus, the mother of appellee, D. L. Vigus, on the 23rd day of May, 1872, took out a policy in the Protection Life Insurance Company, of Chicago, for \$5000, payable to appellee. She died on the 12th of October, 1874. Proofs of loss were duly made to the company. At the request of appellee, R. W. O'Bannon (now deceased) went to Chicago early in January, 1875, to collect the amount of the policy. In two or three days he returned, and brought with him a note and check for \$1000 each, dated January 5, 1875. They were accepted by appellee, and on the same date he gave a receipt to the company in full payment of the policy. O'Bannon died on the 13th of November, 1883, and appellant was appointed his executrix. On the 19th of June, 1884, appellee filed his claim against the estate as follows: "Estate of R. W. O'Bannon, deceased. — To Darius L. Vigus, Dr.—To the sum of \$3000, collected and received by said O'Bannon, to the use of said Vigus, of the Protection Life Insurance Company, of Chicago, on policy No. 4266, on the life of Eliza Vigus, now deceased, on, to wit, the 4th day of March, A.D. 1875, with interest thereon at the rate of 6 per cent per annum. Said money having been collected by said O'Bannon while acting as claimant's agent; the collection of which sum was by said O'Bannon fraudulently concealed from the claimant during the lifetime of said O'Bannon."

The policy was for \$5000. Two thousand dollars were collected by O'Bannon and paid to Vigus. As to this there is no dispute. The contention is as to the \$3000. The evidence offered to show the liability of the estate was the following receipt on the back of the policy: "Received of the Protection Life

Insurance Company five thousand dollars, being amount in full of the within policy. (Signed) D. L. Vigus. By R. W. O'Bannon." This receipt was without date. It was written by Terpenney, the bookkeeper of the company, except the words, "five thousand," and the signature. He said: "O'Bannon was in the office of the company when he wrote the receipt." It is claimed that the receipt was false, the words five thousand dollars having been filled in after it was signed by O'Bannon. . . .

OPINION OF THE COURT.—On the night of Sunday, January 5, 1873, R. W. O'Bannon went from Raymond, in Montgomery County, to Chicago, as the agent of appellee, to collect what he could on a policy of the Protection Life Insurance Company for \$5000 upon his mother's life for his benefit. On the night of Tuesday, the 5th, he returned, reported to him a compromise and settlement, subject to his approval, with A. W. Edwards, secretary and manager of the company, for \$2000, as the best he was able to make, and advised him to accept it. At the same time he tendered the company's check of January 5, for \$1000, and its note, at sixty days, of the same date, for a like sum, both payable to his order. After hesitation and discussion, appellee accepted them, and signed a receipt of the same date, which had been prepared by Edwards, in full of the policy, but without stating the amount; which was returned to the company on Friday, the 8th. Appellee never received anything more on the policy, but the further sum of \$3000 was afterward assessed and collected by the company on account of this loss, and paid to somebody, on its check of March 4th made payable to his order. This check was drawn by Mr. Terpenney, the

bookkeeper, by direction of Edwards, and delivered to him; was paid some time in June, and on its return by the bank was placed by Terpenny with the other papers in the case in the company's vault, to which Edwards had access. No further trace of it appears.

In 1877 the company failed. Edwards removed to Dakota in 1879. His deposition was taken, and he strangely denied all recollection of the check settlement or claim. Terpenny, who continued in the service of the receiver or assignee after the failure, looked for it carefully, and found all the other papers relating to the case together in their proper place, but this check was gone and has never been traced. The check for \$1000 given to Vigus, and the check given the bank cashier to pay the note, were signed by Hillard, as president, and Edwards as secretary, according to the custom. The one for \$3000 was signed by Edwards, as secretary, but by whom else or how it was indorsed Terpenny did not recollect, nor was it otherwise shown. In his search for it in July, 1883, he found among the papers the policy in question, with a receipt indorsed thereon, purporting to be for "five thousand dollars, being amount in full of the within policy," without date, and all in his own handwriting except the words "five thousand," which were in that of Edwards, and the signature, which was "D. Vigus, by R. W. O'Bannon," and in the handwriting of the latter. In October following he casually informed appellee of this receipt, and thereupon an action on the case was instituted against Edwards.

O'Bannon was then on his deathbed, and died on the 15th of the next month. Appellee afterward dismissed his suit against Edwards, and on the 30th of June, 1884, filed this claim in the County Court against the estate of O'Bannon for the amount of the missing check and interest from its

date — alleging that O'Bannon had collected it as his agent and fraudulently concealed the fact. There the claim was disallowed. The case has been three times tried in the Circuit Court and brought here on appeal from its judgments. The first was for the defendant, which was affirmed on the merits (19 App. 241), but the Supreme Court reversed it and ours. (118 Ill. 334.)

On the second trial some changes of more or less importance were made by some of the witnesses in their statements on the first, and some new evidence introduced on each side; and the judgment was for plaintiff, Vigus. We thought these changes and additions weakened his case and positively strengthened the defense. His case rested, as before, on O'Bannon's receipt as it then appeared on the policy, his alleged admission to Miller in the spring of 1875, and statement made on his return from Chicago about the cancer letters. We discredited all this evidence; the receipt, because the words "five thousand" were inserted without his authority where it was blank when he signed it; and the admission and statements, because the testimony tending to prove them was unreliable and improbable in itself, inconsistent with better attested facts, supported only by assumptions which were themselves unsupported and more rationally explained by the supposition that they were misunderstood. Thus, if the admission to Miller, as stated by him, was embodied in a request that was in the highest degree insulting to a man of honor and yet was not resented nor disclosed until O'Bannon was dead and this claim had been disallowed by the County Court, was not true in fact, and would expose his own estate to loss and his reputation to ruin, reason and charity would force the belief that it was not so intended by O'Bannon, and never so understood

by Miller until he heard of the surprising receipt on the policy, but always before as having been in substance the same that had been made to Vigus and others before and about that time, namely, that he had settled the claim of Vigus upon a five-thousand-dollar policy, and not that he had collected \$5000 upon the policy. So also, of the alleged statement about the cancer letters or letter; if it was improbable on its face, untrue in fact, needless or rather hurtful and hindering to the purpose supposed to be in view, likely to lead to injury, easy to be disproved, with consequences certainly ruinous to himself and disgraceful to his family, every fair mind would naturally look for some explanation which should make it more probable that the witnesses were mistaken than that he made or intended to make such a statement. All of this was true and proved of the statement alleged, and an explanation was suggested, which has not been shown nor attempted to be shown to be inadmissible.

On the other hand, the clear weight of the evidence seemed to show that on January 5, 1875, O'Bannon in good faith finally settled the claim in question for the check and note of \$1000 each, that he delivered to appellee, and no more, subject to his ratification. For it established the following facts: Proof of death of the insured was submitted to the company November 28, 1874. By the terms of the policy it had ninety days from that date within which to pay the loss. Appellee wanted money, for a special purpose, as soon as he could get it. He began at once to importune the company for it. Edwards paid no attention to his letters. For some reason he soon came to expect he would have to submit to a compromise, if he got anything. His mother had been treated for cancer existing before the policy, which had lapsed, was reinstated,

though it does not appear that O'Bannon knew or had any intimation of it before he went to Chicago on this business. He went on short notice, in place of his son who had been first engaged, because of his long and friendly acquaintance with Edwards. He went expecting to compromise, and authorized to do so on the best terms he could get. At what time on the morning of the 4th he arrived at Chicago, or how soon afterward he saw Edwards was not shown. Doubtless he saw him on that day, but not at his office. They discussed the claim, probably at considerable length. Edwards told him the company had information that when the policy was reinstated Mrs. Vigus was not a fit subject for insurance, and particularly, at least, that she had been injured by a fall on the street at Litchfield for which she had recovered damages against the city. It did not appear that in that interview anything was said about cancer, unless from statements of O'Bannon on his return. Finally, however, Edwards made him as low an offer as \$2000, and no more. O'Bannon hesitated to accept it, and they separated without a settlement on that day. Up to this time, surely, it cannot be pretended that their action was not natural, businesslike, in good faith, and at arm's length. On the next day O'Bannon appeared at the office of Edwards, which was occupied by Terpenney also, whose desk was only about ten feet from that of the secretary, and while there Terpenney, by direction of Edwards, drew or filled up and delivered to him the note and check for \$1000 each and the receipt on the policy with a blank space for the amount, and Edwards prepared the receipt in full for appellee to sign if he would. Whether the note and check were printed and already or ever afterward signed by the president or vice president, does not appear; but they were duly paid. The

policy was left with Edwards, and O'Bannon, with the note, check, and receipt to be signed by appellee, took the evening train for Raymond. Terpeny made an entry on the books of the company, of the same date, showing that the note was given for the "balance due," all that remained to be paid on the policy. There was no evidence tending to prove that O'Bannon ever afterward had any communication with any agent of the insurance company or of the bank, or knew of the filling of the blank in his receipt or of the existence of the \$3000 check, except his alleged admission to Miller, and the fact (if it was a fact, of which there was some evidence) that he went again to Chicago at some time in the following spring, which in our judgment was fairly overcome by the two receipts in full, the book entry and the other facts stated. If a final settlement could be proved by circumstances, these, not otherwise explained, would prove it. All of them having so appeared on the first trial, we found it was then and thus made; and that fact alone, if such was the fact, would of itself effectually dispose of the alleged admission, and make wholly immaterial in this action, whatever lies O'Bannon might have told to justify his settlement or induce its ratification.

Feeling the force of these circumstances, appellee introduced as a new witness on the second trial, Martin Ryan, the actuary of the company, who testified, that about the 1st of January, 1875, Edwards, at his office, introduced him to O'Bannon; that they proceeded to talk about this claim; that O'Bannon urged its "settlement," and Edwards "seemed disposed to favor him, but said it had not been assessed for yet; O'Bannon desired some money immediately, on that occasion; Edwards agreed to give \$1000 down or a check for \$1000, and a draft or note at sixty days —

I think it was for another \$1000 — *and the balance when the claim was assessed for and collected;*" that Edwards then handed to witness the proofs of loss and told him to see that it got into the next assessment (without stating the amount), to be sent out early in February, and then directed the bookkeeper to draw up the check and note for \$1000 each, which the bookkeeper apparently proceeded to do. The case of plaintiff and the reputation of Edwards were in urgent need of some such evidence as this statement that he then agreed to pay on this policy \$3000, in addition to the note and check then given, when the claim was assessed for and collected. But it could not be made to fit the facts. It was conceded upon the uncontradicted testimony of Charles A. Walker, the attorney of the company, who was also a new witness on the part of the defense, that no longer than the day before, after some discussion in his office, which was in the same building, and just over that of Edwards, O'Bannon and Edwards, in his presence, absolutely agreed on a compromise and settlement of the claim for \$2000, which Edwards had first offered; that O'Bannon seemed well pleased with that agreement, having been satisfied by Walker that the claim would be resisted if pushed, and that \$2000 paid would probably be better for appellee than a judgment for the full amount; and that upon coming to the agreement O'Bannon and Edwards went downstairs together. We believed then, and think we can now show more clearly, that the meeting spoken of by Ryan took place immediately upon the agreement to compromise spoken of by Walker; that they went directly from his office to that of Edwards, and that the conversation between them there had no reference whatever to the amount, because that had just been agreed on, but solely to the time and manner of its pay-

ment, which had not been settled upstairs. Even according to Ryan, O'Bannon wanted some money immediately, and the disposition of Edwards to favor him was shown by his consent to give \$1000 in cash, and a note, on which money could be immediately raised, for the residue.

But upon the contention of counsel as to the *time* of the agreement on the amount, we said in the former opinion: "We are asked to believe that this secretary, who, notwithstanding his friendship for O'Bannon, on Monday, for the substantial reasons stated, in the presence and with the concurrence of the company's attorney, committed himself to a peremptory refusal to pay more than \$2000, and actually got an agreement to settle for that amount, with which O'Bannon seemed well pleased, on Tuesday, without any new light on the subject, and without the knowledge of the attorney, was entertaining a proposition from O'Bannon to settle, and was so 'disposed to favor him' that he would have paid the full amount right down except that it had not been assessed and collected, and actually paid \$1000 down, gave the company's note at sixty days for another thousand, and a *verbal* promise to pay \$3000 more, to which all claim had been abandoned, as soon as it should be assessed and collected, and gave directions to have it assessed and collected as soon as possible. Considering, further, that nothing was yet due, that the financial condition of the company was not such as to justify any needless liberality in the settlement of claims against it, and that the bookkeeper at the adjoining desk, who was probably within hearing of the whole arrangement, when he did 'proceed to draw up the papers,' proceeded further to enter the transaction on his books as a settlement for \$2000 and no more, the statement that the secretary then agreed to pay the further large sum of \$3000

seems but little less than monstrous." This agreement to settle for \$2000, proved by the circumstances and by the direct testimony of Walker, and now conceded, was made in good faith; for if the parties had then conspired to get from the company \$5000, it is morally certain that they would not have made Walker a witness to their agreement on \$2000. And unless that agreement was abandoned and a new one made before the note and check were delivered, then it was also executed in good faith. The evidence proved to our satisfaction that there was no such change in the agreement.

To the reasons suggested in the above quotation, no answer has been attempted. The papers executed were in accordance with the agreement. There was no time after it was made and before the delivery of the papers, sufficient for the concoction of such a conspiracy as is charged, or any material change in the terms of settlement so agreed on, nor any afterward, and before O'Bannon returned to Raymond; for, upon receipt of the papers, he left the office, and there is no evidence or reason for the belief that in the meantime he had any meeting or communication with Edwards; and if he did, it would seem to be the height of assumption and presumption to suppose that he would have broached or Edwards dared to suggest to him the idea of such a conspiracy. Nothing in his conduct or reputation or relations to Edwards or to appellee appears to warrant, but everything to forbid it. His life for nearly nine years afterward, at Raymond and Litchfield, was a continuous and emphatic denial of it.

The fact of a bona fide, executed settlement for \$2000 being thus established, it follows that he could not have intended to admit to Miller or anybody, at any time, that he collected or received \$5000; and that the question of false representa-

tion as to the cancer letter — if any such was made, which we do not believe — is immaterial. For the reasons thus indicated, and others more fully set forth in the opinion filed (32 App. 483–487), this second judgment was reversed and the cause remanded. Having seen no reason to retract or modify the expression of our views of the law or the evidence as to any material point presented by the record then before us, we might here have simply referred to it, for those we still entertain, so far as applicable. But out of respect to counsel and their elaborate argument, if not also in justice to ourselves, we have repeated them, condensed, and somewhat rearranged in their order, as a better introduction to what is now to be said on the bearing of the new evidence.

The points now urged as against the conclusion of the court on the former record are, (1) that there is not nor ever was, any evidence that the receipt on the policy was drawn or signed on January 5, 1875; (2) that the agreement in Walker's office to settle for \$2000, was made on the morning of the 4th, and a new one for \$5000 on the 5th, when the note and check were given; and (3) that the new testimony of Mr. and Mrs. Hill fully proved O'Bannon's admission that he collected \$5000. It is said the legal presumption is, that he signed the receipt as it now appears, and the inevitable conclusion from that fact and the testimony respecting his admission, is that he did collect that sum.

(1) It is true of the receipt that Terpenny did not and would not give the date of its preparation, doubtless for the reason, and only for the reason, that it bore none on its face; for the occasion fixed the time just as certainly, and he had testified before, and not less than five times on the last trial, that he wrote it while O'Bannon was in the office, and further, that he never saw him there, but the one time. To

this there was no contradiction, and, in connection with other facts, it is conclusive. . . . Having then received the check and note, then was the proper time to receipt for them. There was every reason why he should and none why he should not. Edwards was an experienced man, acting for the company. Such men do not make such payments without taking receipts. It was especially proper in this case, because O'Bannon was but an agent and his principal might not ratify the arrangement. His right to refuse was expressly reserved. No other receipt than the one so indorsed is claimed to have been given by him at any time. We think it has already been sufficiently shown why the statement of Ryan on the second trial, that Edwards agreed to pay the further sum of \$3000 when assessed and collected, ought not to have been believed; but his statement on the last, and the new evidence for appellant, call for some further observations in regard to it. On the second trial the testimony of Walker preceded his. He now says he thinks he did not read it before he testified, but that he had some conversation with appellee and Mr. Truitt, his attorney, and they told him, in a general way, about it. Walker had said he had been under the "impression" that the meeting in his office, when the agreement to settle for \$2000 was made, was on a *Monday* morning, in the latter part of December, 1874, or first part of January, 1875. A good many years had since passed. He said: "Of course it is simply an impression that has got on my mind. I don't know why I have got the impression." It appearing that the 4th of January, 1875, was on a Monday, and that the note and check and receipt for Vigus to sign, and the entry on the book that the note was given for the "balance due on policy 4266," were all under date of January 5th, and that O'Bannon had said he made the settlement on

the second day he was in Chicago, it was seen that appellee's claim was to be upheld only by the slender thread of Walker's unaccountable "impressions," upon the basis of some proof that when the settlement was actually made, there was an equally unaccountable *verbal* agreement to pay \$3000, supplementing two written obligations for \$1000 each. And Ryan, whose devotion to Edwards was shown, furnished the proof of such a sudden, great, and unaccountable change in the agreement. For the reasons indicated in the quotation above made, we thought and said it was more probable that Walker's impression as to the day was wrong than that any such change was made. But Ryan, since he furnished that proof, has read the preceding testimony of Walker. At first he denied it, but being confronted with his own letter to Walker stating that he had, he admitted it. Whether he had also read the opinion of this court does not appear. But for some reason, his clear and positive statement turns out on this trial to be also at best only an "impression," quite as vague and shallow as that of Walker. He says: "The settlement of the Vigus claim was talked between Edwards and O'Bannon. I did not pay special attention to the details. . . . My best recollection is, it was agreed to pay \$1000 cash, and note payable about the time the money would come in. . . . He stated, I think, it was a great favor they were extending O'Bannon in making advance payment, as the company was entitled to the date fixed. . . . Nothing was said about the result of the money due on the policy, in my presence. As I stated, I am not very clear as to what was said about the balance being paid when the claim was assessed and collected. My best recollection is, he was impressing on him that he was doing a favor; that the balance would be paid inside of ninety days, after

the assessment. My best recollection is, this was stated — be paid when the assessment was collected." On cross-examination he says: "Edwards ordered a check for \$1000 and a note for \$1000 on the Vigus claim, to be drawn up. I am not positive as to what was said about a balance. Have only a vague impression. Would not swear anything in relation to it, so void is my mind as to what was said." We regard this as a substantial recantation — an admission that according to the statement of Edwards on that occasion the settlement was for a check (cash) and note at sixty days each for \$1000; that the favor shown was by the payment in advance of the time mentioned in the policy; that the balance to be paid when assessed and collected, if anything of the kind was said, was the balance for which the note was given, as entered on the books, and not the further sum of \$3000, of which nothing was said in his presence. The whole of the talk was confined to the time of payment of the amount agreed on — O'Bannon wanting cash, and Edwards insisting on the time for a part. Thus the testimony of Ryan is additional evidence of an actual settlement for \$2000, and that it was made in good faith.

(2) The other contention of counsel is also shown to be groundless. Walker's impression as to the time of the meeting and agreement in his office, was wrong; it took place on Tuesday, January 5th, and immediately preceding the execution of the papers, in the office of Edwards, as is more fully proved by the new evidence. Walker testified before, and now also, that the meeting was in the *morning*. Counsel's position was that it was *Monday* morning, and that the parties had all the afternoon and evening after the agreement, in which to conspire, before the papers were executed. We thought it was Tuesday, because they would naturally proceed to execute the agree-

ment immediately, since it would require only a few minutes' work, and the office of the secretary and bookkeeper was just "downstairs," whither they went together; and further, because of the improbability that the preceding meetings and discussions and the intervals of time between them, together with the meeting in Walker's office, could have all occurred on the same morning, as they must if the latter, which was the last, was on Monday. First, O'Bannon, after a night ride in the cars, met Edwards — where or at what time was not shown — and they had a talk, doubtless somewhat lengthy, as it involved the justice of the claim and the question of a compromise; afterward, how long is not shown, Edwards saw Walker, told him O'Bannon was in town about the Vigus claim, that he had talked with him about a compromise, offered him \$2000, which O'Bannon had not accepted, and that he probably would if advised by Walker to do so; and then, after another interview, how long did not appear, Walker says he took O'Bannon up to his office, went over the case, and advised him to accept the offer made. All this took place before Edwards was called up and the agreement made. We still think it highly improbable that all of this took place on one morning. The question, however, is only as to the last, when the three parties were together and the agreement was made.

We regard the point of the time when it was made, within the period from O'Bannon's arrival in Chicago to his receipt of the note and check, as of no importance whatever to the defense of appellant, because, in our judgment, the idea of such a change in the agreement as is claimed, within any time that can be pretended for it, is on its face not to be entertained. Why, Ryan himself says that in the very conversation between them when the papers were drawn up, Edwards told O'Bannon that "there was a dis-

pute about the claim, and an investigation, owing to letters from his locality in regard to Mrs. Vigus's condition," though he could not say what was said, particularly, as to their contents. And yet it is seriously claimed that he promised to pay \$3000 more than had so recently been agreed on; Ryan added that, when Edwards told him about the letters, O'Bannon, in substance, stated that "some enemies or unfriendly parties had been interfering with other people's business," which may help to explain the cancer testimony, and to show that the parties were still dealing at arm's length and O'Bannon was still faithful.

Counsel for appellee seem to see that unless by way of this idea of a change in agreement, his every approach to a recovery from this estate is solidly excluded by the evidence; and therefore, whether a sufficient reason can or cannot, at least a sufficient time and opportunity to make it, must be shown. Though proof of these might not materially aid his case, the want of it would be fatal. Important as it is to him, the whole argument for the time claimed is as follows: "On Sunday night, January 3, 1875, O'Bannon started to Chicago, where he arrived the next morning . . . and it seems called *at once* on Edwards. After seeing Edwards, O'Bannon seems to have left the place of meeting, for when Edwards saw Walker, *that morning, so Walker says*, the former told the latter that O'Bannon had come to Chicago on the Vigus matter, and that he, Edwards, had offered \$2000 to settle the claim, and that he thought O'Bannon would accept it if Walker saw him and talked to him. We call particular attention to what Walker says. In response to the question, what Edwards said, he answered: 'Said Dick O'Bannon was in town.' For what purpose did he say he was in town? 'Said to me, Uncle Dick O'Bannon is in town; was up to see about the Vigus

matter, etc.' This language clearly shows that O'Bannon's coming *must* have been of very recent occurrence; that he had *just* had his first interview with Edwards; that it *must* have been the first morning he was there; otherwise his old friend Walker *would* have sooner heard of it. Now, as O'Bannon left Raymond Sunday night, and would naturally arrive in Chicago the following morning, *the conclusion must irresistibly be that it was on Monday morning, January 4, 1875, that O'Bannon was in Walker's office.* Walker then says that he watched for O'Bannon at the foot of the stairs, from which they went to Walker's office." We find in the evidence no warrant for such positive use of any of the terms we have italicized; nothing to show with any definiteness at what time of the day or even on which of the two days O'Bannon first saw Edwards, how long he remained with him, how soon after they separated Edwards saw Walker, or how long he remained with him. All of these are matters of mere conjecture, or at most of very uncertain probability. It may have been as counsel assert — but it may not. For all the purposes of this case these assumptions may be conceded. We call attention to them only to show the looseness of the argument. But it would still be very easy to resist the conclusion last stated from the given premises or any other reasonably supported by the evidence, even as it appeared on the former trial. Now, consider the testimony of Walker on the last one. After stating the offer of \$2000, and its acceptance, he proceeds: "They then went downstairs together. I saw Edwards at twelve o'clock, as I went to lunch. I went into his office and said, "You and Uncle Dick settled the matter," and he said "Yes." I saw Uncle Dick that afternoon and said to him, "You are lucky; you and Edwards have settled the matter;" and he said, "Yes, have settled."

The conclusion from this language that it was *not* on Monday morning, January 4, 1875, that O'Bannon was in Walker's office, is so natural, reasonable, and plain that we draw it without hesitation. The twelve o'clock mentioned was the twelve o'clock of the same day they were in that office; they *settled* before that hour; and the settlement was made, as the papers show, on Tuesday, January 5, 1875. It was immediately on going downstairs together that they arranged the mode of payment and executed these papers. This was manifestly done in good faith. There was no time or reason for the asserted change in the agreement, and none whatever was made. Further, when Edwards was seen at twelve o'clock, O'Bannon was not with him, and when O'Bannon was seen in the afternoon, Edwards was not with him; and, as before said, there is not a particle of evidence tending to show that they were again together at any time before O'Bannon returned that night to Raymond. His report to appellee the next day that he had settled the claim for \$2000, and could get no more, was therefore substantially and literally true. That he had then conspired with Edwards to get more, or he had thought of getting it in any way, is a proposition without the least support in the evidence, so far as we can see.

It does not appear that Edwards himself had any such design until just before the \$1000 check was drawn. The new proof shows that in December he wrote to Walker, the company's attorney, that this claim should be compromised. On the former trial, as on this, it was shown that the assessment for this claim, as presented to and approved by the executive board, was for \$2500 (as it would be according to the custom, as proved, if it was compromised at \$2000), and it was so stated in the notices to members sent out in February; though the amount required to be paid by each

would raise \$5000. Ryan said the \$2500 got in by mistake or misprint, which may now be doubted. But however that may be, Walker testified on this trial that early in February, Edwards and Ryan came into his office with these notices and asked his opinion as to the propriety of sending them out. He told them that this claim was compromised at \$2000 and assessed for at \$2500; that these notices were wrong and ought not to be sent out, to which Edwards replied that "there was no time to reprint them now, and if anybody kicked he would send the money back"; that he represented \$25,000 of the company's stock, and that in consequence of this statement of Edwards he then determined to get out; and that though he made no further complaint about the matter, he did leave the company in the following May or June. Counsel indulge in an insinuation against Walker, because he did not call attention to this over-assessment, which we think gratuitous, since, according to his understanding and the statement, it was simply a premature collection and the excess would still inure to the benefit of the members, according to the regular course of business, as shown, because it would be turned to the contingent assessment account. Walker therefore discharged his duty when he advised as strongly as he did against the sending out of those notices. The point we are making, however, is that Edwards was then *fully aware* that Walker knew the claim had been settled for \$2000. It had been so declared and admitted in the presence of Ryan. (It is true that Ryan testified he had been instructed by Edwards to make the assessment for \$5000, and did so; that he had no recollection of the conversation related by Edwards; and at first positively denied that he was ever in his office while he was connected with the company, but on having his attention called more particularly to it admitted his mis-

take.) It is hard to believe that Edwards, in the face of this knowledge of Walker, then intended to rob the company of this excess of \$3000. Yet it may be that a month later — Walker in the meantime making no further complaint about the assessment notices and preparing to leave the company — he may have formed that purpose. The excess would be collected early in March. A check for it could then be drawn to balance the books and look regular, but need not be paid until Walker was out. Ryan was his friend, whose conduct in this connection is questionable. Edwards had the receipt of Vigus in full and could fill up the blank in that of O'Bannon with "five thousand." These would satisfy the company that he had paid to the beneficiary the full amount of the policy and explain the mistake in the representation of the assessment as for \$2500. He could easily find somebody who, for a consideration, would imitate the signature of Vigus, in his possession, and if he recognized the indorsement, the bank would not question it, and he could abstract the check when returned. For such reasons as these he may have concluded to take the risk. We do not say this is the true explanation of the facts proved, but we see no other. Counsel for appellee are compelled to charge, and do charge, Edwards with complicity. We, too, are fully satisfied that if O'Bannon is guilty, Edwards also must be; for O'Bannon, without his aid, could not have obtained the check. But it is clear that after Edwards got the receipts of O'Bannon and Vigus, he had no need of O'Bannon's aid; and we fully believe, as we have endeavored to show from the evidence, that O'Bannon gave his and procured that of Vigus without a thought of wrong.

(3) Of the testimony of Mr. and Mrs. Hill but little need be said. We regard it as wholly unreliable in itself, and abundantly contra-

dicted by the facts and probabilities of the case. They do not themselves agree. They were not witnesses of a kind to be relied upon as to the precise language used in a casual conversation fifteen years before and never thought of in the meantime — not for lack of honesty, but of intelligence, discrimination, and nice observation. They first talked it over with a zealous attorney for appellee, — to whom we impute no improper purpose or method, but every experienced lawyer knows the tendency. Mr. Hill was a farm tenant; he testified that in April or May, 1875, he and his wife were in the store of O'Bannon (J. D.) & Vigus, where they generally did their trading: that she then had an interest in a policy of this company on her father's life; that crops were poor, it was hard to keep up payments, and they had talked of letting it lapse; that as he came into the store after her, R. W. O'Bannon said to him that his wife had been telling him this, and advised them not to do so; that he said it was a good, reliable company, and that he had just *collected* \$5000 on this Vigus policy. On further examination he testified that O'Bannon might have said he *settled* the Vigus policy for \$5000, though he thought it was the other way; then, that he said, "I *received* \$5000 on the policy"; then, again, that the word was *collected*, of which he was pretty certain; then, that he could not give the identical language, and finally, "*my best recollection is that he said settled.*" It appears that from O'Bannon's language, whatever it was, this witness got the impression that he had received the insurance, as he easily might from the statement that he had "settled" the claim on a \$5000 policy, and therefore, naturally enough, he so testified at first; but he made it just as clear afterward that he couldn't pretend to be confident as to the language. His testimony on the whole shows it more probable that

O'Bannon said he had settled a \$5000 policy, or a claim on such a policy, than that he said he had collected or received \$5000 on it.

Mrs. Hill, who was excluded during his examination, with a like impression received in the same way, testified that the conversation occurred in May, 1875, which she thought was only eight years ago, and that O'Bannon said he collected the full amount, \$5000, and that she could give his exact words. She stood immovably by her first statement. Giving her full credit for honesty, it may yet be observed that a woman, as ignorant as she, and unused to courts, might naturally be inclined to resent a cross-examination, however proper, and show herself quite unreasonably persistent and positive. And conceding that the jury, with better means than ours, discovered in her manner no sign of such a weakness, we still think her statement unreliable in its nature and untrue in fact. There was plenty of room for a misunderstanding, and of time for a failure of memory.

Her husband's "best recollection" of it is different. It is refuted by the accumulated evidence of an actual and honest settlement for \$2000, to which we have referred. Its strange inconsistency with the whole current of his statements on that point, from January 6, 1875, when he reported that settlement to appellee, doubtless to and beyond the time of the conversation with the Hills, cannot be explained or rationally accounted for. The amount of the policy, his mission to Chicago, its somewhat disappointing result, and its reluctant acceptance by appellee, were generally known and talked of in that little community. O'Bannon made no secret of it. He enjoined secrecy upon nobody to whom he told it, and he told it to many persons and on many occasions. Nor was there anything more secret or confidential in his talk with the Hills. J. D. O'Ban-

non was in the store waiting on customers. Vigus himself had gone out, but for aught that appears was liable to return while that talk was going on. To all these persons on all these occasions he stated that he settled for \$2000, and could get no more. On what principle or course of human conduct, common or exceptional, can it be believed upon such testimony as Mrs. Hill's, that he told her he collected the full amount, \$5000?

The theory of appellee's case is itself strongly against it. That is, that on the 4th or 5th day of January, 1875, O'Bannon entered into a conspiracy with Edwards to defraud appellee of \$3000, by making it to be believed that his claim was compromised for only \$2000. According to this theory, the most important thing of all he was to do and to keep carefully and constantly in his mind to do, was to conceal the fact that he had collected or received \$5000 on that policy. It was the very gist of the supposed conspiracy. If he was in it, he was bound by every motive of interest, hope, and fear to guard against every word or act that might lead to a suspicion of that fact. And yet it is claimed to be overwhelmingly proved that in the open store of his victim, where he had so often and to so many asserted the contrary without the slightest reason or occasion, and apparently with the utmost coolness and unconcern, he was blabbing the secret he was so vitally interested to keep. And then he went right on for nearly nine years, to the day of his death, living and acting as though he had never either blabbed it or possessed it. . . .

Each of the new trials has deepened and strengthened our convictions as to the facts which should dictate the finding. Upon the question whether R. W. O'Bannon ever received upon the policy anything whatever other or more than the note and check he reported and delivered to appellee, or by conspiracy

with Edwards enabled him to get it, we regard the case as not a close one. In our judgment, after three trials, carefully reviewed, the negative is established by a clear and satisfactory preponderance of the evidence — proving not only that the deceased did not commit the wrong shown, but that another, without his concurrence or knowledge, did. Whatever may be claimed for the *prima facie* case for plaintiff, it was overcome and overwhelmed by the defense. Of the receipt, its integrity as well as its truth was impeached. . . . That it was forged or altered after its execution, may be proved by a bare preponderance. This was so altered, and by the insertion of a falsehood, as shown by far more than a bare preponderance. The alleged verbal admissions are not truly reported. They were never made. The testimony in relation to them is otherwise easily explained. The more it is considered, in the light of the theories of the case on both sides, of O'Bannon's life and conduct before and afterward, and of the other independent evidence that the fact was not as claimed to have been admitted, the more clearly it is seen to be unworthy of consideration.

This verdict, then, is unsupported. On the other hand, it is shown by direct and positive evidence, and not left to inference, that O'Bannon was authorized and expected to compromise the claim; he was met with a denial of its justice, an argument against its allowance and an offer of \$2000; resisted the argument and declined the offer, or left it unaccepted; the next day, upon further argument by Walker reënforcing that of Edwards, agreed to accept it; immediately afterward received the note and check and signed the receipt on the policy left with Edwards; returned home that night and the next day reported to appellee. On maintaining and forwarding his receipt, his agency ceased. The assessment and collection for the

loss, the alteration of his receipt, the drawing of the \$3000 check, its presentation, payment, return, and abstraction, all took place afterward, at Chicago, more than two hundred miles from Raymond. We think we know who were concerned in each and all of them. There is not one particle of evidence tending to prove that O'Bannon had any connection with either, except the alleged admissions. The fact that he visited Chicago in the spring, if a fact, at most proves only a bare possibility, most remote. Any and every inference of his guilt must presuppose a conspiracy on the 4th or 5th of January, 1875, which could not

then have been formed. The conspiracy cannot be legitimately argued from assumed facts whose existence must in turn be argued from the assumption of the conspiracy. Excepting the admission, such is, in our opinion, the character of the argument here made, and the claim of such admission seems to us well-nigh absurdity. The verdict, then, was not only unsupported by the evidence, but against the great weight and body of it, and therefore should have been set aside. . . .

The judgment of the Circuit Court will be reversed and the cause remanded.

384. TOURTELOTTE v. BROWN. (1894. COLORADO COURT OF APPEALS. 4 Colo. App. 378.) . . .

This case was formerly before this court. All the questions and issues involved were settled except one. It was alleged in the answer that the note in controversy was a forgery, was not executed by Francina Hawkins. Issue was taken and the defense relied upon. A large amount of evidence was introduced in an attempt to establish the forgery. No finding as to the question of forgery was made by the jury. The Court submitted to the jury the following question for a special finding: "Was the name of Francina Hawkins at the end of the note forged?" To which was answered: "Jury cannot agree." A general verdict was rendered for the defendant (defendant in error in this case). The case was brought by writ of error to this court. . . .

REED, J., delivered the opinion of the Court.

A brief statement in regard to the subject matter of the controversy and relation of the interested parties will suffice to explain this case. In July, 1887, Mrs. Francina Hawkins was an aged widow of over 70 years, possessed of considerable property, — the amount is not shown. Her heirs were her daughters Maggie A., wife of Nathan S. Hurd, and Nancy, the wife of H. A. E. Pickard, both of mature age. There was also one A. E. Mansfield, who, though he does not appear to have been legally adopted, was raised by the Hawkinses from an infant, and was recognized as, or claimed to be, one of the family. Some time prior to the date given, Pickard and family removed to Denver. The old lady conveyed to her daughter, the wife of Pickard, a residence in West Denver of the admitted value of some \$7000, and also furnished the family money, more or less, as the exigencies of the occasion required. Mrs. Hurd and her husband, who had received nothing from the mother, felt ag-

grieved at the apparent partiality of the mother, and, fearing an inequitable division of the estate in the interest of the Pickards, attempted to counteract it. As claimed by Hurd, the old lady was by him invited to his house, the error of her ways pointed out, and the necessity of doing equal justice impressed upon her; and she, recognizing the justice of the claim and not wishing to offend the Pickards, executed the note in question to equalize affairs between her daughters. The execution and existence of the note remained a secret until after Mrs. Hawkins's death, when it was presented for allowance against the estate, out of which has grown the present litigation. The Pickard family and Mansfield resisted the claim, as it would materially affect their interests in the distribution of the estate, and asserted the note to be a forgery. Like all other controversies of this kind, where quite an amount of money is involved, the contest degenerated into a personal one, developing great intensity and acrimony. That this should be the case with Hurd is naturally to be expected, for although the crime of forgery is not, by the proceedings, directly charged upon him, and no criminal conviction could follow, all the testimony tends to show that, if forgery, it was perpetrated by him, and he is morally, if not legally, convicted of the crime. . . .

It becomes the duty, or at least the privilege, of the Court to examine the entire evidence introduced to determine whether the jury was warranted in its findings.

First. Taking up the evidence of the plaintiff to establish the genuineness of the note, we find it conceded that Mrs. Pickard and Mrs. Hurd were the only children and legal heirs of Mrs. Hawkins, that she had by deed of conveyance of real property and supplies of

money made advances to the Pickards of somewhere from \$7000 to \$10,000, while the Hurd family had received nothing. It was very natural that the circumstances should prompt the Hurd family to seek to equalize matters and secure a proper share of the estate, by calling the attention of the mother to the apparent injustice, and her duty to correct it. It is apparent that at that time ill feeling existed between the two families in regard to the estate of the mother. Such being the fact and the mother recognizing the justice of the Hurd claim and not wishing to intensify existing family feuds, she and Hurd might very readily have adopted the plan of the note, for a sum sufficient to equalize advances to the Pickards, on long time presumably, as really happened, payable after her death. These uncontradicted facts, while not conclusive, become very potent in explaining what otherwise might be considered questionable and doubtful, by showing the justice of the demand and the mother's recognition of it. These explanatory circumstances afford strong presumptions in favor of the integrity of the note, and cannot be rejected in an examination of the case.

Second. We have the evidence of Mr. Hurd detailing all the facts leading up to the execution of the note, the blanks left by him in drawing it, the consultation and agreement as to filling the blanks, the filling of them, the signature in his presence, and delivery of the note. Mr. Hurd was not impeached nor was any effort made to do so; he is not contradicted in any important particular, except by circumstances supposed to be inconsistent. A careful examination of his entire testimony, not only that properly, but improperly admitted, fails to show anything contradictory, or detracting from the truth of his direct evidence. Leaving out of consideration the evidence of his daughter in regard to seeing her grandmother

on some occasion sign a paper at her home, as too indefinite to identify the note in controversy, consequently of little value, also the evidence of the son in regard to the genuineness of the signature in his opinion, we come to the evidence of the experts who testified in the case.

Mr. Denman, Mr. Rose, Mr. Frasier, Mr. McCrimmon, and Mr. Young, all men whose business it has been for years, as bankers, to examine and pass upon signatures, and who showed themselves fully qualified as experts, upon careful comparison of the signature in question with numerous others admitted to be genuine, they each and all unhesitatingly declared in favor of the genuineness of the signature. Eighteen signatures of Mrs. Hawkins, including the one in question, seventeen of which were proved and conceded to be genuine, were submitted to the experts for comparison, and all are photographed and submitted to the court. . . .

No experts were called upon the part of the defendant; those attacking the genuineness of the signature, on comparison and examination, and their knowledge of Mrs. Hawkins's signature from having frequently seen her write it, were Mr. Pickard, his wife, young son, and Mr. Mansfield, all interested in the result. We shall not attempt to analyze and discuss the testimony of these witnesses. We can only give our conclusions, after a very careful examination. Mr. Pickard said "He did not *believe* it was her signature," and proceeds to give his reasons for his belief in a very lengthy and elaborate explanation, which is vague, speculative, and confused, which, in our opinion, weakens instead of strengthens his position. Much, if not all, of it would apply with equal or greater force to each of the signatures shown to be genuine. Mrs. Pickard upon the former trial (Steel & Malone) testified that she could not tell whether it was or was not the signature of her

mother; upon the trial of this cause, with no greater means of knowledge than she formerly had, she testified that it was not her mother's signature. On direct examination she was asked, "Have you examined the signature purporting to be hers on this note? A. Not very closely. No, Sir." Upon cross-examination (speaking of the former trial). "Q. And you stated you could not tell whether it was or not? A. I was undecided, I said so. Q. Now you say it is not her signature? A. Yes, Sir. Q. What has led you to change your mind? A. *I have had closer examination, and circumstances connected with it.*" No matter how honest the witness was in her conviction, nor how satisfactory to herself her reasons were, her evidence could be of very little value. The youth, son of Mrs. Pickard, showed himself, by reason of inexperience and want of opportunities, unqualified to judge, and what he thought about it was unimportant.

The other witness, Mr. Mansfield, arrives at the same conclusion as Mr. Pickard for the same reasons, viz. the signature is too regular, lacks the nervousness that characterizes the signature known to be genuine, and the language of himself and Pickard is so identical in one respect that it is worthy of notice. Mr. Pickard: "It might do for twenty or thirty years ago, but for the last five years she could not sign her name with the steady hand that it seems that was written by." Mr. Mansfield said, "It is written there like she might have written twenty-five or thirty years ago, a steady hand." This being the basis of the judgment of each, and examination and comparison of the signatures by any one, whether expert or not, shows that the conclusion could hardly have been reached without the aid of interest or imagination or both.

This brings us to the main defense relied upon, an *alibi* on the

part of Mrs. Hawkins on the day the note bears date and the day Mr. Hurd testified she executed it at his home in the afternoon, by attempting to show that she was at the house of Mr. Mansfield, seven or eight miles in the country, from the day preceding until two days afterwards. But a very brief review of the testimony upon the point can be had, or is deemed necessary. Mrs. Hawkins was the foster mother of Mansfield. His testimony and that of his wife was that Mrs. Hawkins visited them frequently during the summer of 1887. Two years and a half afterwards this case came on for trial; then the note in question was examined and the attempt made to establish the fact of Mrs. Hawkins having been at their house on the day the note bore date, and thus, inferentially, discredit it, not by showing that Mrs. Hawkins did not execute the note, but by showing that she did not do it on the day testified to by Hurd, thus, by establishing a collateral fact in connection with the date, attempting to establish the forgery. Human memory is so defective that it was apparently realized that unless fortified strongly by circumstances and other facts corroborative, that particular date could not be fixed out of the numerous dates she visited; so the purchase of a harvester, the making of a note in payment, of the same date as the note in controversy, and the taking the machine home are involved to fix the date. It appears that upon the Steel & Malone trial the note given for the machine was exhibited, afterwards lost or misplaced, and never put in evidence in the trial of this cause; consequently its existence, the date and everything pertaining to it, was the oral evidence of those that had seen it. Admitting its existence and its date to have been as stated, still the whole fabric rests upon the testimony of Mansfield that he made it on the day it bore date.

Mrs. Mansfield's evidence is of very little value, for she admits that her knowledge of the date and even the existence of the note was derived from her husband. Allowing all these collateral facts to have been properly established, which they were not, they could have no bearing upon the question of the genuineness of the signature, would only show that it was not executed on the day of its date, and would only show that Hurd had either been mistaken as to the date or Mansfield mistaken in his dates, but could not establish the forgery. Forgery cannot be established by inference from some other facts, and these facts dependent upon memory for that interval of time. . . .

In a case of the magnitude of this, and where the result is so serious as to morally convict a party of crime, the evidence establishing the forgery must be competent and all

that is legally required. It must be satisfactory in every respect; nothing less than clearly satisfactory evidence should be permitted to defeat the note and place upon the witness Hurd the obloquy of crime. In this case there is no such evidence. Examined and analyzed, it is found utterly insufficient to overthrow the evidence of the plaintiff. It, at most, only raises a presumption or suspicion of fraud by setting up an illy founded and poorly authenticated set of facts, from which fraud and crime might be inferred. Under such circumstances the verdict should not be permitted to stand. It was evidently the result of mistake or of willful bias and in direct disregard of the instructions of the Court. For reasons given, the judgment will be reversed and the cause remanded for a trial *de novo*.

Reversed. — BISSELL, P. J., concurs. THOMSON, J., dissents.

385. **VANCIL v. HUTCHINSON.** (1895. APPELLATE COURT OF ILLINOIS. 63 Ill. App. 632.) . . .

Conkling & Grout, attorneys for appellant. *Patton, Hamilton & Patton*, attorneys for appellee.

Mr. Justice PLEASANTS delivered the opinion of the Court.

This action was commenced October 2, 1893, by appellee, upon the common counts in assumpsit, to which appellant pleaded the general issue. The trial resulted in a verdict for plaintiff for \$1997, which the court sustained against a motion for a new trial and rendered judgment thereon. As disclosed by the evidence, plaintiff's claim was for the unpaid residue of \$1997 of the sum of \$3000, alleged to have been left for her in defendant's hands by Edmund C. Vancil, who was his father and her father-in-law. Defendant claimed that he received only \$1003, which amount, it is admitted, he paid to her; and the record presents but little else than the question of fact.

Appellee's first husband, a brother of appellant, died in 1861, leaving a daughter. After twelve or fifteen years of widowhood she married Mr. Hutchinson, her present husband, and has since resided with him in the State of Texas. Some time in the early part of 1890, Edmund lost his wife, and about a month afterward went to live with appellant, with whom he remained until the 31st day of December, 1891, when, as the result of a fall, he died at the great age of ninety-two years, leaving several children and grandchildren, and a very considerable amount of property in money and notes. He had made a will, which had been destroyed — when, how, or by whom does not appear, but probably before the death of his wife. No copy of it was produced nor its contents otherwise shown. He had also given to several, if not each of his children, considerable sums of money, among them to appellee, at different times

during her widowhood and afterward, the aggregate amount of which she would not attempt to state, even approximately, having kept no account of them, and which no one else appears to have known unless it was the old man himself, who deducted such advances in the cases of others in the final distribution which he made in his lifetime. Her statement, upon strong pressure from her counsel, that she did not receive \$1997 in all, after such admissions of her ignorance of the amount she and her daughter had received, must be considered of little weight, since it would be true if she had received \$1796.99. It was admitted that by the will he had expressed his intention that appellee should have \$3000, but whether it was declared to be subject to such deduction was made a question pertinent to the main issue, which was, How much had he intrusted to appellant to be delivered to her?

In the latter part of April, 1890, shortly before the death of his wife, he and his sons, William A. and appellant, were together at his house, selecting from his notes the amounts he intended then to appropriate to several members of his family, respectively, and some other objects of his bounty. On that occasion William did the figuring. Appellant claims that they selected for appellee three notes, amounting to \$1003, and placed them together in an envelope, which, with others so placed for other parties, the old gentleman kept for a time in his own possession to receive payments of interest thereon that should be made before delivery for their intended use. He distributed some notes to appellant and William, and perhaps to some others, within a few days — mostly notes given by them to him — for which he took their receipts; and in June following, assisted by appellant and

in the absence of William, made a further distribution and prepared receipts to be signed therefor by the distributees respectively, as before, but of which also he retained possession. On the 11th of November, 1891, having been seriously hurt by a fall, and thinking the end was not far, he delivered to appellant for the beneficiaries the notes for the several amounts intended for them, together with the receipts therefor so prepared. We understand it was mostly, if not entirely, in notes, from the proceeds of which appellant was to pay them, though some of it may have been in notes of the parties, to be surrendered. Among them were the three above-mentioned for appellee, and which appellant says were all that he ever received from his father for her.

Her claim for \$1997, to make up the \$3000 bequeathed to, and alleged to have been intrusted to him for her, and which the jury allowed, rests upon the testimony of her brother-in-law, William A. Vancil, and her nephew, A. C. Moffet, and a statement in a written communication in the name of appellant, to William, and designated in the record as "Exhibit A." Neither of these witnesses, when he testified, May, 1894, was on friendly terms with appellant. Their testimony related almost entirely to verbal admissions and statements, said to have been made by him from two to four years before, only one of which was stated to have been made in the presence of a third person, then living, and that person was not produced. Not one, therefore, was directly corroborated. Appellant positively denied them, in the sense in which they were intended for the jury. They were nearly all in the same language, viz. "that Mary (appellee) was to have \$3000," without explanation; which of itself would be no evidence that appellant ever received from his father, for her, more than \$1003, the receipt of which he admitted,

and which appellee admitted he paid to her in full. He never denied, but freely admitted and may have repeatedly said, that *by the will* she was to have \$3000, but he claimed that either by it, or his father's determination after it was destroyed, or by both, that amount was expressed to include what she had already received.

Moffet, however, also testified that about a month before the old man died, in reply to his question whether he had sent to Mary *the* \$2000, appellant said he had. And this is supposed to be made intelligible and consistent by the statement of William, on cross-examination, that at the meeting to make some division, in April, 1890, where he was told that by the will Mary was to have \$3000, and when they "were dividing up the notes," his mother and his father both "said to send Mary her money; we could keep the notes and send her the money; that there was plenty of money on hand to send her"; and that appellant then said, "by God, he would send her but a thousand"; a remarkable declaration, certainly, when we consider in whose presence and of whose money it was said to have been made. The suggestion is that his father asked him if he had sent to appellee the two thousand, as stated by Moffet, in view of this declaration more than six months before, as stated by William, that he would send her but one thousand, showing his understanding that she was to receive \$3000, and that appellant's answer showed he had received it for her. Appellant denied Moffet's statement, both as to the question and the answer, and that of William as well. He testified that all he received from his father for appellee was the package of notes for \$1003.13, out of which he was to get the money; that he received them on November 11, 1891, about two weeks before the alleged conversation mentioned by Moffet, and

about six before the death of his father; that he was not expected to send her the money before that event, and did not until long after. Her receipts for the amount he sent, being \$500 and \$503, bear date respectively of October 10, 1892, and March 24, 1893.

On his cross-examination William A. Vancil stated that the last time he was at his father's to divide the notes was in April, and might have been the 24th, 1890, and testified, "We did not set off any notes to Mrs. Hutchinson (appellee) that day. I did not make a memorandum in my own handwriting there of the amount to be set off to her, that I remember of." He was then shown a memorandum as follows — "April 24, 1890. Three (3) notes to Mrs. Mary M. Hutchinson amount to \$1003.13," and admitted it was all in his handwriting. We refrain from comment on the explanation he attempted to make of it, further than to say that in our judgment, as respects his own credit, it was worse than a failure. Again, he testified that two or three months after his father's death, he wrote to appellant inquiring about the amounts his father had appropriated to different persons and purposes, as shown by receipts prepared for their respective signatures, and received an answer giving the several amounts, among which was one showing that appellant had received for appellee \$3000. That is the paper already referred to as one of the supports of appellee's claim. It can be more intelligibly explained after the introduction of some other documentary evidence and will be noticed again in that connection. It is "Exhibit A." He further testified that after his father's death, having learned that appellant had not paid appellee all that was due to her, he advised her of it, and shortly before this suit was brought she came to visit him. He lived at Waverly, in Sangamon county, and appellant near Modesto,

in Macoupin. He took her to appellant's place and demanded of him, for her, the \$2000, claimed to be still due. Appellant denied it — said that what she had received was all that was coming to her, and asked them both to come into the house and look over the books and papers, but they did not go; William says he had some business in town and was in a hurry to get back. Appellant says that William flew into a passion and threatened to sue him — was going to get out of the buggy and whip him, and said he would whip him the first chance he got; that he tried to pacify him, and did everything he could to get him to come in and examine the books and papers — told him they would satisfy him that he (appellant) was all right, and that if sued he thought he could beat him without a witness. William and appellee were both afterward called in rebuttal, but neither denied the fact nor the urgency of appellant's invitation nor the threats he said were made and passion displayed by William.

The foregoing is substantially all of the oral testimony on behalf of appellee. As already observed, it comes from two witnesses, both being biased by personal animosity against appellant, and relates to alleged verbal statements which were separated in time and place, neither of which was directly corroborated and each of which was denied by him. That on behalf of appellant, excepting what was introduced in connection with or relation to the writings, came from himself alone, and is also in substance above set forth. We now turn to the documents.

The memorandum of William A. Vancil, offered as contradicting his oral statement and confirming that of appellant as to the setting apart for appellee of \$1003.13 at the division of April 24, 1890, has been adverted to. It was picked up by appellant's wife from the table or

floor, on that day, after the business was done and the parties had separated.

Next is a receipt taken by his father from appellant, of November 11, 1891, upon delivering to him the several packages of notes, the proceeds of which were by the latter to be paid over to the persons respectively named; which is as follows: "Received of E. C. Vancil, \$10,000 for Mordecai Vancil; also \$3000 for Mary M. Hutchinson, less \$1997 that she has already received on the aforesaid \$3000; also \$500 for Portia Gilkerson; also \$2500 for Effie Vancil; also \$2500 for Ida Vancil; also \$2500 for Ollie Vancil; also \$100 for graveyard, and \$20 for 'the church.' All of which I agree to pay over according to instructions. I. B. Vancil. Effie Vancil, witness. November 11, 1891." This paper, excepting the signature of appellant, is in the handwriting of his oldest daughter, Effie, now Mrs. Jordan. She testified that she wrote and witnessed it at her grandfather's request, and at his like request read and showed it to him. He then gave it to her father to sign, and it was put with her grandfather's papers. It was written in his room, on the day of its date, in the presence of her father and grandfather.

An attempt was made on her cross-examination to show that it was dictated by her father. We think nothing was elicited to impair the force of the paper or of her statements in chief respecting it. Her answers seem to be natural and candid. She thought she used in part a receipt which her grandfather had written, but had no very distinct recollection as to that nor as to any dictation; her father may have dictated it in part. The material part is the deduction of previous gifts from the \$3000 for appellee. It is not probable that appellant knew the amount of those advancements except by information from his father or the fact that

notes for only \$1003 had been set apart for her. If he mentioned the matter and amount (which does not appear) he must have done it in the presence and hearing of his father, to whom the paper was read, shown, and delivered as it is, by the witness.

That he knew it and intended to have it so is further shown by the receipt prepared by him and in his own handwriting, to be signed by her when she should get the \$1003, which is as follows: "April 30, 1890, received of E. C. Vancil one thousand and three dollars (\$1003), part of my stepfather's estate, and I agree that this shall be a final receipt of all claims against my stepfather up to date. This amount is the same as specified in his will, and if I try to break his will, aid or persuade others to do so, I agree to pay back all this money and relinquish all claims to his estate." Under this appears the following, in the handwriting of appellant's daughter, Ida: "Be sure and return this. It is all my written authority"; which appellant explained by the statement that when he sent to her the draft for \$503, in March, 1893, he directed his daughter to write the letter and inclose a receipt for the amount to be signed by appellee, and also this receipt prepared by his father for the full amount, \$1003, not to be signed by her because she had already receipted for the \$500 sent in October, 1892, and was to sign the inclosed for the residue, but to show her it was all his father left him or intended for her, and to be returned to him. He says he put it in the letter of Ida, and mailed it himself, and that it was returned to him with the receipt, also produced, for the \$503. Appellee denied that she received it with the draft, or ever saw it before the trial, and her letter acknowledging the receipt of the \$503 was not produced. We think the fact, however it may have been, was immaterial. He may have in-

advertently omitted it though intending to inclose it. No motive for withholding it is apparent. Its genuineness is fully proved and not questioned. That he actually gave it to Ida to be so sent, as she understood, is manifest from her request underwritten. And the appellee may have received it and forgotten the fact. She never had a suspicion that any more money was left with him for her until so informed, afterward, by William A. Vancil, and therefore the paper was not likely to be regarded by her as important to be remembered. It appears that some if not all the packages set apart at the first division, April 24, 1890, were delivered to the parties for whom they were intended on or before the 30th. William A. received his at that time and the receipt prepared for him to sign was dated on that day, as was appellee's. A further division was made in June, at which William was not present. Receipts for these were prepared in like manner, but were all retained by the old man, with the notes, to receive and credit payments of interest thereon, until November 11, 1891, after he was disabled, and about six weeks before his death, when he delivered them to appellant and took his receipt of that date, above set forth. Some two or three months after his death William A. wrote to appellant for copies of the receipts his father had held, and received in reply the following, which is the "Exhibit A," introduced by appellee: "I do not think it will be necessary to copy all these receipts, as they are nearly identical in language, but will give a list of the amounts.

| | |
|---|-------------|
| I. B. Vancil . . . | \$24,500.00 |
| A. E. Moffett . . . | 3,002.41 |
| I. B. Vancil, for | |
| Mary . . . | 3,000.00 |
| I. B. Vancil, for Mort. | |
| (Mordecai, a brother of appellant in California | 10,000.00 " |

The list proceeds in like manner,

giving the other amounts mentioned in his receipt to E. C. Vancil, of November 11, 1891, hereinbefore copied, and others, amounting in all to a little over \$100,000 and then continues: — "He gave Burke \$2500 in cash, for which there is no receipt. . . . I have the notes all just as I received them, and as they have been for the last year. I have his books in which all the notes are listed. Come down some day and I will show you all about it. . . . I hope you will not be foolish enough to take this into court, as there will be nothing in it. Now I believe this is all I think of. I. B. Vancil."

The material item in this statement is that of "I. B. Vancil, for Mary, \$3000." It is conceded that Mary, there named, is the appellee. William testified that the body of the paper was not in the handwriting of appellant, but he believed the signature was. Appellant positively denied it, and was corroborated by his daughter Effie and his son Burke, each of whom also testified that it was in the handwriting of his daughter Ida, and not of appellant. The latter stated that when he received the request he was very busy; that his older daughter, who usually wrote for him if she was at home, was then away; that he placed all the papers in the hands of Ida, and directed her to copy the two receipts from William, and give him a list of the amounts of the others; that she had his receipt to his father of November 11, 1891, and must have taken from it the items with which her statement charges him; that, after giving her all the receipts and papers, and the general direction stated, he went about his business, and never saw or knew of her statement until it was produced on the trial; that he did not direct her to put down in that letter "I. B. Vancil, for Mary, \$3000"; and closed by saying "the amount of it is she just struck the first amount and never said anything about the conditions." Ida was

too ill at the time of the trial to be present. We perceive nothing in this explanation, of itself or in the light of any circumstances shown, which would justify a reasonable doubt of its truth.

The foregoing comprises substantially all the evidence, and is perhaps set out at unnecessary length. Had the verdict been found upon the oral testimony alone, we should have had no inclination to interfere with the finding. It would have been for the jury to reconcile, accept and reject, as they in their judgment, with their superior advantages, saw fit. But that which seems to us to be the most convincing by far, is shown by what is more to be trusted than the recollection by witnesses of oral declarations, after the lapse of so long a time, however disinterested and honest they may be. With the correction made, as it fairly should be, of Ida's statement in the letter written in her father's name to William A. Vancil, the documentary evidence is all one way. So far as we see, it clearly preponderates against the evidence of appellant's admissions that he received \$3000 from his father for appellee, and corroborates his denials of them, and his statement of the material facts generally. The charge of a disposition on his part to withhold his father's books and papers from examination by or for appellee, is refuted by the letter of Ida and the testimony of William, assented to by appellee. He had no reason to anticipate a need of these books on the trial. Whether they showed the advancements to appellee, which is all it is said they

might have done, was not material to the issue; which was, how much had appellant received for her. He did not state, nor pretend to know, how much she had previously received. If his father, upon his understanding or misunderstanding, stated what it was and therefore left for her only the difference between that amount and \$3000, then whatever the books might show was the amount charged to her, it could not affect appellant's liability in this case, and that he did so state is conclusively shown by his own writing. There is nothing in the record upon which to found a charge of forgery, fraud or mistake, in connection with that statement. That he acted upon it is further shown, as we think, by the memorandum made by William on April 24, 1890. Excepting his alleged verbal admissions, there is not a particle of evidence that appellant received for appellee a dollar in cash or otherwise besides the notes for \$1003.13. He must have understood that William knew that was the amount set apart for her, and have presumed that Ida had given him the amount as stated in the receipt of November 11th; and therefore he could hardly have admitted to William or stated to his father in the presence of Moffet that he had received \$2000 more for that purpose. It is unnecessary, and might be harmful, to comment further upon the oral testimony.

Being of opinion that the verdict was clearly against the weight of the evidence, the judgment will be reversed and the cause remanded.

386. **THE DURRANT CASE.** (JOHN H. WIGMORE. American Law Review. 1895, Vol. XXX, p. 29.)

¹ The case was called on Monday, July 22, 1895, in the Superior Court, Department 3, of the City and County of San Francisco, California, before Hon. Daniel James Murphy. The twelfth juror was obtained on Thursday, August 29, or 5½ weeks later; 21 actual days being consumed in selecting the jury. The lists needed were a general one of 1250, from the general venire, and two more special venires of 75 each; of these, 482 were challenged for cause, and 15 peremptorily (4 for the State, and 11 for the defense). The opening address, followed by a view of the premises, took place September 4; the counsel for the State being Mr. Wm. Sanford Barnes, District Attorney, and Mr. Edgar Davis Peixotto; and for the defense, Mr. John Henry Dickinson, Mr. Eugene Nelson Deuprey and Mr. Abram Warren Thompson.

The facts leading up to the charge were in brief as follows: Miss Blanche Lamont, 21 years of age, lived with her aunt and her aunt's husband at 209 21st street. She had been brought up in Dillon, Mont., and had come for her health to San Francisco, in September, 1894, her sister Maud (19 years old) having come in the preceding June. She had been, since her arrival, an attendant, as well as her uncle, aunt, and sister, of Emmanuel Baptist Church, Pastor George J. Gibson, situated on the east side of Bartlett street, halfway between 22d and 23d streets. She here attended with fair regularity the Sunday-school and the morning service, as well as the weekly and monthly meetings of the local branch of the Young People's Christian Endeavor Society. She also went weekly to the meetings of an amateur orchestra, in which she played the violin, at Grace Methodist Church; and,

for a short period, went weekly to a reading-club, of which her uncle was a member. Other than this she went out little; and she was chiefly in the society of her own family, except that this or that young man more or less frequently escorted her home (alone or with her sister) from the meetings of the church, the society, and the orchestra.

On Wednesday, April 3, 1895, she left her home as usual to attend the morning work at the Girls' High School, on Sutter street, near Gough. Thence she went (also in accordance with her customary practice, beginning with that week) to an afternoon cooking class, at the Girls' Normal School, on the east side of Clay street, just north of Powell. She left this school with the other pupils at 3 o'clock; by supper time she had not yet reached home, and when morning came, she was still missing. The police were informed, search was made, and the disappearance was discussed in the newspapers as a mysterious case of possible enticement or elopement.

On Saturday morning, April 13 (Easter Sunday falling on April 14), some ladies went to the Emmanuel Church to decorate it with flowers. Happening into the library, they found there the dead body of one Minnie Williams (who had disappeared on the preceding Friday night), evidently murdered. The police were called, and searched the church, finishing late in the evening. The search of the belfry tower, however, was postponed until the following morning, — the tower door being locked, and (as afterwards appeared) the handles broken off and thrown from the inside underneath the flooring. At 9 A.M. on Sunday, the search being resumed, the door was forced open, and on the second or top landing of the belfry stairs was

¹ For the proceedings at the trial and for other information the writer is indebted to the courtesy of T. Worthington Hubbard, Esq., of San Francisco.

found a body, which was immediately suspected to be and was soon afterwards identified by Mr. Noble as that of Blanche Lamont.

The body lay upon its back, entirely naked; the hands crossed in front, the feet together, and the head supported on each side by a block of wood somewhat in the manner used at autopsies to steady the body to be operated upon. An examination showed that death had occurred by strangulation. The lungs and the windpipe were congested; the throat was compressed, and there was some clotted blood about the mouth and the nose; while upon the right side of the neck were five finger-nail incisions, and upon the left side seven, one of these (on the left side) appearing to be that of a thumb.

The decomposition which had set in pointed to perhaps two weeks as the period elapsing since death, and it had so far progressed that it was impossible to determine from the body whether an attempt on the virtue of the deceased had been made. No blood appeared about the premises,¹ and though the floor was dusty, it was so littered with sticks, sawdust, shavings, and papers, that traces of a struggle or of footprints were hardly to be expected, if indeed there was any serious attempt to discover them. The clothes of the dead girl were missing; but after some search (made by the three or four policemen present, as well as by some of the dozen other persons who had been allowed indiscriminately to enter) the various articles were found in the following places: A glove and other articles on the floor near by; the girl's school books and strap, under the joists in the southwest (front) corner of the middle ceiling; her hat, under the belfry flooring; her shoes, under the rafters of the lower ceil-

ing in the southwest corner; another glove, between the joists in the southeast (rear) corner of the lower ceiling.

The situation and construction of the building, as they are material to the understanding of this and subsequent parts of the story, must now be explained.² The church building, measuring some 115 × 55 feet, stands full up to the street line on a lot 125 × 80 feet, the street being 60 feet wide over all, and the church standing some 200 feet from 22d street. On the north side of the building is an alley space of nearly 4 feet, on the south side another of 20 feet, both of these being fenced in, with a gate in each front fence. There is a door on the north and on the south sides, as well as in front.

Within, on the ground floor, is first a vestibule, with stairs leading upwards right and left (to the main auditorium vestibule); at the left side is a small library room; then a large Sunday-school room; then an infants' classroom separated from the main room by folding doors; and, at the same or east end of the church, a janitor's room, a wash room, and a stairway to the next floor. On the second floor, the east or rear end contains (back of the auditorium) a pastor's study, a baptistery, and a choir and organ loft; the latter receives the stairs from below; and from a passage behind the study and the baptistery another stairway ascends through the rafters to an attic at the back of the roof. At the west or front end is the main vestibule, from which a stairway leads to a gallery on the west wall, some 12 feet above the floor, and 15 or 20 feet below the ceiling. The belfry tower, at the same end, projects from the main building, and is entered exclusively by a door from this gallery. A

¹ Some stains found below were otherwise explained.

² The subjoined diagrams show the situation of the building and the other localities important in the case. The interior of the building could be represented — if indeed by anything short of a model — only by several diagrams, for which space does not suffice.

A = Normal School. B = Transfer junction. C = Transfer junction. D = Church. E = Miss Lamont's home. F = Defendant's home. G = High School. H = Medical School. I = Direction of Mrs. Crossett's starting point. AB = $\frac{1}{2}$ mile. BCD = $2\frac{1}{2}$ miles. ICD = $3\frac{1}{4}$ miles (by streets).

A = Emmanuel Church.
B = Mrs. Leake's House.

No. 386. STREETS AND PREMISES IN DURRANT CASE

winding stair, in 53 steps, goes up within the tower 15 feet to an intermediate or first landing, then 18 feet more to the second or main landing. The peculiarity of the roof is that there are three distinct levels, creating two chambers or lofts extending over the entire auditorium; first, the real or outer roof; next, the original ceiling, several feet below and formerly plastered on the ceiling side; and last, a new wooden ceiling, several feet below the old one, added in 1894. The wall at the front or west end is sheathed over for the space between the new and the old ceilings; but there are two openings (one like a doorway) in the wall beams between the old one and the roof; and thus access could be had to it at this end from the belfry landing;¹ while at the other or east end the attic over the stair leading up from the baptistery admitted to the lower chamber between the old and the new ceilings. Furthermore, access from the level of the old ceiling to the new one could be had at the front end by climbing down through a space between the rafters of the old ceiling. Finally, the regular way to get inside the new ceiling from the church proper was through an opening at the front end above the gallery, by means of a ladder kept in the gallery; this access being necessary in order to adjust the gas jets or "sun-burners" which hung down into the auditorium at the rear or east end through openings in the lower ceiling. Thus, the murderer, after the belfry door handles were broken off on the inside, would have to leave by stepping from the belfry to the level of the old ceiling, and then through the beams to the lower ceiling, and either passing across it to the stair in the attic at the rear or climbing down by the ladder to the gallery; in either case he must be completely familiar with the church; while the former

mode of exit would be the more natural, because he could not have placed the ladder beforehand while in the girl's company, and without the ladder the drop from the ceiling to the gallery would be unpleasant, if not dangerous.

The surroundings furnished also these further indications. First, the death must have occurred before the afternoon of April 4, because on that day the plumbers were in the church and could not get into the belfry because the handles were broken off and the door locked. Next, the murderer must have been one who was furnished with keys to enter the church and who knew it would be deserted at the time. Finally, the entry must have been voluntary on the part of the deceased, and therefore the murderer must have been a person sufficiently familiar with the deceased and sufficiently entitled to have business at the church to be able to furnish plausible inducements to a girl of the character of Miss Lamont to enter the church with him for some special occasion on a week day.

How, then, was suspicion directed towards the accused, and on what evidence did the State charge him with the murder?

We may take up the evidential material in several groups.

A. 1. *Motive*. — Up to the last moment of time when either Durrant or the deceased girl was seen, there was absolutely no evidence of a motive for him to kill her. The accused met Miss Lamont in September, 1894, soon after her arrival. He was then librarian and assistant superintendent of the Sunday-school in Emmanuel Church, as well as usher at the church services. They were both members of the local Christian Endeavor Society; and he had frequently escorted the sisters home from church on Sunday and also from the week-day meetings of the society. He had called at

¹ It appeared that by a hole in the plaster in the gallery wall there was another possible mode of access; but no question was raised as to its use.

the house not more than twice or thrice. Of her few friends he was perhaps her most frequent but not an exclusive nor an assiduous attendant. He was at the time 23 years of age, was born in Toronto, and had lived in San Francisco some 16 years. He had attended the Emmanuel Church some three or four years, lived five or six blocks distant from the church, and was in April, 1895, in his third or senior year as a student at the Cooper Medical College. Neither in his own life, then, nor in that of Miss Lamont, was there found any circumstance betraying a likely motive for killing her.¹

2. *Opportunity; Presence at the Time and Place of the Killing.* — The main reliance of the State was upon a chain of testimony which, if true, would place the accused in the church with the deceased at the probable time of the murder. To begin with, the accused had met her (by accident, it seems; at any rate it was the first occasion of the sort) on the very morning of Wednesday, April 3, on her way to the High School; and had ridden with her in the cars to the school,² there leaving her and passing on to the Medical College.

But his presence at the church with Miss Lamont in the afternoon of that day was the main support of the State's charge, and this they affirmed on the credit of the following series of witnesses, who traced him from point to point: —

Miss Edwards: Came out of the Normal School about 2:55 P.M., and walked to the corner (Clay and Powell) with Blanche Lamont; here a young man met Miss Lamont and boarded the passing car with her, sitting on the east side (the school side) of the grip car; the witness

entered the closed car attached, and rode south with them; but she said at one time that she did not, at another that she did, notice them when the car reached Market street. The witness had never seen Durrant before, but identified him positively.

Miss Pleasant, now Mrs. Dorgan: Came out of the school at the same time and walked south on the east side, in company with Miss Lannigan; at the corner of California street (two blocks farther) a car overtook them, passing south, about 3.05 or 3.10, and on the east side of the grip-car, facing them,³ was Miss Lamont with a young man, the latter holding an open book and both looking at it. The witness had never seen Durrant before, but identified him positively; she called Miss Lannigan's attention to the couple.

Miss Lannigan: Told exactly the same story; she had never seen Durrant before, but identified him positively.

Mrs. Vogel: Lived directly across the street (on the west side) from the Normal School. On the above day she was looking from her front window about 2.07, and saw a young man at the corner on the east side; he walked back and forth between there and the school till 3 o'clock, standing at one point facing the witness for as much as 15 minutes at one time. The witness had \$300 in the house, and, thinking his lingering suspicious, watched him carefully, even using an opera-glass for this purpose. About 3 o'clock, when the scholars came out, he met two of them, and got on the grip car with one of these, while the other entered the closed car. The witness had never seen Durrant before, but identified him positively; the girls she had not noticed sufficiently to identify.

From this point there was no tracing until that stage of the journey was reached in which they would

¹ There were but three available hypotheses as to the motive of the murderer: (a) a pure glut for blood; (b) a sudden angry purpose arising from the girl's refusal to accede to an improper proposal, and from her threat, or the general probability, of speedy exposure of her would-be seducer's conduct; (c) murder to destroy the victim of his rape.

² This was proved by the conductor of the car, who knew Miss Lamont by sight as a frequent passenger; by a classmate of Durrant who was on the same car; and by the statements of the accused to his classmate, to Mrs. Noble, and to others; and it was afterwards admitted by his counsel.

³ The seats of these cars run lengthwise.

pass along Valencia street, beyond the junction of Market and Haight.

Mrs. Crossett: Was seventy-one years old, lived a few blocks south of the church, and had known the defendant about four years, having seen him frequently in that time. On the afternoon of April 3, she was riding home in a Valencia street car, and saw the defendant sitting on the left side of the grip car with a young lady, the witness sitting on the right forward seat inside, second from the end.¹ She identified Durrant positively, but as to the young lady she could say only that her hat was like that shown as Miss Lamont's. The couple left the car at 21st or 22d street, and walked east toward Bartlett street. The time of seeing them at Valencia street near Market was fixed by the witness at a little later than 3.30, in the following way: She left her granddaughter's house, on Washington and Laurel streets, about 3.20 P.M.,² walked 2 blocks south to Laurel and Sacramento streets, then 1 block east to Walnut and Sacramento streets; boarded a cable car and rode 5 blocks east on Sacramento to Devisadero; changed and rode 10 blocks south on a cable car on Devisadero to Turk; changed and rode in an electric car 8 blocks south on Devisadero to Page; walked 1 block south on Page to Haight; took a cable car 8 blocks east on Haight street to the junction of Haight, Market and Valencia;

crossed the square and boarded the car coming west on Market street and turning off south at this point on Valencia; and it was on this car that she saw the defendant and the young lady. She arrived at her own house, some 6 blocks beyond the point of their departure from the car, at 3.58 or 3.59 by the clock.

The defense argued that her testimony was valueless, since it was impossible to make the trip in that time. The defendant's witnesses made the same trip (exclusive of the preliminary 3 blocks' walk) in 46 minutes. Allowing 5 minutes for the walk, this would make an error of 12 or 13 minutes in Mrs. Crossett's reckoning (33 or 34 minutes). But this discrepancy was accounted for (1) by proving an excessive delay of 3 or 4 minutes at one point for the defendant's witnesses; (2) by taking Mrs. Crossett's daughter's time (3.15) for her starting; (3) by supposing³ some minutes' difference between clocks; all of which would give 43 or 42 minutes for the defendant's reckoning, and 42 or 41 minutes for Mrs. Crossett's, — an error of no significance. The only serious criticism to be made upon her times was their inconsistency with those of the other witnesses.³

Martin Quinlan: Lived on Mission street nearly back of the church, and knew Durrant by sight only, having seen him several times. On the above day he

¹ These cars are built in one piece, with glassed partitions between the open or grip section and the closed section; the seats all run lengthwise.

² According to her daughter, 3.15.

³ Thus: By the Powell street witnesses the couple should have reached 21st or 22d street and Valencia by 3.40 at the latest; by Mrs. Crossett's time, by 3.48 at the earliest, and 3.52 at the latest; while by the next witness, Quinlan's time, they were at Bartlett and 22d streets not before 4.10. These differences were hypothetically accounted for as follows: (1) A lounging or a treating at a candy store in changing cars at Market and Powell streets; or a meeting and talking there with one Minnie Williams, afterwards murdered, this knowledge by her of their doings being the possible motive for her murder, as explained later; this delay would reconcile the stories of Mrs. Crossett and the Powell street witnesses. (2) A probable getting off the car at 21st street, on which Miss Lamont's home was, and the resumption and consummation of the defendant's solicitations to turn aside to the church down Bartlett street; a process which, together with a sauntering along the 2 blocks, would account naturally for difference between the time (3.48 or 3.50) when, by Mrs. Crossett's story, they left the car, and the time (4.10) at which by Quinlan's story they approached the church.

But it must be remembered that the sole effect of these discrepancies, such as they were, could be to impeach the trustworthiness of the identifying testimony. They did not affect the feasibility by Durrant of the murder. Whether the two reached the church by 3.45 or by 4.15 was immaterial to the State in this aspect; because, though the killing (as will be seen) could not have been done by him after 5.05, his presence at church for any period more than half an hour before that time was ample for the deed.

had an appointment with one David Clark at the saloon at the northeast corner of Mission and 22d streets; and at 3.53 or 3.55 (looking at the clock with reference to his appointment), boarded a Valencia street car on Market street near 9th; he got off at 22d street, and walked east on the right-hand (south) side; at the corner of Bartlett street he saw Durrant and a young lady crossing from the north to the south side of 22d street on the east side of Bartlett street, the witness being on the southwest corner approaching them at right angles as they reached the southeast corner going south, Durrant walking on the inside. The time must have been between 4.10 and 4.20. The appointment was kept, and the witness, in going about with Clark, took many drinks, which served as material for criticism on cross-examination.¹

David Clark: Corroborated this witness as to the appointment, and fixed the times as the same, having looked at the clock in the saloon.²

Mrs. Leake: A member of the Emmanuel Church, an elderly person, lived at 124 Bartlett street, on the west side almost directly opposite the north alley gate. She had known Durrant for two years, having seen him nearly every Sunday, and on the above day she was looking out of her window, between 4 and 4.30 P.M., expecting and looking for her daughter, when she saw Durrant and a young lady, the former on the inside of the walk, approaching the church from 22d street on the east side of Bartlett street. They went on past the church and entered the south alley gate, Durrant opening it. The witness identified him positively (though she could not remember his clothes); the young lady she thought at the time was either Miss Lamont or Miss Turner. The witness wore glasses for reading only, and did not have them on when she looked out.

George R. King: Organist of Em-

manuel Church and assistant librarian of the Sunday-school, 19 years old, well acquainted with Durrant and the Lamont sisters, went to church on the above day "just about" 5 P.M. to practice a piece on the piano in the main school-room. He entered by the front door, went into the library for a few moments, then went to the piano, and had played 2 or 3 minutes when the defendant appeared at the folding doors (between the main room and the infants' room), and came through them into the main room. He had neither coat nor hat on; but his vest and necktie were in order. The witness said: "Hello, you look pale!" and Durrant³ explained that he had been fixing the sun-burners over the auditorium, and had been overcome by the gas; then gave him fifty cents and asked him to get some bromo-seltzer; the witness went to a drug store one and one half blocks away, and brought back the bromo-seltzer; Durrant went with him to the kitchen and drank it. About this time Durrant mentioned that he had that morning ridden on the car with Blanche Lamont. He later went to a mirror to see how pale he was. After he had at King's request helped the latter to bring down a small cabinet organ from the choir loft, they went to the library, where Durrant found and put on his hat and coat and they left the church by the front door, about 6 P.M.⁴

Analyzing the story of the seven witnesses who bring him to the door of the church, we find that the first four did not know him before, but that three of these knew Blanche Lamont, while all four agreed upon the circumstances; and that the last three had known Durrant before, but did not know or could not positively identify Miss Lamont.

It will be now necessary to notice the remaining evidence of the State.

¹ This witness' character for integrity was impeached by half a dozen witnesses.

² An attempt was made, but of slight consequence only, to impeach this witness' character.

³ Durrant himself tells that he said: "You would be pale, too, if you had been where I have."

⁴ He arrived home at 6:15, and was thereafter satisfactorily accounted for.

3. *Subsequent Indications of Guilt.*

(1) On Wednesday, April 10, three rings worn by the deceased came by post, wrapped in a piece of the *Examiner* newspaper, to Mrs. Noble, the aunt. The paper bore in pencil the names "John T. King, Prof. Schernstein." Both George King (there being no John T. King) and Mr. Schernstein, the deceased's music teacher (who should have given her a lesson on April 3, the day of disappearance, but waited in vain at the house), denied on the stand that they had written the names. But Durrant's connection with it could not be shown.

(2) On Friday, April 12, the church janitor, Sademan, saw Durrant about 4 P.M. waiting at the ferry at the foot of Market street; Durrant explained that there was a report that Blanche Lamont would come to the city that afternoon by the ferry, and he wished to see if it would prove true. To two fellow-members of the Signal Corps who passed him there and asked if he had heard anything about her, he made answer that he had a clew, the terms of the answer being disputed. They also testified that he explained that he was waiting for another member of the corps.¹

(3) On some day between April 4 and 10, about 11 A.M., Mr. Oppenheimer, a pawnbroker of 405 Dupont street, was visited by a young man, who submitted a cut-diamond ring for sale, the witness declining to buy. The witness identified Durrant positively as the man, and identified the ring as one of the three worn by the deceased and returned through the post on April 10. A Mr. Phillips, passing by the shop about the same period, identified Durrant as seen standing in front of the shop.

B. We may now turn to the defendant's evidence directed to the destruction of the fabric thus woven by

the State. As the State's main reliance (apart from the admitted fact of his being in the church at 5 P.M.) was upon the testimony which sent Durrant in the company of the deceased to the door of the church by 4.15 on the day of her disappearance, and upon the story of his afterwards bringing her ring to sell, so the defense concentrated its attack mainly on those two supposed facts.

1. *Motive.* — As no indication of a sinister motive had been produced against the defendant, there was here nothing to be disputed by him. The usual good character testimony was offered.

2. *Opportunity; Durrant at Another Place until too late to commit the Murder.* — The defense admitted without qualification that Durrant was at the church as testified by George King at 5.05 (approximately) on April 3; but proposed to show that he was at or near the Medical College until so late an hour that he could not have arrived at the church before 4.55; and in 10 minutes the deed, concededly, could not have been done.

In this view, then, the testimony of the seven eye-witnesses who believed that they saw Durrant with Miss Lamont (or another person) at successive stages of the route to the church was of course discredited. Against all of the seven (except Quinlan), the defense expressly disclaimed any imputation of dishonesty. It explained their identifying testimony as so many cases of mistake or illusion, and argued that the constant appearance of the accused's picture in the newspapers had tended to create the hallucination that he was the one whom they had seen. This they attempted to

¹ Other doings, not significant, were these. At the evening prayer-meeting of April 3, Durrant sat next to Mrs. Noble, said he had promised to bring Blanche "The Newcomes" but had forgotten it; asked whether Blanche was coming that evening; said that he would bring the book on Thursday; and did bring it on Friday. About April 10 he came to Mrs. Noble's house (as nearly every member of the church had done) and offered to search for her at places (meaning of ill-fame) which the police did not know of, but a friend would show him. This theory of her disappearance, he afterwards explained, had been suggested to him by a detective, an explanation not improbable in fact.

enforce, as to the last four, by pointing out that they had not appeared at the preliminary hearing, and had not notified the prosecution of their supposed knowledge until several weeks later. The discrepancies alleged between the statement of Mrs. Crossett and the others as to the time of day when Durrant was seen have already been referred to.

As to the constructive portion of the story of the defense, it falls into two parts: (1) The fixing of Durrant's whereabouts till 4.55; (2) The explanation of his reason for going to the church at all and of his doings while there. The defense, it will be seen, had in the latter part (resting mainly on the defendant's own testimony) a double risk to encounter; for not only would the failure to prove the facts alleged leave the State's story unshaken, but any serious inconsistencies or palpable falsities would tend to discredit his entire story as a manufactured one.

(1) Durrant at the Medical College. The defendant himself with commendable courage (and yet his case inevitably involved it) took the stand to tell his own story, which was in brief as follows:—

On April 3, the day of the disappearance, his last morning lecture closed at 12, a recess of one hour following. Not feeling well enough for a hearty lunch, he went north on Webster street for a walk, stopping at the corner of Clay street to buy some nuts which he ate as he walked. He returned by 1 P.M., and finding a notice that Dr. Stillman (the next lecturer) would not come that day, went with Student Ross for another walk north on Webster street, meeting on the way Student Carter, and returning in half or three quarters of an hour; then went to the library for about the

same time, speaking there with Student Diggins, then went downstairs and talked with Student Glaser, omitting a lecture by Dr. Hansen; then attended Dr. Cheney's lecture from 3.30 to 4.15, taking 5 pages of notes; then took the cars from Sutter to Larkin, to Mission, to 22d street, getting off at Bartlett, and reaching the church library at 4.55 P.M. by the watch.

As to this part of the story, the three students, Ross, Carter and Diggins, testified that they remembered the conversations and walks respectively; but they were unable to identify the date; the circumstances making April 3 of greater or less probability in different instances.¹ Student Glaser was not questioned on this point. Durrant's presence at the lecture, however (3.30–4.15), would have disposed conclusively of the State's story. As to this, first, neither the lecturer nor a single student of the 74 usually in the class could remember whether Durrant was or was not present at that lecture,—a not unnatural state of mind, since 12 or 13 days elapsed before his arrest would cause them to recall the occasion. Next, and of most consequence, the attendance-roll did show Durrant to be present,—the absent ones being marked by an "A," and Durrant's name having no such mark appended. But the accuracy of this roll was questioned by the State. The evidence *pro* and *con* as to the roll-call was as follows:—

Dr. Cheney: At the close of the lecture the roll was called by Student Gray, standing beside him and marking it. Dr. Cheney, though having no personal knowledge, believed the roll to be correct, having subsequently questioned each student (apparently after the ar-

¹ It may be pointed out that even if the walks had occurred on that day, the State's story was not thus disproved; for, taking the minimum estimate (half an hour) for the walk and the library visit, we reach only 2 P.M.; and the 15 blocks to Clay and Powell streets could have been covered by car in 15 minutes, bringing us to 2.15, a time not materially different from that at which Mrs. Vogel first saw him waiting there near the school (2.07).

rest) and found the record corroborated.¹

Student Gray, in marking the roll, depended entirely on the answers as heard, not on eye-sight. In March the roll had not been written up, and so the roll for April 3 was at first by error marked in the blank space of March 31, and afterwards was copied into the correct place, the original marks being erased. The roll method was liable to error, he admitted, and in the succeeding June an improved system was adopted. He had no means of knowing whether one student was answering for another. Questions as to his experience on this point on past occasions were ruled out. On the defendant's cross-examination, however, it was brought out that on at least two occasions shortly afterwards (April 8 and 12) he had himself asked a fellow-student to answer for him, and on one of these it was only when the defendant was called upon to recite that his absence was detected. Out of the 74 usually in the class, apparently all (except one deceased) testified that they did not answer for Durrant on April 3; but one of them, who was marked absent, testified that he was in fact present.

But, besides the evidence (whatever it might amount to) of the roll-call record, the notebook of Durrant was of consequence. His 5 pages of notes fairly represented the lecture, and were as much like those of other students as they would naturally be. Two classes of evidence, however, were offered by the State to destroy the value of this circumstance. (a) It was claimed that there had been ample opportunity to copy them in afterwards. On April 10, Student Glaser went over with Durrant at the college

their notes of this day, April 3, Glaser alone reading and Durrant copying from time to time.² As to this, Durrant explained that a mutual "quiz," for purposes of improvement, etc., was not uncommon, and that he had copied only two rules in all.

(b) Furthermore, his notebook remained at the house till April 17th (unthought of by the police), when it was sent to his attorney's office (Durrant having been arrested on the 14th); his attorneys told him the notes were not complete, and the book remained in their possession for an indefinite time thereafter.

(c) It was claimed that Durrant had expressly admitted that he had few or no notes of that lecture, and had tried to borrow from others to complete them. Student Graham went on April 20th to the prison, and Durrant, asking Graham's companion to step aside,³ —

"asked me if I would lend him my notes to compare with his own. He told me he had no notes at all, and if he could get them from me he could establish his alibi. He told me I could take them to his house and put them in his book and thus have them brought to him. He also said I might learn them and then tell them to him."

Graham did not accede to this request. Durrant admitted expressing to Graham a wish to have the notes, because "he didn't know whether he had full notes," and made this singular explanation: "I was following instructions of one of my lawyers to get notes of Dr. Cheney's lecture and complete my own notes and compare them."⁴

¹ This evidence, in another form, was objected to and excluded, but afterwards permitted, when the defense declined to accept the opportunity.

² On April 10 he already knew for several days that Miss Lamont had disappeared on the 3d.

³ It was their joint request, Durrant said.

⁴ Some apparent inconsistencies here appeared in his story. He claimed that when he was arrested on the 14th, he had forgotten whether he had notes, and first learned from his attorneys on the 17th that he had. But (1) on the 10th he had already gone over the same notes with Student Glaser; (2) on the 20th he at least told Student Graham that he did not know whether he had full notes.

It must be added that, according to two or three reporters, Durrant, when first arrested,

(2) Durrant at the Church. How did Durrant happen to be at the church at all, on the day of Miss Lamont's disappearance? His purpose, according to his own story, was to repair the easterly "sun-burner" hanging through the ceiling above the rostrum. It consisted of 24 gas jets, one being fitted with an electric vibrator, by means of which all were lit. The wire ran 75 feet to the gallery wall, where a gas valve turned on the gas and a push-button made the connection with a battery. Durrant's story, in brief, was as follows:—

He was interested in electricity (but knew nothing of gas), and had several times repaired the sun-burner attachment. He had several times been told of defects by Mr. Davis, the treasurer, by one of the trustees, and by the janitor, Sademan; one of these occasions was in the preceding January. About March 23 preceding, a trustee or Sademan (later he fixed it as Sademan) told him that the lights would not work at the first press of the button, and he said he would look after it. When he came to the church he went to the library, put his watch in his coat, and left coat and hat there on a box; went through the Sunday-school room up to the auditorium; proceeded to the gallery at the front end to turn on the gas; plugged the button, turned the gas half on, raised the ladder, mounted, went along the lower ceiling to the opening, took off the cover and reflectors, remedied with nippers the spring on the vibrator (an operation of 4 minutes or so), tested its working, and returned to the gallery and shut off the gas. While making the repairs he lay on his stomach, his head protruding downwards through the open-

ing over the gas, and the escaping gas nauseated him. This it was that caused the paleness described by the witness King. The rest of his story coincided substantially with that of King.

A vigorous cross-examination of nearly two days was met by Durrant with almost entire success so far as this part of his story was involved,—a circumstance of considerable significance in view of the great mass of details involved. But the State attacked the story at several points in the following ways:—

(a) The treasurer Davis and each of the five trustees testified that they had not spoken about the gas to Durrant at any time in 1895. The janitor Sademan testified that he had had no conversation with Durrant about the sun-burner at or about the time stated, and that the gas apparatus was "in a perfect state of repair," except for a loose key in the front lobby below, which sometimes caused a slight leak.¹ (b) Experts testified that the effect of inhaling gas would be a flush and redness of the face, not a paleness; but an expert for the defense denied this. (c) King testified that when he entered the library (which must have been about 5, or after Durrant had, by his own story, arrived) he saw no hat and coat there; and, as the door was locked when they went back there before leaving, it would follow (assuming that his not seeing them indicated that they were in fact not there) that Durrant, and he only, had put them there in the meantime, i.e., during King's absence to get the bromo-seltzer; since it was admitted that a new lock (to keep out book thieves) had been put on the door only a few days before, to which Durrant and himself alone had

told them that he had reached the church between 4 and 4.30. This he explained as a misunderstanding of his expression "gone to the church between 4 and 4.30," signifying the time of leaving the Medical School. But the newspaper reports of what witnesses had said or would say, proved so unreliable throughout the trial that this particular evidence did not play an important part.

¹ Workmen had repaired the single wall-burners in the church on April 2, and this, as the source of a gas escape, was made much of by the defense; as also the fact that King, on entering, smelled gas in the lobby below. But this could not affect the question of the state of repair of the sun-burner; and so far as it was offered to show the cause of Durrant's nausea, it was of no consequence, for the only gas that could have overcome him was that which he inhaled from the sun-burner, while the leak in the lobby accounted for what King smelled.

keys, and since the interval of his absence had afforded Durrant time to put the articles there. The effect of this would be merely to show that Durrant's story about putting them there on his first arrival was false.¹

Durrant's Exclusive Opportunity. — As further negating the hostile effect of the State's testimony putting Durrant at the church on that afternoon (whether with or without Miss Lamont), it was of course open to the defense to show the possibility or probability of some other person having equal opportunity to commit the crime or showing equally strong traces of guilt. In this respect much was promised, but little attempted, and practically nothing effected. The State had shown, as to modes of access, that the north door to the church had been nailed up in the previous year; that to the front door keys were possessed by King and the janitor Sademan only; and that to the south door keys were possessed by only King, Durrant, Sademan, Pastor Gibson, and the President of the Ladies' Aid Society, Mrs. Moore; furthermore, that the murderer must have been completely familiar with the church interior. Practically, then, the matter lay between the defendant, King, Sademan and Gibson. As to the former two, no attempt whatever was made to implicate them, and we must assume that it was not possible to do so. But a distinct effort, indirect rather than direct,

was made to fix suspicion on Pastor Gibson. It probably originated in the fair, though not striking, resemblance between the writing on the inclosure of the deceased's rings sent to Mrs. Noble and some specimens of Pastor Gibson's handwriting. The pastor was called to the stand to identify this handwriting, but for no other purpose. Other bits of evidence noted below, of little or no real significance, were, however, made much of by the defense (though scarcely mentioned in counsel's argument).²

3. Durrant's Subsequent Conduct. — The defense paid special attention to destroying the effect of two incidents of the State's story, — the visit to the pawnbroker Oppenheimer, and the waiting at the ferry on April 12.

The attack on the Oppenheimer story was made in several ways: (1) Durrant and his mother testified that he never wore in the daytime at that season the overcoat which the pawnbroker said he had on. (2) The pawnbroker appeared to be somewhat nearsighted. (3) Others who were sent or had for their own purposes gone to offer him jewelry testified to errors made by him in describing them. (4) A Mr. Lenahan, of the same general appearance as Durrant, had offered him a similar ring about the same time; but this witness' testimony was very weak; moreover Oppenheimer instantly picked out the Lamont ring when the two were shown him together. (5) Durrant's presence at other places on the mornings of the period in question

¹ It may be added that if Durrant had really come down by way of the west gallery, he would naturally have gone directly down the stairs at the west end to the library to get his hat and coat, instead of going unnecessarily to the stairs at the east end and then back through the Sunday-school rooms to the library. That he came down at the east stairs would, on the other hand, be perfectly consistent with his having just committed the murder, for as already mentioned, the natural way of retreat from the belfry was along the new ceiling to the east end and thence down to the baptistery and down the stairs to the Sunday-school rooms.

It may also be noted that as the gas-fitters (for some unexplained reason) took out the sun-burners on April 4, there was no means of testing Durrant's story as to his doings over the ceiling.

² (1) Footprints, in the belfry, of a shoe larger than Durrant's; (2) Marks of a chisel and a hammer on the belfry door, a chisel and a hammer being found in a box in the pastor's study; (3) shoes, of which one bore a brown spot, found in the pastor's study. But the attendant explanations and contradictions were such that this evidence may be fairly described as worthless.

was shown; but only partially. (6) Durrant was shown to have a little money in bank, and the ring was worth only \$2.50.

The ferry incident was so explained that perhaps Durrant did not in fact contradict himself as to his reason for being at the ferry. He claimed that he was really looking for Blanche Lamont; and, so far as his share in her death was concerned, this was quite consistent with his interest as a friend in her whereabouts.¹ But the prosecution made much of the absurdity of his story that he received the advice to go there from an unknown man, who stopped him on the street and then left him, and that Durrant made no attempt to inquire his

name or his source of information or to follow him; and to this extent the incident was used to discredit his whole story.

On Saturday, November 2, at 3.30 P.M., after 27 days actually occupied by the giving of testimony, and 5 or 6 more by the addresses of counsel, the jury retired. Within 30 minutes they returned with a verdict of "Guilty of murder in the first degree." A juror afterwards revealed that this result was reached without discussion and upon the first ballot. It is sufficient to note that the verdict appeared to be in harmony with the opinion of the community.

¹ The prosecution's view of his real purpose, which could not be brought out on this trial, was that he was waiting for Miss Williams, a girl who also had disappeared at the same time and was supposed to have been murdered by Durrant.

387. THE LUETGERT CASE. (JOHN H. WIGMORE. American Law Review. 1897. Vol. XXXII, p. 187.)

On May 1, 1897, Adolph Louis Luetgert, a native of Germany, lived with his wife Louisa, also a German by birth, in a house on Hermitage avenue, near Diversey boulevard, in Chicago. The husband was 52 years of age, large and heavy; the wife was 42 years of age, small and frail, weighing about 105 pounds. They had been married some 19 years, and had two children, Louis, 12 years old, and Elmer, 5 years old. Arnold, a grown-up son of the husband by a former marriage, lived elsewhere in Chicago. The only other inmate of the Luetgert household was Mary Siemering, a second cousin of Mrs. Luetgert, who worked for them as maid. Adolph Luetgert had made his way from small beginnings; at one time a tanner, afterwards a saloon keeper, then a butcher, he now carried on the manufacture of sausages in a large factory adjoining his residence, and in one of the buildings he had also a grocery store and a meat market. He had been reputed rich, and in the surrounding district of humble homes he was looked upon as a magnate. In the course of the preceding year, however, he had lost some \$25,000 through the schemes of an English swindler, and matters had rapidly gone from bad to worse, until in March, 1897, the sausage factory had been closed, only a few hands being retained for retail operations. The foreclosure of a chattel mortgage was impending, and on May 4, shortly after the events to be narrated, the sheriff took charge of the factory, and a sale under the chattel mortgage took place on May 11.

On the evening of Saturday, May 1, about 10.15 or a trifle later, little Louis Luetgert came home from the circus, entered the kitchen by the rear steps, and began to recount his experiences to his mother, who was sitting under the gaslight, dressed in a loose brown wrapper and in slippers. "Was it worth the 10 cents?" she asked. "Oh, yes, it was worth a great deal more than 10 cents," he insisted enthusiastically. But his story was interrupted by his father, who just then entered from the bathroom, with a lantern in his hand, and said, "You had better go to bed now; you can talk about the circus in the morning." The boy went to his room, which was on the same floor. He saw the father pick up his lantern (which he had at first set down), and later he heard him go down the basement stairs on the way out to the factory; for the father did not sleep in the house, but in a room partitioned off from the factory office, with some favorite big dogs for his only companions. The servant, Mary Siemering, was already in her room in bed. A little later in the evening (as some persons were found to assert), husband and wife were seen walking on Hermitage avenue, and along the alley towards the factory; but this testimony was so open to question that it may be laid out of consideration;¹ particularly as its correctness or incorrectness did not seriously affect the other elements of the controversy. This much, at least, is certain, that the wife was left in company with the husband about half past ten o'clock on Saturday evening, May 1. According to the prosecution, she has never

¹ Gottliebe Schimicke, 14 years old, and Emma Schimicke, an elder sister, declared that they saw this on the night of May 1; but the possibility of an error in dates is so serious, and they were so confused on cross-examination and had so discredited themselves by contradictions at other times, that one finds it impossible (while not disputing their honesty) to lay any stress on the incident they related. But Nicholas Faber testified to the same effect, and there may well have been truth in the story. Charles Hengst, passing the place a little later, thought he heard a cry; but little weight can be given to such experiences.

since been seen in human form, alive or dead, by any other person.¹

On Tuesday, May 4, Diedrich Bicknese, a brother of Mrs. Luetgert, living in the country near Chicago, came to call at the Luetgert house, but did not find his sister there. Luetgert said, when Bicknese inquired where she was, "I don't know; ain't she at your place?" and then explained that he supposed she had run away. He said he would let Bicknese know in a week or two, if anything turned up; but Bicknese was not satisfied with this dilatory attitude; and when, on returning next day to the Luetgert house, he learned that his sister was still missing, he spent Wednesday, Thursday, and Friday in making inquiries of various relatives and friends, and ended by notifying the police on Friday, May 7. Luetgert meanwhile had done nothing, and had even reproached Bicknese for publishing the family's disgrace involved in his wife's desertion. On Saturday, May 8, the police began their search, dragging the river, the sewers, and the clay pits, and inquiring of all relatives and intimates. Six days later they turned their attention (in a somewhat belated fashion) to the factory employees, to discover what had been done there on the day of the disappearance; and on Saturday, May 15th (two weeks after the disappearance), upon hearing the story of Bialk, the factory watchman, five of the police (including Captain Schuettler and Inspector Schaack), with Bialk, visited the factory buildings and examined a large steam vat (11' X 3' X 2' 8"), one of three commonly used for dipping sausages, and standing in the basement of the main building. This vat they found about half full of a reddish-brown

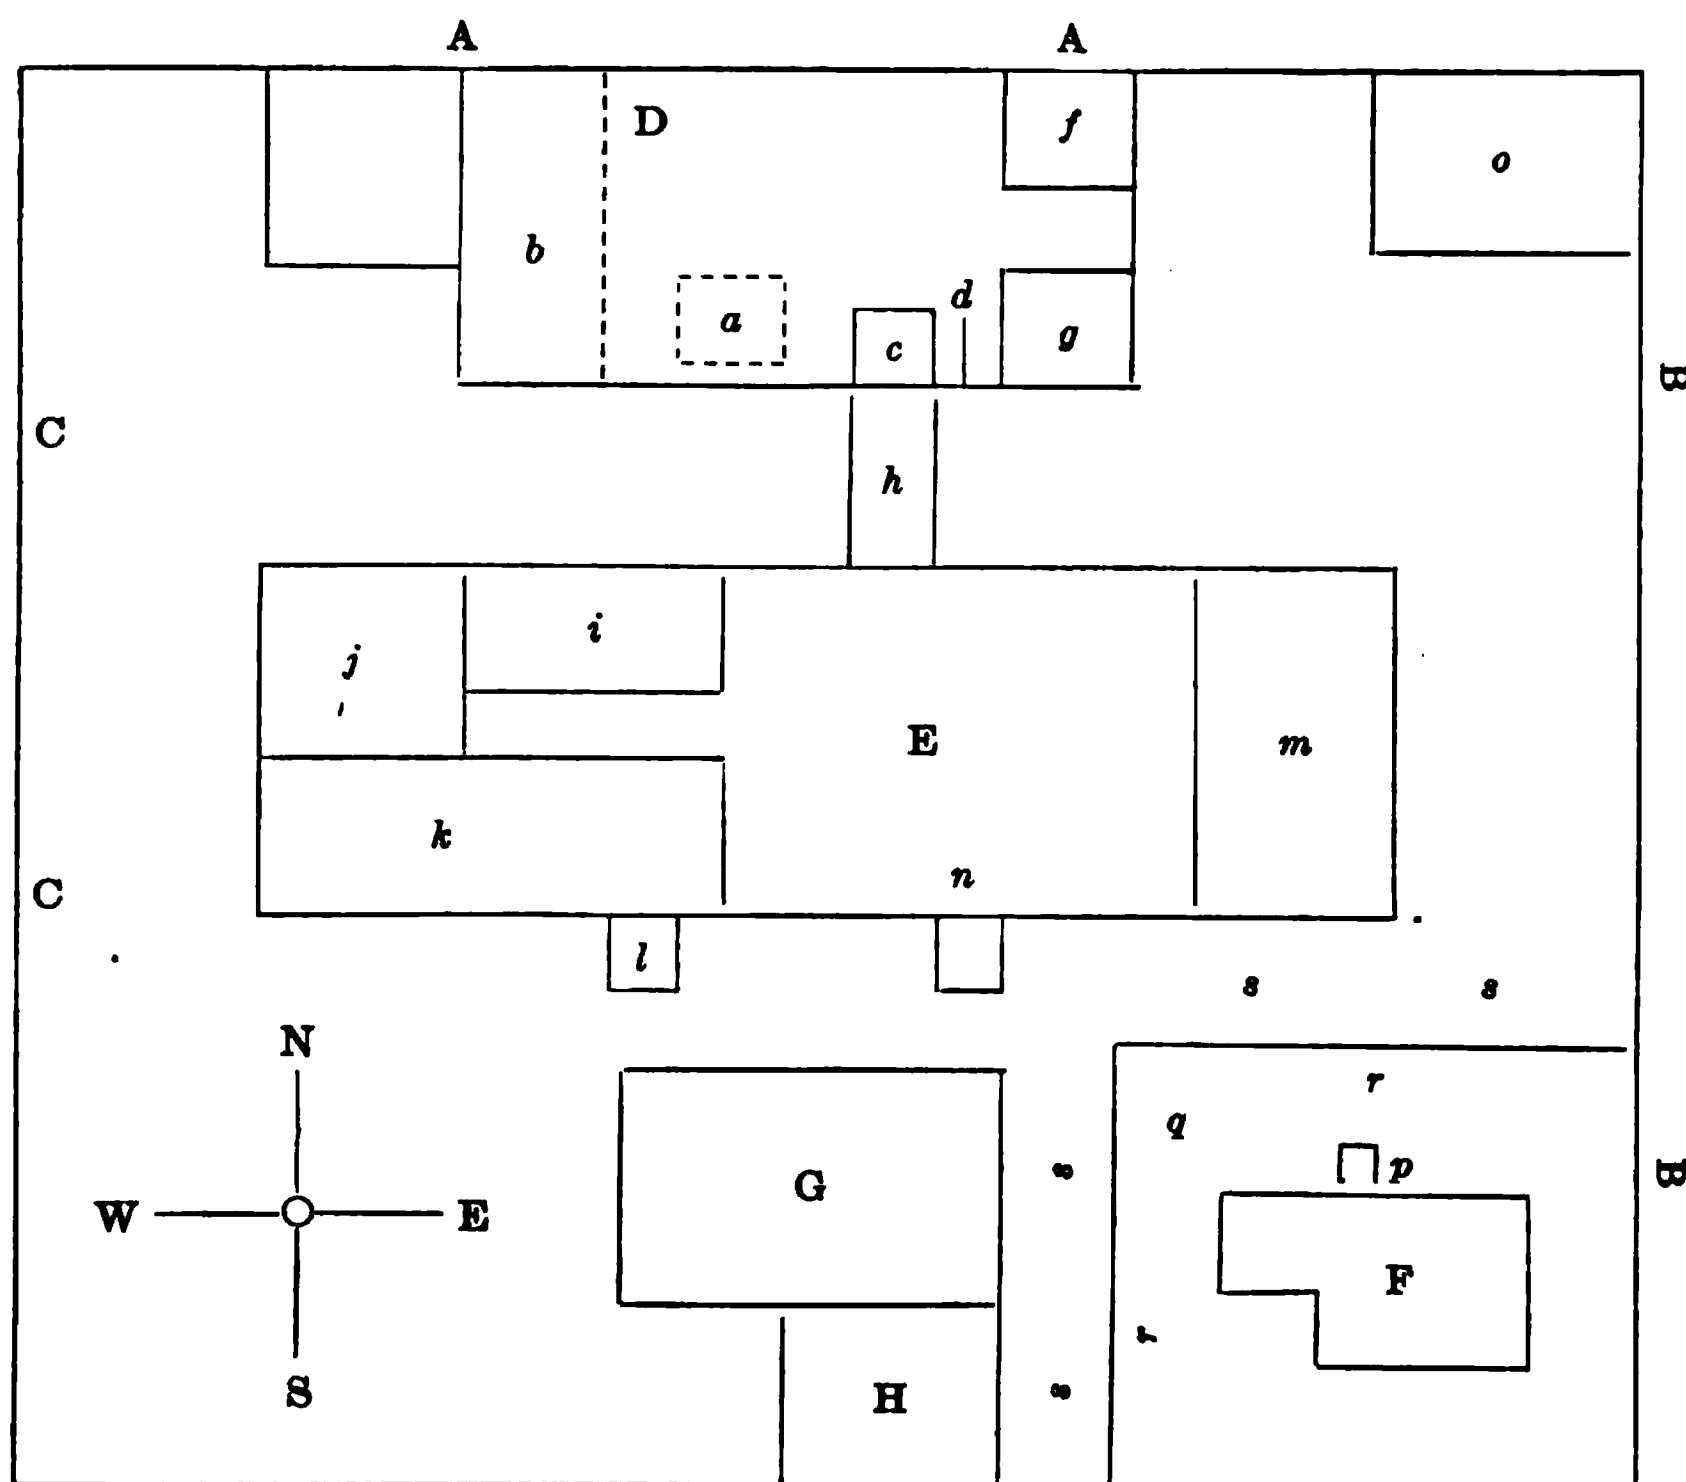

liquid, emitting a sickening odor. A plug on the outside, near the bottom, was withdrawn by one of the police, and some gunny sacks (found near at hand) were spread on the floor at the bung-hole. As the liquid passed out, a slimy sediment and a number of small pieces of bone were deposited on the sacks. The vat was then further searched, and at the bottom, besides other bone fragments, there were found two plain gold rings, stuck together (one inside the other) and covered with a slimy, reddish-gray substance; the smaller was a guard ring, the larger a wedding ring and on the inner surface of the latter was engraved in script "L. L." and "18 carat." It was later abundantly shown that these rings (or their facsimiles) had been habitually worn by Louisa Luetgert, the missing woman.²

The police found also, under or near this vat, a hair a foot long,³ a piece of leather, a piece of cloth, some pieces of string, a hairpin, and the apparent half of an upper false tooth. It was later clearly shown by Mrs. Luetgert's dentist that she had a few false teeth in her upper jaw, but none in the lower. The police found also, in a pile of ashes in the street near by, at a spot where, by Luetgert's order, the smokehouse ashes had been dumped on Monday, May 3, other fragments of bone, as well as some pieces of burned corset steel (identified as such by a corset maker). The most characteristic of the boiled and burned bone fragments were identified by the two osteologists of the Columbian Museum as a femur (thigh), a rib, a sesamoid (extra bone near the big toe), a phalanx (toe joint), a temporal bone (skull fragment), a metacarpal (finger joint), and a

¹ The defense claimed appearances, discussed later.

² There was, to be sure, testimony denying that Mrs. Luetgert ever had rings of this description; but it carried no weight.

³ Other hair was found at the sewer opening in the basement near by, but some or all of it proved to be hog hair.

PREMISES OF ADOLPH LUETGERT

AA, Diversey boulevard, 315 ft. frontage. BB, Hermitage ave., 290 ft. frontage. CC, Fence, near railroad track. D, Main building and store, main-floor plan. E, Factory building. F, residence. G, stable. H, wagon-house. *a*, relative position of middle vat, in basement below. *b*, relative position of smokehouse furnaces in basement. *c*, elevator. *d*, stairway down from main floor. *f*, office, on main floor; grocery, etc., on rest of same floor. *g*, shipping room. *h*, passageway, from D to E, 27×13; its level is slightly below the main floor of D, and through an opening one can look down, across the elevator-shaft, to the basement floor. *i*, casing-room. *j*, engine-room. *k*, boiler-room. *l*, chimney. *m*, ice-house. *n*, entrance. *o*, chicken-yard. *p*, back door. *q*, garden. *rr*, garden fence. *sss*, alley.

humerus (upper arm); but whether they were human or not was afterwards seriously disputed. The reddish liquid was said to contain traces of blood material (alkaline hematine). The ashes were said to contain phosphoric traces of human flesh; but it was afterwards disputed whether the quantity was more than would naturally be found in all sawdust ashes.

On Monday, May 17, in view of the discoveries of the police, Adolph Luetgert was arrested on the charge of murdering his wife. Upon the preliminary hearing he was bound

over to the grand jury, and then indicted, and after another lengthy hearing he was refused bail. Commendable promptness was shown in the collection of evidence, and the trial began on August 23, before Judge Richard S. Tuthill, in the Cook County Criminal Court. After only a week consumed in obtaining a jury, the opening address was made on August 30. The trial lasted nearly two months (till October 21), and such was the general interest excited by it that newspapers in middle-sized cities a thousand miles distant gave up

to it daily two columns of telegraphic news. The prosecution was represented by the State's Attorney for Cook County, Charles Samuel Deneen, and by his first assistant, Willard Milton McEwen, who conducted most of the cross-examinations. The defense was represented by William A. Vincent and by Albert Phalen. The jury was conceded by all to be an exceptionally intelligent one.¹

I. What was the fabric of evidence upon which the State based its accusation against the husband?

1. *Motive*. — It was clearly shown that he was unkind to his wife, and regarded her as an incumbrance; he had even intimated indefinitely an inclination to get rid of her.² It was also proved beyond a doubt that he had shown no sorrow over her disappearance, and was wholly indifferent to her fate. He let her brother conduct the search for her;

he even discouraged the efforts that were made; and he did not go to see the police until they sent for him, although he knew Captain Schuettler personally and had once sought his aid about the loss of one of his big dogs.³ It seems clear that he maintained illicit relations with Mary Siemering, the maid,⁴ and had threatened to take her into the factory (where he slept) if his wife made trouble about her,⁵ and had asked her, after the disappearance, to keep house for him.⁶ Besides this, he at the same time proved his insensibility to the situation and exhibited a singular folly by writing from the jail to Mrs. Christina Feldt (a rich widow who had had money transactions with him and was in some respects a confidante) a series of amorous letters, in which he spoke of the future that now lay before them when he should be liberated.⁷ These letters may have

¹ A feature of their experience, novel in jury annals, was the permission of the court that they should take exercise during their long confinement by playing ball, after adjournment, on a field near by. An unfortunate result was that one of the jurors took cold, and was threatened with severe illness. The second trial began on Dec. 14, before Judge Joseph E. Gary, the celebrated judge who presided at the trial of the anarchists, and ended Feb. 9, 1898. The defendant had at this trial different counsel, Lawrence Harmon, Max Joseph Riese, and John Edward Kehoe. The evidence at the second trial covered substantially the same ground as at the first trial; a few differences have been noted in the following pages; but space does not suffice to touch upon all, and the evidence at the first trial is for several reasons more satisfactory as the basis for a study of the case. At the second trial the defendant himself took the stand; but his testimony on the whole consisted in denials of the more salient facts asserted by the prosecution's witnesses and in reinforcing the testimony to the facts offered by the defense; and there seems no need of more than a few references to its tenor.

² By Mrs. *Tosch*: He had said when his wife was at one time ill, that, if he had waited a minute longer before calling the doctor, "the dirty rotten beast would have croaked": that he felt sometimes "like he could take her and crush her." By Mrs. *Grieser*: On one occasion, when he was angry, his wife asked what the matter was; he told her "to go and stick her nose in the cooking pot"; then he threw a plate at the ceiling and broke it, and said, "she was no wife for him; she had been raised in a pigsty; she was a wooden shoe." By Mrs. *Feldt*: He often said that he could not live any longer with his wife. By F. A. *Schultz*: On Sept. 2, 1896, he saw Luetgert holding his wife by the throat and choking her in the yard at the chicken coop.

³ The defendant claimed that he had called up various hospitals on the telephone at the time, but, singularly enough, without giving his name. He did not deny otherwise his failure to search for her.

⁴ She herself admitted this to the police and to the grand jury.

⁵ By Mrs. *Tosch*, Mrs. *Feldt*.

⁶ By Mary *Siemering*.

⁷ "Beloved dear Christina, . . . this is our battle [and when it is won] as soon as I can be with you, we will have more money than we need. . . . Yours forever, true, loving Louis." "Where there is sincere love, there is everlasting faithfulness in pleasure as well as in trouble, through life until death. . . . [I hope] you have for me the same trust and belief. . . . Your faithful and sincere loving friend till death, Louis." Mrs. Feldt handed over these letters, having experienced a revulsion of feeling when it seemed to her that he was simply using her as a source of funds for his defense.

been insincerely intended merely to dupe her into lending more money to him (though they were in this only partially successful); but even on this supposition they indicated his state of mind towards his missing wife.

2. *Preparations.* — On March 11, 1897, he had purchased from a wholesale drug house a barrel (378 pounds) of crude potash. The barrel stood in the shipping room of the sausage factory (the head being broken in) until April 24. On that day Luetgert ordered the smoke-house helper, Frank Odorowsky, to take the barrel down to the basement, break up the lumps, and put them into the large middle vat, already described, cautioning him at the same time against handling the caustic stuff with the bare skin. This he did, "Ham" Frank Levandowsky, another employee, being called in to help. The substance in the barrel "burned like fire" wherever it touched him, and he had to put rags on his hands and in front of his face, and even then received several severe burns, the scars of which he showed in court. The stuff was placed in three barrels, standing alongside of the middle vat. Bialk, the watchman, and Luetgert then placed the potash in the vat, connected a hose so as to cover the substance with water, then turned on the factory steam so as to dissolve the potash. Here it lay dissolving during the week; and on Saturday, May 1 (the day of the wife's disappearance), about a quarter of 9 in the evening, Luetgert, in the presence of Bialk, the watchman, again turned on the steam into this vat. The steam was kept on, and the vat continued to boil, until about 3 o'clock Sunday morning, when Luetgert shut it off, and (between 3 and 4 o'clock) went up to his room

in the office. During the meantime the watchman was tending the engine in the other building.

3. *Opportunity.* — Twice during this period between 9 and 3 o'clock, the watchman was absent from his post at Luetgert's order.¹ Shortly after 9,² he was sent with an empty white bottle, as a sample, to a drug store on Clybourn avenue (the going and coming required not less than thirty minutes) to get a similar bottle of Celery-Kola compound; on returning with it, he found the ordinary passages from the engine room building into the vat room closed, and he handed the bottle to Luetgert over a wicket gate at the elevator. Again, shortly after 10 o'clock, he was sent to the same store with another bottle, this time a blue one (Hunyadi water), to be duplicated; the drug clerk had this time to be roused from bed, and the trip occupied some three quarters of an hour; Luetgert met him as before at the gate and took the bottle, and Bialk returned to the engine room, and stayed there the rest of the night. These two bottles did not appear to be needed, and their use, or non-use, remained to be explained. The inference from these errands was that Luetgert desired for some ulterior purpose to secure the watchman's absence. It will be noticed that it was during the watchman's second interval of absence that Luetgert came over (almost directly) to the house and sent little Louis out of the kitchen to bed. If Luetgert killed his wife at the vat in the basement, after inducing her to go over there with him from the house, it could have been done in this secure interval between about 10.30 and 11 o'clock; and it must have been done then or not at all.²

¹ The drug clerk corroborated the times of these two errands.

² The hours by the clock may, of course, have varied slightly from these; but the available interval of complete secrecy and security could not have been less than half an hour nor more than three quarters of an hour. At any point of time after that interval, it seems practically certain that either Bialk would have seen the woman (had she been in

4. *Consummation of the Deed.* — Between 3 and 4 o'clock in the morning, Luetgert went up to the office, where he was found by the watchman about 7 o'clock, when the latter went off duty. Luetgert was napping in a chair, his feet on the table, his clothes not removed. He told the watchman not to let the fire go out, but to keep it banked with the steam at fifty pounds (the usual amount for week-day work). During the day Luetgert was in and about the factory. At 6 o'clock the same evening (Sunday, May 2), the watchman came on duty again. He found the hose running into the vat, a chair from the office placed facing the vat, the floor covered with a streaky, slimy substance (the overflow from the vat) containing little flakes of bone, the fire out under the boiler, and ashes in front of the furnace. About 4 o'clock on Sunday afternoon, the factory chimney had been seen by several persons to be smoking, — a singular occurrence for Sunday. On Monday morning early, the smokehouse man, Odorowsky, came on duty, and found the same slimy, stinking substance on the floor, and saw also a shovel standing near the vat, the blade covered with the slimy stuff (having been used apparently to lift out the contents of the vat). Alongside of the vat he also saw three small wooden doors (from the smokehouse), and a number of gunny sacks, the doors and sacks being wet and slimy, as though they had been placed over the boiling vat to confine the steam and intensify the boiling. While Odorowsky was there, Luetgert knocked out the

stopper of the vat,¹ and then Odorowsky, under Luetgert's direction, cleaned into the sewer opening (in the basement) all that he could of the sticky, slimy liquid on the floor, scraped up the more solid stuff into a barrel, and dumped it near the fence by the railroad track; he then carried out what remained and buried it in the yard, — all as dictated to him by Luetgert. On the same morning, another man, at Luetgert's orders, hauled out the ashes from the furnace and dumped them into the street; and it was at the supposed locality of this deposit that the bones and corset-steels already spoken of were later found. From the vat were afterwards obtained, as already described, the two rings and the other bones. A large pocket knife, handed to Mrs. Feldt by Luetgert when arrested, was found to contain, when tested microscopically, traces of flesh and blood on the grooves at the edge.

5. *Guilty Suppression of Evidence.* — From various quarters came indications of Luetgert's anxiety to suppress all accounts of his doings on this Saturday night and Sunday. (1) He sent the watchman, Bialk (as we have seen), away from the factory upon two errands, apparently fictitious. Moreover, after he heard that the police had been talking with Bialk (May 14), he went to the house of the latter (then in bed with pretended illness; an officer being concealed under the bed), upbraided him with talking to the police, and asked what they had found in their search; when he was told they had found nothing, he

the vat room) when he returned with the second bottle, or (perhaps) from the engine room would have heard the two conversing, and also (perhaps) that Luetgert would not have ventured upon violence within the possible hearing of Bialk. On the other hand, a half hour's interval was ample time for the killing, since the process (as the traces in the vat indicate) need have involved only a choking or knocking down and then a placing of the entire body, the clothes still upon it, in the boiling potash.

If it should be asked why he should contrive *two* fictitious errands, the answer is that he may have intended to do the killing during the first, but then recollected that Louis was still at the circus and would inquire for his mother on returning.

¹ "He was mad," "He never looked so wild as he did that Monday," said the helper; the inference being that he was disappointed because the potash had not disposed of everything.

said, "That is good; you and your son can go to work for me soon, when I start up the factory." (2) When Odorowsky cleaned the floor on Monday morning, he said, "What the devil have you been doing here?" and Luetgert answered, "Don't say anything about it, Frank, and I will see that you have a good job as long as you live." (3) On Saturday, May 15, he went to the saloon of a friend, near by, and talked with Mrs. Tosch, the proprietor's wife, about the efforts of the police. He said, "If you know of anybody that saw anything, tell me." She said that Charlie Maeder, his engineer, was telling of the Sunday smoke from the chimney. Then he told her to tell the engineer to say nothing about the smoke; and later in the day he came back and tried to induce Mr. Tosch to go across the street to the dance hall and get the engineer away, so as to stop his talking to the police about the smoke. Subsequently this same Maeder disappeared, and at the time of the trial was known to be in Germany; the inference being that he knew, or was supposed by Luetgert to know, too much about the smoke, and perhaps about other things. (4) He showed the utmost reluctance to allow the aid of the police to be called in, and falsely told his two brothers-in-law that he had hired detectives. (5) He gave different versions of his wife's reasons for leaving, which, though they were rather mere opinions than assertions of fact, were nevertheless inconsistent. (a) He told his brother-in-law, Bicknese, that he thought she had gone off, perhaps to Bicknese's house, but that she had showed no signs of losing her mind; (b) then, a few moments later, he said that she might have gone off with another man; (c) on May 15, he first advanced the theory that she had "got crazy" and wandered off; this was

said to the police captain, and he explained that he had not reported the disappearance because he thought she might come back and he did not want the disgrace of notoriety.

Thus, the main points of the case made out by the State were as follows:

1. The improbability of a voluntary desertion by Mrs. Luetgert; and, in particular, the impossibility of discovering any trace of the living woman;

2. The presence about the premises of the apparent remains of her body;

3. An ample motive in the husband for getting rid of her;

4. A suitable opportunity for him, and for him only, to do this;

5. Operations by the husband about the factory, consistent only with some unusual deed, and corresponding to the mode of destruction indicated by the traces of the body;

6. Conduct of the husband indicating a guilty consciousness.

II. How were these cumulative items disposed of by the defense?

1. *Improbability of Voluntary Desertion.* — The refutation of this was attempted in two ways: (a) By evidence that Mrs. Luetgert (a') had often and recently expressed an intention to leave her husband, and (a'') had shown signs of losing her mind; (b) By evidence that she had been seen alive early in May (*i.e.* after the disappearance from home), near Kenosha, in Wisconsin, about forty-five miles from Chicago.

(a) This evidence was given by six witnesses. If their testimony could be fully believed, it is not too much to say that it should have created such a fair probability of her voluntary departure as would almost justify a jury's reasonable doubt; for she was said (at least by Mary Siemering)¹ distinctly to have planned going off and con-

¹ Mary Siemering originally told a great deal that was damaging to the defendant; but she retracted most of it on the stand, and seemed altogether an unreliable witness.

cealing herself in some distant town as a servant.¹ There were, however, several reasons for distrusting it completely. (1) None of these persons, singularly enough, had come forward to inform or had disclosed in any way these utterances of Mrs. Luetgert until the time of trial, — either during the two weeks that the police were dragging the river and the newspapers discussing the disappearance, or when their friend Luetgert was arrested, or during the two long preliminary examinations; their recollection, in short (it is difficult to doubt), had the suspicious appearance of being forced or manufactured for the occasion. (2) The two suppositions, that she was deliberately concealing herself, and that she was wandering about insane, were somewhat inconsistent; moreover, both were inconsistent with Luetgert's suggestion to her brother that she had gone off with another man. (3) The probability that she would be sitting in a wrapper and slippers, reading, a few moments or hours before so momentous a step, would be small. (4) The probability that, after such planning, she would, nevertheless, go off equipped only with wrapper, slippers, and shawl,² would be also decidedly small. (5) The probability that she would go off at all by midnight, when there was no obstacle whatever to her departure in the daytime, would be slight. (6) The probability that the wife would remain in hiding and let her husband hang for her murder would be also exceedingly small. (7) This supposed plan to go off and hide was inconsistent with the Kenosha

story, next decribed, the theory of which was that she was apparently making for a farm owned by Luetgert himself.

(b) The so-called Kenosha *alibi* was supported by six witnesses (one of whom had known Mrs. Luetgert personally); these persons saw a strange woman in that region on May 3, 4, 5, and 9, whom they thought was Mrs. Luetgert. But (1) the only identification (except of the one person above) was by a tintype picture taken several years before; (2) some or all of the identifiers seemed clearly to have expressed at other times disbelief in the identity, and in two instances at least there was evidence of deliberate falsifying; (3) they differed materially as to the description of the strange woman;³ (4) eight other persons who had seen the same strange woman denied her likeness to Mrs. Luetgert; (5) if she was at Kenosha, it was apparently because there was there a farm owned by Luetgert, which she would naturally seek if she had chosen to come that way at all; but there was no evidence that she ever turned up at the Luetgert farm.

The Kenosha *alibi*, in short, was a claim too fragile and suspicious to be given much weight, if any, at least in the face of such circumstances as the rings in the vat.⁴

2. *Presence of Traces of the Body.* — These traces, as we have seen, were (1) two rings, stuck together, one marked "L. L."; (2) a number of bone fragments, corset steels, a rag, a long hair, etc.; (3) a slimy substance, etc. The last would indicate the presence of a body of

¹ The defendant also spoke, at the second trial, of express assertions by her, on the night of the disappearance, of an intention not to stay and witness their pecuniary ruin and disgrace.

² Both Luetgert and Mary Siemering told the police that these only were missing. As to money for a journey, she certainly had no more than \$80; but whether she could have had this much, or any at all, was so open to dispute that no argument can be founded on the state of her purse.

³ One said that she was a blonde and wore a sailor hat; another, that she had black hair and eyes and wore a slouch hat.

⁴ At the second trial the Kenosha *alibi* was abandoned, and an *alibi* at various other places was put forward. The above testimony is typical of all of these efforts.

flesh and blood; the second would mark it as human and female; the first would identify it as Louisa Luetgert's. All these indications the defense strenuously disputed.

(1) There was only one way of explaining away the cohering rings, *i.e.* that they had been caused to be made and then placed there by some implacable enemy of Luetgert's, — either by one of the police when searching, or by one of the employees, or by one of the persons who gained access on the day of the sheriff's sale, May 11.¹ Numerous considerations make such a supposition improbable in the uttermost, if not humanly impossible; these will easily suggest themselves, and it would here take too much space to analyze them.²

(2) The identification of the bones as human or as female, and of the blood and phosphorus traces, was contradicted by several anatomical and chemical experts. Of the directly opposing testimony on this point, it must suffice to say, that the witnesses on both sides were eminent and competent, and that some of the witnesses on each side were more or less shaken on cross-examination.³ That any of the bones were fully proved to be human, it is hardly possible to assert; yet it certainly was not made out (nor even, perhaps, seriously claimed) that they could not be human. The identification of the corset steels and the human hair was not laid open to doubt; the difficulty here (as also for the strings, leather, and cloth) was that they might perhaps

have come from other sources than a dead body.

(3) The slimy substance, and the other refuse, it was suggested, came from the soap-making process described below.

3. *Motive.* — Witnesses were brought to disprove the ill-treatment of his wife by Luetgert; but they spoke merely of never having seen such behavior, and the prosecution's showing (it must be said) was not otherwise shaken.

4. *Opportunity.* — This was disputed in two ways. (a) Little Louis Luetgert spoke of waking and hearing near at hand a "rustling," late in the night of May 1, and the voice of his mother, answering his call, said, "It's me." But this story had never once been told before by him, even at the preliminary examinations; and, as the boy had been meanwhile in the custody of the defense, this afterthought of his can hardly be treated as valuable. (b) The presence of Bialk, the watchman, in the engine room all night, was argued as negating any real opportunity for the crime. But (1) Bialk was absent long enough to allow its commission; (2) after the body had been put into the vat, there was nothing for him to see; (3) Luetgert would not have been deterred by the fear of Bialk's intrusion, for Bialk, like the other employees, was evidently too much afraid of Luetgert to take such a liberty.⁴

5. *Operations at the Vat.* — That a solution of potash had been prepared in the vat, and that Luetgert

¹ It is true that there is a second possibility, *viz.* that the woman had thrown the rings herself into the vat before leaving; but this does not seem worth considering.

² Two only, as illustrations, may be suggested: (1) The miscreant must have divined exactly where to place the rings so as to harmonize most closely with the other facts *then quite unknown*; (2) the maker of the rings must have been a confederate in a conspiracy, else he would have come forward and informed.

³ The incident simply illustrated anew the failure of our modern system of expert testimony; that failure resulting, be it noted, not from any inherent uncertainty in the subject nor in skilled testimony as such, but in the marshaling of opposing experts, each of them subjected to the suspicion of partisanship; the result being that the helpless layman is forced to regard them merely as units to be set off one against the other.

⁴ By *Bialk*: "I haven't done it [*i.e.* looked in on him] because, if Mr. Luetgert saw me, I would have got something."

had gone through a process of boiling something, and then disposing of it, was not denied. The explanation offered was that he had been trying to make a quantity of soft-soap, preparatory to a thorough cleaning of the sausage factory in order to make a good impression upon possible purchasers or lenders of money. William Charles, Luetgert's brother-in-law and business agent or partner, testified fully to this plan. According to his story, the potash bought for this purpose in March had not been used, because the pending negotiation for the sale of the factory fell through; and the plan was again thought of when there seemed a new prospect of raising money. During all this time the potash was left plainly in view in the shipping room. The undertaking of soap making was left until the night time because during the day Leutgert was too busy in looking after his business and trying to raise money. There was no attempt to conceal the process, and Bialk and Odorowsky were called in to help. The additional material required consisted of three barrels of grease or tallow and one barrel of refuse meat and bones; these Charles himself had seen Luetgert put into the middle vat, where the potash was, about 7 P.M. on Saturday, May 1, and Adolph Elandt, an hostler (still in Luetgert's employ), testified to taking the barrels out of the ice house and placing them alongside the vat about 7 A.M. on the same day.¹ The soap making, however, had failed, the grease all coagulating in one mass and the tallow in another; so that the mixture was useless, and the material was therefore cleaned up and thrown away.²

It is important at this point to appreciate the relation of this plausible story to the rest of the case. (a) If the story were false, and no soap making had ever been attempted, the defense was without strength at any one point. All the most sinister interpretations of the extraordinary process of Saturday and Sunday pressed irresistibly for immediate acceptance. They could mean nothing but murder; and with the other evidence they seemed to leave no room for doubt. (b) Suppose, on the other hand, that the soap making story were true. It would still be not impossible that the soap making had been undertaken as a mere cover for the murder, and that the body, the grease, and the sausage refuse had been boiled together. Nevertheless, the soap making once assumed as a fact, the case of the prosecution was decidedly weakened. The whole boiling process and the preceding preparations were open to an innocent explanation; the Sunday smoke and the subsequent disposal of the refuse were perhaps natural enough; and the slimy stuff, the reddish liquid, and some at least of the bones were possibly accounted for; while the uncertainty as to the nature of the other bones was emphasized, and demanded fairly to be solved in favor of the accused. The only fact of the process remaining wholly unexplained by this theory was the presence of the rings in the vat. This, to be sure, with the other evidence, might well go for proof; but one at least could not quarrel with those who would in that situation find their minds in suspense and give the accused the benefit of the doubt. Thus, in short, if the soap-making

¹ Three witnesses testified to this man's having originally denied all knowledge of the affair. Moreover, Odorowsky and Levandowski, the regular men about the factory, did not remember seeing Elandt in the basement at any time on that day.

² This theory was further supported by expert testimony that the various traces found on the premises were inconsistent with the hypothesis that a human body had been boiled there, but were consistent with the soap-making theory; and upon this issue, and its details, another hopeless conflict of testimony arose. Much burning, boiling, and testing was done; and two gruesome experiments with human bodies were conducted in the same middle vat of the basement.

story were false, the accused's case (it would seem) was left hopelessly weak; while, if it were true, his case, though not clear, was perhaps entitled to the benefit of a reasonable doubt. In this way the soap-making story may be said to have formed the crucial element in the case.

Was it to be believed? There were numerous objections to be made to it, — some slight, some grave, some fatally significant. (1) The story was not advanced at the time of his arrest or at either of the preliminary hearings, when it would have been natural to clear himself by it. Moreover, neither Bialk nor Odorowsky, the helpers, were told of the purpose of the process, though it would have been natural to explain to them at the time; nor was any one else told, except (as alleged) Charles. In short, it bore the appearance of an afterthought. (2) If the purpose of the process was so innocent, why should Luetgert take the depths of the night, stay close by the vat till 3 in the morning, and then sit in his chair, fully clothed, until daylight? That he was too busy in the daytime looking for money not only does not explain all this, but was not true, for he was proved by his own witnesses to have been about the factory all day Sunday, when the factory was idle. (3) If the purpose was innocent, why was he so anxious that Charlie Maeder should say nothing about the Sunday smoke, and why did he not explain, as was natural, to Mrs. Tosch, that his soap making

had required an extra fire on that Sunday? (4) If the purpose was innocent, why did he send Bialk away from the basement upon two needless errands?¹ (5) If the purpose of the potash was this soap making, why did he tell the selling clerk of Lord, Owen & Co. that the potash was an order on commission for another person? (6) Why was any soap making needed, when the factory, so far as appears, was sufficiently clean?² (7) If cleanliness was so persistently in his mind, why did he leave such a mess in the vat for two weeks? And why, when the soap making failed, did he show no further attempts to carry out his important project of cleaning the factory? (8) Why, before making soap, did he not take pains to learn more exactly the conditions of the process, and why did he proceed in a way which his own soap making experts declared could never have produced good soap? What could have made him suppose that refuse meat and bones were essential to the process? Why did he apparently shovel out some of the bones after the failure, and burn them in the smokehouse? And if there were separate masses of grease and tallow (said by Charles to have been formed), why did they appear to Odorowsky as a slimy stinking substance permeating the whole liquid? (9) What moved Luetgert, if preparing for soap making, to purchase and boil down enough potash — 378 pounds — to make, as his own expert admitted, from 1600 to

¹ The Celery-Kola compound may indeed have been desired for some ill turn; but the nature of it was not explained; moreover, why were not both commissions, if genuine, given to Bialk for a single errand? The Hunyadi-water errand was, in itself, natural enough, for Luetgert was accustomed to use it; but it was shown that he had already a stock of thirty filled bottles at his disposal in the factory; and why should he send out for one? It was explained that these bottles had been used and then fraudulently refilled with water from his pump, to be palmed off upon retail customers at his store; but this explanation only suggests that a man who will so cheat his customers will not hesitate to manufacture evidence. Moreover, he did not drink the Hunyadi water after all; why not? It was said that the druggist had sent him the wrong brand of Hunyadi water; but it did not appear that the difference was enough to cause him to reject it.

² By *Odorowsky*: "I cleaned the basement pretty nearly every day, good and clean"; cleaning was a regular part of his work. The deputy sheriff foreclosing on May 4 was surprised to find a sausage factory so clean a place.

2000 pounds of soft-soap,¹ — enough to clean the factory several times over? (10) Why should he wish to be his own soap maker, when there were at hand in his grocery shop many cases of hard soap, and several boxes of soapine and scrubine, equally suited for his purpose? (11) Why should he proceed in his own way clumsily to make soft soap (if soft soap he must have) at an expense of \$15 for potash and something more for his fuel and salable grease, when with less money he could have bought at \$1 a barrel enough soft soap to answer his supposed purpose? (12) Finally, it was apparently impossible that he could have tried at all to make soap, because there *were no barrels of grease* in his basement on the evening of May 1, and there never had been during any one week since March more than half a barrel. This was proved by Albert Brinkhoff, the teamster of Lester & Co., fertilizer makers, who had a contract with Luetgert for all the grease (tallow) and bone product of the sausage factory. Until March, when the factory shut down, this man had come every day for the grease and bones, which were left in barrels in the basement; but after that date he called only every Saturday, getting now only as much weekly as before he got daily. On no Satur-

day had he taken away more than 70 pounds, and on Saturday morning, May 1 (the day of the supposed soap making), at his usual call, he had taken away all that then remained, — about 66 pounds of grease (tallow) and 115 pounds of bones.² It was thus impossible that there could have been three barrellfuls (about 800 pounds) in the basement on Saturday evening.³ This fact, it would seem, disposed fatally of the soap-making explanation, and put it out of the case as not merely an improbability, but an impossibility.

6. *Guilty Conduct.* — The answer to this evidence was simply a denial of some of the assertions and an impeachment of the witnesses. The accused's disinclination to report his wife's disappearance was ascribed to a wish to avoid the notoriety and disgrace of publicity.⁴ But it must be said that the evidence adduced by the prosecution remained substantially undisturbed and unexplained.

On October 21st, after deliberating for sixty-six hours, the jury were unable to agree, and by consent were discharged. They stood nine for conviction and three for acquittal. On February 9, 1898, the second jury brought in a verdict of guilty, fixing the sentence at imprisonment for life. This sentence was explained as due to no doubts

¹ By another witness for the defense, 800 pounds; by a witness for the prosecution (a foreman of Armour & Co., making 100,000 pounds of soap daily), one and a half tons.

² Two ex-employees of Luetgert also testified that there had never been a full barrel of tallow accumulated before the weekly removal. Odorowsky and Lewandowsky, who had put the potash near the vat, saw no tallow or bones there on Saturday, May 1.

³ In surrebuttal it was shown that there did exist in the ice house a quantity of fine tallow used in making sausages; but it was of a quality which no one could be conceived of as wishing to waste in the manufacture of coarse soft soap.

⁴ Mr. Goodrich, a member of his counsel's firm, testified that on Monday, May 3, two days after the disappearance, Luetgert had consulted him about his pecuniary troubles, and incidentally mentioned that his wife had left him; Mr. Goodrich agreed with him that it was better not to make the matter public, as it would prevent his raising money on his property. But this seems a slim reason for such secrecy; for if the wife was in fact missing when it came to requiring a release of dower, all the previous concealment would avail nothing.

On the second trial, the defendant gave much time to explaining that his pecuniary troubles prevented him from spending time in the search. This led to a refutation from a former bookkeeper, whose testimony to the frauds and falsifications in his business showed (if believed) that the defendant was an unscrupulous swindler of the deepest dye; this testimony of course was attacked as false.

of guilt, but to scruples as to capital punishment.

Looking over the case as a whole, the prosecution may be said to have presented a thorough array of significant circumstances, covering all the chief avenues of inference, and amounting in combination to an irresistible *prima facie* case. The only weaknesses of the prosecution were (so to speak) accidental ones, not inherent in its case nor essential to its argument; for the inconclusiveness of the Schimicke girl's story, and the uncertainty resulting from conflict of the osteological and chemical experts, which seemed at the time to be a serious reverse for the prosecution, yet in truth are seen, upon a survey of the whole case, to concern only two subsidiary and non-essential circumstances.

The case of the defense was in itself a weak and unsubstantial one, except for the soap-making story and the plea of desertion, which were *prima facie* elements of great intrinsic weight. The real achievement of the defense, however, consisted in its determined attack all along the line, opposing every accusing circumstance by some answer or other, however weak. The result was a noise and smoke of general conflict, and an appearance of real balance of forces and uncertainty of issue, while a close observation, after the smoke had cleared away, seemed to show that there never had been any real equality of forces and that at most points the opposing movement could hardly be described as more than a feint.

It was, perhaps, this general and vigorous attempt to give battle all along the line which marks the trial out for prominence among others of its class. It belongs, to be sure, to those cases in which the evidence was entirely circumstantial; but so many of the supposed circumstances depended upon conflicting testimony that it is impossible to settle upon the data of inference without assuming that one or the other set of witnesses spoke falsely. It is therefore not a pure case of circumstantial evidence. In difficulty of solution as a problem and in perennial capacity for difference of opinion, it can never compare with the famous cases which will forever interest the student, — such trials as that of Captain Donellan, of Tutor Monson, of Elizabeth Canning, of Cadet Whitaker, of Lizzie Borden. The cool, grim, unique method of the supposed uxoricide; the choice by fate of a sausage factory as the locality of the crime; the cellar, the vats, the potash, the slime; the imagined picture of the husband stirring at midnight the caldron in which his wife slowly seethes to jelly; and the curious responsiveness of the sausage market to the repulsive though unfounded suspicions of potential adulteration, — these features, to be sure, were at least distinctive, and served to give the case current notoriety; but they do not contribute to place it among the great problems of circumstantial evidence.

388. **KARL FRANZ'S CASE.**¹ (*a.* As reported in 2 F. & F. 580.) . . .

The Queen *v.* Franz. Murder. — The prisoner, a German, was indicted, alone, for the willful murder of Martha Halliday, on the 10th of June, 1861, at Kingswood, near Reigate.

On the 7th of June, three days before the murder, a young German (not the prisoner) had called on Mademoiselle Tietjens, using the name of Kron, and obtained a letter from her to some one at Hamburg, representing that he was in distress, and desired to return to his own country. There was evidence that, late on the night of the 9th of June, the prisoner and another foreigner were near the spot, and they were identified as having bought some string at Reigate. The murder was committed on the night of the 10th of June. The deceased was found tied hand and foot with string (identified with that proved to have been so bought), and something was forced into her throat (apparently with the object of preventing an outcry), by which she had been suffocated. There was a stick or club found and two pieces of wood, indicating an intention of the burglars to use violence, if disturbed. The house had been forcibly entered, and the object evidently had been robbery. In the room were found divers papers, which it was admitted belonged to the prisoner, and also the letter given by Mademoiselle Tietjens, addressed to Adolph Kron; there was likewise a book containing entries by the prisoner, in the manner of a diary, coming down to the 8th, 9th, and 10th of some month. On the 12th of June, two days after the murder, the prisoner and another foreigner were in Whitechapel, where they went to a lodging house, and where the other left him. On the 16th or 17th of June, the prisoner (as it appeared by his subsequent statement) had heard that two

Germans, Franz and Kron, were suspected of the murder. On the 23d of June, the prisoner, being in Newgate for some offense, was there told of this charge with the usual caution, and gave a false name, stating that he had come from Hull through Leeds, and had lost his papers.

On the 27th of June, being brought up for the first time on this charge, he gave the false name, and declared he had never been at Reigate. After a remand, he was brought up again on July 1st, and the discovery of the pocket book, etc., was stated in his presence. On the 8th he was brought up again, after a week's remand; and, after hearing all the evidence, he made a statement. He declared that he was thus robbed both of his pocket book and "pass," his papers, and some of his clothes; and he accounted for his identification by suggesting that the murderer had worn his coat and dropped his pocket book and papers on the spot. He said one of the foreigners was called Kron, and among the papers found in his pocket book was a letter to Kron. He did not in his statement make any allusion to the foreigner with whom he had gone to the lodging house on the 12th of June.

Many witnesses swore to seeing *two* foreigners at or near the place about the time of the murder, and identified the prisoner as one of them with more or less distinctness. They were traced walking towards London on the 11th, and would have reached London probably on the 12th, the day on which the prisoner, with a foreigner, were found entering London, fatigued and in search of washing and refreshment, as if they had been out all night. And the prisoner's things were tied with a

¹ [This case is given in three different accounts, as a study in the adequacy and relative trustworthiness of different commentators. See what was said in the introductory text to Part III. The citation of the full report of the case is given in the Appendix. — Ed.]

string, which tallied with that found about the corpse, and both pieces were identified by the maker, who had sold string to the seller, at Reigate, who had identified the prisoner as the purchaser of string from him just before the murder.

The prisoner called no witnesses; his statement being, that his papers had been stolen at Leeds. It must have been by some person who on the 7th of June had a letter from Madame Tietjens in London, and on the 10th was at Reigate, on the scene of the murder.

BLACKBURN, J. (charging the jury): The first question is, has the crime been committed? That must be determined before you can say whether the prisoner is guilty of it. You will hardly have a doubt here that a murder has been committed by some one. . . . All who are parties to that violence are guilty of murder. You need not take on yourselves the responsibility of that [law]. I take that on myself. The great question for you is, whether, taking all the circumstances, it is made out to your satisfaction that the prisoner was one of those who inflicted that violence.

The whole case turns on circumstantial evidence; *i.e.* no eyes have witnessed the act. You are to weigh each circumstance to see if it is proved by itself. There are many circumstances put in evidence; you may believe some, and think others not established; but when you take all those things that you are satisfied of, take into view all the evidence, and see those circumstances. Some of the facts are more strongly established than others. But the question for you is, if all the circumstances you think established lead you to such certainty as you would act on in a matter of great consequence, that the prisoner was one of those persons; if so, it is your duty to public justice to say so. But if, taking all those circumstances, you think that fact

not made out, the prisoner is entitled to be acquitted. . . .

Not guilty.

Karl Franz's Case. (*b.* As stated by H. L. ADAM, *The Story of Crime*, 19—, p. 313.) . . . Some years ago a mysterious crime was committed at Kingswood Rectory, Reigate. The rector and his family had gone away, leaving the house in charge of a Mrs. Halliday, who was the wife of the parish clerk. One night she went to bed as usual, and the next morning was found dead — murdered. She was bound hand and foot on the bed, and in her mouth some sacking had been stuffed, which had suffocated her. An examination of the premises soon revealed the fact that the crime had been committed by thieves. The fact that they had taken nothing with them pointed to the supposition that they must have been disturbed. Now the village schoolmaster lived opposite, quite near, and on the night in question he returned home rather late, and slammed his gate as he went in. It must have been this noise which alarmed the burglars at a moment when they had succeeded in silencing the unfortunate lady, preparatory to sacking the place, and induced them to clear out. The probability was that they thought it was the gate of the house they were in which was slammed, and that somebody was entering the house. The men left behind them a packet of six papers tied with a thread, and these formed important clues, and led to curious developments.

How many burglars were there? Clearly two, by the footprints about the house. Their method of procedure was also soon "reconstructed" by the police. They had first gone to the kitchen window, where they had failed to effect an entry. They had then taken themselves to the back of the house, climbed on to the roof of a small "lean-to" building just beneath the window of the room in

which the victim was sleeping, removed the window, climbed into the room, and committed the crime of murder. At that moment the schoolmaster's gate slammed, they retreated by the same way they had entered, and hastily made off.

What were the clues? Let us first examine the papers. They were in German, and consisted of a certificate of birth, a certificate of baptism, and the credentials which in Germany are given to craftsmen. All the papers purported to belong to and be concerning one Johann Carl Franz, of Scandau, in Upper Saxony. In addition to these documents there was a letter of a begging description, signed Adolph Khron, a second letter from a well-known Continental vocalist, and lastly a slip of paper containing a number of addresses. So far the papers. Inquiry in the neighborhood soon elicited the information that two foreigners had appeared at the Cricketers Inn the previous evening, had slept there the night, and the following day were seen not far from Kingswood Rectory; the supposition being that they were "reconnoitring." They were also known to have purchased from a general shop some peculiar string known as "rublay," the like of which had been used to bind the deceased woman. It seemed pretty conclusive now that the two foreigners in question were the culprits. But where were they? In one of the papers referred to there was a description of the "Carl Franz" mentioned, but the police could discover no trace of such a person.

In spite of these clues it seemed that no further light was destined to be thrown upon this dark deed. However, some time after, an illuminating ray shone across the path of the mystery, which served though to render the surroundings even darker still. One day a destitute German was arrested in London upon some trivial charge, but what interested the police most was his

striking resemblance to the "Carl Franz" of the papers, and he was handed over to the Reigate police. At first he said his name was "Salzmann," but upon being pressed he admitted that his name was Carl Franz, and that some of the papers found at the rectory were his property! Upon searching his lodgings they came across a shirt tied round with a piece of string identical with that purchased by the two foreigners and that found on the body of the deceased woman! In addition to this, he was identified as being one of the two strangers seen in Reigate. Could anything be blacker, more conclusive?

Yet in spite of all this, the man was innocent. It appeared that Franz had, some weeks prior to the murder, landed at Hull and traveled on foot to London. On the way he fell in with two fellow countrymen, sailors, one of whom was named Adolph Khron, the other William Gerstenberg. The latter had no "papers," and was very pressing in trying to induce Franz to let him have his, which, however, the latter steadfastly refused to do. One evening they all lay down in a field upon a heap of straw and went to sleep. When Franz awoke his companions had disappeared, as also had his papers. Eventually he arrived in London in a destitute condition. One day he made himself known to one of his countrymen, who took him into an eating house and paid for a meal for him. During the latter, Franz's companion produced a newspaper containing an account of the murder at Reigate, in which it was stated that two foreigners were connected with the crime, one of whom was named Carl Franz. At this Franz became alarmed, and, in order not to be annoyed, changed his name, adopting the one given to the police, "Salzmann."

This story, however, was not considered by the police sufficient to clear him. What about the

string? It was found that this could only be matched at the manufacturer's. Questioned as to how he came into possession of the string found at his lodgings, Franz explained that he simply picked it up outside a tobacconist's shop in Whitechapel. This, on the face of it, looked very like a lame excuse, yet it proved to be correct, and was not the least strange part of this very strange story. It was found that the shop he had indicated was, in fact, near his lodgings, and moreover it was also within a stone's throw of the warehouse of the very string maker who made the particular "rublay" cord for the Reigate tradesman! The prisoner's solicitor was of an inquiring turn of mind, so he went to Whitechapel, and on the doorsill of the printer's office next to the tobacconist's mentioned by Franz himself picked up a piece of "rublay" cord. Inside the office they had a ball of it.

There was yet the evidence of identification to be disposed of, and upon this being sifted it was found to be very weak. A number of persons who had seen the two foreigners in Reigate both before and after the murder swore that Franz was one of them. But experience has proved to demonstration that the average evidence of identification is most unreliable, and some people, carried away by their imagination, which is in no way discouraged by the police, will swear almost anything. It was fortunate for Franz that the man who should most readily have identified him had he been one of the murderers, entirely failed to do so. That was the potman of the Cricketers Inn at Reigate, who had had the two foreigners under his notice for two days, and was particularly attracted to them by their conversing in a foreign tongue. The others had only seen the strangers casually. This negative witness therefore was worth more than all the other positive witnesses

put together. His lack of evidence was conclusive. But even further, the Continental vocalist, a letter from whom was found among the papers left behind by the murderers at Kingswood Rectory, testified that she gave a letter of introduction to a young German named Adolph Khron, but that the prisoner was certainly not the man. This evidence confirmed the prisoner's statement that one of the men he met on his way to London, and who stole his papers, was named Adolph Khron. When the police questioned him concerning the papers he gave a minutely correct description of those which belonged to him, and which had been stolen from him.

There was, of course, nothing left to do but to release the prisoner, which was accordingly done. There can be no doubt that the murder was committed by the two German sailors who robbed Franz, and who were never captured. As to their present whereabouts, Old Time knows, but he won't tell.

Karl Franz's Case. (c. As stated by N. W. SIBLEY, *Criminal Appeal and Evidence*, 1908, p. 210.) . . . The facts shown in evidence in the Kingswood murder case were that Martha Halliday, the victim of the crime, was the wife of the parish clerk, and acted as caretaker at Kingswood Vicarage, in Surrey, in the absence of the Vicar and his family. On Monday evening, June 10, 1861, she parted from her husband at the Vicarage door between six and seven o'clock. Next morning, when Halliday was proceeding to the Vicarage to see his wife, he noticed footprints, apparently of two strangers, on the Vicarage grounds. The footprints were traced to the kitchen window, in front of the house, where an apparent attempt had been made to break in, which had been foiled by shutters. The footprints then were traced to beneath the window of the room in which Martha Halliday slept. When Halliday pro-

ceeded to the back door of the parsonage he found it closed, as he had left it on the previous evening; then, passing to the other side of the house, he found the front door partially opened. This being the reverse of what was usual during the family's absence, he became doubly alarmed. Not finding his wife downstairs, he went to her bedroom, and there found her lying on the floor in her nightdress, evidently murdered. She had been suffocated; a sock was thrust with great violence into her mouth as a gag, and her tongue was forced back over the glottis. It was evident that she had been roused from her sleep by the breaking of the pane of glass and by the burglars having overturned, in their ingress through the window, the looking-glass on the chest of drawers. She was further secured by tying her feet and arms tightly around with some rublay cord which the offenders must have brought with them, prepared with slip knots. There was picked up just under the bed and about six inches from the shoulder of the corpse, a packet of six papers tied round with a thread. Upon opening the packet, these papers were all found to be written in German. Three of the six papers were a book called the "service book," being the credentials furnished in Germany to craftsmen and others; a certificate of birth, and a certificate of baptism, all three purporting to belong to Johann Carl Franz, of Schandau, in Upper Saxony. The other three papers did not suggest any connection with Franz. One was a letter soliciting relief from some lady of quality, signed "Adolph Kron." There was also a letter from Madame Tietjens, the then famous operatic singer, dated June 7th, the Friday preceding the crime. Lastly, there was a slip of paper with a number of addresses on it. All six papers found on the scene of the crime were written in German. There

was also a thick bludgeon-shaped stick found in the room. It was also evident that the ruffians must have quitted the house precipitately, as presumably the motive was robbery, but nothing was taken, though the purse of the victim, with some money and a ring in it, was found in the pocket of her dress, hanging on the door of her room. The conjecture that the burglars must have been disturbed seemed indirectly confirmed by the fact that the village schoolmaster, on returning home at midnight on the night of the murder, stated that he slammed his gate with some noise, and he lived close to the parsonage.

The clew afforded by the papers found by the corpse — furnishing inflamed probability that the murder had been committed by two Germans — appeared at once to unravel the mystery, as very indicative evidence was at once forthcoming of the presence of one, if not two, pairs of rough-looking foreigners in the neighborhood, and in the immediate vicinity of the parsonage, only a few hours before the time when the murder must have been committed. About midday on Sunday, the day before the crime was committed (it having been committed during the night of Monday, June 10th), two foreigners, one short and dark, the other fairer and taller, entered the town of Reigate from the London side, and applied for lodging at the Cricketers public house, immediately opposite the police station, four miles from Kingswood. They went out after an hour to make some purchases, which consisted of small quantities of meat, barley, and flour. While at the Cricketers Inn the two foreigners sat in the public room, and were well observed by the potman and the frequenters of the place. They left the Cricketers Inn at half past four in the afternoon on the next day, Monday, June 10th. On Monday, June 10th, between two and four o'clock in the afternoon, two foreign-

ers purchased a ball of string of peculiar make at Reigate. The maker, in subsequently describing the string, pronounced it to be rublay cord, and very seldom made. The men were some six minutes in suiting themselves with this string, and were noticed both by the mistress of the shop and her servant. On Monday afternoon, at a time subsequent to the departure of the two men from the Cricketers Inn at Reigate, two foreigners were seen crossing Reigate Hill on the road to Kingswood. About seven o'clock on Monday evening, within little more than a mile from the parsonage at Kingswood, a laborer saw two men, ten yards off, under a beech tree in a thicket called Kingswood Roughit. On this same tree there was found, in a search made subsequently to the murder, the broken end of a branch, which corresponded with the thick bludgeon-shaped stick found in the room where the murder was committed. Finally, a police constable, stationed at Sutton, at 2.30 A.M. on the morning of Tuesday, June 11th, met two foreigners talking and walking very fast towards London, on the road between Kingswood and Sutton. Mr. Alcock, M. P., in whose employ the husband of the murdered woman was, offered a reward of £200 for the discovery of the perpetrators of the crime.

After a few weeks, a destitute German was arrested in London upon the charge of being secreted in a house in Old Broad Street with intent to commit felony. On arrest he gave his name as Saltzmann, but became suspected of the Kingswood murder by being identified by witnesses from Reigate, and he ultimately confessed his name was Franz. On July 8th he was brought before the magistrates at Reigate, and was committed for trial. Three facts pointed strongly to the guilt of the prisoner: (1) He was completely identified on the testimony of a police officer from Saxony as the owner of the papers bearing his name, and

the individual to whom the service book had been delivered in Germany, which had been found within a few inches of the corpse of the murdered woman by her husband on Tuesday, June 11th; (2) Mrs. Mary Pither, of Reigate, at whose shop the two foreigners had purchased the string on the Monday, gave evidence before the magistrates that, to the best of her belief, Franz was one of them. She recognized the voice, She, however, declared that his appearance, hair, and cap impressed her more than his countenance. She could not "realize his countenance." Franz, she added, looked thinner than when she saw him previously. She described the purchaser of the string as "rather tall, fair, and thin." In the account of the police court proceedings in the *Times*, Franz was described as "slight and lithe, about 5 feet 5 inches in height; he has very trifling indications of a light downy beard, and appears to be little more than twenty years of age." Mrs. Pither's servant identified Franz with more distinctness. It appears that the two foreigners took about six minutes to purchase the string, having rejected kinds previously offered them. James Blunden, a laborer, gave evidence that Franz appeared to correspond with one of the two foreigners he saw standing in a thicket about a mile and a quarter from Kingswood Rectory a little after seven in the evening before the commission of the murder. But this witness also declared that he could not identify him with any certainty. Both the men Blunden saw in the thicket were dressed in dark clothes. But Mary Elsey, a servant to Mrs. Pither, swore positively that the prisoner was one of the two foreigners who purchased string at her shop between two and four on the Monday afternoon. Mr. J. F. Matthews, a builder, of Reigate, expressed his belief before the magistrates that he recognized the prisoner as one

of two men he met on the road going towards Kingswood between three and five on the Monday afternoon. He stated that at first sight, on seeing him full face at the station, he failed to recognize the prisoner, but on seeing Franz in court he believed him to be the person whom he passed on the road. He added that the two men he passed looked very hard at him, and so he turned round and looked at them. George Roseblade, the potman at the Cricketers Inn, Reigate, recollected the two foreigners who came to that place on Sunday, June 9th, about 11.15 A.M., and stayed there till 4.30 P.M. on the next day. He declared that the prisoner was the taller of the two, and the one who could not speak English. But this witness only identified Franz after a third examination. Finally, Police-constable Peck identified Franz as the taller of the two foreigners he met very early in the morning of June 11th, on the road between Kingswood and Sutton, walking very fast towards London. He stated that he believed Franz to be the one of the two foreigners who stood on the other side of the road, but who spoke two or three times in his presence to the other foreigner. However, this witness did not render very conclusive evidence, as he could not positively swear to Franz's identity with one of the foreigners he met; he merely said he believed the prisoner to be that man. — It is curious to note that Adolph Kron, who was more proximately identified with the packet of papers found near the corpse of the murdered woman than Franz, was described with the utmost distinctness by all the above witnesses, as well as by Madame Tietjens. The fact that he should have been more clearly described, however, seems accounted for by the fact that he alone of the two foreigners knew English and acted as spokesman. A person is more likely to identify another with

whom he has spoken than a third person whom he has neither answered nor addressed a remark to. It seems impossible not to suppose that Kron was one of the parties who committed the crime. But though Kron was proved to have been in company with Franz at a lodging-house in Whitechapel some days after the murder, the former deserted the latter on June 15th, and was never again heard of till his reported death in September of that year.

Police-constable Basford, of Reigate, swore positively that Franz was one of the two foreigners he saw at the Cricketers Inn on Monday, June 10th, and declared that the other was "dark-haired and fresh complexioned," very youthful in appearance, did not look above twenty, and was very short, little over five feet in height. Madame Tietjens described Kron, whom she had assisted on the Friday preceding the murder, out of compassion to a destitute foreigner, as a boyish-looking person of probably eighteen or nineteen years of age. He had light brown hair, wore a brown coat, blue and white striped shirt with a turn-down collar, and a black necktie. The potman at the Cricketers Inn at Reigate described one of the two foreigners who came there on the Sunday morning as about nineteen years of age, about five foot three or four in height. He wore, this witness added, a very dark coat, dark trousers, common blue striped shirt and black necktie, with a collar turned down over. The police-constable who met the two foreigners walking very rapidly on the road between Kingswood and Sutton very early on Tuesday morning, June 11th, declared that the one with whom he exchanged remarks was about nineteen years of age, about five foot one inch in height, had dark frizzly hair, and was dressed in dark clothes with a cap. David Levi, a Polish Jew, stated before the magistrates

at Croydon that he recognized Franz as one of two foreigners he met in Osborne Street, Whitechapel, on June 12th, that is, two days after the crime. The other foreigner was a smaller man than Franz, not more than eighteen or nineteen years of age, and looked quite a boy. Levi directed the men, who said they had been out all night, to a lodging-house. It also appeared that after three or four days the two had a quarrel, in the course of which Kron struck Franz. The latter then said: "Don't think so much of yourself, you know very well." Kron betrayed marks of great discomfiture at the remark, and parted from Franz next morning, on June 15th.

The third circumstance that appeared to connect Franz with the crime was that there was found round a shirt left by him at his lodgings a piece of hempen cord, of precisely the same kind and the same appearance as the pieces with which the limbs of the victim of the Kingswood murder had been bound, and matching as precisely with the bulk from which the ball sold at Reigate to the two foreigners had been severed.

The prisoner's statement, which is invested with nothing less than decisive interest in view of the occurrences that transpired at his arrest, is as follows: "I will confess that I am Johann Carl Franz, from Shandau. I have hitherto instinctively kept it secret from love of life. It might be the 16th or 17th of June when I went about in Whitechapel about 4 o'clock in the afternoon. I heard a couple of young men, who had the appearance of mechanics, speak together, and I perceived by their language they were Germans. As they separated from one another I accosted one of them and complained to him of my distress, telling him I had eaten nothing the whole day, and that a penny was wanting to pay for my bed. He gave me as answer, 'I

am hungry too; let us go into the next eating-house.' There he had some peas given to me for 2d. He himself ate broth. Afterwards he read the newspaper, and said, 'There are two other Germans being pursued; one is called Johann Carl Franz.' At that I was very much frightened and turned pale. He perceived by my face that I did so, and asked me, 'What's the matter with you?' He said that the other's name was Adolphe Krohn. Hereupon he related to me that he was a journeyman baker, and would emigrate to America in a few days. I must already announce that I stated to Sergeant Spittal that I wandered on the road from Hull to London with two German sailors. Of them, the younger one was named Adolphe Krohn, and the taller one — of my stature — was named William Gerstenberg. I was wandering with both of them; I do not know the name of the nearest town from Hull where I met both sailors. I traveled with them to beyond Leeds. There we passed the night in the open fields behind a straw stack. When I awoke, at six o'clock in the morning, both the sailors were vanished, and had taken my traveling bag with them. In this bag there was a brown greatcoat, a pair of brown buckskin trousers, a waistcoat from the same piece as that which I now wear, and my papers, consisting of a sailor's pass-book, a certificate of birth and baptism, and a railway tariff. These were together in a blue cover. Both the sailors had expressed that they were going to furnish themselves with money from some Catholic priest, because they thought that the Catholic priests were always very rich, and they themselves were Catholics. But the tallest one had no papers, and was constantly asking me whether I had no papers to spare for him. I constantly refused him them because I wanted to keep them myself. Now I must, at the same time, own

that I am really married, and have a wife with two children. When I heard the name Adolphe Krohn in the eating-house, I immediately foreboded that it might be the two sailors, and that the tall one had seized my papers. In that the only error consists that so many people here in Reigate fancy they have seen me, because the tallest one wore my whole attire. The taller one had no coat at all when I was with them. He went in a sailor's blue shirt, and probably he put on my brown overcoat, and thus he had much resemblance to me. Adolphe Krohn, the other one, spoke English better than German. Both pretended to have been born in Vienna. Now I can aver to the magistrates that I have never been in Reigate, and take the greatest oath that I am no murderer."¹

This extraordinary narrative received dramatic, if merely admittedly partial, corroboration by evidence that came into the possession of the Crown after Franz's arrest. The prisoner mentioned a railway tariff as among the papers that had been stolen from him, and this was not found at Kingswood. Again, in order to prove the prisoner's handwriting, the Crown, at the trial, produced a diary kept by the prisoner from the time he left his home, recording his arrival at Hull, his travels through Leeds, Oldham, and Manchester to Liverpool, his stay there while endeavoring to get a ship for America, his departure for London, and his passage through Warrington and some other places to Leek in Staffordshire, where the narrative abruptly ended. The entries in this diary came down to the 8th, 9th, 10th of some month. It then transpired that the railway tariff, the diary, and a certificate of confirmation had been picked up by two tramps on a heap of straw in a roadside hovel on the borders of

Northamptonshire, and had been brought by them to a magistrate on July 9th, the day after the prisoner told his story, of which it thus afforded a singular corroboration.

Again, it was true that the prisoner had a pack when he landed in England, though *non constat* that it was stolen. It was suggested that, owing to the state of destitution he was in, he might have sold or pawned it, but no such transaction was shown to have occurred. A very curious coincidence was that an unfinished letter of Franz to his parents was found on him to the following effect: "Dear Parents, — for goodness' sake, what shall I do? You know with what resolution I went to work to get to America. I found myself in a most horrible position, but how I came in that position is very natural." It is difficult to conceive, broken and abrupt as this epistle is, a more natural letter to pen than this for a man who, like Franz, found himself suddenly exposed to a terrible charge, alone and destitute in a strange land, assuming the hypothesis that he was an innocent man; and the question on this view seems solely to resolve itself into the inquiry whether it can be supposed that the letter was a mere stratagem to induce the view that he was innocent. It must be remembered that Franz was not a good character, having been previously convicted of felony in Saxony. But supposing it to be a mere criminal ruse, it seems strange that the letter should not have been finished. There was an interval of a whole month between the date of the murder at Kingswood and Franz's arrest for loitering with intent to commit a felony in Old Broad Street. If, therefore, he had formed the design of simulating innocence by the fabrication of a document, he had plenty of time within which he might have effected his object.

The weak points in Franz's story

¹ *The Times*, July 9, 1861, p. 5, col. d.

are his knowledge of Kron, his entire failure to prove an alibi, and the entire absence of any proof that William Gerstenberg ever existed. In spite of the great reward offered, the apprehension of Kron was never effected. It seems quite impossible to assume Kron's innocence. The letters found by the corpse must, only three days before the crime, have been in Kron's actual possession; this observation is clearly justified as regards the letter of Madame Tietjens. The packet found by the corpse was far more incriminating as regards Kron than as regards Franz, as there was nothing to show when the pass and baptismal certificate had last been in Franz's hands. All that can be supposed is that they were in his hands when he landed at Hull in April of the same year. On the other hand, it is plain to demonstration that the letter of Madame Tietjens must have been in Kron's possession on the 7th of June, the murder having been committed on the 10th of that month. Again, all the five witnesses who described the two foreigners in the vicinity of Reigate and Kingswood described one of them exactly as Madame Tietjens described Kron. As the spokesman of the two foreigners at Reigate, Kron exposed himself to much more certain evidence of identity. The guilt of Kron appears a far less precarious hypothesis than the guilt of Franz.

But Franz was associated with Kron in all imaginable ways. According to Franz's own admission he was associated with Kron before the murder. By documentary evidence the association of the two is brought down to a later date than seems consistent with Franz's story. It was stated in a paragraph in the *Times* that a short time before the murder Kron applied to a gentleman in the City for relief, and procured ten shillings and a free pass to Hamburg by a steam vessel which was leaving London for that place on the

following day; and this pass was found upon the prisoner Franz when apprehended. Again, Franz and Kron were identified indirectly by the packet found by the corpse of the murdered woman in the parsonage at Kingswood, to say nothing of the evidence as to identity regarding the two foreigners seen in the vicinity immediately preceding, and after, the time when the crime must have been committed. Lastly, there is evidence that Franz was associated with a foreigner two days after the murder in Whitechapel, whose description, as given by a witness, corresponded in all respects with the description of Kron given by Madame Tietjens five days before the murder. This witness, David Levi, who casually befriended Franz and his companion as a foreigner, described the latter as "a smaller man than Franz, and not more than 18 or 19 years of age; he looked quite a boy, and was a foreigner." The identification of Franz by this witness was complete, as he stated to him that he came from Shandau in the *Saxon Swiss*, that he intended to proceed to America, and that he had a wife and two children. This statement corresponded, therefore, in three material particulars with the statement Franz subsequently made before the magistrates.

BLACKBURN, J., as regards the evidence, told the jury that it certainly was a very material question for them whether it had been satisfactorily established that the prisoner was one of the men who was seen near the scene of the murder shortly before it was committed; and if they believed this to have been made out, they would then have to take into consideration the other circumstances of the case, and say by their verdict whether the evidence satisfied them that the prisoner was one of the parties concerned in the murder.¹ It seems regrettable that neither the account of the Kingswood murder in the "Annual Regis-

¹ *The Times*, August 8, 1861.

ter," nor the report in the *Times*, nor the report of R. v. Franz (1861, 2 F. & F. 580) affords the slightest clew as to the direction of Blackburn, J., as to the probative force of the discovery of the packet of letters identified with Kron and Franz found within six inches of the corpse of the murdered woman. Yet one may doubt whether a more dramatic, if not a more significant, evidentiary fact ever transpired, even at a trial for murder.

On the other hand, it seems very difficult to understand the extraordinary prominence that appears to have been given to the bludgeon found in the room, considered as an evidentiary fact. When Blackburn, J., in his summing-up, came to the evidence of the policeman, who produced the bludgeon and the other two pieces of wood, he said to him: "Step forward and help the jury. Don't make any statement; but show the jury the pieces of wood."¹ There was, of course, conclusive evidence that the bludgeon had been cut from the beech tree in Kingswood Ruffet, where the laborer Blunden saw two men standing at seven o'clock in the evening of the 10th of June, the night when the murder was committed. There was, however, nothing else that could have been significant about the bludgeon, as the murdered woman was suffocated with a sock. It was stated that there were no bruises found on the corpse, so the bludgeon could not possibly have been used. The discovery of the bludgeon without any marks in the room of the murdered woman may, however, have possessed significance as showing the precipitancy with which the ruffians fled. This fact, in turn, may have been considered as negating the conclusion that robbery was not intended because there had been nothing stolen. The fact that robbery was probably intended was of great legal importance, because Blackburn, J., directed the jury

that it was a case of constructive murder.

The following comment appeared in the leading article in the *Times* on the evidence in Franz's case: "A book which bears the name of 'Johan Carl Franz' is found in the room of the murdered woman; it is admitted that the prisoner is the owner of the book, and it is admitted that whoever left it in the room murdered the woman. This does not, of course, of itself, prove the identity of the owner of the book with the person who left it in the room of the murdered woman; it is possible, as the prisoner's counsel insisted, that the book might have gone previously out of the prisoner's possession. It is possible that Johann Carl Franz had slept till six o'clock in the morning behind a straw stack with two companions, and that when he awoke he found his traveling companions had carried off his bag, containing, among other articles, his papers and this book. This is a possible account of the termination of the connection between Johann Carl Franz's book and Johann Carl Franz. But there is other evidence, besides that of the book, against the prisoner. He is seen in the immediate neighborhood of the murder the day before, he goes into a shop at Reigate and buys a ball of string: a young woman in the shop identifies him positively and without the least hesitation. It is not common string: it is very uncommon string indeed; Joseph Dunmore, who made it for Mr. Cramp, who sold it to Mrs. Pither, in whose shop it was bought, pronounces it to be rublay cord and very seldom made. Accordingly, when the string which tied the feet and hands of the murdered woman and the string which had been tied round the blue shirt of the prisoner taken by the police were handed into court, Joseph Dunmore identifies both as being the same kind of string and of this uncommon kind: 'I hackled

¹ R. v. Franz, (1861) 2 F. & F. 580, 583.

the hemp in its rough state myself, and afterwards spun it myself, and made the balls myself.' Thus the purchase in the shop at Reigate affords much more than the mere proof of the prisoner being in the vicinity of the murder at the time of the perpetration, viz., in certain links of evidence which connect the prisoner with the murder. The links connect the string round the murdered woman with the string round Franz's shirt, and again, the string round both with the person identified in court with Franz as the purchaser of the string in the shop at Reigate. Mary Elsey's evidence and that of Joseph Dunmore thus corroborate each other remarkably; indeed, the identification of Franz with the purchaser of the string is admitted by the prisoner's counsel, though Franz himself disowned it before the Bench at Reigate, and attributed the apparent resemblance to the real purchaser of the string having on at the time Franz's clothes, carried off by him with the bag — an explanation which would imply that the prisoner's clothes in the bag were an exact duplicate of those worn by him in court when the identification was made."¹ It seems, on a reference to the "Annual Register," that this account, according to Franz's statement in the police court, is rather hard upon the prisoner. In the police court proceedings Franz, as has been seen, denied that he had ever been at Reigate, much more that he was one of the two foreigners who purchased the string there. It is of some interest to observe that the *Times* report of the assize trial before Blackburn, J., does not altogether bear out the statement in the leading article that Franz, through his counsel (Hon. G. Denman, K. C.), admitted that he was one of the two foreigners who pur-

chased the rublay cord at Reigate. Denman, K. C., on the contrary, merely made an admission that Franz was seen in the neighborhood of the place where the crime was committed in company with another man. He also stated that this was the principal evidence against Franz.

There is no doubt that this pregnant admission that Franz was one of the two foreigners seen in the vicinity puts an altogether different complexion on his story before the magistrates, in which he stoutly denied he had ever been at Reigate.² The circumstance appears conclusively to indicate that, if at that time a prisoner had been able to give evidence on his own behalf, and if Franz had elected to do so, cross-examination would have pulverized a story so full of retraction and contradiction as his original story. The final admission that he had been in the vicinity of the crime with another German, coupled with the entire want of any evidence of the existence of Gerstenberg, and of the theft of his pack, would have gone far to totally impair his defense.

However, it was clearly a far less dangerous admission for his counsel to make, that Franz was in the vicinity of the place where the crime was committed, than that he purchased the string at Reigate. This last fact was not admitted by his counsel at the trial, in spite of the statement in the *Times* leading article. A reference to the "Annual Register" shows the great importance of this, as the evidence was that the two Germans at the Cricketers Inn, among whom Franz was identified by at least two witnesses, were distinct from the two Germans who purchased the string. The rublay cord of peculiar make was purchased by the two Germans at Mrs. Pither's shop in Reigate be-

¹ *The Times*, August 9, 1861.

² Cf. *Times*, July 16, 1861, for Franz's statement before the magistrates, and *Times*, August 8, 1861, for Denman, K. C.'s, admission that Franz had been seen in the neighborhood of the place where the crime was committed in company with another man.

tween two and four o'clock in the afternoon of Monday, June 10th,¹ and the evidence of the potman at the Cricketers Inn was that the two Germans who came to that place on the 9th came downstairs the next morning at 8.30 and remained at the Cricketers Inn till half past four o'clock on that day. This was the Monday on the night of which the murder took place.² The Kingswood murder case, therefore, instances in a very signal manner that the truth of the facts composing a strand of circumstantial evidence depends on minute and careful observation, as to which even the most conscientious witnesses may make unintentional misstatements. The mistress of the shop where the two foreigners purchased the string on the Monday could not determine the hour of the purchase with any more definiteness than that it occurred between two and four o'clock in the afternoon. This induces the suspicion that her evidence was not rendered with enough precision to be relied on as to the time, though it was no doubt true the purchase was a fact. The importance of the matter is that the current of evidence is that the persons who bought the string at Reigate committed the murder at Kingswood a few hours later, and that, accepting Mrs. Pither's statement, Franz cannot have been one of the two Germans who purchased the string from her between two and four on Monday afternoon, if he was one of the two Germans at the Cricketers Inn, because the potman stated that the two latter did not leave the place till half-past four. It is this statement of the shopkeeper at Reigate that is the sole authority for concluding that there were two pairs of foreigners in the vicinity of Reigate about the time of the murder, an hypothesis that envelops the whole case with an impenetrable obscurity.

But in view of its vague nature it is clear that there is no placing any implicit reliance on Mrs. Pither's statement as to time. The dismissal of this evidence as to time must equally involve the entire abandonment of the hypothesis that there were two foreigners in the vicinage at the date of the murder. The *Times* report of the police court proceedings is, as has been noticed, entirely inconsistent with the hypothesis.³

It is rather curious to observe, in view of the variance between Franz's statement before the magistrates at Reigate and the defense raised by his counsel at Croydon Assizes, that Denman, K. C., stated, in his address to the jury, that Franz was not a man of bad character.⁴ This was undoubtedly incorrect. A police inspector stated at the police court that a communication had been received at the Foreign Office from the British Consul at Dresden, stating that this Franz had been a very indifferent character, and that he had suffered two years and eight months' imprisonment for felony.⁵ Again, the leading article in the *Times*⁶ does not draw the conclusive inference that must, nevertheless, be derived from the letter of Madame Tietjens to Kron having been found in the packet of letters found by the corpse. This letter was dated the Friday before the murder, June 7th, and therefore must have been in Kron's possession only three days before the date of the crime. In Foster and Finlason's Reports it is stated that, if Franz's letters were stolen, they must have been stolen by the person to whom Madame Tietjens gave the letter dated June 7th.⁷ There appears, therefore, to be drawn an implicit distinction between Kron and "the person" to whom Madame Tietjens gave the letter. There is no doubt from the evidence of Madame Tiet-

¹ *Times*, July 9, 1861.

² *Times*, July 16, 1861.

³ *Times*, July 9 and 16, 1861.

⁴ *Times*, August 8, 1861.

⁵ *Times*, July 16, 1861.

⁶ August 9, 1861.

⁷ *R. v. Franz*, (1861) 2 F. & F. 580, 582.

jens that the person to whom she gave the letter was not Franz.¹ While there is no doubt that Kron employed various aliases — Jeretzký, Ahlborn, etc. — there is no evidence that any one personated him, if the statement of Franz is to be believed. Again, according to the prisoner Franz, the person who saw Madame Tietjens must have been Kron, who was very short and boyish looking. Franz did not accuse Kron, but stated that he suspected one Wilhelm Gerstenberg of having stolen the letters.² There was, however, no proof whatever adduced that this man existed except the statement of Franz.

Again, it appears "sub modo" to support the view that Kron stole Franz's papers that all the six papers found by the corpse were bound up with one thread, and that one of them must have been in Kron's possession four days previously.

But the report in Foster and Finlason seems inadequate to the degree of inaccuracy in its account of the evidence. It does not mention the one circumstance that so strikingly corroborated Franz's story as to the loss of the letters: the fact that some documents identified with him had undoubtedly been found by tramps on the borders of Northamptonshire, far farther south and nearer London than Leek, in Staffordshire, where the entries in the prisoner's diary abruptly ended. The report in Foster and Finlason gives a very inadequate description of the rebutting circumstantial evidence adduced for the defense in two other particulars; it does not state that it was proved the prisoner had a pack when he landed at Hull, which might have been stolen from him; and also omits mentioning that, however peculiar the string found tied round the corpse of the victim, its correspondence with that purchased the day previously at Reigate and with that tied round Franz's shirt seems

deprived of any significance since it was easily obtainable in Whitechapel. It was a necessary assumption of the case for the prosecution that the string round the corpse of the victim must have been purchased by Franz in Reigate. Again, the report in Foster and Finlason categorically states that Franz's diary was found in the parsonage at Kingswood (p. 580), whereas the fact was that the three papers connected with Franz found near the corpse were a service book, a certificate of birth, and a certificate of baptism. The diary was found by tramps on the borders of Northamptonshire, about a hundred miles away from Kingswood, and a whole month afterwards.³ The discovery of the diary afforded nearly as strong presumptive evidence of Franz's innocence as the discovery of the other three documents in the room of the murdered woman did of his guilt, because it proved that some, at least, of his papers had passed out of his possession. As the entries in the manuscript book gave a consistent account of his wanderings after he landed at Hull, and purported finally to show that on the 10th of some month he arrived at Leek, in Staffordshire, and as the murder for which he was tried was committed on June 10th, if the entry in the diary could have been assumed to apply to the month preceding that on which it was found, Franz would have possessed clear, if not conclusive, evidence of an alibi, as he would then have been able to show that at the date of the Kingswood murder he was at Leek in Staffordshire. It is clear that, as he did not do this, the 10th day of the month referred to in the diary must have been May 10th, as the Foreign Office were informed that Franz left Königstein, in Saxony, in April, 1861.⁴ But in his statement before the magistrates at Reigate, Franz entirely failed to account for

¹ *Times*, July 16, 1861; *R. v. Franz*, 2 F. & F. 580.

² *Ann. Reg.*, 1861, *Chronicle*, pp. 142-3.

³ *Times*, July 9, 1861.

⁴ *Times*, July 11, 1861.

his movements either previous to, or at the date of, the Kingswood murder, or, it may be added, subsequently.

While the report of *R. v. Franz* in Foster and Finlason seems very clearly to err on the side of both inaccuracy and omission, there is nothing to confirm, in the *Times* report of the proceedings before the magistrates at Reigate, the statement in the "Annual Register" that three witnesses before the magistrates, who were not examined at the trial, deposed that two foreigners, one short and dark, and the other fairer and taller, were within a hundred yards of the Kingswood parsonage at five o'clock on the Sunday afternoon, June 9th — the day before the crime — at which time two other persons specified that two similar foreigners were seated in the taproom at Reigate.¹ Again, it was stated in the leading article in the *Times* that Franz was seen "in the immediate neighborhood of the murder the day before."² But there is nothing in the *Times* report of the police court proceedings that in the slightest degree supports the notion that there was evidence that any foreigners were seen in the immediate vicinity of Kingswood parsonage on the Sunday.³ That, in particular, Franz should have been seen in the vicinity of the murder on the Sunday is directly contradictory to the evidence of the potman at the Cricketers Inn, George Roseblade, who stated that, with the exception of about an hour's absence at midday on Sunday, the two foreigners who stayed there (amongst whom he identified Franz), remained indoors the whole of that day. As Kingswood is four miles from Reigate, it would have been clearly impossible for two persons who had no knowledge of the district to have gone out and made some purchases, and, in addition,

have walked at least eight miles, in the brief space of one hour. But the matter is concluded by the fact that no evidence was tendered that two foreigners were seen in the vicinity of the murder the day before the crime. If any such evidence had been tendered, it may be added, it seems certain that a report of it would have appeared in the *Times* notice of the police court proceedings of the Kingswood murder. That report was so full that, at the trial at Croydon Assizes, the learned reporter contented himself with a mere epitome of the evidence previously given, mentioning that there had already been a very detailed account of the evidence given before the magistrates.⁴ It seems, therefore, nearly essential to conclude that there was no evidence of a second pair of foreigners in the vicinity of Kingswood parsonage the day before the murder, though a little more doubt may possibly exist as to whether on that day there was not some evidence that there were two pairs of Germans in Reigate. Even this last point is highly uncertain, and the conclusion of the account in the "Annual Register" leads to the abandonment of that hypothesis.

The "Annual Register," in its final observations on the Kingswood murder, states that none of the foreigners who were at Reigate at the date of the murder have been traced, and that no clew has been found to unravel the mystery.⁵ This is, undoubtedly, incorrect as regards Kron, even considered merely as a *résumé* of annual information about events. The *Times*, on September 7, 1861, under a paragraph headed "Supposed Discovery of the Remains of Adolphe Krohn," stated that the police in Surrey had been informed that the dead body of a man believed to be Krohn had been found at High Leigh, near Warring-

ton, Cheshire. The body found was that of a young man, apparently a foreigner, between twenty-five and thirty years of age. It was found in a field adjoining the highroad from the south to Liverpool. Decomposition had proceeded so far that no trace of features could be discerned, but in dress, height, and every other ascertainable particular the body corresponded with the published description of Adolphe Kron. It must be remembered that a reward of 200 pounds had been offered by Mr. Alcock, M. P., for Kron's apprehension, so the published description is likely to have been both detailed and widely circulated. No marks of violence were discovered; nothing whatever was found in the pockets of the deceased's clothing; and it is supposed that the man must have lain down and died from exhaustion shortly after the Kingswood murder was committed, having fled from London on June 15th. From a statement

that appeared in the *Times* on July 11, 1861, it seems highly probable that the body found was that of Kron. It was for some reason anticipated Kron would proceed north, and that his sole *modus vivendi* would be that of soliciting alms from charitable foreigners under different aliases.

A curious feature of the Kingswood murder case is that no attention was paid to footprint evidence, which it nevertheless distinctly appears was available. The account in the "Annual Register" states that when Halliday went to see his wife at Kingswood Rectory the morning after the crime he traced the footprints of two persons, and that they proceeded up to the kitchen window, where an entry had clearly been foiled by the shutters, and that these same footprints were afterwards traced to beneath the window of the murdered woman. The entire neglect of such evidence appears culpable laches.

389. **HILLMON v. INSURANCE CO.** (CHARLES S. GLEED. 18th Annual Report of the Kansas State Superintendent of Insurance. 1887. p. 49.)¹

PRELIMINARY. — The Hillmon cases in the United States Circuit Court for the District of Kansas are styled: *Sallie E. Hillmon v. The Mutual Life Insurance Company of New York*; *Sallie E. Hillmon v. The New York Life Insurance Company of New York*; *Sallie E. Hillmon v. The Connecticut Mutual Life Insurance Company*. These cases were docketed on the 13th of July, 1880.

The first trial was at Leavenworth, June 14–July 1, 1882, before the Hon. CASSIUS G. FOSTER, of the United States District Court for the District of Kansas, the attorneys being *L. B. Wheat, John Hutchings, R. J. Borgolthaus*, and *S. A. Riggs* for the plaintiff; and *George J. Barker* and *James W. Green* for the defendants. The jurors were as follows: R. B. McClure, Thomas White, James M. Walthal, Wm. Stocklebrand, E. H. Hutchings, Leonard Bradley, J. T. Fulton, Daniel Horville, Wm. Lyons, J. S. Tood, John P. Gleich, and Samuel Kieser. This jury failed to agree, seven being for the plaintiff, and five for the defendants.

The second trial was at Leavenworth, in June, 1885, before the Hon. DAVID J. BREWER, United States Circuit Judge, the attorneys being *L. B. Wheat, John Hutchings*, and *Samuel A. Riggs* for the plaintiff, and *George J. Barker, J. W. Green*, and *Charles S. Gleed* for the defend-

ants. The jurors were as follows: B. M. Tanner, J. P. G. Creamer, C. O. Knowles, H. D. Shepard, Nelson Giles, Jr., R. H. Stott, G. W. Greever, Wm. N. Nace, Joseph Kleinfeld, Wm. H. Hamm, H. A. Cook, and P. B. Maxson. This jury failed to agree, Messrs. Tanner, Kleinfeld, Stott, Maxson, Creamer, and Shepard being for the plaintiff, and Messrs. Greever, Giles, Knowles, Cook, Nace, and Hamm for the defendants.

The third trial was at Topeka, Feb. 29–Mar. 20, 1888, before the Hon. O. P. SHIRAS, Judge of the United States District Court for the Northern District of Iowa, the attorneys being *L. B. Wheat, John Hutchings*, and *Samuel A. Riggs* for the plaintiff, and *George J. Barker, J. W. Green, Charles S. Gleed*, and *William C. Spangler* for the defendants. The jurors were as follows: Samuel Kozier, Jacob Moon, J. S. Bouton, A. S. Davidson, N. S. Miller, Riley Elkins, J. S. Earnest, John W. Farnsworth, Enoch Chase, Furman Baker, G. W. Coffin, and J. P. Rood. This jury agreed on the second ballot, rendering a verdict of \$35,730 (in all) for the plaintiff.

The cases are now (April, 1888) in the Circuit Court pending the argument of a motion for a new trial. If this motion is overruled, an appeal will probably be taken to the United States Supreme Court.²

¹ [A typewritten copy was supplied for use in this work, by the courtesy of Mr. Gleed. — Ed.]

² [The appeal was so taken. In 1892 (*Mutual Life Ins. Co. v. Hillmon*, 145 U. S. 285), the judgment was set aside, and a new trial ordered. This fourth trial took place Jan. 9–Mar. 19, 1895; the jury disagreed. The fifth trial took place Mar. 11–Mar. 31, 1896, and the jury disagreed. The sixth trial took place Oct. 17–Nov. 18, 1899, and the jury gave a verdict for the plaintiff. This verdict was later affirmed on appeal: *Connecticut Mut. Life Ins. Co. v. Hillmon* (107 Fed. 842, C. C. A., April, 1901); but was finally set aside in the Supreme Court (188 U. S. 208, January, 1903), two judges dissenting.

Of the three defendants, each had chosen a different course:

The New York Life Insurance Co. had settled, in 1898, before the sixth trial, the case being dismissed. In 1896, during the Populist government, the State Insurance Commissioner had barred these three companies from doing business in Kansas, owing to the popular disapproval of the companies' resistance to the Hillmon claim. To regain admission to the State, this settlement was made. Later, upon a change of political administration, the bar was removed for all.

In stating the facts in this controversy, the writer has confined himself to the evidence adduced at the second and third trials, except as otherwise indicated; and, though sure that the companies are in the right, he still feels bound in this sketch to make a clear distinction between the facts and his construction of them — between citations from the evidence, and his opinions. Aside from his knowledge of the cases as an attorney, he was one of the first newspaper reporters to become familiar with them, and has a personal acquaintance with most of the witnesses. Such familiarity gives him a knowledge of many facts which, under the rules of evidence, cannot go to the jury, but which might properly appear here. He has thought best, however, to avoid criticism by confining himself to what appeared or was closely suggested in court, and to further give both sides of the case a hearing by quoting the reports of the arguments made by the plaintiff's counsel at the trial at Leavenworth. These reports were made in the *Daily Standard* by Henry C. Burnett, now of New Mexico, also one of the first journalists engaged on the case, and a thoroughly competent and conscientious reporter. All citations from the testimony of the second trial are from the bound volumes of reports made by Mr. F. O. Popenoe, the official stenographic reporter. If the writer has made errors of any sort in quoting the evidence, they are certainly trivial and unimportant, as the utmost accuracy has been desired.

THE EVIDENCE.

Hillmon and Wife, before Hillmon's Disappearance. (In Evidence.) — John W. Hillmon was born in

Indiana, in 1845, and was therefore about thirty-four years of age at the time of his alleged death near Medicine Lodge, Kansas, March 17, 1879. He came to Kansas with his father, who settled near Valley Falls, Jefferson county, Kansas. He attended school more or less, and then became a cattle herder and farm laborer, working for various farmers and cattlemen in Jefferson, Leavenworth, and Douglas counties. He entered the army in 1863, at eighteen years of age, and remained about one year. In 1874 he went to Colorado, and worked in the mines at Quartzville and Central City as a miner and mining boss. In 1876 he returned to his home in Kansas, and resumed his occupation as cattle herder. He left Kansas again in 1876, going to Sweetwater and Reynoldsville, Texas, where he engaged in killing buffalo, gathering buffalo bones and hides, and in hauling freight. He returned to Kansas via New Mexico and Colorado, selling the ox teams of his Texas outfit at various points on the return trip, and arriving at Lawrence in August, 1877. For a time he bought and sold hogs in Lawrence. On or about December 15, 1878, he left Lawrence for a trip to Wichita, Dodge city, and other western and southwestern points, as he said, to find a cattle ranch, leaving Wichita December 26, 1878.

The following extracts from his pocket journal will show the character of this first trip, the journal or memorandum book having been taken from the body of the man killed near Medicine Lodge on the 18th day of March, 1879:

"John W. Hillmon's book; residence, Lawrence, Kansas. Mrs. S. E. Hillmon,

The Mutual Life Insurance Co. of New York, in 1900, made satisfaction of the judgment obtained in 1899 on the sixth trial.

The case was dismissed against the Connecticut Mutual Life Insurance Co., in 1903, presumably because of a settlement after the Supreme Court's order for a new trial.

Thus ended the Hillmon Case.

For most of this later history of the case, the Compiler is indebted to Morton Albaugh, Esq., Clerk of the United States District Court for the District of Kansas, at Topeka. — Ed.]

corner Henry and Alabama streets, Lawrence, Kansas. Traveling companion, J. H. Brown; residence, Wyandotte, Kansas.

"My first memorandum I lost after I had been out a few days, so I replaced it with a new one. Could not recall all that I had in my first, but placed my dates correct. I lost it the second day from Wichita, together with some cough medicine; I had caught a severe cold at Wichita, and provided for it. Colds are numerous through this part. Prescription, Bon Bay root.

"December 18th. I left Lawrence on the 18th of December, 1878, for the purpose of looking up a stock ranch in the southwest. Went by way of the Atchison, Topeka & Santa Fe to Wichita. Arrived at Wichita at twelve at night. Found snow about three inches deep.

"December 19. On the morning of the 19th looked around town during the day. Wichita is a livery town. Streets full of teams every day. They will face the storm to go to the city.

"December 20. Rather warm overhead. The snow melting some. Wrote a letter home, and one to Baldwin. Looked around some for a team. Did not get any up to this evening.

"December 26. Started early for the west. Turned cold and began to storm. Drove all day, nearly facing the storm. The country is dotted with houses all over the prairie. No timber and no accommodations to amount to anything. Stopped at night about 25 miles from Wichita. Their principal fuel is corn stalks.

"December 27. Cold. A long drive through rather an unsettled country. Jack frosted his feet. Had to break road most of the way. Horses as well as us was very tired. Stopped for the night with some Hoosiers, though they made us very comfortable.

"December 28. Drove thirty-five miles, and arrived at Medicine Lodge about four in the evening. The weather has been so cold, and the scarcity of fuel has prevented us from camping out. There is no timber from here to Wichita, about a hundred miles. Settlers have to

haul what timber they use forty or fifty miles. Received a letter from L. Seelig, Lawrence, Kansas. Did not receive any word from home.

"December 29. At Medicine Lodge. Snowed during the past night. Too cold to travel. Remained in town. Wrote a letter home. Went to church at night. Medicine affords a very good congregation for a new and frontier town.

"January 6. After looking around we find that we have broke our wagon. Will have to go back to Sun City to get it fixed. The wind is blowing very hard and cold. I think something very strange will happen soon. It has not snowed any since yesterday. Have just had a good time after our horses. They got loose and ran all over the country. Think they are done running for a while except they are hitched up. Last night was very cold and blustery. This morning, the 7th, threatened snow. Wind cold from the north. We are in camp on the Medicine river, at Myers's ranch, about twelve miles west of Sun City. Jack is complaining with cold. Nothing to do to-day except set by the fire, and it smokes so we can hardly see at times. This kind of weather will make one almost curse camp life, and himself for being so silly as to start on a trip of this kind during the winter months. I have prophesied a cold winter this winter, but so far it has overreached my expectations. My opinion was formed by the extra quality of all kinds of furs, both small and large. Muskrats in the north build higher than they was known to for years. The sun goes down to-night dark with snow and wind. I think it has been as blustery an afternoon as I have ever witnessed. This kind of weather is what will condemn this part of the country for stock. It will be almost impossible to save near all of the stock. Admitting it a good country, why was man made to drift in the world like wild animals? I guess the intent was good, and our life what we make them. I would freely give fifty dollars if I had postponed my trip until one month later at least. I think then a man would have some show to travel

with safety, while now he has but very little.

"January 8. Rather pleasant overhead. Old man Myers came down to camp and talked until we both had the headache. He thinks himself the pioneer of Kansas, and has only been in the country about four years. He says woman is a swindle, and that every one knows. At least his, for they look worse than h——l sewed for murder. We have concluded that we will set in camp a day or two longer, and see what the weather is going to do. A fair prospect for a good day to-morrow.

"January 12. We left Medicine river early in the morning. It had every appearance of being a beautiful day. Traveled northwest. Crossed the head of Spring creek, near Bannister's ranch. We found the road very rough and tiresome. The sand hills numerous. Snow badly drifted in many places. We put up for the night at Smith's ranch, 14 miles southeast of Kinsley. I should like to own all this country, if I had it on a big hill or mountain where I could roll it down by sections. I think then I could save many from living out a miserable existence, which they are trying to do here on these bald prairies, without wood or coal to keep themselves warm. If the country affords such, many of them are not able to buy, but burn corn stalks and hay.

"January 20. Warm and pleasant overhead. Roads very bad. Mud and ice. Arrived in Wichita in the afternoon. Think we will wait a few days and see if the traveling will get better. Think will go south to the Nation line next time.

"January 22. At Wichita waiting for the roads to get a little better. They are very muddy. The weather looks some like a storm again, cloudy and dark. Wichita is packed with teams in the streets. I think it is the boss town of Kansas for business. Hogs seem to be in good demand. Buyers are quarreling over them to-day. They are bringing \$2.60 for good ones. Wheat 54 cents. Corn is selling at about 18 cents. Wichita is

having a glorious time, that is, the praying portion of the city. 22d. Went to church in the evening. Thought it would last all night. They have several mourners — fish for the preachers.

"January 25. Started home morning at 5 o'clock. Arrived at Lawrence half-past three evening. Met Mr. Wiseman of the Mutual Life, Topeka.

"January 26th and 27th at home.

"January 28. Left Lawrence 12.40 by A. T. & S. F. for Wichita. Weather damp and cloudy. Arrived at Wichita at 10 in the evening.

"February 8. Still I remain in Wichita waiting for the roads to get in a passable condition. They are very bad. I think I have never did as hard work in my life as I have done in the past six weeks. It is killing me almost by inches to loaf around and do nothing as I have been doing of late. I think I will leave here within a day or two, if I have to go home.

"Monday, 17th. Cloudy and cool. Am at home in Lawrence.

"18th, 19th and 20th, at home.

"23d. Came home in the evening. Very warm. Don't see as there is any good to grow out of me trying to keep track of my misdeeds, while I am apt to err as any one. And that I would be sure ashamed not to make a memorandum of, and only show up the best parts as others have done before me. I do not want to be an exception to the rule or make any new ones so to keep from answering any hard questions. If any one should want to know where I spent my evenings I will say to them I have forgotten to make a memorandum of the time, and my memory is bad, as I never charge it with anything, and of course cannot answer prompting. So ends this part at Lawrence.

"February 23, 1879.

"(Signed) J. W. HILLMON."

On January 25, 1879, Hillmon went from Wichita to Lawrence, for a few days, and returned to Wichita, leaving there on March 4, 1879, on his next and last trip, prior to his disappearance at Crooked creek, a

few miles from Medicine Lodge, Barber county, Kansas. The two Wichita trips in search of a ranch were exceedingly hard ones. He was accompanied by John H. Brown, who had also been his companion in Colorado and Texas, and the two men were at home wherever night overtook them.

Hillmon was married October 3, 1878, to Sally E. Quinn, about four and a half months before his disappearance. Hillmon and wife lived in one room in the house of Mrs. Judson, where they were married, in Lawrence. Mrs. Hillmon was a second cousin to Levi Baldwin, who lived near Tonganoxie, Leavenworth county, Kansas, and who was Hillmon's best friend. Mrs. Hillmon came to Kansas from Columbus, Ohio, at an early age, and had been employed at Lawrence as a family servant, and waiter in a restaurant, which was managed by her mother.

Hillmon was always a poor man. No one knows of his ever having had money or property of consequence except the train taken from Texas and sold in Mexico and Colorado (his possession of which is explained later), and two notes given to Hillmon by Levi Baldwin, and produced for the first time on the last trial. Three notes, signed "Hillmon & Brown," the signatures having been identified as the work of Hillmon, and the notes having been executed to McKamy & Anderson, of Texas, were introduced by the defendants to contradict the evidence that Hillmon had money above his debts. The Texas parties, to whom these notes were given, wrote to the City Marshal of Lawrence, saying that Hillmon was wanted. Hon. J. B. Johnson holds an unpaid note of Hillmon's for \$100, given by Hillmon for professional services, which note has never been collectible.

An accurate description of Hillmon at the time he was last in Lawrence, is as follows: Weight, 165

pounds; height, 5 feet 9 inches; hair, brown; mustache, full; teeth, imperfect, and one gone; face egg-shaped, and broadest through the temples; cheek bones, medium, and not prominent or high; nose, straight and regular; jaws, tapering to the front; lips, closed; scar on back of head and on hand, and vaccination sore on arm.

(Not in Evidence.) — Hillmon and Brown bought the train which they used in Texas of McKamy and Anderson, and gave back the three notes for about \$1600 each above referred to, and a bill of sale for the train. The train was taken to New Mexico and Colorado and sold as also above stated, and the notes were never paid. It was on this account that the police inquiry came from Texas to City Marshal Brockelsby, of Lawrence. Hon. W. N. Allen once paid a bond for about \$100 for Hillmon when the latter had been arrested in Jefferson county, with others, for brutally trying to force information out of an old farmer on the subject of horse stealing.

(Comment.) — From all the evidence it appears that Hillmon was a rough character, familiar chiefly with the hard life of the soldier, the plainsman, the miner, the hunter, and the cowboy; accustomed to seeing human life held cheaply; practically an outlaw; absolutely poor; without a definite occupation; with no particular respect for women, or home, or relations, or law. He was mentally active, however, and always had work or business of some kind in which he showed more or less cunning and shrewdness. His penmanship was better than ordinary, and his journal gives evidence of considerable crude thought. Such was John W. Hillmon at the time of his disappearance.

From all the evidence it seems that Mrs. Hillmon before marriage was a young woman of good character and industrious habits. As a family servant and waitress in a

restaurant she supported herself, and perhaps assisted in the support of her mother and sister, her father being dead. Her marriage does not seem to have materially changed the situation, as her subsequent living arrangements were of the simplest sort. After the insurance quarrel began, she entered on the interesting chapter of her life. In nine years she has traveled much and prospered fairly. She may or may not be married. She was not asked her name by any of the attorneys, but she was accompanied through the trial by a Mr. Smith, who is understood to be her present husband. Why her attorneys did not develop this fact, if fact it be, on the trial, the writer does not know.

The Insurance Transaction. (In Evidence.)—Shortly after the marriage of Hillmon, which took place October 3, 1878, he went with his friend Levi Baldwin to the office of J. H. Blythe, attorney, at Tonganoxie, a small town in Leavenworth county, and asked his advice as to the best methods for securing insurance. Mr. Blythe was not a regular insurance agent, but he told Hillmon and Baldwin what he knew in the line of their inquiries. On the 31st of October, 1878, Hillmon and Baldwin went to the office of A. L. Selig, a well-known insurance man in Lawrence, to whom Hillmon applied for insurance in the New York Life Insurance Company in the sum of \$5000. On December 4, 1878, he and Baldwin again called on Mr. Selig and applied for a second policy on the life of Hillmon in the New York Life Insurance Company in the sum of \$5000. The New York Life Insurance Company issued policies on the applications made to it. The Connecticut Mutual was refused on technical grounds. On the 4th day of December, the same day the applications were made, Hillmon and Baldwin called also on G. W. E. Griffith, of Lawrence, and made application for insurance in the Mutual Life Insur-

ance Company of New York in the sum of \$10,000. The Mutual Life Insurance Company issued a policy as applied for. On February 14, 1879, Hillmon returned from Wichita to Lawrence, and applied for a policy in the Connecticut Mutual Life Insurance Company in the sum of \$5000, which policy was granted. This gave Hillmon insurance for \$10,000 in the Mutual Life of New York, \$10,000 in the New York Life, and \$5000 in the Connecticut Mutual, the total being \$25,000 in all. The annual premiums on this sum called for about \$60 a month. Hillmon made the first semiannual payments, part in cash, and part by one note, the latter being given to Mr. Selig, agent of the Connecticut Mutual Company.

The insurance agents testified that they had never known of Hillmon's personal character or financial standing when the policies were issued, except that he was vouched for by Levi Baldwin as a cattleman with money. Baldwin was a farmer, supposed to be in good circumstances, but subsequent evidence proved that he was bankrupt. Mr. J. S. Crew, as assignee of a bank, had to foreclose a mortgage on Baldwin's farm. Baldwin asked him to wait until the money was paid on Hillmon's insurance, as he would then have \$10,000. After the litigation commenced, Crew would wait no longer, and the foreclosure was made, after which Baldwin removed to New Mexico.

One policy was declined because Hillmon wanted permission to ride fast after cattle and carry firearms. Hillmon's last visit to Lawrence seems to have been on a matter of life insurance, as a question had been raised as to the validity of his policy, on the ground that he had never been vaccinated. He objected to vaccination until assured beyond a doubt by the agents of the company that in case of death, his policy would be void, on the ground of his

they had seen in the wagon with Brown going west. The Medicine Lodge witnesses did not know Hillmon personally, but believed that the dead man was the man they had seen briefly, as above described. Mr. Riggs spent considerable time in and about Medicine Lodge working up this line of evidence.

Mrs. Hillmon, immediately before the body reached Lawrence, went to the office of G. W. E. Griffith, in response to a letter from Griffith asking her to call and take steps to make proof of death. At Griffith's office Mrs. Hillmon met Griffith and A. Selig, insurance agents. They asked her for a description of her husband. Both Griffith and Selig testified that she seemed unable or unwilling to give any description. They attempted to take down what she answered, but stopped trying, as they could get nothing definite from her. What they did get down on paper in the beginning was given to County Attorney J. W. Green, to the best of Mr. Griffith's recollection. Mr. Green never remembered having seen anything of the sort. Mr. Selig says that Mrs. Hillmon said that she did not know her husband very well. At the inquest Mrs. Hillmon was accompanied by her first attorney, Mr. R. J. Borgholthaus. She produced pictures of her husband, but would not answer satisfactorily questions put to her by the County Attorney and the coroner's jury. When asked how much hair her husband had, she answered that he had more than Mr. Green. As that gentleman was bald, this wild dash of levity afforded a pleasing break in the melancholy course of the proceedings.

The jury found the body to be that of an unknown man feloniously shot by John H. Brown. Four of these jurymen — E. B. Good, J. W. Adams, W. O. Hubbell, and Andrew Tosh, knew Hillmon well, and swore that the body was not that of Hill-

mon. The same was sworn to by W. H. Lamon, the photographer who took the pictures of Hillmon, exhibited by Mrs. Hillmon, and also the picture of the dead man; Col. Sam Walker, who saw the body when it was first exhumed at Medicine Lodge; Theodore Wiseman, who was also at the opening of the grave at Medicine Lodge; A. L. Selig, Mr. Tillinghast, and G. W. E. Griffith, insurance agents; Edward Monroe, a hackman who had carried Hillmon; George Gould, an implement dealer; Joseph Bebout, a farmer; Wm. Brown, another farmer (the three latter having done business with Hillmon); Wm. Brockelsby, City Marshal of Lawrence, who at the time of the disappearance was looking for Hillmon on information from the Texas parties who had lost their teams; Frank L. Woodruff, merchant, who had traded with Hillmon frequently; Dr. V. G. Miller, who examined Hillmon for his policy in the Mutual Life Insurance Company of New York, and who knew him well; Dr. J. H. Stuart, who examined Hillmon for his policies in the New York Life, and who vaccinated him on the 20th of February; and Dr. C. V. Mottram, who also knew him. Dr. Stuart met Hillmon in Selig's office October 31, 1878, and on that day examined him for life insurance. Early in December he examined him again for another policy. On the 20th day of February he vaccinated Hillmon at two points on the left arm. Hillmon consulted him five or six times about the vaccination. All or practically all of the witnesses above named as having sworn positively that the body was not that of Hillmon, based their belief, first, on their general inability to recognize the dead face; and, second, on the facts that the dead man, as compared with Hillmon, had very much darker hair, higher cheek bones, a broader chin, a more Roman nose, larger hands and longer arms, better teeth, larger

feet, and a longer measurement. Not all of these witnesses testified to all of these facts, but all testified to some of them, and nearly all to nearly all of them.

An important branch of the testimony of identification was the tooth testimony. The following-named witnesses, thirty-eight in number, testified that Hillmon had a defective tooth, or was minus a tooth altogether from the front part of the upper jaw, most of them locating it on the upper left side, immediately in front of the eyetooth; Major Wiseman, Colonel Sam Walker, Oliver Walker, William Hogan, Jackson Hogan, Tinnette Korkadel, Charles Snow, Josiah B. Brown, James T. Cameron, Mrs. M. J. Dart, Dr. V. G. Miller, Frank H. Hatch, J. E. Taylor, W. S. Angel, H. D. Marshall, Mrs. Wm. T. Faxon, Joseph Bebout, Claude Holliday, Harriet Adams, James A. Adams, E. L. Emmons, Mr. Rothwell, R. A. Brown, Joshua Wilson, William Brockelsby, Mrs. Smith, Wm. T. Faxon, Mary Carr, Margaret Jane Kaufman, Jackson Taylor, Robert Blake, S. D. Nixon, Mrs. Harris, W. W. Nichols, George A. Nichols, Mrs. Geo. A. Nichols, Maggie J. Dixon, and Jefferson Schleppey. Wiseman remembered that there was something imperfect about Hillmon's front teeth. Colonel Walker remembered that once when lying on a bunk in his stable, Hillmon came to the place where he was lying, and hung his overcoat on a nail over him. While they were in this relative position, Walker noticed the absence of one tooth in the front part of Hillmon's upper jaw, and remembered it at the time because his son Oliver has lost a tooth in exactly the same place. Oliver Walker remembered the same circumstance — the absence of the tooth — because of having himself lost a tooth from the same place. Wm. Hogan remembered a defective tooth. Tinnette Korkadel, of Valley Falls, was a schoolmate of

Hillmon's, and for many years an intimate friend of the family. She remembered that as a boy Hillmon had a black or discolored tooth on the left front of the upper jaw. Hillmon was once very attentive to her. James T. Cameron knew Hillmon when both were farmers in the same neighborhood. They once had a conversation with reference to the missing tooth. Cameron swore positively that the tooth next to the upper left-hand eyetooth was gone. Mrs. M. J. Dart, who had seen Hillmon and Mrs. Hillmon at her house, swore positively as to the missing tooth. Mrs. Faxon was at the house of Wm. T. Faxon, whom she subsequently married, when the first Mrs. Faxon was ill. Sallie E. Quinn was a domestic in the employ of Mrs. Faxon at that time. One day she received a call from Mr. Hillmon, and Sallie asked Mrs. Faxon what she thought of her choice. Mrs. Faxon replied that she liked him much, but that it was a pity that he had lost a front tooth. Wm. T. Faxon on that occasion noticed the absence of the tooth, and as he had been buying false teeth for his wife, made some remark as to how much it would cost to put a false tooth in Hillmon's mouth. This remark caused his wife some annoyance, as she considered what was said as a complaint about the expense which she had thus incurred. Mr. and Mrs. Faxon swore positively as to the missing tooth. Josiah Wilson knew Hillmon near Tonganoxie. He swore positively that Hillmon had a tooth out of the left front of the upper jaw. Claude Holliday knew Hillmon intimately, and remembered the absence of the tooth. He mentioned one time in particular when the absence was more than usually noticeable, because Hillmon laughed. George A. Nichols and his wife, Hillmon's sister, formerly Mary E. Hillmon, both testified positively to the absence of a tooth from their brother's upper jaw on the left side, front. Mr. Nichols

had known Hillmon since 1865, and had been his most intimate friend. He first noticed the entire absence of a tooth in 1872, but before that had noticed for many years that a tooth was discolored. W. W. Nichols, brother of G. A. Nichols, knew Hillmon intimately, and swore that one of his upper front teeth was either out or defective. Dr. Miller, in making his examination of Hillmon for insurance, noticed the absence of a tooth from the left front of the upper jaw. Jefferson Schleppy, cousin to Hillmon, testified to the absence of the tooth.

(Not in Evidence.) — Dr. Howe, a Lawrence dentist, now living in the City of Mexico, says that some time before the Hillmon affair became notorious, two men called upon him to have an artificial tooth made for the position in front and next to the eyetooth, on the left side of the upper jaw. He did not know Hillmon, but identified Brown as the other of the two men. His books were destroyed, so that any entries which he might have made could not assist him in identifying the men. The plate was never called for, and Mr. Howe lost what he had in the job.

(Comment.) — The cross-examination of all these witnesses elicited the fact that there were many persons with whom they were intimately acquainted, the condition of whose teeth they could not tell. They were asked about the merchants with whom they dealt and other people with whom they were well acquainted, various questions as to teeth, etc., the majority of which questions they were unable to answer as definitely as they were swearing on the subject of Hillmon's lost tooth.

(In Evidence.) — A small item in the testimony of identification related to the hair. One of the Walters sisters testified in a general way that her brother's temples were bare. A witness for the plaintiff

swore from the looks of the pictures that the hair of the dead man grew over the temples. Hillmon's hair was an ordinary brown. Walters had hair almost black; so had the corpse. The testimony as to the quality of Walters' hair and Hillmon's was mixed, some saying one way and some another — the difficulty evidently being that no two witnesses had the same standard of comparison.

Another item of importance was the fact that the clothes of the dead man were slightly too small for him. This was observed by the members of the coroner's jury, the undertakers, and the physicians.

Another important branch of the testimony of identification was the vaccination testimony. Dr. Stuart vaccinated Hillmon on the 20th of February, and on the 25th the vaccination was found to be "working" well. The dead man was killed on the 17th of the following March, 27 days from the date of the vaccination. The vaccination scabs on the dead man's arm were found to adhere closely to the arm, and had to be removed, if at all, with force. The area of the vaccination was cut out by Dr. Stuart from the arm of the dead man and preserved in alcohol. It was of no possible use to anybody, and so was thrown away when Dr. Stuart removed from Lawrence. The defendant maintained and the physicians testified that the course of a healthy vaccination would have left the arm practically well in a period of twenty-seven days. As the vaccination scabs showed the vaccination to be a perfectly healthy one, so far as could be determined by careful examination, the physicians for the defendants, Drs. Miller, Mottram, Morse, Stuart, Branstrup, Alexander, Jones, and Hibben, gave it as their opinion that the vaccination marks on the dead body could not have been from the vaccination of Hillmon done on the 20th day of February. All these physicians, as

well as several called by the plaintiff, testified that an unhealthy condition of the body or an accident might have prolonged the life, so to speak, of the vaccine sore, and it was this remote general possibility which was relied on to nullify the defendants' testimony on this subject.

(Comment.) — The physicians were practically a unit on the subject of vaccination. All maintained that the progress of a perfectly healthful and uninjured vaccination sore was definite and certain; that an injury, like a blow, or any gross impurity of the blood, would prolong the sore; and that any sore so prolonged would have a different appearance from the perfectly natural vaccine sore. The sore on the dead man was a perfect vaccine sore, as sworn to by the four physicians who saw it.

(In Evidence.) — Another important branch of the testimony of identification was that in relation to the condition and contents of the stomach of the dead man. Brown and Hillmon, according to the testimony of the former, had eaten a meal of bacon, bread, and coffee about an hour before sundown on the afternoon of the killing. The physicians, testifying for the defendants as above named, gave it as their opinion that the occurrence of death at the length of time mentioned after eating, in cold weather, would cause evidences of undigested food to be found in the stomach. The post-mortem examination only revealed a small quantity of mucus. The physicians agreed that digestion under some circumstances could go on after death — that is, given food and gastric juice in a stomach not too cold, a chemical action would take place which would result in the dissolution of the food. Such action would take place in any receptacle as well as in the stomach. The greatest range of temperature given as permitting this chemical action was between zero and boiling

point, Fahrenheit. It was also shown that if the food in the stomach of the dead body had become decomposed — particularly if it had become decayed and gaseous — the rough riding from Medicine Lodge to the railroad station at Hutchinson, and from Hutchinson by cars to Lawrence, might have dispersed such gases by the process described as analogous to the process of perspiration. The majority of the physicians gave a good deal of latitude to all their opinions on this subject of digestion, although the majority were clearly of the opinion that if the meal described had been eaten as described, and the man killed as stated, in a condition of unusually cold weather as proven, the chances would be largely in favor of the stomach showing signs of undigested food, particularly as the stomach itself was in good condition.

(Comment.) — The testimony on the subject of digestion was very interesting, but was certainly not very tangible and conclusive for the jury. It would undoubtedly be summed up by a strictly impartial observer as having the effect of showing that the theory of the defendants was a very plausible but not conclusive one.

(In Evidence.) — Another important branch of the testimony of identification related to the respective measurements of Hillmon and the dead man. A certified copy of Hillmon's enlistment in the army at 18 years of age shows him to be five feet eight inches high. His discharge a year later showed the same height. In his application for insurance in the Mutual Life, Hillmon gave his height as five feet eleven inches. All other policies were copied from this — at least in the matter of height. Dr. Miller, examiner for the Mutual Life Insurance Company, testified that Hillmon called at his office, and stated to him that he had made a mistake in giving his height. The Doctor then measured him in the presence

of Selig, and made a memorandum on a blank leaf of his office ledger as to the result of that measurement, which was five feet nine inches. The memorandum in the ledger was written out in full, dated, and sworn to as having been made at the time of the measurement, and as accurately recording the results of that measurement. The memorandum itself was not admitted as evidence, but the Doctor was permitted to hold it in his hand, and from it refresh his memory as he testified. Mr. Selig was present when this measurement was made, and knew all about it, excepting that he could not swear that he actually examined the measuring-line himself as it was applied to the wall. The memorandum made was as follows:

"Lawrence, Kansas, December 17, 1878 — John W. Hillmon called on me and reported a slight mistake in his height. He, Hillmon, is five feet nine-inches, in place of five feet eleven inches, as stated in his policy for life insurance in the New York Mutual.

"V. G. MILLER."

Hillmon also stated the correction as to height to Dr. Stuart, but no memorandum was made of it. The witnesses as to Hillmon's height — to the effect that he was five feet nine inches high — were J. H. Stuart, Dr. V. G. Miller, Major Theo. Wiseman, Joseph Bebout, A. L. Selig, W. W. Nichols, Geo. A. Nichols, Mrs. Nichols, Draves of Wichita, H. D. Marshall, Claude Holliday.

Another important branch of the testimony of identification related to the scar on Hillmon's hand. W. W. Nichols swore that once when he was in camp with Hillmon in Texas, and while some general shooting was being done at a mark, Hillmon attempted to crowd a loaded cartridge into his breech-loading gun with a stick, and exploded the cartridge, the shell of it cutting a long wound around the base of one thumb, and an inch,

more or less, on the outside. This wound left a scar, which was sworn to as being very plainly seen subsequently by W. W. Nichols, G. A. Nichols, and Mrs. G. A. Nichols, Hillmon's sister, when Hillmon was making his sister's family a visit, in Washington county. H. D. Marshall and Rufus Whitney also swore to the scar.

William Brown traded shoes with Hillmon, and George A. Nichols and Jefferson Schleppey also testified as to the size of Hillmon's foot. It was a foot calling for shoes number eight or nine. The dead man's shoes mysteriously disappeared on the trip between Medicine Lodge and Hutchinson from Hillmon's trunk, Brown and Baldwin having charge of all the effects, as well as of the body.

Mr. C. W. Smith, the undertaker, and Doctors Stuart, Mottram, and Miller measured the dead body, and found it to be five feet eleven and five eighths inches long. The witnesses who testified to this part of the description of Frederick Adolph Walters were twenty-five in number. The witnesses who swore, among other things, that the photographs of the dead man were those of Frederick Adolph Walters were twenty-two in number. Among those witnesses were the entire family of Walters at Fort Madison. Four witnesses at Albuquerque identified the photographs of Hillmon as the man they had known near Albuquerque. One other witness, at Breckenridge, Colorado, swore to having seen Hillmon personally. This testimony, however, was not very satisfactory.

Levi Baldwin testified to having known Hillmon eight or ten years. The photograph of Hillmon exhibited had been in his home a long time. He traded clothes with Hillmon a short time before he went south. Could not tell exactly where the trade took place, but thought it was in Judson's house at Leavenworth. The body exhumed at

Medicine Lodge had on the same coat and vest which he had traded to Hillmon. Baldwin could not remember whether he sent Hillmon \$25 at one time and \$10 at another time, or not. Hillmon had good teeth. Baldwin testified at the coroner's jury that he did not recollect about Hillmon's teeth, but said at the trial that the tooth case was not fixed on his mind until after he saw the teeth exposed and became satisfied.

Another important branch of the testimony of identification was the scar on the back of Hillmon's head, sworn to by George Lewis, the barber, whose habit it was to cut Hillmon's hair so as to hide the scar; Mr. V. P. Newman, a blacksmith, who stood by on one occasion while Lewis was so cutting the hair; and Jefferson Schleppey, Hillmon's cousin. The dead man had no scar on the back of his head.

Another item in the identification was the finding of a mole on the dead man's back, which was sworn to positively by the Fort Madison witness as being exactly in the location of a mole on the back of Walters.

Physicians Miller, Mottram, Morse, and Stuart testified that judging from the skin, hair, teeth, and appearance generally of the dead body, it was that of a man about 25 years of age. This opinion was right if the body was that of Walters, wrong if it was that of Hillmon.

(Comment.) — The method of cross-examining the witnesses on the subject of their remembrance of the tooth peculiarity, though easily understood by one who gives the subject careful attention, is very effective with the casual observer, the point of it being that because a man remembers a certain thing he must necessarily remember every other thing of equal importance. If the matter be carefully considered, however, it soon appears that about the only rule which can be laid down for the explanation of

what is remembered, is that a man remembers what he remembers. The mind is a sieve. It loses more than it holds. We see and hear, and do a multitude of things daily, all of which might be remembered, but most of which are forgotten. The fact that one fails to remember an occurrence of last month is not proof that he does not remember a similar occurrence of ten years ago. Most of our memories are latent, and we are aware of them only when some special circumstance recalls them to mind. If one be asked to name all the acquaintances seen yesterday, the list will be very brief; but after it is finished, if he be asked a more leading question (for example: Did you not see John Doe, or Richard Roe?) the answer may be yes, although without such reminder the fact might have been forever beyond recall. It is fair to presume that in the minds of the jury this style of cross-examination utterly blotted out the overwhelming evidence of thirty or more reliable men on the subject of the teeth.

Mrs. Hillmon, Buchan, and Brown. (In Evidence.) — A very important branch of the testimony consisted of that given by Mrs. Hillmon, John H. Brown, Hillmon's companion at the time of his disappearance, and Hon. William J. Buchan, of Wyandotte. A large part of the testimony of these three is so closely interwoven as to make it convenient to present all together. So far as Brown was concerned up to the time of the disappearance, there is little to be said about him except that he was much like Hillmon in his general characteristics, though, it seems, was in every way a much weaker man. He had been a miner with Hillmon in Colorado, and had traveled with him in Texas on his various long trips. The two trips west from Wichita were made in Brown's company. Brown testified that he and Hillmon had on the first trip traveled from Wichita to Medicine Lodge; thence to Sun City; thence to a

town on the Santa Fe road; thence to Great Bend; thence to Hutchinson; thence back to Wichita. Between the return to Wichita and the departure for the second trip Brown testified that Hillmon returned to Lawrence. On the second trip the two men went from Wichita to Kingman; thence to Harper City; thence to Medicine Lodge; thence to Sun City; thence to Elm creek, finally to Crooked creek, where the disappearance took place. Brown testified that he arrived at Crooked creek on the 16th of March, and that while in camp during the next day a man called during the forenoon. In the afternoon Brown and Hillmon had been shooting with a gun at a mark, and after they were through Hillmon put the gun back in the wagon, with the muzzle sticking out. About bedtime Brown went to get ready for bed. He took hold of the barrel of the gun and pulled it over his right shoulder. The hammer caught on the wagon, and the gun was discharged. Brown testified that he dropped the gun, turned, and went to Hillmon, who was twelve feet distant, and caught him before he fell, and swung him around away from the fire. He then got a horse and went three quarters of a mile to a house and told what had occurred. The man of the house returned with him to the camp. The man's name was P. B. Briley. He was the same man who was at the camp in the morning.

The next morning Esquire Pad-dock held an inquest. They then took the body and went to Medicine Lodge, where an inquest was held. The next day the body was buried at Medicine Lodge. After Levi and Alva Baldwin, Colonel Walker, Major Wiseman, and Tillinghast came from Lawrence, Brown went to the grave to help take up the body. He returned with the body to Lawrence. Brown testified that when they left Wichita on the last trip a man stayed with them all the time they were at Cowskin creek. This

man joined them about three miles out from Wichita. The stranger left, and was not with the two men at camp when the disappearance took place. When the inquest was held at Lawrence, Brown, after giving his testimony, left town in a hurry, and returned to the vicinity of Wyandotte, where Brown's father lived. Brown's father applied to State Senator W. J. Buchan, at Wyandotte, for help for his son. This was in March, 1879. The elder Brown explained the difficulty in which John had become involved, and asked Buchan to go to Lawrence and try to manage the matter. This Buchan did, without result. Some time later, Reuben Brown, brother of John Brown, called on Senator Buchan, and asked him to go to Lexington to see John. At Lexington Buchan and Brown discussed the matter fully, and Brown stated that the job was as bad as it could be, and he wanted Buchan to see the agents of the insurance companies, as he, Brown, wished to turn State's evidence and get out of the difficulty. Brown went across the street from the railroad track and wrote the following letter:

"Mirs Hillmon i would like to now where Johny is and How that business is and what i shall doe if any thing. Let me now threw my Father.

"JOHN H. BROWN."

Senator Buchan testified that this letter was written by Brown in order to get information out of Mrs. Hillmon about her husband. Buchan again saw Brown at Parkville, and found Levi Baldwin trying to get Brown to sign proofs of death. Baldwin told Brown that he would not have to go on the stand, as the theory of the insurance companies was that the body was that of Frank Nichols, and that was as good a thing as he (Baldwin) wanted, as he could produce Nichols in court. Buchan told Brown that he would be compelled to go and testify,

which he said he would not do. He again proposed to turn State's evidence, which fact Buchan had previously reported to the insurance companies.

On the 4th of September, 1879, Buchan went again to Parkville, and asked Brown to put his statements in writing. This Brown did, and afterward went before Justice McDonald and swore to the statement. This statement or confession was as follows:

"STATE OF MISSOURI, COUNTY OF PLATTE, SS.:

John H. Brown, of lawful age, being first duly sworn according to law, deposes and says: My name is John H. Brown. My age is thirty years. I am acquainted with John W. Hillmon. Also Mrs. S. E. Hillmon, and Levi Baldwin, of Douglas County, Kansas. Have known John W. Hillmon for about five years. Have been with him a good deal for the past two years. Was with him last March at Wichita, and on the trip from there to and around Medicine Lodge, in Barber county, Kansas, where it is claimed that I killed him on the 17th day of March, 1879. Along about the 10th day of December, 1878, John W. Hillmon, Levi Baldwin, and myself talked about and entered into a conspiracy to defraud the New York Life Insurance Company and the Mutual Life, of New York, out of some money to be obtained by means of effecting a policy or policies on the life of said John W. Hillmon. Baldwin was to furnish the money to pay the premiums, and to keep up the policies in case they had to be renewed. Our original arrangement was to get Hillmon's life insured for \$15,000, but it was afterwards changed to \$25,000. Hillmon and myself were to go off southwest from Wichita, Kansas, ostensibly to locate a stock ranch, but in fact to in some way find a subject to pass off as the body of John W. Hillmon, for the purpose of obtaining the insurance money aforesaid. We had no definite plan of getting the subject, but to in some manner get one; the final termination of the matter was the last idea thought of. Our first trip out from

Wichita the last days of December, while the snow was on the ground, we expected to find a subject that would appear to be Hillmon frozen to death, and that could not be identified only by the clothes and papers found on it, and so I could pass it off as Hillmon.

"We went from Wichita to Medicine Lodge; then direct to Sun City; from there to Kinsley; from there to Great Bend, on the Santa Fe Road; then to Larned, and on to Wichita via Hutchinson. Hillmon and myself were entirely alone on this trip. Iliff, of Medicine Lodge, saw Hillmon on the trip. We put up at his stable. I then stayed at Wichita until the 4th of March. Hillmon, in the meantime, went to Lawrence to see his wife and get some more money. He returned about the 1st of March, and on the 5th we left on our second trip. We went due west to Cowskin creek, then west to Harper City, then to Medicine Lodge, on by Sun City, and beyond some miles. Then we turned northeast down Medicine river to a camp on Elm creek, about eighteen miles north of Medicine Lodge, where Hillmon is claimed to have been killed. We got there about an hour before sundown, and stayed in camp until the next evening. We overtook a stranger on this trip, the first day out from Wichita, about two or two and one half miles from town, who Hillmon invited to get in and ride, and who he (Hillmon) proposed to hire to herd and work for him on the ranch as proposed to be located. This man was with us during all this trip. Hillmon proposed to me that the man would do to pass off for him. I contended with him that the man would not do to pass off for him, giving him various reasons why the man would not answer his description, and complained and objected because his proposition was to take the man's life; and I protested, and said that was going beyond what we had agreed, and something I had never before thought of, and was beyond my grit entirely. But Hillmon seemed to get more deeply determined and desperate in the matter. Pains were taken not to have more than two of us seen together in the wagon. Sometimes

one and then the other would be kept back out of sight. On his trip up to Lawrence, Hillmon was vaccinated. His arm was quite bad. Hillmon kept at the man until he let him vaccinate him, which he did, taking his pocket-knife and using virus from his own arm for the purpose. He also traded clothes with him, Hillmon first giving him a change of underclothing, then trading suits — the one he was killed in. The suit he was buried in was a suit Hillmon traded with Baldwin for. This man appeared to be a stranger in the country, a sort of an easy-go-long fellow, not suspicious or very attentive to anything. His arm became very sore, and he got quite stupid and dull. He said his name was either Berkley or Burgess, or something sounding like that. We always called him Joe. He said he had been around Fort Scott awhile, and also had worked about Wellington or Arkansas City. I do not know where he was from, nor where his home or friends were. I did not see him at Wichita that I know of. I had but very little to say to the man, and less to do with him. He was taken in charge by Hillmon, and yielded willingly to his will. I dreaded what I thought was to be done, and kept out of having any more to do with him than possible. I frequently remonstrated with Hillmon, and tried to deter him from carrying out his intentions of killing the man.

"The next evening after we got to the camp last named, the man Joe was sitting by the fire. I was at the hind end of the wagon, either putting feed in the box for the horses or taking a sack of corn out, when I heard a gun go off. I looked around, and saw the man was shot, and Hillmon was pulling him away around to keep him out of the fire. Hillmon changed a daybook from his own coat to Joe's, and said to me everything was all right, and that I need not be afraid, but it would be all right. He told me to get a pony, and go down to a ranch about three quarters of a mile, and get some one to come up. He took Joe's valise, and started north. This was about sundown. We had no arrangements about communicating with

each other. He first promised to do so, but I told him I did not want to know where he was; that in case I should, I might find out some other way. I have never heard a word from him since. At Lawrence, Mrs. Hillmon gave me to understand that she knew where Hillmon was, and that he was all right. The man over whom an inquest was held at camp, afterwards at Medicine Lodge and Lawrence, Kansas, was the man, Joe Burgess or Berkley, killed by Hillmon, as related above, and John W. Hillmon I believe to be still alive. At least he left our camp, and went north, as stated above, after killing Joe. Hillmon said he would assume the name of William Marshall. Baldwin, wife, and Mrs. Hillmon knew all about this. In my testimony at Lawrence I stated the route taken, as above described, but the man who I described as being in camp with us, and who I said went off with some wagon, was Joe, the man killed. I afterwards, sometime in August, 1879, made four affidavits under great importunities from Baldwin, who came after me three different times, the last time persuading me to go with him to Kansas City, where Hon. Samuel Riggs insisted on my signing them. I don't think Mr. Riggs is aware of the facts in this case, nor the other counsel in the case.

"I make the above statements in the Hillmon case as the full and true facts in the case, regretting the part I have taken in the affair.

(Signed) JOHN H. BROWN.

Subscribed in my presence, and sworn to before me, this 4th day of September, A.D., 1879. My term expires on the 2d day of April, 1883.

(Seal.)

FRANCIS M. McDONALD,
Notary Public."

Brown gave Buchan a power of attorney to act for him in securing immunity from prosecution, in return for his confession. Subsequently Buchan also had from the insurance companies the same sort of power of attorney to bind them to what Brown required. These authorizations were as follows:

"PARKVILLE, MO., Sept. 4, 1879.

"I hereby authorize W. J. Buchan to make arrangements, if he can, with the insurance companies for a settlement of the Hillmon case, by them stopping all pursuit and prosecution of myself and John W. Hillmon, if suit for money is stopped and policies surrendered to companies.

"JOHN H. BROWN."

"W. J. BUCHAN, ESQ. — Dear Sir: On behalf of the Mutual Life the New York Life, and the Connecticut Mutual Life, I hereby authorize and employ you to procure and surrender the policies of insurance on the life of John W. Hillmon.

"H. B. MUNN.

"KANSAS CITY, Sept. 5, 1879."

The transaction, so far as Buchan was concerned, became an arbitration, with himself as arbitrator. Brown then authorized Buchan to say that he would testify in accordance with his statement or confession, provided the companies would take no steps to prosecute Hillmon, Mrs. Hillmon, Baldwin, or himself. The insurance companies, on the other hand, were bound to do what Brown required of them according to the terms of his proposition. Senator Buchan said that after the papers were signed he returned home, and next saw Brown at his office in Wyandotte. At the time of signing the statements Brown spoke of getting Mrs. Hillmon to surrender the policies. Buchan told him that if he did that, it would probably end the matter. He said he would see Mrs. Hillmon. Buchan promised Brown not to show his statements to the authorities or to reveal his whereabouts until he, Buchan, had secured their promise not to prosecute, as above described. Brown went to see Mrs. Hillmon at Levi Baldwin's house. Baldwin went to Lawrence on horseback and brought Mrs. Hillmon out by getting a neighbor to carry her part way, as the roads were bad, and taking her the rest of the way

himself. At about eleven o'clock at night Mrs. Hillmon and Brown met at Baldwin's house, and, according to Mrs. Hillmon's testimony, Brown told her that he had turned State's evidence, and could not testify for her in the insurance cases. The next morning they had another interview, and made an appointment to meet at Leavenworth on September 15th, 1879. Brown, Mrs. Hillmon, and Buchan met at Leavenworth. The policies were with Mr. Wheat, at Leavenworth. Mrs. Hillmon signed full release of all her interest in the insurance policies. She also went with Buchan to Mr. Wheat's office to demand the policies. Mr. Wheat refused to give up the policies, saying he had a lien on them for \$10,000. Mrs. Hillmon and Buchan returned to Wyandotte. Buchan showed Mrs. Hillmon the agreement of the companies not to prosecute Brown. Also Brown's statement. This statement was torn up and put in the stove, but was afterwards fished out of the stove and preserved, when it developed that there was to be a contest over the policies. Mrs. Hillmon remained in Wyandotte some time with Buchan. She afterwards went to Ottawa. Returning from Ottawa she signed a supplementary release, and afterwards stayed for about three weeks at Buchan's house. She went to Trenton, Missouri, where she stayed three weeks or a month. Buchan had nothing to do with fixing the place of meeting at Leavenworth, he going there at Brown's request. Buchan got no fees from the Browns, but did get from \$500 to \$700 from the insurance companies, including expenses. Mr. Wheat was retained by Levi Baldwin.

While absent from Wyandotte, Mrs. Hillmon wrote to Buchan the following letter:

"Saturday Jan. the 3, 1880

"HON. W. J. BUCHAN, WYANDOTTE: I am now ready to go to Colorado as soon as you send the ticket and money. I hope

rado, and parts unknown to me. I expect to see the country now. I will close. Regards to all inquiring friends; love to all.

“Your brother,
“F. A. WALTERS.”

At the same time Mr. C. F. Walters, the brother at Holden, Missouri, received a letter from him, stating that he was about to leave Wichita with a man by the name of Hillmon. Since that time, no word has ever been received by the friends or family of Walters, nor has any person with whom he was before acquainted seen him.

Some time after this, his people became alarmed by his continued silence, and began to make inquiry. His father applied to the Odd Fellows' Lodge at Fort Madison, of which his son was a member, but it did nothing for him. He then applied to the Masonic Lodge for assistance. Mr. Hobbs, a bright young lawyer of that place, was the master of this lodge. He at once applied to the lodge at Wichita for assistance. The lodge at Wichita wrote to Lawrence, and in response, pictures of the dead body which had been brought there were forwarded to it. These pictures in turn were forwarded to Mr. Hobbs, and by him shown to the father, who immediately recognized them as pictures of his son, Frederick Adolph Walters. He showed them to the members of the family, and one and all under oath identified the pictures as being that of their son and brother. The pictures were then shown to other friends, and by a large number of them identified as the picture of Frederick Adolph Walters. Several parties at and near Lawrence, where Walters worked, recognized the pictures as those of Walters. Mrs. Gilmore, daughter of the proprietor of the Central Hotel, where Walters was sick, identified the pictures positively. All members of Walters's family swore that he had very dark-

brown hair, a wide forehead, a broad German face, an aquiline nose, long hands, and extraordinarily sound teeth. He was also described as being well built, a skillful Turner, and five feet eleven inches high. He had no scars on his body except a small one, half as large as a pea, near one ankle, caused by the bite of a dog. This scar was last seen when Walters was twelve years old — a sister so testifying. He had a mole on his back. This description was exactly that of the dead man, except as to the small scar. No such scar was discovered, as Dr. Miller examined the body with a magnifying glass, and found no scars on it except a slight one on one finger. Walters was a young man of excellent habits and strong social attachments. He was on the best of terms with everybody, and had no known motive for leaving home, except for the purposes testified to and indicated in his letter to Miss Kasten.

(Comment.) — The facts are that Hillmon and Walters disappeared simultaneously. One of the two reappeared dead. The bulk of the evidence shows that the dead man was not Hillmon — that it was Walters; that Hillmon had every motive to prevent his reappearance, if alive — desire to secure the insurance money, and an equal desire not to go to the penitentiary; and that Walters, if alive, had every motive to induce his return.

The letters written from Wichita by Walters were admitted by Judges Foster and Brewer, but were ruled out on the last trial by Judge Shiras.

The Walters sisters were both kept away from the last trial by the death of their mother, and the serious illness of other members of his family.

General Notes and Considerations. — There has been much talk about the presumption of death in law after the lapse of seven years as being a proper dependence for the plaintiff. This could not be, as the question is not whether Hillmon

is now dead, but whether he died at the date of the killing at Crooked creek; in other words, whether the proofs of death made by Mrs. Hillmon were good.

The five Medicine Lodge witnesses who did not see three men in the wagon at any one time, are the only strong witnesses for the plaintiff, and their strength decreases on a full statement of all the facts. In the first place, the witnesses are vague. One was a teacher, and saw the wagon pass his schoolhouse. Whether he was in the building or out, or whether the school was in session or not, he was unable to tell. It seems that the testimony on this point might have been very much stronger if the facts had been as claimed by plaintiff. The Brown confession shows how the appearance of only two men was kept up.

Mrs. Hillmon exhibited a gold ring which she said Hillmon had once given her, but had afterward worn himself and returned to her before he went south. This ring did not seem to have any connection with the case, except so far as it went to prove Hillmon's love for his wife.

The counsel for plaintiff persistently crowded it before the jury that the defendants were rich and therefore powerful corporations. The changes were rung on this topic with great skill and emphasis.

When the insurance companies are asked to produce Hillmon, the answer is a demand for the Benders, or for Tascott, or for ten thousand great criminals, well known and clearly distinguished, who have escaped from under the very nose of the law. Hillmon was a common man in appearance. He was like thousands of others — miners, cattlemen, and laborers — all over the West. He had a long start and all advantages. He might have been in Mexico before the dead body reached Lawrence. But supposing him to have remained in the United States, he was but one of many millions, and the terri-

tory in which he was at liberty to lose himself was boundless. Every officer of the law knows the difficulty of finding a man who has wit and pluck and is determined not to be found. The companies have made little or no effort, knowing the great expense that would be incurred, and the comparative hopelessness of success, and believing their case was sufficiently strong without further evidence.

Major Houston, who had employed Hillmon a great deal as a cattle herder, told the writer a few minutes after taking a long look at the dead body that he could not recognize it.

ARGUMENTS MADE BY COUNSEL FOR PLAINTIFF.

Argument by *L. B. Wheat*. — Mr. Wheat spoke of the long acquaintance of Mr. and Mrs. Hillmon before marriage; their deep regard for each other, as evidenced in one particular by the ring with "Remember me. — J. W. H." engraved upon it; their marriage and affection for each other; his departure to look for a ranch in the southwest just after the Indian raids through western Kansas; the taking of life insurance to protect his wife, and, as to the amount (\$25,000), with the full knowledge of it by all the companies concerned. The companies' agents, like all agents, urged him to take the insurance. They considered him responsible for the premiums, and were willing to insure him. They ought not to plead the baby act now. After urging him to take it, they cannot say that the fact of his taking it was evidence of fraud. The testimony, Mr. Wheat thought, shows that Hillmon was a man of considerable means and of good character. Such a conspiracy as the defense alleges must result in lasting separation from his young wife — the blighting of both their lives forever — her lifelong misery, and his eternal damnation. He was a person of blameless life — nay, more than that, his diary shows him to

have been a Christian gentleman. But he is charged with a terrible crime — lifelong banishment, self-inflicted, from wife and kindred and friends for a few paltry dollars that he himself could never enjoy.

Mr. Wheat turned to the question of identity. The policies all put Hillmon at five feet eleven inches, but a statement is introduced that Hillmon went back to Dr. Miller, one of the examining physicians for the companies, and said he was only five feet nine inches. But the policies were never changed in that particular. These policies, these silent witnesses that the agents of the companies themselves afford, are strongly corroborated by the oral testimony of Mrs. Hillmon, who measured him, and found him five feet eleven inches, the same height as the body brought to Lawrence.

Mr. Wheat asserted that the letter from G. W. E. Griffith, the insurance agent, to Mrs. Hillmon, soon after the death of her husband was reported, asking her to call and make out an application, and Griffith's questioning of her, aided by Selig, another insurance agent, were for the purpose of puzzling her in her distressed state of mind, and getting her to make statements that could be used to beat her out of the insurance. Then later on they plied her with reasons why she should not see her husband, in an effort to destroy a witness against themselves.

Mrs. Hillmon, Arthur Judson, Levi Baldwin, John Brown, and six other Lawrence witnesses, who knew Hillmon well, testify that the body was his. A half dozen Medicine Lodge witnesses, who saw and became acquainted with Hillmon a short time before his death, were quoted where they testify that they saw the body, and it was Hillmon's. The two men only could be traced from Medicine Lodge to the place of the accidental killing, and the two men were Hillmon and Brown.

The photographs of Hillmon and the body were placed in the hands of

a jury, and attention called to the decomposition in the nose of the body in just the spot where Dr. Simmons had testified that he had treated Hillmon for an injury. Dr. Fuller testified that the nose of the body had the appearance of having been injured in that spot, and it has been shown that decomposition took place more rapidly in injured parts.

The vaccination of the arm of the body, it is claimed, was not so far along at the time of death as it should be on Hillmon, but this matter of telling the age of a vaccine sore is very uncertain at best, and the fact that the arm of the body was vaccinated in exactly the place where Hillmon was vaccinated is another strong piece of evidence in the plaintiff's favor. The insurance company's physicians carried away the scab and piece of the arm upon which it was, and now it cannot be found. It looks like suppression of evidence. At any rate, they ought to admit that the matter of vaccination is all right. The hair of the body was dark brown. So was Hillmon's. Walters's was bluish black. The temples of Walters were bare. Hair grew on Hillmon's temples, and there was hair on temples of the body. There was a scar on Walters's leg, where he was bitten by a dog. No such scar was found on the body. The body was so badly decomposed that the identification of it by the Walters family by photographs of it is out of the question. The hair on the body was fine. So was Hillmon's. Walters's was coarse.

The tooth feature of the testimony is very uncertain and unreliable. Some of the witnesses may have honestly imagined that Hillmon had a tooth out, but they were mistaken. None of them stand the test of questions in regard to other people's teeth. People who know the worth of testimony have no confidence in that offered about Hillmon having a tooth out. The same industry and expenditure put forth to get up this

tooth testimony by the defense would have produced Hillmon had he been in the land of the living, and especially had he been in New Mexico, where they say he has been.

Argument by *John Hutchings*. — Mr. Hutchings said that the plaintiff had proved by John H. Brown, the person best qualified, that Hillmon was killed; by Mrs. Hillmon, the widow, the next best qualified person, that the body was that of her husband; by Levi Baldwin, the most intimate friend of Hillmon, that the body was Hillmon's. Five Medicine Lodge witnesses who knew Hillmon well testified that the body was his at a time when the body was best recognizable. Some of these witnesses were on the coroner's jury, and close and not mere casual observers. The photograph gallery, at which the defense now sneered, was introduced by them. Mr. Hutchings entered upon an exhaustive analysis of the photograph gallery, to show that by this testimony of the defense the body was that of Hillmon. Their own witnesses testify that the body was carefully examined by physicians with magnifying glasses, and no scars found; their own witnesses testify that Walters had scars from a dog bite and vaccination. As for the tooth testimony, it was not possible for two or three dozen witnesses, after from six to ten years, to remember that he had a tooth out. It was contrary to common sense. Colonel Walker was too swift a witness. He could remember about Hillmon's tooth, but he could not tell which leg B. J. Horton had lost, though he has known him and seen him almost every day for many years. W. W. Nichols was a wretch who came here from Washington county for \$148 and fees and expenses to give testimony calculated to make his wife's brother a murderer. He excoriated Tillinghast, Selig, and Griffith, the insurance agents, for attempting to entrap Mrs. Hillmon into a description of her husband before

his body arrived. These insurance companies, with boundless wealth and inexhaustible resources at their command, with agents scattered the world over, with six years to operate in, have failed to find Hillmon. They bring depositions from New Mexico, from a worthless class of fellows, instead of bringing Hillmon. Dr. Miller produces a remarkable account book, which, though not intended for that purpose, contains memorandum of Hillmon's height, dated December 17th, according to which he was five feet nine inches. Dr. Stuart testified that Hillmon afterwards came to him, and gave his height as five feet eleven. Hillmon must have been a marvelous man. One of a party of three, traveling through a settled country, camping out, and stopping at houses, he succeeded in concealing one of the party through the entire journey from Wichita to Medicine Lodge. Not only that, but he vaccinated him, made it work, kept the protesting Brown at bay, and succeeds in his conspiracy. It was a marvelous transaction.

In regard to the Buchan-Brown affair, he insisted that Buchan was not Brown's attorney, but attorney for the companies, and that he procured the statement from Brown against Brown's protest, for the purpose of enmeshing Mrs. Hillmon, and getting her to release the policies. Take the Kasten letter out of the Walters theory, and nothing remains of it. The letter does not prove that Walters was going with J. W. Hillmon — there were other Hillmons in that part of the country. It does not prove that Walters left Wichita at all. Why don't the defense bring witnesses from Wichita to show the association of Walters and Hillmon? Why don't they bring the parties with whom Walters boarded at Wichita, and find out where he went from there? Mr. Hutchings closed with an appeal to the jury for a verdict for the plaintiff.

Argument by *Samuel A. Riggs*. — Mr. Riggs called attention to the difficulty Mrs. Hillmon has had in the prosecution of this case in her poverty for five years. He characterized the taking of the insurance at Lawrence by Hillmon as an ordinary transaction of life insurance. Hillmon was of good character, and in good circumstances. It has been asserted that he mortgaged his life to the payment of premiums on a large amount of insurance. It is not unlikely that he intended to permit the policies to lapse after his trip to the Southwest. As to his financial circumstances, he was for many years in the hide business in Texas, when it was profitable. He afterwards fed 250 hogs at Wyandotte. His trip was a natural one, made at a proper time, as southwestern Kansas is a winter stock country. The Indians had raided western Kansas in September, and in the following winter he very naturally protected his young wife by insuring his life. Riggs read the account of the killing as it appears in Brown's deposition. Brown, he said, had stood up for four years in the face of the law, and asserted that his first account of the killing was true. He was here three years ago, and gave his testimony. The defense in this case was purely one of suspicion, beginning with the untrue assumption of poverty and a reckless life on the part of Hillmon. A remarkable feature of the case and one strongly in favor of Brown, is that ever since the so-called coroner's inquest at Lawrence, the defense has been in possession of a detailed statement of Brown's as to the trip that he and Hillmon had made; where they went; where they stopped; and the names of families and persons whom they met. This has never been produced in court, and for a good reason; the defense has never been able to show that at any time, anywhere on that trip, there was a third man in the party besides Hillmon and Brown.

With all their money and all their power they have never been able to find a vestige of Hillmon. Five witnesses at Medicine Lodge, who knew Hillmon well and saw the body, testify it was his. They are disinterested witnesses. We have the identification of those who knew Hillmon best. The testimony of the widow is the strongest. She sent for the body of her husband, asking that if the weather permitted it should be brought to Lawrence; otherwise it might remain there till spring. The first thing at Medicine Lodge, when the body was taken up, was the cutting open of the coat-sleeve, and finding the vaccination mark. Now, mark you, as soon as the body arrived at Lawrence it was taken possession of by the undertakers, and almost the first thing was the cutting out by the physicians of the company of the pieces of flesh in the arm on which were the vaccination scabs. It was carried away, and afterwards could not be found. Under these circumstances, it would be but fair for the defense to concede that the vaccination was all right.

Mr. Riggs spoke of the action of Griffith, Selig, and Tillinghast as a trap purposely set for Mrs. Hillmon. They tried to weaken her case by inducing her to make some statement in the description of the body which they could use against her afterward. Then the evidence of John H. Brown had to be disposed of. Brown's whole conduct bore out the theory of innocence. He stayed with the body at Medicine Lodge, and afterwards went with it to Lawrence. The so-called Lawrence inquest was an ex parte examination, inspired by the insurance companies. One of the chief movers, Mr. Barker, was their paid attorney. Immediately after the arrival of the body at Lawrence, Mrs. Hillmon went to see it, but was not allowed to do so.

Mr. Riggs detailed the connection of Brown with Buchan, and said

it was a studied attempt on the part of the insurance companies to destroy Brown as a witness for Mrs. Hillmon. We have been asked why we did not take Al. Baldwin's deposition. Look at Brown's deposition here. He was cross-examined for nineteen days. That was a notification to us from the defense that we were not to be allowed to take any more depositions. Mr. Riggs did not think it remarkable that a poor, weak woman, confronted by the statement of Brown, rendering him worse than useless as a witness for her, and in the hands of a shrewd attorney like Buchan, should be induced to release the policies. A strong point, and one that destroys the Walters theory with evidence in which there can be no mistake, is the fact that Walters's temples were absolutely bare, while those of Hillmon had hair on them corresponding with the temples of the body, as shown in the photograph and testified to by Lamon, the photographer.

In finishing, Mr. Riggs urged the jury to mete out justice to the plaintiff, and nothing more, in the unequal contest which she had sustained with these great and powerful corporations, the insurance companies.

ARGUMENTS MADE BY COUNSEL FOR DEFENDANTS.

Argument by *J. W. Green*. — Mr. Green urged that it was not incumbent upon the defense to show that the body was that of John W. Hillmon, whose life was covered by the policies. The companies are worth millions. This \$25,000 is not a drop in the bucket, and would hardly be worth contending for if it was not for the fact that it involves conspiracy, fraud, and cold-blooded, atrocious murder. Hillmon was a wild, roving fellow. He herded cattle out here in Leavenworth county, went to Texas and Colorado, and drifted aimlessly about for years. Then he suddenly took a notion to have \$25,000 in-

surance on his life. The premiums amounted to \$600 a year — more than the average man earns, more than Hillmon was ever known to earn. He mortgaged his life for that sum, poor though he was. He sought the insurance, was anxious about the policies, paid a portion of the first year's premium, suddenly disappeared, was reported killed and buried. The men whom Mrs. Hillmon says she sent after the body fenced the grave and started away, when they were required by the insurance companies to take the body up. It was brought to Lawrence. The alleged widow did not go to see it for three days. She kept away from it until she feared the effect of her action would prevent the success of the conspiracy to defraud the companies out of \$25,000, and then she went to see it. Colonel Walker saw the body at Medicine Lodge. He knew Hillmon had a tooth missing. He saw that the teeth of the body were perfect, and he put his finger in the mouth to see if there was a false tooth. It was not there. The body was five feet eleven and five eighths inches in height. Hillmon was five feet nine inches. Three weeks after the killing, Mrs. Hillmon could not tell after the examination, at Lawrence, what her husband's height was, but now it is convenient to do so, and she remembers that she measured him, and that he was the same height as the corpse. Dr. Miller, of Lawrence, who testifies that Hillmon was five feet nine inches, that he measured him, and made a record which is produced in court, is a disinterested and thoroughly reliable witness. Four witnesses testify that Hillmon was five feet nine. His own statement that he was five feet eleven was taken from the policies, but he was not measured. Mrs. Hillmon could not or would not describe her husband's body before the arrival of the body at Lawrence. That was very suspicious.

As to the tooth testimony, Mr.

Green said that any number of men who do not know that a tooth is missing cannot equal one witness who does. Hillmon's schoolmates and boyhood acquaintances swear that he had a bad front tooth and the relatives and acquaintances swear that later in life he had lost that tooth. As to the vaccination, competent physicians who examined the scab on the arm of the body say that it could not have been older than 19 days, and from all appearances was only 14 days old. Yet Hillmon was vaccinated February 25th, and killed March 18th. If Walters was vaccinated at Wichita about the time of leaving there with Hillmon, the scab on the arm of the body would correspond with the scab on Walters's arm at the time of the killing, so far as age is concerned. At Lawrence Mrs. Hillmon said that the body was that of her husband, but six months later she confessed that it was not, by giving Mr. Buchan releases of the policies.

Was it the body of Walters? So his own family testify, and one of his sisters, Fannie Walters, bears a striking resemblance in features to the face of the cadaver. Those sisters testified by their tears and grief as well as by their words. Mr. Green read the letter from Walters to Alvina Kasten wherein he says that he was going southwest with Hillmon. No one had questioned the genuineness of the letter. The ring mark on the finger of the body which the plaintiff's attorneys had tried to make a point on was in all probability the mark of the ring that Alvina Kasten had testified that she gave him when they parted. Walters is traced from his home at Fort Madison to Wichita, and from that point writes a letter saying that he is going away to the southwest with Hillmon. After that he is never heard of. A body answering in description to his is produced, and his relatives and friends testify that it is his, and still we are asked to regard these as a series of coin-

cidences meaning nothing and proving nothing. Walters was five feet eleven inches in height, had dark-brown curly hair, high cheek bones, a Roman nose, light mustache, perfect teeth, was muscular, had long bony fingers and large feet. That is an excellent description of the body of the man mysteriously killed and hastily buried at Medicine Lodge. There was a mole on Walters's back, and so there was on the back of the body. The scars on Hillmon's hands and nose must have been plainly visible if the testimony is correct, and there is no reason to doubt it, and yet the doctors with their magnifying glasses could not find them on the body.

Mr. Green commented very sarcastically on the "photograph gallery" and the fancied resemblance between Hillmon and the cadaver, and pointed out the similarity between the cadaver and Walters.

Argument made by *George J. Barker*. — Mr. Barker said he believed the original plan and object of the first trip made by Brown and Hillmon in December was to find a dead body that could be passed off for that of Hillmon. This failed, and another plan was adopted, which was the murder of Walters and the palming off of his body for that of Hillmon. Mr. Barker bore down with considerable stress on the letters written from Wichita by Walters to his intended and to his sister, wherein he said he was going away with Hillmon. What did Hillmon want of Walters? Walters had no money and no stock. Hillmon had no use for him except the terrible purpose for which he did use him. The three men did not leave Wichita together. Brown testifies that three or four miles from Wichita they picked up a man. This man in all human probability was Walters. The second trip to Medicine Lodge consumed much more time than the first. It was on this trip that Walters was prepared for slaughter. He had to be vaccinated. That was prob-

ably done in the camp on Cowskin. In a covered wagon with one seat a third man could easily be concealed. There were few people along the route to see them. They stopped in lonely places. Mr. Barker called the attention of the jury to the diary taken from the pocket of the dead man, from which he read, and said it had evidently been written to read and to be the means of identifying the person upon whom it was found as John W. Hillmon. Two days after the killing, Brown coolly writes to Mrs. Hillmon, tells her he has killed her husband, and asks what he shall do with the ponies. Here is a man who carries \$25,000 on his life; he is buried at Medicine Lodge, away from kindred and friends; his widow at Lawrence is kept in ignorance for several days. Brown waits around Medicine Lodge a week. Levi and Al. Baldwin come down there. They do not take the body up, but build a fence around the grave of this man with \$25,000 insurance on his life. The hat had been burned up when the killing occurred; the shoes were lost on the way to Hutchinson. These two important articles of identification were thus disposed of. The body was taken up at the instance of the insurance companies and taken to Lawrence, where people who knew Hillmon might see it. In regard to the tooth and height testimony, Mr. Barker said that it was not possible that Colonel Walker, Dr. Miller, Ollie Walker, Hillmon's sister and brother-in-law, could be mistaken. In describing the missing Fred Walters, the Walters family had described the body almost exactly. Hillmon and Brown were three months trying to find a cattle ranch. No question of identity was raised at the Barber county inquest. Updegraff, the hotel keeper, who thought he knew Hillmon, and who evidently did know him as well as any of the Medicine Lodge witnesses, showed on cross-examination that he had only

seen Hillmon a few times and could not give any satisfactory description of him. So it was with many of the Lawrence witnesses. Insurance agents at Lawrence did just right in suspecting that something was wrong, and acting upon that hypothesis.

What interest had the Walters sisters in giving their testimony as they did? They had nothing at stake except identification of their brother; they are not after \$25,000 insurance. Walters's sisters should know him if anybody did. There is no reason why he should remain away all these years. All the ties of nature, mother, sisters, father, sweetheart, all bind him to home. They ask us why we don't produce Hillmon? He is hid and has the best of reason for being hid; his hands are red with blood. We ask them, where is Walters?

If a man ever tells the truth, it is when he talks to his minister or his lawyer. Brown made the confession to his own attorney that Hillmon had killed Walters, but does not give the right name of the person killed. He did not want to bring the wrath of the Walters family down on him. Can honest, intelligent jurymen find a verdict on the testimony of such a man as Brown after he said what he did to his attorney? He robs a woman of her husband and then brands that husband as a murderer. His perfidy is boundless and his testimony wholly unreliable. This is the man who is the principal and vital witness for the plaintiff. Mrs. Hillmon saw the dead body, and stoutly asserted it was her husband. Six months afterwards she acknowledged that it was not, by surrendering her policies. Had she known that to have been the body of her husband, would she not have scorned the proposition of Buchan that she release the companies? Levi Baldwin, her friend and adviser, would never have permitted her to come to Leavenworth and give those releases.

Mr. Barker closed with an appeal to the jury to do justice as between corporations and a woman. He hoped they would not allow their sympathy to be played upon at the expense of equal and exact justice.

Argument by *Charles S. Glead*.—A man's acts must be construed by the light of his motives. In considering what he does it is necessary to look further—for his motive in doing it. And, conversely, in assuming a motive we must look further to see that the resulting act is in accordance with it. No test will more surely crush the body of any friend than this test of motive. Now let us see briefly what effect this test has on the case in hand.

What was Hillmon's motive in settling on his life an insurance of twenty-five thousand dollars? He was little beyond 'passing rich with forty pounds a year.' Sixty dollars a month for insurance was beyond his depth. Could he have had the slightest expectation of dying immediately? Could he have had the slightest expectation of keeping up his payments? And here let me call your attention to the fact that this insurance was effected on what is known as the "Tontine" system—by all odds the worst system for a poor man, as by the failure to pay any given premium when due, the whole policy lapses, and the payments are forfeited. I ask you, Can you ascribe any motive to this extraordinary proceeding other than the motive of fraud?

What was Hillmon's motive in going, in the dead of what he has himself described as an unusually cold winter, into the empty spaces of western Kansas? He says he went to look for a stock ranch. Have you any such belief? Would you do the same thing? Would you drive day after day over the bleak prairies of western Kansas next January looking for a stock ranch, having no money to buy with if you found one? If you were looking for a stock ranch, would you travel miles

and miles along the Santa Fe road? I ask you can you ascribe any motive for this unusual proceeding other than the motive of fraud?

What was Hillmon's motive in writing this peculiar diary which has been read in your presence? It takes this man thirty odd years to discover that he needs a diary. He begins suddenly, writes briefly, ends suddenly, and with great formality signs his name to the document, and then carries the book for a considerable time without apparent reason. Was not this book written to be found on the body of the murdered man? Can you discover any motive in this unusual proceeding other than the motive of fraud?

What is Hillmon's motive, if he is alive, in keeping out of sight? The instinct of self-preservation will keep him hidden forever. An outraged public yearns for him, and those whom he has attempted to defraud have set a price upon his head.

What was Brown's motive in so precipitately burying the body of his friend at Medicine Lodge? The weather was cold, the distance was comparatively short, the team was in his possession, the young bride and younger widow, was supposed to be mourning at her home in Lawrence, and all the instincts of a man and a friend would naturally have prompted him to do the direct reverse of what he did. Can you ascribe any other motive to this unnatural proceeding than the motive of fraud?

What motive have John Brown and Alva Baldwin for staying away from this court? The first, although he knew Hillmon well, and was present at Medicine Lodge when the coffin was opened, has never been called upon to testify. The second prefers the jungles of Arkansas to the witness stand in Kansas. He makes a better appearance in the pages of a tediously-taken deposition than he would on the witness stand under the scrutiny of your

eyes. Alva Baldwin knows that the body he saw at Medicine Lodge was not that of Hillmon, and John Brown knows that he is party to a conspiracy — accessory to a murder.

What was Brown's motive in making the confession which I have read to you? The counsel for the plaintiff insults your intelligence by saying that this man who had braved the dangers of prairie and desert and mountain, this man who had his liberty, this man who knew ten thousand avenues for the coward's escape — they insult you, I say, in saying that this man made this statement contrary to the facts in the case because the man whom he had employed as his attorney told him there was, somewhere in the vague vicinity, a warrant for his arrest. Do you imagine for one moment that if that man had killed Hillmon as he said he had, if he knew that Hillmon was dead and innocently dead, if he knew that his confession meant to brand his friend as a murderer and rob his friend's wife of twenty-five thousand dollars, he would have made it and sworn to it, just because somebody said that somewhere was a warrant for his arrest? If he had been innocent, have you any doubt that he would have defied all the sheriffs and all the jails and all the courts of justice on the face of the earth? Can you discover in this remarkable proceeding any other motive than the motive of fraud?

What was Mrs. Hillmon's motive in attempting to return to the insurance companies the policies which they had issued to her husband? She had seen her dead husband in his coffin; she knew the insurance money had been earned; she knew that she was a widow; she knew that she was poor; and yet, in unconditional surrender, without confiding to her attorneys, or her friends, without receiving consideration, she does all in her power to abandon her rights. You, gentlemen, have seen this woman, and you know that she

knows her business too well to be thus hoodwinked. What motive can you discover in this strange proceeding other than the motive of fraud?

What was Mrs. Hillmon's motive in her treatment of Senator Buchan? She swears here to you that she believed Buchan was trying to brand her husband as a murderer, and to rob her of twenty-five thousand dollars; and yet she complies with all his wishes, she stays at his house as his guest, and then she writes to him such letters as those which have been read to you. Can you, gentlemen, explain the horrible inconsistency of this business? Can you explain it on any other ground than that of a guilty conscience? Can you discover in it any motive other than the motive of retreat from fraud?

What motive had Baldwin in not restraining Mrs. Hillmon from the step which she proposed to take? Ought he not as a friend to have insisted on her keeping away from Buchan, or at least should he not have insisted on her consulting her attorneys? What motive can you ascribe for his apparent indifference other than the motive of avoiding the consequences of his share in the fraud?

What were the motives which induced the parents, brother, and sisters of Frederick Adolph Walters to solemnly swear to their brother's death? Would they not gladly believe him alive? You saw them on the stand. Did you ever hear truth more clearly spoken? Did you ever see sincerity more clearly stamped on people's faces? Can you believe that these people were swearing for money? Can you ascribe to their statements any motives other than the motives of conviction?

What motives do you ascribe to Dr. Miller, Dr. Mottram, Dr. Stuart, Dr. Morse, to Colonel Sam'l Walker and his son, to Hon. J. W. Green, Dean of your State's University

Law School, the then County Attorney of Douglas county — what motive do you ascribe, I say, in their conduct of the coroner's inquest, their treatment of the cadaver, and their subsequent efforts and evidence on behalf of the defense? These men are above reproach in their private characters; they are leading churchmen, leaders in society, honorable soldiers, and good men by whatever test they are examined. Dare you, by giving a verdict for the plaintiff, brand these men as perjurers and conspirators? Dare you say that for thirty pieces of silver, by the sum more or less, which they might receive from the insurance companies, they would blacken the whole record of their lives by an infamous proceeding like this? Dare you ascribe to them as a motive for all they have done, avarice and cupidity?

What motive has Frederick Adolph Walters for remaining hidden? Father, mother, brother, these sweet sisters whom you have seen here, a lover — these call him, if he be alive, from his hiding place, and demand his appearance.

What motive had William J. Buchan in his connection with the matter? This man who has been twelve or fifteen years in the State Senate, and who has made more of the laws of this State than perhaps any other man in it; who has for his friends and admirers the leading men in the State; whose money and business are ample; whose public and private life have never been impeached — this man could not have had the motive ascribed to him by the counsel for the plaintiff, the motive of getting a small fee in return for robbing a widow and extracting perjury from his client. The idea is an insult to your intelligence.

What motive have the insurance companies in beginning and continuing this contest? None, I submit, but that of a desire to defeat an attempted fraud. A reputation

for being poor pay is a thing which no insurance company can stand. To advertise to the world that it will always contest a claim where it has a shadow of ground on which to make such contest, is to drive any insurance company out of business. The trouble and expense of this litigation, added to the undesirable advertisement which such litigation gives, far overbalance the amount directly involved. The only motive which the companies can have in prosecuting this case is that of discouraging the sort of crime of which this is a sample, and which to-day is one of the most prevalent of all forms of fraud. In both life and fire business the gravest frauds are attempted daily. In Kansas, the fraud on life insurance companies (including the Hillmon cases) are best exemplified perhaps by the Winner and McNutt case, these two men being now in the penitentiary for burning one Seiver in a house at Wichita, the body being passed off as that of McNutt, who was insured. It is a notable fact that this affair was invented in Leavenworth county, only a few miles from the home of Hillmon and Baldwin. Near Leavenworth lived a man at least up to three years ago, who was supposed to have jumped from a boat on the Hudson river and drowned, and to whose widow the insurance money due on his life was paid; for fourteen years that man lived quietly and securely within a few miles of the city. The case of Jacob Smith, of Atchison, who set fire to his packing houses for the insurance, is remembered by all. In the little town of Eudora, Douglas county, some five years ago, a Dr. Clause insured his house and its contents for three thousand dollars. The property was burned and heavy insurance was paid over, but the finding of a watch, which was scheduled as lost, aroused the suspicion of interested parties, and enabled George J. Barker to force from the doctor a confession and a complete restoration. The

whole property insured was worth four hundred dollars. Not long ago the Travelers' Insurance Company, of Hartford, Connecticut, had a case where a man secured heavy insurance on his life, built him a small workshop or laboratory in the vicinity of Baltimore, where he was one day, so the papers said, elaborately and completely cremated. From a certain suspicious circumstance the company contested the case, and for three or four years braved the indignation of honest people generally, who believed the death to have actually occurred. Finally, as a result of a quarrel between the supposed dead man on the one hand and the wife of a mutual friend on the other, the man put in an appearance and all parties were punished. During all the time of this conspiracy the supposed dead man was but a few miles' distance away. These very brief illustrations are sufficient to clearly point out the fact, for fact it is, that no one interest in our country to-day is so persistently beset by plots and conspiracies as the insurance interest. . . .

JUDGE BREWER'S CHARGE [at the second trial].¹—Gentlemen of the Jury: I congratulate you that this case is drawing so near to its close. And I congratulate the parties in this case that they have been permitted to try their case before such a jury. I repeat no idle compliment when I say that it has been a common expression of the many, who from time to time, have visited this court room during this trial, that we have an exceptionally fine, intelligent jury to try this case. Some of you are men of state reputation for character; all of you are men of mature years. Some of you have got beyond the meridian of life, and none of you can afford to barter your own self-respect, the character which you have earned and well earned in this state, for the mere paltry desire to

please or favor one party or the other.

At the outset I need no more than state that this case is one of peculiar interest. The many who, from time to time, have gathered here to listen to the testimony as it has fallen from the lips of the witnesses, indicate that there is an interest outside of the mere question of pecuniary interest to the parties, that there is a curiosity and a feeling which has brought them here to listen, and yet of them all who have been here from time to time, or who may have read in the papers the story detailed by these various witnesses, of council, witnesses, and parties, you and I are the only ones who, hearing all the testimony and the arguments of council, the whole detail of this case from its inception to its close, have looked at it or could have looked at it with the single thought that it is for us to settle what is the very truth of this controversy. It has developed before you that this case has run many years. The amount of the controversy, the interest that is felt, all compels, if possible, a verdict, a decision at this time. But while it is for the interest of all that if possible this question should now be settled, it is far more important that each individual juror should be loyal to his own convictions. It matters not what casual remarks you may have heard dropped from outside parties, or what you may have seen in the papers. The question comes home to you, and should come home to each one of you, that "I and I alone have listened to this story as told by these various witnesses, and that no man but myself is responsible for the verdict which must be rendered." I deem it not inappropriate to say that I shall feel it my duty to keep you together a reasonable time for consideration, deliberation, and the weighing of this testimony, but I

¹ [A newspaper report of the charge was supplied for this work, by courtesy of Mr. Gilbert Porter, of the firm of Messrs. Isham, Lincoln, and Beale, of the Chicago Bar. — Ed.]

have never been a judge to attempt anything like a thumbscrew to coerce a verdict against the will and judgment of any jury. This is a case wherein there can be no compromise. It is not like an action for damages, where one juror may say that, "Although I think the plaintiff is entitled to so much, I am willing to throw off a little to adjust my views to the views of my fellows." There is no halfway house here. There is no compromise. Either this plaintiff's husband was killed on the 17th of March at Crooked creek and she is entitled to a full verdict, or else that body there produced was not the body of her husband, and she ought to go out of court, and the verdict should be for the defendants.

I deem it proper, in view of the importance of this case, to comment at some length upon the various classes and forms of testimony that have been presented. I think you will accord to me the belief that it comes not merely from an assumption by virtue of the position that I now hold, but that out of a somewhat protracted experience in the sifting and weighing of testimony and in determining the relative bearing of various forms of testimony upon the matter in issue, I may be able to throw out some suggestions which will help to guide you towards the truth. Yet while I feel that it is my duty to make these suggestions, I want most emphatically at the outset to say that it is not my judgment that is to control; it is yours. I do not want any man on this jury to think that the judge has an opinion this way or that upon the final ultimate question. I have and shall cautiously refrain from any disclosure of any such opinion; and so far as I may express opinions upon this and that matter of testimony, if you do not think that my views are sound and right, reject them; for I want to impress upon you that it is your judgment in this case that determines the verdict. You are

not bound in any manner by the mere say-so of a witness, or the opinion of an expert like a physician. You may, and ought to, use your own common knowledge. You come from various walks in life; you represent different pursuits; you are gathered here from these various walks in life to give the benefit of your own general knowledge of facts and things; that by the concurrence of these varied opinions we may ascertain what is the general judgment as to the truth.

With the plaintiff lies the *burden of testimony*. It is incumbent upon her to prove the truth of the allegations she makes. As the law phrases it, the preponderance of testimony must be on her side. But that preponderance does not mean counting up so many witnesses on the one side, and counting so many on the other. It does not mean in this — which is a mere civil suit — that she must prove her case beyond a reasonable doubt, as the state would have to do if it charged a person with crime. It means simply that the preponderance, the weight of the testimony, shall be on her side; that as you look upon any question, as you look upon the ultimate facts to be decided before you can find a verdict in her favor, you must say that you believe that that is more probably true than false; that as between the two questions whether this was the body of John W. Hillmon that was there found, or not the body of John W. Hillmon, you believe it was the body of John W. Hillmon, and that that belief is sustained by a preponderance of evidence.

You are the judges of the *credibility of witnesses*. As I said a moment ago, you are not bound by the mere fact of a man coming on this stand, and who says a thing, to believe it. You don't count up the number of say-so's on one side and the number of say-so's on the other and say that this is or is not a fact. You judge an individual

here on this stand just as you do an individual off the stand. Do not think that there are any cast-iron rules around your judgment which fetter and hamper it when it would be free and untrammelled outside the jury box. As you measure a man, as you weigh his statement outside the jury room, listening to anything on the street when he tells you of anything seen or heard, so you measure and weigh him here. And if I enumerate some of the things which go to affect the credibility of witnesses, I commend these suggestions simply to your judgment.

One's *interest* affects his testimony. A person who makes or loses by this or that fact, coming upon the stand will naturally, although honest in purpose and thought, color the statement and the testimony which he gives to suit his own interest. And that you will find, I submit to you as your own experience, to be true of the best men. When they are asked to tell their tale in reference to any fact which interests them, by which they make or lose money, they will, while they will not insert a thing which is absolutely false, tell those things which make for their side and omit those things which make against their side, and they will color their narrative of those things which help them to suit their interest. That, I submit to you, is a part of human experience. Feeling has the same effect that interest has. It is not always a question of dollars and cents. Ofttimes, from one reason or another, perhaps unknown and undisclosed, one witness or another has deep feeling for or against this or that party. Such a witness, I submit to you, despite the best intention, will put his views in accord with his feelings most strongly.

Then you will notice, as you have noticed in this case, that some witnesses have that peculiar temperament which compels them to say, "I know." Others come forward and say "My best judgment is so and so,"

"I think this is so and so." Well, I submit to you whether the former is entitled to more credence than the latter. It is a part of common experience that some when they see a thing or believe a thing, believe it absolutely. They do not recognize the possibility of a doubt or an opposite side. Others, more cautious, are simply willing to give their best judgment; and I submit to you, whether in your experience through life, they who speak cautiously, they who give to you that which they say as simply their best judgment, are not, in the general average of things, more likely to be true than these positive natures who are apt to grasp a fact speedily, be positive, and recognize no possibility of a doubt.

Then, you measure the story of the witnesses by the *probability of the story*. If one comes before you and details facts which are in accord with human experience, which are natural and probable, you instinctively, involuntarily, give more credence to that witness than when one comes before you and tells something which is out of the ordinary course of nature. You want to have his testimony strengthened; you want to hear somebody support it, for you say, "This, on the face of it, seems strange; that, on the face of it, seems natural."

Then, you may measure anybody, on or off the stand, by the *manner in which they testify*. Some carry on their face that impress of truth which no person can witness without according belief to it. Others, by their manner, show that they are either telling an untruth or that they are telling matters of which they are not certain, and it is your prerogative, as you have done — and I say it to your credit that I have never seen a jury during a protracted trial watch more cautiously and carefully the various witnesses who have been before them — it is your prerogative, as it is your duty, to weigh every witness who has sat in this box, and

determine for yourself whether that witness was seeking to tell the very truth and whether he was talking of things of which he had a clear and distinct recollection or was simply giving a vague impression, drawn perhaps from many sources.

Then there is another question I want to call your attention to. You have doubtless in your life noticed that men will *recollect facts* when they cannot recollect dates. It is often thought by counsel that if they can catch a witness in a misstatement as to a date, they have impeached his testimony as to a fact. But I put it to your own recollection, to your own experience, whether out of 1000 men you ever saw a single one that, unless there was something to impress the date, could actually state it. You have every one of you noticed that Judge Foster, the district judge, has been in attendance since this court commenced; of that fact you are certain; you have no doubt of it, but can one of you tell the day, would you be certain as to even the week of these four weeks of trial as to which he first appeared? And yet, if somebody cross-examining you in the days to come as to that fact, should ask was it the first week? was it the second week? Was it Monday, Tuesday, Wednesday, Thursday, Friday, or Saturday? and you should say: "I do not know; I think it was Thursday or Monday," would you think that thereby your certainty, your recollection was thereby impeached? Indeed, a witness, unless there is something to impress the date, or some memorandum, or unless he can put the fact alongside of some certain date about which there can be no question, is seldom able to positively assert the date. So I submit to you whether your general experience does not tell you that a date is of all things the most uncertain to recollect, the most impossible for a witness to tell. And while he may be certain as to this or that fact which he sees, the time at which he

sees it is a matter which is past his certain statement.

There is another matter. If you and I are witnesses of any transaction, you may see one circumstance, I another; one series of facts may impress you, another series of facts may impress me. I go on the stand and tell what I remember; you go on the stand and tell what you remember; each of us may be perfectly truthful, each of us may endeavor to give the whole truth and each of us may honestly forget things which the other has remembered.

These are rules of evidence born of the experience of many generations, and I submit to you, whether they do not concur with your own experience and judgment. There has been thrown out in the argument here suggestions on the one side and the other of the conduct of the parties, charges of conspiracy; and reflections have been on both sides cast upon the conduct of various agents and parties in respect to this transaction. It matters not to you and this case, whether either side has in all things conducted itself according to the strictest rules of decorum and propriety. It may be that it was an unusual thing and a weak thing for this plaintiff to leave the home of her friends and come to Leavenworth and sign those releases. It may be that it was an ungentlemanly thing for the agents of the insurance companies before the body had reached Lawrence to write to Mrs. Hillmon, seek an interview, and strive to elicit facts. Be that as it may, that is not the question for you to settle. All these things come in and are properly let in evidence only as bearing upon the ultimate fact, the single fact which you have to determine.

The amount in controversy is large. On the one side you are told that there is a poor woman; on the other side rich corporations to whom a mere matter of \$30,000 or so is trivial. While counsel on both sides disclaim any desire to

influence by outside matters, yet you see that there comes to every man the thought that on the one side there is a poor woman, upon the other side wealthy corporations. You see also the thought which has been suggested that these are foreign corporations, living and residing in the distant States, contesting with a citizen of your own State, and appealing to jurors of this State, whose sympathy may naturally be with their fellow citizens, for justice. I speak of this because these matters, while not pressed upon your attention, are incidentally thrown out. I trust you are true men, who sympathize with a poor woman. I would despise a man, and I would not let him sit on a jury that I controlled, if I did not believe he had much sympathy for any woman in poverty or distress. I believe you are proud of this State, and would not have the good name of this State or the good name of its jurors sullied by any act of yours. I would not have a juror sit on a case tried before me, if I could help it, whom I did not believe had that loyalty to his own State. But above all these questions, beyond all these considerations, is that loyalty which every one of you ought to feel, and I do not doubt does feel, to his own convictions; and whether your verdict shall be for this poor woman or in favor of these rich corporations, or, as some may say, for the good name of the State or against it, I believe, I trust, I am talking to men who respond to that feeling, that you are each one going to do that which shall be the true answer to your own convictions, whichever way they may lead you.

Now, *what is the question?* The plaintiff in this case says that prior to March, 1879, her husband took out policies of insurance to the amount of \$25,000 in these three several companies defendant; that on the 17th day of March that husband was killed on Crooked creek, near Medicine Lodge; that that

body was brought from Crooked creek to Medicine Lodge, and from Medicine Lodge to Lawrence, and there buried. And the question in the case, and as I have had occasion to say to you several times during the progress of this trial, the single, paramount, ultimate question is: "Was that body thus brought from Crooked creek to Medicine Lodge and to Lawrence the body of John W. Hillmon?" That is the question which you must answer, and that is the single, ultimate question which you must answer. It is not a question as between two bodies. It is not a question whether this is the body of John W. Hillmon or Frederick Adolph Walters. This is not like the case told in Scripture of the woman claiming one body, one child. It is not a question for you to settle whether the preponderance of testimony shows that it is the body of Walters or the body of John W. Hillmon. The question is: "Is this the body of John W. Hillmon?" And if such a thing as this should happen, that any one of you jurors sifting and weighing this testimony should come to the conclusion that you are not satisfied that it is either the body of Hillmon or the body of Walters, then your verdict must be against the plaintiff, for with her rests the assertion that it is the body of John W. Hillmon. . . .

At the outset we have this fact: That John W. Hillmon, prior to the 17th of March took out \$25,000 insurance. It is claimed by the insurance companies that this is a significant fact. They have said to you that that is an enormous amount for a man circumstanced as he was, to take out; that on the face of it, it indicates in the inception, a wrong purpose, and coupling that with the fact that immediately after taking it out, he goes into an unfrequented and lonesome country and meets his death, presents a combination of suspicious circumstances, which, in the inception, characterize

the transaction. On the other hand, the plaintiff says that her husband was recently married; that within three months of their wedding starting out upon a legitimate business transaction, and going into a country but recently visited by hostile Indians, a country in whose locality might be expected danger and risk, he simply did that which the promptings of conjugal love required. Uncertain whether from the country he would return alive, fearing accident to himself there, and unwilling that the woman to whom he had so recently pledged his loyalty and faith for life, should be unprovided for, he had taken this simple and reasonable precaution for her future benefit. Now, this is a matter for you to pass upon. You have heard the arguments of counsel as to one thing and another, whether a man would ordinarily take such a trip at such a time, whether that was the best time to make the investigation contemplated, and all the circumstances of his pecuniary condition, his past life, his present surroundings; and the question for you in that respect is to say whether in the inception of this matter there appears that which impels you to say that it indicates wrong, or was the simple and natural action of a loving husband.

We pass from the inception of this case to what I may call the direct testimony.

One John H. Brown testifies before you that he was the sole companion of John W. Hillmon; that on the 17th day of March, 1879, by accident, the gun in his hands went off and John W. Hillmon was killed. He says he was the only person there present, the only witness to that transaction, and there is no other witness that pretends to have been there. His testimony therefore comes before you as what we call "direct testimony." If his statement is true, there can be no question but what it was the body of John W. Hillmon and this plaintiff is entitled to recover. As against

that, first, as to the man himself it appears that sometime in September thereafter he signed and swore to a statement contradicting the testimony which he gives. Naturally, one who tells two stories is entitled to little credence. If I come before you to-day and tell you that I saw a thing take place so and so, and to-morrow I come before you and say that it is not so, it took place in a different way, the thing was entirely opposite to that which I told you yesterday; involuntarily you would say: "Well, I do not know that either story is true. You have no regard for truth if you can thus tell one thing one day and the opposite to-morrow." If I heap upon that an oath to-day and swear that this thing took place so and so, and to-morrow I heap upon that statement another oath exactly the reverse, stronger would be the feeling, because I neither have any regard for truth nor feel the obligation of an oath. If this statement of John Brown's stood simply alone opposed to his testimony here, with no explanations, nothing indicating how it was obtained or why he tells different stories, I would unhesitatingly say to you that you ought to reject every vestige of what he says, and that no verdict ought to be sustained for a moment which rested upon the solitary testimony of a man who swears one thing to-day and the opposite to-morrow. In his testimony he tells how and why he made that statement, and you have the testimony of Reuben Brown and of W. J. Buchan as to the circumstances under which that statement was made.

The next matter of testimony to which I draw your attention is that which runs along the line of general resemblances, general recognition. That really is divided into two classes here. There is the general recognition of the body, and the other that recognition which comes from seeing photographs thereof. There is a vast amount of this testimony.

Many witnesses have come before you here who say that the body lying there in the coffin was the body of John W. Hillmon. Others have come before you and say that it was not the body of John W. Hillmon; that it was the body of a stranger, and that they were acquainted with Hillmon in his life. Other witnesses, by deposition or in person, have come before you and looked at the photographs taken of that corpse, and say "those are photographs of the body of Adolph Walters." All the testimony which runs along that line, whether given at Medicine Lodge, Lawrence, or in Fort Madison, is a mere matter of general resemblance and general identification. As to that I submit to you whether that testimony is not of a weak character? It is true that if one of you was called upon to describe a face which you had seen here, you might not be able to pick out every feature and describe it so that somebody else could thereby identify it. And it is at the same time doubtless true that you would know the face. I think some of the counsel have said in their argument, and I think well said, you go away from this court room; you have been here trying this case sixteen days; you and I have met day after day; you have seen my features and my face; and I doubt not if you should meet me anywhere in the months and years to come, you would remember me; but yet, if next week even, somebody should call upon you to describe the features, the face of Judge Brewer, so that he could identify me, I think you would be puzzled to do it. I think when you came to describe my eyelids, my nose, my face, my mouth, you would make a description which would, perhaps, answer for half the people in this room, and yet the certainty of your knowing me cannot be questioned. Those who saw Hillmon in life, and those who saw Walters in life, doubtless have a distinct recollection of their

features and their faces; but a dead body is not a live one. All of you have looked upon the dead doubtless many times. There is a change which comes at death. That voiceless and at the same time perfectly intelligible reply, which comes from the living face to any inquiring gaze, and which, for lack of any better term, we call expression, is gone. It is motionless, silent. The features may be there; and if you were so familiar with the person in lifetime that the features, the form as distinguished from the expression, that which lights up the face of the living one, was clearly imprinted upon your memory, you might distinguish. And when you see the photograph, it is not even the cold form that you look upon, but it is simply a picture, a representation. The form of the features may be there. If there is any mark, if there is any particular feature which is significant, you may identify it thereby; but that testimony which comes from a mere recognition of a resemblance, a general resemblance of a dead body, is very unsatisfactory. And that is true whether you see the body one day or more. It is true under all circumstances; becomes more true as the features change by decay. I do not mean to say that these witnesses are not honest; I do not mean to say that they do not believe what they testify to.

And yet there are one or two things which ought to be borne in mind. If you go to look upon a corpse expecting to see a friend or one you have known in lifetime, unless there be something which at the instant arrests your attention so as to satisfy you that it is not the body of that friend or the person that you expected to see, almost involuntarily you say, "Yes, I have seen his body." You have been many times, doubtless, beside the coffin of some friend. You expected to see his form. You give it a glance and turn away, "Yes, I have seen his

body." Or it may be a stranger you have seen but a few days before. You glance at it, and unless there is something which arrests your attention, something which at the moment satisfies you that that is not the body, with the expectation of seeing such a body there, and there being nothing to challenge the resemblance, you pass away and say, "Yes, that is the body." The same way, on the other hand, if some one tells you that there is a body that is not the body of a person you knew, you naturally would go looking for matters of dissimilarity, points which will distinguish that face from the face of the one you knew. Looking for such things, you will often find little trouble in seeing marks of dissimilarity. And yet while I say this in criticism upon this testimony as to general resemblances, it is fair to say that in the concurrence of many voices there is often force which does not come from one alone. You glance around the room here to-day and let your eye rest upon any individual. You recognize him partially, casually. There is nothing to make a definite impression in your mind. You are called down the street to see a dead body. One of you is called and asked, "Is that his dead body?" "Yes." Well, that is faint testimony. And yet if you twelve men, one by one, separately, come and say, "Yes, that is his body," there is a strengthening. Even this weak testimony is thus entitled to consideration. So here in the multitude of witnesses who think they see and say they recognize a resemblance, there is that which is entitled to consideration. But I do not tarry upon that because other matters, I think, are of more moment.

And here let me call your attention to this distinction. There may be what you call resemblances, and what on the other hand you call dissimilarities, the one being affirmative and the other negative. Now, mere resemblances may not be very sig-

nificant, or indeed of any consequence. There is testimony on the part of one of the doctors that Mr. Hillmon had a wound on his nose. You heard his testimony. You heard the testimony of the witnesses as to the condition of this corpse. Now, if you should find that upon Hillmon's face during his lifetime there was such a scar and that such scar was also found upon the body of this corpse, that is something not very common. You would feel as though there was something there to bind the two together. So on the other hand you heard the testimony that upon the back of the body of Adolph Walters there was a mole, and it is the testimony of the doctors that there was a mole on the back of the corpse. This is something which is not so common as a ring mark. This similarity of marks tends to bind the two bodies together. All these matters, which are mere matters of similarity, resemblance, they become more and more strong as they become more and more rare in the common experience of men. But the other branch of this testimony is identification by dissimilarities. There if the dissimilarities are proved, the testimony becomes strong. If the body in that coffin was free from a certain mark which it is proved existed upon the body of Hillmon or upon the body of Walters, and you are satisfied of the truth of that, there can be but one conclusion — that that is not the body of either. Dissimilarities cannot be covered over — cannot be set aside. If they are proven to exist, they compel belief. Now, I do not feel called upon to go through in detail all these various dissimilarities which are spoken of by the testimony or discussed by counsel — the height, the teeth, the mark on the heel, the mark on the nose, the mole on the back, the vaccination. All I can say in reference to them is that if as between this dead body and either Hillmon or Walters you are satisfied that the testimony

shows that any dissimilarities exist, anything which could not in the ordinary course of events be covered over by time and years, why, you are inevitably driven to the conclusion that it is not the body of either. The defendants say that Hillmon had a tooth gone; black in earlier life, and finally disappearing. The plaintiff says that he had a perfect set of teeth. If it be true that one of his teeth was gone, why, there can be but one conclusion. If you believe the plaintiff's testimony and the testimony of her witnesses that these teeth of Hillmon's were perfect, then this mark of dissimilarity vanishes. If on the other hand you believe the testimony the defendant introduces, that John W. Hillmon did have a missing tooth, that is one of those things that there is no way of getting around. So as to all these matters on the one side or the other, of alleged dissimilarity. Whenever you come to a conclusion that dissimilarity is proved, that the body as it lay there in the coffin was destitute of marks which were on the body of either Walters or Hillmon, just so soon as you come to such a conclusion so must your conclusion inevitably be that that body was not the body of either one.

Now, I come to another branch in this case, and that is the *expert testimony*. Doctors have been introduced before you to testify to three matters: First, as to the course of vaccination; second, as to the effect of such a wound as is described in the head of this body; and third, as to the process of digestion and the probabilities of food remaining in the stomach and being found there after death. Now, in reference to these, which are matters of scientific testimony, if as to any of them there is absolute certainty, if you are satisfied from the testimony, for instance, as to the wound, that such a wound in the head would drop a man with instant paralysis, that there would be no staggering backwards or forwards, no motion,

but that he would drop paralyzed instantaneously, and that it was an absolute certainty, then such testimony as that would come right against the account which is given by the witness Brown. If you should be satisfied that the food of the character named and taken in the stomach of the body at the time named would remain there for days and weeks, and that as a matter of absolute certainty, why of course you would say, "It cannot be that the testimony which Brown has given is true." And so with reference to the vaccination. If a doctor can, from looking at a vaccination sore, tell within a day or two, or two or three days, of the time that vaccination sore has been running, and it is shown that the time was less than elapsed between the time that Hillmon was vaccinated and the death, you would instantly say: "Brown's testimony cannot be true; that cannot be the body of Hillmon; the testimony of Brown cannot be true, because here is this physiological fact; this will not deceive; it never deviates from the truth for anything." But if on the other hand you are not convinced that this claim of some of the doctors is well founded, if you are not satisfied that the inevitable, the universal effect of such a wound in the head would be instantaneous paralysis of the body, if you are ready to believe that it might or might not depend upon the many circumstances of which the physicians cannot positively speak, why then, simply all you can say — and so in reference to these other matters of scientific testimony — if the doctors' testimony satisfies you that the probabilities are against the facts, then all you can say is that the probabilities are against the story told to you. That is all you can say about it.

Now I will pass to one other fact, and that is the letter which was written by Adolph Walters, from Wichita, in the early part of March,

1879. In all questions of conflicting testimony upon a certain fact, we reach instinctively back of any dispute, back of any controversy, to the written messages that come to us antedated — anything before the trouble. Mr. Hutchings, I believe, one of the counsel for the plaintiff, said if that letter was stripped from the case, there would be nothing on which to hang a suspicion. That letter comes to us certainly before this dead body was found. It tells its story from the fingers and mind of Walters, sixteen or seventeen days before this body was found. Does it prove that that body was the body of Walters? Whatsoever it tells, and whatsoever significance might fairly come from it, it is something which it seems to me no human mind can resist. In it he says — I do not mean to be understood as quoting the exact words: "I am going away for some months. I have hired to a man named Hillmon. We are going out to hunt a sheep ranch, through Kansas, New Mexico, and Colorado. He promises me better wages than I can get elsewhere. Otherwise I might join the crowd that is going to Leadville." What does he mean? What inference may we fairly draw from it? Was it a truthful statement on his

part as to his having made such a contract? of his intentions for the future? or was it mere excuse and cover for an intended disappearance? If it was a mere cover for an intended disappearance, it signifies nothing. If it was a statement of the actual fact, who was this Hillmon? Was he John W. Hillmon, the assured, the husband of the plaintiff in this case? or was it somebody else? If it was this Hillmon, was this contract carried out or abandoned? Did he go with him, or did he not? If he did not, where did he go? If he did, was he the one John Brown speaks of? And I believe he speaks of some one in both his statement and his testimony previously. These are questions for you to consider. Is this one of those mysterious and inexplicable coincidences which sometimes happen in life? or is it a sort of a guide board at the corner where two ways meet, pointing in the line of truth? That is a question of fact which comes home to each of you.

Consider all the facts in the case. Fear not. Be just; and may that infinite Being, who from His unseen throne in the center of this mystic universe, who sees and knows the very fact, help you to be strong and guide you to truth.

Dear Sir,
I am writing to you in the name of
the Lord of Hosts, the God of Israel,
the Lord of the universe, the Lord of
the earth, the Lord of the sea, the Lord of
the air, the Lord of the fire, the Lord of
the water, the Lord of the wind, the Lord of
the rain, the Lord of the sun, the Lord of
the moon, the Lord of the stars, the Lord of
the planets, the Lord of the galaxies, the Lord
of the universe, the Lord of the earth, the Lord
of the sea, the Lord of the air, the Lord of
the fire, the Lord of the water, the Lord of
the wind, the Lord of the rain, the Lord of
the sun, the Lord of the moon, the Lord of
the stars, the Lord of the planets, the Lord
of the galaxies, the Lord of the universe.

WASHINGTON,
D.C.

390. **THROCKMORTON v. HOLT.** (Reported by the *Washington Post*.)

Probably no case in the history of the local bar has excited a more widespread interest than the contest over the alleged will of Judge Holt, which has been on trial in Judge Bradley's court for the past five days. This interest is in a large measure due to the high standing of the alleged testator, who was Judge Advocate General of the United States and Postmaster General, and in his first capacity was closely identified with the trial of the conspirators who plotted the death of President Lincoln. And it is in an equal measure ascribable to the mystery which surrounded the appearance of the will and its mutilated condition, the paper being charred and torn and without a seal, and the further fact that the witnesses to the instrument were President Grant, Gen. Sherman, and Mrs. Sherman. The will is dated Feb. 7, 1873. It bequeaths everything to Miss Elizabeth Hynes, a niece and ward of Judge Holt's first wife, and a person of whom he is known to have been very fond, and to the daughter of Maj. Charles B. Throckmorton, who was named for him, Josephine Holt Throckmorton, and whose godfather the testator was; Mrs. Throckmorton was cousin to Judge Holt's second wife. Judge Holt died on Aug. 1, 1894, at the age of 87, leaving an estate of some \$180,000. His first wife, Mary L. Harrison, had died in 1846; his second wife, Fannie L. Wickliffe, in 1860; and he was childless. The surviving next of kin, who would inherit, were nine in all, the children of one sister and two brothers; one of them Wm. G. Sterett, lived in Washington; another, Washington Holt, lived out of town. Nearly a year elapsed after the death of Judge Holt. No will being found in the meantime, the estate was being administered in the interest of certain blood relatives, including

Washington Holt, his nephew, and about \$9000 had been divided among the heirs-at-law, when unexpectedly, within a few days of the legally constituted limit, the mysterious will of 1873, naming Luke Devlin, a clerk in the War Department, executor, made its appearance in the office of the Register of Wills in a large white envelope addressed in a disguised hand.

The will had been burned in places, but not so as to destroy any vital part of the writing; the place where the seal is usually affixed had been torn off, and the part bearing the signatures apparently separated from the body by long wear, the whole having been pasted on a new sheet of paper to hold it together. The peculiarity of the fire marks is that the edges were burned while the document was folded, while the fire marks on the face of the will were made while the paper was face open or only partly folded. If the paper on which the will was written was at one time what is known as a sheet of legal cap, with presumably a red line running down the left margin of the paper, the margin was burned off, and in that event the mysterious sender of the document presumably destroyed the words of revocation which may have been written there. This is a subtle theory, based on the presumption that there is a serious irregularity about the presentation of the will for probate.

The letter containing the document was put in the mail some time Saturday afternoon, August 24, 1895. It bears the post-office stamp at 6 P.M., and remained in the office until Monday morning, when it was delivered. It was inclosed in a large white envelope, inside of which was fitted a piece of cardboard to protect the will. It bore two 2-cent stamps, apparently carelessly or hurriedly attached, which are canceled with the letter L.

Mr. Devlin, the executor of the will of 1873, is a short, stout man of middle age, who was Judge Holt's private secretary from 1862 until some time in the seventies, during the period of his term as Judge Advocate of the United States. He is by all regarded as a man of high integrity. He is at present employed in the record and pension division of the War Department in a responsible position.

Judge Holt lived in a fine old mansion at the corner of New Jersey avenue and C street southeast, opposite the Varnum Hotel. It is a fine piece of property, where the weeds are now ranking in blissful innocence of scythe or mower, with ivies creeping over the front steps. Here he lived for many years with his servants after the death of his second wife, a Miss Hynes, and he died on the 24th of August, 1894. The property is now in charge of two servants, man and wife, Charles and Frances Strother, colored, who occupy the rear and show strangers through the house who are sent up by the real estate agent, for the mansion is for sale. Frances Strother is an intelligent and buxom colored woman of about thirty. Her mother was for fifteen years cook in the house. Her name is Ellen Christian. There was a housekeeper, Martha Thomas, who served Judge Holt for fourteen years. Both Mrs. Christian and Mrs. Thomas are at present at Hampton, Va. Strother was the coachman for eight years, and two years ago married Mrs. Christian's daughter Frances. These, with the Judge, constituted the household for many years.

The trial of the will contest began on Monday, May 18, 1896. The two tables in front of the bench were occupied by the parties to the suit, their attorneys, and members of the press. At the long table to the right of Judge Bradley sat Maj. Throckmorton; next to him his wife, and between the latter and

Miss Lizzie Hynes, sat Miss Josephine Throckmorton, who forms the central figure of this interesting group. She and Miss Hynes are the direct beneficiaries under the provisions of the will. Major Throckmorton is a tall, military looking man, dressed in a gray suit, light spats, and black shoes. He has a florid face, gray hair, and a gray mustache, twisted into sharp points at the ends. Mrs. Throckmorton is a handsome woman who dresses becomingly in black and wears her gray hair brushed back from her forehead. Her face is very fair, and betrays the keen interest she takes in the proceedings. Miss Hynes is upward of forty, dressed neatly in subdued colors, and never manifests more than a passive interest in the testimony or the arguments of the lawyers.

The cynosure of all eyes in the court room is Miss Throckmorton. She is a tall, unusually attractive girl, with a benevolent expression of countenance which may be termed beautiful; bright, dark eyes, and light brown hair. She dresses plainly in dark colors, but with marked good taste, and evidences in her manner the grace and refinement of good society. At the other table yesterday sat Washington Holt, the nephew of the deceased, and principal heir-at-law, with a suggestion of Speaker Reed in the side view which the casual observer is able to obtain of him as he sits facing the Judge. Next to him sat his daughter, about eighteen years of age, and Mrs. Holt, a handsome woman with bright eyes. Back of these, the principal figures in the case, were seated a number of persons who are interested, remotely or otherwise, in the case. Mr. Devlin, the executor of the will, sat for the greater part of the day behind Maj. Throckmorton, and manifested a sharp, nervous interest in the proceedings. He was repeatedly called to the stand, and underwent a searching inquiry into certain state-

ments made by him to a representative of *The Post*, which he answered in his short, brusque way, for that is one of the characteristics of the executor. He is a short, dumpy man of about forty-five years, with a fat, smooth face, and light eyes and hair. He wears gold glasses, and seldom changes the firm, set expression of his countenance. Mr. Devlin is not a nervous person, and the deep interest he takes in the case is not manifested by ordinary physical symptoms, but the intensity of his expression.

On both sides distinguished legal talent is engaged, the attorneys for the legatees under the will being J. J. Darlington, ex-Congressman Ben. Butterworth, and Blair Lee. For the other side are A. S. Worthington, Jere M. Wilson, J. C. Heald, James C. Poston, of Louisville, and Attorney McChord, of Kentucky, the personal representative of Miss Hynes.

Monday, May 18, 1896.

The first witness called by the attorneys for the legatees was Senator *Sherman*, who identified the signatures of Gen. Sherman and Mrs. Sherman as genuine. They then put on the stand Col. *Fred. D. Grant*, who identified the signature of his father, President Grant. Judge *Henry L. Burnett* declared that, in his opinion, the signature of Judge Holt attached to the paper was that of the deceased. The caveators so early in the proceedings gave an indication of their line of attack by trying to establish the fact that Judge Holt was too careful a lawyer to draw a will in the language of the contested instrument. On cross-examination Judge Burnett, however, stated his opinion that while the deceased was well grounded in the principles of the law, he was not so well informed in the technical rules. He was rather an eloquent jury lawyer, witness said. *Tecumseh Sherman*, of New York, identified the signature of his mother as genuine.

The will was then offered in evidence. The caveators objected. The very condition of the paper, Mr. Worthington argued, showed that it had been revoked. He asked where was the signature and the seal spoken of. After a spirited argument Judge Bradley ruled in favor of its admission, and the caveators gave notice that they reserved an exception to the ruling.

Luke Devlin, the executor of the will, was then put on the stand. He testified to his employment in the office of Judge Holt during the latter's incumbency of the office of Judge Advocate. Became acquainted with him in 1862, and compared the decisions that left the Judge Advocate until 1869. From 1869 until 1876 he was a clerk, and had charge of correspondence. His relations were not wholly official in character, but at times social. He met Judge Holt several times at the residence of Mrs. Throckmorton. Met him once in two or three months up to 1878.

These questions were objected to. Mr. Darlington said that the opposing counsel, it would seem, were trying to adduce that the will was in the custody of the witness. "Your honor," said Mr. Wilson, "we propose to show that he did have the will in his custody."

Witness then testified as to his further relations with the deceased. He saw him once or twice after 1875 — the year of his retirement from the office of Judge Advocate — in his parlor, when he called socially. In 1878 the servants on one occasion when he called at the house told him that the Judge had company. In the year in which the will is dated he was a clerk in his office and private secretary to Gen. Blair.

Tuesday, May 19.

Mr. Luke Devlin, executor under the alleged will, took the witness chair in the morning.

"Mr. Devlin," asked Judge Wilson, "is this your handwriting?"

handing the witness a paper. Upon receiving an affirmative answer, "I wish to offer this in evidence," announced the attorney.

"I object," interjected Mr. Darlington.

"This," said Mr. Wilson, addressing the court, "is an application for letters of administration on the estate of the late 'Billy' McGarrahan. There is a certain phraseology in it strikingly similar to that in the contested paper; also marked similarities in the handwriting."

But Justice Bradley ruled that the paper could not be admitted on cross-examination, although it might properly come in later, if competent. Judge Wilson noted an exception, then asked Mr. Devlin if he had called at Judge Holt's residence after his death, or attended the funeral. Mr. Devlin replied to the first question that he did not, and did not go to the funeral, because he could not learn the hour when it was to be held.

Mr. Wilson's questions were the most interesting because their trend was clearly evident. There was breathless silence when he asked Mr. Devlin if there were any envelopes like the one received in which the will was inclosed, at the same time handing him the identical wrapper on which was crudely printed the address to the register.

"They are not in use in the Bureau in which I am employed," replied Mr. Devlin. "Of course, I cannot say as to other offices."

Mr. Blair Lee asked Mr. Devlin as to his relations with Judge Holt, and received a reply to the effect that he always took care of the Judge's mail, while in his office when the Judge was out of town. He spoke of an estrangement between Gen. Blair and Judge Holt, and said also that he had been advanced in office by Judge Holt, after Gen. Blair had asked Mr. Devlin to become his private secretary. A letter recommending Mr. Devlin

"to whom it may concern," and written by Judge Holt, was offered in evidence.

At the close of Mr. Devlin's testimony, Miss *Josephine Holt Throckmorton*, one of the beneficiaries under the testament, took the stand. The witness is about thirty years of age, with brown hair, well-cut features, and handsomely formed. She was gowned tastefully in a figured costume, and wore a jaunty hat with purple flowers. She corroborated Mr. Devlin's testimony, practically, when she said she had not heard of the contested will until Mr. Devlin sent her a telegram, announcing its appearance in the Register's office. There also she first saw it. Miss Throckmorton testified that her father was Maj. Charles B. Throckmorton, U.S.A. She lived at various army posts with her parents, but was born in Washington. She spent the year from May, 1876, to May, 1877, in this city. She was one of the persons named in the will.

When Mr. Darlington at this point suggested that no more witnesses were then ready, Mr. Worthington said he wanted all the witnesses on the other side to be presented before the counsel for the caveators placed any on the stand. If Mr. Darlington's *prima facie* case was announced as concluded, he would oppose any future attempt to introduce direct evidence in support of the validity of the will. The caveat had claimed that the whole paper was a forgery; the other side must prove it genuine. They had already gone beyond the bounds of this part of the case, for opportunity had practically been given Mr. Devlin to testify that he had not written the will. "And yet," Mr. Worthington said, "there is more reason now to believe that Mr. Devlin wrote the will than that Judge Holt did so."

The court decided that the counsel for the beneficiaries must produce full evidence in support of the

validity of the will. So Miss Lizzie Hynes was recalled, having testified the day before. She told in a lengthy examination that she was well acquainted with the alleged testator, had corresponded with him for forty years, and knew his handwriting from having seen him write. She identified the paper as having been written by Judge Holt. He had not written to her himself in the latter part of their correspondence, but had always signed the letters dictated to others.

Mrs. *Mary McC. Ray*, a niece of Miss Hynes, who said she had also been in frequent correspondence with the Judge, identified the handwriting in the will. Mr. Worthington closely questioned the witness as to alleged disagreement between her husband and Mr. Washington D. Holt on account of money, the apparent purpose being to suggest unbiased testimony.

Mrs. *Throckmorton* was then put upon the stand to identify the handwriting and signature. She said she was a cousin of the first wife of Judge Holt. She had corresponded with the alleged testator, having heard from him last in 1881. She had destroyed some of the letters. Just here, because Mrs. *Throckmorton* attempted to tell why Judge Holt had not answered two letters written by her in the early '90s, counsel had a tilt. Mr. Darlington wished the evidence to go in to foil the intention of the caveators' attorneys to let it be inferred that there were strained relations between Judge Holt and the *Throckmortons*. The explanation was not made.

Maj. *Throckmorton* also identified the handwriting of Judge Holt, Mr. Butterworth conducting the brief direct examination. He said he had last heard from Judge Holt in 1870. With a view to showing the credibility of the witness, the Major was sharply cross-examined as to the court-martial of 1892, when, according to his statement, he was

convicted of conduct unbecoming an officer. Sentence of dismissal was commuted to suspension and later set aside. Mr. Worthington's questions were not to Mr. Darlington's liking, and another tilt resulted. Mr. Worthington was allowed, despite the protest of the other side that it was incomplete, to put in evidence the findings of the court-martial. Duplicating pay accounts constituted the burden of the findings. But under the redirect examination of the caveatees' attorney, the Major related in full his side of the case, although Mr. Worthington objected. Maj. *Throckmorton* said that he was owed \$300 by some one at David's Island, N.Y., who had pledged himself to deposit that amount subject to the Major's order in a New York bank before June, 1891. It was not done, but he did not know it until after he had drawn against the bank. Soon afterward, however, he paid the checks. As to the alleged duplication of pay accounts, the Major declared that he held the accounts as security, and they were presented by mistake, but no one lost by the transaction.

Additional cumulative testimony was here given by Mr. Devlin as to the signature of Judge Holt. Another witness, in the person of John C. Hesse, who was in the War Department in 1862, testified to the handwriting.

Miss *Throckmorton* was again recalled, and said: "This is my godfather's handwriting; it is his signature."

Cross-examined, Miss *Throckmorton* said she saw Judge Holt in 1885 and in 1876 in his room. She received letters from him before 1876. So did her parents. Miss *Throckmorton* said she had seen him write letters.

"When did you ever see him sign his name?" asked Mr. Wilson. "In 1881 and at other times," replied the witness.

The Judge used sand to blot his

letters, Miss Throckmorton said, and once or twice she had done this for him. She thought she had destroyed all the letters received from her godfather from time to time. She had never turned any of them over to other people.

Mr. Wilson's pressing questions seemed rather to weary the witness, and when the attorney asked, "Now, did Judge Holt always respond to your letters?" she replied, "Most certainly he did," with something of triumph in her voice.

"When you speak of your godfather," asked Judge Wilson, referring to the witness' frequent characterization of the alleged testator by that term, "do you mean Judge Holt?"

"Of course," returned the young lady. "Would you prefer to have me speak of him only as Judge Holt?"

"Oh, no, please yourself," replied Judge Wilson, blandly.

Maj. Theophilus Gaines, who was associated with Judge Holt during the war, identified the handwriting in the alleged will. The Major could not exactly tell when he had last seen Judge Holt's writing or seen him write. He received no written communication from him after 1866. Witness then recalled that a few days ago he had seen a paper in the Judge's handwriting in possession of Gen. Butterworth.

"Then," interposed Mr. Worthington significantly, "you had not seen any of the Judge's writing for thirty years?"

Wednesday, May 20.

The greater part of the day was consumed by Messrs. Darlington, Butterworth, and Lee in trying to establish the genuineness of the writing.

Rev. Butler thought the will was in Judge Holt's handwriting. He had seen a sample of his writing that morning in a letter written by Judge Holt to Mrs. Butler. He admitted having no distinct recollection of receiving any letter from the de-

ceased at any time, but he had written one to him about 1865, referring to the Surratt trial. Mr. Wilson objected to the testimony as incompetent. Mr. Worthington offered Mr. Butler a letter — one written by Judge Holt to Mrs. Ray, referring to Lizzie Hynes — and asked him to identify that. The witness said he was not an expert in handwriting and would give no opinion. There was some wrangling among the attorneys over the propriety of offering the letter, but Mr. Darlington waived objection.

"Why are you so positive in saying that the writing in the body of the will is in Judge Holt's handwriting," inquired Mr. Worthington in a tone of mild astonishment "and then say you are not an expert?" Mr. Butler was dismissed.

Then Representative Hitt was summoned, and he was taken in hand by his old colleague of the House, ex-Congressman Ben Butterworth. Mr. Hitt delivered his testimony with almost elocutionary distinctness. He knew Judge Holt for more than thirty years; often saw him write documents during his term as Judge Advocate General; often received notes and letters from him. He was, therefore, somewhat familiar with his writing. Mr. Hitt was handed the will. He looked at it a long time, with his hand raised to his spectacles. Then he said very gravely:

"That is the writing of Judge Holt as I remember it. I speak merely of the writing, not the signature."

"How long since you saw him write?" asked Mr. Wilson, sharply. A long pause ensued. "It is fully ten years — since I saw him write," said the member from Illinois, though, he added, he had received letters from him subsequently. "I have one of his notes now."

"What date?" asked Mr. Wilson.

"July 25, 1890," promptly responded Mr. Hitt.

"You confined yourself carefully to expressing your opinion regard-

ing the body of the writing," resumed Mr. Wilson; he wanted to know if the will had any of the characteristics of Judge Holt. But this was promptly objected to by Mr. Darlington. In arguing the point Mr. Worthington said it was not a question whether the handwriting was Judge Holt's, but whether this paper was his last will and testament, and to prove that they might have to go deeper than the handwriting. On their part, Mr. Butterworth argued, the attempt was made merely to show that it was Judge Holt's mechanical performance, and for that purpose the witnesses had been brought here to testify. Mr. Darlington held that it was not necessary for them to show that certain phraseology in the will was not characteristic of Judge Holt. The point was argued by Mr. Wilson for the opposition, but the court sustained the objection, and the attorneys for the heirs-at-law reserved an exception to the ruling.

Mr. Hitt testified, in reply to a question by Mr. Wilson, that he used to be familiar with Judge Holt's handwriting in official documents thirty years ago.

"His writing was variable," he continued, "it was characteristic, but so variable that I would not know, and do not now know, that he wrote it," pointing to the document in his hand.

"That's all," exclaimed Judge Wilson, with self-satisfied emphasis.

"The last note," continued Mr. Hitt, in answer to a question from Mr. Butterworth, "I received in 1890. As he advanced in years his writing showed the signs of age," added in reply to Mr. Wilson.

The next witness was *S. M. Yeatman*, who testified to his familiarity with Judge Holt's handwriting from the frequent examination of old documents in the War Department, where he was employed.

"That signature," he said, closely looking at the will, "seems to have

been written by Judge Holt. In my opinion it was written by Judge Holt." He spoke of several styles of signatures. This seemed more upright.

"Those you speak of lean to the right?" asked Mr. Worthington.

"Precisely," said the witness, "but there is a similarity in all his signatures. I think I have a signature up there just like this."

"Think you can find one?" came from Mr. Wilson; "we will be obliged to you if you will have one ready."

"If you will make a requisition on the Secretary of War," said the witness, "I will be glad to accommodate you."

Mr. Yeatman was allowed to step down, and Mr. *Frank T. Howe*, of the Washington Star, testified to the handwriting briefly, after which Mr. *A. E. H. Johnson*, a solicitor of patents, was called. He had been confidential clerk to the Secretary of War during Judge Holt's incumbency of the office of Judge Advocate General, and from his familiarity with his writing judged the will to be his. On cross-examination, he admitted that he identified the document by writing which he knew before 1869.

Clarence F. Cobb, for thirty-two years a clerk in the War Department, testified that he compiled the correspondence between Gen. Brice and Judge Holt for the former in Baltimore. The two, he said, had a mutual admiration society and used to write to each other a great deal, both being extremely proud of their diction. He examined the will last February for about an hour and believed Judge Holt had written it. On cross-examination he said he had known Devlin about town for some twenty-five years, but he was not employed as an expert in handwriting to examine the will.

Mr. Devlin was recalled and took his seat with a demure air. In reply to questions from Mr. Worthington he said that he telegraphed to Miss

Throckmorton in New York of the finding of the will. The same day he called on Mrs. Throckmorton, the grandmother, who resides at 52 B street northeast, in this city. He was asked where he secured Miss Throckmorton's address in New York. He replied that he had gone to the War Department and there obtained Maj. Throckmorton's address. After a close cross-examination as to his movements on that day, which elicited no features of special interest, the court took a recess until 1 o'clock.

After dinner Mr. Devlin was again put on the witness stand. He was asked by the attorneys for the heirs-at-law if he knew the reporter of *The Post* who had interviewed him. Witness remembered a young man calling on him.

"Did you say to him," asked the attorney, "'I have formed two ideas in explanation of it (the whereabouts of the will), and I think one of these is correct. I think I know where the will has been all this time and why it was not produced sooner, but I intend to keep the information to myself. In fact, I had reason to believe that such a will was in existence, and I wrote to Maj. Throckmorton before it was found, telling him my idea about it?'"

"I may have had some theory about it," said Mr. Devlin, "and expressed myself to that effect. But I deny having said to him that I wrote to Maj. Throckmorton about it." This was delivered with marked emphasis. "I have never read the article from which that is a quotation," he added.

The remainder of his cross-examination was devoted to developing information of his movements on August 28, 1895, and the time he sent the telegram to Miss Throckmorton. Mr. Devlin was finally allowed to step down, but in passing by the table occupied by the attorneys, Mr. Darlington whispered a few words to him, and he resumed the stand to correct a statement.

He had not written to Maj. Throckmorton about the will, as alleged in *The Post* interview, he said, but had written to Miss Throckmorton. That was about Christmas, 1894.

"So you wrote to Miss Throckmorton about it before the will was found?" asked Mr. Wilson sharply. "Yes," said Mr. Devlin.

"You say you never read the interview in *The Post*?" asked Mr. Darlington. "That is correct," said Mr. Devlin brusquely; "I wrote to Miss Throckmorton in reply to a letter from her."

A question from Mr. Darlington as to the nature of that correspondence was objected to by Mr. Wilson and sustained.

Register of Wills *McGill* briefly testified to the condition of the will.

This ended the testimony in chief on behalf of the will.

Then the attorneys for the heirs-at-law put on the stand the most important witness of the day, Col. *Thomas S. Barr*, from Governor's Island, N.Y., Assistant Judge Advocate General. He testified in a fine sonorous voice, with studied enunciation and a deliberate manner. In reply to a question he said he had studied law and was a member of the bar. He had known Judge Holt well. He had reported to him a few days after the assassination of Lincoln and was on duty until April 1, 1870, with the exception of three short details. He had had frequent, almost daily, opportunity to see his handwriting and his signature. His style and manner of composition were familiar.

The will was then handed to the witness and he examined it long and carefully.

"My impression is," he said at last, in a deliberate manner, "that Judge Holt never wrote that paper. It is similar in some respects, but taken as a whole it is altogether unlike anything I ever saw of his."

He was asked if there were any characteristics which distinguished

the document, and replied that there were.

"What are they?" asked Mr. Wilson. But Mr. Darlington objected, and the question was temporarily withdrawn.

Witness continued that Judge Holt's manner of punctuation was very correct. "I think he used a full share of commas," he said.

Mr. Wilson then asked him if Judge Holt would have been likely to use the expression in the will: "Lizzie Hynes is to inherit hers at my death."

Col. Barr was unfamiliar with such expression in wills as drawn by lawyers, but was stopped from pursuing the subject further by an objection from the other side.

The intention was to show that the phraseology of the will was not such as would be employed by experienced lawyers like Judge Holt, and Mr. Worthington asked for an immediate ruling on this point because of the importance of the question involved. He thought phraseology and other characteristics of a testator were material questions, but Judge Bradley sustained the objection, and several technical points made by the heirs-at-law were also overruled.

In reply to a question Col. Barr said that Judge Holt had the clearest power of expression he had ever known, and he was the finest rhetorician he had ever met. As to accuracy, he said, he exercised very great care in regard to reports prepared by him, often suggesting a change of phrase. He had never read an incorrect expression from him.

Thursday, May 21.

The heirs-at-law in the Holt will case scored a strong point in their favor yesterday when Judge Bradley ruled that testimony showing the character of the relationship existing between Judge Holt and the Throckmortons toward the close of the testator's life, was admissible as evidence.

This ruling affords the attorneys who are assailing the will a full opportunity to prove that the relationship existing in 1873, the year in which the will in evidence is alleged to have been drawn in favor of Miss Josephine Throckmorton and Miss Lizzie Hynes, no longer existed during the closing years of his life, at least as to the first of the two beneficiaries, and may be regarded as the turning point in the case.

The point at issue was decided when the attorneys for the caveators put on the witness stand Mrs. Emma S. Briggs, at one time a well-known Washington correspondent, writing under the name of "Olivia." She testified that she stood in close and friendly relations to Judge Holt for many years, and was acquainted with Maj. Throckmorton and his family in times past. The question arose when Attorney Wilson asked her to state what she knew of Judge Holt's treatment of them and with what sentiments he regarded Miss Josephine's mother and grandmother.

The examination of Col. Barr was continued yesterday, and he was the first witness on the stand. The counsel for the legatees indirectly showed that the witness has not been on an amicable footing with Maj. Throckmorton since the latter's court-martial. Col. Barr's recall to the witness stand yesterday led to a spirited contention between counsel as to the admissibility of evidence tending to show whether Judge Holt would have asked the President of the United States and Gen. and Mrs. Sherman to attest his will, thus subjecting them to the embarrassment of testifying before the Probate Court. The decency of the District bar, Mr. Worthington argued, had always held it a question whether a subpoena was competent to issue from a local court summoning the President to testify in a case. He held to the theory that the slip of paper containing the names of President Grant and the

other witnesses to the will was a separate slip of paper over which the will of Judge Holt had been forged.

Mr. Worthington asked the witness what were the characteristics of Judge Holt when he was associated with him in 1870 in his deportment toward his superior officers.

He was a man of retiring manner and great modesty toward his superiors, said the witness, and he saw him but seldom with the President. The question whether his relations were such that he would probably have asked them to be witnesses to a will was objected to as involving a question, not of fact, but opinion. Objection sustained. The witness was then taken in hand by Mr. Darlington, who asked the witness what a caveator and a caveatee was, to which he made reply which he afterward corrected of his own accord.

Witness said he was admitted to the bar in 1859. He had no animosity for Maj. Throckmorton, but did not speak to him. He did not know the heirs-at-law.

He was then cross-examined as to business movements early in life, and said he came to Washington from Massachusetts, giving up his law practice there, and entered the Treasury Department as a clerk at \$1200 a year. He was asked when his relations with Maj. Throckmorton ceased. He replied that it was at the time of Maj. Throckmorton's court-martial, in which he figured as an official.

Mr. Darlington then asked him if he had not called on Maj. Throckmorton, as a friend, and conversed with him, about the time of the court-martial, and then gone on the stand to testify against him. The witness replied that he had done so, but not until after he learned that Maj. Throckmorton had destroyed certain documents.

"Did you not offer him your hand?" asked the cross-examining attorney.

The witness replied that he simply

ceased to speak to him after that. He was asked if he had not written him friendly letters. "No friendly letters," said the witness. "I may have written him official letters." He was asked with whom he had conversed regarding Luke Devlin. With the counsel and the Assistant Secretary of War, replied Col. Barr. He had talked to Devlin on Wednesday, and Devlin had said: "This is an unpleasant case."

"Have you any letters written you by Judge Holt?" asked Mr. Darlington. The witness replied that he had. He remembered one dated 1875, and was asked if he had any correspondence with the testator since that time. He remembered receiving a communication from Judge Holt in 1889, while in Washington, but it was only a short note.

"With that exception, did you receive any letters after 1875?" asked Mr. Darlington.

"Possibly — a few," said the witness. He was asked if he had practiced law in late years. He had practiced in the Supreme Court in a few official cases, he said.

"Have you tried any civil case in the past thirty-six years?" asked the attorney. The witness replied that he had not.

On re-examining the will he said he would not swear that it was not Judge Holt's handwriting, but he would say that the signature was not, in his opinion, that of Judge Holt. He had great doubt of its regularity. The body of the writing was ragged and unlike the testator's as a whole. It had an unfamiliar appearance, its character being unsymmetrical. He pointed out some of the details, and the will was closely examined by the jury, Mr. Darlington passing it along. The attorney tried to induce the witness to particularize, but he declined to be led, confining his criticism in the main to the appearance of the writing in general. He specified the unfamiliar appearance of the

letter "T" and said he never saw Judge Holt write a "W" as in this will. The paper was again shown to the jury. He also criticized the use of the abbreviation "Majr." for Major. He criticized the phraseology of the will as wholly unlike such as Judge Holt would have employed.

Mr. Darlington handed the witness a letter dated September 29, 1873, addressed "My Dear Cousin," purporting to be signed by Judge Holt, but Mr. Wilson quietly arose and asked that it be handed to him. He examined it and then objected, but Mr. Worthington explained that there was an agreement to submit Judge Holt's handwriting on both sides, with reservations, and withdrew the objection. Mr. Darlington tried to induce the witness to draw comparisons between the will and the letter, but voluntarily abandoned the effort out of deference to his agreement, and submitted the Holt will of 1848. He asked no questions, however, and soon after allowed the witness to step down.

Ex-Postmaster General *Horatio King* was then put on the stand. He said he would be eighty-five next June if he lived. He came to Washington to find an opening in the newspaper business, and not finding anything, he entered the Post-office Department in March, 1829, at \$1000 a year. He graduated to First Assistant Postmaster General, and as such was Acting Postmaster General, until 1861, when he was appointed Postmaster General, serving from March 7 that year until he resigned with the Cabinet. He was first assistant under Judge Holt, when the latter was Postmaster General. He was often in conference with him on official matters on which there was any doubt. Became perfectly familiar with his handwriting and was very intimate with him until near his death. During his illness, four or five years before his death,

hardly a day passed that he was not a caller at his house and chatted with him. Had much correspondence with him, and has now some twenty letters signed by Judge Holt, the first being written in 1863 and the last in 1888. Would not say that he had ever seen Judge Holt write.

Mr. Wilson then handed him the will for examination. He asked him if it was Judge Holt's writing.

"Unquestionably, it is not," fell from the venerable witness' lips.

"Now, tell the jury if this is Judge Holt's signature," said Mr. Wilson.

The witness said he would not say, but in his opinion it was not, "because," he said, "the whole thing is a gross bungling fraud!"

There was a buzz and commotion in the crowd of spectators and the court officer rapped for silence. The witness had examined the will last year with Washington Holt and had then made up his mind that the will was a forgery. He said there were fifteen places where Judge Holt would have made commas and four or five places where he would have made full stops. He remarked upon the failure of the writer to use a capital letter in "will," when he did so in "Testament." He also criticized the long pauses between words. The general appearance indicated that the will was a forgery. Witness spoke of the high attainments of the testator and spoke in glowing terms of his accomplishments. He was a finished orator, he said, and a man of great intellectual force.

The venerable witness spoke in a broken voice and in a manner indicating that he had formed an opinion, and was not to be budged in his conclusions. He spoke of the testator as Gen. Holt; "for," said he, "he never was a Judge," and raised a laugh in concluding his testimony by referring to him as "Judge Holt, that never was a Judge."

Before the witness was turned

over to the tender mercies of Mr. Darlington, Mr. Wilson moved to strike out the testimony of the witness in reference to the signature. Mr. Darlington objected, but was overruled after a sharp tilt with the opposing counsel. The witness was then subjected to a searching cross-examination by Mr. Darlington touching an interview which the attorney had with him regarding the will three or four months ago. Mr. Darlington tried to establish the fact that the witness had then pronounced the will genuine from a photographic copy of it. Witness did not specifically deny it, saying that he thought it to be genuine for a while, but did not think so now. He was asked if he did not tell Charles Jones that the will was undoubtedly Judge Holt's.

"If I did," said the witness, gravely, "I made a terrible mistake."

He was also shown the letter addressed "My Dear Cousin," which Mr. King said appeared to be in Judge Holt's handwriting. When shown the will of 1848 he said he would not inferentially swear that it was Judge Holt's writing.

Emma S. Briggs, who has been a resident of Washington since 1859, said her acquaintance with Judge Holt began when Andrew Johnson was inaugurated. She was a correspondent, a journalist, during her acquaintance with Judge Holt, and had exchanged letters with him; he had also visited her home. She was a great admirer of his style, and her relations were those of "a very ignorant woman who was anxious to learn something" to such a very able man as Judge Holt. She thought she had some letters written her by Judge Holt dating to 1885. He wrote a letter of introduction for her in her presence in his house.

She was then shown the will, and asked if, in her opinion, it was in the handwriting of Judge Holt.

Mrs. Briggs studied the document a long time. Then she said:

"I do not think that it is." She did not believe that the signature was Judge Holt's.

"Were you acquainted with any of the Throckmortons?" asked Mr. Wilson.

"I was in years past," said the witness. She was then asked what she knew of the treatment by Judge Holt of the members of the family, or what he had said of Mrs. Throckmorton, the elder and younger. This was objected to by Mr. Darlington as inadmissible evidence, and an hour was consumed in technical arguments by counsel, touching the admissibility of parole declarations of Judge Holt, showing his intention to revoke the will.

In an exhaustive explanation the Court ruled that the evidence was admissible, and on motion of Mr. Wilson court adjourned until to-day.

Friday, May 22.

The feature of the examination was the evidence given by Mrs. Briggs under the ruling of the court, made on Thursday, that testimony showing the nature of the relationship subsisting between Judge Holt and the members of the Throckmorton family might be offered. Mrs. Briggs is said to be the first woman who engaged in newspaper work as a Washington correspondent. Her connection with the press dates back to the period of the war. She was for a short time editor of the *Washington Chronicle*, and enjoyed the acquaintance of the public men of those stirring times. She was particularly well acquainted with Judge Holt. Her husband pointed out the printed report of a speech of Judge Holt and advised her to study it if she wished to acquire a pure English style. She became acquainted with him, and, according to her testimony, became a frequent visitor at his house for the purpose of drinking in the beauties of his rhetoric and laving herself in the fountain of his diction. From this association, she declared, she came to

be known as a great writer. This relationship dated back to 1865.

Mrs. Briggs, who is an old lady, was dressed in black silk, as she resumed the stand to testify yesterday morning. The attorney for the legatees objected to any testimony which did not confine itself to Miss Josephine Throckmorton, the beneficiary, so long as the inquiry was to extend to Judge Holt's relationship with the Throckmortons; but the court ruled that the testimony might extend to the other members of the family as tending remotely to show his intentions with regard to the beneficiary. Accordingly witness was allowed to testify that she had a conversation with Judge Holt regarding the Throckmortons about 1881. In reply to the question what was said, witness related that she was at Judge Holt's house on one occasion and inquired about the health and whereabouts of Mrs. Throckmorton.

"I do not know the Throckmortons," was Judge Holt's reply; "and that," added the witness, "is the only time I heard him mention the Throckmortons."

She then related the White House episode and the incident of Judge Holt turning his back upon Maj. Throckmorton.

"I was so surprised, so astounded," said the witness, with considerable declamatory effect, "that I had to sit down."

"Did you have any talk with Judge Holt respecting the will?" asked Attorney Wilson.

"I did," said the witness; "it was at his own house." She had just read the press accounts of the breaking of Tilden's will, she said, and she suggested to him to be careful to adjust his affairs so as not to place them in a similar jeopardy, whereupon Judge Holt counseled her to exercise a like care.

"In my own case," he said, "my nephew, my brother's son, Washington Holt, will attend to my affairs, and I know it will be done all right."

Mr. Darlington objected to this testimony as not admissible. Such declarations, he said, were easily obtainable and difficult to disprove. Judge Bradley, however, overruled the objection because of the unique circumstances environing the whole case. Soon after Mr. Darlington took the witness in hand.

On cross-examination, she testified that she had lived in Washington since 1859. Before that she lived in Iowa.

"When did you live in Chicago?" suddenly asked the attorney. The witness answered that it might have been during the latter years of the fifties.

"Where were you born?" asked Mr. Darlington abruptly.

"In Cuyahoga County, Ohio," said the witness.

"When?" asked the counsel.

"I have no remembrance," was the reply. The attorney tried to jog her memory, but witness declared that she had no information on the subject. Her father or mother never had told her, and she had no other data. The testimony created a good deal of amusement, which was promptly suppressed by the Court.

"You spoke of your husband," resumed the counsel.

"I did," said the witness.

"When did he die?"

Witness said in 1873. She was asked when she became a correspondent. Did not remember, but it was during the time of the war. She mentioned the *Philadelphia Press* and the *Burlington Hawkeye* among the papers for which she had written. She really could not call it a business, that in which she had been engaged while writing. It was during the time of Andy Johnson's trial or a little before that. She also worked for the *Washington Chronicle*, she said.

"As what?" asked the attorney. She started as a book-reviewer, and said she wrote occasional editorials, and for a short time had complete

editorial control of the paper. She thus gained access to public men, and became acquainted with Judge Holt.

"You knew the Throckmortons?" asked Mr. Darlington.

"Certainly, and real good, lovely people they were," said the witness.

"Where did you meet them?"

She thought several minutes. "I can tell where I didn't meet them," she answered with sudden emphasis.

"Where?" asked Mr. Darlington.

"I never met them at Judge Holt's," declared the witness forcibly.

She could not recollect how long ago she knew them, but in the cross-examination she fixed the date when she first called at Judge Holt's at about 1865. From that time to the last time she called there she never saw the Throckmortons at his house.

Counsel asked how, under these circumstances, she came to inquire about the whereabouts and the health of Mrs. Throckmorton, reference being had here to the mother of Major Throckmorton.

"If you were a newspaper correspondent, Mr. Darlington," sagely replied the witness, "you would not inquire." She told the counsel that newspaper people were likely to make inquiries of such a nature, and explained that her knowledge of the acquaintance between Judge Holt and the Throckmorton family came to her from Mrs. Throckmorton, the elder.

Mr. Darlington here changed the direction of his inquiries by asking witness:

"Was not Judge Holt a widower when you met him?" "He was."

"And continued so long as you knew him?" pursued the counsel. "He did," replied the witness, adding, guardedly, "to the best of my knowledge," which created a ripple of merriment in the crowd.

"How did you go to the White House on the occasion of the reception of which you speak?" asked Mr. Darlington.

Witness said they went in a carriage.

"Who drove you?" asked the attorney.

"How should I know or remember the colored man who drove us?" asked the witness, in a mildly re-monstrative tone.

"What?" asked the attorney, in surprise, "you did not know Judge Holt's servants?"

Witness protested that her relations to Judge Holt were not of so close a character that she knew all the details of his household, but rested solely upon a mutual admiration and worship of the beauties of English literature. She could not tell under whose administration this occurred. Did not know whether it was under that of President Hayes. Never told Julius Truesdell, a reporter, that it was during the Hayes administration. Never told Miss Josephine so. She related an interview which she and the latter had, when Miss Josephine had complained of a statement in the paper that Judge Holt had turned his back upon her papa.

"It is true," witness had declared, "for I was on Judge Holt's arm at the time."

"Did you see Major Throckmorton after that?" asked the attorney.

Witness thought she called on the Major at Governor's Island once after that. She saw Mrs. and Miss Throckmorton, but was told that the Major was in New York.

"How long did you visit at Judge Holt's house?"

"There never was a time," witness said, "that I didn't go there when I could." She emphasized that her visits there were prompted by her admiration for English literature.

"Any interruption to your visits?" asked Mr. Darlington. Witness grew dramatic, and exclaimed with great emphasis, rising in her seat: "Never — never — never!"

"Ever have any trouble with the

servants?" "Never — that I recollect."

"You say you visited Maj. Throckmorton's wife and daughter at Governor's Island?" "Yes."

"When was that?"

A long pause ensued. "It was during the time that Maj. Throckmorton was stationed there," witness finally said; but she did not recollect clearly.

"You took lunch there?" "I did."

"Did you not ask Miss Josephine, in the presence of her mother and a servant (naming the same), when she had last seen Mr. Holt?"

Witness said she did not think so. Thought they had asked her when she had last seen him.

"I know I did not," witness added, "and would not have done so, from motives of delicacy."

"You did not say that you had ceased visiting the home of Judge Holt because the servants were impertinent?"

Again the witness waxed dramatic, arising to her feet and in a ludicrously solemn tone, exclaiming: "Never — never — never!"

The attorneys for the heirs-at-law then submitted a deposition from Mrs. *Barney B. Ricketts*, of California, touching statements alleged to have been made by Judge Holt regarding Mrs. Throckmorton, the elder. About four years after 1873 — the date of the will — she heard him express himself with great bitterness regarding her, and again on the occasion of the Yorktown centennial.

Mrs. Briggs was put on the stand again by Mr. Darlington and shown the will. The general look, the whole thing, the "W" and other signs were unlike his, she said. They were entirely unlike the letters she had of his. She said there was a "something" about it that was as unlike as two faces. She admitted she couldn't swear to her own writing. There was a difference in the "t's" used in the will, and witness pointed

out a number of seeming discrepancies.

She was handed several letters signed by Judge Holt for identification, but declined to express positive opinions. On reëxamination, she stated that she had cultivated Judge Holt, to acquire his style, and had studied English literature under his instructions. Witness thought the testator was a very careful writer, and very exact in his punctuation and capitalization, and through her study of his style she declared she had acquired the reputation of being a great writer.

She was asked as to the handwriting and composition of the will, which she said were not those of Judge Holt. This was objected to by Mr. Darlington, and a long technical argument ensued, which was not finished when the court adjourned for the noon recess. After dinner Judge Bradley overruled the objection.

Witness was shown the will, and asked by Mr. Darlington to point out the absence of commas and other punctuation marks. After some study she pointed out the absence of a period and a comma. She thought she had thus pointed out all the peculiarities of punctuation, except that the employment of a dash for a comma struck her as different from anything she had ever seen of his writing. She pointed out a "t" which was drawn like an "l" as anomalous in his handwriting. Witness did not mean to say that she had received letters from Judge Holt every year for thirty years, but "off and on" within those years. The testator's writing she said, was not so slanting as in letters of Judge Holt's in her possession. The chief characteristic of Holt's style was forcibleness. He was not a verbose man, and used no superfluous words. Never used a word which could be omitted.

Samuel Hodgkins was employed in the War Department after 1863 in the Secretary's office, and had

excellent opportunities for becoming well acquainted with the handwriting of Judge Holt. Handled many of his official papers after 1870, some letters, but mostly indorsements in his handwriting, and bearing his signature. Thought he could find papers in the War Department indorsed in Judge Holt's handwriting. Shown the will, witness said:

"In my mind it is not Judge Holt's." Witness had no doubt that the body of the writing was not his; he had doubt as to the genuineness of one of the signatures, and thought it was not Judge Holt's. Witness formed his opinion from the general appearance of the writing. "Judge Holt," said he, "wrote what I call a cramped, scratchy hand, while this is written in an easy, flowing style."

Witness then pointed out particulars which he thought differed from the writing of the deceased. He thought every word showed an effort. He could not analyze his meaning letter by letter, but to his mind the writing looked like an imitation, and showed relaxation at irregular periods. Mr. Darlington offered other writing of the testator, and attempted to show by the witness that the same freedom of hand was evident in other writing of his. The witness thought some words were written by the same hand that wrote the will, but Mr. Worthington objected to these questions. Mr. Darlington said he proposed to introduce evidence of this kind to prove that the testator wrote a free hand. The court allowed the questions to be asked, and witness gave his opinion on several papers purporting to be in Judge Holt's writing. Shown the will of 1848, with the words: "This will is wholly revoked — J. Holt," indorsed on the wrapper, witness said the writing was not in Judge Holt's writing, but the signature was.

On redirect examination witness said he had no familiarity with the handwriting of Judge Holt in 1848.

Col. *Patterson A. Hosmer*, of Washington, became acquainted with Judge Holt, October 2, 1862, while Judge-Advocate-General; was under his orders till latter part of 1865; had numerous opportunities to become acquainted with his writing; had correspondence with him on official business as late as 1876, and has a note of January, 1876. His characteristics in respect to his composition, his accuracy, and style of expression, he said, were marked by great care, both in speech and writing. Witness was shown the will, and said he was unable to believe that it was Judge Holt's handwriting, either in body or signature. He did not think it was. Witness had renewed his knowledge of Judge Holt's handwriting from a note addressed to his wife, bearing date of 1876. He did not believe the will was his composition.

He pointed out alleged discrepancies in the writing of the will and noted three variations in the signature of the will different from the signature attached to the letter which his wife had received in 1876.

Court then adjourned until Monday morning.

Monday, May 25.

Mr. Worthington began the proceedings when court opened by placing in evidence the envelope in which the will was received at the Register's office, the piece of pasteboard contained in the envelope, and the order of the court issued in September, 1894, stating that the heirs-at-law had applied for letters of administration, and commanding all persons having objections to lodge to appear before the Orphan's Court. An inventory of the property, exclusive of real estate, of Judge Holt, amounting to \$130,664.90, was also submitted.

Mr. Worthington then read the deposition of Consul General *John J. Barclay*, of Tangier, Morocco, stating that the deponent last saw Judge Holt at his home in this city

in November, 1893, upon which occasion Judge Holt had stated that he had made a will leaving certain pictures to Mrs. Barclay.

The first witness who took the stand was Col. *William Winthrop*, U.S.A., retired, who was ordered to report for duty under Judge Holt in 1864, when he was Judge-Advocate-General. He remained in his office as senior assistant until Judge Holt's retirement in 1875. Col. Winthrop told a good deal about the nature of the work in his office; how he had become thoroughly familiar with the handwriting of Judge Holt, and with his characteristics and ability as a lawyer. In reply to questions by Mr. Worthington, he also stated that Judge Holt's relations with Luke Devlin, who was appointed a messenger and afterward promoted to a clerkship, were as friendly as possible under the circumstances, but that he was never aware of any business or social relations between them.

When the alleged will was handed to Col. Winthrop, and he was asked whether, in his opinion, it was in the handwriting of Judge Holt, he replied:

"There is a certain resemblance between this and the handwriting of Judge Holt, but I am inclined to believe he never wrote this paper." He went on to point out details upon which he based his opinion. In four cases, a letter was made to resemble a capital, when it was not, and the word "will" was spelled with a small "w," and the word "testament" with a capital "T." This was at variance with Judge Holt's precise methods.

Under a rigid cross-examination by Mr. Darlington, witness said his interest in the case was due to his having been a personal friend of Judge Holt, and, though he had been in consultation with Messrs. Jere Wilson and Washington Holt, he expected no fee for his services.

Asked as to the chief characteristics of Judge Holt's style of composi-

tion, he said it was a little formal and a little florid. It could not be called verbose, although he illustrated a good deal. Mr. Darlington then handed witness a letter, dated December 9, 1876, addressed to U. S. Grant, which Col. Winthrop thought was in Judge Holt's handwriting. Mr. Darlington pointed out a superfluous comma, and questioned witness concerning it, whereupon Mr. Worthington objected, and was sustained by the court. Witness identified another document, dated September 29, 1873, as being the handwriting of Judge Holt, and then Mr. Darlington asked:

"Do you wish to be understood as asserting that Judge Holt never omitted commas?" "No, but his style was based on the old school, and he seldom omitted them," replied Col. Winthrop.

Witness expressed the belief that four or five lines on the bottom of Luke Devlin's discharge from the army were in Judge Holt's writing.

The will of 1848, subsequently revoked, was then shown him. He said that, while it was written fifteen years before he ever met Judge Holt, it appeared to be in his writing. Mr. Worthington objected to Mr. Darlington cross-examining the witness concerning the will, until it was placed in evidence, which Mr. Darlington proceeded to do by reading it to the jury. It was rather a lengthy document, prepared with great precision, making express provision for his various relatives and dwelling at length upon the disposition of the slaves which were to be emancipated. It also left \$1000 to the American Tract Society. The testator also recommended Kentucky State bonds, in which some of the legacies were to be paid, as "a safe and most convenient form of investment." His brother was appointed executor and the will bore date of April 9, 1848.

Mr. Darlington then proceeded to cross-examine the witness as to the chirography in the will of 1848

and the alleged will of 1873, pointing out all sorts of dots, dashes, and commas, which the witness attempted to explain, and which resulted in opening up a broad field for speculation as to whether Judge Holt would have used a small w for will and a capital T for testament, or a small c for city and a capital W for Washington, or a small e for Episcopal and a capital c for church.

Col. Winthrop, on redirect examination by Mr. Worthington, testified regarding his last interview with Judge Holt, and the fall which resulted in his death, and after the wrapper on the will of 1848 had been placed in evidence.

He resumed the stand as soon as court reconvened at 1 o'clock, but Mr. Worthington introduced a conveyance of a farm in Kentucky from himself to his niece, Amanda Holt, and Col. Winthrop was released. The document was dated subsequent to the date of the alleged will, and in connection with it, a letter from Judge Holt, to his nephew, dated May 31, 1884, was read. The letter was one of instructions as to filling out of the conveyance, and went very carefully into the most minute details, showing that the writer had the utmost regard for the technicality of the law.

The greatest interest had been manifested in Col. Winthrop's testimony at the beginning, especially by Miss Throckmorton, who occasionally raised her eyebrows in surprise, but it became monotonous in its sameness after a time, and there was a general sigh of relief when *Francis G. Saxton* was called. His testimony, however, was substantially a reiteration of what Col. Winthrop had testified to. He has been a clerk in the Judge-Advocate-General's office since September 2, 1869. Luke Devlin was there at that time, and went out, according to witness' recollection, before Judge Holt's retirement. The witness told about his duties and his familiarity with the handwriting of Judge Holt.

He showed the jury the position in which the Judge held his pen in writing, and added: "He almost invariably began by putting the pen down squarely on the paper, and wrote altogether with his fingers, without any arm movement." The witness stated that he had hunted with Mr. Dobson, another clerk in the office, for some of Judge Holt's indorsements on reports, and these indorsements were offered in evidence by Mr. Worthington. Several of them were dated during the month of February, 1873, the date of the alleged will.

Upon the alleged will being handed to him, and in reply to the usual question, witness said: "At the first glance there is something about this paper that is very like Judge Holt's writing, but on looking at it more closely the similarity disappears. In my opinion it is not Judge Holt's writing or signature." Further on he said he did not think it was Judge Holt's language, and the differences in detail were brought out under close examination by Mr. Darlington.

Replying to a question by Mr. Darlington, the witness said: "In the writings of Judge Holt, about the date of the alleged will, he commenced the J in his signature with a dot, made by putting his pen down on the paper before he began to write. Then the mark running across the foot of the J to the top of the H in the will is quite different from any of his writings about that time. In all that I have been able to find about that time, this line starts down and then comes up again, almost making a D out of the J. This line (pointing to the will) is almost straight."

Mr. Saxton proved a most valuable witness for the heirs-at-law. Just as Mr. Darlington was preparing to confront him with the will of 1848, in which these characteristic "jabs," as he called them, were lacking, he went on to explain that there was a great difference in the

handwriting between the two periods. Mr. Darlington then handed him Luke Devlin's discharge, and asked:

"Do you find these jabs here?"

"Yes, sir, you will find it there very distinctly," was the reply.

Various other writings of Judge Holt were shown the witness, all of which he was inclined to think were written by the Judge. He stated in answer to Mr. Darlington's question that he searched the files for Judge Holt's writings at the request of some of the attorneys on each side, including Gen. Butterworth.

Mr. Darlington wanted to know if it was not true that Gen. Butterworth had found signatures of Judge Holt in the Judge-Advocate-General's office, in which the mark on the J was different, but the witness did not remember. Years ago he said the loop of the J was different, but at the time of the alleged will that peculiar feature was there.

The next witness called was a Miss *Willie Greene Sterett*, a dainty little miss of thirteen. She replied to all questions without the slightest reserve, and sometimes the innocence of her answers brought smiles even to the faces of the litigants on either side, who had been sitting there all day absorbed in the evidence, making an occasional sarcastic comment when it did not meet with their approbation.

She first told about her brothers and sisters, and then what she knew about the relations of her own family with Judge Holt.

"Did you live near Judge Holt?" asked Mr. Worthington.

"Well, he lived on New Jersey avenue and we lived on H street; I don't know whether you call that near."

"Did you go to see him often?"

"Not so very often; we were afraid we might bother him."

"How did he treat you and your sister?"

"Oh, very nicely, always."

"Can you tell us anything he ever did to show he was nice?"

"Well, he used to take us on his knee, and he always gave us something to eat. Yes, and he gave us money, too; sometimes 50 cents, sometimes a dollar, and once he gave us \$2.50 apiece."

She then told how Judge Holt used to come to her parents' house in his carriage and take herself and her mother and her sister driving.

"How did he treat your mother?" asked Mr. Worthington.

"Well, of course, he didn't treat her like he did us, but he was very nice."

Judge Holt, she said, had always treated the different members of her family with the same kindness, and she had never observed any coolness between them. She was at the Judge's house a few days after his death, and while there she had found a piece of paper in one of the closets in the Judge's room, while she was looking for postage stamps.

"Oh, you are a stamp fiend, are you?"

"No, not now," hastily explained the child, as if she had been accused of a dreadful crime.

"How large was the paper?"

The little witness indicated with her hands that it was about $2\frac{1}{2}$ inches square.

"Could you read what was on the paper?"

"Why, of course," with a rising reflection and an injured air.

Mr. Worthington here explained, in view of anticipated objection, that this particular piece of paper had been placed in a valise belonging to one of the heirs, and the valise was stolen, while he was on his way from the South to Washington. The papers were burned by the thief.

The little girl then added that the paper was inscribed: "Will, January 1, 1886," and that there were two names on it, one of which was Roundtree, without any initials, while the other could not be deciphered.

Cross-examined by Mr. Darlington, witness said she did not remember whether she was living at Judge Holt's at the time she found the paper.

"I know I was looking for stamps," she said, "and I knew he had plenty of them. They all looked the papers over and were through with them."

"Who had looked them over?"

"Why, the heirs, I suppose; they were all trying to find the will."

"Where did Judge Holt keep his papers when he was alive?"

"I couldn't tell you to save my life."

Little Miss Sterett bore up well until the ordeal was over, but when she got back to her mother's side, she began to cry. She is attending school at Staunton, Virginia, and was put on the stand yesterday in order to allow her to go back to her studies.

Emma Board, who had been a servant in the family of Washington Holt, at Holt's Bottom, Kentucky, next testified. She said that Judge Holt visited his nephew every spring and fall until his health got bad. He had always treated the members of the family very kindly, and frequently sent the two daughters presents.

At one time, when she was fastening the Judge's collar, he had told her he would not live long, and advised her to remain in the family of his nephew, and she would be taken care of, as he had provided for them in his will.

She did not remember the date when she had last seen Judge Holt, but it was not long before she left the family of Washington Holt, a little more than three years ago. Her testimony was not affected by cross-examination.

William H. Dobson, another clerk from the office of the Judge Advocate-General, did not think the will was written or signed by Judge Holt. Cross-examination brought out that he had never seen Judge Holt write, and could only base his opinion from the fact that

he frequently came in contact with his signature. Mr. Dobson fell upon the absence of the dot before the J and the wrong direction of the loop, as promptly as had his predecessors. But he had the additional honor of discovering a new distinction. The o and the l in Holt were not connected, and in all of the Judge's signatures he had ever seen these two letters were joined. The same array of authenticated writings of Judge Holt were shown him, which he duly identified as genuine. He swore there were no signatures in the Judge Advocate's office in which the o and l were not connected.

But there were more clerks in the Judge-Advocate-General's office, and the next one to appear was Mr. *Albert L. Smith*. He did not think it was Judge Holt's writing, either. The authenticated documents were Judge Holt's. He knew Luke Devlin, but had never observed any relations between him and Judge Holt, except such as would naturally arise from the association of Judge Advocate and messenger.

"Have you any recollection of Devlin's keeping an autograph album?" asked Mr. Worthington, as the occupants of the court room craned their necks in anticipation. "Yes."

"What use did he make of it?" "He was getting the signatures of people of note."

"Do you remember anything concerning any of the signatures in particular?" "I do remember his coming to me with a signature on a piece of paper and asking whether it was not pretty good for President Lincoln."

"What else did he say?" Mr. Darlington here lodged an objection, which was promptly sustained by the court. After Mr. Darlington had cross-examined the witness briefly regarding the characteristics of Judge Holt's signature, court adjourned for the day.

Tuesday, May 26.

The deposition of *Robert S. Holt*,

of Tacoma, Washington, a nephew of Judge Holt, was first submitted by Mr. Worthington for the heirs-at-law. The deponent simply testified to the warm relations existing between his father and Judge Holt, while a large number of letters from Judge Holt to deponent accompanied the deposition, to show that these friendly relations were continued with the son. The letters were all read after Mr. Darlington's objections had been overruled, and they evinced the most affectionate regard for the nephew, and the deepest interest in all that concerned him.

After the reading of these letters, Mrs. *Iglehart*, sister of the deponent, Robert S. Holt, was sworn. She testified to her first meeting with her uncle, Judge Holt, while she was on her wedding trip in this city in 1874. She was here again ten years later, and was entertained at Judge Holt's house. She had corresponded with Judge Holt both before and after her marriage, and the correspondence was placed in evidence. There was a large number of letters, extending over a period from early in the seventies until as late as 1887, and the reading of them occupied considerable time. All were couched in the most affectionate terms, and those written about the time of her marriage contained advice as to how to make her husband happy. All of them were precise, going into the most minute details even down to seemingly trivial subjects. They sounded like the outpourings of a lonely old man of refined and delicate nature, weary of life, yet anxious to strew happiness in the pathway of those in whom he took an interest. One which he wrote in reply to the announcement of the arrival of a young stranger in the *Iglehart* family, was especially touching. In another letter he said: "There is no prospect of my years of isolation terminating short of the grave."

As Mr. Worthington came to the

close of each letter, after "your affectionate uncle, J. Holt," he would add: "With a jab to the J." At last he omitted the final clause, and Mr. Darlington said:

"Wait a moment, Mr. Worthington, you haven't told us about the jab to the J."

"No, sir," thundered Mr. Worthington, "because there is no jab. That letter was written about the time he stopped making jabs, and the man who forged that will did not know it."

He then proceeded with the reading of the letters. In congratulating the *Igleharts* upon the arrival of a second son, and referring to the announcement that the boy had been named Joseph Holt, the writer said he hoped he had been named after Judge Holt's grandfather, the head of the house. "His record is complete," the letter read, "and can never be changed. I do not think it wise to name children after the living, whose records are unfinished. In this respect man is like a snake; he can never be accurately measured until he is dead."

Upon learning that the child had been named after himself, Judge Holt wrote entreating its mother not to burden him with the name of Joe. He thought nicknames were coarse vulgarisms. He finished by telling the parents to teach their children to love nature, to regard life as something sacred, and to love flowers as the smiles of God.

In concluding his examination, Mr. Worthington handed Mrs. *Iglehart* the alleged will, and asked whether, in her opinion, it was the writing of Judge Holt.

"I shouldn't think it was; it doesn't look familiar at all."

Mr. Darlington began his cross-examination by asking: "Are you prepared to point out any particular dissimilarity?" at the same time handing her the will of 1848.

"I cannot say anything about the

details," responded the witness. "You are trying to confuse me, and I am not going to have it." All effort to get the witness to indicate any points of dissimilarity failed.

After recess Mr. Darlington read a number of letters from Mrs. Iglehart to Judge Holt, complaining that he had never been to visit her, and also another letter under date of April 3, 1887, in which she told him she was grieving because of a piece of property near her home in Kentucky which was worth \$20,000, and which could be bought for \$10,000, that amount being \$3000 more than they could raise. The letter added that the place would be nice for the children.

"Did you get a reply to that letter, or did you ever hear from Judge Holt afterward?" asked Mr. Darlington.

"I never wrote with any intention of his getting the property for us," replied the witness, "and I don't remember whether I received any more letters from Judge Holt." On redirect examination, however, Mr. Worthington placed in evidence correspondence during the year 1888.

The next witness called was *Martha Scott*, a colored woman who was a servant in Judge Holt's house from 1881 until the time of his death. After she had told about the other servants employed at the house, and described the arrangement of the rooms, Mr. Worthington asked:

"Are you acquainted with the elder Mrs. Throckmorton, Maj. Throckmorton's mother?" "Yes."

"Did she ever call at Judge Holt's house?" "Yes."

"What happened when she called there?" "He always refused to see her."

"How often did she call?" "Sometimes about once a week. She used to give me her name, and when I went up and told the Judge he always told me to say he wouldn't see her. She was an old lady and I tried to treat her as nice as I could,

so I used to tell her the Judge couldn't see her; then she used to say 'poor thing,' and go away."

"Did you keep on taking her name up after the Judge told you he wouldn't see her?" "Well, after a while, when the Judge told me not to bring her name up any more, and she used to insist on my taking it up, I used to pretend to go up, and then go back and tell her he wouldn't see her."

"Did you ever see Maj. Throckmorton or his wife?" "Maj. Throckmorton came there once, but I did n't know him; he called there afterward with a stout lady. The Judge sent word down he wouldn't see them."

The witness testified that this was about four years before Judge Holt's death. She stated that Miss Josie Throckmorton, the Major's daughter, and one of the legatees, also called to see Judge Holt. The latter saw her the first time in the parlor. She called again one evening when Mrs. Washington Holt and her family were visiting the house and Judge Holt saw her in the dining room.

"I did not see her again," continued the witness, "until after her father got into trouble. When she called again Judge Holt wouldn't see her, but she asked for Ellen, the cook, and Ellen went up and persuaded Judge Holt to see her. Some time after that a lady called when Judge Holt had gone to Willard Hall to see a doctor, and when Judge Holt came back he said it was Miss Josie Throckmorton."

"Did Judge Holt ever give you any instructions regarding the family besides the elder Mrs. Throckmorton?"

"Yes; he said he didn't want to see any of them; they were all enemies of his."

Witness, in response to questions, said Miss Lizzie Hynes, the other heiress under the will, had frequently visited Judge Holt's house, once with Mrs. Ray, and that the re-

lations between them were very cordial. She had never seen Luke Devlin, the person named as executor in the alleged will. Judge Holt's nephew, Washington Holt, and his wife and daughters also frequently visited the house, and the most cordial relations had always existed. Judge Holt could not have treated the daughters any better if they had been his own children. He always greeted them most heartily when they arrived and showed evidences of grief when they went away.

Judge Holt had always told witness that if anything happened to him, she was to at once telegraph Washington Holt, whose address he gave her on a card. In response to Mr. Worthington's question the witness said that once when Miss Mary Holt was visiting this city and was not stopping at Judge Holt's house, she used to call to see him about every other day and remain as long as two hours. At the time of one of these visits she was caught in a rainstorm with no wraps or overshoes, and Judge Holt was so much worried that he sent witness to where Miss Holt was stopping to find out whether she had reached home safely without taking cold. The members of Washington Holt's family were equally affectionate in their treatment of Judge Holt. Witness had also seen Mrs. Iglehart at Judge Holt's house, and the Sterett family had begun to come there as soon as they moved to this city. Among all of them the most friendly and cordial relations existed.

Mr. Worthington's examination took a mysterious turn at this point and gave the audience reason to hope for sensational developments, which, however, did not materialize yesterday.

"Where did Judge Holt do his writing?" "In his room."

"Do you know how many ink-stands he had on his desk?" "Only one."

"What color was the ink?" "Black."

"Did he do his own writing up to the last?" "No, he had one of the servants do it after his eyes got bad."

Witness then testified to the fact that at the time of the fall which resulted in Judge Holt's death she was away on a vacation. The fall was on a Wednesday and she returned in response to a summons. Judge Holt died on Saturday. Judge Holt had told her often to take charge of his watch and bunch of keys as soon as he died, and keep them until the arrival of Washington Holt, for whom she was to telegraph immediately, as his business was all in Washington Holt's hands. One day in the month of May before his death he rang the bell and told her to go upstairs and see if a flag in a certain trunk was moth-eaten. He said he wanted the flag wrapped around his body after death, and at the same time told witness that arrangements for his funeral were in his will, which would not appear until after his death. Judge Holt had often told her not to get impatient at being obliged to wait on him day and night, as she would be well rewarded in the end.

"Do you remember any conversation you had with him about a ladder?"

"Yes, he always used to lock the door on the inside, and he said that if he should die when we were not in the room, we were to get a ladder and get in his window, and I was to secure his watch and bunch of keys and keep them until Washington Holt arrived."

"During the last year of his life do you recall his being disturbed at any time during the night, and calling for the servants?" "No; except when he was sick he used to ring the bell."

"What keys were they which he kept referring to?" "A bunch of keys which he carried in his pockets."

He always kept the closets in the library and his desk locked."

"When he died, who got those keys?" "I took them and put them in my trunk and gave them to Mr. Washington Holt when he arrived."

"Did those keys ever pass out of your custody before that; or did you yourself approach the closets or desk to unlock them?" "No, sir."

"Was the flag wrapped around his body as he requested?" "Yes, sir."

"Did you tell his relatives that he had left a will in which arrangements for his funeral were mentioned?"

"Yes; I told Washington Holt, and gave him the keys as soon as he arrived. They searched all over the house for the will."

On being questioned further as to people who had visited the house, witness named a number of persons, and also told about Mrs. Throckmorton having sent Judge Holt some strawberries and cream, which the Judge had promptly sent back. No papers had been burned in the house after the death except some pamphlets. She saw the small piece of paper which Col. Sterett's little daughter had found, and had a copy of it made which she sent to Washington Holt.

Mr. Darlington then began his cross-examination. He was very particular about the exact location of the closets in Judge Holt's room, although he developed nothing important. He had the witness go over the list of visitors at the house again. This brought Mrs. Throckmorton up again. This time the witness said Mrs. Throckmorton came with a bunch of flowers, but Judge Holt sent word that he did not want them; that he had flowers in his own yard. The cross-examination brought out no new features. Mr. Darlington, too, asked the witness whether at any time there had been unusual noises in Judge Holt's room on any night, but the witness could not remember any. He also brought up the ladder inci-

dent, and wanted to know whether at Judge Holt's death they had to get into his room by means of a ladder. The witness replied that they had not. During the closing days of the Judge's illness she had remained in the room nearly all the time, and at his request had kept the door locked. Before that he used to lock the door himself.

Wednesday, May 27.

There was the usual large audience assembled when Mr. Darlington resumed his cross-examination of the colored servant, *Martha Scott*. After questioning her as to her duties at Judge Holt's house and her whereabouts both before and since her residence there, Mr. Darlington recurred to her statement that Judge Holt had issued orders that he would not receive members of the Throckmorton family, and asked:

"Did he not decline to see other persons besides the Throckmortons?" "Oh, yes; sometimes when he was not feeling well he would not see his best friends."

Mr. Darlington then questioned the witness closely as to the visits of Miss Throckmorton, and in connection with one of her visits, said:

"How did you know that Maj. Throckmorton was in trouble at the time of one of her calls, as you say?" "The Judge said so afterward."

"Now, did you ever hear him say Mrs. Throckmorton was his enemy?"

"Yes, sir; I don't know how many times. He said they bedeviled him and he didn't want to see them."

"Did you ever hear him speak unkindly of Miss Throckmorton?"

"No, sir."

"You never saw him kiss her?"

"Oh, no, sir," replied the witness in a surprised tone, amid a general titter, while Miss Throckmorton blushed a trifle.

Replying to further questioning concerning events about the time of Judge Holt's death, witness

testified that the Throckmortons were the only people that Judge Holt had given a general order not to admit. She had never heard Judge Holt say he would not allow Mr. Sterett in his room. Mr. Sterett had said his wife wanted to come and stay with the Judge constantly, but the latter had said he did not want her all the time. Judge Holt, she stated, was a most methodical man, and when he sent her to either of the closets for anything he was always able to tell her exactly where to find it. He had never sent her for papers of any sort. Asked concerning the funeral of Judge Holt, witness said she did not remember that any person who was present had to go back to his house and put on his ministerial robes, because no minister had been provided.

Mr. Darlington then came back to the visits of Miss Throckmorton, and it appeared that the witness had become somewhat confused concerning her last call. "A week or two before that," she said, "a young woman who was disguised called on the Judge. She wore an old waterproof, an old lady's bonnet, and a thick veil. She did not ring the bell, but knocked at the front door. She told me Judge Holt used to know her when she was a child, and when I told her he was out she stepped into the parlor and waited an hour and a half. I watched her close, because I thought it was queer, but she kept her veil on all the time, and I only saw as far as her nose as she was leaving. The next time a young lady called who looked something like the one that was disguised I asked her if she was not Mrs. Throckmorton's granddaughter. She said she was not, but she would not give her name."

Replying to Mr. Darlington, the witness said she did not know Ann Tully, who used to be Miss Throckmorton's maid. Mr. Worthington then proceeded to reexamine the witness, asking her whether she

knew Luke Devlin. The witness had testified on Tuesday that she did not, but yesterday Devlin was in court, and as Mr. Worthington pointed to him and asked the witness whether she had ever seen him, he stood up, and the witness answered that she had not. She added that she had never refused him admission at Judge Holt's house, although he might have called there without her knowing it.

Mr. Worthington also brought out the additional fact that the elder Mrs. Throckmorton called at the house after Judge Holt's death and asked to see the body. "I wouldn't let her in," said the witness, "and I told her Judge Holt had never wanted to see her when he was alive, so I was not going to take the responsibility of letting her see him without the consent of his relatives."

Dr. *F. R. Frazier*, of Philadelphia, a professor of chemistry and a well-known expert on handwriting, was then called. His testimony occupied the rest of the day, and was mainly technical. He had been professor of chemistry in the University of Pennsylvania and for twelve years professor of chemistry in Franklin Institute. He began investigating the question of disputed documents in 1878 in the Whittaker will case, and the following year took up the application of composite photography to the study of documents. He had written a number of pamphlets on the subjects. . . .

Dr. Frazier stated that he had had in his custody certain letters written by Judge Holt to his niece, Mrs. Iglehart, and had made the most careful comparisons between them and the disputed will. He proceeded to tell all about these comparisons, and nobody who heard him will dispute the assertion that they were thorough and in detail. He stated that he had taken certain lengths between salient points in twenty-four signatures, and measured them for comparison with the signature to the

alleged will. The results he had tabulated on a large sheet of paper, which he subsequently read, and the measurements embraced apparently every possible point of distinction.

The witness answered some preliminary questions by Mr. Darlington, which threw some light upon his method of procedure.

"In simulating writing," he said, "the pictorial effect appeals at once to the eye, and if a person is experienced, he can make a very good imitation which, to the general eye, would seem a good reproduction of a signature. Consequently the points on which to test the genuineness of a signature are not open to the eye and cannot be easily seen."

A full description of the method of taking composite photographs of a number of similar objects was then given for the benefit of the jury, Dr. Frazier explaining that he had so photographed the twenty-four signatures to Judge Holt's letters.

By the time the witness had finished his description of the method of taking composite photographs, which method he had applied to handwriting, a recess was taken, and when court reconvened, he began to give the results of his work. The average length from the stem of the "J" to the stem of the "t," in the twenty-four signatures to the letter, he found to be seventeen and five tenths millimeters. In the composite photograph of these twenty-four signatures the distance was seventeen millimeters, while the distance in the signature to the alleged will was seventeen and five tenths millimeters. He gave at great length the results of other measurements, in some of which the differences were almost imperceptible, while in others they were considerable. While all this was going on Judge Bradley closed his eyes and apparently took more than forty winks, while the spectators yawned, and some of them took their departure. . . .

When all the measurements had

been gone over, Mr. Worthington asked: "Now, from these measurements which you have made of different parts and angles of these twenty-four signatures and of the signature to the disputed will, what do you say as to whether or not the hand which wrote these twenty-four signatures wrote the signature to the disputed document?" A. "I believe that the signature to the document is not by the hand which wrote the twenty-four signatures to the letters of Judge Holt."

Q. "Why?" A. "I believe it because, although the resemblance in measurement was great in such portions as could be determined by the eye, in those parts which could not be easily determined by the eye the differences are greater than I have hitherto found compatible with genuineness of a document."

"In your experience what have you found to be the value of such comparisons as you have made of things not to be seen by the eye?"

"In the few cases in which the matter has been placed beyond all dispute by the final determining with certainty of the case, I have found in all cases that I can recall where such comparison was made that the characteristics observed of ratio and angles which are not visible to the eye are those which remain most constant, and I may say that the same thing is true in regard to changes in the handwriting of a man from youth to old age, or from sickness to health."

Dr. Frazier testified to various general differences which he had observed in the writing in the will and the authenticated writing of Judge Holt. He then said, referring to the will: "In my opinion the pen which wrote this document was a steel pen, held in such manner that the hollow of the pen was inclined to the right rather than toward the person; that the stroke was heavy and the pen under greater control than in the case of the undisputed writings of Judge Holt."

Mr. Worthington asked whether in the opinion of the witness the body of the will was written by the same hand as that which wrote the letters, and the reply was: A. "I believe that the body of the alleged will was not written by the hand which wrote the genuine letters. I have personally no doubt about it."

The cross-examination was undertaken by Gen. Butterworth.

Quite a lengthy discussion resulted as to the statement of the witness that the will was in two fragments when he first saw it, and Gen. Butterworth tried to get his opinion as to whether it had been cut or worn into two pieces, calling his attention to a letter J which crossed the line of separation. Witness said the J could not have been more perfect if it had been written when the paper was whole. In reply to a direct question as to whether the document could possibly have been prepared on two separate pieces of paper, he replied:

"I can only say that I believe it to be possible that this was done. The fact that the tail of the J crosses the line is strong evidence that it was not done, but the fact that the ink stains extend below the line and not above the t is strong evidence that it was." He went on to explain that there was slight evidence of stains above the "t" in Holt, but it seemed to be too high to have come from the ink in the signature.

Gen. Butterworth wanted to know whether scorching the paper would not have had a tendency to make it break, particularly upon folding it, and the witness replied that the paper would probably have broken, but not in so straight a line. Judge Bradley asked whether his microscopical examination had disclosed whether the paper was cut or worn in two, but witness was not able to answer positively. He said it looked to him too smooth for a break, and proceeded to examine it again under

the microscope, but without further developments.

The witness rather resented some of Mr. Butterworth's questions, and said very emphatically that it was not his desire to make Judge Holt's signature out to be twenty-three millimeters long when it was only twenty-two; that he didn't care a straw which side won the case, and only wanted to present the facts as he found them.

"Then you would be surprised to find another expert going over the same ground and differing with you entirely?" A. "Not at all."

Thursday, May 28.

When the case was resumed yesterday morning Gen. Butterworth continued his cross-examination of Dr. Frazier, and tried hard to upset all his scientific theories and explanations by a series of questions. Time and time again he seemed to have the witness concerned, but every time the latter came up smiling with a new theory, opening up still another broad field for scientific investigation. Nobody understood what was going on, with the possible exception of the witness, but Gen. Butterworth stood his ground, and looked wise until the last moment.

At one time, after propounding a question to which the suave witness replied in the negative, Gen. Butterworth ventured the remark:

"But that is certainly the logic of your position." "I beg your pardon, but it is neither logic nor is it my position." And then came another theory which made the preceding ones appear like simple addition.

The question whether the will was written on two separate and distinct pieces of paper was brought up again, and after it had been discussed at considerable length again, Judge Bradley asked the witness:

"I wish you would state, from your examination of the line between the upper and lower sections of the paper, whether the paper was separated before it was pasted on the

backing or otherwise." "I believe there were two pieces before it was pasted on the backing."

"Have you any reasons for this statement?" asked Gen. Butterworth.

Had he? Well does Gen. Butterworth know it now. He had fifty, and every one of them involved fifty minor ones. They all hinged on the fibers of the paper, which did not seem to interlock. There were all sorts of theories about the effect of moisture, and heat, and paste, and folding, and handling upon these fibers, and after going over them the witness looked calmly at Gen. Butterworth as if to bid him bring on his next interrogation.

The General mildly suggested some slight possible discrepancy, and after disposing of it in about three columns of agate, Dr. Frazier added:

"I will just state one thing which I think will explain what you are trying to get at." "But I know what I am trying to get at," gasped Gen. Butterworth in frantic despair.

Then followed a long argument, in which Judge Bradley took a hand, as to whether Judge Bradley meant that paste was to be "put" on the paper or "dropped" on it, and when it was finally straightened out, Gen. Butterworth groaned: "That's all, doctor," and sank helplessly into a chair as the court took a recess.

Mr. Worthington brought up the deposition of *Robert S. Holt*, a nephew of Judge Holt, after recess, and read such portions as were not touched upon when it was first presented. Deponent related all his personal history, and told how he began to correspond with Judge Holt. He had at first felt a trifle bitter toward him for allowing feelings concerning the Civil War to interfere with his regard for the nine children of his brother, but felt more kindly disposed toward him after they began to correspond. He had no reason to cultivate his

uncle's friendship, and the latter made all the advances. Replying to cross interrogatories, deponent stated that in 1873 he was a boy living at Evansville, Indiana, and had never met his uncle. He felt that if his uncle's indifference grew out of his feelings over the war, he had no concessions to make himself. He had always felt that his mother should have received counsel and advice from her husband's brother, being left a widow with nine children, eight of them under twenty-one. Deponent had always been entirely able to take care of himself, and while he may have written to his uncle regarding his material welfare, it was with no idea of receiving assistance, as there would never have been any excuse for its being offered. If any such interpretation was put on any of his letters, it was unjust and improper.

After the reading of the deposition *George H. Johnson*, a negro, Secretary Carlisle's butler, and apparently the product of the "old school" himself, was called. He was coachman and general servant at the Holt residence from 1878 until 1884. His testimony gave a slight hint as to the difficulty between Judge Holt and Mrs. Throckmorton, the elder. He knew Mrs. Throckmorton, and until about 1880 Judge Holt, he said, used to go and see her, but about that time they had a falling out.

Q. "Did it have any relation to a visit Judge Holt made away from home?" asked Mr. Worthington.

A. "Yes; he had been away in Kentucky, and when he came back he went over to see Mrs. Throckmorton. When he came back he asked me if I had been waiting on Mrs. Throckmorton during his absence. I told him yes, and he said, 'Well, I never want you to wait on her any more, and never do I want you to allow her to come on my premises.'"

Q. "Was he in his ordinary frame of mind?" A. "He wasn't a man

to be out of his mind, but he seemed to be quite angry."

The witness explained that during Judge Holt's absence from home Mrs. Throckmorton used to have the use of the carriage. Mrs. Throckmorton used to call at the house afterward, but Judge Holt would never see her.

The witness knew Maj. Throckmorton by sight, but did not know his wife. He saw the Major at the house once after the difficulty between the Judge and Mrs. Throckmorton. He had also seen Miss Josie Throckmorton and her brother at the house when she was quite small and about a year after the quarrel.

Q. "What happened when they came to see the Judge?"

A. "I went up and told him they were there, and he told me to tell them to get away from there, that he would not see them. When I told them what he said they would sometimes play around the house for two hours afterward. Judge Holt told me afterward that they were enemies of his and he didn't want to see any of them."

The witness stated that Mrs. Throckmorton used to come about once a week after the trial for six or eight months, and after that only once in a while. The rest of his testimony was practically the same as that given by Martha Scott. He knew Miss Hynes, Washington Holt and his family, and Mrs. Iglehart. They had all stopped at Judge Holt's house and were treated with every possible consideration. He had never seen or heard of Luke Devlin. Judge Holt used to visit his nephew, Washington Holt, and when his relatives visited him he took his meals with them in the dining room, though at other times he took them in his bedroom. He also knew Mrs. Briggs. He had driven her and Judge Holt to the White House once while Mr. Arthur was President.

Mr. Darlington subjected the witness to a rigid cross-examination, trying hard to ascertain the dates

of the different events which the old servant testified to, but without success. He could only trace one event from its connection with another, and nothing could shake him. Mr. Hayes was present when he first went to work for Judge Holt, and he used to drive the Judge around to see Mrs. Briggs.

Mr. Darlington proceeded to question Johnson about an alleged interview he had with a reporter in Franklin Square.

Q. "Didn't you tell this reporter that Judge Holt had found out while he was in Kentucky that Mrs. Throckmorton had abused Mrs. Washington Holt?" A. "I told him it was reported that was the case."

Q. "How did you find that out?" A. "At the house."

Q. "In this Franklin Park interview did you not say that the Judge had said that not a dollar of his money should go to any of his people who had abused him for his loyalty in the war?" A. "No, sir; I don't remember Judge Holt making such a remark."

Q. "Did you tell the reporter that you did not know of any heirs except Washington Holt?" A. "Yes, sir; I had never heard of any others."

He went on to state that he did not tell a reporter that he knew something would be left to Miss Hynes, and that he first knew of the Sterett family during the latter part of Judge Holt's life.

Q. "After the Judge's death how long was it before the Holt heirs got into communication with you?"

A. "I never heard or saw anything of them until about two weeks ago."

Q. "Did you tell the reporter they were surprised not to find a will?" A. "Yes."

Johnson denied having said that the house had been ransacked by any one, however. He did not remember having had a conversation with a *Post* reporter, and did not remember saying that he was sent

for by Mrs. Washington Holt, who expressed surprise at not finding a will. This concluded the cross-examination, and in response to Mr. Worthington witness said that while Mrs. Washington Holt was ill at Judge Holt's house he had taken money to the physician who attended her, and that the money came from Judge Holt.

Another of Judge Holt's servants, *Ellen Foster*, an elderly colored woman, concluded the testimony for the day. She was in his employ from 1881 until the time of his death. Her testimony was the same as that given by the other servants, differing only in detail. She told of the elder Mrs. Throckmorton's visits to the house, and stated that upon one occasion she had got into trouble for letting her in.

Q. "Will you tell us whether Mrs. Throckmorton ever saw Judge Holt when she called?" asked Mr. Worthington. A. "No, he told me several times not to bring her name to him any more, but I always carried it."

The witness did not know Maj. Throckmorton and failed to recognize him when he stood up in court. She remembered Miss Throckmorton's visits and repeated the story of her visit there when Judge Holt refused to see her. After Martha Scott had brought the message back Miss Throckmorton had asked the witness to go to Judge Holt and tell him she only wanted to see him five minutes, and he had then consented to see her. Miss Throckmorton looked distracted and when she came down she looked as if she had been crying. The witness had heard that it was some trouble about her father.

The story of the veiled lady was also told by the witness, but she threw no more light on her identity than did Martha Scott. She also knew Washington Holt and his family, Miss Hynes, Mrs. Iglehart, and the Steretts, who were all well

treated when they visited Judge Holt's house, but Luke Devlin still remained unidentified and unheard of. She stated that Judge Holt was very much worried at the time Washington Holt received his second stroke of paralysis, but he had remarked that the family was well provided for. Col. Sterett, she said, used to come into the house without ringing the bell, walking through the kitchen. She used to see him and Judge Holt sitting in the yard talking and laughing, but whether they were laughing at Col. Sterett's jokes or Judge Holt's she did not know.

The direct examination of the witness had not been concluded when the case was adjourned until Monday morning, owing to the fact that Saturday is a holiday. Judge Bradley cautioned the jury not to discuss the case or to permit others to discuss it in their presence.

Monday, June 1.

Unless the jury in the Holt will case are the most skeptical twelve men on the face of the earth they must be pretty well convinced by this time that Judge Holt entertained the most affectionate regard for his relatives from about the time he is supposed to have made the mysterious will disinheriting them one and all up to the hour of his death. There is not a shadow of doubt about it in the minds of any of the spectators who have been watching the progress of the trial, because, outside of the testimony of Dr. Frazier, the expert in handwriting, the entire efforts of counsel for the heirs-at-law have been directed toward proving this fact. A dozen witnesses have sworn to it, and scores of letters written by Judge Holt to his nephews and nieces and their children have been read, all breathing love and affection. In fact, from the tone of these letters it would appear that the old gentleman devoted the greater part of his life during the later years to making his relatives happy.

The examination of *Ellen Foster*, who was one of Judge Holt's servants, was concluded yesterday. Ellen Foster went over in detail the same old story regarding the visits of Judge Holt to Kentucky, the visits of the family of Washington Holt to this city, and of the affectionate relations existing between Judge Holt and his family. She remembered the finding of the piece of paper by Willie Sterett containing the words: "date of will, January 1, 1886," and the name Roundtree. She had never heard of any one by that name, and had never seen the alleged will.

Mr. Darlington cross-examined the witness, questioning her particularly regarding the people who were admitted to Judge Holt's room during his final illness. Nothing of importance was developed, however. She stated on redirect examination that from what she saw she was sure Judge Holt thought more of the members of Washington Holt's family than any one else in the world. He had special cups and saucers reserved for them, which nobody else was permitted to use.

Mrs. *Margaret E. Bowmer*, a daughter of Judge Holt's sister, Mrs. William Sterett, and sister of Col. Bill Sterett, was next called. She had known Judge Holt since she was a child, as he frequently visited at her mother's house. With the exception of Judge Holt all the members of her family were Southern sympathizers in the late war. No unpleasant feelings resulted, however. In 1878 or 1879 she had a misunderstanding with Judge Holt and did not see him afterwards. A number of letters which she received from Judge Holt prior to that time were introduced. Mr. Darlington lodged an objection, but it was overruled. The letters were written in an affectionate tone, evincing a tender interest in all the members of the family. Mrs. Bowmer stated that in 1876, while on her way to the Centennial celebration she had

stopped at Judge Holt's house. Mr. and Mrs. Washington Holt were in the party, and while the ladies stopped at Judge Holt's house Mr. Holt and her husband stopped at a hotel. She was shown the alleged will, but did not think Judge Holt wrote it.

On cross-examination the witness was asked by Mr. Darlington the cause of the difference between her and Judge Holt, and she replied that it was owing to some criticism which he understood she had made concerning him. Mr. Darlington then produced a letter in Mrs. Bowmer's handwriting addressed to Judge Holt, and dated subsequent to the misunderstanding. The writer sought a reconciliation with Judge Holt, but in response to a question she stated that she had received no reply.

The next witness examined was Miss *Mary Holt*, a daughter of Washington Holt. She was born in 1871, and first saw Judge Holt in 1876, when he visited her father's house. In 1879 she came to Washington with her parents, and stayed at Judge Holt's house for several months. She felt just as much at home here as she did in her own house. Judge Holt frequently took her out driving, and also to the theater. He gave her fruit and candy; in fact, he never went out without buying her something. She visited Judge Holt with her parents in 1881 and 1882. While here her mother was too ill to walk, and was carried up and down stairs every day. Dr. Busey attended her. Again, in 1886, while on her way to Philadelphia to school, she stopped at Judge Holt's house. He was very kind to her, and told her that if ever she wanted money, not to write to her parents, but to ask him for it. She never thought of asking him for money, however. While at school Judge Holt wrote to her about every two weeks, and she spent the following Christmas at his house with her parents. She

saw him every year after that, but when she was here in 1893, he was very ill, and she did not stop at his house, but visited him every other day at 10 o'clock, remaining until 1.

Replying to Mr. Wilson's question, the witness said Judge Holt used to supply her with what money she needed, and added: "He used to beg me to go down town and buy things I liked, but I did not do so until he insisted on my buying a ring or a pin. He was not very much pleased with it because he said it was not such a pin as he wanted me to have; I only bought a small one."

Q. "What connection did he have with your going to school?" A. "Well, Uncle always paid my school bills; he said I could either study here or in Europe, but my parents did not want me to go to Europe."

After the witness had stated that Judge Holt had visited her father's house in Kentucky twice a year as far back as she could remember, Mr. Wilson asked:

Q. "What did Judge Holt do to beautify the place when he came there?" A. "Oh, he had the house built, besides summer houses and carriage houses and other things."

Q. "What, if anything, did he say he wanted done with the old homestead?" A. "I heard him say many times that he never wanted it to pass out of the family; that it was the only place he loved, and the only place that was home to him."

The witness then identified a number of letters written by Judge Holt to her father, and after Mr. Darlington's objection had been overruled they were read. One of them inclosed a draft for \$50, which Judge Holt asked to have distributed among the servants as his Christmas present. Another contained \$200 toward a monument which had been erected in the family burying ground.

Judge Holt's letters to the witness were also read. She was only a child when the first were written,

and they were such letters as would interest a child, telling her about his cats and dogs, and about his pear tree, which was loaded with fruit. In one he told her she ought to clear a place in the snow every morning and feed the birds. Later on the letters were in a more serious tone, congratulating her on her progress at school. One was in answer to a letter in which the witness had told him about a heron her father had shot, and over which the Judge seemed to have grieved. He said: "Do not you think it would have been far more beautiful skimming over the lake or wading with its long legs in the water, than lying bloody and dead? Beg your father not to use his gun again in that way." In still another he referred to sending them various articles, among other a brick from Mount Vernon. He added: "It is undoubtedly an English brick, for at that time bricks were not made in this country."

A letter he wrote to her upon the occasion of her visiting Niagara asked her to purchase souvenirs on the visit to "the value of the inclosed bill."

Q. "How much was that?" asked Mr. Worthington. A. "Twenty-five dollars."

There was a general titter, and Gen. Butterworth made notes on a tablet in front of him.

Q. "He sent you more than one bill, then?" suggested Mr. Worthington. A. "Yes, I presume he did."

In another communication he called his grandniece's attention to the fact that while her composition and spelling was generally very accurate in her last letter in speaking of "losing time" she had spelled the word "loosing." He advised her to refer to the dictionary and she would find that the two words were entirely distinct. He also called her attention to the fact that she spelled "stopped" with only one p. Again, he said, referring to the

general tone of the letters he received: "I have a great fondness for details; generalities, however glittering, do not satisfy me."

After all the letters to Miss Mary Holt had been read she was asked to identify a big batch of them addressed to her mother, and at this proceeding the spectators began to depart, leaving those interested the only occupants of the court room.

The various lawyers for the heirs-at-law took turns at reading the letters, hesitating and stumbling over the different phrases and making the operation doubly tedious, while Gen. Butterworth engaged himself in comparing the chirography of the will with that of some of Judge Holt's letters. The letters to Mrs. Holt began in 1876, and were affectionate in tone as the most tender and loving father could have written to his daughter. The writer evinced the deepest interest in the most trifling details concerning her welfare, and seemed particularly concerned regarding the health of his niece. A reference to a newly painted fence was rather amusing. He wanted to know how it looked, and added: "If it gratified you, it seems to me that you would have been likely to mention it in order that I might share your gratification." His love for his niece was forcibly illustrated in a letter which he wrote after being informed of her improved health. "My heart is singing a new song," said he, "and clapping its hands. Hallelujah in the highest is the only thing that will express it."

About this time Judge Bradley asked: "How many more letters have you there?" "About twenty or more."

"Do you propose to read them all?" "We appreciate, in introducing these letters to show the feeling Judge Holt entertained toward his relatives, the embarrassments which might result in leaving portions of them out, but we do not wish to consume more time than is necessary."

"There is a great deal in them," replied Judge Bradley, "that is neither important nor interesting, and I think you might read the passages bearing upon the subject, and give the other side an opportunity to look them over." An adjournment was then taken until 10 o'clock this morning.

Tuesday, June 2.

Most of the session was devoted to corroborating the testimony of previous witnesses concerning the affectionate relations existing between Judge Holt and the members of the family of his nephew, Washington Holt. It is possible that there may be a few more people in the world who were aware of the fact that Judge Holt loved his nephew and niece and grandnieces, and the utmost confidence is reposed in the ability of counsel for the heirs-at-law to ferret them out and place them on the stand to give the same testimony that has been given before at least a score of times. The reading of Judge Holt's letters occupied all of the morning session.

The letters were those written to Mrs. Washington Holt and her husband, and, like those which have preceded them, gave quite an insight into the character of the writer. In one of them he said: "The great desire of my life is that the dear old place shall be kept in our family from generation to generation. I hope that in 1911 you will celebrate the centennial of the settlement of our family in the Bottom." This referred to the old homestead at Holt's Bottom, the residence of Washington Holt. Many of the letters referred to drafts for various sums inclosed to defray the expenses of improvements. In one of Judge Holt's letters the significant sentence appears: "I am glad you are keeping your eye turned in the direction of that swindler, Ray, and trust that you will pursue him unsparingly now and always." Mr. Worthington was not disposed to read this passage, but, in consulta-

He always kept the closets in the library and his desk locked."

"When he died, who got those keys?" "I took them and put them in my trunk and gave them to Mr. Washington Holt when he arrived."

"Did those keys ever pass out of your custody before that; or did you yourself approach the closets or desk to unlock them?" "No, sir."

"Was the flag wrapped around his body as he requested?" "Yes, sir."

"Did you tell his relatives that he had left a will in which arrangements for his funeral were mentioned?"

"Yes; I told Washington Holt, and gave him the keys as soon as he arrived. They searched all over the house for the will."

On being questioned further as to people who had visited the house, witness named a number of persons, and also told about Mrs. Throckmorton having sent Judge Holt some strawberries and cream, which the Judge had promptly sent back. No papers had been burned in the house after the death except some pamphlets. She saw the small piece of paper which Col. Sterett's little daughter had found, and had a copy of it made which she sent to Washington Holt.

Mr. Darlington then began his cross-examination. He was very particular about the exact location of the closets in Judge Holt's room, although he developed nothing important. He had the witness go over the list of visitors at the house again. This brought Mrs. Throckmorton up again. This time the witness said Mrs. Throckmorton came with a bunch of flowers, but Judge Holt sent word that he did not want them; that he had flowers in his own yard. The cross-examination brought out no new features. Mr. Darlington, too, asked the witness whether at any time there had been unusual noises in Judge Holt's room on any night, but the witness could not remember any. He also brought up the ladder inci-

dent, and wanted to know whether at Judge Holt's death they had to get into his room by means of a ladder. The witness replied that they had not. During the closing days of the Judge's illness she had remained in the room nearly all the time, and at his request had kept the door locked. Before that he used to lock the door himself.

Wednesday, May 27.

There was the usual large audience assembled when Mr. Darlington resumed his cross-examination of the colored servant, *Martha Scott*. After questioning her as to her duties at Judge Holt's house and her whereabouts both before and since her residence there, Mr. Darlington recurred to her statement that Judge Holt had issued orders that he would not receive members of the Throckmorton family, and asked:

"Did he not decline to see other persons besides the Throckmortons?" "Oh, yes; sometimes when he was not feeling well he would not see his best friends."

Mr. Darlington then questioned the witness closely as to the visits of Miss Throckmorton, and in connection with one of her visits, said:

"How did you know that Maj. Throckmorton was in trouble at the time of one of her calls, as you say?" "The Judge said so afterward."

"Now, did you ever hear him say Mrs. Throckmorton was his enemy?"

"Yes, sir; I don't know how many times. He said they bedeviled him and he didn't want to see them."

"Did you ever hear him speak unkindly of Miss Throckmorton?"

"No, sir."

"You never saw him kiss her?"

"Oh, no, sir," replied the witness in a surprised tone, amid a general titter, while Miss Throckmorton blushed a trifle.

Replying to further questioning concerning events about the time of Judge Holt's death, witness

testified that the Throckmortons were the only people that Judge Holt had given a general order not to admit. She had never heard Judge Holt say he would not allow Mr. Sterett in his room. Mr. Sterett had said his wife wanted to come and stay with the Judge constantly, but the latter had said he did not want her all the time. Judge Holt, she stated, was a most methodical man, and when he sent her to either of the closets for anything he was always able to tell her exactly where to find it. He had never sent her for papers of any sort. Asked concerning the funeral of Judge Holt, witness said she did not remember that any person who was present had to go back to his house and put on his ministerial robes, because no minister had been provided.

Mr. Darlington then came back to the visits of Miss Throckmorton, and it appeared that the witness had become somewhat confused concerning her last call. "A week or two before that," she said, "a young woman who was disguised called on the Judge. She wore an old waterproof, an old lady's bonnet, and a thick veil. She did not ring the bell, but knocked at the front door. She told me Judge Holt used to know her when she was a child, and when I told her he was out she stepped into the parlor and waited an hour and a half. I watched her close, because I thought it was queer, but she kept her veil on all the time, and I only saw as far as her nose as she was leaving. The next time a young lady called who looked something like the one that was disguised I asked her if she was not Mrs. Throckmorton's granddaughter. She said she was not, but she would not give her name."

Replying to Mr. Darlington, the witness said she did not know Ann Tully, who used to be Miss Throckmorton's maid. Mr. Worthington then proceeded to reexamine the witness, asking her whether she

knew Luke Devlin. The witness had testified on Tuesday that she did not, but yesterday Devlin was in court, and as Mr. Worthington pointed to him and asked the witness whether she had ever seen him, he stood up, and the witness answered that she had not. She added that she had never refused him admission at Judge Holt's house, although he might have called there without her knowing it.

Mr. Worthington also brought out the additional fact that the elder Mrs. Throckmorton called at the house after Judge Holt's death and asked to see the body. "I wouldn't let her in," said the witness, "and I told her Judge Holt had never wanted to see her when he was alive, so I was not going to take the responsibility of letting her see him without the consent of his relatives."

Dr. *F. R. Frazier*, of Philadelphia, a professor of chemistry and a well-known expert on handwriting, was then called. His testimony occupied the rest of the day, and was mainly technical. He had been professor of chemistry in the University of Pennsylvania and for twelve years professor of chemistry in Franklin Institute. He began investigating the question of disputed documents in 1878 in the Whittaker will case, and the following year took up the application of composite photography to the study of documents. He had written a number of pamphlets on the subjects. . . .

Dr. Frazier stated that he had had in his custody certain letters written by Judge Holt to his niece, Mrs. Iglehart, and had made the most careful comparisons between them and the disputed will. He proceeded to tell all about these comparisons, and nobody who heard him will dispute the assertion that they were thorough and in detail. He stated that he had taken certain lengths between salient points in twenty-four signatures, and measured them for comparison with the signature to the

alleged will. The results he had tabulated on a large sheet of paper, which he subsequently read, and the measurements embraced apparently every possible point of distinction.

The witness answered some preliminary questions by Mr. Darlington, which threw some light upon his method of procedure.

"In simulating writing," he said, "the pictorial effect appeals at once to the eye, and if a person is experienced, he can make a very good imitation which, to the general eye, would seem a good reproduction of a signature. Consequently the points on which to test the genuineness of a signature are not open to the eye and cannot be easily seen."

A full description of the method of taking composite photographs of a number of similar objects was then given for the benefit of the jury, Dr. Frazier explaining that he had so photographed the twenty-four signatures to Judge Holt's letters.

By the time the witness had finished his description of the method of taking composite photographs, which method he had applied to handwriting, a recess was taken, and when court reconvened, he began to give the results of his work. The average length from the stem of the "J" to the stem of the "t," in the twenty-four signatures to the letter, he found to be seventeen and five tenths millimeters. In the composite photograph of these twenty-four signatures the distance was seventeen millimeters, while the distance in the signature to the alleged will was seventeen and five tenths millimeters. He gave at great length the results of other measurements, in some of which the differences were almost imperceptible, while in others they were considerable. While all this was going on Judge Bradley closed his eyes and apparently took more than forty winks, while the spectators yawned, and some of them took their departure. . . .

When all the measurements had

been gone over, Mr. Worthington asked: "Now, from these measurements which you have made of different parts and angles of these twenty-four signatures and of the signature to the disputed will, what do you say as to whether or not the hand which wrote these twenty-four signatures wrote the signature to the disputed document?" A. "I believe that the signature to the document is not by the hand which wrote the twenty-four signatures to the letters of Judge Holt."

Q. "Why?" A. "I believe it because, although the resemblance in measurement was great in such portions as could be determined by the eye, in those parts which could not be easily determined by the eye the differences are greater than I have hitherto found compatible with genuineness of a document."

"In your experience what have you found to be the value of such comparisons as you have made of things not to be seen by the eye?"

"In the few cases in which the matter has been placed beyond all dispute by the final determining with certainty of the case, I have found in all cases that I can recall where such comparison was made that the characteristics observed of ratio and angles which are not visible to the eye are those which remain most constant, and I may say that the same thing is true in regard to changes in the handwriting of a man from youth to old age, or from sickness to health."

Dr. Frazier testified to various general differences which he had observed in the writing in the will and the authenticated writing of Judge Holt. He then said, referring to the will: "In my opinion the pen which wrote this document was a steel pen, held in such manner that the hollow of the pen was inclined to the right rather than toward the person; that the stroke was heavy and the pen under greater control than in the case of the undisputed writings of Judge Holt."

Mr. Worthington asked whether in the opinion of the witness the body of the will was written by the same hand as that which wrote the letters, and the reply was: A. "I believe that the body of the alleged will was not written by the hand which wrote the genuine letters. I have personally no doubt about it."

The cross-examination was undertaken by Gen. Butterworth.

Quite a lengthy discussion resulted as to the statement of the witness that the will was in two fragments when he first saw it, and Gen. Butterworth tried to get his opinion as to whether it had been cut or worn into two pieces, calling his attention to a letter J which crossed the line of separation. Witness said the J could not have been more perfect if it had been written when the paper was whole. In reply to a direct question as to whether the document could possibly have been prepared on two separate pieces of paper, he replied:

"I can only say that I believe it to be possible that this was done. The fact that the tail of the J crosses the line is strong evidence that it was not done, but the fact that the ink stains extend below the line and not above the t is strong evidence that it was." He went on to explain that there was slight evidence of stains above the "t" in Holt, but it seemed to be too high to have come from the ink in the signature.

Gen. Butterworth wanted to know whether scorching the paper would not have had a tendency to make it break, particularly upon folding it, and the witness replied that the paper would probably have broken, but not in so straight a line. Judge Bradley asked whether his microscopical examination had disclosed whether the paper was cut or worn in two, but witness was not able to answer positively. He said it looked to him too smooth for a break, and proceeded to examine it again under

the microscope, but without further developments.

The witness rather resented some of Mr. Butterworth's questions, and said very emphatically that it was not his desire to make Judge Holt's signature out to be twenty-three millimeters long when it was only twenty-two; that he didn't care a straw which side won the case, and only wanted to present the facts as he found them.

"Then you would be surprised to find another expert going over the same ground and differing with you entirely?" A. "Not at all."

Thursday, May 28.

When the case was resumed yesterday morning Gen. Butterworth continued his cross-examination of Dr. Frazier, and tried hard to upset all his scientific theories and explanations by a series of questions. Time and time again he seemed to have the witness concerned, but every time the latter came up smiling with a new theory, opening up still another broad field for scientific investigation. Nobody understood what was going on, with the possible exception of the witness, but Gen. Butterworth stood his ground, and looked wise until the last moment.

At one time, after propounding a question to which the suave witness replied in the negative, Gen. Butterworth ventured the remark:

"But that is certainly the logic of your position." "I beg your pardon, but it is neither logic nor is it my position." And then came another theory which made the preceding ones appear like simple addition.

The question whether the will was written on two separate and distinct pieces of paper was brought up again, and after it had been discussed at considerable length again, Judge Bradley asked the witness:

"I wish you would state, from your examination of the line between the upper and lower sections of the paper, whether the paper was separated before it was pasted on the

counsel for the heirs-of-law who had ever heard of the man named as executor in the alleged will. Asked where he met Devlin, witness replied that he used to run a pool room near the Baltimore and Ohio depot after Judge Holt's death, and that Devlin had come there to see him.

Q. "Did he come there to see you or to play pool?" A. "I suppose he came to see me; he asked for me."

Q. "Was that before the publication in the newspapers of this paper called the will, or afterward?" A. "It was after."

Q. "Do you remember seeing Luke Devlin about Judge Holt's house at any time?" A. "No, I never heard or saw anything of him at Judge Holt's."

The interest of the spectators had been aroused to the highest pitch upon the appearance of the first witness who had ever seen or heard of Luke Devlin, but just at this point Mr. Worthington suggested:

"Your honor, I think this is a good place to suspend for the day."

Court at once adjourned.

Wednesday, June 3.

Charles Strothers, who was being examined when court adjourned on Tuesday, resumed the stand. He described the desk and closets in which Judge Holt kept his private papers, gave more testimony as to the cordial relations existing between Judge Holt and Washington Holt and his family, and related a conversation which he heard while he was driving Judge Holt and Washington Holt to the depot. Judge Holt had remarked to his nephew: "I am very glad the law regarding administrators has been modified, so that when I die you can come right up and take charge of affairs without any trouble."

He spoke also of the pleasant relations between Judge Holt and Col. William Sterett. The latter used to stop at Judge Holt's house and sit out in the yard with him, telling stories which made the Judge

laugh heartily. The witness said Col. Sterett used to burlesque the nation's legislators, and he had heard them having no end of fun over Senator Pepper's whiskers. Judge Holt had also said to the witness: "Don't get impatient at waiting on an old man, Charles, and later on you will see that I appreciate it."

Strothers also identified the copy he had made of the piece of paper Willie Sterett had found after Judge Holt's death.

Q. "Can you tell us whose writing it is?"

A. "I take it to be the Judge's writing; it is similar to his."

Q. "Do you remember any papers being destroyed after Judge Holt's death?"

A. "I remember a few letters being destroyed in the kitchen yard. I burned them in a coal scuttle. I received them from Washington Holt and Col. Sterett. There were about twenty-five of them, letters from Judge Holt's family which came out of the closet in the library." The witness did not think Judge Holt ever destroyed any papers with writing on them. He used to take all the letters he received, write across the top of them from whom he received them, and put them away in bundles. Strothers examined the will, and said he did not think it was Judge Holt's writing.

Q. "Tell us now about your meeting with Luke Devlin."

A. "Well, he came down to my pool room and asked for me. He asked me whether I knew him, and I replied that I couldn't say I did. He said his name was Devlin, and said he was the man named in the will. I asked him if he thought it was all right. He replied that he did not know. Then he said, 'The Judge gave me a pretty good send off in it, and if it goes through, there is a whole pile in it for me.' After I told him I didn't know him, he said he didn't think I was the man who was there when he used to call, that it was a darker man."

Strothers said Judge Holt used to preserve the cards of people who called on him, and that he (Strothers) had looked through about a bushel of them without finding one of Luke Devlin's.

Mr. Darlington subjected the witness to a rigid cross-examination. He wanted to know if he had not looked Luke Devlin all over upon the occasion of his visit to the pool room, and then asked him if he was Mr. Washington Holt. The witness replied that he had; that the idea had occurred to him that it was Mr. Washington Holt very much improved in health, and with more hair on his head.

Q. "Did you make a copy of Judge Holt's diary?" continued Mr. Worthington. A. "Yes, sir; about six months after he died."

Q. "Did not the Register of Wills go to Holt's house and stop the burning of papers by putting them all under seal?" A. "I thought it was Mr. Wilson, of the Loan and Trust Company, who did that."

Mr. Darlington then brought out the fact that Strothers was living at the Holt house, and that he rented out a portion of the stable to ex-Detective Block and another portion to a colored man. They paid Strothers the rent, and he spent it. The witness also identified three large pictures of the house and stable. Block paid \$4 a month for his part of the stable and the other man, who was a friend of Strothers, was to pay him \$3 a month, but he did not pay it regularly.

Strothers was asked how he made his living, and replied that he had no permanent occupation. He kept the pool room part of the time, and after that did whitewashing, put down carpets, carried baggage, and did all sorts of odd jobs. He had had some connection with a policy scheme at one time. He also sold coal, wood, and ice at Judge Holt's stable, on which he had painted a sign to that effect. Mr. Darlington promptly produced the photograph,

which brought the sign out plainly, and placed it in evidence for the purpose of showing a similarity between the lettering and the lettering on the envelope, in which the will was received. The letters on the stable were rudely printed, and bore a general resemblance to the inscription on the envelope.

Strothers next identified a number of letters which he had written for Judge Holt to the members of Washington Holt's family, and Mr. Worthington handed them around to the jury, asking them to observe the peculiar formation of the periods, which he declared as "full moons, only smaller sized."

Upon redirect examination by Mr. Worthington, Strothers stated that about five months ago ex-Detective Block came and rented the stable. He used it for storing a crate of bottles. He seemed to be greatly interested in the will case and frequently talked to Strothers about it. On one occasion Block told him it would be worth \$5000 to them from the New York papers if they could secure the first accurate information regarding the will. Strothers then gave some rather significant testimony regarding Block's connection with the case. "He told me," continued the witness, "that everybody thought I had sent the will in; that he thought so himself. He said he knew I would deny it then, but that when the trial came up and I was placed on the stand he knew that I would admit having sent it."

According to Strothers' testimony Block pictured the whole court-room scene to him, and gave him an idea of what questions would be asked him and what his replies would be. He also stated that Block went all through the Holt house, taking note of everything he saw. It was a peculiarity of the Judge's that if he ever lost a key of any sort, he never had a new one made, but always had the lock changed. Block mentions especially the fact

his letters indicated that he was a decidedly pious man.

The last witness of the day was Mr. *Rice W. Hooe*, who is employed as crier in the Police Court. For about two years he lived next door to the Steretts on Capitol Hill, and frequently saw Judge Holt's carriage drive up to the door, and also saw his servants bringing presents of fruit and other delicacies.

Thursday, June 4.

Luke Devlin, the executor under the alleged will of the late Judge Joseph Holt, was the object of the attack of the attorneys for the heirs-at-law during most of the proceedings. No witness so far examined has given any evidence to show that relations other than those naturally existing between a superior officer and his subordinates existed between Judge Holt and Luke Devlin, and yesterday some very peculiar statements alleged to have been made by Devlin were brought out. Besides, it was shown that Devlin was a man who took particular delight in imitating other people's signatures, and that on certain occasions he signed Judge Holt's name to official documents. At the morning session a number of witnesses testified to the great apparent anxiety of Devlin to have the receipt of the alleged will made public, and their testimony also tended to show that Devlin's own account of his movements on the day the will was received, given when he was on the stand early in the trial, was not altogether correct.

Mr. *John P. Miller*, of the *Evening Star*, was the first witness called yesterday morning. He first saw Devlin on the day the will was received. Devlin took a typewritten copy of the will to the *Star* office for publication. Some time after that, Mr. Miller stated, he met Devlin on F street, and the latter told him that the first thought which occurred to him upon hearing of Judge Holt's death was what a fool he (Devlin) had been. Explaining

his remark, Devlin stated that he had been to the house a number of times and that the servants would not let him in. He said he ought to have gone in anyway; that it was just a repetition of the McGarrahan case. McGarrahan and he were close friends, and if he could have reached McGarrahan's room the night before he died, he would have been able to write his name for \$50,000.

All this testimony was objected to by Mr. Darlington, who quoted authorities on the subject. There was quite a little sparring between Messrs. Darlington and Worthington, but the testimony was admitted. The court, however, sustained Mr. Darlington when he objected to Mr. Worthington asking the witness what Devlin said he would have done if he had been able to get into McGarrahan's room. On cross-examination the witness said the interview with Devlin had never been published, as it might have had a tendency to prejudice the case.

The testimony of Mr. *Beriah Wilkins*, the next witness summoned, disclosed the fact that Devlin went to the office of *The Post* on the same day with another typewritten copy of the will. Mr. Wilkins, supposing that he was receiving important and exclusive news, thanked Devlin, but when he learned that it had already been furnished to evening papers he returned the copy to Devlin. Mr. Wilkins thought Devlin appeared somewhat nervous at the time.

Robert W. Dutton, of the *Star*, testified that he first saw Devlin in the Register's office, where he was examining the will the same day it was received. The witness' statement as to the hour at which he saw Devlin varied considerably with Devlin's own account of his movements on that day. Mr. Dutton had examined the will carefully, but was unable to give an opinion as to whether the two portions of

the paper were parts of one piece, or whether they had been pasted together. There was nothing at all remarkable about Devlin's appearance.

Perhaps the most important testimony of the day was that given by *Joseph Fought*, who was a messenger in the Judge-Advocate-General's office from 1869 to 1876, having succeeded Luke Devlin when the latter was promoted. Fought is now engaged in the dairy business. He had never observed any evidences of confidential relations between Judge Holt and Devlin. He did remember, however, that once when Judge Holt learned that Devlin had been acting as private secretary to Senator Blair during office hours he summoned Devlin before him, and after a warm interview demanded Devlin's key to the office. Several other incidents were related to show that Judge Holt required the same discipline in the case of Devlin as he did with other employees.

Q. "Do you know anything about Mr. Devlin's proficiency as a penman?"

A. "He used to collect autographs, and would often sit and amuse himself by trying to imitate them, and so successfully that it was difficult to tell them from the real ones."

Q. "Did he ever imitate Judge Holt's signature?"

A. "Well, sometimes when papers had not been signed by Judge Holt, owing to oversight, Mr. Devlin would sign the Judge's name to them, and he did it about as well as the Judge could have done."

The witness was then shown the alleged will, and gave the opinion that it was not written by Judge Holt. There were portions of it, he said, which could not have been written by Judge Holt. It was further developed that although the witness and Devlin had not been on speaking terms for twenty years, Devlin had stopped him last Friday

and asked him if he would testify to the reverse of what was stated by Mr. Saxton last week. Devlin told him his expenses would be paid, but the witness refused to have anything to do with the case. Indeed, he would not have appeared at all if he could have kept out of the way of the subpoena.

The next witness was *Arthur Schatz*, who was a copyist in Judge Holt's office from 1872 to 1876. He had never seen Devlin enter Judge Holt's room or speak to him. He was familiar with Judge Holt's handwriting, and did not think he wrote the alleged will.

Mr. *Judson H. Jennings*, whose wife was on the stand on Wednesday afternoon, gave substantially the same evidence as she had given. Judge Holt was a distant relative of his, and he renewed his acquaintance with him in 1889. He described the interview in which Judge Holt had been so bitter in his denunciation of Maj. Throckmorton. Mr. Schatz was recalled to testify to Devlin's penchant for copying signatures.

Mr. *Wright*, who was Register of Wills at the time of Judge Holt's death, testified regarding the receipt of the will through the mail. Devlin had evinced no surprise when he first saw it. He had spent half a day at the Holt residence after the Judge's death searching for the will. He did so at the request of Washington Holt and Col. Sterett. He found no testamentary papers of any sort. On cross-examination he said he had telephoned to Luke Devlin and asked him to come to his office on a matter of importance. At Devlin's request he gave him a copy of the will.

Q. "What remark did Mr. Devlin make?" A. "He wanted to know whether the Judge had left him anything. I replied that he had left him a valuable trust."

Q. "Do you remember his reading that part of the will leaving everything to Miss Throckmorton and

Miss Hynes, and remarking 'I don't see where I come in.'" A. "I don't remember it."

Q. "Was any reward offered you by the heirs for finding the will at the time you went to the house to look for one?" A. "Yes, by Mr. Washington Holt."

Q. "How much?" A. "Forty thousand dollars." The spectators took a long breath and the witness added: "I didn't expect anything, however; it may have been a careless remark."

Mrs. *Emily V. Miller*, the next witness, has lived in Washington since 1865. She knew Judge Holt, and had received letters from him. She did not think the alleged will was in his handwriting. The letter "g" wherever it occurred was not like Judge Holt's. It was also developed that Mr. Darlington, for the other side, had called on Mrs. Miller regarding the case, but on learning her opinion had not thought it worth while to subpoena her.

J. Nota McGill, the present Register of Wills, was called. He testified as to the care which had been exercised in preserving the will.

Mr. *Thompson*, of the Register's office, was also examined. Asked whether the lower corner of the will was separated from the rest of the paper when he first saw it, he stated that it was his distinct recollection that it was intact.

There was a movement of expectation when Col. *William G. Sterett* was placed on the stand. His mother was a sister of Judge Holt's. The Colonel gave a brief sketch of his life, beginning with his birth in Hancock County, Kentucky, in 1847. He told of the high regard he had always felt for Judge Holt. His mother, he said, thought the Judge was the greatest man that ever lived, and the Colonel would have been telling of Judge Holt's good qualities still if the opposition had not objected. Col. Sterett told in detail all about his relations with Judge Holt since he came to Wash-

ington. He remembered particularly one morning when he and Col. Dick Wintersmith had breakfasted at Judge Holt's house.

Q. "Do you remember any particular attention he paid you that morning?"

Col. Sterett's face assumed a rapturous expression as he proceeded: A. "Uncle Joe had no idea of the capacity of a man. He made us a couple of mint juleps about that long," and the Colonel measured off a distance of about a yard and a half with his hands. The description produced the biggest laugh of the trial.

"He didn't ever overestimate your capacity, did he?" asked Mr. Worthington, but Col. Sterett was non-committal on the subject. Asked as to his own relations with Judge Holt, the witness said they were always friendly; sometimes confidential, and never sentimental. He told of Judge Holt's attentions to his wife and children, and stated that besides paying his wife's expenses to the World's Fair and to summer resorts, he gave her money for herself nearly every month. Not that she needed the money, as his own salary of \$60 a week was sufficient to take care of his family.

The witness did not hear of the fall which resulted in Judge Holt's death until the Saturday after it happened. He went to see him that morning, and went every day after that. The evening before he died he went as usual, and met the Judge's physicians there. The Judge seemed to be suffering considerably, but he did not think there was any immediate danger; but the next morning he learned of his death. Pending the arrival of Washington Holt he went to Riggs' Bank to see if he could find any memorandum there containing the Judge's instructions as to the funeral. He had heard from the servants that the Judge had instructed Martha to give his keys, watch, etc., to Washington Holt. The witness

remained at the Holt house on Wednesday night, and was there when Washington Holt arrived. He saw the keys delivered to him.

"As soon as he got the keys," continued the witness, "we went together to the desk to look after instructions about the funeral. We found only some insurance policies and a couple of keys."

"Let me ask you," said Mr. Worthington, "whether you found this paper," holding up the mysterious paper.

Col. Sterett looked amused, as he answered that they had not. "After that," he continued, "we went to the safe deposit building, and asked them to look over the papers, but nothing was found. We were told at Riggs' Bank that Uncle Joe had a little black trunk in which he kept valuable papers. It was not at the safe deposit company's, so we went home again, and finally found it in the closet in the library. The trunk was locked, but Washington Holt opened it in my presence, and found a whole lot of bonds. There was about \$60,000 or \$66,000, I don't remember which."

The witness then described the funeral arrangements and the removal of the body to Kentucky. He accompanied it, together with Washington Holt and his wife. The services were held in the Memorial Church, which Judge Holt had erected at the old family homestead. He also testified regarding the publication of a certain death notice in *The Post*.

Asked concerning the removal of any papers from the house, the witness said that some papers relating to the Surratt case were found, and Washington Holt had expressed a desire for them. Witness replied that he could have them so far as he was concerned, and Washington Holt had taken them, with the understanding that he would furnish copies if any of the relatives cared for them. They had also discovered a number of letters from Judge Holt's

wife, and an autograph letter from Gen. Grant.

Col. Sterett also testified concerning the paper which his little daughter had found. The Colonel was away fishing when the paper was found, but he made a copy of it when he returned, and sent it to Washington Holt. He had made the inscription out to be: "Date of will, January 1, 1886. Roundtree-J. M. Knott." He thought the handwriting was that of Judge Holt.

"I will ask you now, Colonel, whether you had anything to do with sending this paper to the Register of Wills," holding up the alleged will again. The idea was too absurd for the Colonel's equanimity, but he managed to sputter out that he was not the person who had surreptitiously mailed the mutilated document, by which he and all the rest of Judge Holt's relations were disinherited. Neither did he have anything to do with sending Detectives Block and Flinders to the Holt house. In fact he had never heard of them until Charles Strothers had mentioned them to him.

Friday, June 5.

Col. William G. Sterett, who was being examined when court adjourned on Thursday, resumed the stand. He first identified copies of local newspapers containing the death and funeral notice, which Mr. Worthington explained was for the purpose of showing that any one having the will in his possession should have been aware of Judge Holt's death, and also to show that Luke Devlin's excuse that he did not attend the funeral because he did not know when it was to be held was not well founded. Mr. Darlington, however, objected to the evidence, and was sustained by the court.

A good deal of Col. Sterett's succeeding testimony was regarding the relations of Judge Holt to the various members of his family. Cross-examining him, Mr. Darlington wanted to know whether, in

1873, the year the alleged will was made, Judge Holt knew whether Col. Sterett was alive or dead. The witness could not say whether he did or not. On one occasion, after the appearance of the alleged will, Col. Sterett said he was with Washington Holt at the Riggs House, when Luke Devlin approached them and suggested that somebody ought to look after the renting of the Holt residence. Col. Sterett told Mr. Holt that an administrator had been appointed, and that it was none of Devlin's business.

Q. "Did you tell a reporter last August that you intended to fight this case through to the last?"

A. "I did."

Q. "In your sworn statement, accompanying your application to the court for the appointment of an administrator, you said Judge Holt died intestate; what do you think now?" A. "My opinion has not been changed."

Mr. *John W. Holt*, also a nephew of Judge Holt, was the next witness called. He met Judge Holt only twice, at his home in this city. The Judge treated him with the utmost kindness and hospitality. The scrap of paper found by Willie Sterett after Judge Holt's death was delivered to Mr. John Holt. It was in his valise which was stolen from a sleeping car while he was on his way from Kentucky to Washington. The valise was subsequently recovered, but the papers had been burned. The witness had nothing to do with sending the alleged will to the Register's office, nor with the sending of the detectives to Judge Holt's residence. Nothing additional was developed by cross-examination.

Washington D. Holt, the nephew who, with his family, has figured most prominently in all the testimony given so far, was next called to the stand. He has suffered three mild strokes of paralysis, and was unable to submit to the strain of

testifying for an extended period. The family came into possession in 1811 of the old homestead, known as Holt's Bottom, in Kentucky, where his own father and Judge Holt's father and mother lived and died. He told in detail of his earliest recollections of Judge Holt, and of his later visits there. In fact, all of his testimony was devoted to the relations existing between Judge Holt and his relatives in Kentucky.

Mr. *Levy*, who was formerly connected with the office of the Register of Wills, was next examined. He made a search for a will after Judge Holt's death, and placed under seal all the papers found in the house in August, 1895. Under cross-examination the witness said that Washington Holt remarked to him that if he found a will he would give him \$5000. He said he was naturally anxious to find it. He saw evidences in one of the grates that papers had been burned. He and Mr. John Holt examined the grate, and though they found small scraps of paper, they discovered nothing of importance.

Mrs. *Iglehart* was then recalled for the purpose of stating that she was in Northern Michigan at the time of Judge Holt's death; that Judge Holt took his meals with her when she visited his house, as he was not confined to his bed at that time, and that after his death, when she learned that none of the relatives were here, she telegraphed to Miss Teller, daughter of Senator Teller, to go to Judge Holt's house and represent her there.

The examination of *Washington Holt* was resumed at this point. He related the circumstances of his visits to Judge Holt's house in this city from his first visit in 1876 to the last, in 1893. In answer to a question as to Judge Holt's attitude toward him, he replied: "I don't believe there was a man living who was as close to him. He treated me just as if I was his own son."

Q. "Did he say anything to you at any time regarding his affairs?"

A. "Yes, he said to me often that his affairs, more especially after his death, would be in my hands. He always spoke of his affection for the old homestead, and said he never wanted it to go out of the family if it could be helped. He said he would make provision so that it would remain in the family always. I told my uncle once, jocularly, that I would keep the sheriff off as long as possible, and he replied that he would arrange it so that he would always be kept off.

"Coming down to the will, he told me several times that he had made his will, and had appointed me executor, but added that he was afraid I would have trouble, as the laws were different from those in Kentucky. He was afraid I would have difficulty in furnishing bond. He said he would try and get such a law passed as we had in Kentucky. Afterward, in Florida, in 1890, he told me that such a law had been passed, and that it had relieved him of a great deal of apprehension. On a subsequent occasion here in Washington he told me in his carriage that the law had been passed, and said: 'All you will have to do now will be to come here and take possession.' In that connection, the last day I ever saw him, we were sitting together in his yard, and he said, 'Washington, I want you to know that everything I have is yours.'

"Frequently he would speak about things that might happen after his death, but I would invariably change the subject. I felt as if it was holding up the skull and crossbones before a man who, by reason of his great age, had one foot in the grave. I will say now, though, by way of parenthesis, that I am very sorry I did not discuss it more fully with him. When I left him the last time, in spite of my protests, he insisted on riding down to the depot with me in his carriage, and

at the entrance, as I shook hands with him, the last words I ever heard him utter were, 'Good by, Washington, my son; God bless you.'"

In the course of his succeeding testimony Washington Holt stated that the Judge had told him on one occasion that after his death Washington and his family could go to Europe and stay as long as they wanted to, as they would have ample means. In the whole course of his connection with Judge Holt there was never a criticism or the slightest misunderstanding between any member of his family and the Judge.

The witness told the circumstances connected with his coming to this city after Judge Holt's death, and went at length into the succeeding events. After mentioning the delivery of his uncle's keys and watch to him by Martha, the colored servant, Mr. Wilson asked:

Q. "Did she give you any information regarding what your uncle had said touching arrangements for his funeral?"

A. "Martha told me that she had been instructed by Judge Holt to take care of the keys and deliver them to me, and that he wanted to have a certain flag wrapped around him, all of which he told her was in his will, which might not be opened until after his death. I immediately proceeded to search for further directions. Mr. and Mrs. Sterett were with me when I searched the drawer to my uncle's desk, but found no will or directions."

The witness gave a detailed account of the subsequent search for the will, including visits to the safe deposit building and Riggs' Bank, and the finding of \$66,000 in bonds in an old-fashioned trunk or valise, mentioned on Thursday by Col. Sterett. After he came back from Kentucky after the funeral the witness stated he found a list of Judge Holt's taxable property,

apparently made out in readiness for the assessor. Continuing, he said: "I gave the closet in the library the most thorough search, knowing, or believing, as I still believe, that there must have been a will. I worked until I was completely exhausted, putting in fourteen or fifteen hours a day. If there is any doubt about that house having been ransacked, I want to relieve all doubt about it now; because I ransacked that house."

Q. "Did you find paper of a testamentary character?"

A. "I found a little slip of paper, and on it was written: 'I give and bequeath to the Washington Humane Society, incorporated under the laws of the District of Columbia——dollars.' It contained no date."

Q. "What became of that paper?"

A. "I threw it away, I think. I don't remember whether I even showed it to anybody. It was in my uncle's handwriting. I thought it was a memorandum he used in making a will."

"When did you first hear of the will of 1848?"

"I don't think I heard of it until this forgery came out."

Mr. Holt then testified as to the burning, under his direction, of a lot of pamphlets and printed matter of no importance, and also a number of letters from members of his family to Judge Holt. There were a large number of other letters of a personal nature addressed to Judge Holt, which he wanted to have burned, but Mr. John Holt objected, "and," added the witness, "it was not done, very much to my regret." At this point Mr. Holt was unable to continue, owing to extreme fatigue.

The last witness examined was Mr. *John C. Wilson*, an officer of the safe deposit company. He testified that he went to Judge Holt's house and took possession of all personal property and papers. Some of the relatives wanted to have

certain letters burned, but he thought he had no discretion in the matter, so took charge of all of them. He broke the seals of the closets in the library and took out the papers. He found the will of 1848 among a lot of old papers, but saw nothing of the alleged will of 1873. The witness was not cross-examined, and with his testimony the case went over until Monday morning.

Monday, June 8.

The lawyers who are trying to show in Circuit Court No. 1 that the document alleged to be the will of the late Judge Joseph Holt is a forgery played their strongest card yesterday when they placed upon the stand Mr. David N. Carvalho, a famous expert, not only in handwriting, but in inks and paper. For sixteen years he has been the official expert for the District Attorney's office in New York, and during his career has testified in thousands of cases. The entire day was spent in examining and cross-examining Mr. Carvalho, and court remained in session until a later hour than usual in order to permit him to return to New York last night to testify in the famous Fleming murder case, now on trial. He unhesitatingly pronounced the alleged will of 1873 to be a clumsy forgery, and gave it as his opinion that the name Ellen B. E. Sherman, attached to the document as the name of a witness, was written by the same hand which wrote the body of the document. Furthermore, he applied a chemical test to the ink used in the document and stated as a result that such ink was not in use in 1873, and that it could not have been written at that time. Dr. Frazier, the Philadelphia expert, had fairly bewildered everybody with his technicalities, but after listening to Mr. Carvalho for a day, the impression prevailed that the Philadelphian had only dealt in the rudiments of the science. If Mr. Carvalho had only had time, he would no doubt have told whether

the mysterious document was written in the daytime or at night, in Washington or in San Francisco, and whether the man who wrote it wore a full beard or was smooth shaven.

Mr. *Carvalho* was then called. He is a well-built man, apparently about forty years of age, wears a full dark beard and eyeglasses. He has the appearance of a scientist, and is extremely positive in all his statements. He placed his microscope and a number of papers on a small table in front of the witness stand. He had made a careful study, he said, of the various authenticated writings of Judge Holt of date prior to 1880, in comparison with the writings in the alleged will. His most important observation had been that in the disputed document there is an excessive number of letters, such as "t" and "l," made with a loop at the top. The writing was evidently that of a person accustomed to the forearm movement, although certain words were written in a cramped, studied hand. It also struck him that the names Josephine Holt Throckmorton and Maj. Charles B. Throckmorton seemed to have been inserted after the body of the document had been written.

In order to enable him to give a practical demonstration of his meaning, a large blackboard was provided for the witness and a photograph of the alleged will was handed to each jurymen. Mr. *Carvalho* attached to the blackboard a large card bearing a copy of Judge Holt's genuine signature enlarged thirty-two times. He then proceeded to point out various never failing characteristics of the signature, which, he said, were lacking in the one attached to the alleged will.

"My conclusion is that if the letters which were presented to me, and which I have examined as the genuine handwriting of Judge Holt, are what they purport to be, Judge Holt did not write the will or

the signature attached to it. It is nothing but a forgery, pure and simple."

Proceeding to the signatures of the witnesses to the alleged will, Mr. *Carvalho* said his examination of them had been confined to the name of Ellen B. E. Sherman, which he was satisfied was written by the hand which wrote the body of the will. After that discovery he had not examined the other signatures.

Regarding the probable age of the paper, the witness explained that while it might be of the purported age it was very easily simulated by holding a paper over the spout of a coffee pot and afterward going over the paper with a hot iron. He was certain that the paper in question had been ironed.

Mr. *Worthington* then directed the witness' attention to the ink in the alleged will, which resulted in a lengthy technical description of the various inks in common use. He had made chemical examinations of the ink used in the genuine letters written by Judge Holt in 1873, and of that used in the will, and found them apparently not the same. The ink used in the will, he stated, was a "loaded" ink, and an ink that was not in ordinary use in 1873. One of Judge Holt's letters which he had examined, he said, was written with an "iron" ink. This letter he had partially burned, and found the effect to be entirely different from the effect of fire on the alleged will.

After recess, Mr. *Worthington* went into the question of the difference in inks more in detail. He brought out the fact that in the case of iron inks, some idea as to its age could be obtained by chemical tests, for the reason that disintegration sets in between four and seven years after its use. In the case of India ink, nothing could be learned, because it was not affected by chemicals. The witness explained also that India ink was not used as

a general thing for ordinary writing purposes, either in the present day or in 1873. "Now, your honor," said Mr. Worthington, "I ask that the witness be allowed to make a chemical test of the ink used in this alleged will, as by the laws of nature we may settle this case right here."

The proposition was agreed to on all sides after considerable discussion.

The word "of," immediately following the name of Luke Devlin, was then chosen. The witness explained that the chemical he was about to apply was muriate of tin. He then took the tattered document, which is causing so much trouble and speculation, and standing before the jury smeared the chosen word over with the liquid. Blair Lee drew his watch and at the end of two and a half minutes the expert declared in positive tones: "It is not India ink."

He then resumed the stand, and continued: "In my judgment, this is a loaded ink; loaded with a material we call 'archil.' It is characteristic of Arnold's chemical writing fluid, which company is using archil to load inks, and has been using it for the past ten years."

Mr. Worthington: "Mr. Carvalho, are you able to state whether archil was used in inks more than ten years ago?" A. "So far as my recollection goes it was not; it was introduced as an adulterant about ten years ago."

Q. "What is your conclusion as to whether that paper could have been written as long ago as 1873?" A. "That paper could not have been written in 1873, and certainly not within a period of ten or twelve years afterward."

Mr. Carvalho's statements created a profound sensation in the court room. Messrs. Wilson and Worthington looked triumphant as they turned the witness over to Gen. Butterworth for cross-examination, while Luke Devlin seemed ill at ease.

In cross-examining the witness Gen. Butterworth first asked: "What is archil?" A. "It is made from seaweed, and is a bluish-green coloring matter. It is obtained by burning the weed. I do not know what its chemical constituents are."

"If you don't know what its constituent elements are, how can you tell what the effects of chemicals will be upon it?" A. "Simply from experiment; from the phenomena which result."

The witness went on to explain that there was a certain something which happened when he applied the chemical which at once told him that the archil was there. He could not explain what this mysterious something was, in spite of Gen. Butterworth's repeated efforts to get him to do so.

Under close questioning the witness said he found Judge Holt's writing full of inconsistencies. That of itself was one of his peculiarities.

"Did I understand you to say that the slope of the letters does not harmonize in the will?"

"Yes."

"But did you find that the slopes in the letters of Judge Holt harmonize?"

"Much more so than in the will. Those in the will are a sort of jumble compared with the others."

The witness then pointed out a number of words in the will which were written with a cramped pen-movement, and compared them with others written more freely. Another thing the witness had observed was an unusually long space after Josephine Throckmorton's name. "The person," said he, "who wrote that name knew he could get it in the space, but he did not know where the 'n' was going to end."

Q. "In your judgment, then, the words Josephine Holt Throckmorton were not written in when the body of the will was written?" A. "It certainly was put in subsequently."

Q. "Is that your impression also as to the words Lizzie Hynes?"

A. "I think that Lizzie Hynes was written with the rest of the document."

Q. "What is your impression regarding the name Maj. Charles B. Throckmorton?" A. "I will answer the same as in regard to the name Josephine Holt Throckmorton. In each case the balance of the line had been written before the names were put in. I arrive at this conclusion by the spaces, and also because the names do not bear the same relation to the base line. There is also a different quality in my mind in the matter of pen pressure. The names are written in a cramped hand."

Speaking of further discrepancies in the alleged will, the witness said that in none of the letters he had examined did he find the letter "t" made with a loop at the top when it was the first letter of a word. Neither did Judge Holt begin the first stroke of his H in his name with a heavy stroke, nor had he found any Js with a heavy stroke at the top.

Replying to Gen. Butterworth's question as to what he found in the name of Ellen B. E. Sherman which led him to suspect that it was not genuine, the witness specified certain characteristics in the "l," "n," and "h" which led him to believe that the name was written by the same hand as that which wrote the body of the will. Regarding the name of W. T. Sherman, he said he had expressed no opinion as to its genuineness, but he had observed that an erasure had been made in the vicinity of the burned hole near the name. The witness also believed that the lower portion of the will had been cut from the upper portion, up to a point near the right-hand side, and that it had been torn the rest of the way.

Mr. Carvalho, at Gen. Butterworth's request, repeated his reasons for believing that the will could not have been written as long ago as 1873, and was then asked:

Q. "Are you able, by looking at that ink, to tell when it was made, within say five years?" A. "Yes."

Q. "Very well, when was the ink made?" A. "Within twelve years."

Q. "Why?" A. "I applied a chemical to it, and obtained a certain result; the result is archil, and prior to ten or twelve years ago ink did not contain it."

Gen. Butterworth then questioned him concerning his experiment with one of Judge Holt's letters, and the witness replied that he was certain there was iron present in the ink with which it was written.

Q. "Do they put iron in all inks?" A. "No, they do not."

Q. "If you will put that chemical on any part of this will, the result will be the same, will it?" A. "Yes, and if you will put it on any other piece of paper containing Judge Holt's writing of February 7, 1873, you will find a different result."

The ink expert went on to describe the effects of the chemical on different varieties of ink. He said there are about forty different kinds of ink manufactured in this country, from which many combinations are made.

Tuesday, June 9.

If it had not been for the refreshing appearance of Mr. G. O'Toole McCarthy, in the Holt will case yesterday, the proceedings would have been more than tiresome. Upon the whole it was a good thing McCarthy was there. He burst suddenly upon the scene just when everybody was beginning to yawn and threw so much life into his little comedy rôle that he received a hearty encore, which it required the united efforts of the court officials and Judge Bradley himself to squelch. There was nothing remarkable about his testimony. It was not even allowed in the record, and it would have been of small importance if it had been. It was the way he gave it, or rather tried to give it, that made the hit of the day.

When *Washington Holt* took the stand at the opening Mr. Wilson conducted the examination. The witness related a number of incidents showing Judge Holt's feelings toward his relatives. Once Judge Holt spoke to him of a gift of \$10,000 which he had made to Miss Lizzie Hynes. He said that Miss Hynes was a woman of simple tastes, and that the amount would probably be ample for her needs for the rest of her life. Mr. Wilson asked the date of the conversation, but the witness replied that his memory for dates was very bad, and that if he and Mr. Wilson should take a buggy ride to San Francisco together, discussing all sorts of things on the way, it would be just as easy for him to tell at what particular milestone a certain subject was discussed.

He had never heard Judge Holt mention the Throckmortons and had never heard of Luke Devlin until after his uncle's death. He related again the incident when he and Col. Sterett had been accosted by Devlin at the Riggs House. Mr. Wilson tried to show by the witness that Judge Holt was not on good terms with the Rays, relatives of Miss Hynes, in order to show the improbability of his leaving her a large sum of money which would eventually go to her relatives. Judge Bradley, however, ruled such testimony out.

The witness had first seen the alleged will in the Register's office. "I repeat now," he added, "what I said then, that it is not only a forgery, but a botch. The expert made use of this expression yesterday, but I claim the copyright, as I used it a year ago. There are a great many things about the will which make me believe this. Uncle never used a superfluous word, and the will speaks of Luke Devlin's character as being of the highest standard. The word standard is not necessary, and I am sure he would not have used it. Where it

says that Josephine Throckmorton is to inherit her share at the age of twenty-one, figures are used, and I remember once uncle sent a deed back to me for correction because figures were used, when he said the words should have been spelled out. Mr. Holt was then excused, while two or three other witnesses were examined briefly.

Mr. *Frederick F. Schrader*, of *The Post*, testified that he had an interview with Luke Devlin the day after the alleged will made its appearance, and that Devlin told him that he always had an idea there was a will in existence, and that he had written to the Throckmortons about it. When the witness first examined the alleged will in the Register's office, two or three days after its receipt, the upper and lower portions were entirely separated.

Cross-examined, Mr. Schrader told of his examination in detail, and added that the paper was not folded when he first saw it. He thought its general appearance yesterday was the same as when he saw it first. During his conversation with Devlin the latter had said that while he had always suspected the existence of a will, he had no idea he was named as executor. On redirect examination the witness said Devlin had told him that he had an idea where the will was all the time, but refused further information. Devlin had also stated that he was on intimate terms with the Throckmortons, and that Maj. Throckmorton visited him whenever he was in town.

The next witness was Mr. *John B. Randolph*, for thirty years a clerk in the War Department. He had become familiar with the signatures of Gen. Grant and Gen. Sherman, and was confident that the signatures attached to the alleged will were not genuine. He pointed out a number of peculiarities in the two signatures which inclined him to this belief.

A bald-headed gentleman, with an iron gray beard and spectacles, who said he was *G. O'T. McCarthy*, an "artist in penmanship," next took the stand. He had had occasion to become familiar with the signature of Mrs. Sherman, and when he was shown the alleged will and asked as to the genuineness of the signature attached, he thrust his hand into his inside pocket and produced a bundle of papers, as he said with a decided brogue: "I have to compare these signatures to show radical differences."

Gen. Butterworth at once took advantage of the situation, and asked: "And you cannot show any differences without comparing them?"

"No, but I can show you many differences when I look at them together."

All the lawyers on the other side interposed strenuous objections, but the witness was rattling on at a great rate, utterly oblivious to what was going on around him, and talking as if he had a hot biscuit in his mouth. He seemed to have an idea that he was about to clear up the whole mystery of the will, and could not for a moment understand that there could be any objection. Judge Bradley looked down on him in helpless amazement for a moment, while everybody laughed, and the attendants rapped for order. Then the court said: "Is there any way of stopping you when you get started?"

"Oh, yes, sir; I was only going to —"

"Well, you had better stop when you are asked. Put those signatures in your pocket."

"If you will allow me to make comparisons, I will show you some radical differences," and the witness was off again at a two-minute lick.

"Well, you cannot do that," said the court.

"Very well, then, I have nothing more to say," said the crest-fallen Mr. McCarthy, as he reluctantly

pocketed his documents. Under Mr. Worthington's subsequent questioning, he said he did not think the signature was genuine, but his testimony was ruled out, and after several requests, he was finally induced to leave the stand.

H. A. Wallon, who is also a clerk in the War Department, having been there since 1863, was next called. He frequently came across documents bearing Judge Holt's signature, and had two papers with him, dated in March and July, 1873. He thought the signature to the will was not Judge Holt's, but it was developed by Gen. Butterworth that he only spoke after a comparison, and his evidence followed that of Mr. McCarthy.

After recess *Washington Holt* was recalled and cross-examined at length by Gen. Butterworth. The questions put to him for the first hour were all concerning early family history. He was asked concerning the number of acres in the old family estate, and the cost of the improvements which Judge Holt had paid for, but the witness' memory was bad, and he protested repeatedly that he was being asked questions which it would be impossible for any human being to answer. Gen. Butterworth then questioned him closely as to the value of the bonds Judge Holt had given Mrs. Holt, and the amount he had spent in paying the expenses of various trips which Mrs. Holt and her daughter had taken. The witness simply told over again what he and Col. Sterett had both related in detail last week. Counsel for the legatees seemed to be at a loss for a theory, and Gen. Butterworth's interrogations apparently had no significance until he began to dwell particularly upon the large sums of money Judge Holt expended during his lifetime upon Washington Holt's family. Then it began to be suspected that he was attempting to intimate that Judge Holt had done so much for them during his life that it would not

have been surprising if he had left them out of his will. He also questioned him regarding the conversations he had with Judge Holt regarding the disposition of his estate. He brought out the fact that the witness' mental faculties were impaired as the result of paralysis in 1893, and then asked whether it was in that year that all the conversations were held with Judge Holt. A. "Not at all; not at all," was the reply.

Q. "What was the peculiar mental trouble you were suffering from?"

A. "My mind seemed to act slowly."

Q. "Was it at that time he told you all he had was yours?" A. "Yes."

Q. "And you inferred from that that he had made provision to leave you something?" A. "Not only from that, but from other conversations."

The search for the will was gone over again, and Mr. Holt repeated his statement that he had never wavered for an instant in his belief that a will existed. A slight sensation followed this statement, as Gen. Butterworth said:

Q. "You joined with Mr. Sterett, I believe, in making application for letters of administration?" A. "Yes, sir."

Q. "Is that your signature?" (showing him the application). A. "Yes, sir."

Q. "Did you swear to this paper?" A. "Yes, sir."

Gen. Butterworth then read that portion of the application which stated that Judge Holt had died intestate, and looked inquiringly at the witness, who replied: A. "I swore to it at the instigation of my counsel, Mr. Wilson, as the only way out of the difficulty, and with no intention of committing perjury. Suppose I had been your client, what would you have advised me?"

Q. "Wait until you become my client, and then I will advise you. You would not swear to anything

which was not true at the instigation of counsel, would you?" A. "It seems that I did; that was the only way out of the difficulty."

Gen. Butterworth attempted to ascertain facts as to dates of occurrences from the witness, but without success, as the witness replied: A. "I have given the facts, but I cannot make my memory do that which it will not do. I know some things as well as I know London is in England, but I cannot swear to that, as I never saw either London or England."

Q. "I understand," said Gen. Butterworth, "that you and other members of the family have built a monument to Judge Holt. When did you do that?" A. "It was built last year, in June; I have a reason for fixing that date."

Q. "Before the discovery of this alleged will?" A. "Yes."

At this point court adjourned for the day.

Wednesday, June 10.

When court opened, counsel for the heirs-at-law recalled Mr. *John C. Wilson*, who was an officer of the safe deposit company. He testified simply that in the examination of Judge Holt's safe deposit box no testamentary papers or documents of especial value were found.

Washington Holt then took the stand again. Gen. Butterworth created something of a stir by asking him whether he had not said to Representative Hitt that he was convinced that Judge Holt's papers had been gone over, and that he believed Col. Sterett had found a will and destroyed it. A. "I do not remember saying such a thing."

Q. "Did you not say, further, that you thought if Col. Sterett was in his cups he might confess to having done so?" A. "I do not remember. I was very much worried at the time and I do not know what I might have said. I remember a conversation I had with Mr. Hitt, but cannot say what it was about."

Q. "Did you offer Col. Wright,

who was at that time Register of Wills, \$40,000 if he found a will?"

A. "I did."

Q. "Did you offer his assistant \$5000 if he could find a will?" A.

"Yes. I told Col. Wright I was willing to give \$40,000 for the discovery of such a will as I believed was in existence, making me executor. When I offered the assistant \$5000 I remember he said such a sum was not to be picked up every day, and I replied that I did not think it was to be picked up that day, because I was convinced that the will was either lost or destroyed."

Mr. Holt stated further on that he thought the estate was worth about \$180,000, but Mr. Worthington suggested that it was worth close to \$250,000 at one time.

Gen. Butterworth handed the witness the alleged will and said: "Examine this paper, which is called a will."

"You may call it a will, but I don't," replied the witness.

"Well, the paper which we call a will. Now tell us why you say it is not only a forgery, but a botch."

Mr. Holt proceeded to indicate various points in the document which had led to his opinion. In legal documents his uncle always referred to himself as Joseph Holt, of the City of Washington, District of Columbia, while in the alleged will he was called J. Holt, of the City of Washington, D.C.

Mr. Butterworth wanted to know whether the disposition made of the property did not have its effect on the witness' opinion. Mr. Holt said he was unable to answer such a question, and Mr. Worthington objected on behalf of his client, and said that if Gen. Butterworth wanted a lecture on the working of the human mind, he had better wait until after the trial.

Nothing more of importance was developed, and at this point, by an understanding with the other side, Mr. Darlington called Mr. *William Tecumseh Sherman*, of New York,

and asked him as to certain characteristics of his father's signature. Mr. Worthington at once objected, which precipitated there and then the question as to whether counsel for the legatees would be permitted to introduce evidence as to handwriting in the alleged will. After considerable argument the court held that whatever testimony Mr. Sherman might give upon the point could not be held as rebutting the testimony given on Tuesday by Mr. John Randolph regarding the signature of Gen. Sherman. The lawyers made several attempts to introduce the desired testimony by other forms of questions, but they were all ruled out.

Mr. Worthington offered to call Mrs. *W. G. Sterett* as a witness, but Mr. Darlington's objection that she was the wife of one of the interested parties was sustained. His attempt to call Mrs. *Washington Holt* was also thwarted, whereupon the counsel for the heirs-at-law rested their case. After more argument Mr. Darlington craved a recess for an hour, which the court granted.

It will be remembered that several days ago, when Miss Mary Holt was being cross-examined, she was asked as to a certain remark she had heard Judge Holt make regarding Col. William Sterett. Mr. Worthington objected to her answering, and was sustained by the court. Immediately after recess yesterday Miss *Holt* was placed on the stand for the legatees.

"Will you tell us, now," said Mr. Darlington, "what remark you heard Judge Holt make about Col. Sterett?"

Again Mr. Worthington objected, but subsequently withdrew it, and the witness replied:

"I cannot tell you his exact words, but the idea Judge Holt conveyed was that according to the statement of Col. Sterett's wife he was always broke, and according to his own statement, he made plenty of money,

and the Judge wondered what he did with it." The witness was promptly excused.

Mr. Darlington secured permission to read the depositions of Mrs. *Fannie Ricketts*, widow of Gen. Ricketts, now living in California. In 1873 she lived at 1829 G street, in this city, and was intimately acquainted with Judge Holt. In February, 1873, she was a guest at a dinner party given by Judge Holt, and among the other guests were President and Mrs. Grant, Hamilton Fish and Mrs. Fish, and Gen. and Mrs. Sherman. Deponent stated in reply to cross-interrogatories that within three or four years after 1873 she heard Judge Holt express himself with great bitterness against Mrs. Throckmorton, senior. Mr. Darlington explained that the deposition was introduced in order to show that the relations between Judge Holt and Gen. Grant and Gen. Sherman were such that it would have been possible for them to have witnessed the making of the will.

This having been disposed of, *Luke Devlin* was called to the stand, and Mr. Darlington asked him how he came to make application for the office of executor of the McGarrahan estate, to which references had previously been made. Objections were promptly interposed by the other side, and there was another long legal argument, Mr. Worthington holding that if Mr. Devlin were allowed to testify, there was no reason why his side should not be given an opportunity to reopen the question, so that there would be "no end to this thing." The court, however, admitted the question, and Mr. Devlin replied: "I had been McGarrahan's companion from 1871 until April, 1894, and I loaned him sums of money from \$25 to \$100. I hold his note now for \$3100. I became administrator of his estate at the third request of his counsel."

Mr. Worthington then asked the

witness concerning a statement attributed to him by a newspaper reporter regarding his not having been able to see McGarrahan on the night before his death. "I did not say that," replied Mr. Devlin. "On the contrary, I told him I had sickness in my family and could not go to see McGarrahan. I saw him the last time I called and gave him some money."

Questioned concerning his letter to Miss Throckmorton regarding the possibility of Judge Holt having left a will, the witness stated that he had written to Miss Throckmorton in answer to a letter from her. He had destroyed the letter in August, 1895. As nearly as he remembered Miss Throckmorton had asked whether Judge Holt's will had been found. The witness identified his reply to the letter, which was read in court. It began, "My Dear Miss Josephine," and the writer expressed the opinion that Judge Holt had made no will, for had he done so the witnesses to it, three in number, would have come forward. The letter also referred to a theory of a gentleman living near the Holt residence that the will might have been purloined from the house with numerous other articles.

Mr. Darlington then continued: "Some testimony was offered to the effect that you told Mr. Schrader, of *The Post*, that you had an idea where the will was. Did you so tell him?" A. "I believe that was correct. I formed it immediately after my interview with the Register of Wills; after the will was turned into the Register's office."

Q. "Something was also said about your having an autograph album and getting signatures of prominent people?" A. "That is true; I had one up to 1867. I gave it to Mr. O. L. Pruden during the summer of 1867. I next saw it after Mr. Smith's testimony, when I went to the White House and got it."

Q. "In Charles Strothers' testi-

mony regarding an interview with you at his pool room, speaking of the will, he stated that you remarked there would be a pile in it for you?" A. "I did not use such language; I simply said there was a high compliment in it for me."

Mr. Darlington then asked the witness regarding interviews which Mr. John Miller, of the *Star*, had testified to. Mr. Devlin denied positively that he had said there ought to have been a will in favor of the Throckmortons. His conversation in the *Star* office had been addressed to Dr. Howe, who had known the Throckmortons as long as he had. Mr. Miller's statement that he had said he was a fool to let another opportunity go by, and that he should have gone into Judge Holt's room in spite of the servants was also a mistake; it was highly improbable that he would have used such language. In regard to the statement of Mr. Wilkins, of *The Post*, that witness had offered him a typewritten copy of the will, Mr. Devlin stated that he had offered him the official copy of the document to make a copy from. Dr. Howe, of the *Star*, had previously made a copy of it, and the document was in a *Star* envelope.

The statement of Witness Fought to the effect that Devlin had had trouble with Judge Holt over the fact that he (Devlin) was acting as Senator Blair's private secretary was next brought up, and Mr. Devlin denied that Judge Holt had ever spoken to him on the subject. At this point a document was introduced, signed by Judge Holt, testifying regarding Luke Devlin, that "his conduct throughout his long service has been most excellent; thoroughly qualified for his duties, he has performed them at all times with fidelity and zeal." Mr. Devlin also characterized Fought's statement that he had been required to surrender his key to the office as absolutely false. At that very time

Judge Holt had promoted him from a salary of \$1100 per annum to \$1600.

At this point Mr. Devlin was excused, in order to place Judge *John A. Bingham*, of Ohio, on the stand. He testified that he was eighty-one years of age, and was in Congress for eighteen years. He first met Judge Holt in 1864 and had become familiar with his handwriting, having been associated with him at the time of the trial of the assassins of President Lincoln. He met Judge Holt constantly until 1873, when he left the country as Minister to Japan, being gone twelve years. When it became apparent that it was the intention of the attorneys for the legatees to have Judge Bingham testify regarding the genuineness of the alleged will, the lawyers on the other side raised strenuous objections again, and the battle as to what was rebuttal testimony and what was not was on again as fiercely as at first. After a long argument Judge Bradley held that it was clearly not rebuttal, and sustained the objection of counsel for the heirs-at-law. Even then the opposition did not give up, and Messrs. Butterworth, Darlington, and Lee all submitted additional arguments, but without avail.

The court added, however, that he did not want his decision understood as prohibiting testimony as to the attainments and qualifications of Judge Holt as a lawyer, without reference to the genuineness of the document in question, and Gen. Butterworth immediately took the cue and asked:

Q. "Judge Bingham, do you know anything as to the legal attainments of Judge Holt? Are you able to state, from your knowledge of him, whether, in the preparation of legal documents, he was an accurate, technical lawyer?" A. "I regarded Judge Holt," replied the witness, "as a strong, sensible man; a careful, painstaking man; a very faithful man in the discharge of his

official duties. At no time during my intercourse with him did I see any indication that he was a technical lawyer. He was simply a broad-minded, intelligent man. He tried to ascertain his duty and did it. I saw no sign of his being a technical lawyer; he dealt with facts."

The lawyers for the other side refused to cross-examine the witness, and Mr. *Devlin* resumed the stand. Mr. *Darlington* said: Q. "Mr. *Schrader* testified that you told him Maj. *Throckmorton* was on very friendly terms with you, and visited you every time he came to town?" A. "I did not say that; he asked me when Maj. *Throckmorton* would be in town, and where he would stop. I said he would probably stop with me, as I visit at his house."

Q. "It was also stated during the proceedings that you were very fond of signatures of prominent people, and would tear them off papers in the office." A. "It is undoubtedly false; absolutely."

Q. "It was further stated that when Judge *Holt* inadvertently omitted signing his name to official papers you wrote his name to them."

A. "That is absolutely false. I never signed Judge *Holt*'s name to a document in my life; not one."

Q. "Mr. *Schrader* stated that you said you believed that Miss *Hynes* would be well provided for in the will." A. "That is correct. From 1862 to 1869 I sent checks quarterly from Judge *Holt* to Miss *Hynes*. I knew she was supported by Judge *Holt*, as she was his ward."

The examination of Luke *Devlin* will be resumed.

Thursday, June 11.

Nearly all of the morning session was occupied by *Luke Devlin's* testimony. His own version of the various interviews which he had with newspaper men after the discovery of the alleged will differed materially from that of the scribes and made Mr. *Devlin* appear like

a much-misrepresented man. The balance of the testimony tended to show that Judge *Holt* entertained the highest regard for Miss *Hynes* and to discredit previous statements that Judge *Holt* had not intended to provide for her in his will.

In reference to his having suggested to Washington *Holt* and Col. *Sterett* at the *Riggs House* that the *Holt* residence ought to be rented, the witness stated that Mr. *Holt* had expressed his willingness provided the other heirs were agreeable. He then identified a letter written by Judge *Holt* recommending his appointment as a Second Lieutenant in the army. The letter referred to Mr. *Devlin* in the highest terms.

Mr. *Darlington* asked the witness whether he had anything to do with the writing of the alleged will and the sending of it to the Register of Wills, and Mr. *Devlin* replied: A. "I knew absolutely nothing of it until I saw it at the Register's office."

Cross-examined as to his relations with the *Throckmortons*, the witness stated that they began in 1860, and he had known Miss *Josephine* since her father was stationed at *Fort Myer*. He repeated his statement made yesterday as to receiving a letter from Miss *Throckmorton* regarding the probability of Judge *Holt* having left a will, and also identified a copy of a telegram which he had sent Miss *Throckmorton* after the alleged will made its appearance. It was dated August 26, 1895, and read: "Will found. You and Miss *Hynes* get all; share alike."

Mr. *Devlin* was then asked how he was so well informed as to affairs at the *Holt* residence after the Judge's death, as appeared from his interviews with newspaper reporters. Mr. *Devlin* said he got his information from a Mr. *Olds*, living in the suburbs. Mr. *Worthington* read from the *Star* of August 26, 1895, a number of statements credited to Mr. *Devlin*, which the latter denied most strenuously. He

particularly denied a statement attributed to him that he believed the alleged will had been hidden by some of Judge Holt's colored servants, who afterward became conscience stricken and mailed it to the Register.

The several statements regarding Mr. Devlin's movements after leaving the Register's office on the day the will was found have been very conflicting, and yesterday he reiterated his statement that he went first to a drug store, then to the War Department for Maj. Throckmorton's address, then to the telegraph office, and then to the *Star* office. He was to meet his sister-in-law, Miss Emily Carrico, at the drug store. He insisted that it must have been after 2 o'clock when he reached the *Star* office.

The examination of Mr. Devlin was suspended to allow Mr. C. A. Johnson, who, from 1890 to 1894, was postmaster at Lebanon, Kentucky, the home of Miss Hynes, to testify. After Mr. Worthington's objection was partially overruled, and he had withdrawn it, the witness stated that while he held the office Miss Hynes received money orders about once a month from Judge Holt. They were always for \$50 each.

When Mr. Devlin took the stand again, the fact was brought out that after the finding of the alleged will Maj. Throckmorton's son dined at Devlin's house and left with him a number of letters from Judge Holt. He had turned the letters over to Mr. Blair Lee, one of the attorneys for the legatees.

Q. "Did you tell Mr. Schrader that you were satisfied that the will and the attestations were genuine?"

A. "I may have said so with reference to all the signatures except Mrs. Sherman's."

Q. "Did you tell him that you thought probably the will was written and attested upon some occasion when all the witnesses were at Judge Holt's house?" A. "I did not."

The witness further stated that he is at present employed in the record and pension division of the War Department, and that it is a part of his duty to have tracings of signatures made. He usually got Mr. Harry Fellows, another clerk, to do it. Mr. Devlin named a number of army officers whom he met at Maj. Throckmorton's house. All of them are dead or stationed at posts outside of the city.

This concluded the cross-examination of Mr. Devlin, and after recess, Judge Miller, of the Police Court, was called. He was asked what he knew about the general reputation of Luke Devlin, but Mr. Worthington objected vigorously before he had a chance to reply. "Your honor," said Mr. Lee, "I think this is competent; Mr. Devlin has been accused of a very serious offense." Mr. Worthington, however, argued that evidence as to a man's reputation could not be introduced until that reputation had been attacked. He was promptly sustained by the court, and the police court Judge as promptly vacated the stand.

Mr. H. P. Godwin, city editor of the *Star*, was then called. He testified that he and Mr. John P. Miller were present at the interview which Devlin had with Dr. Howe in the *Star* office on the day the will was found. He had no recollection of Devlin having made a statement to the effect that he had a theory that there was a will in existence before it was discovered, nor did he remember his saying that he had written to the Throckmortons concerning it. Mr. Devlin had with him at the time a typewritten copy of the will. Cross-examined, he thought the interview occurred about 12.30.

Q. "Did Devlin say anything about the life Judge Holt had been living?" A. "I remember him saying that the Judge had lived alone for a great many years and had no one with him except the servants."

The witness identified a portion of

a paragraph in the *Star* of the day the will was found, which he thought he had written, and was then asked: "Have you any recollection as to whether Mr. Devlin made any suggestion to the effect that the will had been held back by some of the servants, and afterward being sent in when conscience pricked them?"

A. "I don't recollect that Mr. Devlin said that."

Dr. *Frank T. Howe*, of the *Star*, testified that he did not remember Mr. Devlin saying he thought there was a will before it turned up, and did not hear him say anything about writing to the Throckmortons. Dr. Howe stated that he was employed in the Judge Advocate's office from 1864 to 1869. Devlin was at that time a messenger there. He was always very attentive, and when the Judge's bell rang he was very prompt to answer it. He thought Judge Holt entertained kindly feelings toward him.

Under cross-examination Dr. Howe was asked: "Did Mr. Devlin say to you in substance that he believed the will had been put away either by accident or design by some of Judge Holt's colored servants, who who were his sole companions in his later days?" A. "I do not remember that he said just that. It has never been determined just who wrote the interview with Mr. Devlin. I think, however, that Mr. Devlin conveyed that impression."

The next witness was Mrs. *Frank Evans*. She was employed as a typewriter in the Register's office at the time the alleged will made its appearance. The document was handed to her soon after its receipt for the purpose of making a copy of it. She was asked whether the will was in two pieces at that time, and after Mr. Worthington's objections were overruled she testified that it was in one piece, showing the jury just how it was joined.

Maj. *T. Gaines*, who has already figured as a witness in the case, was

then recalled. He was questioned as to his visits to Judge Holt's house, he having been associated with him since 1862. Mr. Lee explained that this was for the purpose of rebutting the statement of Charles Strothers that he had examined a bushel of visiting cards at Judge Holt's house, and had never found cards bearing the name either of Luke Devlin or Maj. Gaines.

"The last time I called," said the Major, "the servants brought word that the Judge was very ill, and to please call again. I didn't know any of the servants, they were strangers to me. I didn't believe —"

There was a storm of objection, and Mr. Worthington remarked: "Let us permit what he didn't believe to remain a mystery." This was unanimously agreed to, and Maj. Gaines proceeded to testify regarding Luke Devlin's relations with Judge Holt. "Judge Holt," said he, "was very fond of Luke Devlin, as I learned as soon as I entered the office. In conversation with the Judge while riding with him about the city, he spoke frequently about Luke Devlin. I remember one occasion in particular. The chief clerk of the office had become offended at Luke, and there was a good deal of personal feeling between them. The Judge had expressed himself as sorry that Wright had allowed his temper to influence him. He thought that Devlin would not do anything except what was right, and that it would all pass over again."

He did not remember anything Luke Devlin did for the Judge except attend to errands and similar work. The witness was not acquainted with any other of the parties to the suit, although he had seen Maj. Throckmorton. He did not remember who answered the door upon the occasion of his last visit to Judge Holt's house. That visit, he thought, was later than 1880, though he did not remember whether it was subsequent to 1885.

When the name of Mrs. Ray was called a little woman in black, who has sat just behind Miss Hynes and the Throckmortons throughout the trial, took the stand. She comes from Kentucky, and is a niece of Miss Hynes. She first saw Judge Holt in 1862, when he came to Kentucky to take her aunt, Miss Hynes, on a long trip. He did this almost every year. In April, 1884, when Judge Holt was visiting Miss Hynes, he took a lot of bonds from a valise and gave them to Miss Hynes.

Q. "Tell us just what he said upon that occasion." A. "He

said: 'Lizzie, here is something I have for you. I have forgotten to send you money lately, and I will give you these bonds, so you will always have a little money.' He said he did not want her to think that was all he was going to give her. He told her to write to him whenever she wanted money, for when he was dead she would be independent of everybody. She could take \$10,000 and spend it just as she wished. He said he had always intended to support her, as he had promised his wife to do so."

The witness then spoke of the visits she had made to Judge Holt's house in this city in company with her aunt. In 1882 Judge Holt had spoken to her in this city, in regard to Miss Hynes. He said he had promised his wife, whom he referred to as "Cousin Mary," on her deathbed to take care of "Poor Lizzie," as she called Miss Hynes.

Mrs. Ray remembered on another occasion when Judge Holt was not feeling well he told Miss Hynes that he might never see her again, and that he did not want her to think that \$10,000 was all he intended to give her.

At this point Mr. Worthington objected if the testimony was intended to prove that Judge Holt had spoken of providing for Miss Hynes in a will. He claimed that such evidence should all have been intro-

duced by the other side in the first place; that even if they should now offer to produce a man who saw Judge Holt write and sign the alleged will, it would not be competent. Mr. Darlington named three grounds upon which he thought they had a right to introduce Mrs. Ray's testimony, the most important being that it was rebuttal to Washington Holt's statement that Judge Holt had said that the \$10,000 he had given Miss Hynes would be enough for her needs for the rest of her life. The court thereupon overruled the objection, and the witness continued as follows:

"Judge Holt said he wanted Miss Hynes to know that he would fix his business affairs in such a way that she could have all she wished while he lived, and after he was gone she would be amply provided for. Miss Hynes then asked him what his relations would say, and he replied that his relations had nothing to do with his affairs, that they had never given him a dollar, and that he had made all his money himself. They would have nothing to say about it."

The witness was then questioned as to her own family, for the purpose of introducing further facts regarding Judge Holt's attitude toward Miss Hynes, but the court sustained Mr. Worthington's objection. A number of letters from Judge Holt to Mrs. Ray were then introduced as evidence, most of them, as Mr. Darlington explained, containing references to Miss Hynes. They were also objected to, but the court ruled in favor of their admission.

While Judge Wilson was examining them, preparatory to their being read this morning, Mr. Worthington began his cross-examination of the witness. She stated that she last saw Judge Holt in 1885 or 1886.

Q. "Why was it that you and he ceased to correspond?" A. "My husband owed him a note; that was

all it was; I never had any trouble with him myself."

This answer explained the bitter attack Judge Holt made on Mr. Ray in one of his letters to Washington Holt.

Q. "When Judge Holt spoke of his relations in that conversation with Miss Hynes, was his tone that of unkindness?" A. "No; not at all."

An adjournment was then taken.

Friday, June 12.

The testimony was confined to attempts to prove the friendly relations existing between Judge Holt and Miss Hynes and between Judge Holt and the family of Maj. Throckmorton, and also that the will was in one piece when it was received at the Register's office. The latter has all along looked like a plain proposition, but it did not appear to have been satisfactorily proved until yesterday.

Mrs. Ray, Miss Hynes' niece, resumed the stand as soon as court opened, and in regard to the letters written to her by Judge Holt, it was decided to read only those containing references to Miss Hynes. Under cross-examination, additional facts were brought out regarding the difficulty between the witness' husband and Judge Holt. The latter held her husband's note for \$4000 which was not paid when due. It was afterward turned over to Washington Holt, and the witness admitted that she became much embittered, when he sent an officer to levy on the furniture in their house. She stated that after the note was paid, with the exception of \$315, and her husband had asked for thirty days in which to pay the balance, Washington Holt had refused.

Judge Holt's letters to Mrs. Ray were read. They all expressed deep affection for Miss Hynes, and Mr. Darlington passed them around among the members of the jury, with the suggestion that they compare the handwriting with that in the alleged will. He called their

particular attention to the absence of the jab on the J, which had been set forth as a characteristic of Judge Holt's signature, and in one letter he directed their attention to a number of t's made with a loop, which Mr. Carvalho, the expert, had testified he had not found in Judge Holt's writings.

Under further cross-examination, Mrs. Ray said she was not sure whether the amount was not \$715 instead of \$315, remaining unpaid on the note, nor was she certain that Mr. Holt had not granted her husband several extensions of time. At any rate, she was very indignant at Mr. Holt's action.

Miss Sarah A. Terry, who was a clerk in the Register's office when the alleged will was received, was called to the stand. She stated that when she first saw the document it was in one piece.

In the same connection Prof. W. M. Gray, microscopist of the Army Medical Museum, was summoned. He identified an immense photograph which he made of the alleged will, and which Mr. Blair Lee handed to the jury with the statement that it showed that the break between the two portions was not complete. The witness also identified several photographs of letters which cross the line of alleged separation in the document, including one of the final "t's" in the signature of J. Holt, and another of the final "y" in February in the line above. In reply to questions by Mr. Lee, Prof. Gray stated that the magnified photos showed such an interlacing of the fibers on the two edges as to convince him that it was originally one complete piece of paper. Efforts to get the witness to testify to details were objected to, and in spite of numerous methods of questioning in order to bring about the desired result, the court sustained the other side in their contention that Prof. Gray was not an expert concerning the subject of wear and

tear of paper. Mr. Worthington declined to cross-examine the witness.

Maj. *Throckmorton* was called, and his examination occupied the rest of the day. He gave a fairly complete history of his life since his first acquaintance with Judge Holt in 1858. Judge Holt was then Commissioner of Patents, and in 1859 he took Maj. *Throckmorton* to the office of the Postmaster-General and had him appointed to a clerkship. Subsequently he was offered a position in Louisville, Kentucky, which Judge Holt advised him to accept. Some time afterward he wrote to Judge Holt, saying he would like a position in the army, and in March, 1861, the Judge wrote him that he would get him an appointment as Second Lieutenant. He came at once to Washington, and Judge Holt told him that President Lincoln had made the appointment. Maj. *Throckmorton's* father and cousin were anxious to have him decline the appointment and go South, but Judge Holt told him it was the duty of every young man to serve his country at that time. He served through the war, and in 1865 he was brought to Washington with his battery, and encamped near H street and Maryland avenue, where Judge Holt came to see him repeatedly. He was sent to Detroit with his battery in October, 1865. In 1868 he returned to Washington, and was stationed at Fort Foote and Fort Washington, remaining until October, 1872. Judge Holt visited him repeatedly, and the most friendly relations existed between them. In 1872 he went to California and engaged in the Modoc campaign.

The Major referred to his marriage in Kentucky in 1863, and to the birth of his daughter, Josephine Holt *Throckmorton*, in Detroit. Judge Holt was informed of the event, and also of the intention to name her after him, and to make him her godfather. He replied, thanking

him for the honor, and sending his godchild a silver mug, and also a bottle of water from the River Jordan, which he wished to be used at the baptism. He had procured the water while on a visit to the Holy Land.

In 1876 Maj. *Throckmorton* was quartered in Washington by direction of President Grant. He brought his family with him, and saw Judge Holt repeatedly while he was here. While he was stationed in Maine he left his wife and family in Washington, and in 1881 he came to Washington as a member of the court-martial which tried Sergt. Mason for his attempt to kill Guiteau, the assassin of President Garfield. He was located at the Washington Barracks from Christmas, 1883, until May, 1884, and frequently met Judge Holt, their friendly relations being continued.

After that he was in New Orleans until the yellow fever scare of 1888, when he was ordered to New York by sea, remaining there until June, 1890. "I saw very little of Judge Holt," continued the witness, "after my return from New Orleans, for the reason that I was very rarely in Washington. On two occasions after 1888 I called at Judge Holt's house. Once I rang the bell, and the servant woman, who has been here — Martha — came to the door. I handed her my card, but mentioned no name, as I am not in the habit of giving my card and name at the same time. She said Judge Holt was not in, and I said I only wanted to pay my respects and left. Within a year I called again, and the same servant came to the door. I asked if Judge Holt was in, and she replied that he was not. I again left my card, saying I had called to pay my respects.

"The next morning I met Judge Holt on the corner of New Jersey avenue and B street. He stopped and spoke very kindly, saying that he did not know I was in town. I replied that I was sorry, as I had

left my card at his house the day before."

Q. "What difficulty ever took place between you and Judge Holt?" asked Mr. Darlington. A. "No difficulty between Judge Holt and myself," replied the witness. "There was a misunderstanding between him and my mother, an old lady eighty-eight years of age."

Mr. Darlington then handed Maj. Throckmorton a number of letters, which he identified as letters he or members of his family had received from Judge Holt, and also two written by Judge Holt to a third party. The latter referred to Maj. Throckmorton as the "soul of honor," and also referred to his brave conduct at Bull Run. Mr. Worthington wanted to know what such evidence was in rebuttal of, as it simply referred to the friendly relations between the two men twenty years before they had claimed any breach occurred. Mr. Darlington replied that his purpose was to show relations which would make the writing of such a will as was in question a probability, and he was finally given permission to read them.

The correspondence brought out the fact that Maj. Throckmorton's father was an officer in the Confederate army. Several of the letters referred to Judge Holt's efforts to have Maj. Throckmorton sent into the field with Gen. Sherman instead of doing mustering duty. One dated in 1863 regretted that the Major had "been disturbed by an idle rumor."

Q. "To what did that refer?" A. "My impression is that some one said I had been drinking. I wrote back that it was a lie."

Another of Judge Holt's letters stated that he was glad Maj. Throckmorton had met Miss Hynes, who was "in every way a noble-spirited woman, especially in her love of country." Other letters read were dated in 1873, one being dated in February of that year, the same

month in which the alleged will was written. At that time Maj. Throckmorton was located at the lava beds of California, it being the height of the Modoc campaign. One of the letters read was addressed to Mrs. Throckmorton, beginning, "My dear cousin." It was evidently in reply to one from her in which she had expressed the greatest anxiety for her husband's safety. The Judge's was a very tender letter, expressing confidence that the life "so precious to us all" would be preserved, and sending his love to the "dear little children." Both Mrs. Throckmorton and Miss Throckmorton shed tears while it was being read.

Maj. Throckmorton identified a letter, dated February 5, 1873, as one which he had written to Judge Holt from the lava beds. In it the Major expressed sympathy for the Indians he was warring against. He said they had been driven to desperation by bad treatment and broken promises, and had been compelled to eat their ponies to keep them from starving. He added: "I hoped to be home with my wife and babies by about March 15. If I should be so unfortunate as not to get back, I know you will not let my wife and little ones want."

Q. "Did you receive any reply to this letter?" Maj. Throckmorton was asked. A. "I have not got it. At the time I received it I was in the lava beds and could hardly keep one shirt."

Q. "In that letter what response did Judge Holt make to this paragraph in your letter?" A. "He told me to do my duty, they should not suffer."

A letter was read from Judge Holt to President Grant, dated December 9, 1876, asking for the appointment of Maj. Throckmorton to a position in the newly established signal corps. It referred particularly to his bravery at the battle of Bull Run, where he was confronted by that part of the Confed-

erate army in which his father was an officer.

Q. "Something has been said regarding a difference which sprung up between Judge Holt and your family. What do you know of that?" A. "In 1880, in reply to one of my letters, Judge Holt wrote me that my mother had told him that my wife had informed her that Miss Lizzie Hynes had shown to my wife letters written by Judge Holt to Miss Hynes. I wrote to him at once, but I could not quite understand his letter, so I turned it over to my wife to answer in full. He made a reply to that letter to my wife."

Q. "Tell us how far that matter affected your relations." A. "It did not affect either myself, my wife, or my daughter. He seemed to be very bitter against my mother. The subject was never mentioned between us. I always believed that it was brought about by misrepresentation, but I was placed in such a delicate position that I was powerless to act. I seemed to drift away from him after 1885. As he would not discuss it, I could not discuss it, and being absent from the city, I saw very little of him. When we did meet I saw no change in his manner toward me. He received me as he always did. He was a very dignified man, who rarely unbent to anybody. I last saw him in July, 1891."

Mr. Worthington conducted the cross-examination, which resulted in some lively tilts between him and the Major. Mr. Worthington handed him a letter dated January 2, 1892, and asked whether he had written it. The Major replied that he had. The letter read: "After many years of separation, I again approach you for assistance." The writer asked for a letter which he could lay before the general court-martial, before which he had been summoned, adding: "You have been in the past the best friend I have had, and I have always loved

and respected you as a benefactor, though a terrible misunderstanding and separation has come between us." Later on the witness said he got only a verbal reply to the letter through his daughter.

Mr. Worthington questioned him closely, for the purpose, he stated, of trying to find some reason why Judge Holt should have made a will leaving Miss Throckmorton \$80,000 or \$90,000, and nothing to the Major's son or any of the other members of the family. Nothing important was developed on this point. Maj. Throckmorton explained, however, that when he wrote to Judge Holt stating that he knew that the Judge would not let his family want, he had just learned of the collapse of a life insurance company in which he carried a policy.

Some questions came up as to the number of the elder Mrs. Throckmorton's house on Capitol Hill, and Maj. Throckmorton said to Mr. Worthington, with a tinge of sarcasm, "You might know yourself; your man was up there in the kitchen several times."

Q. "I didn't ask you about that; when it has been asserted that my man was there it will be time enough for you to tell what you know. I might ask you whether you had anything to do with sending the detectives up to Judge Holt's house."

A. "I did not, sir; I never heard of them until it was brought out here."

Mr. Worthington brought out the fact that Maj. Throckmorton's mother acted as proxy for Judge Holt at the baptism of Miss Josephine in which the water from the River Jordan figured. The witness said his mother was a strong Union woman, so far as he ever heard her express herself.

On redirect examination, Maj. Throckmorton stated that Judge Holt was a very peculiar man, and it made him furious to hear of any of

his correspondence being shown to a third party.

At the conclusion of the examination of Maj. Throckmorton, Mr. Darlington proceeded to read the deposition of *Robert S. Holt*, portions of which had been read already by Mr. Worthington. The latter, however, objected, and rather than argue the point at that time, Mr. Darlington laid the deposition aside, and was about to read letters from Judge Holt to Robert S. Holt when Court was adjourned until Monday morning.

Monday, June 15.

The first witness called by counsel for the legatees was Mr. S. A. *Manuel*, proprietor of the Hotel Varnum, which adjoins the Holt residence on Capitol Hill. He stated that in the spring of 1894 Luke Devlin entered the hotel office and asked for a blank card. Shortly afterward he saw Devlin going up the steps of Judge Holt's house. He did not see him enter or leave.

Mr. *Charles Baum*, bookseller, identified an old leather-colored Bible, which he stated he had purchased at the auction sale of Judge Holt's library. The Bible was then offered in evidence. It was originally the property of Judge Holt's first wife. It contained a record of their marriage and of the wife's death in the handwriting of Judge Holt.

Maj. *Throckmorton* was then recalled and gave a running account of various incidents to which previous witnesses had testified. When Mrs. Olivia Briggs was on the stand she stated that Judge Holt on one occasion took her to one of President Arthur's receptions, and that while at the White House Maj. Throckmorton had approached Judge Holt to speak to him, and that the latter had turned his back. Maj. Throckmorton stated that he had never attended one of President Arthur's receptions, and that Mrs. Briggs' statement was without foundation.

Regarding his acquaintance with

Luke Devlin, the Major said he had known him thirty-one years, having seen him frequently in Judge Holt's office. He had only seen Mr. Devlin three or four times from 1885 until the alleged will was found. Maj. Throckmorton was cross-examined regarding an interview he had with the New York correspondent of *The Post*. He affirmed a portion of the interview as published, but denied some of the statements made. He stated that he did not say that Judge and Mrs. Holt had introduced his daughter Josephine to Washington society. Mrs. Holt died when Miss Josephine was a little girl.

Asked on redirect examination as to what he really did say in the interview, Maj. Throckmorton replied: "Reporters have been the bane of my existence for the past four or five years." Mr. Worthington promptly objected on the ground that the reporters were not represented by counsel, and the court held that the newspaper men were not on trial. The remark was ordered stricken out of the record. Maj. Throckmorton continued, saying that *The Post* correspondent told him a great deal more about the finding of the will than he knew. He did tell the correspondent that he had always thought Judge Holt had made a will, if for no other reason than to provide for Miss Hynes, who had always been his ward.

The next witness was *Julius A. Truesdell*, a *Star* reporter. He gave an account of an interview he had with George Johnson, who is now employed by Secretary Carlisle, but who was formerly employed in the Holt household. The reporter stated that Detective Lacey was present at the interview, in which Johnson told him that he had heard Judge Holt say that not a dollar of his money should go to his relatives, who had abused him for his loyalty, and also that he intended to provide for Miss Lizzie Hynes.

Maj. *Throckmorton* was recalled for the purpose of identifying a letter, dated January 12, 1880, which Judge Holt had written to Maj. *Throckmorton's* wife, in reply to her letter regarding the trouble between Judge Holt and the elder Mrs. *Throckmorton*. A piece of the letter, about an inch wide, was missing from the bottom of the first page. Mr. *Darlington* read portions of it, omitting certain references to a third party, which he said ought not to be produced in court. The letter began, "Dear Mrs. Major *Throckmorton*." It dealt with the statement attributed to the elder Mrs. *Throckmorton*, and referred to on Friday, that Miss *Lizzie Hynes* had shown some of the letters Judge Holt had written her, and called him "an old fool" on account of certain terms of endearment which they contained. Judge Holt took up the matter in detail in his letter to Maj. *Throckmorton's* wife, and stated that from investigations he had made he was satisfied that Miss *Hynes* had not read any of his letters to others. He referred to his relations with Miss *Hynes* as those of friend and protector. The letter requested Mrs. *Throckmorton* to express Judge Holt's warmest thanks to Maj. *Throckmorton* for his course in the matter, and continued: "He has been my constant, true friend through many long years."

The elder Mrs. *Throckmorton* was referred to indirectly in a condemnatory tone.

Expert *Harrison Blake Hodges*, who is tall and angular, with a partially bald head and an English accent, then took the stand. He is a chemist in the office of the Southern Railway. He studied abroad, and was for four years professor of chemistry at Harvard, a position which he resigned to accept one as chemist for the Carter Ink Company.

There is very little reliable literature on the subject of inks, he said, for the reason that the manufacturers endeavored to keep their

recipes secret. Mr. *Carvalho* had testified that he had obtained a great deal of information on the subject through correspondence with ink manufacturers. Mr. *Carvalho* had also stated that archil was procured by burning seaweed, and that it was not used in the manufacture of ink prior to ten or twelve years ago. Mr. *Hodges*, on the contrary, testified that it is made from lichens, that he never heard of it being used to adulterate inks. Archil, he said, was supposed to have been known to the ancient Greeks, but of late years anilines have almost completely taken its place. Mr. *Carvalho* had applied muriate of tin to the alleged will, and in a few seconds had declared that the ink contained archil. Mr. *Hodges* declared that it was almost an impossibility to detect its presence with that chemical.

Q. "What would be your conclusion," he was asked, "if in your experiments with the ink you should discover archil?" A. "It would be my opinion that the ink was made prior to the time when the cheaper and more effective aniline dyes came into general use."

The witness was shown the bottle containing the liquid with which Mr. *Carvalho* made his experiment, but said he could not tell positively what it was. He was then handed the alleged will, and the word on which Mr. *Carvalho* made his experiment was pointed out. He was asked:

Q. "Assuming that the word has been treated with pure muriate of tin, do you believe that the result shows the presence of archil in the ink?" A. "Muriate of tin bleaches archil, while this word shows a brownish tint that could not have been brought about by the action of muriate of tin on archil. I can say positively and beyond question that the experiment has not demonstrated the presence of archil in the ink."

While this statement appeared like

a flat contradiction of Mr. Carvalho's statement, it was really not so pronounced as some of the witness' previous statements. Mr. Carvalho had held out that some peculiar phenomena occurred when he applied his liquid, which he could not explain, but which he insisted demonstrated to him the presence of archil.

Gen. Butterworth secured permission from the court for Mr. Hodges to make an experiment. After explaining the character of his chemical, which he said was chloride of tin, the witness applied it to a word in the will and quickly announced that he found iron in the ink. Upon examination he stated that there was nothing which led him to suspect the presence of archil. He gave it as his opinion that if the alleged will had been written within the last twenty years, he would have discovered aniline blue, which had been used in the manufacture of ink for even a longer period. In his opinion a man could not be a chemist in inks without being well versed in general chemistry, which reflected on Mr. Carvalho's statement concerning his own attainments.

Mr. Hodges told about the different works on chemistry of which he was the author, and made more experiments. Replying to questions by Gen. Butterworth, he stated that he did not know whether archil had been used in Arnold's inks within the last ten or twelve years, and he could not tell by chemical analysis of writing whether the ink contained archil. He stated also that it was next to impossible to get any information from manufacturers as to what their inks contained, as it was a secret very rigidly maintained. Mr. Worthington promptly objected to the statement, taking the position that while it might have been impossible for him to get such information, it was quite probable that Mr. Carvalho had been able to obtain it.

Mr. Hodges experimented on a

letter written by Judge Holt a short time prior to the date of the alleged will, and announced: "This ink is different from that in the other paper."

"That's exactly what we expected," put in Mr. Worthington, his own countenance and that of Jere Wilson being wreathed in smiles. The witness hastened to correct himself by saying that he would not be positive about it until the paper had dried. Mr. Hodges then applied the test to a letter written by Judge Holt on February 7, 1873, the date of the alleged will, and announced that all three tests produced the same result.

Q. "Can you tell, as a chemist in inks, whether there is archil in one and not in the other, or in any of them?" A. "I cannot tell, because the effect of the chloride of tin would be to bleach out the archil so that it would be entirely invisible beside the reddish brown of the iron."

Cross-examining the expert, Mr. Worthington asked:

Q. "Is not the effect on the two letters precisely the same, and is it not entirely distinct from the effect on the alleged will?" A. "There is not a pronounced difference in the color."

"There is not, eh? Well, I will ask permission of the court to show them to the jury," and having been granted the privilege, Mr. Worthington placed the two letters side by side with the alleged will, and held them up for the inspection of each member of the jury.

"Now, Mr. Hodges," he resumed, "whatever may be in that bottle, if you apply it to the same ink, under the same conditions, it will have the same effect?" A. "Yes."

Q. "And if you apply it to two inks and do not get the same effect, that indicates that the inks are different; is not that so?"

The witness began to explain that it depended a good deal upon how much of the liquid was used, and how long it was allowed to remain.

The witness was questioned regarding the manufacture of archil. He repeated his statement that it was made from lichens, which grow on the sides of hills. It was not the product of a maritime plant, he told Mr. Worthington.

Q. "Let me ask you," said the latter, "whether you recognize the Encyclopædia Britannica as an authority on this subject." A. "Yes, I do."

Mr. Worthington promptly produced the work in question and read the article concerning the manufacture of archil from lichens, which are found on various seashores. The Century Dictionary said about the same thing.

When Mr. Hodges had finished still another problem confronted the jury. If Mr. Hodges knew anything at all about ink, it was perfectly plain that Mr. Carvalho, the other expert who testified, knew nothing at all about it, and if Mr. Carvalho did know anything, then Mr. Hodges was simply talking nonsense. Impartially summed up, these two learned gentlemen made a draw of it, and the effect is about the same as if no expert evidence concerning ink had ever been introduced. Mr. Carvalho was positive that there was no iron in the ink with which the alleged will was written, but that it did contain archil. Mr. Hodges was just as certain that there was iron in the ink and he could not detect the presence of archil. Mr. Carvalho said archil is made from seaweed, and Mr. Hodges maintained that it was made from lichens, which grow on hillsides. The dictionaries and encyclopedias state that it grows near the seashore.

Tuesday, June 16.

The first witness called was Col. Charles James, who testified that he saw ex-Postmaster-General Horatio King in this city soon after the publication of a facsimile of the alleged will. Mr. King had told him that he was satisfied that the

handwriting was genuine, but that he could not imagine where it had been since Judge Holt's death. The court ruled out a question as to whether or not during that conversation anything was said regarding Judge Holt having been a Spiritualist. The witness was not cross-examined.

Ann Tully, a domestic in the Throckmorton family, testified that in 1891 she went twice with Miss Josephine Throckmorton to Judge Holt's house. She remained about an hour the first time, Judge Holt bidding her good-by most affectionately, and telling her to come again. The second visit was even longer, and as Miss Throckmorton started to leave the Judge said he had forgotten something, and handed her something wrapped in tissue paper. Cross-examination made the witness' testimony all the stronger, as she stated that the colored servant, Martha, answered the door, and told Miss Throckmorton that Judge Holt was expecting her.

Miss Lizzie Hynes, one of the legatees, then took the stand again, and gave a detailed account of her relations with Judge Holt. She said she was a cousin of Mary Harrison, Judge Holt's first wife, who took care of her at the death of her parents, when she was a child. She first met Judge Holt when she was five or six years old, and he seemed very fond of her from the first. She was then shown Judge Holt's family Bible, containing a record of his marriage to Miss Harrison, on April 22, 1839. Miss Hynes remembered the wedding distinctly, Judge Holt having told his wife that he would always take care of "Little Lizzie," and treat her as his own daughter.

Miss Hynes testified that Judge Holt paid her school bills, bought her clothing, and insisted on her spending all her vacations at his home in Louisville. At the death of Mrs. Holt, Miss Hynes said she

went to live with her married sister, and Judge Holt wanted to continue paying her board, but her brother-in-law would not permit it. He did pay her other expenses, however, and kept her in pocket money. The witness related many incidents connected with a number of trips which she made with Judge Holt to Niagara Falls and the large cities. She stood beside him on the steps of the Tremont House, in Boston, when he made a famous speech there. The last trip she took with him was in 1885 or 1886. During her visits to Judge Holt's house, in this city, she always heard him speak in the kindest terms of the Throckmortons. He was especially fond of Miss Josephine, and had taught her to call him "Bon Père."

Miss Hynes also gave her version of the misunderstanding between Judge Holt and Mrs. Throckmorton, the elder. The Judge had been informed that Mrs. Throckmorton had said that Miss Hynes had read some of his letters to her to a third party, and had called him an old fool. Judge Holt had given her the \$10,000 in bonds, Miss Hynes stated, in 1884, because he sometimes forgot to send her monthly remittances and he wanted her to have a fund to draw upon. He told her that he did not wish her to understand that he would not continue to provide for her. She was never dependent upon the interest on the bonds.

"I asked him once," said Miss Hynes, "what his relatives would think of his generosity, and he replied that it was none of their business. The last time I saw Judge Holt was in this city in 1891, and when we separated he said: 'Lizzie, may God be with you till we meet again.' That was the last I ever saw of the truest friend I had on earth — a friend from my earliest childhood."

Miss Hynes identified a letter from Judge Holt, which Mr. Darlington proceeded to read to the jury. It began: "My Precious Cousin," and

went on to say that he rejoiced in her independence as much as she did, adding that he would be very unhappy to think that she was at the mercy of the world. The letter added that she was perfectly safe then, but would be safer in due time.

Mr. Worthington conducted the cross-examination. Miss Hynes said she thought it very strange that no will was found after Judge Holt's death, and denied ever speaking to any one about making terms in case a will was found. She did not remember that Judge Holt kept a written account of all his expenditures. Mr. Worthington asked whether it was not a fact that after the present of bonds in 1884 Judge Holt only sent her money once. The witness replied that the Judge continued to send her money as before, but could not remember in what form it was transmitted.

She identified the writing in Judge Holt's expense book, which Mr. Worthington handed her, after which he asked her: Q. "Miss Hynes, can you now say positively that after June, 1884, when he gave you the bonds, Judge Holt ever sent you a cent until April, 1885, when he sent you \$30?" A. "Yes, I think so; I think he sent me money."

Mr. Worthington continued to question her closely on this point, but the witness could only remember positively that he gave her money when she visited him in this city.

At this point counsel for the caveators were permitted to call as a witness Mr. *Lee M. Lipscomb*, of the money order division of the post office in this city. He had with him a number of large volumes containing the records of the money order division, which showed that from 1890 to 1894 only thirteen orders were drawn on the office at Lebanon, Kentucky, in favor of Miss Hynes, amounting in all to \$465.

Miss Hynes took the stand again after recess, and in response to Mr. Worthington's question stated

that she had visited Florida since Judge Holt's death, accompanied by a Mrs. Hardin.

Q. "Do you remember telling Mrs. Hardin, in speaking of the \$10,000 in bonds, that Judge Holt had drawn a will for you disposing of it." A. "Yes, the will was drawn in 1886. I was very sick at the time and wrote to Judge Holt regarding the disposition of what he had given me. He sent me a draft of a will, which I copied."

Miss Hynes stated that she still had the will, and when Mr. Worthington asked whether she had any objection to letting him see it, said she did not think it was necessary, that a will was a private paper, and she did not care about the public knowing its contents. Mr. Worthington developed the fact that Judge Holt had written Miss Hynes that Mrs. Ray had a husband and was provided for, so that Mrs. Ray was left out of Miss Hynes' will. The witness did not remember telling Mrs. Hardin that she expected to get something more out of Judge Holt's will. She did nothing herself toward finding a will, but thought her nephew, Mr. John McCord, had written to parties in Washington concerning it.

On redirect examination Miss Hynes stated that the date of her will was January 1, 1886, and that J. M. Knott, cashier of a bank in Kentucky, and another person named Roundtree were in some manner connected with it.

"There is one mystery explained," said Mr. Worthington.

"I am glad," rejoined Mr. Butterworth, "to have our witnesses confirmed upon a point on which they were cross-examined, as if they were not believed. I never attached any importance to the theory of a will by Judge Holt of that date."

Then the inimitable Mr. *Ed. Hay* appeared on the stand as an expert in handwriting, which was certainly putting his popularity in the community to a severe test, for when he

appeared in court with an armful of the familiar letters of Judge Holt to members of his nephew's family, a sign of anguish involuntarily escaped the spectators. He made a large number of practical comparisons, however, which evidently made quite an impression on the jury. He stated that he had devoted many years to the study and comparison of handwriting, and had testified in courts in the District of Columbia, Maryland, Pennsylvania, Dakota, Minnesota, and Ohio. He had also devoted considerable time to a comparison of the alleged will with other papers in the case. He did not attach any great importance to the use of a microscope. He had first seen the alleged will in the Orphans' Court. It was in a much smoother condition at that time, and it was undoubtedly in one piece. He had never made any especial study of papers to determine their age, although he had examined papers to see whether they were "doctored" to simulate age. The effect was produced by saturating them in tea and holding them over the mouth of a coffee pot.

Q. "Have you examined this paper with a view of determining whether it has been ironed?"

A. "There is no evidence to my mind that it has been touched with an iron."

Mr. Darlington then handed his witness a large number of letters from Judge Holt to the members of the family of Washington Holt, which Mr. Hay identified as those he had examined.

Q. "How does the handwriting in these letters compare with the handwriting in the will?" A. "It compares most favorably. I never use the word natural; but they all appear like the writings of the same individual; they contain the same regularities and irregularities of slant."

Mr. Hay showed the jury two or three different positions in which Judge Holt might have held his

pen in order to produce the form of handwriting in the will.

Q. "You say, then, that this will gives no evidence of being written in a feigned hand?" A. "Oh, no; it could not be."

The witness went on to explain that feigned handwriting showed evidences of nervousness, caution, and careful formation of letters which were lacking in the will. He also explained the methods of tracing, but there was no evidence of this in the document in question. He had found in the letters nearly all the characteristics which appear in the will. There was no evidence of a cramped movement which Expert Carvalho had pointed out, and Mr. Hay gave the audience another lesson on the blackboard, showing the three principal forms of writing, the whole arm movement, the forearm movement, and the finger movement. Judge Holt wrote with the finger movement.

Mr. Hay took up various points in the alleged will which previous expert witnesses have stated were unnatural and proceeded to find corresponding peculiarities in a number of Judge Holt's authenticated epistles. He paid particular attention to the letter k, which in the Throckmorton in the alleged will has been said to be too large, and found half a dozen letters in which the letter was formed in the same way. These were passed around among members of the jury.

The unusually long space between the Throckmorton and the following word in the alleged will was then referred to, and Mr. Hay, after admitting that this was unusual in Judge Holt's writings, nevertheless found a number of instances in which it occurred.

Q. "It has been said," Mr. Darlington remarked, "that Throckmorton was interpolated after the balance of the document was written in each instance where the name occurs." A. "That is mere conjecture on the part of anybody who said that."

The witness said there was nothing except the space to substantiate the supposition.

About the time for adjournment Mr. Darlington and his witness had reached the point where they were conversing knowingly about "similar dissimilarities" which occurred in the letters just as they occurred in the will, and it is possible that Judge Bradley was doing them a kindness when he ordered the court adjourned.

Wednesday, June 17.

Mr. Hagan took the stand as soon as court convened. He is a man apparently close on to sixty years of age, short of stature, with white hair and side whiskers, and wearing spectacles. Besides being an examiner of disputed handwritings he is well versed in the manufacture of inks, and has testified in many famous will contests. He said he made a thorough examination of the alleged will of Judge Holt last January, and had examined it again last Tuesday. When he first saw the will he was satisfied that it was not in two separate pieces. When he was shown the elaborate table of measurements, which Expert Carvalho had introduced in his testimony, Mr. Hagan said he placed very little reliance on such comparisons, and had long ago discarded them. Mr. Hagan's testimony was entirely contradictory of that of Experts Frazier and Carvalho, as to various alleged discrepancies in the will as compared with Judge Holt's letters, and in answer to Mr. Darlington's question he said that he was almost certain that the will and letters had been written by the same hand. He denounced the statement that the name Throckmorton had been interpolated after the balance of the document was written, as simply guesswork. Judge Holt, he thought, wrote with a combination of the finger and forearm movement. There was no evidence of imitation in the will, and it contained many characteristics which would hardly have

been found in simulated writing. An examination with the microscope, he said, showed that it had not been traced.

As for the signatures of Mrs. Sherman, which Mr. Carvalho had testified was written by the same hand as that which wrote the balance of the will, Mr. Hagan said he found nothing to indicate that. While there were slopes in the will corresponding with the slopes in the name of Mrs. Sherman, the latter were more constant, resembling the copy-book style more than the other writing. The witness also stated that he had examined the handwriting of Luke Devlin, comparing it with that in the will. This comparison had thoroughly convinced him that they were written by two different individuals, there being nothing whatever to indicate that the same hand had written both.

Mr. Darlington then reverted to the theory he advanced some time ago that Charles Strothers, the colored man who was Judge Holt's coachman, and who has had charge of the Holt residence since the Judge's death, was the person who mailed the alleged will to the Register's office. At that time a number of photographs were exhibited showing a sign which Strothers had painted on the stable wall, stating that he had coal, wood, and ice for sale. These photographs were produced again yesterday and handed to members of the jury while Mr. Hagan testified that he had examined a number of the printed letters in the sign in connection with the inscription on the envelope in which the will was mailed and a number of letters which Strothers wrote for Judge Holt. In reply to Mr. Darlington Mr. Hagan stated that it was his opinion all were the work of the same individual. The construction of the punctuation marks, he said, was similar throughout.

Mr. Hagan had also examined the will with a view of determining whether artificial methods had been

used to give it the appearance of age, and found nothing to indicate this, although it had a smoky appearance in places, due to partial burning. He undertook to give his views as to just how the will was burned, but Mr. Worthington objected and the court sustained him.

The witness next took up the subject of archil, which Mr. Carvalho had testified was not used in ink until ten or twelve years ago, and which since that date had been a characteristic of Arnold's writing fluid. Mr. Hagan stated that it was not used in inks to any extent, although he had found it in an English ink which he had analyzed in 1848. He said, however, that its presence could not be detected by the use of muriate of tin, which chemical Mr. Carvalho claimed to have used when he made his alleged discovery that there was archil in the ink with which the will was written.

The witness was then turned over to Mr. Worthington for cross-examination, who produced a book on inks, written by the witness, in which archil was referred to. Expert Carvalho's bottle of chemical was also produced, but the witness could not tell from looking at it what it was. Mr. Worthington read extracts from the work on inks, and asked the author whether his understanding of the question was still the same. Mr. Darlington protested that this was not treating the witness fairly, and Mr. Worthington retorted warmly that if it was not treating him fairly, he did not know how to do it. In one chapter of the work it was stated that when competently executed a chemical test would disclose whether all the writing in a document was done with the same ink. The witness still held the same opinion.

Mr. Hagan was questioned regarding the various points in the alleged will which have been pointed out as at variance with Judge Holt's style, but they did not seem to

strike Mr. Hagan so forcibly as they did Mr. Carvalho.

Mr. Worthington handed the witness Judge Holt's letter of the same date as the alleged will, of which counsel for the caveators have had facsimile copies made. Mr. Hagan was asked:

Q. "How many times does the word 'to' occur in that letter?"

A. "I find it eight times."

Q. "And how many times is the letter 't' made with a loop?"

A. "I don't find any of them."

Q. "And how many do you find made with a loop in the will?"

Lawyer and witness counted them together and agreed that there were six. Mr. Worthington continued:

Q. "That would not indicate anything to your mind, I suppose?"

A. "Not if I found it to be the habit of the writer to use both."

Q. "Yes, but on the same day. It didn't appear to be his 'loopy' day when he wrote the letter."

The other "t's" in the letter of February 7, 1873, were pointed out to the witness by Mr. Worthington, who interjected "no loop" as he came to every "t." Summing up the result, he announced that in the alleged will the "t" was only made with a loop when it occurred in the word "to," and that there were no "to's" with loops in the letter.

After this question was disposed of a board about twelve feet long was brought in and placed before the jury at a height of about five feet from the ground. An enlarged photograph of the alleged signature of Judge Holt attached to the will was tacked on the blackboard. Mr. Worthington explained that the letters spread across the board contained the genuine signatures of Judge Holt from 1861 to 1894, and asked Mr. Hagan to indicate which pile of letters gave evidence that Judge Holt was beginning to make a cross instead of a curve across the two staffs of the "H" in his signature.

The enlarged photograph was abandoned, however, and the jury

were handed the photographs of the entire will. The examination then turned on the curve to the J in the signature and the dot at the beginning of the signature. Among the various piles of letters the witness tried to find signatures without dots, while Mr. Worthington strained his eyesight in an effort to get dots on the witness.

This portion of the cross-examination of Mr. Hagan produced the driest of all the tedious expert testimony. It dealt largely with minute measurements and comparisons, among the lawyers and the witness, which were not likely to be comprehended except by a jury of mathematicians. The character of the testimony is well illustrated by the fact that Mr. Worthington read an extract from Mr. Hagan's book in which the statement was made that only once out of 2,866,000,000,000 times would two signatures of the same individual agree exactly as to size and formation when examined transparently. At one point the court seemed impressed with the idea that only the witness, besides Mr. Worthington, of course, had the remotest idea of what was going on. He suggested that it might be a good plan to make a record of dates and other statistics, to which Mr. Worthington made the unconsciously humorous response that he thought everybody was listening, including the stenographer.

For purposes of exact comparison, Mr. Worthington produced some photographs, on a transparent substance, of the words "these" and "Washington" in Judge Holt's letter of the same date as the will. The transparent photographs were placed over the same words occurring in the alleged will, and the witness invited to examine them. Mr. Hagan did not think the words corresponded exactly, but Mr. Worthington, somewhat in a tone of triumph, invited each member of the jury to step up and view the result for himself.

Mr. Worthington produced a transparent photograph of a portion of the will and placing it over the letter of February 7, 1873, asked the witness to compare the words "the city of." Mr. Hagan had previously testified that where words were found to compare exactly under such treatment it was a good indication of forgery by the tracing method. The witness indicated several points in which the words compared did not exactly agree, but Mr. Worthington again called on members of the jury to decide for themselves.

Mr. Worthington continued his efforts to convey the impression that the alleged will was forged by tracing from Judge Holt's letter of the same date, placing the name "Holt" where it occurred in "Josephine Holt Throckmorton" in the transparency, over the signature "J. Holt" in the will itself.

Mr. Worthington then summed up all these striking similarities and asked:

"Now, what do you think the chances are that the writings of a man on the same day would exhibit all these similarities?" A. "It would be improbable even with a man writing under the same nervous condition on the same day; but it might occur. It is not impossible, although it looks as if the chances were against it."

"So it does begin to look a little improbable, even to your mind," was Mr. Worthington's rejoinder.

The court adjourned at this point, and Mr. Worthington will bestow further attentions on Mr. Hagan to-morrow. Originally Mr. Hagan was the caveatee's witness, but people who dropped into the court room in the afternoon were under the impression that he was the exclusive property of Mr. Worthington, as that gentleman had taken him completely in charge and had him penned in behind a big board loaded down with letters written by Judge Holt and arranged so the dates were

not visible. Mr. Worthington worked up his tracing theory very artistically, and earlier in the trial the climax might have been sensational, but yesterday it only created a ripple of surprise. It was simply the development of a theory that the will might possibly have been forged by tracing most of the words from Judge Holt's letter of February 7, 1873. When opposing counsel are afforded their next opportunity, however, they will produce other letters in which the similarity is equally marked. As it is at present, however, whenever they produce rebuttal testimony Mr. Worthington manages to make his cross-examination last about twice as long as the examination-in-chief.

Thursday, June 18.

The cross-examination of Expert Hagan, of Troy, was resumed at the opening, and Mr. Worthington again subjected him to the most searching examination. The witness stated that he had observed in Judge Holt's writing a tendency to write the same words almost identically alike, which he thought accounted for the fact that many of the words in the letter and in the will bore an almost exact resemblance.

Mr. Darlington devoted a good deal of his redirect examination of Mr. Hagan to an effort to overthrow Mr. Worthington's theory of tracing. The witness selected a letter written by Judge Holt on February 11, 1888, fifteen years subsequent to the date of the will, and pointed out that the word Washington corresponded almost exactly with that in the gelatine print of the will. He added: "There is just as much similarity between the Washington in this letter and the Washington in the will as there is when I compare the word in the will with that in the letter of February 7, 1873."

These investigations were continued until recess, after which Mr. Worthington resumed his cross-examination. He wanted to know

whether the witness had found any letters containing words almost a fac simile of the words in the will, which he had not referred to. Mr. Hagan said he had produced all that were of any importance. Judge Holt's letter of September, 1873, was then taken up by Mr. Worthington, who, in his effort to substantiate the tracing theory, called attention to the words "standard work of the highest character," and asked the witness to compare them with the words "character" and "highest standard" in the will. Mr. Hagan said that, while there were similar characteristics of spacing, the loops were different, and many of the letters were differently formed. Mr. Worthington, however, asked each member of the jury to observe the similarity. He wanted to know whether the witness was aware of the fact that, outside of letters which had been in possession of Maj. Throckmorton and his family, he had only been able to find one word of more than a single syllable that corresponded to any marked degree with the same word in the will. Mr. Hagan said he did not know where the letters came from.

There was considerable sparring between Mr. Worthington and the witness.

Q. "Now, Mr. Hagan, let me ask you to compare the capital D in Devlin with the D in Washington, D.C., in the will. I believe you said yesterday that when letters examined transparently were found to correspond exactly it was a good indication of forgery. I suppose the resemblance in this case does not suggest anything wrong to your mind?" A. "That would depend entirely upon the connection in which I found it."

Q. "Well, but when you find it in connection with twenty or thirty other similarities, how then?"

Lawyer *Ed. Hay*, as an expert, was recalled. He had been making comparisons himself, and the dreary

grind of measurements and comparisons began again as soon as he took the stand. He testified that of 150 of Judge Holt's signatures examined he had not found two alike. Mr. Hay compared the handwriting of Luke Devlin with the will, and found the only general resemblance to be in the "inclination to be vertical." There was really no comparison between the handwriting of Mr. Devlin and Judge Holt. The will exhibited none of Mr. Devlin's peculiarities.

After pointing out, in the authenticated writings of Judge Holt, these various peculiarities, the witness was asked:

Q. "Will you tell us, from your comparison of the will with the letters in evidence, what conclusion you have reached?" A. "My opinion is that the same hand that wrote the letters in exhibit here wrote the will. If Judge Holt wrote the letters, he wrote the will."

Q. "With what degrees of positiveness can you state this?" A. "As positive as one can be from a comparison of handwriting. It is not so difficult to imitate a signature, but it would be impossible to get up a whole page of script to present all the similarities found in this document as compared with the other writings."

Friday, June 19.

Lawyer-expert *Ed. Hay* resumed the stand at the opening and continued to point out characteristics in the will and writings of Judge Holt, on which his belief as to the genuineness of the document was founded. There was not a letter in the will, he said, of which he had not been able to find the counterpart in Judge Holt's letters. Under cross-examination, he was asked particularly regarding the word "of," which he stated on Thursday was one of the strongest characteristics in the document. He admitted that the word was written, wherever it occurred in the will, with greater regularity than any other word.

Mr. Hay explained the method of tracing writings by placing them on a barrel over a strong light.

Q. "Tracing in that way does away with the necessity of using a pencil first, the marks of which must afterward be erased, does it not?"

A. "I presume so."

Q. "How nearly can an expert penman, like yourself, imitate the handwriting of another person?"

A. "I can come very close to it."

Q. "Close enough to deceive the ordinary observer, myself, for instance?"

A. "Well, I think I could deceive you, Mr. Worthington," replied Mr. Hay, smiling blandly, while the audience laughed, and even Judge Bradley joined in.

The witness said it was much easier to imitate an odd or unusual signature than a simple one. A very eccentric signature could be readily imitated for that very reason. Mr. Hay was next questioned as to space between certain words in the will, and also the punctuation.

In reply to a question, he said he had not been able to find in any of Judge Holt's letters any line in which he left such a space between two words as occurs after the name of Josephine Holt Throckmorton in the will, but that he had found considerable space between the end of one sentence and the beginning of another on the same line. This answer was objected to, Mr. Worthington complaining that Mr. Hay was taking advantage of opportunities to state what he had not been asked. The court held that the witness must confine himself to the questions put to him. Mr. Hay said he had found no letter of Judge Holt's in which the lack of punctuation marks was so marked as in the will.

During recess Mr. Hay reproduced on the blackboard a number of Judge Holt's signatures, taken from letters of various dates, while he also made a good imitation of the signature attached to the will. The

witness pointed out several points of difference between the signatures, the one attached to the letter of September 29, 1873, he thought, being decidedly different from any other signatures he had found. After efforts had been made by the opposition to discredit some of Mr. Hay's comparisons, the long board which has figured in the trial for the last three days was removed.

Miss *Hynes* was recalled by Mr. Worthington to identify the will which Judge Holt had drawn up for her. The will was placed in evidence. It simply disposed of the \$10,000 in District of Columbia bonds, bequeathing them to Miss *Hynes'* two nieces, the Misses *McCord*. Replying to questions, the witness stated that Judge Holt never had the will in his custody after it was executed, and that she did not remember any correspondence regarding it. *R. H. Roundtree* was the original executor, but after his death Miss *Hynes*, in another paper, appointed *W. M. Knott* executor.

Mrs. *Ray* took the stand, also at Mr. Worthington's request, and identified a letter which Judge Holt had written her in reply to a request for a loan of \$4000. Mr. *Darlington* objected to the introduction of the letter as evidence, but was overruled, and he noted an exception. The letter was dated October 11, 1884, and in it Judge Holt said he had sold four bonds, from the proceeds of which he sent her a draft for \$4000, as a loan to her husband. Mrs. *Ray* held in her hand another letter from Judge Holt to her husband, dated January 11, 1886. When she referred to it Mr. *Worthington* said he would like very much to have it. The witness promptly handed him the epistle. The letter was turned over to Mr. *Darlington*, who lodged an objection to its admission upon the ground that it contained matter of a nature that had already been excluded. The court, however, decided to admit the letter, and an exception was again

noted. Before the letter was read Mr. Worthington read a number of Judge Holt's indorsements on the back of Mr. Ray's note for \$4000, regarding non-payment of interest. The letter itself was full of scathing denunciations of the borrower. The Judge said he regarded his promises to pay as "little less than mockery." The failure to take up the note, he declared, was a deliberate breach of faith, for which there was no decent excuse. Judge Holt also referred to an offer he had previously made to Mr. Ray to take up the \$4000 note for \$2000.

Mr. Worthington then introduced some memoranda found among Judge Holt's papers at the safe deposit, in which were a number of bequests to such institutions as the Emergency Hospital, the Washington Humane Society, and the municipal lodging house.

The feature of the case yesterday was the reappearance on the witness stand of Miss *Josephine Holt Throckmorton*, the most important part of her testimony being in rebuttal to that of the colored servants at Judge Holt's house regarding her visits there. The witness' first recollection of Judge Holt was of his visiting her father when he was stationed at Fort Washington, and trying to teach her to call him "Bon Père." Her father was ordered to California in 1872, and when she was seven years old, Judge Holt sent her a ring set with seven pearls. Her subsequent relations with Judge Holt were gone into, and Gen. Butterworth asked:

Q. "Was there ever, from your earliest recollection, down to the last time you saw Judge Holt, any change whatever in his bearing toward you?"

A. "Never; not the slightest."

She corresponded with Judge Holt constantly while she was absent, and called at his home at least twice a week while she was here. He made her presents of jewelry and books, and treated her most affectionately on all occasions. Once Judge Holt expressed

a desire to see her in evening dress, and in 1885, when she was on her way to one of President Cleveland's receptions with her father, she stopped at Judge Holt's house. The dress she wore on that occasion was her mother's wedding dress.

Q. "How did Judge Holt address you?" A. "He called me Josephine; I have never been called Jo. He always said 'Josephine,' or 'my child.'"

On her birthday in August, 1887, Judge Holt gave her a diamond ring. Referring to one occasion when she called at Judge Holt's house, Miss Throckmorton said:

"The servant who came to the door, the girl sitting over there [indicating Martha Thomas], said Judge Holt had just gone out, but just then I saw my godfather walk across the porch, so I called to him, and told him the girl had said he was out. He asked her how it was, and she replied: 'The young lady misunderstood me; I said you had just come in.'"

Martha, the servant, had been listening intently to this testimony, and at this point shook her head vigorously. Miss Throckmorton referred to Judge Holt as either "Bon Père" or "my godfather" throughout her testimony. He invariably kissed her when they met, she said.

Q. "When did you first begin to have difficulty in seeing Judge Holt?"

A. "The first time was in 1887, of which I have just told you. Again in 1888 I went to his house. Ellen, the cook, came to the door and told me my godfather had gone to Kentucky, and would not be back for six months. The next morning I went to the market and met my godfather there. I told him I thought it was queer, and he said: 'When you are coming to see me, just write and let me know.' I noticed after that when I wrote to Bon Père and let him know I never had any trouble in getting into the house."

Q. "Do you remember his send-

ing word to you and your brother to leave his premises?" A. "It is absolutely false. I never received such a message. I was here on that visit only during the months of December, January, February, March, and April, and could not possibly have been eating peaches in his yard; at least, if there were any peaches there, I didn't see them."

Miss Throckmorton told of other presents Judge Holt had given her, and also of his offer to send her abroad to study art. She denied ever having spoken to Charles Strothers, or ever having visited Judge Holt's house heavily veiled. When she began to relate the incidents connected with her visit to Judge Holt in behalf of her father when he was in trouble, Miss Throckmorton wept copiously, and her testimony came slowly. She testified that Judge Holt was deeply affected and advised her to write to a Mr. Huntington and get a letter of introduction to Vice President Morton. She referred frequently to her father's army record and to the great injustice which was done him. The witness said she did not know why the servants had declined to admit her to Judge Holt's house.

When Gen. Butterworth brought up the subject of Judge Holt's letters to the Throckmorton family, he asked the witness where these letters had been kept prior to the discovery of the will. She replied that they were kept in a wooden box.

Q. "How was that box fastened?"

A. "Nailed," said Miss Throckmorton, with so much vehemence that it caused a general titter.

It was nearly 4 o'clock when the cross-examination of Miss Throckmorton was begun. She was asked regarding her letter to Mr. Devlin prior to the discovery of the will, but without additional developments. She was also questioned closely as to the names of the servants at Judge Holt's during different periods, but her recollection was not very

clear regarding them. The cross-examination was interrupted by Judge Bradley's adjourning the court.

Monday, June 22.

Detective *Lacey* was called by the caveatees to testify regarding the interview between Reporter Truesdell and George O. Johnson, Secretary Carlisle's butler, who was formerly in Judge Holt's employ. Lacey was present at the interview, and testified that Johnson said he had been sent for by Mrs. Washington Holt, and that she expressed surprise and disappointment because no will had been found. Johnson had also stated that Judge Holt said once in his hearing that none of his property should ever go to any of his relatives who had criticized him for his loyalty to the Union.

Cross-examined, Mr. Lacey also testified to Johnson's statement regarding the quarrel between Judge Holt and the elder Throckmorton. Johnson said he regretted it at the time because the innocent children who had nothing to do with the trouble would be the sufferers. For his own part, however, he had been the gainer by the misunderstanding, as prior to that Judge Holt's carriage had been at the disposal of Mrs. Throckmorton, and she had used it nearly every day, which made him extra work.

Miss *Throckmorton* was recalled to the stand, and her cross-examination resumed. She was questioned closely as to her visits to Judge Holt's house, and the fact was developed that she never saw Mr. and Mrs. Holt, Miss Holt, Mrs. Ray, or Col. Sterett until the trial began. Mr. Worthington wanted to know whether it was possible for Judge Holt to have gone to Niagara in 1885 without her knowing it, and the witness replied that she remembered his going, as he sent her presents from Niagara on that occasion.

"Miss Throckmorton," asked Mr. Worthington, "do you remember that your father wrote your mother that he had received a letter from

Judge Holt agreeing to take care of his wife and children in case he was killed?"

The question was objected to, and the examination turned upon the letters which had been placed in evidence. Miss Throckmorton repeated her statement that they had been kept in a box securely fastened until the alleged will made its appearance, when the box was opened and her brother brought the letters to Washington last summer. One of the letters found in the box, Miss Throckmorton stated, was from Gen. Sherman to Judge Holt, in relation to the Modoc war, but the statement was objected to, and the objection sustained by the court.

The witness also stated that she had kept a scrapbook of papers connected with the will case, beginning with the telegram from Luke Devlin, regarding the discovery of the alleged will, and including various newspaper articles on the subject. She offered to produce the book if necessary. Mr. Darlington stated that he intended to rest his case with Miss Throckmorton's testimony, but had concluded to place her brother, Wickliffe Throckmorton, on the stand, adding that he would be here on Tuesday. Otherwise his evidence was all in.

George Johnson was recalled by Mr. Worthington at this point, for the purpose of testifying to the fact that Judge Holt kept a set of account books in which he recorded even his smallest expenditures. He identified the books handed to him by Mr. Worthington. Martha Thomas was also recalled and testified to the same fact. She was also questioned regarding the statement of Ann Tully, the Throckmortons' servant, that she had accompanied Miss Throckmorton on two occasions to Judge Holt's house. The witness testified that the first time she had ever seen Ann Tully was when she appeared in court. Ann Tully had stated that she sat in the hall for an hour and waited for Miss Throckmorton, but

Martha said the hall was narrow and dark and nobody ever sat there as it was too narrow to keep a single chair there.

Mr. *Frederick F. Schrader* was also recalled to elaborate the story of his interview with Luke Devlin, several points of which the latter had failed to confirm when he was on the stand. Mr. Schrader stated that when Mr. Devlin had expressed the belief that the signatures to the alleged will were genuine he had not excepted that of Mrs. Sherman's. Devlin had told him, to illustrate the intimacy between Gen. Grant and Judge Holt, that Gen. Grant had once offered to make Judge Holt Secretary of War. Mr. Devlin had also stated that he supposed the will was signed and attested some evening when all the parties were at Judge Holt's house.

Charles Strothers, another of Judge Holt's servants, took the stand again and corroborated the testimony of Johnson and Martha Thomas as to the account books and also as to the size of the hall at the Holt residence. He had never seen a chair in the hall.

Mr. Worthington recalled Miss *Mary Holt*, Washington Holt's daughter, who identified Judge Holt's account books, and stated that, at Mr. Worthington's request, she had examined the books carefully from 1872 to 1888, and made a list of all items of expenditure, with which the initials of Miss Elizabeth Hynes were connected. The books showed all the trips Judge Holt had made away from Washington, and the last record of a trip to Niagara with Miss Hynes, the witness found to be October 6, 1879. Mr. Worthington placed in evidence that portion of the entries covering the expenses of this trip down to expenditures of 5 cents. After recess Miss Holt identified a list, which she made from Judge Holt's expense books, indicating amounts paid to "E. H." (Elizabeth Hynes), beginning in 1872. The amounts specified payments aggregating between \$600 and \$700

per annum up to 1884, when the present of \$10,000 in bonds was made. After that the payments fell off to \$30 in 1885, \$25 in 1886, and \$50 in 1887.

Q. "Now, Miss Holt," asked Mr. Worthington, "in examining these books, did you find any entry indicating presents to any member of the Throckmorton family?"

A. "I have never found the name Throckmorton in any of the books I have examined."

The questioning and cross-questioning of the witness as to the method she had pursued in making extracts from the elaborate expense accounts occupied considerable time, Mr. Worthington explaining that one object was to show that Miss Hines was mistaken in testifying that she went to Niagara Falls with Judge Holt in 1885.

Mr. Worthington called *Edward F. Frazier*, a photographer, who testified that he made the gelatine print of the alleged will, the photolithographs of Judge Holt's letters of February 7 and September 9, 1873, and other photographs of portions of various documents, which have been introduced as evidence.

Robert E. Carmody, a draftsman, identified a diagram of the interior of the Holt residence, which he made yesterday morning.

Mrs. *Meigs*, wife of a deputy clerk of the court, who has lived on New Jersey avenue near the Holt residence for thirty-one years, was called. She knew the Throckmortons and had seen the children call at Judge Holt's house when they wore short dresses. She did not remember their calling after that.

Q. "Do you know anything of Miss Throckmorton's calling there at the time her father was in trouble?" A. "I heard of her being there, but did not see her."

Under cross-examination, the witness admitted that people might have entered the Holt house without her seeing them. Mr. Worthington produced a letter written

by Maj. Throckmorton's wife to Judge Holt in which she had written asking for \$2000. The second letter stated that she had secured \$1000, and continued: "Won't you, dear Mr. Holt, let me have \$1000? Charlie is to be tried by court-martial, and we are very much distressed."

At Gen. Butterworth's request Miss *Throckmorton* took the stand, and testified regarding the letter written by her mother. She said that almost immediately after the letter was written, the necessary amount had been secured. She came on to Washington, and went to Judge Holt's house. He told her he would gladly let her have the money, and said if she would return in the afternoon, he would make the necessary arrangements. She thanked him, but told him that they did not need it then.

Q. "Did you ever take any other verbal answer from Judge Holt to letters from your parents?" Mr. Worthington inquired. A. "No, I can't say that I remember doing so."

Mr. Worthington thereupon produced a letter from Maj. Throckmorton, to which he testified he had received a reply through his daughter. The letter requested Judge Holt to send the Major a letter which he could place before the general court-martial.

A. "Yes, I recall now," said Miss Throckmorton. "My godfather said he would be glad to give father a letter, but he would have to dictate it, as he was in such a condition then that he could not write himself."

Q. "Did he dictate that letter?"

A. "No; because he was informed that it was not needed."

At 2.45, on the first day of the sixth week of the trial, Mr. Darlington announced: "We rest here, your honor, so far as we are concerned."

Mr. Darlington thought they should make an effort to dispose of the prayers to instruct, so the jury was excused for the day, and the lawyers

began their consultations. It developed that only Mr. Darlington had his prayers prepared, but the court suggested that as he was the plaintiff he should submit them. This was done at once. There were eleven of them altogether, the most important being those referring to instructions regarding the evidences of revocation. Mr. Darlington asked that the jury be instructed that they must not find revocation merely upon the evidence of the paper appearing in a burned and mutilated condition. They must find that the mutilation was the work of Judge Holt himself, or that it was done by his direction, and that it was done for the purpose of revocation. In order to substantiate the theory of revocation by a subsequent will, Mr. Darlington contended, the caveators must have satisfied the jury that a later will was in existence at the death of Judge Holt, or that it was accidentally or fraudulently destroyed during his lifetime.

Mr. Worthington then made a general review of the prayers of his opponents, objecting to all of them from the fourth to the thirteenth inclusive. He said it was practically asking that the jury be instructed that the caveators must explain the mystery of the will, and that unless they can do it the paper must be admitted to probate. Mr. Worthington thought that the proper way in which the jury should be instructed was that there was no burden of proof about it. He thought his side would be justified in asking the court to instruct the jury that from the appearance of the paper, and the fact that it came from nowhere, the presumption must be that it had been revoked if Judge Holt ever executed it. He would also ask that the jury be instructed that if there was any doubt in their minds as to whether Judge Holt executed the will, then their deliberations must be confined to that point.

Tuesday, June 23.

At the opening yesterday Capt. *James E. Bell*, superintendent of the city delivery of the general post office, was called to the stand for the purpose of having all his information concerning the mailing of the will appear in the record. It did not take him long to tell all he knew about it. It was only possible for him to say that the envelope was collected in the north-west section of the city on the 4 P.M. collection.

Maj. Throckmorton's son, *Charles Wickliffe Throckmorton*, was called by Mr. Darlington. He stated that he was in Washington in the months of June and September, 1895. He came the second time for the purpose of seeing Luke Devlin, and that was the first time he ever saw him. He first saw the alleged will on Labor Day, 1895. He brought with him the letters from Judge Holt to the Throckmortons, which have been introduced in evidence. He had never seen the letters prior to that time.

Following this testimony, Mr. Worthington read a list of entries taken from Judge Holt's expense books for the years 1889, 1890, and 1891, for the purpose of rebutting Miss Hynes' testimony that Judge Holt still continued to send her monthly allowances after having presented her with \$10,000 in bonds in 1884. Mr. Worthington's list showed that in no one of the three years mentioned did Judge Holt send Miss Hynes more than \$150, while prior to the gift of bonds the allowances had averaged \$50 per month.

Mr. Worthington also undertook to prove by these same expense books that the dinner at Judge Holt's house, referred to several times during the trial, at which President and Mrs. Grant and Gen. and Mrs. Sherman were present, was given on February 21. An entry under date of February 22, 1873, showed that Judge Holt had paid a caterer \$110 for a dinner the

day before. This was for the purpose of correcting a possible impression that the dinner was given on the date the alleged will was executed. Several letters were also read, indicating that the breach which had previously existed between Judge Holt and Mr. Ray, husband of Miss Hynes' niece, had been healed.

At 11.45 both Mr. Worthington and Mr. Darlington announced that they had no more evidence to present, and Judge Bradley promptly excused the jury until 1 o'clock, so as to give the lawyers free scope for the battle over the prayers. This occupied nearly an hour, in the course of which there were several little tilts between opposing counsel. Everything was finally arranged, however, and immediately after recess Mr. Blair Lee began the opening argument in behalf of the caveatees.

Mr. Lee began by calling attention to the privilege of his opponents to set up two lines of defense — forgery and revocation — adding, however, that common sense compelled them to adopt one, as the one was absolutely inconsistent with the other. "It will become necessary," he continued, "for the gentlemen on the other side, when they come before you with their argument, to decide whether they will hold that this paper is or is not a forgery, or whether there was revocation of the document."

Mr. Lee went on to say that it had become necessary for his adversaries to "shift their ground." Mr. Worthington, at the outset, had contended that Judge Holt could not by any possibility have created Maj. Charles B. Throckmorton a trustee, but it had been clearly proven that Maj. Throckmorton was not guilty of the charges laid at his door. Besides, these charges were made long after Miss Josephine Throckmorton became of age, and the trust had expired. Mr. Lee referred to the

great stress his opponents laid upon the finding of a memorandum in Judge Holt's closet. "Nearly every witness placed on the stand referred to it, until, taking a hint from the cross-examination, Brother Worthington tried to hedge a little. And then the whole matter fell upon the simple statement of Miss Hynes that the will referred to in the memorandum was her will, and the executors her executors." Mr. Worthington's picture of the tender relations between Judge Holt and the Steretts was next touched upon. "It was stated that during the last few years of his life Judge Holt leaned upon them like a cripple upon his crutches; and yet their own witnesses testify that Judge Holt could not understand the two Col. Steretts, the one always making money and the other always hard up. And this Col. Sterett, who made his entry to the house by the back way, was unable to get possession of the keys and watch from this dead man's body. That 10-cent key to a 10-cent lock may have been small protection, but they were intrusted to a servant of Judge Holt's rather than to this faithful, intimate, and tender nephew."

Mr. Lee referred at length to the emphasis laid upon the alleged separation of the contested document, and to the testimony of various witnesses to the contrary, and also to the statements of Fred Grant and William T. Sherman, Jr., as to the genuineness of the signatures of the witnesses. Regarding the burning of the documents at the Holt house, Mr. Lee said he had always regarded it as strange that Washington Holt should have ordered certain letters, which he was particularly interested in having destroyed, burned on a portion of the premises where he could not see them.

Another significant fact, Mr. Lee thought, was the appearance of the will at the very time that Charles Strothers was about to be ejected

from the Holt residence, where he had been living, tax free and rent free, ever since the Judge's death. After the will appeared, however, Strothers continued to live there, and was likely to remain indefinitely.

Mr. Lee took up what he called the "trick transparency of this campaign." He said he had carefully compared the word "Washington" in the letter of February 7, 1873, upon which so much stress was laid, with the word in the transparency, and that to his eye "unaided, or rather undimmed by this gelatine partition, there was a slight difference in nearly every stroke." Mr. Lee also drew a comparison between the statements of numerous witnesses, both expert and non-expert, that the alleged will was a forgery, by reason of various existing or lacking characteristics, and Mr. Worthington's claim that many words in the will were simply traced from letters written by Judge Holt. A memorandum found at the safe deposit and dated a month subsequent to the alleged will, which Mr. Lee claimed presented the strongest resemblance to the writing in the will of any document yet produced, was then handed to the jury for their inspection.

Judge Holt's relations with his family prior to the date of the will were referred to by Mr. Lee, dwelling upon the fact that Judge Holt was not on very intimate terms with his relatives until long after the date of the alleged will. After a time, however, Judge Holt did take an interest in his old home in Kentucky, and finally grew to love it, but Mr. Lee held that this love did not extend to his relatives. And the influence which Washington Holt thus acquired over his uncle was not used to bring about affectionate relations between Judge Holt and the balance of his family, for there were no family reunions at Holt's Bottom. So far as Judge Holt's relations with the Throckmorton family were concerned, Mr.

Lee thought they made the writing of such a will as the one in question extremely probable.

Mr. Lee attacked the testimony of witnesses regarding troubles between Judge Holt and Luke Devlin, claiming that if Witness Fought had known of such actions as he accused Devlin of on the witness stand, he would not have gone to his superiors with trifling tales when he had it in his power to crush Devlin by telling of the more serious irregularities. He reviewed at length the testimony of the witnesses in Devlin's behalf.

Mr. Lee was bitter in his attack on the testimony of the caveators. Mrs. Washington Holt's veracity, he said, was attacked by her cousin, and Mr. Holt's lack of veracity was admitted by himself. "They come here desperate," he continued, and charge a great crime to a man (Luke Devlin) who has a very small interest in this case. They are like the character in the Scripture who, having been forgiven a great debt, went out and took the man who owed him a penny by the throat."

Mr. Lee made the most of the picture of Maj. Throckmorton in the lava beds of California, about the time the alleged will was executed, writing to Judge Holt and saying that he hoped to return to his darling wife and little ones by a certain date, but that if he should be so unfortunate as not to get back, he knew Judge Holt would not let his family want.

At this point Mr. Lee announced that his time had expired.

Mr. *Darlington* began his address to the jury. He said at the outset that there were only two points for them to consider: first, whether Judge Holt executed the will, which he thought was simply a question of whether it was in his handwriting or not, and, second, if Judge Holt did write it, did he revoke it?

Mr. *Darlington* proceeded at once to discuss the inconsistency of

Washington Holt's conduct, after accusing Charles Strothers of stealing or destroying a will, to subsequently place him in charge of the Holt residence. The rejection by Washington Holt of Mr. Devlin's suggestion that the house be rented was also commented on, and Mr. Darlington proceeded to review the testimony tending to show that Charles Strothers addressed the envelope in which the will was received at the Register's office. He said there were five times as much evidence to show that Strothers did it as there was to indicate that Devlin was the man.

Mr. Darlington confined his attention largely to the technical features of the case, going over the evidence as to the handwriting and the composition of the alleged will, from the standpoint of both the lay and the expert witnesses. He took Mr. Carvalho's minute measurements of characters in the will and the letters written by Judge Holt, and claimed that they were all in favor of the will. Mr. Carvalho's composite photograph of Judge Holt's signature, Mr. Darlington said, also compared very favorably with that in the will. Mr. Darlington also added: "I don't like to discuss Mr. Carvalho, as I will say very frankly that he did not impress me favorably, and I believe he had the same effect on you. He attempted to impose on the jury as science things that are the veriest nonsense in the world."

The testimony of Mr. Carvalho, that the ink with which the will was written was not in existence at that date was vigorously attacked by Mr. Darlington, who said: "If that record does not satisfy any man that he is unreliable, untrustworthy, and unentitled to belief, then I am doing him a great injustice." He read Mr. Carvalho's evidence concerning archil, and continued: "He is evidently a man ignorant of what he pretends to

know, who attempts to impose on people whom he assumes to be as ignorant as himself."

Mr. Darlington combated the theory that Judge Holt was a strict technical lawyer, and poked fun at the testimony of some of the witnesses to this fact, one of whom did not know the difference between caveatees and caveators. He also assailed Washington Holt's statement that he did not believe Judge Holt would have used the expression "highest standard," or that he would have used the word "inherit" as applying to personal property.

Mr. Darlington endeavored to point out that the selection of Luke Devlin as executor was a perfectly natural proceeding, in view of whom the beneficiaries were and the character of the property to be divided. He asked the jury to compare the letters written by Judge Holt about the date of the will to members of his family with those he wrote to the Throckmortons, and those in which Miss Hynes was mentioned, and judge for themselves who he would have been most likely to make his beneficiaries.

Mr. Darlington had not quite finished his address to the jury when the hour of adjournment arrived. The court has restricted the time for argument to three hours for each side.

Wednesday, June 24.

Mr. Darlington, for the caveatees, faced the jury again as soon as court opened yesterday morning, and began in his suave and easy manner to unfold his theories. He thought it passing strange that his opponents should first devote several weeks to showing that the will was written in a hand thoroughly unlike that of Judge Holt, and then another week to arguing that the resemblance was so close that it could only have been accomplished by tracing. It was also curious, if tracing was the method resorted to, that, while unimportant words had been traced, no signa-

ture of Judge Holt's could be found which was an exact facsimile of the one in the will.

In reviewing the evidence on his side of the case, Mr. Darlington said fourteen witnesses had sworn that the handwriting was genuine, and, besides, the very appearance of the paper itself was inconsistent with the theory that the will was not genuine. It was absurd to suppose that any one attempting to perpetrate a forgery would have burned and mutilated his work in such a manner. As for the sending of the will to the Register's office, Mr. Darlington admitted that he could tell nothing about it. He had his own theory, and he presumed the jury had theirs. "As for the burning," he continued, "I can only say that if the paper had been folded twice and thrust into a fire in a coal scuttle or a grate, it would present about the same appearance as it does now." There could be no doubt as to the genuineness of the signatures of the witnesses; that had been proven beyond question. It had also been shown conclusively that the paper was in one piece when it reached the Register's office.

The character of the persons involved, he said, was additional proof that no such crime as forgery had been committed. A review of Luke Devlin's career was satisfactory proof that he would never have stooped to forgery. In looking for a forger the jury would have to go beyond Luke Devlin. It would be equally preposterous to suppose that a man with a long and honorable record in the army, like Maj. Throckmorton, was guilty of the crime, and he thought no member of the jury would smirch the fair name of Mrs. Throckmorton or that of her beautiful daughter by even a suspicion that they would take part in a crime for which people are sent to the penitentiary.

Referring to the theory of revocation, Mr. Darlington said there was

absolutely no evidence to show that Judge Holt had ever changed his mind as to the disposition of his property, and there was nothing to prove that Judge Holt had ever done anything that constituted a legal revocation. If he had made a later will, the fact that it was not found was legal presumption that he destroyed it himself.

Mr. Darlington concluded his argument shortly after 11 o'clock, and was followed by

Mr. *Worthington* for the caveators. There were four questions to be decided, said Mr. *Worthington*. Did Judge Holt write the will? Did he revoke it? Was there fraud? Was there undue influence? The argument of his opponent, that if the jury found Judge Holt did not write the will, it would mean that Luke Devlin did, was unsound. It would mean only that Judge Holt did not write it, and nothing more. An effort to find the forger would fall upon another court. Neither Mr. Devlin nor any member of the Throckmorton family would be implicated by such a decision.

The theory that Charles Strothers had mailed the will to the Register's office, Mr. *Worthington* held was unworthy of consideration. If Strothers had found the will and carried it in his pocket for a year, no good reason why he should have sent it in at the end of that time had been shown. The only result would be an opportunity for him to come into court and perjure himself. If he had found it, the natural thing for him to have done would have been to take it to Washington Holt or to Col. Sterett and make what he could out of it; or he might have taken it to the Throckmortons and Miss Hynes and tried to dicker with them over it. It would be just as reasonable to suppose that Washington Holt or Col. Sterett had sent the will in, and then engaged lawyers to try to prove that they did not.

The will was a suspicious docu-

ment from first to last, and not worthy of the slightest trust. It was sent in by some person who was ashamed of what he was doing and unwilling to have any one know it. The burning of the paper could not have been done by dropping it into the fire, as was shown by an examination of the burns. It was remarkable that not a single word in the whole document had been obliterated. It required no expert testimony to show that the ink with which the will was written was different from that with which Judge Holt wrote his letters, and if Judge Holt wrote the will, he must have sent out and got a special bottle of ink, which he never used again. Mr. Worthington called attention to various other suspicious appearances, and continued that the will was the work of an ignoramus. It convicted the writer in the first line, which began, "I. J. Holt." Any lawyer knew that the name of the deviser should be written out in full. Again, one of the beneficiaries was referred to as Lizzie Hynes, so that if she should ever have occasion to transfer any of the property, she would have to secure affidavits that J. Holt was Joseph Holt and that Lizzie Hynes was Elizabeth Hynes. Mr. Worthington declared that if he should ever draw up such a will for anybody and charge \$5 for it, he would be liable to arrest for obtaining money under false pretenses. He compared the alleged will with other legal papers drawn up by Judge Holt, including the will of 1848 and Miss Hynes' will, which he said were models of clearness and fullness.

Mr. Worthington's argument was interrupted at the usual hour for luncheon. He resumed his address after recess, calling attention to the character of the witnesses for the caveators, who gave evidence concerning the handwriting and signatures in the alleged will, and pointing to the fact that they had every facility for being competent to

judge. He thought it was a most striking fact that every one of these witnesses had stated positively that neither the handwriting nor the signature was that of Judge Holt. Fourteen witnesses, he said, none of them at all interested in the case, had testified to this effect. He characterized as an immense fallacy the argument of his opponents that the evidence of the witnesses was valueless because they could not point out specific differences in the writing.

Referring to Mr. Darlington's denunciation of Expert Carvalho, Mr. Worthington said he would offer to the jury a theory, by which they could determine whether Mr. Carvalho came to the court to give his honest opinion or to lie for so much per day. He then proceeded to point out that Mr. Carvalho, in regard to several circumstances where his own opinion differed with that of the lawyers, by whom he had been summoned, unhesitatingly asserted his own views without any regard for the effect it would have on the case. He had testified that the kind of paper on which the will was written was manufactured as long ago as 1873; he had expressed the opinion that Luke Devlin had not written the will, and that the document had not been entirely severed at the time it was received. All these theories were at variance with the belief of the lawyers, but it had made no difference to Mr. Carvalho's testimony. "Now, I would like you to contrast this testimony with that of an individual who came from Troy," he continued. "Don't you remember Mr. Hagan, standing there and saying to me: 'If I said anything that will help you, I didn't intend it?' Standing at the bar of justice, where he had sworn to tell the whole truth, he unblushingly declared that if the truth would help us, he would not tell it."

Turning to the forgery theory, Mr. Worthington grew vehement.

He had his transparency prepared days before he had seen the famous letter of February 7, 1873, and knew that when he came to place the word "Washington" in the will over that in the letter he would find them identical. He knew it because the same words in the will agreed identically, and it was natural to suppose there was an original somewhere. "We knew," he added, "that the person who forged that will was the person who had in his possession that letter." Mr. Worthington here held up for the inspection of each member of the jury the will and two letters, one of February 7, 1873, and the other of September 11, 1888. The "Washington" in the former letter, he said, was the one from which they claimed the word in the will was traced, while the "Washington" in the letter of September 11, the other side claimed, bore just as much resemblance to the word in the will. He asked the jury to compare the two words, indicating a large number of alleged differences. He went into the subject of handwriting at great length, making numerous comparisons between the testimony of the two experts — Carvalho and Hagan. He cut the word "that" out of his famous transparency and placed it over "that" in the letter of September 9, 1873, from which he claimed the word was traced, and then made the same comparison of the word in other letters, which Mr. Hagan said also resembled the word in the will. He invited the jury to step up and use their own eyesight. These comparisons occupied some time, and at the conclusion Mr. Worthington summed up the list of striking similarities.

"Now," said he, "we come to the crowning point of all. When you think about it, the ringing in of such an expression as 'whose character I believe to be of the highest standard,' after the name of an executor is a very extraordinary

thing. But, lo, and behold! what happens? The gentlemen on the other side bring in a letter dated September 29, 1873, which we had been looking for, and on the fourth page we find the following reference to Blackstone: 'Which is a standard work of the highest character.' Now you see why that expression was put in there. They wanted something to copy."

The question of punctuation was then taken up. Mr. Worthington read a number of properly punctuated epistles of Judge Holt's, then dashed off the alleged will, pausing three times to take breath.

"There are other things," he continued, "which I do not like to refer to, which indicate that this will is a forgery. Why was this will dated February 7, 1873? We supposed we knew all about it when the letter of February 7, 1873, appeared. The witnesses were President U. S. Grant and Mr. and Mrs. Sherman — all dead before Judge Holt, all dead before this paper saw the light of day, so there was no chance of their contradicting it. Now, if it be a fact, as I think I have demonstrated to you, that this will was prepared by somebody who had the letters of February 7 and September 29, 1873, in their possession, you would expect they would use any knowledge in their possession regarding the witnesses. Very well; some time in February, 1873, Judge Holt gave a dinner, at which these witnesses were present. And you find that the people who had these letters had in their possession another letter, which they held back until the last minute — a letter which shows that this dinner was to have been given on February 7, 1873, but was postponed.

"You also find Miss Josephine Throckmorton leaving New York a few days before this will appeared and going to Culpeper, Virginia, where she had relatives living. It had never occurred to her to visit them

before. She comes back here and waits at the Baltimore and Potomac depot for one hour for her train. "And during that very hour this thing was mailed, and mailed in the very section of the city in which she was waiting. This coincidence of the mailing of that letter; the coincidence of the date of the will; this terrible coincidence of the words in the will and the words in the letters in the possession of the Throckmorton family, all point to something which you will have to decide upon."

Mr. Worthington proceeded to attack the assumption that it was natural for Judge Holt to have made Luke Devlin his executor, and next argued against the possibility that Judge Holt would have made a will cutting off all his blood relations. His opponents, he said, had failed in their attempts to show that Judge Holt was a man without a family. He read numerous letters from Judge Holt to members of his family in Kentucky, the tone of which, Mr. Worthington held, proved of itself that he never could have written such a will. "It is enough to make him rise from his grave and come here to curse those who proclaim that he did so," the attorney declared.

After completing his argument, that it was impossible for Judge Holt to have written such a will, Mr. Worthington took up the theory of revocation, and referred at length to the evidence regarding the changes in Judge Holt's relations with the parties interested. Especially did Mr. Worthington dwell upon his relations with the family of Washington Holt, adding that if Judge Holt had died and left such a will as the one under discussion for the world to see, then he was "the grandest hypocrite the world has ever seen." If Washington Holt told the truth, Mr. Worthington said, his evidence absolutely disposed of the question of revocation. He spoke of his tireless search for the will and his questioning of the

servants and then asked: "Do you suppose Washington Holt would have acted in this way if none of these things he has testified to is true? No; he had these conversations regarding a will with Judge Holt, and that was why he acted in that way."

Mr. Worthington exhibited a memorandum of a bequest to the Washington Humane Society, which Washington Holt testified to finding in a closet at the Holt residence, showing, Mr. Worthington said, that Judge Holt was engaged in the act of making a will after 1886. "There it is," he said, holding up the paper. "Judge Holt's own handwriting. He is speaking from the grave."

The gift of \$10,000 to Miss Hynes next received attention from Mr. Worthington, who argued that the interest accruing from the bonds was equivalent to the allowance of \$600 per annum which he had previously made her. He would say nothing reflecting upon Miss Hynes, except that her interest in the case had so affected her memory, unconsciously, that it was absolutely unreliable. Mr. Worthington also endeavored to correct the impression that certain of Judge Holt's letters, containing kindly references to Mr. Ray, were not written subsequently to the breach between the two men. He argued also that the will which Judge Holt drew for Miss Hynes, disposing of the \$10,000 in bonds which he had given her, was a strong piece of evidence against the existence of such a will as that in question. Judge Holt was careful to so arrange matters that none of the \$10,000 could ever get into the hands of his enemy, Mr. Ray, and if there had been a will in existence leaving Miss Hynes half of his estate, or if he had intended to leave her anything more, he would not have drawn such a will for Miss Hynes, in which the only property referred to was the money he had given her in 1884.

Thursday, June 25.

Mr. Worthington resumed his address for the caveators at the opening with further references to the testimony of the Throckmortons. If they had told the exact truth on the witness stand, he said, then eight or ten eminently respectable and disinterested witnesses had not told it. The Throckmortons had stated that the difference Judge Holt had with the elder Mrs. Throckmorton had not extended to the other members of the family, while numerous other witnesses said that Judge Holt had expressed the greatest animosity toward the whole family. Mr. Worthington devoted considerable attention to the relations between Judge Holt and the Throckmortons, calling attention to the unavailing appeals for money made to Judge Holt when Maj. Throckmorton was in trouble. He thought Miss Throckmorton's statement that she came to Washington from New York for the express purpose of telling Judge Holt that her father had made arrangements for the money, and did not need it, a most remarkable one.

Turning to Judge Holt's relations with the family of his nephew, Washington Holt, Mr. Worthington asked why it was that Judge Holt directed his servants to turn over his watch and keys to Washington Holt instead of Luke Devlin, if such a will as the one in question was in existence. Mr. Worthington had no doubt that Judge Holt did write a will, as he told his nephew, in which he made him executor, but that on his deathbed his thoughts turned back to his old home in Kentucky and to all of his relatives, and he decided to let his property go to all of them alike. "I am as sure, gentlemen, as I am of anything," he added, "that Judge Holt's own hand destroyed that will, leaving his property to be divided among all his relatives as the law provides."

Mr. Worthington was followed by his colleague,

Jere Wilson, who began with a vigorous attack upon the validity of the alleged will. He reviewed the evidence thoroughly on both sides as to the genuineness of the document, and asked the jury to make a comparison of the testimony. The burden of proof as to the validity of the will rested on the other side, and he did not think they had proved it. There was argument in every sentence of Mr. Wilson's address. It was perfectly natural, he said, that the will should bear a striking resemblance to the handwriting of Judge Holt. A man would be an arrant fool to attempt to get up a fictitious will and not to imitate the handwriting of the person whose will it purported to be. He thought the preponderance of evidence was that it was not Judge Holt's writing. The legal form and composition of the alleged will he argued was convincing proof that it was not written by a man of Judge Holt's character and attainments.

Mr. Wilson referred pointedly to the testimony of Miss Throckmorton, where it conflicted with the testimony given by the servants at the Holt residence. There was as much reason for believing them, he said, as for believing her. There was no \$80,000 or \$90,000 at stake so far as they were concerned, and besides there were six of them and their statements all agreed, while hers was exactly the opposite.

Gen. *Butterworth* began the closing argument for the caveatees immediately after recess. He began with an attempt to refute the assertions of his opponents that the will was not such a document as an able lawyer would have drawn up. On the contrary he doubted whether there was a lawyer in Washington who could have drawn up a will that would dispose of property more satisfactorily. The only thing that could be said against the will was that it had turned up in a mysterious manner, and to his mind it was surprising that it ever turned up. His

opponents, he said, were trying to make it appear that it was a forgery and that the forger in order to certify to its worthlessness had burned and mutilated it in an effort to defeat his own aims. "That this will was burned," he continued, "is certain, and that it was burned by the only persons interested in its destruction is equally certain."

Paying his respects to Expert Frazier, Gen. Butterworth said that ships could not be navigated about the shores unless more accurate measurements could be made than Mr. Frazier was able to make with the instrument he called a "producer." Mr. Worthington corrected him, and said it should be "projector," at which one of the spectators laughed so loudly that Judge Bradley reprimanded him severely, and said if it occurred again, he would have the offender ejected from court. Reverting again to the handwriting, Gen. Butterworth said a bank teller knows in a moment whether a bank note is good or not, but he cannot tell why. In the matter of handwriting it was the same, the general appearance enabled any one to decide as to its genuineness. People do not always write the same; it depends on conditions.

Discussing the probabilities of Judge Holt writing such a will, Gen. Butterworth spoke eloquently of Judge Holt's promise to his dying wife to care for Lizzie Hynes. He referred to the war, and made the most of Judge Holt's loyalty to the Union and the fact that his relatives were Southern sympathizers. He drew a harrowing picture of the bitter civil strife, when rewards were offered for the heads of abolitionists. It had been said that Judge Holt referred to the family of Washington Holt as an oasis in the desert of his life, and surely, said Gen. Butterworth, "an oasis which cost \$75,000 was not a cheap one."

Concerning the probability of Judge Holt writing such a will, Gen. Butterworth asked: "Isn't it

a little strange that until Washington Holt and his family established an oasis in the life of Judge Holt nobody who had any claim on him was ever turned away from his door? Wasn't it a little strange that after they came into his life the key turned hard and there were letters which never reached Joseph Holt? Wasn't it strange that when he went to his old Kentucky home there were no family reunions there? When he went to the oasis he had nothing but the oasis. The trouble between Judge Holt and the elder Mrs. Throckmorton originated in Kentucky, and, strangely enough, after that the mails did not reach Joseph Holt regularly." He drew a touching picture of Miss Throckmorton's interview with Judge Holt when her father was in trouble and of her unswerving devotion to the latter, and added: "Is it possible that she has disgraced him by an attempt to perpetrate a forged will for the purpose of securing an estate? Is it possible that that can be true? If so, human nature is a lie." Gen. Butterworth again waxed eloquent when referring to the relations between Judge Holt and the Throckmortons, and quoted Scripture in connection with the bottle of water from the River Jordan which Judge Holt sent for use at the baptism of Miss Josephine. The General pronounced Jordan in the same way that many people pronounce a product of Kentucky which does not flow in streams. Taking up Mr. Worthington's insinuation that Miss Throckmorton had mailed the will, Gen. Butterworth grew vehement. "They would have you believe," he shouted, "that this young lady, whose life has been as spotless as a star, is the criminal."

He dashed at the tracing theory like a bull at a red rag, and referring to the characters in the will which it had been claimed were identical with those in Judge Holt's letters, said: "If they are the same, I will

abandon this case. I not only deny that they are the same, but I deny that any man, honestly comparing them, has a right to tear the heartstrings and render infamous a helpless girl with such an insinuation. My friend (Mr. Worthington) has said here, without hesitation, they are the same. I deny it. And yet upon this he bases his claim of forgery." "By what warrant do you assert that I set my theory upon that similarity?" interrupted Mr. Worthington. "Well, upon that and other things," responded the General fiercely. "You have warped the heartstrings of innocent women upon the theory that this is a reproduction." Considerable time was spent by Gen. Butterworth in submitting for the examination of the jury the words in the alleged will compared with the words in the letter from which it was claimed they were traced. "Now, if anybody had been using that letter for the purpose of tracing," resumed the speaker, "they would have been apt to trace the genuine name. Is it possible, viewed from any standpoint of reason, that this can be a forgery?" Gen. Butterworth claimed that it had never been denied that the signatures to the will were genuine, and asked whether it was possible that President Grant or Gen. Sherman signed a forged paper. He denounced Witness Carvalho in unmeasured terms. "He knows no more about chemistry," said the General, "than I do about Sanscrit." Gen. Butterworth, in referring to the gelatine print of the will, pointed out to the jury that in examining the writing by the aid of this transparency the refraction of the light would make a substantial difference, and it would also make a difference as to the point from which it was viewed. He stated also that he had found no less than fifty-seven instances in other letters of Judge Holt, where the characters agreed with those in the will just as closely as those in

the letter from which it was claimed they were traced.

The testimony regarding Luke Devlin's character was taken up. "Of the whole pack turned loose to hunt Luke Devlin down," said the speaker, "only one could be found to say aught against him, and that was Fought. He made him a criminal from choice, one who forged for the love of it, without hope of reward or fear of punishment. After holding up Luke Devlin as a forger they turned from him and attempted to humiliate, degrade, and disgrace the goddaughter of Joseph Holt."

The closing portion of the argument was devoted to the revocation theory. "Forty-five thousand dollars offered for a will," said the speaker. "Where are the witnesses to this subsequent will? Is it possible that such a reward would not call some of them into existence? Is it probable, if he made a will, that no one would know anything about it? All the evidence they have on this point is that he loved these relatives. Col. Bill Sterett says there never was a will, and there is a kind of rugged candor about Col. Sterett that I admire. Are we to make a will for Joseph Holt? Are we to destroy his will, or is it to stand? My friend says that if you find this a forgery, it will cast no reflection on anybody, but he has labored here week after week to wreck a home and a heart to set aside the will of Joseph Holt."

The closing hours of what has been perhaps the most remarkable trial in the history of the Circuit Court of the District were of the dramatic order, the feature of the proceedings being the eloquent appeal of Gen. Benjamin Butterworth in behalf of the caveatees. The crowd in the court room throughout the day was dense; but when the time came for Judge Bradley to deliver his charge to the jury there was a breathless stillness in the room, and many members of the bar present strained their ears in an effort to hear every word.

Judge Bradley prefaced his charge to the jury with a very pleasant little address, in which he referred to the fact that the jury had been kept beyond the ordinary time which the law imposes upon citizens for such service. "I feel sure," he continued, "that each member of the jury has felt it a privilege to sit in a case so remarkable in all its features. The case has been distinguished by the remarkable ability of counsel on both sides, and it has been a pleasure to listen to a case so admirably tried."

Proceeding directly to his charge, Judge Bradley said: "There are four issues which have been submitted by the Orphans' Court, and to each of these issues you must return an answer, and that answer will be 'yes' or 'no,' save with respect to the fourth issue. The answer to that issue may be, if the evidence justifies it, more than the simple affirmative or negative. The first issue is, Was the paper executed by the said Joseph Holt as his last will and testament? The second is, Was the execution procured by fraud practiced upon Joseph Holt? The third is, Was it secured by undue influence? The fourth is, If it was executed, has it been revoked by the testator? Your deliberations will be confined absolutely to the first and fourth issues, for these are the only issues which have been on trial. The second and third relate to the question of fraud and undue influence upon the testator by any person or persons, and to the second and third you will answer 'no,' for there is no evidence which would justify any other conclusion, and the court directs that you return that answer to these two issues.

"As to the first question, inasmuch as the testimony has indicated, and the instrument itself indicates, that this entire will, as well as the signature, purports to be in the handwriting of Judge W. Holt, the question necessarily is, Was this will, as well as the signature to it, written by

him? As a necessary sequence, if it were not written by him, either as to signature or body, it is not his will. If it were written by him and signed by him as his last will and testament, then it matters not what its contents are, who is benefited by it, or who is deprived of benefit by it. The fact being established that this will is in his handwriting and signed by him, your answer to this first issue would necessarily be 'Yes.'

"If this will had been found (and when I say will, I don't mean to indicate that it is a will) among the papers of Judge Holt, that circumstance would lend to it the presumption of genuineness. If we had been enlightened by the testimony of any one of these subscribing witnesses, probably this question would not have been put to you for determination. If any one of these subscribing witnesses, Gen. Grant, who was at the time of this alleged execution, President of the United States, or Gen. Sherman, who I believe was General of the army at that time, or his wife, had testified, I hardly think that any one of you would have any question as to the genuineness of the signature of Judge Holt. If a reputable witness had testified that he had seen Judge Holt sign the paper, or had heard him acknowledge the signature, the question would have been almost absolutely foreclosed.

"If we were enlightened as to the source from which this paper emanated just before it made its appearance in the office of the Register of Wills, doubtless it would throw a great deal of light upon this question. The difficulty is that this paper was deposited in the mail by some person who, for some fraudulent reason of his own, deems it necessary to be quiet, for he does not come forward and indicate that it was so deposited. Who that person is there is no direct evidence in this case. Who that person may be, it is claimed by counsel for both parties, is indicated by circum-

stances in this case. Who that person is you may be able to determine, measuring these circumstances by your experience as men and understanding the motives which ordinarily influence them. And if you do reach the conclusion as to who in all probability sent this paper to the office of the Register of Wills, you will probably have in your hands the key to the situation."

The court then referred to the numerous prayers which he had granted to both sides, most of them referring to the revocation issue, and in this connection the court instructed them: "Your inquiry as to this question must be addressed to the circumstances in evidence. If these circumstances show you that this paper was mutilated, torn, or burned by Judge Holt with the intention to revoke it, then your answer to this inquiry should be 'yes.' If he executed it as a sealed instrument and he subsequently tore off that seal, that act would be sufficient to accomplish the fact of revocation. If you reach the conclusion that it has been revoked by later will containing inconsistent provisions which do not cover the entire estate, then you should indicate by your answer to what extent this inconsistency goes."

At this point Mr. Worthington handed in two supplementary prayers. The prayers were granted by the court, who said: "You are to be influenced by no other motive than to reach the exact truth. Let justice be done, no matter who is injured by your verdict. You are not responsible for the outcome of this case, no matter whether or not it will indicate perjury on the part of any witnesses of high or low social standing."

It was 4.20 o'clock when the court completed the charge, and both Mr. Darlington and Mr. Worthington called attention to minor points to which they took exception. They were all straightened out without difficulty, however, and at 4.35 o'clock the jury filed out of the court room. At the end of an hour an

attendant announced to the waiting crowd that there was no prospect of a verdict and the court room was cleared. It was at first stated that the jury were instructed to render a sealed verdict, and under this impression both Mr. Darlington and Mr. Lee left for their homes in the suburbs. Judge Bradley, however, left orders to be notified at any time before 10 o'clock if a verdict was reached, and he was back at the court very soon after 8 o'clock upon notice that the jury had agreed. A single gas lamp threw a dim light upon the final scene in the great drama. The figure of Judge Bradley was only a dark outline upon the bench, and a few indistinct shadows scattered about the room represented the lawyers and spectators.

The verdict was rendered without a single one of the lawyers for the caveatees being present. Messrs. Worthington and Wilson were there representing the caveators, who were none of them present, while on the other side were Maj. and Mrs. Throckmorton, Luke Devlin, and Mrs. Ray. Messrs. Darlington and Lee had both left for their country homes under the impression that a sealed verdict was to be rendered, and Gen. Butterworth could not be found. After waiting until 8.20 o'clock for some of the lawyers for the caveatees to put in an appearance, Judge Bradley announced that he did not feel justified in keeping the jury waiting any longer, and ordered that they be summoned to the court room. They filed in and stood in line on the right of the bench. The foreman handed the clerk the paper on which the questions they had decided upon were typewritten, and after each man had answered to his name, the clerk read the four questions.

The whole verdict hinged upon the first question: "Was the paper, bearing date February 7, 1873, and filed in this court August 23, 1895, written and executed by the said Joseph Holt as his last will and testament?" "Your answer to this

question is —?" And here the clerk paused and Foreman Bentley answered "No." The answers to the other three questions were necessarily the same, but they were all read and the proper replies made. The second inquiry was whether fraud had been exercised in connection with the execution of the will; the third was whether undue influence had been brought to bear, and the final question was whether the paper had been revoked. By arrangement between the lawyers and the court the formal answer to the last inquiry was recorded: "No, because it was not executed." This was done to avoid any possible conflict in the event of another trial.

As soon as he heard the verdict, Maj. Throckmorton arose and hurriedly left the court room to join his wife in the corridor, where she had gone as soon as Judge Bradley summoned the jury. She accepted the result without the slightest demonstration.

Judge Bradley addressed a few words to the jury, saying: "I think you should receive the thanks of the court for your faithful services. I am glad that you were able to so promptly reach a conclusion in such a difficult case." The court room was quickly cleared, Mr. Wilson going at once to the Riggs House to inform Washington Holt of the verdict.

There was really little division among the jury. Two or three of them were inclined to hold to the theory that the will was genuine, but was subsequently revoked, but one of the others had taken with him the will of 1848, and it was not long before those who believed in the revocation theory were won over. While it was generally thought that the verdict would be against the will, there was a strong feeling that it would be repudiated on the ground of revocation.

A highly important, and, in view of the verdict, a somewhat startling fact was developed yesterday. The

fact that Mrs. U. S. Grant, though still alive, had had no connection whatever with the case has been commented upon frequently, and it was ascertained yesterday that the lawyers for the caveatees have in their possession an affidavit by Mrs. Grant, stating that one evening in February, 1873, she was present at a dinner at Judge Holt's house, together with her husband, President Grant, and General and Mrs. Sherman, whose names appear as witnesses to the will. The affidavit further states that during the evening Judge Holt, President Grant, and Gen. Sherman retired together from the room in which the party was assembled, and that a few minutes later Gen. Sherman returned, and asked his wife to step into the next room, as her presence there was desired for a minute.

This affidavit was only secured last Sunday, and no attempt was made to introduce it as rebuttal testimony, although there were vague hints concerning it during the argument for counsel yesterday. In his address Mr. Worthington mentioned the fact that Mrs. Grant was alive, but nothing had been heard from her, and in closing, Gen. Butterworth took the matter up and asked Mr. Worthington whether he would be willing to admit a deposition at that point. Mr. Worthington answered that he would have been perfectly willing at the proper time.

The caveatees will undoubtedly appeal the case, and the affidavit will doubtless be produced in the higher court.

[On the points of law, principally rulings on evidence, the verdict was sustained in the Supreme Court of the District (1898, *Throckmorton v. Holt*, 12 D. C. App. 552). But in the Supreme Court of the United States the verdict was set aside, three judges dissenting (1901, *Throckmorton v. Holt*, 180 U. S. 552, 21 Sup. 474). No second trial took place, the parties having settled the case by compromise.]

391. **LAURENCE BRADDON'S TRIAL.** (1684. HOWELL'S *State Trials*. IX, 1127.)

[After the accession of James II in 1680, the antagonism of the Protestant and Catholic parties became even more intense. Two prominent leaders of the Protestants were the Earl of Essex and Lord Russell. Treason being in the air, Russell and Essex, with Colonel Algernon Sidney and others, were charged with a Protestant conspiracy to depose the Catholic James (the Rye-House Plot). All were arrested. Lord Russell's trial began on Friday, July 13, 1683. The Earl of Essex had been confined in the Tower. On that morning, his body was found in his cell with the throat cut and a razor by his side. This suicide of one of the leaders made a deep impression when the news came to the court room. Russell, Sidney, and others were convicted and executed. Shortly afterwards, a rumor spread that Essex had been assassinated by connivance of government sympathizers, the killing being timed so as to produce an impression on the pending trials. The Protestants were in consternation; and a zealous gentleman named Braddon set himself to disprove the suicide and vindicate the memory of the Earl. Later, in 1688, much evidence pro and con was elicited at an investigation made by a Committee of the House of Lords on Mr. Braddon's demand. But at the time of his original inquiry the chief and almost only basis of Braddon's belief was the story told by two children, living near the Tower of London, who on the morning of the Earl's death said that they had seen a bloody razor thrown out of the Earl's window in the Tower. Braddon procured their written statements, and began to stir up inquiry. For this he was prosecuted, on charges of seditious libel and of subornation. The trial took place on February 7, 1684. Whether the Earl's death was a murder or a

suicide has been discussed by every historian of English politics, and the verdicts have differed. These children's stories, however, were the starting point in this interesting problem.]

Hilary, February 7, 1684.

The defendants, who had pleaded not guilty to an information filed last term, were now brought to trial.

Cl. of Cr. — Crier, call the defendants, Laurence Braddon and Hugh Speke.

Crier. — Laurence Braddon and Hugh Speke, come forth, or else this inquest shall be taken by your default.

Mr. Wallop. — They appear.

Cl. of Cr. — Gardez votrez Challenges. . . .

Cl. of Cr. — Gentlemen, you of the jury hearken to the record. . . .

Then Proclamation was made for evidence.

Mr. Dolben. — May it please your lordship, and you gentlemen that are sworn; This is an information preferred by Mr. Attorney-General, against the defendants Laurence Braddon and Hugh Speke, and the information does set forth, that whereas Arthur late earl of Essex, the 12th of July last, was committed to the Tower of London for certain treasons supposed to have been by him done: And the said earl being so committed prisoner to the Tower for treason, not having the fear of God before his eyes, feloniously and as a felon did kill and murder himself, as by an inquisition taken before the coroner of the Tower liberty may more fully appear; yet the defendants Laurence Braddon and Hugh Speke not being ignorant of the premises, but designing to bring the government into hatred and contempt, the 15th day of August last, in the parish of St. Clement Danes in this county, with force and arms, falsely, unlawfully, maliciously, and seditiously did conspire together to

make the king's subjects believe, that the inquisition aforesaid was unduly taken, and that the said earl of Essex did not murder himself, but was by certain persons unknown, in whose custody he was, murdered. And it further sets forth, that these defendants, Laurence Braddon and Hugh Speke, designed to disturb and disquiet the minds of the king's subjects, and to spread false reports, did conspire to procure certain false witnesses to prove that the said earl of Essex was not a felon of himself, but was by some persons unknown killed and murdered: And to persuade other subjects of our sovereign lord the king to believe the said report, they did falsely, maliciously, unlawfully, and seditiously cause to be declared in writing, that the said Laurence Braddon was the person that did prosecute the said earl's murder. And this was to the great scandal of the government, to the evil example of all persons in like case offending, and against the peace of the king, his crown and dignity. To this the defendants have pleaded not guilty; if we prove it upon them, we make no question you will find it. . . .

Att.-Gen. — My lord, we will then read the inquisition, that the earl, being thus in the Tower, killed himself.

Solicitor-General. (Mr. Finch.) — Show the inquisition. Where is Mr. Farnham?

Mr. Farnham. — Here I am. The inquisition is returned here, and is upon record.

Cl. of Cr. — Here it is, Number 11. [He reads.] . . .

Att.-Gen. — Call Mr. Evans and Mr. Edwards. After this, my lord, we shall show you, that Mr. Braddon went about the town, and declared the earl was murdered, and he was the prosecutor. There is Mr. Evans, swear him. [Which was done.] Pray will you give an account to my lord and the jury, what you know of Mr. Braddon's going about and declaring he was the

prosecutor of my lord of Essex's murder?

Mr. Evans. — My lord, all that I know of this matter, is this. About the 17th of July last —

L. C. J. (Sir GEORGE JEFFERIES.) — When is the inquisition?

Cl. of Cr. — It is the 14th of July.

L. C. J. — Well, go on.

Evans. — The 17th of July last I was at the customhouse key, shipping off some lead, and the person that brought me the warrant, I told him I could not execute it without one of the commissioners' officers; and I bid him go to Mr. Edwards, who was the next officer adjoining to the key, and he went to his house, and told him I was at the water side, and had a warrant, which I desired him to be present while I executed it; Mr. Braddon it seems was then present in the place with Mr. Edwards when this was told him, and hearing my name, Mr. Braddon came down with Mr. Edwards, and found me then at Smith's coffeehouse. . . .

. . . There they began to discourse about this matter.

Just. Withins. — Who began to discourse?

Evans. — Mr. Edwards.

L. C. J. — Well, what was it he said to thee?

Evans. — Mr. Edwards began thus: Says he, Mr. Evans, this gentleman has been at my house to examine my son concerning a report that is spread abroad concerning a razor that was thrown out of the window of the earl of Essex's lodgings that morning he cut his throat. I hearing of that, said I, Gentlemen, I have read the Coroner's inquest that is in print, and it is otherwise declared there: And therefore let there be no discourse of any such matter, for I believe no such thing. And, said I to that gentleman, Mr. Braddon, pray forbear meddling in any such thing, for Mr. Edwards is a poor man, and has divers children, he may be ruined, and you likewise

may be ruined yourself, if you proceed any farther in it. . . .

Mr. *Braddon*. — [Lifting up his hands in an unusual manner.] Mr. *Evans*. Pray, will you answer one thing? . . .

L. C. J. — What is it you would ask him?

Braddon. — My lord, I desire he may be asked, whether I, with a brother of his, did not come to his country house, on the Monday immediately after my lord of Essex's death, and whether at his table there was not a report then of a razor being seen to be thrown out of my lord of Essex's window? . . .

Evans. — My brother, Mr. *Hatsell*, came down along with Mr. *Braddon* to my house at *Wansted* in *Essex*, on the Monday, after my lord of Essex's death (July 16), and coming down, my brother, Mr. *Hatsell*, pulled out the Coroner's inquest upon oath that was printed, and showing of it to me, I read it; and as soon as ever I had read it, said I, Mr. *Edwards*, that was at the Customhouse, that very morning when the earl of Essex's throat was cut, did declare to me upon the Customhouse key, That his son did declare that the razor was thrown out of the window, which seems to contradict this paper, that says, it was found lying by him.

Mr. *Freke*. — Was this before Mr. *Braddon* was with Mr. *Edwards*?

Evans. — I can't tell that.

Mr. *Freke*. — Was it before Mr. *Braddon*, and Mr. *Edwards* came to you to the coffeehouse?

Evans. — Yes, I believe it was. . . .

Att.-Gen. — Yes, my lord, this discourse at *Wansted* was before that at the customhouse. . . .

Att.-Gen. — Take the times, my lord, and you will see he does speak very notably. The 13th of July my lord of Essex murdered himself, the 14th of July the inquisition was taken before the coroner. . . .

L. C. J. — But pray let me ask you one question, if your matter about the inquisition in the country

was before the matter of your cautious discourse at the Customhouse, how came you to tell them, I heard this report of a razor thrown out of the window that morning the earl of Essex cut his own throat?

Evans. — Mr. *Edwards* reported this same thing that very same morning to me and several others at the Customhouse key.

L. C. J. — Why did you not tell us this before? . . .

L. C. J. — Now after all this discourse of the matter, for aught I can understand, the matter is but this: he says, *Edwards* before the meetings either at his house in *Essex*, or at the coffeehouse by the Customhouse, reported to him, as though the earl of Essex had not murdered himself, but somebody else had done it for him. And this was reported at the Customhouse that morning the earl of Essex cut his own throat. . . .

Sol.-Gen. — Look you, Sir, you say that very morning my lord of Essex killed himself, Mr. *Edwards* discoursed, and made this report to you at the Customhouse; pray tell what the discourse was; what he said to you; and then tell us what time of day it was?

Evans. — To the best of my remembrance it was about 11 o'clock: there were several persons standing together, among the rest captain *Goodland*, and some of the searchers, and Mr. *Edwards* was there; and said he, I am informed from home, that my boy has been at home, and given an account to my wife, that being in the Tower, he saw a hand throw a razor out of a window, and he named my lord of Essex's window; and this Mr. *Edwards* did not only tell me, but to a whole coffeehouse of people, this matter of fact.

Just. *Holloway*. — Did not Mr. *Edwards* tell you, that somebody had been examining his boy about that report?

Evans. — That was the second time, when Mr. *Braddon* and Mr. *Edwards* came together. . . .

Att.-Gen. — Come, Mr. Edwards. Crier swear him. [Which was done.]

L. C. J. — What do you ask him, Mr. Attorney? . . .

Sol.-Gen. — Pray tell what you know of Mr. Braddon's coming to your son, and what discourse he or you had about the murder of the earl of Essex?

Mr. Edwards. — The report that Mr. Braddon came to inquire after, was with us some three days before; it was in our family three days before, and upon the 17th of July —

L. C. J. — What was the report, Mr. Edwards, before Mr. Braddon came to you? . . .

Edwards. — The report of the boy the 13th of July, about ten o'clock, as I was informed by my family, and by the boy afterwards by word of mouth, was this: he comes in about ten o'clock, says he, I have been at the Tower (to one of his sisters), and I have seen his majesty and the duke of York, and the earl of Essex has cut his throat, and I see an hand throw a razor out of the window, and one came out of the house, a maid, or a woman in a white hood and a stuff coat, and took it up, and went in again, and then I heard a noise as of murder cried out. This was the boy's report, and more than as his report I cannot speak to it.

L. C. J. — This was your son, was it not?

Edwards. — Yes, the younger of them. The two boys were that morning going to Merchant-Tailors' school together as they used to do, and by the way hearing the king was in the Tower, this younger boy that was well acquainted with the Tower, gave his elder brother the slip and went into the Tower, and rambled about from place to place.

Att.-Gen. — Did not you examine him?

Edwards. — Ay, I did examine him.

Att.-Gen. — Did not you find that he denied it again?

Edwards. — No, I did examine him, and I found no denial of any-

thing at all that he had reported, till Mr. Braddon came to make inquiry. As soon as he came to make the inquiry, and I understood what Mr. Braddon's business was, I begged of him that he would not insist upon it by no means, I begged of him as if I had begged for my life, but he was so zealous in the business, that nothing would satisfy him. And after I had told Mr. Braddon that which I could not deny, which was the boy's report, I left him and went down to the Customhouse, and some of my family discoursed the boy at that rate, that he began to deny it, and in less than half an hour's time recollected himself, and began to own it again; and so the boy was off and on till the time he was before the Council; and to this day he seems to stand in the denial; whether he will do it now or no I cannot tell.

Att.-Gen. — Did you acquaint Mr. Braddon that you had found this boy to be a lying boy, and detected him in lies several times?

Edwards. — May it please you, Sir, I acquainted him with thus much: said I, Mr. Braddon, as I have dealt ingenuously with you, to let you know what the boy's report was, so I must likewise tell you, that I cannot, nor will undertake to assert the truth of it; and presently upon that my daughter told me, the boy had many times excused his playing truant by false stories.

Att.-Gen. — Did you acquaint Mr. Braddon, that your boy was a lying boy at that time?

Edwards. — I think I did not at that instant of time.

L. C. J. — How old is this boy you talk of?

Edwards. — About 13 years of age, my lord.

Att.-Gen. — What do you know of Mr. Braddon's forcing your boy to sign anything that he had prepared after this? . . .

Sol.-Gen. — How did Mr. Braddon behave himself?

Edwards. — Like a civil gentleman.

I saw nothing else by him, but that he was very zealous in the business, that is the truth of it, nothing could persuade him to desist. . . .

Mr. Jones. — Did not Mr. Braddon carry your son before several justices of peace?

Edwards. — Before none as I know of; not one truly to my knowledge.

Att.-Gen. — Did you understand he had taken your boy from your house in a coach.

Edwards. — Never till he carried him into his majesty's presence before the Council, and I knew not that till the boy came home.

Mr. Thompson. — Mr. Attorney, Have you done with him? may I ask him a question?

Att.-Gen. — Ay, ask him what you will.

Mr. Thompson. — If I understand you right, Sir, this report of the boy's was that morning that the earl of Essex was murdered.

L. C. J. — Was murdered? murdered himself, man.

Mr. Thompson. — My lord, I mean the day of his death. Now I would ask you, Sir, when that was?

Edwards. — The boy's report was this, Sir, —

Mr. Thompson. — I ask you not what his report was, but when? What day it was?

Edwards. — The 13th of July. That day the earl of Essex cut his throat.

Mr. Thompson. — How many days after that was it when Mr. Braddon came to you?

Edwards. — It was not till the 17th of July.

Mr. Thompson. — Had you discoursed of the report of your boy at the Customhouse, or anywhere else, that same day he came to you?

Edwards. — I cannot say that.

Mr. Thompson. — Had you discoursed it before Mr. Braddon spake to you, upon your oath?

Mr. Edwards. — Yes, I believe I had.

Sol.-Gen. — Had you discoursed it before your boy told you?

Edwards. — I should then indeed have been the contriver of the story.

Att.-Gen. — So it is like enough you were.

Sol.-Gen. — Had you discoursed it to anybody before you went home to your own house, upon your oath, Sir?

Edwards. — Upon my oath then I discoursed nothing of that nature, not a tittle of it, nor knew nothing of it, till I had it from my own family.

Sol.-Gen. — Did you not discourse of it before you went home?

Edwards. — No, when I came home they told me of it.

L. C. J. — I ask you again, Sir, Did not you tell it before you came home?

Edwards. — About ten o'clock, I having heard the news of the earl of Essex's cutting his throat, at the Customhouse, I stepped home, being very near to my own house, and as soon as I came in at the door, the family began to give me an account what news the boy brought in.

L. C. J. — That was the first time you heard of it?

Edwards. — Yes, that was the first time I heard of it.

L. C. J. — And did you not discourse of it till after that?

Edwards. — No.

L. C. J. — Call Mr. Evans, let him come in again.

Att.-Gen. — Let Mr. Evans come in again.

L. C. J. — Mr. Evans, I would ask you this question. . . .

L. C. J. — When you first had a discourse with Edwards about this matter, what was it that Edwards did say to you?

Evans. — Being upon Customhouse key, and captain Goodland and several others standing upon the key, that very morning my lord of Essex's throat was cut, about eleven o'clock Mr. Edwards came to us, being standing upon the key, and told us, That he was informed his boy had been at the Tower, and came home and told his mother, he saw a hand throw a razor out of

a window, and that he went to take it up, and a maid or a woman came and took it up, and went in again.

L. C. J. — Evans, did he tell you this as if he had been at home?

Evans. — No, I think it was that he had it from home by some hand or other.

Edwards. — I was at home.

Evans. — My lord, at two o'clock in the afternoon, when he came again to the Customhouse, he did tell us he had been at home, and his boy did tell him the same story.

L. C. J. — But when he had told you before he had dined, did he say, he had been at home?

Edwards. — My family can testify I was at home between ten and eleven o'clock.

Evans. — To the best of my remembrance he told me he heard so from home.

L. C. J. — Before he went home, you say, he told you of this, and that was ten o'clock in the morning, and about two o'clock, in the afternoon, he said, he had been at home, and it was true.

Mr. Evans. — Yes, my lord.

Edwards. — My lord, I was at home.

L. C. J. — Mr. Edwards, did you tell him so, or did you not?

Edwards. — It is like I might say so about ten o'clock, but not before I had received the report at home.

Mr. Evans. — I understood it so, my lord, that he had heard from home.

L. C. J. — I ask you this upon your oath, mind the question, and answer me plainly, Did you speak to him, that you had such a report from home, or did you not?

Edwards. — When I told it him, I had it from home, for I brought it from home.

L. C. J. — Nay, did you tell him you had such a report from home at ten o'clock, or no?

Edwards. — I told him that I had met with such a report.

L. C. J. — From whom?

Edwards. — From my family at

home, for the boy came not to me to tell it.

L. C. J. — Then did you see Mr. Evans about two o'clock that afternoon?

Edwards. — 'Tis probable I did.

L. C. J. — Did you, or did you not?

Edwards. — Yes, I believe I might. . . .

L. C. J. — Answer me my question, did you, or did you not tell him so?

Edwards. — I did not acquaint him with it before I had been at home, and received it from my own family.

L. C. J. — Look you, Sir, don't you go about to evade the question, to trifle with the court, you must answer me my question directly, and upon your oath, did you tell him you had notice from home of such a report, or no?

Edwards. — I did not receive notice from home, but I brought it from home.

L. C. J. — Did you tell him you had it from home?

Edwards. — I told him I had it from my family, who told me the boy had made such a report.

L. C. J. — Did you tell him you had it from your boy, or received notice from home about it?

Edwards. — I did not tell him anything before I had been at home.

L. C. J. — Well, then, answer me this question. Did you tell him in the afternoon at two o'clock: Now I have been at home and examined my boy, and find it so as I told you?

Edwards. — I examined my boy at dinner, and I found the boy agreed with the report of my daughter, and confirmed it.

L. C. J. — I ask you what you told Mr. Evans, not what your boy or your daughter told you?

Edwards. — It is probable I might tell Mr. Evans the same story after dinner at two o'clock, that I did before.

L. C. J. — Now tell us the passage again, Mr. Evans, as you heard it.

Evans. — To the best of my remembrance, at two o'clock in the afternoon, Mr. Edwards came and told us, he had examined the boy, and says he, the boy has confirmed all that I told you.

L. C. J. — But before that in the morning what did he say?

Evans. — I cannot say exactly the time, but I think it was about ten o'clock. There were four or five more besides myself standing at the Customhouse key, and Mr. Edwards came to us, and told us, says he, I am informed from home, as I understood it, not that he had been at home, but that he heard it from home, that his boy had been at the Tower, had seen an hand throw a razor out of the window.

L. C. J. — What said he at two o'clock?

Evans. — He said he had examined his boy, and he said the same thing, that he told us he had heard in the morning. . . .

Sol.-Gen. — Mr. Edwards, pray let me ask you a question, Did Mr. Braddon tender any paper to your son to sign?

Edwards. — I was informed he did do it afterwards, but I saw him not do any such thing.

Sol.-Gen. — Did you never say that Mr. Braddon had tendered a paper to your son to sign?

Edwards. — I do not believe I ever did say so, I do not remember any such thing.

Sol.-Gen. — Pray recollect your memory, and tell us whether you did, or did not?

Edwards. — I thank God, Sir, that he has given me my memory and my understanding, I bless him for it.

Att.-Gen. — But it were well if thou hadst any honesty too.

Edwards. — And honesty too, Sir: I have not lived these thirty-nine years at the Customhouse without honesty. I never had my honesty questioned to this day. I am sure nobody can tax me with dishonesty.

Sol.-Gen. — Pray, Mr. Edwards, let your anger alone for a while, and

answer the question that I shall ask you: Did your son refuse to sign that paper?

Edwards. — He did sign it at last.

Sol.-Gen. — Did he refuse to sign it?

Edwards. — I do not know whether he refused it or no.

Just. Withens. — Did you hear that your son refused it?

Edwards. — I did hear that he had signed it.

Just. Withens. — But did you hear that he refused to sign it?

Edwards. — The boy did not tell me he had refused to sign it. I did not hear him refuse it.

L. C. J. — Thou dost prevaricate very strangely, I must tell thee that, notwithstanding thy reputation of thirty-nine years of honesty: Prithee, answer plainly, Did you hear at any time, that your son had refused to sign it?

Edwards. — No, my lord, I did not, to the best of my remembrance.

L. C. J. — That is a plain answer, man; but thou dost so shuffle up and down, one cannot tell what to make of what thou sayest.

Mr. Thompson. — Sir, I desire to ask you one question, Whether ever Mr. Braddon and you had any former acquaintance?

Sol.-Gen. — Pray, stay, Sir, and if you please, spare your question a little, for we have not yet done with Mr. Edwards. Mr. Edwards, pray answer me, Did Mr. Braddon ever tell you, that he had other informations to confirm this report of your son from others?

Edwards. — Truly, I do not remember he said any such thing.

Sol.-Gen. — Did you ever say he told you so? Consider of it, and remember your former examination.

Edwards. — 'Tis like since he may have said so, but not at his first coming.

Sol.-Gen. — At his first coming did your son sign his paper then?

Edwards. — No, he did not, as I am informed, I saw it not.

Sol.-Gen. — But afterwards you

say, Mr. Braddon did tell you he had other evidence to confirm it.

Edwards. — It may be he might, I cannot say it positively.

Att.-Gen. — You say he did not sign the paper at his first coming?

Edwards. — No, I am informed he did not.

Sol.-Gen. — How do you know he did sign it at last?

Edwards. — My wife and daughter's information.

L. C. J. — But how then can you say, that you never heard he did refuse it.

Edwards. — My lord, he did not tender a paper to sign, till he had been two or three times there, as I have heard; it was not tendered the first time he came.

L. C. J. — I wonder how thou hast escaped thirty-nine years with such a reputation.

Edwards. — My lord, I never was thought otherwise, nor I hope never gave any occasion for such a thought.

L. C. J. — I assure thee I do not, nor can take thee for one.

Edwards. — I hope I have done nothing to make your lordship think the contrary.

L. C. J. — Yes, thou hast. Thou didst nothing but shuffle up and down, thou art to consider thou art upon thy oath, and must answer questions plainly.

Edwards. — My lord, I do answer as truly as I can. . . .

Att.-Gen. — Then where is Edwards, the boy? [Who was brought forth with into the court.]

Edwards. — I charge you in the presence of Almighty God, speak truth, child.

Sol.-Gen. — And so should you too.

Edwards. — Be sure to say nothing but the truth.

L. C. J. — And child, turn about, and say, Father, be sure you say nothing but the truth.

Att.-Gen. — My lord, this is the boy, he is very little and very young, will your lordship have him sworn? What age are you of?

W. Edwards. — I am thirteen, my lord.

Att.-Gen. — Do you know what an oath is?

W. Edwards. — No.

L. C. J. — Suppose you should tell a lie, do you know who is the father of liars?

W. Edwards. — Yes.

L. C. J. — Who is it?

W. Edwards. — The devil.

L. C. J. — And if you should tell a lie, do you know what will become of you?

W. Edwards. — Yes.

L. C. J. — What if you should swear to a lie? If you should call God to witness to a lie, what would become of you then?

W. Edwards. — I should go to hell-fire.

L. C. J. — That is a terrible thing. And therefore, child, if you take an oath, be sure you say nothing but what is truth, for no party, nor side, nor anything in the world; for that God, that you say will call you to an account, and cast you into hell-fire, if you tell a lie, and witness to a falsehood, knows and sees all you do, therefore have a care, the truth you must say, and nothing but the truth.

Crier. — Pull off your glove, and hearken to your oath. [Then he was sworn.]

Sol.-Gen. — And now remember you call God to witness to the truth of what you say.

Att.-Gen. — Young man, look upon that paper, is that your hand?

W. Edwards. — Yes.

Att.-Gen. — Did you sign that?

W. Edwards. — Yes.

Att.-Gen. — Prithee tell the court, how thou camest to sign it?

L. C. J. — Ay, child, be not afraid. Tell the truth, for if thou tellest the truth, thou needest not be afraid, but if thou tellest a lie, thou hast need to be afraid; let nobody, whatever has been said to thee, affright thee from telling the truth.

Sol.-Gen. — Don't be afraid of thy

father, or anybody, but tell plainly what thou knowest, and speak only the truth.

Att.-Gen. — How came you to sign that paper?

W. Edwards. — Mr. Braddon bid me sign it when he had writ it.

L. C. J. — Hark thee, child, Did he take it from thee what he writ, or did he write it from himself? Come hither, child, be not afraid, nobody here will do thee any hurt.

Then the Boy was lifted up upon the table before the Judges.

L. C. J. — Look upon that paper, didst thou put thy name to that paper, child?

W. Edwards. — Yes.

L. C. J. — Whose handwriting is that paper, besides thy name?

W. Edwards. — Mr. Braddon's.

L. C. J. — Did he bring it ready written?

W. Edwards. — He writ it in our parlor.

L. C. J. — How came he to write it?

W. Edwards. — He said it was for the earl of Essex, to give to his wife.

L. C. J. — And what did he ask thee before he writ that?

W. Edwards. — He asked me, whether I saw anything at the Tower, and so I told him, yes.

L. C. J. — Ay, tell us what you told him, and be not afraid, child, but tell the truth.

W. Edwards. — I told him I was in the Tower, and saw a razor thrown out of a window.

L. C. J. — You told him so, and then what said he to you?

W. Edwards. — He bid me speak the truth.

L. C. J. — Was that all the words you had?

W. Edwards. — I afterwards went with my brother into the Tower, and I showed my brother the place, and then afterwards Mr. Braddon writ this, and he said it was to give to the countess of Essex.

Just. Holloway. — Did he read it to you after he had writ it?

W. Edwards. — Yes.

Just. Holloway. — And did he ask thee, whether it were true? *W. Edwards.* — Yes.

L. C. J. — And didst thou tell him it was true?

W. Edwards. — Yes.

L. C. J. — And didst thou tell him all that was in that paper was true? *W. Edwards.* — Yes.

L. C. J. — Did you tell him all that was writ in that paper before he writ it down?

W. Edwards. — Yes.

L. C. J. — Prithee mind the question, and speak truth, Didst thou tell him all that was in that paper before he writ it down?

W. Edwards. — Yes, I told him, and so he writ it down.

Just. Holloway. — You heard it all read to you, you say? *W. Edwards.* — Yes.

L. C. J. — Then I ask you again. Did you tell him all that was in that paper was read to you, before he writ it down? *W. Edwards.* — Yes.

L. C. J. — And after you had told him, he writ it down?

W. Edwards. — I told him as he writ it down.

L. C. J. — And after such time as he had writ it down, did he read it to you?

W. Edwards. — Yes.

L. C. J. — And then you put your name to it?

W. Edwards. — Yes.

Att.-Gen. — I pray, my lord, he may be asked this question, Whether or no, when he first brought it in, the boy did not deny to sign it?

L. C. J. — Did he bring the paper thither before thou signedst it?

W. Edwards. — It was upon the table.

L. C. J. — Didst not thou refuse to put thy name to it? *W. Edwards.* — Yes.

L. C. J. — Why? *W. Edwards.* I was afraid.

L. C. J. — Why?

W. Edwards. — For fear of coming into danger.

L. C. J. — Why, what danger

could there be? There was no danger if it was truth.

W. Edwards. — That was not the truth.

L. C. J. — Which was not the truth? Was not the paper that he had written truth?

W. Edwards. — No.

L. C. J. — How so, child? Was not that thou toldest him the truth?

W. Edwards. — No.

L. C. J. — Tell the truth now then.

W. Edwards. — So I do.

Sol.-Gen. — Then he offered it first to you, and bid you sign it, and you denied to put your hand to it, because it was not true?

W. Edwards. — Yes.

L. C. J. — And how long after did he offer it to you again?

W. Edwards. — A little while after.

L. C. J. — But did you tell Mr. Braddon it was not true, when you refused to sign it?

W. Edwards. — No, I did not.

L. C. J. — Why didst thou refuse to sign it then?

W. Edwards. — I was afraid, because it was not true.

L. C. J. — Didst not thou tell Mr. Braddon it was not true?

W. Edwards. — I did not tell Mr. Braddon it was not true.

L. C. J. — Why then wast thou afraid to sign it because it was not true at one time, and yet did sign it, though it was not true, at another time?

Sol.-Gen. — Child, didst thou give Mr. Braddon any reason, why thou didst not sign it at that time? *W. Edwards.* — No, Sir. . . .

L. C. J. — Thou sayest, thou didst first refuse it, because it was not true?

W. Edwards. — Yes.

L. C. J. — And then afterwards thou didst sign it? *W. Edwards.* — Yes.

L. C. J. — Then I ask thee, who persuaded thee to sign it after that time that thou still refusedst it?

W. Edwards. — My mother was afraid to have me sign it.

L. C. J. — Who persuaded you to sign it?

W. Edwards. — Mr. Braddon said there was no harm in it, so I did it.

L. C. J. — Did Mr. Braddon then persuade you to sign it?

W. Edwards. — He said there was no harm in it, that was all.

L. C. J. — Did you do it at his desire?

W. Edwards. — Yes.

L. C. J. — And you refused it at first when he desired it? *W. Edwards.* — Yes.

L. C. J. — What, because it was false?

W. Edwards. — Yes.

L. C. J. — Why then wouldst thou sign it afterwards, if somebody did not persuade thee to it?

W. Edwards. — He told me there was nothing of harm in it.

Att.-Gen. — Hadst thou any money offered thee by Mr. Braddon? — *W. Edwards.* — No.

Att.-Gen. — Hadst thou any money promised thee? *W. Edwards.* — No.

Att.-Gen. — Hadst thou anything else offered or promised thee?

W. Edwards. — No, nothing at all.

L. C. J. — You have heard what he has said, gentlemen?

Jury. — No, my lord, we have not heard a word.

L. C. J. — Then I will tell you what he has said exactly. He says, that Mr. Braddon writ it from him; that he writ it in the room while he was there; that after such time as he had writ it, Mr. Braddon read it to him: He says, that he had carried his brother to show him the place where he assigned that the razor was found in the Tower: He says, that after such time as the writing was finished, Mr. Braddon offered it him to sign, and he refused to sign it, and I asked him the reason why, and he says, because it was false; he says some short time afterwards Mr. Braddon came to him again.

W. Edwards. — No, Sir, it was the same time.

L. C. J. — Well, the same time

Braddon was at him again, and told him there was no harm in it, and therefore desired him to sign it, and because he would not, he would have his aunt to have signed it; and he says, that Braddon telling him there was no harm in it, he did sign it.

Sol.-Gen. — But withal he says, that it is false.

L. C. J. — Ay, he swears now it is all false.

Mr. Freke. — Did you tell Mr. Braddon it was false?

L. C. J. — No, he says he did not.

Mr. Freke. — Did your sister at all discourse with you after you had dictated to Mr. Braddon? Pray what discourse had you with her after Mr. Braddon writ that paper, before you refused to sign it?

L. C. J. — Do not ask any leading question, Sir, but propose a fair plain question.

Mr. Freke. — Did you discourse with your sister at all, after Mr. Braddon had been at your house?

W. Edwards. — Yes, I had been at school, and when I came home, they said that a gentleman that came from the earl of Essex's brother, had been to inquire of the truth of the report I had raised.

Mr. Freke. — What did your sister say to you?

W. Edwards. — That was all.

Sol.-Gen. — Did she name the gentleman, and did you see him afterwards?

W. Edwards. — Yes.

Sol.-Gen. — Who was it?

W. Edwards. — That gentleman, Mr. Braddon.

Jury. — My lord, we don't hear a word he says.

L. C. J. — He says he had been at school, and when he came home, they told him a gentleman came from the earl's brother, to inquire of the truth of what he had reported. It was asked him who the gentleman was, and he says, it was that gentleman, Mr. Braddon.

Mr. Thompson. — Before such time as Mr. Braddon came to you,

what did you tell your father about this razor, and when?

W. Edwards. — Sir, I told him the king and duke of York were at the Tower, and while I was there, I said, I saw a hand cast out a bloody razor, and a maid come out and take it up, and go in again.

Mr. Thompson. — Did you see any such thing as a bloody razor cast out?

W. Edwards. — No.

L. C. J. — What a dust has such a trivial report made in the world! Admit the boy had said any such thing, what an age do we live in, that the report of every child shall blow us up after this rate? It would make a body tremble to think what sort of people we live among: To what an heat does zeal transport some people, beyond all reason and sobriety? If such a little boy had said so, it is not an half-penny matter, but presently all the government is to be libeled for a boy, which, whether he speaks true or false, is of no great weight, and he swears it is all false.

Sol.-Gen. — My lord, we shall next call Dr. Hawkins's son of the Tower. Where is Thomas Hawkins? [Who was sworn.]

Att.-Gen. — My lord, agreeable to what the boy has now said, to show you that what Mr. Braddon got him to sign was all false, here is the young man that truanted with him the same morning, that was with him all the time, the whole morning, that says, there was no such thing, and he saw no such thing; and how could it enter into the boy's head such a malicious lie, if it had not been dictated? Pray, Mr. Hawkins, will you acquaint my lord, and the jury, whether you played truant that morning with this other boy, and where you were?

L. C. J. — Ay, tell the truth in God's name, young man, be it one way or the other, let the truth come out.

Hawkins. — In the morning, Sir, I met with him at the Tower, going round with the king, and we walked

round the Tower as long as the king walked, and then the king going into the Constable's house, we and some more boys were playing —

L. C. J. — Prithee speak out, as though thou wert at play at chuck-farthing.

Hawkins. — After we had been at play, I went home, and after I had been there a little while, news was brought to my father that the earl of Essex had killed himself. My father went down, and I followed him, and after I had been there a little while, William Edwards came home, and there we stood looking up at the window an hour or two at least, and after we had tarried there a great while, I went out of the Tower gate a little after eleven.

Att.-Gen. — Was there no razor thrown out of the window?

Hawkins. — No, there was no razor thrown out.

L. C. J. — Didst not thou see a razor thrown out of the window and a maid come and take it up?

Hawkins. — No, there was no such thing.

L. C. J. — Were you there before Edwards came? *Hawkins.* — Yes.

L. C. J. — And you went out with him?

Hawkins. — Yes.

L. C. J. — Did you and Edwards go away together? *Hawkins.* — Yes.

Mr. Thompson. — Did he tell you of any such thing? *Hawkins.* — No.

Sol.-Gen. — What time of the day was it that you went out of the Tower?

Hawkins. — Almost eleven o'clock.

Mr. Wallop. — The boy does say, he did tell his father and mother, and all the family of it. And it is plain by the father, that it was known in the family by ten of the clock.

Sol.-Gen. — Was this young man with you, all the time that you was there, Edwards?

W. Edwards. — Yes.

Att.-Gen. — Did you not tell your father of this story when you came from the Tower?

W. Edwards. — Yes.

Att.-Gen. — And that was the same time you came out of the Tower with Hawkins?

W. Edwards. — Yes.

Att.-Gen. — And you, Hawkins, was this young man with you all the time you were at my lord Essex's window?

Hawkins. — He came thither while I stood there.

Att.-Gen. — My lord, this is but the beginning of our evidence, your lordship sees what a fine case it is, and how all this noise and bustle has come to be made in the world. The rumor did first arise in a fanatic family, and was propagated by that party.

Mr. Jones. — Ay, it is easily known whence it came.

L. C. J. — Gentlemen, pray will you go on with your evidence, and make no descants.

Mr. Freke. — You, Hawkins, when you came from your father's house, did you find that boy in Tower?

Hawkins. — Yes, Sir, a-going round with the king.

L. C. J. — That was before this thing happened.

Mr. Freke. — Were you with him all the while he was in the Tower?

Hawkins. — Just before my lord Essex cut his throat I went home.

Mr. Freke. — Were you with him all the time or no? And how long were you with him?

Hawkins. — I went with him round the Tower with the king. And after we were at play, and then I went home, and then when I had been at home a little time, the rumor and noise came, that the earl of Essex had killed himself; so I went with my father, and stood before the window, and I tarried there awhile before he came home, and I stayed with him looking at the window a great while, and we went out of the Tower together. . . .

Att.-Gen. — My lord, we had not laid so much weight upon Mr. Brad-don for this matter, but that he

could not be quiet, but must inform the king of it, and this matter was all examined before the king, the boy was sent for, and before his face the boy declared it was a lie. And after he knew this, and after the boy had twice in the presence of the king denied it, yet notwithstanding all this, then was the project between him and Speke. We shall first prove the examination of this matter before the Council, and how he was acquainted with it. Pray call Mr. Blathwaite and Mr. Monstevens.

Mr. *Blathwaite* was sworn.

Att.-Gen. — Pray, Mr. Blathwaite, will you give an account whether you were present at the Council, when Mr. Braddon brought this information, and how the matter was examined there, and what was done.

Mr. *Blathwaite*. — My lord, it was on the 20th of July, that Mr. Braddon came to Whitehall, he may remember I was there, for he could not but see me attending on the king. This little boy was brought before his majesty, and was asked what information he had given Mr. Braddon? And whether the matter of the information was true? The boy said it was a lie, and that upon his faith it was not true. Mr. Braddon knew all this, for he was called in and informed of it; and I believe Mr. Braddon will remember, that he heard the boy deny it. The whole examination could not but show that it was an invention of his, as he said it was, to excuse himself for having played truant that day, and that because he was afraid to go home he invented that lie. After this Mr. Braddon, as it appears, did nevertheless pursue this business.

L. C. J. — Pray only tell what you know of your own knowledge, both before and after.

Mr. *Blathwaite*. — I know, my lord, that Mr. Braddon (having been in the country) came afterwards before the king, and was again examined upon this matter, by which it appeared, that he did continue in his pursuit, though he was

always informed of the denial the boy made, and that it was understood to be a lie by the whole family of the Edwardses, as well as from the denial of the little boy; for they did confess, that the boy used to tell lies, and one of the sisters said he had denied it at first, but afterwards was brought to say it. And if I remember right, the words of one of the sisters were, "Braddon compelled the boy to sign it." Those are the words in the minutes that I took at the examination. . . .

Att.-Gen. — My lord, I pray that a word of the Information may be read, we will first prove the information taken by him. . . .

Cl. of Cr. — This is subscribed, "William Edwards."

L. C. J. — Call the boy in again. . . .

L. C. J. — Hark you, young man, do you know my lord Gerard? *W. Edwards.* — Yes.

L. C. J. — Which lord Gerard do you know?

W. Edwards. — My lord Brandon Gerard.

L. C. J. — How came you to know him?

W. Edwards. — By sight I know him.

L. C. J. — Do you know where he lodged in the Tower? *W. Edwards.* — Yes.

L. C. J. — Where?

W. Edwards. — At one Mr. Sam's.

L. C. J. — Was you ever in his lodging?

W. Edwards. — No.

L. C. J. — Never at all? *W. Edwards.* — No.

L. C. J. — Did you ever tell anybody you were in my lord Brandon Gerard's lodgings?

W. Edwards. — Never in my life.

L. C. J. — Did you never tell Braddon, that you went to see his lodgings?

W. Edwards. — Into the house I never went.

L. C. J. — Did you never tell Braddon, That you went to see my lord Brandon Gerard's lodgings? Never in your life?

W. Edwards. — No, Sir.

L. C. J. — Now read it.

Cl. of Cr. [Reads.] — "The Information of William Edwards, second son to Thomas Edwards, of the parish of All-hallows Barkin, London, taken the 18th day of July, in the 35th year of the reign of our sovereign lord king Charles 2, anno 1683, says: That this informant on Friday the 13th of this instant July, as he was going to school, with his brother Edward, he heard that his majesty and his royal highness the duke of York, were going to the Tower. . Whereupon this informant left his brother, and went to the Tower to see his majesty, and his royal highness. And when this informant had seen his majesty and his royal highness, this informant about nine of the clock in the morning of the same day, went to see my lord Brandon Gerard's lodgings; and as this informant was standing almost over against my lord Gerard's lodgings, between the lord Gerard's and the late lord of Essex's lodgings, this informant saw a hand cast out a bloody razor out of the said earl of Essex's lodgings. And this informant was going to take up the said razor, which he saw on the ground to be bloody; but before this informant came to the razor, there came a maid running out of captain Hawley's house, where the said lord of Essex lodged, and took up the said razor, which she carried into the said captain Hawley's house. And this informant believes that it was the said maid, who he first heard cry out murder. And this informant further said, That he heard the said maid say to some which were about the door, after the murder was cried, That she did hear the said lord of Essex to groan three times that morning. The father, three sisters, and brother will swear, That the said William Edwards did declare the substance of this Information to them on Friday the 13th instant, and never in the least denied it till

Tuesday after, when being chid and threatened by the eldest sister, he did deny it; but soon after confessed it, and signed it in the presence of five or six witnesses."

Just. Withins. — Thus you see, he persuaded him to tell a fine story of going to see my lord Brandon Gerard's lodgings, but the boy never told any such thing.

L. C. J. — No, he never told him a word of it, he swears. . . .

Cl. of Cr. — The Information of Mrs. Edwards, wife to Thomas Edwards, saith, "That about 10 o'clock in the morning on Friday the 13th of this instant July, this informant's youngest son William Edwards, aged about 13 years, came trembling to this informant, and in great amazement and horror told this informant, that the lord Essex had cut his throat in the Tower, and further said, That he the said William Edwards in the morning about nine o'clock, did see a hand cast out a razor out of the said lord of Essex's lodging window, which razor he saw on the ground to be bloody. And the said William Edwards was going to take up the said razor, but before he came to it, there came a maid running out of captain Hawley's house, where the said earl of Essex lodged, and took up the razor, which she the said maid forthwith carried into the said captain Hawley's house, and soon after he the said William Edwards heard her, as the said William Edwards did believe, cry out murder. And this informant further saith, That the substance of which the said William Edwards hath sworn in this information, he the said William Edwards on Friday last did declare to this informant and her whole family, several times attesting it to be true, and several times since." . . .

L. C. J. — Ay, that is the boy's Information.

Cl. of Cr. — Here is another, it is dated August the 8th, 1683. The Information of Jane Lodeman, aged

about 13 years, did in the presence of these, whose names are here under written, declare as followeth, "That the said Jane Lodeman was in the Tower on Friday morning, the 13th of July last, and standing almost over against the late earl of Essex's lodging window, she saw a hand cast out a razor out of my lord's window, and immediately upon that she heard shrieks, and that there was a soldier by my lord's door, which cried out to those within the house, that somebody should come and take up a razor which was thrown out of the window, whereupon there came a maid with a white hood out of the house, but who took up the razor she cannot tell."

"This is subscribed

"JOHN BOOM,
"WM. SMITH."

Cl. of Cr. — Here is another paper, August the 8th, 1683, Mr. William Glasbrooke does declare, That one Jane Lodeman, aged about 13 years, inhabiting in the same house where he the said William Glasbrooke lodged, did on Friday the 13th of July last past, between the hours of 10 and 11 in the morning, in the presence and hearing of him the said William Glasbrooke declare to her aunt, "That the earl of Essex had cut his throat, which upon her aunt was very angry with her, whereupon she the said girl did declare, that she was sure of it, for she saw him throw the razor out of the window, and that the razor was bloody, and that she heard two groans or shrieks (which of the two words she used, he the said William Glasbrooke is not certain); of this he the said William Glasbrooke is ready to make oath.

"This is subscribed

"WM. GLASBROOKE,
"MARGARET SMITH."

Att.-Gen. — He carried his stuff about him, it seems, wherever he went.

L. C. J. — It is stuff indeed. Good God, what an age do we live in!

Att.-Gen. — It is not taken upon

oath before any magistrate, but cooked up to amuse the country, as if they were formal Informations. . . .

Att.-Gen. — My lord, we have gone through our evidence for the present to show how this man has endeavored to spread this matter to the scandal of the government. We shall end here at present to see how he has improved his confidence, by what defense he will make to all this proof. . . .

Braddon. — My lord, I desire the family of the Edwards may be called.

L. C. J. — Name them, Who are they? How can we tell who your witnesses are? . . .

Braddon. — Mr. Edwards, and Mrs. Edwards. [Who came into court.] . . .

L. C. J. — Well, What do you ask Edwards?

Braddon. — What day was the first day I saw you, and had discourse with you, and what was the discourse I had with you?

Edwards. — It was the 17th of July.

Braddon. — What did you tell me then that your boy reported?

Edwards. — I told you what I acquainted the court withal before, that the boy had brought home such a report.

Braddon. — Had the boy ever denied it before I saw you?

Edwards. — That day you came to speak with me about it, as I was informed by my wife and my daughter, the boy did deny it.

Braddon. — Was it before I came, or after I came that he denied it?

Edwards. — It was after you came.

Braddon. — What were the inducements that made him to deny it?

L. C. J. — He tells you himself, because it was false.

Braddon. — I desire the elder sister Sarah Edwards may be called. . . .

Crier. — Here is Sarah Edwards now. [Who was sworn.]

Att.-Gen. — This is not the sister, this is the mother of the boy.

L. C. J. — Well, what do you ask her?

Braddon. — What discourse had you with your boy about ten o'clock that Friday morning I met you?

Mrs. Edwards. — I had no discourse, but what my child told me.

Braddon. — What did your child tell you? . . .

Mrs. Edwards. — What was it, Sir, he came and told me? Why, the boy told me, Mother, says he, I have been at the Tower, and seen the king's majesty, and his royal highness, and says he, the earl of Essex has cut his throat; and Lord, Mother, says he, and wept. Lord, child, said I, I am afraid you are going to make some excuse to me that I should not beat you, being you have played truant; no, Mother, says he, I did not. He continued in this for a little while, and then afterwards did deny it.

Braddon. — What did he deny?

Mrs. Edwards. — What he had said to me.

Braddon. — Did he deny that he had been at the Tower? Or that the earl of Essex had cut his throat?

Mrs. Edwards. — No, he denied what he said he saw.

Braddon. — What was that?

Mrs. Edwards. — He said, he saw an hand out of a window, and a razor fell down, and he went to take it up, and there came out a woman, or a maid, a short fat woman came out, and took it up, and went in again.

Mr. Wallop. — And he said this crying and weeping you say?

Mrs. Edwards. — Yes, he did so.

Braddon. — Did he deny it before such time as I had been there?

Mrs. Edwards. — No, you was once at my house before, and spake to my husband, and then you came the same day again. . . .

L. C. J. — Hark you, Mrs. Edwards, before you go. The boy denied it, it seems, in two or three days after he had given out such a report?

Mrs. Edwards. — Yes, my lord, he did.

L. C. J. — How came he to deny it?

Mrs. Edwards. — I will tell you how. When this gentleman came and acquainted my husband with his business, it put us all into a great damp; and my husband said, Now both my boys were gone to school, and says he, after the gentleman was gone, to my daughter Sarah, Do not you say anything to your brother when he comes in, but let him alone, and we will talk to him. So with that she was grievously affrighted, and so amazed, that as soon as he came in, she said, Prithee Billy, deal truly, and do not you tell any lie to save your breech, for here has been a gentleman to inquire something about what you said; why, sister, says he, will anything of harm come? Truly, child, says she, I do not know; and upon that he did deny it.

L. C. J. — Did you tell Mr. Braddon, he had denied it? . . .

Braddon. — Mrs. Edwards, did not the boy come to you, and cry out, he should be hang'd, and then did deny it?

Mrs. Edwards. — Yes, that he did.

Braddon. — From whence did he come, that he was in such a fright?

Mrs. Edwards. — I can't tell that, Sir.

Braddon. — Did not your eldest daughter chide him and threaten him?

Mrs. Edwards. — Yes, she did bid him speak the truth.

Att.-Gen. — And then he denied it?

Mrs. Edwards. — Yes.

L. C. J. — Ay, says she to him, Billy, do not, to save thy breech, tell a lie, but speak the truth; why then, says he, the truth of it is, there was no such thing.

Braddon. — My lord, she says it was after his sister had chid and threatened him.

Sol.-Gen. — You are a little too fierce upon the woman, Mr. Braddon, you do not observe what she says.

S. Edwards. — Yes, the second time before he came into the house.

Braddon. — I desire the old gentleman may be asked this question.

Mr. Thompson. — Call Mr. Edwards again. . . .

Braddon. — Mr. Edwards, Pray will you answer this question? Did not your son, when he was asked why he denied it, say that it was fear and discouragement, through his sister's threats, was the cause? Pray speak the truth.

Edwards. — I cannot tell whether the child did say so; something of that nature he did say.

Mr. Thompson. — Call Anne Burt.

L. C. J. — We have got such strange kind of notions, nowadays, that forsooth men think they may say anything because they are counsel. . . . But we plainly see through all. This was the design from the beginning, the king and the duke of York were in the Tower at that time, and it must be thought and believed that they had designed this matter, and so then all the people must be ruined in case they would not say the earl murdered himself, though indeed others had done it. . . .

Braddon. — My lord, as to the making such an inference, or any reflection as your lordship mentions, I am as far from it as anybody here. . . .

Then *Anne Burt* appeared, and was sworn.

Braddon. — Mrs. Burt, I desire to know what discourse you had with Mrs. Edwards, and that family? . . .

Mrs. Burt. — I went to make a visit to Mrs. Edwards, and I had not been there half an hour but in comes this gentleman; now I had asked no questions about the business, but in he comes and desired to speak with Mrs. Edwards; Mr. Edwards was called, and when he came in with Mr. Edwards, the gentleman sat down in the room, and told Mr. Edwards he had heard a report of something his son had spoken, but he desired to have it from his son's

own mouth, and the boy was called in (this is a real truth, Sir, for I do not know whether I may stir from this place where I am alive or no); And when the boy came in, the gentleman said to him, if it be true that you have reported, own it; if not, do not own it; for, said he, it is a dreadful thing to be found in a lie, I would have you read the 5th Chapter of the Acts, where a man and a woman were struck dead for telling a lie. Sir, said the boy, it is true, and what I said I will speak it before any justice of peace in the world. And then he asked him what he had reported, and the boy made a repetition of what he had seen and said before, that he went into the Tower and came to the first row of houses that goes along. And at the first house he saw nobody look out at the window, nor at the second house, but he looked up at the third house, and he took his hand and showed thus, said he, I saw a man's hand he did not say, but an hand throw a razor out, of this fashion, and he imitated it with his hand. Said the gentleman, was it not the wrong window, or the wrong house? I will not take the thing upon this credit, take your other brother down, that was a bigger boy than this, and, says he, go down to the house, and show your brother the window where you saw this. The two boys went down, and he showed his brother the place where he saw the hand —

L. C. J. — Were you present at his showing?

Mrs. Burt. — Will your lordship please to give me leave —

L. C. J. — And pray give me leave too. I ask you, Were you present? For you tell it as if you knew it yourself.

Mrs. Burt. — Both the boys came up and said so.

L. C. J. — You should have said so then, that they told you it, for you are upon your oath, and must affirm nothing but your own knowledge. . . .

Mrs. *Burt.* — My lord, I heard what I say with my own ears.

L. C. J. — But you talk of a thing you did not see with your own eyes, as if you had seen it. . . .

Mrs. *Burt.* — I tell what is truth, what I heard and saw ; for, said Mr. Braddon, I believe it was not the right window, when the boy came up and said he had showed the window. And this gentleman, I cannot hit his name right (he is a stranger to me), he and Mr. Edwards went down with the boy, to see whether it were the right window of the house where my lord died (which where it is I cannot tell any otherwise than has been reported, or whether there be one room or two of a floor I do not know); and when he came up again he called for a sheet of paper, that he might write from the boy's mouth, and that he might not differ one word from what the boy had said himself. And when I saw Mr. Braddon begin to write I went away, for I thought it may be the gentleman might expect I should set my hand to it as a witness, and I did not desire any trouble.

Braddon. — I desire this question may be asked her, my lord, Do not you remember it was said the boy denied it ?

Mrs. *Burt.* — Yes, it was said, the boy did deny it. . . .

Mrs. *Burt.* — Because his sister, as his mother told me, had been talking to him.

L. C. J. — As his mother told you, prithee, woman, speak your own knowledge, and not what another body told thee.

Mrs. *Burt.* — Pray, give me leave, my lord —

L. C. J. — I tell thee, I will not give thee leave to say what thou shouldest not say. . . .

Mrs. *Burt.* — My lord, I have done. I come here to speak the truth, and so I do.

L. C. J. — Nay, prithee be not so full of tattle, so full of clack.

Then a little girl came into court.

L. C. J. — What age is this girl of ? How old art thou, child ?

Girl. — I was 13 last Saturday.

L. C. J. — Do you know the danger of telling a lie ? *Girl.* — Yes.

L. C. J. — Why, what will become of you if you tell a lie ?

Girl. — The devil will have me.

L. C. J. — Give her her oath. What is thy name, child ?

Girl. — Jane Lodeman.

Then she was sworn.

L. C. J. — Child, do not be afraid of anything in the world, but only of telling anything but what is true; be sure you do not tell a lie, for if, as you say, you shall be in danger of hell-fire by telling a lie, much more will you be in danger if you swear to a lie. Now, what do you ask her ?

Braddon. — What did you see in the Tower that morning the earl of Essex died ?

Lodeman. — I saw a hand out of a window, but I cannot tell what window it was, but it was a hand throw out a razor.

Braddon. — And what did you hear after that ?

Lodeman. — I cannot well remember, but it was either two shrieks or two groans that I heard presently after.

L. C. J. — What time of the day was it, child ?

Lodeman. — It was between 9 and 10 of the clock.

L. C. J. — Who was with you besides yourself there ?

Lodeman. — There were more besides me, but they went away.

L. C. J. — Who were they, child ?

Lodeman. — A great many that I did not know.

L. C. J. — And how came you to take notice of it ?

Lodeman. — And there was a coach stood just at the door.

L. C. J. — Tell us some of them, child, and that were there besides thyself, speak the truth, be not afraid. Thou sayest a great many people were there, and all the people must necessarily see it.

Lodeman. — They were people I did not know.

L. C. J. — But they all saw it as well as you?

Lodeman. — So I suppose they did.

L. C. J. — And you heard a shriek or two, you say?

Lodeman. — Two shrieks or two groans, I can't well remember which.

L. C. J. — How high was the window?

Lodeman. — Not above one pair of stairs high.

L. C. J. — How high from the ground might it be? *Lodeman.* — Not above one story.

Mr. Thompson. — Whereabouts in the Tower was it?

Lodeman. — Sir, it was as you go upon the mount.

Mr. Wallop. — Whose lodging do you think it was?

Lodeman. — I did not know whose it was, but folks said it was the earl of Essex's.

L. C. J. — Who did you tell this to?

Lodeman. — I told nobody till I came to my aunt, and I told her.

L. C. J. — What is her name?

Lodeman. — Margaret Smith.

L. C. J. — Did you ever tell this to that man? *Lodeman.* — Yes, afterwards I did.

L. C. J. — How came he to inquire of you about it?

Lodeman. — He came and asked me, and I could not deny it.

L. C. J. — Ay, but how came he to ask you?

Lodeman. — There was a gentlewoman that was at our house, and she heard of it, and spake of it at a gentlewoman's at dinner, and so he came to our house to inquire about it.

L. C. J. — Who is that gentlewoman? What is her name? *Lodeman.* — Susan Gibbons.

L. C. J. — Let me see the information of this girl, that Mr. Braddon had taken?

Cl. of Cr. — Yes, my lord, there it is.

L. C. J. — Do you know my lord

of Essex's lodgings? *Lodeman.* — They said it was his.

L. C. J. — Did you know it of your own knowledge? *Lodeman.* — No, Sir, I did not.

Mr. Thompson. — Pray what became of the razor that was thrown out of the window, after it was thrown out?

Lodeman. — I saw a woman in a white hood come out, but I did not see her take it up.

Sol.-Gen. — Girl, you say, that when you were at this place in the Tower, and saw this matter, there were a great many people there besides yourself? *Lodeman.* — Yes, Sir.

Sol.-Gen. — Did the razor fall among the people that stood there, or did it fall out in the street, or how?

Lodeman. — Sir, it fell within the pales.

Sol.-Gen. — And was the passage easy into the pales? *Lodeman.* — Yes.

Sol.-Gen. — What, they must climb over, must they?

Lodeman. — No, you need not climb over, there is a door to go in. And when people went in the soldier opened the door.

Sol.-Gen. — Who went in with the soldier? Did you see anybody go in?

Lodeman. — There was a man went in, but I know not who he was.

Sol.-Gen. — Did the soldier stand at the door when this razor was thrown out?

Lodeman. — I cannot tell that, a soldier used to be at the door.

Sol.-Gen. — The woman came out of the lodging, did she not? *Lodeman.* — Yes.

Sol.-Gen. — Did she go in again?

Lodeman. — I did not see her go in again.

Sol.-Gen. — Did she go into the pale?

Lodeman. — I did not see her go into the pales.

Sol.-Gen. — Did you see the razor after it fell upon the ground? *Lodeman.* — No.

Sol.-Gen. — Was it bloody?

Lodeman. — Yes.

Sol.-Gen. — Very bloody ?

Lodeman. — Yes.

Sol.-Gen. — Did you see nobody take it up ?

Lodeman. — No, I did not.

Sol.-Gen. — Come hither, child ; are you sure it was a razor, or a knife ?

Lodeman. — I am sure it was a razor.

Sol.-Gen. — Was it open or shut ?

Lodeman. — It was open.

Sol.-Gen. — What color was the handle ?

Lodeman. — Sir, I cannot tell, I see it but as it flew out.

Sol.-Gen. — Was it all over bloody ?

Lodeman. — No.

Sol.-Gen. — All but a little speck ?

Lodeman. — It was very bloody.

L. C. J. — Blessed God, what an age do we live in ! Girl, you say, you did not know it to be my lord of Essex's window ?

Lodeman. — No, but as they told me.

L. C. J. — Nor you did not see anybody take up the razor ? *Lodeman.* — No.

L. C. J. — But you are sure you did not ?

Lodeman. — I am sure I did not.

L. C. J. — But, child, recollect thyself, sure thou didst see somebody take it up ?

Lodeman. — No, I did not.

L. C. J. — I ask thee again, Didst not thou know it to be my lord of Essex's window ?

Lodeman. — No, but as they told me.

L. C. J. — Did you hear nobody speak to the maid that came out ?

Lodeman. — Nobody at all.

L. C. J. — No ; prithee is that thy hand, child ? Show her the paper, the uppermost part of it.

Lodeman. — Sir, I cannot write.

L. C. J. — Who put thy name to it ?

Lodeman. — Sir, I do not know, no more than the Pope of Rome.

L. C. J. — Whose handwriting is that ?

Lodeman. — I cannot tell, I never could write in my life.

Braddon. — Those are the names of such as heard her say it.

Att.-Gen. — Yes, you have cooked it up bravely.

L. C. J. — You shall see what a brave managery you have made of this poor child. Read the Information.

Cl. of Cr. [Reads.] — “ The eighth of August, 1683, Jane Lodeman, aged about 13 years, did in the presence of these whose names are underwritten, declare as follows, That the said Jane Lodeman was in the Tower on Friday morning, the 13th of July last, and standing almost over-against the late earl of Essex's lodging window, she saw a hand cast out a razor out of my lord's window, and immediately upon that she heard shrieks ; and that there was a soldier by my lord's door, which cried out to those within the house, that somebody should come and take up a razor, which was thrown out of the window, whereupon there came a maid with a white hood out of the house, but who took up the razor she cannot tell.”

L. C. J. — Here it is said “ the soldier cried out,” but now she says, the soldier she does not know was there, and she heard nobody speak to the maid. . . .

Sol.-Gen. — Were you carried by Mr. Braddon before any magistrate, or any justice of peace ? *Lodeman.* — No.

Sol.-Gen. — Did he take the examination himself ? *Lodeman.* — Yes.

Att.-Gen. — Did not he desire you to go before a justice of peace to be sworn ?

Lodeman. — No, Sir.

Sol.-Gen. — Did he write it himself ?

Att.-Gen. — Ay, he writ it, and took it, and this woman that is coming here, is a witness to it.

L. C. J. — What is this woman's name ?

Braddon. — This is the aunt, Margaret Smith. [Who was sworn.]

L. C. J. — Well, what say you to her?

Braddon. — I desire to know, what this girl said to you, when she returned from the Tower the 13th of July?

Mrs. Smith. — She said to that effect that she speaks now. . . .

Att.-Gen. — Mistress, Did you send to Mr. Braddon, to inform him of what the girl had said? or did he come to you?

Mrs. Smith. — Sir, I never saw him before in my days.

Att.-Gen. — He came first to you then?

Mrs. Smith. — Yes: he hearing of it, came as a stranger to me.

Braddon. — Did I, directly, or indirectly, offer you, or your niece, anything?

Mrs. Smith. — No, never in this world.

Braddon. — Did I ever desire her, or you, to say anything but what was true?

Mrs. Smith. — No, Sir; you ever encouraged the girl to speak truth; and bid her speak nothing but what was truth. . . .

Braddon. — Swear William Glasbrooke. [Which was done.]

L. C. J. — Well, what do you ask him?

Mr. Freke. — My lord, we desire to know of him, whether he was by on the 13th of July, when the girl gave this report?

Glasbrooke. — I was up two pair of stairs when she came in.

L. C. J. — What is your name, Sir?

Glasbrooke. — William Glasbrooke.

Cl. of Cr. — Ay, here is his Information, among those that were taken about Braddon.

Glasbrooke. — She came in to her aunt, that went out just now before me, and I heard her very loud with her aunt, saying, the earl of Essex had cut his throat in the Tower. Her aunt chid her upon it; and her aunt chiding her, she said, she was sure it was true; for she saw a bloody razor, with a bloody hand, thrown out of the window.

Mr. Freke. — Was this the day of my lord Essex's death?

Glasbrooke. — It was the day the king was in the Tower, and, as was reported, the day he was killed. . . .

L. C. J. — Now my lord of Essex cut his own throat, and after threw the razor out of the window.

Glasbrooke. — 'Tis what the girl did declare.

Att.-Gen. — Does not this girl usually tell lies?

Glasbrooke. — I have before that time taken her in a lie.

Att.-Gen. — Did you acquaint Mr. Braddon with that?

Glasbrooke. — I cannot tell that I did.

Att.-Gen. — Do you remember that you told Mr. Braddon, That she was a girl that told truth?

Glasbrooke. — No, I never did that; for I was always of another persuasion about her. . . .

Braddon. — These two children told me, they never saw one another till they were examined at the Council.

L. C. J. — Well, well; Go on with your witnesses.

Braddon. — Where is William Smith? [Who appeared and was sworn.] I desire to know of you, Mr. Smith, what you heard the girl say, when I was there?

Smith. — I heard the girl tell us, That she saw a hand cast out a razor, and either the hand was bloody, or the razor, I cannot tell which; but she said it was out of the window, where she said the earl of Essex lodged.

L. C. J. — Did she say the earl of Essex did it himself?

Smith. — She said she saw an hand cast out a razor.

L. C. J. — Did she tell you, it was the earl of Essex's lodging window?

Smith. — She said it was that lodging.

L. C. J. — Ay, but she says now she does not know it to be his lodging.

Braddon. — My lord, she said she was told it was his lodging.

L. C. J. — But you have made her

to say positively, it was his lodging, and that he threw out the razor.

Sol.-Gen. — Pray, Sir, where did you first hear this report of this girl?

Smith. — There at the house where she was.

Sol.-Gen. — Were you alone when you went to the girl the first time?

Smith. — No, I went with Mr. Braddon.

Sol.-Gen. — Did you hear anything of it before? What did induce you to go along with Mr. Braddon? What were the arguments that prevailed with you to go with him?

Smith. — I did not know where he was going; Mr. Braddon called me at the shop, as I stood at the door, and asked me if I was busy, or would go with him? So I went with him to the tavern.

Sol.-Gen. — You never heard one word before of the girl's report?

Smith. — No, I did not.

L. C. J. — What else did the girl tell you?

Smith. — I cannot say what else she said. This I remember that I have told you.

L. C. J. — Did she name the earl of Essex's lodgings?

Smith. — I am sure she said the lodging where the earl of Essex lay.

L. C. J. — Did she name the earl of Essex?

Smith. — She did name the earl of Essex's lodgings.

L. C. J. — Did she in so many words say, That it was the earl of Essex's lodgings?

Att.-Gen. — Your lordship sees, they give one evidence, and she another.

Smith. — I cannot say whether she did in so many words say so, or no; but she said, that she saw a hand toss out a razor, and either the hand was bloody, or the razor, and it was where my lord of Essex's lodgings was.

L. C. J. — But she did name my lord of Essex's lodgings? *Smith.* — Yes, she did.

L. C. J. — Well, what else did she say? Tell us all she said.

Smith. — She said, there was a man stood below, and she heard two shrieks, and the man did say, here is a razor; and a woman came out, or one in woman's clothes, with white headclothes. Mr. Braddon asked if she see anybody take it up, and she said, no; but she heard a man say here is the razor, and she saw a woman come out.

L. C. J. — You are sure that is all you heard her say? *Smith.* — I think so.

L. C. J. — Recollect yourself, pray, good Mr. Smith.

Smith. — I do not know that I heard anything else. . . .

Mr. Wallop. — My lord, I shall leave it to your lordship and the jury, how far they think the defendant guilty of this information.

Att.-Gen. — My lord, We have indeed given as great an evidence as ever was given I think of any offense. But to clear up the matter, that it was impossible for any man, unless the most maliciously and villainously inclined against the government and peace of the kingdom, that can be, to imagine such a thing, much less spread such a report, we will call you two or three witnesses to prove, that the earl of Essex murdered himself.

L. C. J. — It is necessary, Mr. Attorney, I think, for you so to do, to satisfy the world, though to a discerning eye there is enough given from the evidence this day, to make it appear to be a most malicious and scandalous contrivance, to hawk about for every idle rumor, to pick up children of such tender years, and make them swear to anything to serve a turn.

Att.-Gen. — My lord, we do not call these witnesses as if there were any doubt of it in the world. . . .

It is not to satisfy the court nor the jury, who I believe are all of them already sufficiently satisfied, but it is to satisfy the world, that may have entertained some prejudices from this conspiracy. Call Mr. Bomeney in. . . .

Then *Bomeney* was sworn.

L. C. J. — Did you wait upon this unfortunate gentleman, my lord of Essex?

Bomeney. — Yes, my lord.

L. C. J. — Well, what do you know of his death?

Bomeney. — I went with him from Whitehall, and I stayed with him all the while he was in the Tower.

L. C. J. — How came he by that unhappy end, pray?

Bomeney. — When we were at his lodging, my lord used to call for a penknife to cut his nails of his hands and feet, and he then had long nails, and said to me, give me your penknife to cut my nails; said I, my lord, I have none, I came in haste, but I will send to-morrow for one; and therefore I sent our footman, one William Turner; to whom I gave a little note for provisions, and among other things which I writ directions to the steward to send, there was a little line; "Pray send a penknife for my lord." He brought some provisions, but he did not bring a penknife on the Thursday, because he said he had none, but he would send one the morrow after; I sent William Turner, the morning after very early, and gave him another little note for provisions; and, among other things, I writ in the note, "Do not forget the pen-knife for my lord." . . . I went to my lord, and when my lord asked me if I had gotten him a penknife, I said the footman was not come, but I hoped it would come immediately, because I sent him early. And I was turning from the chamber, thinking I had done with my lord, and my lord called me again, Hark you, *Bomeney*, said he, I can do it with one of your razors. My lord, said I, I will fetch one, so I went into my closet and fetched one. And I went to my lord, and when he had it, he did as if he picked his nails with it, and was walking in the chamber. . . . I went down into my closet again, and at the same time that I was in my closet, there came the footman, and

one with him that brought the provisions, and he gave me the penknife, and gave me a little note, that he had brought with the provisions, which, he said, Mr. Billingsly, that was our steward, bid me to show that to my lord. I took it, and went up to show it to my lord; I found nobody in my lord's chamber, there was a closet there, in which was a close-stool, and that I found shut, and thinking my lord was there, I would not disturb my lord, but came down again, and stayed a little while, in so much as I thought my lord by that time might have been come out. I went up again, and found nobody in the chamber, but the closet door shut still, I went against the door, and knocked three times, and said, My lord, my lord, and nobody answered: then I looked through the chink of the door, between the door and the wall, and I could see blood, and a little part of the razor. Then I called to the warder, and the people of the house, and they came up and found him there.

Att.-Gen. — Had you much ado to open the door, or could you open the door easily?

Bomeney. — No, the door could not be opened easily, I know not how they opened the door, but I think Russel the warder, when he came up, pushed at the door, but could not open it very far, because my lord's foot was against the door, and so they had much ado to open the door. . . .

Att.-Gen. — Did you find the razor?

Bomeney. — Yes, it lay by him.

Att.-Gen. — What became of the razor?

Bomeney. — The coroner's jury had it.

L. C. J. — Was there any window in that room, where the close-stool was?

Bomeney. — Yes, there was a window.

L. C. J. — Was there a casement to that window?

Bomeney. — Yes, I think there might.

Just. *Withins*. — Which way does that window look?

Bomeney. — I cannot, very well remember, my lord.

Just. *Withins*. — Which way do you think?

Bomeney. — I believe it is upon a yard. . . .

Sol.-Gen. — Then we will call Mr. Russel the warder he speaks of. [Who was sworn.]

Att.-Gen. — Pray will you give my lord an account at that time where you were, and what was done?

Mr. *Russel*. — I was in the chamber, next opposite against my lord's chamber. . . . I was then waiter at that time, and stood upon the guard; and my lord asked Mr. *Bomeney*, whether the penknife was come; and he told my lord, no. Then says he, lend me your razor, that will do it. And my lord took the razor in his hand, and the door was open and he went two or three turns in the room, with the razor so. This I saw, the door being open, as I stood in the passage. My lord, by and by Mr. *Bomeney* goes down, and my lord shut the door to him, and Mr. *Bomeney* stayed below a little while, and afterwards comes up again. . . .

My lord, there was nobody went up or down all the time, but *Bomeney*. He came up, and seeing my lord was not come out of his closet (this I did stand and hear) so he puts by the hanging, and looks in, and sees my lord in his blood, lying in the closet; and he makes an oration, a great noise; with that I stepped two or three steps, hearing him make such an oration, and I found the key was on the outside of the door, and I opened the door, and saw him lie in his blood.

L. C. J. — Could you open the door with ease?

Russel. — Yes, I could put it a little way open, and there saw him.

L. C. J. — But you could not put it quite open?

Russel. — No, for his legs lay against the door.

L. C. J. — Was it a narrow closet?

Russel. — Yes, a very narrow closet.

L. C. J. — In what posture did my lord lie?

Russel. — He lay all along on one side.

L. C. J. — Where lay the razor?

Russel. — By him. But I did not take so much notice of the razor, for I was surprised with the sight.

Just. *Holloway*. — Was there any window in the closet?

Russel. — Yes, that looks into captain Hawley's yard. And the window is quite northward.

L. C. J. — Which way does that window look?

Russel. — Quite the other way, into the back yard.

L. C. J. — Then there is no way out, nor light, nor casement out into the foreyard?

Russel. — No, my lord, it is backward, and it is paled in, only into the house there is a door.

Att.-Gen. — Was there any door out of the street, that way?

Russel. — No, there is one door that goes out from the entry to go into the yard.

L. C. J. — Has anybody else access to come to the yard, but what must come through Hawley's house?

Russel. — No, nobody.

Sol.-Gen. — We will call captain Hawley himself.

L. C. J. — Warder, do you remember there was any coach that stood there?

Russel. — No, there was no such thing.

L. C. J. — I ask you for this reason, because here was a girl that spake of a coach, that came through the house I suppose, and so through the entry out of that door into the yard.

Att.-Gen. — Where is Lloyd the soldier? for, my lord, as there was a warder above, so there was a soldier that stood at the door below. And while he stayed there, there could not anyone come in, nor near, but he must observe them.

Sol.-Gen. — Pray, my lord, be pleased to ask Mr. Bomeney, how long he lived with my lord?

L. C. J. — How long had you lived with my lord of Essex? *Bomeney.* — Six years.

Just. Withins. — You waited on him in his chamber, I suppose?

Bomeney. — Yes, in the nature of his *valet de chambre*.

Then *Lloyd* was sworn.

Mr. Recorder. — Hark you, *Lloyd*, you were the sentinel. Give an account where you stood that day that my lord of Essex murdered himself? *Lloyd.* — At my lord's door.

Att.-Gen. — Which door?

Lloyd. — At my lord of Essex's door.

Att.-Gen. — Were you abovestairs, or below at the street door?

Lloyd. — Below at the street door.

Just. Withins. — Did anybody come into the house that morning?

Lloyd. — Nobody came in, all the while I stood there, that I knew of.

Just. Withins. — Were you there at that time when my lord killed himself?

Lloyd. — I was there when the noise was made of it abovestairs. . . .

Att.-Gen. — Did any maid go out of the house?

Lloyd. — None at all.

L. C. J. — What, not in a white hood?

Lloyd. — No.

L. C. J. — Why, didst not thou call to the maid to come and take up the razor, that was thrown out of the window of captain Hawley's house?

Lloyd. — There was no razor at all thrown out, that I saw.

L. C. J. — Did not you open the pales for her to go in, and take up the razor? *Lloyd.* — No.

L. C. J. — Was there any other soldier there besides you? *Lloyd.* — No.

L. C. J. — Then you must be he that cried out, or nobody?

Lloyd. — I saw no razor, nor did not cry out to anybody. . . .

Att.-Gen. — My lord, We will then

only call captain Hawley. [Who was sworn.]

Sol.-Gen. — Pray, Captain, tell what you know of this matter?

Capt. Hawley. — My lord, All the account I can give, is, that about four or five o'clock in the morning, I went to open the gates, that being the usual hour to open the gates. And I was at the gate then when a warder came, and told me, my lord of Essex had killed himself, and that was between nine and ten o'clock. When I came into the house, I went upstairs, and saw nobody in the room, nor no blood; said I, to the warder, what, do you make a fool of me? Here is nothing: says one of the warders, look into the closet: I went to the closet, and could not open the door above this wideness, and I looked in, and saw the razor all in blood, and my lord lay on his arm in this fashion. I could not tell, whether he was dead or no, but I thought it was not my business to stir him. Then my lord Constable was ordered to come and secure, and examine all the servants.

L. C. J. — Pray, Captain Hawley, where does the casement look into?

Capt. Hawley. — The house, ever since I came to it, is just as it was, and the house having settled, the casement won't open above this far: and it is so low, and the pales are nine or ten foot high, that it is impossible for anyone to throw anything out of the window three foot hardly. It is one of the horrid reports that ever was heard of, and the unlikeliest thing, they cannot throw anything out of the window to be seen.

Att.-Gen. — My lord, I think it is not necessary to call any more witnesses. . . .

L. C. J. — Have you any more Mr. Braddon?

Mr. Braddon. — My lord, I have only this to say for myself. It has not been proved directly, or indirectly, that I used any evil arguments to persuade these witnesses to testify what was false; but I deal

with them with all the candor, that any person in the world could use; and used all the caution that I could, to hinder them from speaking anything that is false. There has been nothing proved of evil practice used by me. . . .

L. C. J. — Gentlemen of the jury, the evidence has been very long, that has been given both for and against the persons, against whom this information is exhibited. . . .

Gentlemen, 'Tis a concern of an high nature, and if you do believe these persons that are defendants, or either of them to be guilty; such as you believe to be guilty, you must find guilty, and of such as you be-

lieve them guilty. And if in case they shall by you be found guilty, the court is to take care to inflict a punishment, if it be possible, suitable to their offense.

Then the court arose, and the jury afterwards gave in a private verdict, which the next morning was repeated in court and recorded. And by that verdict they found the defendant, Laurence Braddon, Guilty of the whole matter charged upon him in the information, and the defendant Hugh Speke Guilty of all but the conspiring to procure false witnesses, and of that they found him Not Guilty.

392. EARL OF THANET'S TRIAL. (1799. *HOWELL'S State Trials*. XXVII, 821.)

Court of King's Bench, April 25, 1799
Counsel for the Crown.

Mr. Attorney-General [Sir John Scott, afterwards Lord Chancellor Eldon];

Mr. Law [afterwards Lord Ellenborough, and Lord Chief Justice of the Court of King's Bench];

Mr. Garrow [afterwards a Baron of the Exchequer];

Mr. Adam [afterwards Lord Chief Commissioner of the Jury Court, and a Baron of the Exchequer of Scotland];

Mr. Wood [afterwards a Baron of the Exchequer];

Mr. Fielding;

Mr. Abbott [afterwards Lord Chief Justice of the Court of King's Bench].

Solicitor — *Mr. White*, Solicitor for the affairs of his Majesty's Treasury.

Counsel for the Defendants, the Earl of Thanet, Mr. Ferguson, and Mr. O'Brien.

The Honorable *Thomas Erskine* [afterwards Lord Chancellor Erskine];

Mr. Gibbs [afterwards Lord Chief Justice of the Court of Common Pleas];

Mr. Best [afterwards a Judge of the Court of King's Bench];

Mr. MacKintosh [afterwards Recorder of Bombay].

Solicitor — *Mr. Lowten*.

Counsel for the Defendant, Mr. Browne — *Mr. Rous*.

Solicitor — *Mr. Foulkes*.

Counsel for the Defendant, Mr. Thompson — *Mr. Rayne*.

Solicitor — *Mr. Bonney*.

The Information was opened by *Mr. Abbott*, and is as follows:¹ . . .

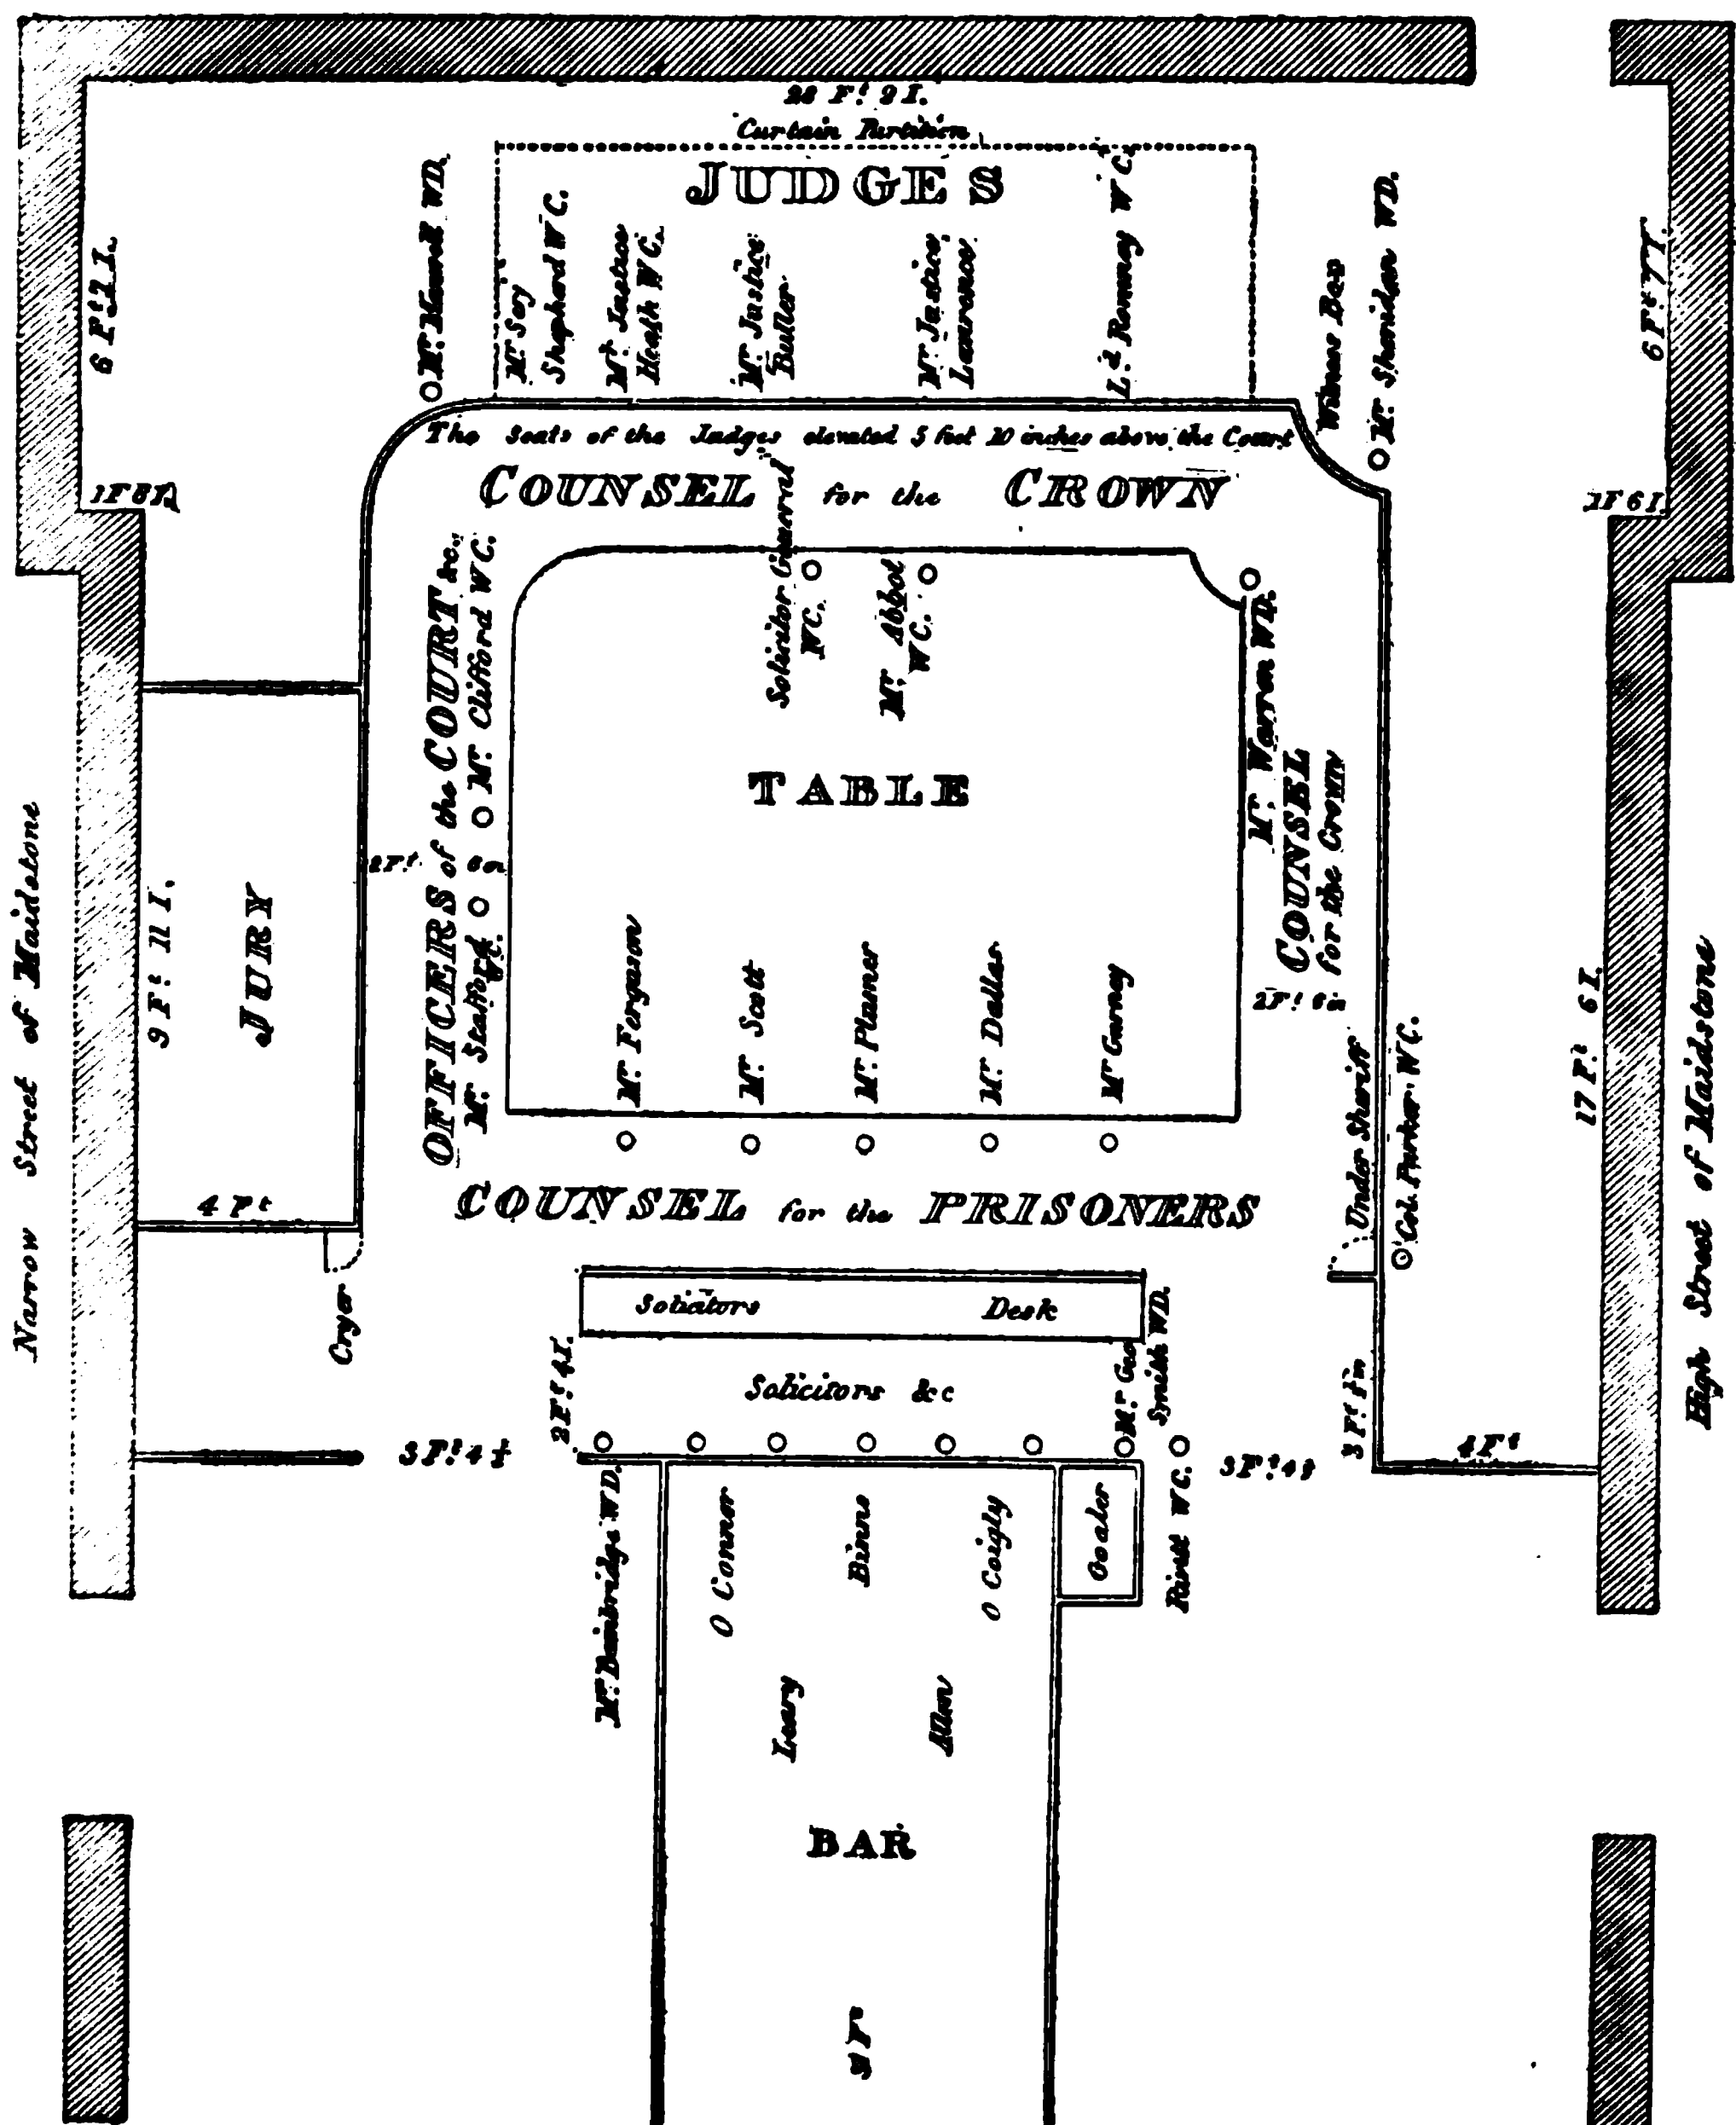

Mr. Attorney-General. — May it please your Lordships and Gentlemen of the Jury — I can very unfeignedly assure you, that I should have felt infinite satisfaction, if, in

any view that I could take of what my country required of me, I could have determined not to have instituted the present prosecution. . . .

Gentlemen, the information states to you, that at a special session of Oyer and Terminer, held at Maidstone in the month of May last, *Mr. O'Connor* together with several other persons were tried for the crime of high treason, of which they had been accused by a grand jury of the county of Kent. The information states, that the jury had found four of the defendants, *Mr. O'Connor* being one of the four, not guilty of the offense with which they were charged. The information states, that before he was discharged, these defendants (and you will give me leave to point out particularly to you the substance of the different charges in this information) did, in open court, and before any discharge, make a riot, and attempt to rescue him out of the custody of the sheriff; that they assaulted three persons named in the first count of the information, *John Rivett*, *Edward Fugion*, and *Thomas Adams*; that they riotously impeded and obstructed the commissioners of his majesty in the due and lawful holding of the session. The second count charges them with having, before the discharge of *Mr. O'Connor*, assisted him to rescue himself out of the custody of the sheriff, and having assaulted *Thomas Adams*, who was acting in aid of the sheriff. The third count charges them with having made a riot in open court, and been guilty of the assault. The fourth count charges them with a riot in open court, without the circumstance of the assault; and the last count charges them with a riot, without any addition of circumstances: and it will be for you to determine whether they are guilty of all, or

¹ [The italics and small capitals for passages of the witnesses' testimony are found in *Howell's* edition. — Ed.]

Plan of the Court of Maidstone

any of the charges stated in this information.

Gentlemen, I will endeavor now to open to you as much of this case as may enable you to understand as much of this evidence as is offered to you. . . .

Gentlemen, the trial at Maidstone was, as I need not tell those to whom I have the honor to address myself, an extremely long one. The witnesses on both sides had been desired to withdraw from the court previous to the commencement of the trial. In the natural course of proceeding, the witnesses for the defendants were called after the witnesses for the prosecution; and the noblemen and gentlemen who gave evidence in favor of Mr. O'Connor and the other defendants in that trial for high treason, after respectively giving their evidence, remained in court. . . . You will have plans of the court offered to you by and by in order to make the evidence more intelligible. . . .

The witnesses were, therefore, directly opposite the jury, and the prisoners at the bar were removed somewhat behind the counsel, who sat, as it were, in the place where I am now standing, there being some little distance between them and the prisoners, who were in the bar behind. . . .

When the verdict of Not Guilty was pronounced, Mr. O'Connor endeavored (it will be for you to decide whether or not with the coöperation of the defendants whose names occur upon this record) to get out from the place in which he stood as a prisoner, with a view to get out of court, and for the purpose of not being answerable to some demands of justice which he, and those who were acting with him, had reason to believe would be made upon him, if he stayed till he was regularly discharged.

Gentlemen, one of the defendants in this case, I mean Mr. Thompson, a member of parliament, was bound, certainly, from his situation as a

subject of this country, and bound from the high situation in which he stands in the country, not to be acting in the execution of such a purpose as this information imports; but you will find that he, together with Mr. O'Brien, had taken great pains, in the course of the afternoon . . . to know with certainty, whether there was any demand of justice upon Mr. O'Connor, supposing him to be acquitted of the present charge.

Now, gentlemen, be so good, without my entering into a detail of that evidence, to attend to the circumstances as to the conduct of the different defendants, during the time the learned judge was executing the painful duty of passing the sentence of death — giving your attention also to what was the conduct of the several defendants, when this notice had been publicly given in Court, the moment that that sentence was finished; and unless I am deceived indeed, with respect to the effect of that evidence, you will have no difficulty in coming to this conclusion, that those defendants did mean to take Mr. O'Connor out of the reach of the demands which it had been publicly declared justice had upon him. . . .

EVIDENCE FOR THE CROWN

Mr. Sergeant *Shepherd* [afterwards Lord Chief Baron of the Exchequer of Scotland] sworn. — Examined by Mr. *Garrow*.

We have collected from the record, that you were one of the commissioners appointed to try certain persons at Maidstone? — I was.

Did you attend upon the bench upon that occasion? — I did.

Do you remember the circumstance of the jury, after they had retired, coming into court to deliver their verdict? — I do.

Are you acquainted with the person of my lord Thanet? — I am. I had seen my lord Thanet examined as a witness on that day for Mr. O'Connor; I did not know his person before.

Are you acquainted with the person of Mr. Dennis O'Brien? — I am.

Are you acquainted with the person of Mr. Gunter Browne? — I cannot say I am. . . .

Are you acquainted with Mr. Fergusson, a gentleman at the bar? — I am.

Are you acquainted with Mr. Thompson? — I am acquainted with the person of Mr. Thompson; but I do not recollect seeing Mr. Thompson at Maidstone.

Be so good as state to the Court, whether, after the jury had given in their verdict, and judgment of death had been pronounced upon the prisoner who was convicted, you made any observation upon any of these persons, or their conduct? — After the jury had given their verdict, and, indeed, I think, at the time the jury gave their verdict, my lord Thanet was standing before the bar at which the prisoners stood, with his back to the prisoners, and his face, of course, towards the Court. I am not quite sure whether my lord Thanet was on the bench at which the solicitors for the prisoners stood, or whether there was any space between the bench and the bar; that I could not sufficiently observe.

Mr. *Garrow*. — It may not be improper here to state (and we shall certainly prove it), that there was no such space. . . .

Mr. Sergeant *Shepherd*. — My lord Thanet stood with his face towards the Court, and his back to the prisoners; he was rather to the right hand of O'Connor; I do not mean upon a line with O'Connor, of course, but rather to his right hand.

Mr. *Garrow*. — May I interrupt you to ask, whether the right-hand side was the side upon which the jailer was placed?

Mr. Sergeant *Shepherd*. — I am not quite sure whether it was the side on which the jailer was placed; it was the side on which O'Coigly, the convicted prisoner, stood; and it was the side on which the Bow-

street officers afterwards endeavored to advance.

Mr. *Erskine*. — The side nearest to the great street of Maidstone?

Mr. *Garrow*. — Certainly so, which is the side on which we all know the jailer is placed. You recollect the jailer has a box on that side next the great street? — I recollect he has; and therefore it was certainly on that side on which the jailer was placed. Mr. O'Brien stood, or sat, at that time, I do not exactly recollect which — but Mr. O'Brien was on the same line with lord Thanet, but rather to the left hand of Mr. O'Connor. Whether there was any person between my lord Thanet and Mr. O'Brien, I do not recollect.

When I interrupted you, you were about to state something of the Bow-street officers advancing? — I think something had been said before the jury brought in their verdict. When there was an expectation that they were coming, something had been said about the Bow-street officers being there. There was a sort of noise or buzz in court; and somebody said, I do not know who, that the Bow-street officers were making a noise. In consequence of that it was, that I observed one of the officers, I think Rivett — it was either Fugion or Rivett; I am not quite sure that I recollect the person of one from the other —

You had seen them, and heard them give evidence? — I had, and I rather think it was Rivett, whom I observed standing at the corner of the bar; and they were desired to be quiet — not particularly the Bow-street officers, but the Court desired that everybody would be quiet; and they were quiet; and the jury then brought in their verdict. When the jury pronounced their verdict of Not Guilty upon Mr. O'Connor, some person, but whom I do not recollect, said, "Then they are discharged"; other persons sitting round the table said, "No, they are not discharged"; and at that time Mr. O'Connor, I think, had

raised his knee to the bar, as if to get over; whether he was pushed back, or pulled back, I do not know; but he was restored to his former position behind the bar. A question was put to the Court by somebody — whether by the prisoners or the counsel for the prisoners, or by-standers, I cannot tell — but some one said, “Are they not discharged, my lord?” or, “Have they not a right to be discharged?” or some such terms. Mr. Justice Buller, I think, said, “No, they are not to be discharged yet; put the other prisoners back, and let O’Coigly stand forward.” I do not pledge myself for the exact words, but certainly to that effect.

I will trouble you to repeat that, according to the best of your recollection? — “Put the other prisoners back, and let O’Coigly” (who was the convicted prisoner) “stand forward.” I should have told your lordship, that when it was asked, “whether they were not to be discharged?” before the riot, if I may so speak, began, one of the Bow-street officers, I think, got up upon the bench, or from I should rather say, and said, “No, my lord, I have a warrant against Mr. O’Connor”; whether he added, “for treason,” or “for high treason,” I do not recollect. It was immediately upon the officer’s saying that, that Mr. Justice Buller said, “They are not discharged”; I do not mean in answer to that; but he said, as a direction of the Court, “they are not discharged; put the others back, and let O’Coigly stand forward.”

I would ask you, whether that form, upon which the officer raised himself to address the Court, was near the place where, as you before described, the Bow-street officers were before the bar, and near lord Thanet? — Certainly. He set his foot upon the end of the form before which lord Thanet stood, with, certainly, I think, the interval of three or four persons.

Was that expression of the officer’s

addressed audibly to the Court? — Certainly; I heard it most distinctly, and, I think, every one must have heard it.

Did he produce a paper? — Yes; he said, “No, my lord, they are not to be discharged. I have a warrant against Mr. O’Connor”; and he certainly extended his hand with a paper in it.

After that direction which you have stated had been given by the Court, what then passed? — Mr. Justice Buller proceeded to pronounce sentence upon the prisoner O’Coigly. During the first part of the time that he was pronouncing sentence, my attention was particularly attracted to O’Coigly, the prisoner. I was looking at him, and attending to him.

The form of the sentence was introduced by a prefatory address? — Yes; during the former part of it, my attention was directed to him. Towards the conclusion of the sentence, I think just as Mr. Justice Buller came to that part of the sentence which pronounces the specific punishment, I observed lord Thanet and Mr. O’Brien standing in the same position as they had stood before, and I observed Mr. O’Brien turn round, and look up at Mr. O’Connor. . . . He looked up at Mr. O’Connor, and then looked down to the place before him, which cannot be so well expressed in words as by an imitation of the manner; he looked down with a very slight motion, certainly an inclination of his head. Lord Thanet was standing with his back against the bar, behind which Mr. O’Connor stood. I can describe it no other way, than standing square, as I do now. I did not see lord Thanet make use of any motion or gesture, at that time, certainly. The moment the last word of the sentence had been pronounced by Mr. Justice Buller, the instant he had finished, Mr. O’Connor raised himself upon the bar; he jumped with his left foot upon the bar; he put his left hand upon the shoulder

of Mr. O'Brien, and, I think, his right upon lord Thanet's shoulder, jumped over the bar between lord Thanet and Mr. O'Brien, passed Mr. O'Brien towards the door of the court, which was on that side next the small street of Maidstone —

That is, from the Bow-street officers? — Yes; then I lost sight of Mr. O'Connor. Whilst Mr. O'Connor was getting over the bar, which, though it takes some space to describe, was done almost in an instant, the Bow-street officers were pressing, endeavoring to get towards him, for the purpose of stopping him, I suppose.

That is, in the narrow pass between the back of the seat for the counsel for the prisoners, and the bench that was made for the accommodation of their solicitors? — Yes; lord Thanet certainly stood in the position in which I had observed him. There was a great noise, of course, took place at that time, at the moment when Mr. O'Connor was getting over the bar; and some people calling to stop him, there was a great noise certainly. Lord Thanet stood, in the way that I have described to your lordship, in the pass; the officers were endeavoring to press by him; and he stood till, I think, in a very short space of time, he held up his stick with both his hands over his head. There was then a great deal of confusion; persons got upon the table; and there was a press, in the narrow pass, of officers and persons from that side of the court, attempting to press towards the door to which O'Connor had rushed; and other persons, whom I cannot say, appearing to me to push the other way, as if to prevent them from passing. I saw sticks raised, and fists raised, by individuals; but who did so, I cannot speak to. There became then a general confusion in that part of the court, so that I lost sight of particular individuals; the candles were some of them thrown down; they were upon the table; and there was

a general riot and confusion, certainly, in that part of the court, and in most other parts of the court; at that time a great number of persons had got upon the table, and there was certainly a great deal of confusion. In a very short time, somebody called out, "O'Connor is stopped"; and he was brought back again to the bar. I should state to your lordship, that, just at the time that I lost sight of lord Thanet, and of the particular individuals, a person had got upon the table (which drew off my attention from what was going on at the bar), and had drawn a saber which was lying there.

That was part of the baggage of Mr. O'Connor, which had been produced upon the trial? — It was. He drew that saber, and placed himself between the judges and the part of the court where the confusion was, obviously to prevent any persons from advancing towards the judges — if I may use the phrase, to defend the judges. I did not at that time see the face of the person who had it; and, therefore, I had some apprehension it might be in the hands of some imprudent man, who might do mischief; if I had known who it was, I should have known that he had discretion enough not to misuse it.

It was Mr. Stafford, the witness, was it not? — Yes; I said to him, not seeing his face, "Don't strike!" When I saw who it was, I was satisfied. After the riot had ceased, a number of persons got upon the table towards the judges; some to ask questions upon the subject of the legality of this warrant; and others, whether the prisoners were not entitled to their discharge; and others, certainly, to allay the fervor that seemed to be at that time operating upon the minds of many persons who were in court; to restore order, in fact; I should, perhaps, use that phrase. The particular conversations and expressions that were used by any of those persons upon

the table, I cannot pledge myself to recollect.

I will take the liberty of asking you, — I believe you were at a distance from the learned judge, Mr. Justice Lawrence? — I was. Mr. Justice Heath and Mr. Justice Buller both sat between me and Mr. Justice Lawrence.

Therefore, I would ask you, whether you had an opportunity of hearing any particular conversation addressed to the learned judge who is now present? — No; I think I remember Mr. Sheridan speaking to Mr. Justice Buller, or Mr. Justice Heath, or both; and I remember lord Thanet being upon the table after Mr. O'Connor was brought back, apparently to me conversing with the learned judge, Mr. Justice Lawrence.

What he said, you did not hear? — I did not; for at that time there was a great deal of noise in the court.

Was it after that, that you observed Mr. Sheridan talking with the learned judge? — I think it was; the object of Mr. Sheridan seemed to be, to allay the tumult; and then he crossed the table, and conversed with the learned judges. . . .

Mr. Sergeant *Shepherd* cross-examined by Mr. *Erskine*.

I have very few questions indeed to put to you. You state, that when the verdict of Not Guilty had been pronounced, some persons, but whom you do not know, seemed to inquire, as if for information, whether the prisoners were to be discharged or not? — Not quite so; not to inquire; but some persons exclaimed, "Then they are discharged."

Who those persons were, you do not know? — I do not.

You say that you observed lord Thanet standing fronting the Court, as I am now fronting the Court? — Yes, certainly.

With his back to the prisoner? — Certainly so.

He was in that position when the jury came in with their verdict? — I think so.

You have observed that Mr. O'Brien looked round to Mr. O'Connor, and then looked down, as you have described it; did lord Thanet continue all that time in the same position? — The time when Mr. O'Brien looked round, was a very short time before Mr. O'Connor jumped over the bar; from that time, certainly, lord Thanet had continued in the same position, standing as I described.

While the learned judge was passing sentence of death upon O'Coigly, did lord Thanet still continue in the same position? — Certainly he did. . . .

You then describe, that upon the officers coming in, and pressing through this narrow place, the next that you saw of lord Thanet was, with a stick with both his hands up? — Yes; I did not mean that the officers came in then, but that they had come in some time before, having declared that they had a warrant; but, certainly, upon Mr. O'Connor jumping over the bar, the officers rushed forward to follow him; after they had made several pushes it was, that I saw lord Thanet in that position.

Did you ever observe any change in the position of lord Thanet, from the time you first saw him, till you saw him in the situation you have now described to the Court? — I did not observe any change.

But a stick over his head? — Yes; and, perhaps, I should say this — it seemed to be, when he held it in that way, that it was to defend his head.

The Rev. *William Hussey* sworn. —

Examined by Mr. *Adam*.

I believe you are a clergyman of the church of England? — I am.

Were you at Maidstone at the trial of Mr. O'Connor and Mr. O'Coigly? — I was.

Were you there at the time the jury were out, deliberating upon their verdict? — Part of the time.

Were you in court at the time they returned with their verdict? — I was. . . .

In what part of the court did you first see lord Thanet? — The first time, when he came to give his evidence; and the next time, at the table fronting the judges, and afterwards sitting under the bar at which the prisoners stood.

Upon a bench, with his back to the prisoners? — With his back to the prisoners.

Do you remember seeing the Bow-street officers there? — I saw a person who, I was informed afterwards, was a Bow-street officer. I did not know, at that period, that he was a Bow-street officer.

Do you recollect the jury delivering their verdict? — I do.

Can you state to my lord and the Court, anything that struck your attention upon the jury delivering their verdict of Not Guilty, with respect to Mr. O'Connor? — After the jury returned their verdict of Not Guilty, I observed Mr. O'Connor make a feint to get over the bar; he put up his foot, as if he would get over.

Did you observe anything more pass at that time? — I cannot speak expressly as to the direct period of time at which I saw the circumstance happen; whether it was at that period, or a future period, I must say that I cannot immediately recollect.

What was that circumstance? — That the earl of Thanet was in that situation which I before mentioned, sitting with his back towards the bar, nearly under the prisoners, or under the jailer; and as the person was pressing forward from that side of the court to get towards the prisoners —

Lord *Kenyon*. — What person? — I cannot say who the person was; I was informed afterwards he was a Bow-street officer; and, indeed, from the circumstance of his mentioning to the jury what was the matter — he said he had a warrant to apprehend Mr. O'Connor — I supposed him to be a peace officer.

Mr. *Adam*. — Then, as this per-

son, who held a paper in his hand, and pressed forward — ? — I saw no paper in his hand; *lord Thanet seemed to press himself against the bar with his body inclined somewhat towards that person, apparently with an intention to interrupt his progress towards the prisoner.*

In what situation was Mr. O'Connor at that time? — Mr. O'Connor, at that period, was standing at the bar.

Go on, and state what you saw after this. — Upon my word, from the confusion that was in the court, I do not recollect any particular circumstance that I can take upon me to speak to.

The Right Hon. *Charles Lord Romney* sworn. — Examined by Mr. *Wood*.

Was your lordship in court at the time of the trial of the prisoners at Maidstone? — Yes.

In what part of the court did your lordship sit? — Next to Mr. Justice Lawrence, upon the bench. . . .

After the riot began, what did your lordship observe? — When the riot first began, I looked very much towards the prisoner O'Connor, and saw him get over the bar, and go towards the narrow street. I looked at the other part of the court, where there were individuals forcing a passage through, which were the Bow-street officers; I saw them forcing their way, and blows were struck. I paid particular attention to Mr. O'Connor, and then, almost at the same moment, turned my eyes to a different part upon the table, where there was a sword brandishing about; I do not know whether it was drawn or not, for I could not see at that time; but I should imagine that it was drawn; upon which I thought things seemed to bear a very serious aspect, and I let myself down from the bench, where I was sitting, and crossed the table directly to where I saw the prisoner escaping from. I dipped my head under the broadsword that was brandishing about; I got immediately to the end

of the table, near that part of the court where the prisoner escaped from; and as soon as I got there, I immediately saw the prisoner O'Connor brought back to that part of the table by several javelin men and others. I then immediately said to the javelin men, "Form yourselves round the prisoner, and let no one approach you," or, "Let no one come round you," or words to that effect; "for he is not yet" (I meant to say, and imagine I did say) "discharged." I was told afterwards that I had said wrong; for I had said, he was not acquitted; upon which I answered, I might very possibly make use of the word *acquitted*; but, if I did, it was a mistake; I meant *discharged*.

Mr. *Garrow*. — Will your lordship mention who it was that said that? — I think it was Mr. Fergusson: he said, "My lord, you are mistaken; you said, 'He is not acquitted' — he is acquitted." I think it was Mr. Fergusson. I have no doubt myself, as Mr. Fergusson mentioned it, but that I did make use of the word *acquitted*, in the hurry; I have no doubt of it: it was not my intention to say, he was not acquitted, but that he was not discharged; I meant to make use of the word that I heard Mr. Justice Buller make use of from the bench.

Mr. *Wood*. — Does your lordship recollect whether the Court had said anything, before that, about his not being discharged? — Yes; and I meant to make use of the word *discharged*, because I had heard Mr. Justice Buller use the word *discharged*. . . .

Did your lordship notice any particular persons that were acting in the riot? — . . . I certainly could not say who it was in the passage that was struck by the Bow-street officers; for when I looked to that part, the confusion was very great, and the blows very frequent in that part.

Did your lordship hear any conversation between lord Thanet and

Mr. Justice Lawrence, after Mr. O'Connor was secured? — It is really a very considerable time since the riot; and, at the same time, as many different things were going on at that moment, I cannot positively swear; and, therefore, unless I was perfectly convinced, it can be of no consequence.

Lord *Kenyon*. — It is my duty, and I am bound to say, your lordship must recollect as well as you can. — If your lordship will give me leave to say, that at this distance of time, ten or eleven months, I really cannot swear whether I heard it at the time, or whether it was a conversation afterwards, that such and such things had passed; and, therefore, as I cannot answer positively, I must, for myself, beg leave to decline answering it. . . .

The Right Hon. *Charles Lord Romney* cross-examined by Mr. *Gibbs*.

You say, you intended to say that the prisoner had not been discharged; but you had been informed by some one, that you had said he was not acquitted; and then you corrected yourself, and said you meant to say, *discharged*? — I have no doubt but that, in directing my speech to somebody in the hurry of the business, I said he was not acquitted.

There was but one person who said that? — Mr. Fergusson said it repeatedly: and then I said, "I meant to have said, *discharged*; if I had said *acquitted*, it was a mistake"; and then Mr. Plumer came up, and I told him that Mr. Fergusson had said so.

Lord *Kenyon*. — There can be no occasion to go into all that conversation. . . .

Sir *John Mitford* (his Majesty's Solicitor-General) sworn. — Examined by Mr. *Fielding*.

Have the goodness to describe what was your particular situation in the court at Maidstone? — You mean after the jury had withdrawn, I suppose?

If you please. — I went up to Mr. Justice Buller and spoke to him; and then I placed myself immediately under him, opposite to Mr. O'Connor, upon whom I kept my eye fixed when the jury came into court and gave their verdict. *I observed Mr. O'Connor and Mr. Fergusson; I particularly fixed my eyes upon them. I observed Mr. Fergusson speaking to Mr. O'Connor, and Mr. O'Connor put his leg over the bar: I called out, "Stop him." Mr. Fergusson said, "He is discharged." I said, "He is not discharged." Mr. Fergusson then addressed Mr. O'Connor, and said, "You are discharged." I repeated, "He is not discharged," I believe more than once. I observed the jailer leaning over towards Mr. O'Connor, and I think he took hold of him.*

Mr. Garrow. — The other prisoners were between the jailer and Mr. O'Connor, were they? — Two of them were, and the other two behind Mr. Binns and Mr. O'Coigly; and then Mr. Allen and Mr. Leary were behind. Then Mr. O'Connor drew back his leg: there was then a disturbance immediately under Mr. O'Connor, and some person or persons pressing forward, and Mr. Fergusson made some complaint to the Court upon the subject; then Rivett, the officer, who appeared to be the person pressing forward, said —

Mr. Fielding. — When you say *pressing forward*, in what kind of direction was that pressure? — Towards Mr. O'Connor.

That was not forward towards the body of the court, but towards Mr. O'Connor? — It was towards the body of the court, in order to get to Mr. O'Connor, and place himself under Mr. O'Connor, as I conceived. Rivett said, he had got a warrant against Mr. O'Connor; and the gaoler also said something upon the same subject, but I do not recollect the particular words; and Mr. Justice Buller spoke to the officers, as I understood, to keep the

prisoners back, or some expression of that description, and then almost instantly began addressing Mr. O'Coigly.

Lord Kenyon. — With a view to pass the sentence? — With a view to pass the sentence. I recollect that this was almost instantaneous; because I was about to speak to the Court; and it was so sudden, that I thought it was indecent to interrupt Mr. Justice Buller, otherwise should have spoken to the Court.

Mr. Garrow. — Mr. Attorney-General had retired from the court? — He had retired from the court, and had desired me to speak to Mr. Justice Buller upon the subject, which I had done after Mr. Justice Buller had passed sentence upon Mr. O'Coigly. I fixed my eye particularly upon Mr. O'Connor, and *I observed Mr. Fergusson, and some other persons whom I did not know, encouraging Mr. O'Connor to go over the bar.* Mr. O'Connor appeared for a little while to hesitate, but it was only for a moment; he then sprung over the bar, and leaped into the lower part of the court, between the bar and the jury box, which was on the right hand of the judges. From that time I did not see Mr. O'Connor until he was brought back by the officers; for at the same instant that Mr. O'Connor jumped over the bar, three or four persons whom I did not know leaped over from the box opposite the jury box upon the table.

Mr. Garrow. — Was that box the box where the witnesses had been examined? — Where the witnesses had been examined, and where persons who attended the trial through curiosity had been. They went to the spot where the riot was, and jumped among the rioters: all the lights, except those before the judges, and the lights which hung in the middle of the court, in a kind of branch or chandelier; I do not recollect exactly what sort of a thing it was: it gave a considerable light — but all the other lights were extinguished.

Mr. Garrow. — The chandelier that hung over the prisoners? — In the middle of the court; there were, I think, three patent lamps in it; it gave a great deal of light. Mr. Fergusson, at the moment that Mr. O'Connor jumped over the bar, turned himself round, and appeared to me to follow Mr. O'Connor; but I cannot positively say that he did so, because the persons who rushed from the other side of the court, came between me and him; but I recollect that when they were passed I did not see him. I then attended to the prisoner O'Coigly, apprehensive that he might escape; and that attracted my attention in some degree from what was passing in the riot; he was perfectly tranquil, and I was convinced, from his behavior, that he did not mean to stir; and therefore my attention was drawn back again to the riot. Mr. Knapp's clerk, Mr. Stafford, jumped upon the table, and drew Mr. O'Connor's sword (a kind of broadsword, I think), which was lying upon the table; and he flourished it over the heads of the persons who were engaged in the riot below. I got up to speak to him, to desire him to put up the sword, which, after some time, he did; and soon after Mr. O'Connor was brought back. Mr. Stafford being between me and the rioters, prevented me from seeing what passed after the riot was over. I do not recollect anything material except lord Thanet; that is, a person whom I understood to be lord Thanet. I did not know lord Thanet's person; that is, I did not recollect him; I had seen him many years ago. *I saw a person whom I understood to be lord Thanet come across the table; and I saw him in conversation with Mr. Justice Lawrence; that conversation was a little warm, but I did not hear the particulars of it. When my lord Thanet left Mr. Justice Lawrence, and went across the table again, I heard him say, "I thought it was fair he should have a run for it."*

Was that addressed to the judge in parting from him and going across the table? — I think it was not addressed to the judge, but as he turned from the judge: *he said it rather in a tone of anger; I think it was in consequence of what had fallen from Mr. Justice Lawrence, which I did not exactly hear. I do not recollect anything else.*

Mr. Fielding. — *Will you have the goodness to explain what you meant by "encouraging Mr. O'Connor to get over the bar"? — It was not immediately encouragement, by any words that I could hear; but by action, as if he was encouraging him to come over the bar, and by insisting that he was discharged.*

Sir John Mitford cross-examined by Mr. Best.

While Mr. Fergusson was speaking to Mr. O'Connor, he was in his place at the bar? — He was.

There was a vast number of other persons at the same time speaking to Mr. O'Connor? — Yes.

I believe it was generally understood in the court at that time, that Mr. O'Connor would be acquitted? — I do not know whether they were congratulating him; it was after he was acquitted. . . .

Mr. Justice Heath sworn. — Examined by Mr. Attorney-General.

Your lordship, I believe, was one of the commissioners of Oyer and Terminer at Maidstone? — I was.

Did your lordship observe any riot that took place? — I did; and if you will give me leave, I will state all that I observed. I was applied to in the course of the day by a messenger from the secretary of state, who informed me that a warrant was issued for the apprehension of Mr. O'Connor, in case he should be acquitted, and desiring to know if the Court would permit him to execute that warrant if he should be acquitted; and we gave leave. After the verdict had been given, and, I believe, after sentence of death had passed, this messenger very unadvisedly went from that corner of the

box where the prisoners were confined, to that corner which was near the door, and said aloud, "My lord, may I now execute my warrant?" Presently after, I saw Mr. O'Connor thrust one leg over the box, and then draw it back again: afterwards, in the space of a minute, I saw him leap over the box. I could not see any person between him and the door at that moment. Immediately a great scuffle and a riot ensued, and a great deal of fighting, such as I never saw before in a court of justice; it appeared to me to be between the constables with their staves on one side, and those who favored the escape of O'Connor on the other. I know not from whence the favorers of Mr. O'Connor came; it being dark, I could not see exactly the number of the combatants; it was dark in that place where they were fighting; but from the exertion of the constables in plying their staves, it seemed to me that there must have been ten or twenty, I suppose, all fighting together. I saw a man with a naked saber, brandishing it over the heads of the combatants. One of the officers of the court, I believe, came up to me with a brace of pistols, which, I believe, belonged to Mr. O'Connor, and lay upon the counsel table, saying, "I have secured these at last." This combat, I suppose, might last five, six, or seven minutes; I cannot exactly say how long; *but in the course of it, I saw Mr. Fergusson standing upon the table, together with many others; he turned round towards the commissioners, and said, I believe particularly addressing himself to me, "My lords, the constables are the persons that are the rioters; they are the occasion of it," or words to that effect. Before I could give him an answer, he turned round again towards the combatants; it was impossible, from the noise, for him to hear anything I could say to him. My attention was chiefly turned from him to the more interesting scene of the fight; but I must do him the justice to*

say, that, in the very short time I saw him, which was not above a minute or so, I did not observe him say or do anything to encourage the riot. I thought myself in great danger, and that we were all so. I could not guess at the view of the rioters, how far it extended, or whether they had any and what arms; indeed we were more alarmed, because we had intelligence beforehand, that there was a very disaffected party in the town. — That is all I have to say. Charles Abbot, Esq., sworn. — Examined by Mr. Law.

Were you in court when the jury brought in their verdict? — I was.

Did you observe any motion made by Mr. O'Connor towards quitting the bar? — I do recollect that Mr. O'Connor made a motion with his body, as if he would leave the bar. *Mr. Fergusson, almost at the same instant said, "He is discharged." Mr. Solicitor-General then called across the table, "No, stop him; he is not discharged."* Just at the same instant, one of the officers, either Rivett or Fugion, but I cannot say which, got upon the form and pressed forward towards Mr. O'Connor, and at the same time said he had a warrant; there was then a little confusion for a short space of time, but not very long; the prisoners resumed their places, and Mr. Justice Buller proceeded to pass the sentence upon Mr. O'Coigly. During this time I had been sitting almost immediately under Mr. Justice Buller, very nearly so. At the very instant that Mr. Justice Buller had closed the sentence, I observed Mr. O'Connor leap over from the bar towards his left hand; a very great tumult and confusion immediately took place; and, shortly afterwards, I saw a person, whom I soon learned to be Mr. Stafford, draw a saber. and went to that corner of the table where the confusion was. Mr. Garrow cautioned him not to strike; and he did not appear to aim the saber at anybody, but merely to keep it moving over their heads. When

this second tumult began, I rose up and stood upon the form upon which I had been sitting; so that I was standing before Mr. Justice Buller and Mr. Justice Heath, with my back towards them. When the confusion began to abate, I turned round, and entered into some conversation with Mr. Justice Buller; and soon after this, while I was in that situation, I saw my lord Thanet standing on the table, nearly before Mr. Justice Lawrence, which was towards my right hand. *I heard Mr. Justice Lawrence speak to lord Thanet to this effect, "I think it would be an act of kindness in Mr. O'Connor's friends, to advise him to go quietly to the prison, lest some mischief should happen." I do not pretend to state the learned judge's words; but the substance, I believe, I am correct in. Lord Thanet then turned abruptly round towards his right hand, which brought his back towards me; and I did not distinctly hear the first words that he uttered, but the concluding words were either "to have a run for it," or "fair to have a run for it." I will not be quite certain of the word "fair"; but of the words "to have a run for it," I am quite certain. I have the more particular recollection of this, because, shortly afterwards, I observed Mr. Sheridan at the same part of the table, and heard Mr. Justice Lawrence speak to him to the same effect that he had before spoken to my lord Thanet. Mr. Sheridan answered with great civility, either that he had done so, or that he would do it: it was the different manner of Mr. Sheridan to that of my lord Thanet that made me recollect that. . . .*

Mr. Law. — Have you any doubt of the words spoken by lord Thanet, "to have a run for it"? — I have not.

John Rivett sworn. — Examined by Mr. Garrow.

Did you attend at Maidstone as a witness upon the trial of O'Connor and others? — I did.

Was any application made to you

by one of his majesty's messengers, to assist in apprehending Mr. O'Connor, if he should be acquitted by the jury? — Yes, there was.

Did you, in consequence of that, go into the court with a view to give that assistance? — Yes, I did.

Who went with you? — Fugion, my brother officer.

He was another officer of the police? — Yes, and the messenger; we all three went into the court together.

Is Fugion since dead? — He is. . . .

At which end of the bar were you? were you on the side the farthest from Mr. O'Connor, or the nearest? — Nearest to the jailer, which was the right-hand side of the bar.

While you were in this position had you any conversation with a gentleman you understood to be Mr. Thompson? — Yes.

State it to the Court. — The gentleman whom I understood to be Mr. Thompson, a member of parliament, asked me, "What I did there?" I made him little or no answer. He then said, "What business have you here?" or words to that effect; "have you got anything against Mr. O'Connor?" meaning, as I supposed, a warrant; I did not know what his meaning was. I replied, "No." I believe he asked Fugion likewise, to the best of my recollection. . . .

What then passed? — I then observed a gentleman, whom I knew to be Mr. O'Brien, at the farther end of the court: I observed Mr. O'Brien whispering something to Mr. O'Connor over the bar.

Describe particularly where Mr. O'Brien was placed during that time? — He was on the left-hand side of the bar, by Mr. O'Connor; I was on the right-hand side, and he on the left: a few minutes might elapse, when Mr. Thompson put up his finger to catch the eye of Mr. O'Brien, and beckoned to him; a few minutes might elapse, when Mr. O'Brien came to the same side where I stood.

Did Mr. Thompson still continue standing by you? — Yes, he did.

How long was this before the verdict was given? — While the jury were out, considering their verdict.

When Mr. O'Brien came to the place where you and Mr. Thompson were standing, what took place? — Mr. O'Brien and Mr. Thompson spoke to each other; but what they said I cannot tell. Mr. O'Brien then addressed me, and said, "Have you got a warrant against Mr. O'Connor?" I said, "No." Then he said, "Then Fugion has."

Do you mean that he made use of Fugion's name? — Yes; Fugion was present, and he answered immediately that he had not. He said, "Fugion, have you got the warrant?" He addressed himself to Fugion: Fugion said, "No." Then Mr. O'Brien said, "Then the messenger has."

Had Wagstaffe his badge as king's messenger on at that time? — I do not recollect.

Do you mean to say that he addressed himself to the messenger? — No; he said, "Then the messenger has." I then replied, "I can answer only for myself." Mr. O'Brien then said, "I will bet you three guineas," I think it was, to the best of my recollection, "that you have." Fugion said, "Done," I believe, or words to that effect. Mr. O'Brien then left the side of the court that I was on, and returned to the left-hand side where Mr. O'Connor was, and whispered something to Mr. O'Connor; but what I cannot tell.

What observation did you make at that time, with respect to any other persons in the court, as to any change of position? — It remained quiet till the jury were coming in: a number of gentlemen seated themselves directly before me in the place where I stood.

That was upon the bench made for the prisoners' attorneys? — Yes.

Many gentlemen seated themselves there? — Yes.

Did you know any of those persons? — Not that were sitting down before me; some time had elapsed, when there was some noise when the jury were coming into court, "Make way for the jury," or something to that effect. I then endeavored to get as nigh Mr. Watson, the jailer, as I possibly could. I went to step my foot up to get nigh the bar, and I was pulled down again by my leg; I turned round, and the person who pulled me down, I supposed, was Mr. Thompson.

Do you mean to say you know it was Mr. Thompson; or, from the situation he was in, that you apprehended it was Mr. Thompson? — Exactly so.

You do not aver the fact positively? — No; but when I turned round he was close to me.

And therefore you conclude he was the person that pulled you? — Yes. The jury then came in, and I endeavored to get up again as near the bar as I possibly could.

When you use the expression, that you endeavored to get up as near the bar as you could, was there anything that prevented you from getting there? — Only the gentlemen sitting there.

With what view was that? — With a view to assist in securing Mr. O'Connor if he should attempt to make his escape.

Upon your endeavoring to get as near the bar as you could, what happened? — The jury were in, and the Court called "Silence." The jury had given their verdict — Mr. O'Connor and the others, Not Guilty; and Mr. O'Coigly, Guilty; and then I got up nigh the bar. I observed something in Mr. O'Connor that struck me as if he meant to make his escape; at that moment there was some noise in the Court, and Mr. Fergusson says, "What business has that fellow there, making such a noise?"

Lord Kenyon. — *Whom was that addressed to? — It was addressed to the Court, I believe. Upon that I got up upon one of the benches, and ad-*

dressed the judge, and told him my reasons for being there. I told his lordship I had a warrant from the duke of Portland to arrest Mr. O'Connor; the judge replied, "I should have him," or words to that effect; and desired the jailer to take care of all the prisoners for the present.

Which of the judges was that? — Judge Buller; then the sentence was passed upon Mr. O'Coigly. As soon as the judge had so done, Mr. O'Connor immediately jumped out of the bar: there was then a very great confusion in Court; those gentlemen who had so placed themselves before me, stood up; I called out, "Shut the door, shut the door," several times.

After Mr. O'Connor had jumped over the bar, which way did he take? — He took to the left.

He took the direction going from you? — Yes.

That was as we have been describing, towards the narrow street? — Yes; I then endeavored to get forward, but was prevented by those gentlemen who had so placed themselves quite before me and Fugion, and the messenger.

Now describe particularly what passed which prevented you, with your assistants, from following Mr. O'Connor? — I was pulled down, or shoved down, twice or three times; but by whom, I am not able to say. I THEN JUMPED FORWARD AS WELL AS I WAS ABLE, AND WAS ENDEAVORING TO PURSUE MR. O'CONNOR; MR. FERGUSSON JUMPED UPON THE TABLE, AND WITH A STICK FLOURISHED IT IN THIS WAY, TO PREVENT MY GETTING FORWARD.

Flourished it over your head? — He flourished it with an intent, as, I presume, to stop me.

Was Mr. Fergusson in his professional dress? — Yes, he was. I THEN SPRUNG AT HIM, AND WRENCHED THE STICK OUT OF HIS HAND, AND HE RETURNED BACK TO HIS FORMER SITUATION.

He went from off the table, and returned to his place at the table? — Yes; otherwise I should have struck him with the stick which I had

wrenched from him, if he had not that moment got away.

Describe what more took place? — AS SOON AS I RECOVERED MYSELF, I WAS THEN KNOCKED DOWN BY SOME PERSON WHO DROVE AGAINST ME — NOT WITH A STICK; AND AS SOON AS I HAD RECOVERED MYSELF, I SAW THE PERSON WHO HAD SO SHOVED ME DOWN; I IMMEDIATELY STRUCK HIM WITH MY STICK: I REPEATED MY BLOWS THREE OR FOUR TIMES; THAT PERSON CALLED OUT, "DON'T STRIKE ME ANY MORE." I REPLIED, "I WILL; HOW DARE YOU STRIKE ME?" That person I so struck was, as I understood while I was in court, the earl of Thanet.

Are you quite certain that the person you struck and repeated your blows with a stick, was the person who shoved you down? — Yes.

And that person, whilst you continued in court, you understood was my lord Thanet? — Yes.

Should you know his person now? — I think I should.

Look round the court, in all parts of it, and see if you see his lordship here — is that the person you struck who sits next Mr. Gibbs? — I believe it is; I cannot positively say, because I have never seen the gentleman but once since that time.

From the appearance of his lordship, from his person and make, do you now believe him to be the person? — I cannot positively say.

Have you reason to believe that that gentleman is the person? — I have some reason to believe so, FROM HIS SIZE.

Did you afterwards, in the course of your continuance in court, see lord Thanet in any other part of the court? — He was pointed out to me immediately after.

Upon the spot? — Upon the spot.

I do not know whether you recollect how he was dressed? — No, I do not.

Who was the person that told you that the name or title of the person, with whom you had the contest, was lord Thanet? — Mr. O'Connor, after

being secured and brought back again into the bar.

Mr. O'Connor gave the title of lord Thanet to the person with whom you had had the contest? — Yes.

Lord Kenyon. — Was it a conversation addressed by Mr. O'Connor to you? — It was.

Mr. Garrow. — After you had given these blows to the person supposed to be lord Thanet, what passed? — I observed Mr. O'Connor was in custody — he had been secured by the doorway; I then assisted in getting him back to the bar. . . .

John Rivett cross-examined by Mr. Erskine.

You have stated to my lord and the jury, that, from something that passed, you expected Mr. O'Connor to attempt to make his escape? — Yes.

I take it for granted, that the apprehension that he wanted to make his escape, induced you to go forward? — Yes: I got as near the bar as I could.

It made you more desirous, with the other officers, to push forward quickly? — Surely so.

If you had had no reason to suppose Mr. O'Connor was endeavoring to escape, and that others had a disposition to assist him, I take it for granted you would have gone on more leisurely? — No doubt.

But the apprehension that you had, that you might be disappointed in the execution of your warrant, made you go on with considerable rapidity? — I went swifter than I should have done if I had not been molested, no doubt.

The line that you were going in at that time, was a place not very unlike where I am standing now, immediately before the prisoners? — Yes.

That is to say, a place like that I am now standing in, divided by something like this from the place where the counsel sat? — Just so.

You say that you jumped forward as well as you were able, and were endeavoring to pursue Mr. O'Connor,

when Mr. Fergusson jumped upon the table, and with a stick flourished in this way, to stop you? — Yes.

That was the first obstruction you met with? — No; I was pulled by the leg.

But, except that pulling by the leg, after you pursued your progress through the solicitors' box, the first interruption you met with was by Mr. Fergusson jumping upon the table? — No: I had been pushed down before that.

Had you struck anybody before that? — No.

Had you shoved or pushed anybody? — I cannot tell that; in the confusion I might.

You had not seen lord Thanet till after this had passed with Mr. Fergusson? — To my knowledge I had not.

Lord Thanet is a very strong, big man? — Yes, he is so.

Then you had not seen lord Thanet till after you had been with Mr. Fergusson, at this time upon the table? — No, I had not.

And you had shoved against several others? — I probably might, in the endeavor to get forward. . . .

After you saw Mr. O'Connor jump over the bar, and when you were apprehending that you might be disappointed in arresting him, you went forth with all the rapidity you could. Now, how came you to leave the course which directly led to him to go up to the table where Mr. Fergusson stood? — There had been a great many gentlemen in the corner, and I got a little farther to the right.

Towards the table where Mr. Fergusson was? — Yes.

He was standing upon the table, and you upon the ground? — No; upon the bench: I might be upon the ground sometimes; for I was up and down several times.

Mr. Fergusson was upon the table, flourishing a stick over you, in his wig and gown, and you forcibly wrenched it out of his hand? — Yes; and if he had not got away,

he would have recollected me another time.

Now you take upon you to say, that when this transaction took place, he returned to the table, and went to his seat? — He turned back, and went from me to the table.

Did he go towards Mr. O'Connor? — No; he turned towards the judges.

Then it was not until after this transaction had passed, when Mr. Fergusson had flourished his stick in this manner, and had gone away towards the judges, that you met with lord Thanet? — Just so.

What interval of time might there be between Mr. Fergusson's going away in the manner you describe, and your meeting with lord Thanet? — A very few minutes; a minute or two.

Where was it you met with lord Thanet? — A very little distance from me.

Was he in the counsel's seat, or where? — I do not know what you call the counsel's seat; he was upon the benches. As soon as I turned from Mr. Fergusson, I was immediately shoved down.

Was the person you took to be lord Thanet upon a bench by where the table stood? — I cannot say.

Had he a stick? — He had no stick, that I recollect.

Then, lord Thanet having no stick, what assault did he make upon you? — With his fist, in this way, shoved me down as I was going forward; he shoved me back.

And then you struck him? — Yes; as soon as I recovered myself, I struck him two or three blows.

With what? — The stick that I took from Mr. Fergusson.

My lord Thanet had no means of parrying that blow? — No; he did not attempt to strike me afterwards.

Where was he at the time you struck him two or three times? — When I hit him the first time, he fell upon his side, this way.

Did you strike him after that? — Yes.

Mr. Fergusson was gone away? — Yes.

Mr. Fergusson did nothing to endeavor to extricate lord Thanet from you? — No.

Did you strike anybody else but lord Thanet? — I do not know that I did; I might by accident.

If you struck anybody else, besides lord Thanet, it was by accident? — Yes.

Did you see either Fugion, Adams, or Wagstaffe, who were there, strike anybody? — No, I did not.

Mr. Garrow. — Do you remember seeing Fugion strike anybody? — No.

You said you were not before acquainted with the person of Mr. Thompson? — No.

Should you know him again now? — I should think that little gentleman is him.

Mr. Gibbs. — This gentleman? [*putting his finger on Mr. Thompson.*] — No; the next gentleman.

This gentleman? [*putting his finger on Mr. Bonney.*] — Yes; I think that is him.

Sir Edward Knatchbull, bart., sworn.

— Examined by Mr. Adam.

Were you at the trial of O'Coigly, O'Connor, and others, at Maidstone? — I was.

Were you present in court at the time the riot took place? — I was.

Will you state to my lord and the jury, whether you saw Rivett, the Bow-street officer, engaged with any person, and with whom? — Previous to the sentence being passed upon O'Coigly, I saw Rivett, the Bow-street officer, on the prisoner's right hand; he produced some paper, which I understood at the time to be a warrant from the duke of Portland, to secure the person of Mr. Arthur O'Connor; after that, there was some conversation passed between the judge and Rivett, which I do not immediately recollect. *I saw lord Thanet seat himself under the prisoners at the bar, immediately at the conclusion of the sentence being passed upon O'Coigly.* I saw Rivett, who appeared to me to be placed in a situation in order to prevent Mr.

him? — I came quite up to the end of the bar with him.

At that time, what was the number of the people standing about? — They were directly opposing the officers from coming, when I was at the corner of the bar with him.

Do you know the person of Mr. Fergusson? — I do not.

Did you see any person in a bar wig and gown? — Yes.

In what situation was he? — He was one of those who wanted to obstruct the officers from coming forward.

What did you observe him to do? — I saw them stand all of a body together, so that the officers could not pass to take him.

Do you remember any complaint being made to the judge, by any person, of having their head broke? — Yes; a gentleman said, "What recompense am I to have? I have got a broken head;" but I do not know who it was.

Was that the person that you spoke of with a black collar? — I cannot say.

Had he a bald head? — I cannot say.

Henry William Brooke sworn. — Examined by Mr. *Abbott*.

I believe you have some situation in the secretary of state's office? — Chief clerk in the alien department.

Were you at Maidstone at the trials? — Yes. . . .

Do you recollect what happened immediately after the jury had pronounced their verdict? — I recollect that Rivett, one of the Bow-street officers, attempted to get up on the side where the jailer sat.

Did he declare the purpose of his attempting to go that way? — To the best of my recollection, he said, he had a warrant from the secretary of state to arrest Mr. O'Connor.

Did you observe that any attempt was made to resist this person who was endeavoring to come forward? — I observed some persons endeavoring to pull him back. . . .

Did Mr. O'Connor do anything?

— Mr. O'Connor placed, as far as I recollect, his left hand upon the side of the bar where he stood, and leaped over.

Did you hear any voices crying out anything? — At that time the tumult became general: I heard some cry out, "Stop, stop;" and others, "Run, run."

Are you able to identify any person who was resisting Rivett? — I saw a person, to the best of my recollection, who was dressed in a gray coat and a black collar, and his head was bald on the top.

What did you see that person doing? — He seemed to have hold of the officer's coat.

Of Rivett's coat? — Yes.

Did you afterwards learn who that person was? — I afterwards understood that person to be a captain Browne.

Did that person, after the tumult was over, prefer any complaint to the Court that you recollect? — I cannot identify the person of the gentleman that endeavored to make a complaint to the Court of ill usage; but there was some gentleman upon the table, who complained, whether generally, or to the bench, I cannot say, "Am I to be ill-treated in this way?" or to that effect.

Was that the person with a bald head and black collar? — I cannot say.

Did you know Mr. Fergusson the counsel? — I have not the honor of Mr. Fergusson's acquaintance: but I had his person pointed out to me as being Mr. Fergusson.

Did you see him do anything? — He appeared to have SOMETHING in his hand; but whether it was a stick or a sword that lay upon the table, or what, I cannot say — but he was brandishing it over the heads of the people.

Was he in his professional dress at this time? — He was.

Henry William Brooke cross-examined by Mr. *Erskine*.

Where was Mr. Fergusson standing when you apprehend, rather than express, that you saw him brandish-

ing something which you do not describe, but which you think was a stick or a sword? — He was standing near the side of the court upon which Mr. O'Connor stood.

Upon the ground, upon the bench, or upon the table? — He appeared to me, as far as I can charge my recollection, to have been upon a bench; he appeared to be elevated from the ground.

This was after the sentence had been pronounced, and after Mr. O'Connor had gone out of the dock? — It was about that time, as far as I can recollect.

At the time of the confusion in court, was it not? — It was at the time of the confusion.

John Stafford called again. — Examined by *Mr. Law*.

I will not examine you to the preliminary circumstances which have been proved by several witnesses. Confine yourself now to the time that Mr. O'Connor was endeavoring to get over the bar. At that period of time, did you see any of the defendants, and particularly Mr. Fergusson or lord Thanet, do, or endeavor to do, anything? — At the instant that Mr. O'Connor leaped over the bar, I saw my lord Thanet and Mr. Fergusson: I had been paying particular attention to Mr. Justice Buller in passing sentence: and the moment that he was done, I turned my eyes round to the bar, and saw Mr. O'Connor in the act of getting over; he had his left hand upon the bar, and his right hand extended: my lord Thanet stood next to him, to the right of him; Mr. Fergusson, at that instant, was in front of him, with his back to me, facing Mr. O'Connor.

Mr. Erskine. — Where did you sit at this time? — Supposing this to be the court at Maidstone, I sat directly under the jury.

Mr. Law. — You sat so that you could observe the whole of the transaction? — Clearly; but the whole of the transaction was of that sudden nature, that I was rising part of

the time; I rose, and seized one of the sabers which lay upon the table, and which was a part of Mr. O'Connor's baggage.

Did you see lord Thanet or Mr. Fergusson do anything in aid of Mr. O'Connor in the act of escaping? — *When Mr. O'Connor extended his arm, he either laid it upon lord Thanet's shoulder, or Mr. Fergusson's arm; lord Thanet being between me and Mr. Fergusson, I could not distinguish on which of them he put his hand.*

Did you see any obstruction given by them to any persons in passing from one part of the court to the other? — I did not observe lord Thanet make any obstruction; Mr. Fergusson had his back turned to that side of the Court from whence the officers were endeavoring to approach to the bar.

With his back towards the great street of Maidstone? — Yes. At the instant I am now speaking of, I was upon the table.

Did you see anything in particular done by Mr. Fergusson? — Mr. Fergusson extended his arms in this manner, seemingly to me to keep the persons back who were forcing themselves forward. I saw no other act done by him.

Then did Mr. Fergusson appear to you to be putting himself in a position to stop the way? — Certainly so.

To stop the way for whom? — I said before, to stop the way of the persons who were approaching that side of the court where the officers were.

Were any persons at that time attempting to come from the side of the court where the officers were, to the side where Mr. O'Connor was? — Rivett and the Bow-street officers were. *I at this time stood upon the table with a drawn saber in my hand.*

Did you see anybody, before that, have hold of the flap of Mr. O'Connor's coat? — Yes; before Mr. O'Connor got from the bar, I observed that Mr. Watson the jailer had got hold of the tail of his coat.

Was it at the same period of time when you saw the officers rush forward, and Mr. Fergusson attempt to stop the way in the manner that you have described? — Yes; the whole transaction was of the shortest duration possible: *Mr. Fergusson forced himself between Mr. O'Connor and Mr. Watson the jailer*; Mr. Watson the jailer reached across; he sat on the other side from where Mr. O'Connor the prisoner sat; he reached across behind Binns, and seized the flap of O'Connor's coat, as he was getting over the table; the coat was extended for a small distance between O'Connor and the bar, and Mr. Fergusson forced himself in between the two, and Mr. Watson let go his hold.

Do I understand you, that by the action of Mr. Fergusson, the jailer was separated from his prisoner? — That I cannot say: the jailer might have let go his hold without the action of Mr. Fergusson; it appeared to me to be in consequence of the action of Mr. Fergusson.

Do you know the person of Mr. O'Brien? — No, I do not. . . .

You mentioned standing upon the table with this saber in your hand: did you strike anybody, or create any confusion? — I certainly struck no one; I menaced many that I saw, apparently to me, endeavoring to force Mr. O'Connor out; I brandished the saber, and cried out very loudly, "Keep back," and made motions as if I would strike; but I did not strike any one.

From the observations you were enabled to make, to what cause and to what efforts did you attribute the riot? — The riot must be attributed, most certainly, to Mr. O'Connor's attempt to escape, and the assistance that his friends gave him. I did not know of any warrant there was to apprehend him, till I heard Rivett call out in the manner I have described, before the sentence was passed.

Did you observe any other circumstances of actual assistance

given by the friends of Mr. O'Connor to his escape, besides those you have mentioned? — No; the transaction was so short, it was impossible to observe minutely.

John Stafford cross-examined by Mr. Erskine.

This scene of confusion you represent as almost instantaneous, and to have continued but a very short time? — Yes.

You were sitting as clerk to Mr. Knapp, under the jury box? — Yes.

And your face, of course, towards the great street of Maidstone? — Yes.

Now, after Mr. Justice Buller had pronounced sentence of death upon O'Coigly, did you see O'Connor jump out of the bar? — I did.

Where do you mean to represent that you saw Mr. Fergusson at that time? — *Mr. Fergusson did not attract my eye till I was upon the table*; seeing the act of O'Connor, I immediately sprung up.

You did not see Mr. Fergusson till the confusion had advanced? — It was just at the very instant; they all happened almost at the same time.

Mr. Fergusson did not attract your attention till you had got upon the table in consequence of that instantaneous confusion having begun? — I got upon the table in consequence of seeing Mr. O'Connor leap over.

Then, when your attention was first attracted to Mr. Fergusson, it was in the midst of the confusion? — Yes.

Several persons appeared to be pressing forward, and there seemed to be a scuffle? — Yes.

You observed lord Thanet very distinctly? — I had never seen lord Thanet before that day — I saw him give his evidence — I saw him afterwards, I think, sitting between Mr. Dallas and Mr. Fergusson; and I think I cannot err, when I say, I am sure it was lord Thanet.

Did you not see distinctly the

person you took to be lord Thanet? — Most distinctly.

How far was he from you? — I am sure, not more than two yards; for the space between the table and the bar is very small; and it was between the table and the bar that I saw lord Thanet.

Where the counsel sat? — Not in the seat where the counsel sat.

At this time you were upon the table, and saw Mr. Fergusson in the midst of the confusion: was he upon the table where you were, or in his place? — Neither upon the table, nor in his place.

Where then? — Immediately behind where he had formerly sat; he had sat in the front of O'Connor, and he had got just behind the seat where he had sat before.

You had a sword which you brandished for the purpose of keeping off any danger that might happen? — Yes.

Do you mean to represent that Mr. Fergusson was at that time in the solicitor's box? I do not know whether I can call it the solicitor's box or not; *he sat at the extremity of the seat wherein the solicitors sat* — he was certainly directly before me at the end of the trial.

At that time, was not Mr. Fergusson surrounded by a great number of people, who were pushing and shoving, and making a disturbance? — The persons behind him were certainly crowding upon him; but there was a small space before him that was vacant.

Was there not a pressing upon him every way? — No, not from the table.

Were there not persons in the place where the solicitor's box was, pushing and crowding at the time Mr. Fergusson extended his arms? — Certainly; but I saw him only pressed on the side that I describe.

Do you mean to swear that you saw Mr. Fergusson shift his place where he had been, and go nearer to Mr. O'Connor? — No, I did not see him shift it.

Mr. Garrow. — There was a low-backed seat for the counsel for the prisoners? — Yes.

Behind that was a space and bench for the solicitors? — Yes.

And if I understand you right, Mr. Fergusson appeared to you to be over that low back to the counsel's seat? — Yes, certainly so.

Between the back of the counsel's seat and the bar? — Yes; I had not immediately before this observed where Mr. Fergusson was.

The Honorable Robert Clifford sworn.

— Examined by Mr. Garrow.

I shall not trouble the Court to hear from you over again the detail of the circumstances. . . .

When the jury returned, and had given their verdict, what observations did you make respecting either lord Thanet, Mr. Fergusson, Mr. O'Brien, Mr. Thompson, or Mr. Browne? — When they had returned a verdict of Guilty against O'Coigly, I observed Mr. O'Connor put his left leg over the bar of the dock, I believe they call it, leaning upon his left hand; lord Thanet rose up, and Mr. O'Connor's hand was within this distance (six or seven inches) of lord Thanet's left shoulder — it was below his head: I did not see it touch his shoulder, because Mr. Fergusson rose up, and was exactly between lord Thanet and myself.

Mr. Erskine. — Where did you sit? — I sat as marshal under the jury box.

Mr. Garrow. — *Be so good as to describe that rising of Mr. Fergusson's? — They ran off all together — they followed Mr. O'Connor, as it appeared to me — I bent myself as far as I could to see, when so many people came jumping from the witness box, that I was almost overpowered.*

The witness box was opposite the jury box? — Yes; and they all went off to the left hand, behind the crier's box.

Lord Kenyon. — Do you mean that they all ran off together? — *Mr. Fergusson and the rest of them*

went off towards the narrow street of Maidstone.

Mr. Garrow. — There you lost sight of them, on account of the number of persons that came to intercept your view? — I was sitting here, and they all went there.

Did you see anything more of the conduct of lord Thanet? — I saw no more of them after that; I saw a gentleman, that was almost bald, come and complain that he had received a blow upon his head, and asked, "Whether there was no redress for the blow he had received?"

Did you learn afterwards that that was Mr. Gunter Browne? — I understood his name was Browne.

Did you see him favoring the escape of O'Connor? — No. . . .

William Cutbush sworn. — Examined by Mr. Garrow.

I believe you are a clock maker at Maidstone? — Yes.

Were you in court at Maidstone when sentence of death was passed upon a prisoner of the name of O'Coigly? — Yes, I was.

Upon that occasion, did you see Mr. O'Connor do anything? — Yes; I saw him get over the bar.

At that time did you see lord Thanet; and if you did, what did you see him do? — After that, I saw a man with a sword in his hand beating over a gentleman's head.

The Court have been sitting many hours, and have heard the general detail of the transaction; be so good as to answer my questions: did you see lord Thanet? — I did.

Did you see his lordship do anything, and what? — I saw Rivett strike lord Thanet over the back; I did not know it was Rivett at that time; I knew lord Thanet very well.

Where was lord Thanet at the time that Rivett struck him? — Two or three yards from Mr. O'Connor, or thereaway.

Was lord Thanet nearer to the great street of Maidstone, than he was to Mr. O'Connor, or to the nar-

row street? — They were all on the left side.

You were on the side on which Mr. O'Connor was endeavoring to get out? — Yes.

What was the first thing you saw? — I saw nothing till I saw the sword hit upon lord Thanet's back.

That was not Rivett? — Yes, it was; he hit lord Thanet upon the back with a sword; I did not know it was Rivett till afterwards.

Were any of the lights put out? — One.

Did you hear any expression about putting out the lights? — Yes; I heard some person say, "Put out the lights." . . .

Robert Parker sworn. — Examined by Mr. Garrow.

Were you in court at Maidstone when the jury returned into court with their verdict, in the case of O'Connor and others? — Yes.

Were you near the undersheriff? — I was very near; behind him.

Nearest the great street of Maidstone, and far from O'Connor? — Yes.

Did you see anything happen upon that verdict being brought in? — Upon the verdict being brought in he put his leg over the bar, feeling himself discharged, as he afterwards explained; a Bow-street officer then stepped up and said, "There was a warrant to detain him;" Mr. O'Connor then put his leg back again, and said, "He thought he was discharged," and one of the judges said, "He was not to be discharged," or something of that sort; and he was quiet till sentence was over.

Did you see lord Thanet? — Yes; I saw him on a seat at the front of the bar; I am perfectly sure I saw lord Thanet.

After sentence had passed did you see the Bow-street officers make any attempt to pass the bar where Mr. O'Connor stood? — Mr. O'Connor jumped over the bar, and then the Bow-street officers both advanced in order to stop Mr. O'Connor; the jailer called out, "My lord, am I to

let him go?" or something to that effect, and there was a contention; several persons were assisting Mr. O'Connor to get out at the opposite door, and the Bow-street officers were attempting to stop him.

Did you at that time see lord Thanet? — I did.

In what situation? and what was he doing? — Lord Thanet evidently appeared to me to be obstructing the officers in their attempt to stop Mr. O'Connor.

Did you see any other person engaged in the same attempt? — Not any one whose person I then knew.

Did you observe any person whose dress was remarkable? — I saw a gentleman in a bar gown and wig endeavoring to assist the escape of O'Connor; but at that time I did not know the person of the gentleman. . . .

Robert Parker cross-examined by Mr. Gibbs.

You say, lord Thanet appeared to you to be obstructing the officers; did you see him do anything? — I saw him resisting with his hands.

Pray when was this? before or after the sentence? — It began immediately after the sentence; it began upon Mr. O'Connor getting over the bar.

What did he do with his hands? — The Bow-street officers pushed forward; and against one of them it was that he was making resistance.

Pray which of them? — I cannot tell; I do not know which; I did not know either of them.

Did you see the warrant? — Yes; I saw it handed over to be read.

Can you tell whether it was against either of those two men, or against the messenger, that he was making that resistance? — I cannot.

But you saw him put his hand against one man that was coming forward? — Yes, certainly.

You said that you saw a gentleman in a bar gown that appeared to assist O'Connor? — Yes.

What did you see him do? — I

recollect that gentleman was ranged with the counsel for the prisoners; and then he turned round with his face to the bar, and was in that manner contending to resist their advancing towards the prisoner.

He was standing upon the ground and reaching over? — Yes.

Standing, as I may be standing now, supposing this to be the bar? — Yes; supposing you were turned round, it would be exactly so; he turned round towards the bar.

End of the Evidence for the Crown.

DEFENSE

The Honorable *Thomas Erskine*. — Gentlemen of the Jury: It now becomes my duty to address you. . . .

You have heard attentively the accusing testimony: AUDI ALTERAM PARTEM. . . .

We are here, therefore, upon a mere question of fact. You cannot but have observed, that the attorney-general and myself, instead of maintaining opposite doctrines, perfectly agree upon the principles which ought to govern your decision. The single object of inquiry is, the truth of this record. Is the charge proved to your satisfaction? or, rather, *will* it be so proved, when the *whole* cause has been heard.

In adverting to what the charge is, I need not have recourse to the abstract I had made of the information. The substance and common sense of it is this: that Mr. Arthur O'Connor had been brought, by legal process, into the custody of the sheriff of Kent; that a special commission had assembled at Maidstone, to try *him* and others for high treason; that, upon the opening of the commission, he had again been committed by the Court to the same custody; that he was afterwards again brought up to the bar, and found not guilty; and that, after he was so acquitted, but before

he was, in *strict form*, discharged by the order of the Court, the defendants conspired together, and attempted to rescue him. This is the essence of the charge. The disturbance of the Court, and the assaults stated in the different counts of the information, are only the overt acts charged to have been done, in pursuance of this purpose, to rescue the prisoner. The *criminal purpose* to rescue Mr. O'Connor is the fact, therefore, of which you must be convinced, to justify the verdict which the crown has called upon you to pronounce.

Before I proceed to address myself to you upon the evidence, . . . I will begin by relieving your attentions from the consideration of all circumstances that are neither disputed, nor fairly disputable, either as they are the result of what you have heard already, or as I think they must remain when the whole case is before you. I admit, then, that Mr. O'Connor, when he heard the verdict of the jury in his favor, was disposed to leave the court. The presumption, indeed, as it arises out of universal practice, as well as out of the law that warrants it, is, that he, as well as others, thought that the verdict of Not Guilty entitled him to do so. Neither can it be disputed that a warrant did in fact exist, and that its existence was known, since it appears that the officers stated in open court that they had one; and it is not material for me to dispute, nor is it, perhaps, disputable, that Mr. O'Connor knew of their intention to arrest him; and, if he did know it, human nature is stronger than all the evidence in the world, to convince every man of his disposition at least to escape from it. . . .

Having admitted these facts, I, in my turn, have a right to bring to your recollection, that it is an indisputable fact, resting upon the whole of the crown's evidence, that the officers, strongly impressed with

this idea, rushed suddenly and impetuously forward, on Mr. O'Connor's stepping over the bar when the verdict of Not Guilty was delivered; and indeed Rivett, upon his cross-examination, distinctly admitted, that, owing to the apprehension of a rescue, he rushed into court with more precipitation than under other circumstances he could have justified, and that a great bustle and confusion existed before he approached any of the defendants, or even saw their persons. This *admitted* origin of the disturbance removes all difficulties from the consideration of the cause; and Mr. Justice Heath declared, that there was a scene of confusion and violence in court, such as he had never seen, nor could possibly have expected to see, in a court of justice. The single question, therefore, is, *What share the defendants had in it?* Did the disturbance arise from any original acts of theirs? or were they, on the contrary, first pressed upon by the officers and their assistants, who, though they might be engaged in what they mistakenly supposed to be their duty, from an expectation of resistance, necessarily created confusion by their forcible entry into a crowded court? Were the defendants engaged in any conspiracy or combination to deliver Mr. O'Connor? That is the great, or rather the only question; because, if this does not appear from the evidence, all their acts, even if they were ultimately to remain as they appear at present, are perfectly consistent with the conduct of gentlemen suddenly and rudely trampled upon in a tumult, though without, perhaps, being the particular objects of violence by those who created it.

The natural course of considering which of these propositions ought to be adopted by reasonable men, is, to set out with tracing a motive. There can be no offense without some corresponding inducement to commit it. . . .

Now, I have always understood

it to be the great office of a court of justice, when evidence is to be opposed to evidence, to consider the probabilities of the transaction: indeed, a judicial decision is nothing else but the bringing up facts to the standard of reason and experience. I have already described the situations of the only two defendants whose cases you can have occasion to consider; the one, as a high peer and magistrate of the kingdom, with the natural consciousness of the duties inseparable from exalted stations; the other, standing in a manner for his very existence upon the dignity and decency of his deportment in the courts, which habit, as well as principle, had taught him to reverence and respect. . . . Under these circumstances, you are asked to believe that lord Thanet and Mr. Fergusson — . . . *without any motive upon earth brought home to them by any part of the evidence*, engaged publicly in a scene of audacious riot and violence, in the public face of the most dignified court; in the presence of all its numerous officers; of an acute and intelligent bar; of the sheriff and all his train; of a jury composed of the principal gentlemen of the county, and of all that concourse of attendants. . . .

Gentlemen, the mind of man cannot avoid collecting and accumulating these absurdities; but they are too important to be thus run over; they must be viewed separately, to have their proper effect.

First, then, let us search for a motive strong enough to impel honorable men to encounter such desperate difficulties, in the pursuit of a dishonorable, useless, and impracticable purpose. . . .

It seems, they were not indifferent to the deliverance of Mr. O'Connor; for, upon his acquittal, they hastened to the bar, and congratulated him on the verdict! They certainly did so, in common with many others; and although the impulse of personal kindness which directed them was honorable,

it may be set down, not so much to the individuals, as to the characteristic benevolence of Englishmen. . . . Long, long, may this remain the characteristic feature of our country! When Mr. O'Connor, therefore, was pronounced not guilty, was it any proof of a conspiracy to rescue him from other charges, that he was congratulated on his deliverance, which he was not only entitled to by the verdict of the jury, but which the evidence on the trial, and the judge's remarks on it, had previously and distinctly anticipated? The question, therefore, again recurs — Were the defendants the active authors of the rescue, for the purpose charged in the indictment? The MOTIVE is gone already. . . .

The next consideration, in weighing the probabilities, is, how this purpose, supposing it still to exist, without any corresponding interest, was possibly to be accomplished? — for men cannot be presumed to engage in the most perilous enterprises, not only without inducement, but without even a shadow of hope or prospect that their object is practicable. . . . Mr. O'Connor stood at the bar where my learned friends now sit, surrounded by hundreds of persons not attempted to be implicated in any design to favor his escape; on the right, and on the left, and behind, were the public streets of Maidstone, from whence no passage without observation was to be expected; and before they could even be approached, an outlet must first have been made through groves of javelins in the hands of those numerous officers which the exemplary attention of the sheriffs of Kent has always provided for the security and dignity of the Court. It was, therefore, not merely improbable, but *naturally impossible*, to deliver, or even hope to deliver, a prisoner from the public bar of such a court, in the view of all its judges, its counsel, and attendants, without the support of great force and numbers. and with-

out, likewise, a previous concert and combination to direct them with effect. . . .

Gentlemen, the next question upon the score of probability is this: supposing that, contrary to everything either proved or asserted, the defendants *had* felt an interest in the escape of Mr. O'Connor, and *had* conceived it to be *practicable*, could they possibly have hoped to escape detection — more especially lord Thanet and Mr. Fergusson, whose persons were so notorious — the one, from his high rank and residence in the county whose principal inhabitants surrounded him; and the other, from being in his professional dress, in the place assigned to him as counsel on the trial, and, in the very midst of his companions, engaged in the business of the Court? . . .

The next recourse to probability, if your judgments, as in all other cases, are to be governed by reason and experience, is, if possible, still more unanswerable and decisive.

Supposing the defendants, *without interest or motive, and without the possibility of success, and without even a chance of escaping from detection and punishment*, to have, nevertheless, publicly insulted and disturbed the Court by acts of disorder and violence, WHO MUST HAVE BEEN THE WITNESSES TO SUCH A SCENE? . . . The proof of this fact, to which the whole Court must have been, as it were, but one eye, and an eye of indignation, is not supported by any one person, either upon the bench, or at the bar, or amongst the numerous officers of the Court. On the contrary, we shall see, by and by, the difference between the testimony of a reverend judge of England, and that of a Bow-street officer, when I come to advert to the evidence of Mr. Justice Heath, which is directly and positively inconsistent with Rivett's, on whose single and unsupported testimony this extravagant and incredible part of the case is alone supported.

But, it seems, they have given judgment against themselves, by their demeanor and expressions upon the occasion. Lord Thanet, it seems, said to Mr. Justice Lawrence, as Mr. Abbott expressed it, who did not hear what the learned judge had said, to which lord Thanet's words were an answer, "that it was fair he should have a run for it;" — words which cannot be tortured into any other meaning, more especially when addressed to one of the judges of the Court, than that, speaking in extenuation of Mr. O'Connor's conduct, who had visibly made an effort to escape, he thought it fair that a person so circumstanced should have a run for it, if he could; a sentiment which, by the by, no man in his senses would have uttered, more especially in such a quarter, if he had felt himself at all implicated in a criminal endeavor to assist him; . . . it was *after* the riot (as it indeed must have been), that Mr. Justice Lawrence conversed with lord Thanet, saying to him, amongst other things, "that he hoped Mr. O'Connor's friends would advise him to submit to his situation." Now I may safely assert, that, high as lord Thanet's rank is, that learned judge would not have spoken to him as a person from whom he solicited and expected assistance, if he had himself observed him, or if he had known him to have been observed by others, disturbing the order of the Court. . . . Mr. Justice Lawrence was one of the youngest of the learned judges who presided at the trial, with stronger health than belonged to all of them, which enabled him to keep up his attention, and to observe with acuteness; he was, besides, deeply interested in whatever concerned the honor of the Court; and the elevation of the bench on which he sat gave him a full view of every person within it. Indeed, lord Thanet, at the time this misdemeanor is imputed to him, was directly before him, and under him,

and not farther from him than lord Kenyon at this moment is from me. . . . If *he to whom the discourse was addressed*, and who was the best judge of the fair construction to be put upon it, had considered it in the light it has been represented and relied on, he might have been called as a witness. . . .

Gentlemen, let us now pause a little, to consider the effect which I feel myself entitled to derive from these observations. — I consider myself to have advanced no farther in the argument than this —

First, That there was no assigned nor assignable motive for the criminal purpose charged by the indictment.

Secondly, That it was a purpose palpably impracticable, and which, therefore, no reasonable men could possibly have engaged in with any prospect of success.

Thirdly, That whatever might have been the probable issue of such an enterprise, detection and punishment were certain.

Fourthly, That admitting the evidence you have heard to be free from all errors, the defendants did not conduct themselves like men engaged in such a pursuit, nor appear to have been supported in a manner reasonably, or even possibly, consistent with the alleged conspiracy.

Fifthly, That, although the witnesses against them, if the transaction had been justly represented, must, probably, have been the greater part of the Court, and certainly all that part of it elevated both by situation and authority above the rest; yet that there has been not only no such concurrence of testimony against the defendants, but, on the contrary, the most correct and respectable witnesses have concurred in destroying the remainder of the proof.

Sixthly, That the expressions imputed to lord Thanet cannot possibly affect him, without supposing that he publicly gave evidence

against himself, even to one of the judges, who, upon the evidence of his own senses, had authority to have punished him upon the spot.

Lastly, That it appears, by the whole body of the proof, that the confusion arose when the officers burst with improper and indecent precipitation into court; that it began and ended almost in the same breath; and that, during the short moment of its continuance, there was such a scene of tumult and confusion as to render it impossible for the most attentive observer to give any clear and distinct accounts of the transaction.

If these conclusions, gentlemen, be the unavoidable result of the crown's evidence when brought to the common standard of man's reason and experience, it appears to me, that you are bound to return a verdict for all the defendants, even if I should call no witnesses. . . . This proposition, however, cannot be supported by general observations, nor by that general appeal to the proof which I have been engaged in; it must be examined accurately in the detail. . . .

The first witness examined for the crown is Mr. Sergeant Shepherd, who was joined with the judges in the special commission. This examination is highly important in every part of it; because, when it becomes necessary to compare the evidence of different witnesses in order to arrive at a safe conclusion from the whole, nothing can be so satisfactory as to find some person on whose testimony the judgment may repose with safety. My learned friend (as all who knew him must have anticipated) delivered his evidence with the greatest clearness and precision, and in a manner most dispassionate. . . .

Mr. Sergeant Shepherd says, "*Lord Thanet was standing before the bar at which the prisoners stood, with his face turned towards the Court; he was rather to the right hand of Mr. O'Connor, nearest to the great street*

of Maidstone where the jailer sat." Speaking of Mr. O'Brien, he said, that "he stood in the same line, but rather to the left of Mr. O'Connor, that something had been before said by the Bow-street officers, who were making a noise, and had been desired to be quiet. When the verdict of not guilty was delivered, some persons (but whom I know not) said, 'Then they are discharged;' and somebody at the table replied, 'No they are not discharged.'" . . . "At this time," continued the learned sergeant, "Mr. Justice Buller said to the jailer, 'Put the other prisoners back, and let O'Coigly stand forward;' when one of the Bow-street officers stood up on a form, and said he had a warrant against Mr. O'Connor." This, you observe, was the first time there was any mention of a warrant in court. . . . Whilst Mr. Justice Buller was passing sentence, my attention," continued Mr. Sergeant Shepherd, "was directed to O'Coigly; and when he had finished, I observed Mr. O'Brien turn round, and LOOK at Mr. O'Connor and immediately afterwards LOOK DOWN with a very slight motion and inclination of his head." . . . This fact, therefore, delivered with the restraint which the integrity and understanding of the witness so properly suggested, affords no evidence whatever of evil design in Mr. O'Brien, much less of concert or combination with the other defendants. . . . It is, indeed, strongly in Mr. O'Brien's favor, that at the moment he looked down as described by the witness he could not be acting in concert with lord Thanet; for sergeant Shepherd saw lord Thanet at the very same moment, and swore that he was standing with his face to the Court, and that he never changed this position. The sergeant added that "when the last word of the sentence was pronounced, Mr. O'Connor jumped with his left foot upon the bar, and his left hand upon the shoulder of Mr. O'Brien," but who does not appear to have held out his hand to assist him. Mr. O'Brien,

on the contrary, though he could not have but continued in view for some time longer, is charged with no one act whatsoever; and it would be strange indeed, to convict a gentleman of a rescue, because, standing near a prisoner meditating an escape, he had laid his hand upon his shoulder. . . .

The remainder of sergeant Shepherd's evidence, as it applies to lord Thanet, is so absolutely decisive, that you will be driven to pronounce by your verdict, whether you give credit to this most respectable and observing witness, or to a Bow-street officer, who was himself the author of the confusion; for the sergeant added, that "when Mr. O'Connor had jumped over the bar, and he had lost sight of him, the officers rushed into Court to arrest him, and a great noise ensued; and AT THIS TIME" (GENTLEMEN, THE TIME IS MOST MATERIAL AND CRITICAL, BECAUSE IT CAN APPLY TO NO OTHER THAN THE PRECISE TIME SWORN TO BY RIVETT), "I saw lord Thanet," said the sergeant, "standing as I have described him, with both his hands over his head," — which he also described to you by putting himself in the same defensive posture, as far more expressive of his situation than any words could communicate. This, I say, is the single point of time to be looked at; for the remainder of the sergeant's original evidence, applying to a subsequent period, described a scene of great confusion, in which he said he could discover nothing distinctly; that many persons were upon the table, some asking questions, and others endeavoring to restore order. It is not therefore, at this period that you are to look, since no part of the evidence at all applies to it: but at the moment when lord Thanet is alone affected by Rivett's evidence, the sergeant's testimony has a direct and decisive application; for, upon his cross-examination, he said in so many words. "I never saw lord Thanet look round, or change his posi-

tion as I have before described it, till the very instant the officers rushed into court; and THEN I saw him with his stick held as I before described it; but I am BOUND to say, that he appeared to me to be acting on the DEFENSIVE WHOLLY." This concluding evidence is an exculpation of lord Thanet, and must have been so intended. I did not even put the question to the witness; he himself conscientiously added, that he was BOUND (bound, of course, in justice to lord Thanet, who was accused of *active violence*) to say, that he appeared to be only acting IN HIS OWN DEFENSE. . . .

Mr. Sergeant Shepherd was properly selected as the first witness for the Crown. He sat, from his station as judge, in an elevated position, where he had a better opportunity of observing than others; and he accordingly appears to have observed everything which passed; yet, instead of fastening guilt on lord Thanet, he sees him from the time the jury returned into court, standing in one position; not looking round as if he was watching the motions of Mr. O'Connor, or engaged with others in attending to them; not even looking towards the side of the court from whence the arrest was to proceed, but upwards to the judges; not opposing his body as an obstacle in a narrow passage through which the officers were to pass: not presenting a front to them which a man of his strength, with the intentions imputed to him, must naturally have been expected to do; but standing as any other person attentive to the trial, till the officers, apprehending a rescue, rushed with violence into court, and pressed upon and assaulted him; for, had he not been pressed upon and assaulted, he could not have been seen by sergeant Shepherd in a posture of defense: and if he were first active in obstructing and assaulting Rivett, in the manner which he, and he only, has sworn to, why should not sergeant Shepherd have seen it? since his eye was

so constantly fixed upon lord Thanet, from the time the jury returned with their verdict till the confusion became general, which is subsequent to the period of Rivett's evidence, as to enable him to tell you that he did not shift his position, nor make a gesture or motion, till the officers and others rushed in upon him; and *then, i.e.* immediately at the same moment to which alone the evidence has any application, he sees lord Thanet with a stick over his head, which he thinks himself BOUND to express and even to *describe* to you as a passive posture of defense. This evidence, which so completely exculpates lord Thanet, is not less applicable to Mr. Fergusson, for, if he who is placed by all the witnesses as standing close by him, had been an active conspirator, armed with a stick, which he was flourishing over the heads of the officers, can you possibly suppose that he would have withheld his assistance from lord Thanet who was visibly overpowered, or that a man of lord Thanet's strength, though assisted by Mr. Fergusson, who is above six feet high, and a young man of great activity and strength, should be perfectly passive under the blows of Rivett, endeavoring only to save his person from violence, without retaliation, or even a motion to the accomplishment of his object?

The evidence of Rivett is farther exposed, by his having denied that lord Thanet had a stick — a fact established beyond all question; and by his swearing that he took the stick from Mr. Fergusson, and struck him with it; when it will appear by and by, that he took it from behind his own coat when he assaulted lord Thanet. This last fact, however, I ought to have passed over at present, because it arises out of my own evidence, which I do not wish at all to mix with my observations on the case of the crown.

Gentlemen, the other judges, with the exception of Mr. Justice Heath (whose testimony will also support

the innocence of the defendants), have not been examined, though their positions in court were so highly favorable; neither has the bar been examined, who, if lord Thanet had been in the situation which some of the witnesses have described, must have all seen it to a man; and their not having been called, affords a strong inference that their evidence would not have been favorable.

Mr. Hussey, who was next examined, said, "*I saw Mr. O'Connor attempt to get over the bar*" (a fact never disputed); "*and at that time lord Thanet was standing with his back to the prisoners. I saw somebody pressing forward, who said he had a warrant; but I saw no paper. Lord Thanet SEEMED to press himself towards the bar, and SEEMED TO BE DESIROUS to interrupt his progress.*" I dare say, the Rev. Mr. Hussey meant to tell you what he saw; but he has expressed nothing. What can be collected from such expressions? Can you convict any man upon evidence which imputes *no act*, but only a *seeming desirousness*? Lord Thanet SEEMED to press himself towards the bar, and *seemed* to be desirous of interrupting the officer's progress. Did the witness SEE him do the one or the other? If he had, he would of course have so expressed it; and if lord Thanet had actually done so, why should not Mr. Sergeant Shepherd have equally seen it, who observed him accurately *at the very same moment*? . . . The whole of Mr. Hussey's evidence, therefore, amounts only to this — that lord Thanet SEEMED to press forward, and that too, *at the very same moment* when Mr. Sergeant Shepherd described him as unmoved and motionless, with his back to the prisoner, and his face, of course, towards the Court. . . .

Lord Romney is the next witness, whose evidence was just what might have been expected from a person in his situation — highly interested in the honor of the county where

he has great hereditary estates and honors. . . . He was placed, besides, in that part of the court where he was entitled by his rank to sit, from whence he had an opportunity of observing what was transacting. Thus circumstanced, he says, "*I saw the Bow-street officers FORCING a passage, AND STRIKING BLOWS: — whom they struck I do not know; there was a sword brandishing on the table. Thinking things bore a serious aspect, I crossed the table, and saw the prisoner escaping; he was brought back by the javelin men. I said to them, 'Form yourselves round the prisoner, for he is not yet discharged.' I was told afterwards I had said, 'he was not acquitted.'*" I believe Mr. Fergusson said so: *I have no doubt I made the mistake.*" — Gentlemen, undoubtedly lord Romney meant only to say, that Mr. O'Connor was not *discharged*; though the answer was not made to him by Mr. Fergusson; for I shall call the gentleman himself who answered him; not that it is in the least material, except that it proves that Mr. Fergusson was noticed at that time by lord Romney; and surely, gentlemen, if he had been acting like the fool and madman, and, I will add, like the knave he has been represented to you; if, in his professional dress, he had been publicly flourishing a stick upon the table, lord Romney, who was close by him, must inevitably have observed him; yet his lordship does not speak of him as out of his place, or as engaged in any act of disorder or violence.

Another most important fact is established by lord Romney's evidence; for, though his lordship said that he should have been so much hurt if the county had been disgraced, that his attention was not directed to individuals, and that in the confusion he could not tell who had been struck in the *passage* by the officers, yet he added, that *VERY MANY blows were struck, and MANY persons hurt*; yet Rivett says, that Fugion struck no blows; that

Adams struck no blows; that the messenger struck none; nor he himself any but those which were struck at lord Thanet. Rivett, therefore, according to his own account, was the only person engaged, and successfully engaged, against the rioters; yet you are desired to believe, that a large combination of strong and active conspirators were favoring an escape by violence. This is quite impossible; and the blows, therefore, which were observed by lord Romney, were the blows which the *officers themselves* wantonly inflicted; since it will appear hereafter, by witnesses whom the Court cannot but respect, and whose evidence cannot be reasonably rejected, that they rushed in like madmen, striking with violence the most harmless and inoffensive persons, which compelled others to put themselves into that passive posture of defense, that lord Thanet has been so frequently and so distinctly described in. . . .

Gentlemen, I will now state to you the solicitor-general's evidence. He says, "*I kept my eye fixed on Mr. O'Connor. When the jury gave their verdict, I observed him and Mr. Fergusson; I particularly fixed my eyes upon them. I observed Mr. Fergusson speaking to Mr. O'Connor, and Mr. O'Connor put his leg over the bar: I called out, 'Stop him!' Mr. Fergusson said, 'He is discharged.' I answered, 'He is not discharged.' Mr. Fergusson then said to Mr. O'Connor, 'You ARE discharged.' I repeated, 'He is not discharged.' I observed the jailer lean over, and lay hold of Mr. O'Connor; some person was at this time pressing forward, and Mr. Fergusson complained to the Court. The officer was pressing into court, in order to get round to Mr. O'Connor.*"—Now, gentlemen, it is fit just to pause here a little, to consider this part of the evidence. The time filled by it is not above two or three minutes; for it is only the interval occupied by the sentence upon O'Coigly; and if a combination had existed between lord Thanet

and Mr. Fergusson, and other persons in the secret, is it probable that Mr. Fergusson would have made himself the conspicuous figure which I am supposing the evidence truly to represent him to have done? His conduct, besides, appears quite different from Rivett's account of it. Did he enter into private resistance or altercation? No; he made a regular and public motion to the Court; the judge yielded to the suggestion; the officers were directed to stand back for the present, and then the sentence was pronounced. This is not the natural deportment of a person engaged in a conspiracy. . . . The solicitor-general farther said, "*Rivett, the officer, said he had a warrant against Mr. O'Connor. Mr. Justice Buller spoke to the officers, commanded silence, and proceeded to pass sentence. When the sentence was finished, I observed Mr. Fergusson, and some other persons whom I did not know, ENCOURAGING Mr. O'Connor to go over the bar.*"—Here we must pause again.—Mr. Gibbs asked the witness, upon his cross-examination, "*Did you hear him say anything? Did you see him do anything?*"—The solicitor-general proved no one thing which Mr. Fergusson said or did. . . . By these observations I am not impeaching the evidence of the solicitor-general; I am commenting as a lawyer upon the result of it; and I do say, as a lawyer, that it is giving no evidence at all, to swear that a man encouraged, or appeared to be encouraging, without stating the facts on which that impression of his mind was founded. Mr. Solicitor-General went on to say, "*I did not see Mr. O'Connor till he was brought back by the officers; for at the instant that Mr. O'Connor jumped over the bar, three or four persons leaped from the witnesses' box upon the table, and mixed among the rioters; all the lights, except those before the judges, and the chandeliers, were extinguished. Mr. Fergusson, at the moment Mr. O'Connor jumped over the bar, turned round,*

and APPEARED to follow Mr. O'Connor; BUT I WILL NOT POSITIVELY SWEAR IT." I am very glad, gentlemen, that he did not; because it would have been unpleasant to swear that positively, which will be positively contradicted; by those, too, who are of as good faith, and who had as good an opportunity of observing. It is a mere misapprehension; and I would say to the solicitor-general, if I were to see him at his own table, or at mine, *that he is mistaken.* Indeed, in a scene of confusion, no man can tell what he sees with any certainty or precision, and images are frequently confounded in the memory. — The solicitor-general then said, *that Mr. Stafford jumped upon the table, and drew a sword;* and, speaking of lord Thanet, he said, *he went across the table, and that he saw him in conversation with Mr. Justice Lawrence,* the particulars of which he did not hear; *but that, when he went across the table again, he said he thought it fair he should have a run for it: he said it rather in a tone of anger, in consequence of what had fallen from Mr. Justice Lawrence.* Gentlemen, this last part of the evidence applies to a point of time when the disturbance was at an end: . . . you cannot therefore believe, that, under such circumstances, when lord Thanet could not but know that high offense had been given to the justice of the county, he should come voluntarily forward, in the hearing of the king's judges, and confess himself to be an accomplice in a high misdemeanor. These observations are not made to induce you to believe, that lord Thanet's expressions have been misrepresented to you; but to convince you, that the making them at the time, and to the persons to whom they were made, arose from a consciousness that he had no share in assisting Mr. O'Connor. . . . The right of Mr. O'Connor to deliver himself from such a warrant, if he could escape before it was executed on his person, was an opinion which

lord Thanet might correctly or incorrectly entertain; but to enhance the confession of such an opinion into an admission of the crime *in himself*, is contrary to every human principle and feeling, and, therefore, not a reasonable conclusion of human judgment. — Gentlemen, these are my observations upon the evidence of the solicitor-general, as it affects lord Thanet; and, as it applies to Mr. Fergusson, it is very important: for if Mr. Fergusson had been flourishing a stick in the manner which has been falsely sworn against him, what should have induced the solicitor-general to say, only in general terms, that he saw him *encouraging?* Will any of my learned friends maintain, that if the solicitor-general could have proved, in terms, that Mr. Fergusson had a stick in his hand, till it was wrested from him by the officers in repelling violence by violence, that he would not have *distinctly stated it?*

Gentlemen, Mr. Justice Heath was next examined; and there is no part of the proof more important, particularly as it affects Mr. Fergusson, than the evidence of that very learned, and, I must add, that truly honorable witness, who was one of the judges in the commission, and presiding at the trial. He said, that "*a messenger from the secretary of state had applied to the Court for liberty to execute a warrant upon Mr. O'Connor: that permission had been accordingly granted.*" So that Mr. O'Connor was not to be ultimately liberated, but was to remain amenable to the process in the hands of the officers: that, "*after the verdict had been given, and the sentence pronounced, the messenger, VERY UNADVISEDLY, went to the corner most removed from the door, and said aloud, 'My lord, may I now execute my warrant?'*" Presently afterwards, *I saw Mr. O'Connor put one leg over the bar, and draw it back again.*" I have already reminded you, gentlemen, that at this time there was a doubt in the minds of some as to the effect of the verdict:

to liberate the prisoner; and I admit that Mr. O'Connor, when he put his leg over the bar, knew of the existence of the warrant, and intended to evade it. Mr. Justice Heath then said, "*A violent riot and fighting took place, such as I never before saw in a court of justice. It seemed to me to be between the constables on one hand, and those who favored the escape of the prisoner on the other.*" This shows plainly that Rivett did not speak the truth, when he said that the blows were all on the side of the rioters against the officers; whereas the fray, as described by Mr. Justice Heath, arose at first from the activity, if not the violence, of the officers; which I will confirm hereafter by the most respectable testimony. "*It being dark*" (continued the learned judge) "*I could not see the numbers of the combatants; but I think there must have been ten or twenty engaged in it. I saw Mr. Stafford brandishing a sword over their heads. The combat might last for five or six minutes. I saw Mr. Fergusson, in his professional dress, standing upon the table with many others. He turned round, and said, 'My lord, the constables are the persons to blame; it is they that are the occasion of the disturbance.' Before I could give him an answer, he turned round towards the combatants; and then my attention was drawn FROM HIM to the more interesting scene of the fight.*" — Every part of this evidence is a decisive exculpation of Mr. Fergusson. WHEN was it that Mr. Justice Heath saw him upon the table? I answer, at the very moment, nay at the *only* moment when blame is attempted to be imputed to him. By whom was he thus observed? Not by a common person, unqualified to judge, or uninterested in the order of the court, but by one of its highest and most intelligent magistrates. . . . It is therefore quite impossible, upon Mr. Justice Heath's evidence, to mix Mr. Fergusson with violence; for the learned judge distinctly stated,

that after having *seen and heard* him as he described him to you, he observed him *no longer*, his attention being drawn from him to "*the more interesting scene of the fight.*" Is not this a most positive declaration of Mr. Justice Heath, that the place where Mr. Fergusson stood, was *not* the scene of the fight, and that he was not personally engaged in it? for he turned his eyes *from* him to *the scene of the combat*, and of course to the persons of the combatants; whereas, if Mr. Fergusson, with a person so remarkable, and in the dress of his profession, had been *himself* a rioter, the learned judge must have pursued *him* with his eyes, instead of losing sight of him, and must have seen him more distinctly. But the truly honorably judge does not leave the exculpation of Mr. Fergusson to any reasoning of mine, having concluded his evidence with these remarkable words: "*I must do him the justice to say, that in the short time I saw him, which was not above a minute or two, I did not see him do, or hear him say, anything to encourage the riot. I thought myself in great danger, and all of us also.*" This testimony, gentlemen, IS ABSOLUTELY CONCLUSIVE. . . . When we consider, therefore, that this learned and reverend person stood in the same situation with the first witness who was examined for the crown; that he had an opportunity, from his situation in court, of seeing everything which belonged to the scene of combat, as he termed it; and when he nevertheless so separated Mr. Fergusson from it as to feel himself *compelled* to say what he did in the close of his testimony, we ought to give to *his* words a weight beyond the voice of a thousand witnesses. . . .

The next witness was Mr. Abbott, a gentleman at the bar. "*He saw Mr. O'Connor make a motion to leave the Court, and heard Mr. Fergusson say he was discharged. Mr. Solicitor-General answered, that he was not discharged; and then either Rivett or*

Fugion said he had a warrant; there was then a little confusion; but the prisoners resumed their places, and Mr. Justice Buller proceeded to pass sentence on O'Coigly. When that was finished, Mr. O'Connor leaped over the bar towards his left hand; a great tumult and confusion took place. — No part of all this, gentlemen, was ever disputed. — “*I saw lord Thanet on the table nearly before Mr. Justice Lawrence.*” This is also nothing. If lord Thanet mixed in the riot, it could not be near Mr. Justice Lawrence, but in the other part of the court, where the prisoners were placed. — “*The learned judge spoke to lord Thanet, and said it would be an act of kindness in Mr. O'Connor's friends to advise him to go quietly to prison, lest some mischief should happen. Lord Thanet then turned round, and said — I did not distinctly hear the first words, but the concluding words were, 'TO HAVE A RUN FOR IT,' or 'FAIR TO HAVE A RUN FOR IT.'*” Gentlemen, I will not weary you with a long repetition of the same observations. I have observed more than once already, that if Mr. Justice Lawrence had considered lord Thanet as having done anything to promote the riot, he would have acted accordingly; and it would be, therefore, trifling with your time and patience to detain you farther with Mr. Abbott's testimony.

Gentlemen, we are now arrived at Mr. Rivett; and, retaining in your minds the testimony of the crown's most respectable witness, on which I have been so long observing, I shall leave you to judge for yourselves, whether it be possible that what he says can be the truth, independently of the positive contradiction it will receive hereafter. Indeed, the evidence of this man administers a most important caution to juries not to place too implicit a confidence in what is sworn with positiveness, but to found their judgments upon the most probable result from the whole body of the proof.

Rivett says, . . . “*Many gentlemen were seated upon the solicitors' bench,*” which has already been described to you as immediately before the prisoners, and without the counsels' seat, in which lord Thanet appears to have sat till he stepped into that of the solicitors, where he was heard to speak to Mr. O'Connor, and congratulate him on his acquittal. It was in this place, and before and after this time, that Mr. Sergeant Shepherd described him as standing unmoved, with his face to the court, and his back to the prisoners: Rivett went on to say, “*When the jury were coming in, I endeavored to go nigh to the jailer, when I was pulled down by the leg; and as soon as I turned round, I saw Mr. Thompson,*” who turns out not to have been Mr. Thompson. “*I thought Mr. O'Connor looked as if he intended an escape. At that time there was a noise and violence; and Mr. Fergusson said to the Court, 'What business has this fellow here, making a noise?'*” Now, gentlemen, this cannot be a correct statement as it respects Mr. Fergusson, since it has been sworn by all the crown's most respectable witnesses that he made it a regular motion from the bar, and the officers were desired to stand back. “*I told his lordship, I had a warrant from the duke of Portland to arrest Mr. O'Connor; and the judge said I should hear him, and desired the jailer to take care of the prisoners for the present. The sentence was then passed on O'Coigly; and as soon as it was finished, Mr. O'Connor immediately jumped out from the bar; there was then a great confusion in court; the gentlemen who sat before me got up. Mr. O'Connor took to the left, and I called out to shut the door. I endeavored to get forward, but was prevented by those gentlemen who had placed themselves before me and the other officers. I was pulled and shoved down two or three times; but by whom I know not. I jumped forward as well as I was able, and re*

endeavoring to pursue Mr. O'Connor, when Mr. Fergusson jumped on the table, and with a stick flourished it in this way, to stop me. Mr. Fergusson was in his gown. I sprang at him, and wrenched the stick out of his hand, and then he returned from the table, and went to his seat." I will not pause at this part of the evidence as it applies to Mr. Fergusson, but pursue it as it goes on to lord Thanet; because, if I can show you that its application to him is demonstratively false when compared with the rest of the crown's evidence, on which it must lean for support, it will destroy all its credit as it implicates Mr. Fergusson also. He says, "*I was then knocked down by a person who pushed at me with both hands, and I immediately struck that person three or four blows.*" . . . His words were, "*He shoved me with both hands;*" and, in his cross-examination he afterwards described it, "*I struck that person three or four blows: he called out, 'Do not strike me any more;' I replied, 'I will; how dare you strike ME?'"*" You observe that he describes lord Thanet as having no stick, and as having struck him: whereas Mr. Sergeant Shepherd saw lord Thanet, at what must necessarily be the same point of time, standing with his face to the judges, and his back to the prisoners, motionless, as I have repeatedly described him, till he must have received violence from some other person, since the Sergeant saw him leaning back, and DEFENDING himself with a stick which he held in both hands over his head — an account, which, if any corroboration of such a witness could be necessary, I will establish by eight gentlemen who were present, and who will add, besides, in contradiction of Rivett, that lord Thanet was himself beat severely, and never struck the officer with either fist or stick. That lord Thanet *had a stick*, is beyond all controversy: and, having one, is it likely that a man of his strength and activity, engaged in

such an enterprise, would only push at his opponent with his *hands*, or that Mr. Fergusson, who is charged as being an accomplice, would have contented himself with flourishing a little stick over his head?

Mr. Attorney-General. — I do not find that Rivett has at all said that lord Thanet had a stick.

Mr. Erskine. — I have been reading his original examination. I will state his cross-examination by and by, and then set both of them against the truth. He says farther, and to which I desire your most particular attention, "*I saw Mr. Fergusson flourishing a stick about the middle of the table. I went that way, to avoid the persons who had stopped up the passage. He endeavored to prevent me; but I wrenched it from him, and struck him. I HAD NOT THEN SEEN LORD THANET.*" Now, gentlemen, I have only to beg that you will have the goodness to make some mark upon the margin of your notes of this fact, which the witness has had the audacity and wickedness to swear to. I use these severe expressions which I have applied to no other witness in the cause, because I never wantonly employ epithets that are unjust. He was in such a situation that he cannot be mistaken in what he swears; neither does he qualify it with his belief: but takes upon himself to marshal the proceedings in his memory, and to affirm POSITIVELY both as to persons and times. Yet I will prove Mr. Fergusson to have been within the bar in his place when Rivett speaks of him as on the table, and CERTAINLY WITHOUT A STICK. I will prove this — not by Bow-street officers, but by gentlemen as honorable as any who have been examined. Mr. Rivett told you too, "*that he came along from the great street where the Star Inn is, towards the prisoner, to arrest him; but that he went to the table to avoid the gentlemen who interrupted him in his passage towards him.*" Lord Thanet is one whom he positively fixed on as having done so. Lord

Thanet then interrupted him in his passage to the prisoner, which induced him to go to the table, where he had the conflict with Mr. Fergusson; and yet, according to his own deliberate declaration, he never saw lord Thanet till *after* the stick had been flourished by Mr. Fergusson over his head, and till after he had wrenched it out of his hand; or *then it was*, and for the *first* time, that he swears to have seen lord Thanet. This is totally inconsistent, not only with the whole course of the evidence, but even with his own. And I will prove, besides, by a gentleman who sat next his lordship, Mr. George Smith, the son of a late chairman of the East India company, a gentleman at the bar, and of independent fortune, that one of the first things Rivett did when he came into court, was, to press rudely upon HIM; and that lord Thanet, without having struck a blow, or offered any resistance, was attacked by these men in a most furious manner; which accounts for the attitude of defense in which he has been so often described.

No embarrassment or confusion can possibly attend the consideration of time; because from the evidence of Mr. Sergeant Shepherd there could be no interval. It was all in a moment. He saw lord Thanet sitting down: he rose, and stood with his face to the judges; and then the confusion began. But, at this time, I engage to prove most positively by many witnesses, that Mr. Fergusson was in his place at the bar, that he was forced upon the table in consequence of the tumult *after lord Thanet had been knocked down*, and that he had NO STICK. This, indeed, is incontestably established by the evidence of Mr. Justice Heath, who saw him in that situation till he removed his eyes from him to the scene of confusion, which he could not possibly have done if the confusion had not become general whilst Mr. Fergusson remained in his place; and so far was he from

seeking to mix himself with the riot which the officers were occasioning, that when sir Francis Burdett, a gentleman possessed both of strength and spirit (if a rescue had been the object), was coming hastily across the table, from seeing the situation lord Thanet was placed in, Mr. Fergusson, knowing that it would only tend to embroil instead of abating the confusion, took hold of him to prevent him, carried him bodily towards the judges, desired the officers to be quiet, and, addressing the Court, said publicly, and in his place, "My lord, it is the officers who are making all this disturbance."

What, then, is to be said for this Mr. Rivett, who swore that he never saw lord Thanet till *after* his conflict with Mr. Fergusson on the table, although Mr. Fergusson will appear to have at this time been in his place? Mr. Smith was as near lord Thanet as I am now, when Rivett rushed by him, and attacked him, Mr. Fergusson being still in his station at the bar.

Gentlemen, he said farther, in his cross-examination, that "*he struck lord Thanet several blows; that lord Thanet desired him to desist, but that he had struck him once or twice afterwards.*" This was after Mr. Fergusson had gone across towards the judges; so that the scene he describes, as relative to lord Thanet, is not immediately upon his first coming into court, but afterwards, when, having gone out of his course towards the prisoner from the resistance he had met with in the passage towards him, he was obstructed by Mr. Fergusson at the table: whereas all the witnesses agree in placing lord Thanet in the solicitors' box, the very passage which Rivett states himself to have left in consequence of resistance; and, therefore, he must have passed lord Thanet, in the solicitors' box, *before* he could have approached Mr. Fergusson at the table; and if he met with any blows or interruption from him at all, he must have met with them *immediately upon his*

entering the court; for Mr. Sergeant Shepherd's evidence establishes, that at that period violence must have been used on lord Thanet, as he was in an attitude of *defense*. Rivett farther said, that "*lord Thanet had nothing to defend himself against his blows,*" though sergeant Shepherd saw and described him with a stick; and that "*he saw no blows struck by anybody but himself.*"

What, then, is the case, as it stands upon Rivett's evidence? That no blows were struck but his own: though a learned judge has sworn to have seen many struck, and upon many persons; that he received no blows from Mr. Thompson — none from Mr. O'Brien — none from Mr. Fergusson — none from any of the defendants but lord Thanet, nor from any other person in the court. It is for you to say, gentlemen, whether this statement be possibly consistent with a widespread conspiracy to rescue a prisoner by violence, of which the defendants were at the head.

Sir Edward Knatchbull saw no blow given to Rivett. He said, "*I can by no means speak positively; but it appeared to me, that when somebody was endeavoring to keep Rivett back, HE struck lord Thanet with his fist. I saw no blow given to Rivett.*" So that Sir Edward Knatchbull's evidence, instead of confirming Rivett's story, mainly and importantly contradicts it. . . .

Thomas Adams, who was then Mr. Justice Buller's coachman, "*saw lord Thanet with a stick in his hand, and saw it lifted up.*" We had got rid of that stick upon Rivett's evidence, and now it comes back upon us again when it is convenient to have it lifted up. He describes the stick as lifted up in this position [*imitating the witness*]; whereas it could be in no such posture, as you must be convinced of from the observations I have already made to you; but this man's evidence is very material in this respect, viz. that in describing the assault of Rivett on

lord Thanet, he says, "*I heard lord Thanet say to him, 'What do you strike me for? I HAVE NOT STRUCK YOU:'*" — an expression of great importance in the mouth of such a person as lord Thanet; and falling from him at the very moment when it could have proceeded from nothing but consciousness; and an expression that I will confirm his having used by several of my own witnesses.

Mr. Brooks, who was next called, says, he "*saw Mr. O'Connor when the jury returned. Mr. Fergusson held a sword or stick over the heads of the people.*" A sword, or something else, given to us in this confused manner, adds no force to the evidence; more especially when, upon being asked if he can swear with positiveness, he admits that he cannot.

Mr. Stafford was then examined, who says, "*he sat under the jury box and could see lord Thanet distinctly.*" I particularly asked him that question, and how far distant he was from him: he answered me, "*Not above two yards from me — three times nearer than I am to you.*" He saw lord Thanet, then, distinctly, at two yards distance, and from the beginning to the end of the confusion; yet he swears, "*he did not observe him engaged in any obstruction.*" Afterwards when the tumult became general, this witness has been described as brandishing a drawn sword — no doubt, from a sudden apprehension of danger, and to avert it from that quarter. Now suppose Mr. Stafford had come down, out of mere curiosity, to Maidstone to hear the trial, and had been seen flourishing this drawn sword in the midst of the affray — what should have prevented Mr. Rivett from considering this gentleman as the greatest rioter of them all? Why might he not the rather have represented him as brandishing it to favor the escape of the prisoner? One cannot, indeed, imagine a case of greater cruelty and injustice; but what could have been his protection if Mr. Fergusson can be

convicted on the evidence you have heard? . . . Mr. Garrow said to him at the moment, "take care that you do no mischief," and undoubtedly Mr. Stafford neither did nor intended any; but that makes the stronger for my argument, and shows how little is to be built upon appearances which grow out of a scene of tumult. The case for your consideration, seems, therefore, to be reduced to this — whether you will believe the two learned judges, and the other respectable witnesses? or, whether you will depend upon the single and unsupported evidence by which violence has been imputed? Mr. Stafford, who was within two yards of lord Thanet, has completely acquitted him; for had he been in the situation in which Rivett has placed him, what could possibly have prevented him from seeing it? It was also sworn by Rivett, that Mr. Fergusson had a stick; but upon appealing to Mr. Stafford's evidence, who sat just opposite to him, we find that he had none; but that *he extended his arms seemingly to prevent persons approaching that side of the Court.* Mr. Stafford admits, that when he saw Mr. Fergusson it was in the midst of confusion; and it would be a harsh conclusion indeed, that Mr. Fergusson is guilty of the conspiracy charged on this record, because, upon being forced out of his seat by the tumult which surrounded him, as I will show you he was by several witnesses, he had extended his arms in the manner you have heard. Mr. Stafford added, that the jailer had hold of Mr. O'Connor's coat; that Mr. Fergusson forced himself between them, and that the jailer stretched his hand behind Binns to take hold of the prisoner. This must be a mistake; for Watson sat as where my learned friend Mr. Wood is at present [*pointing to him*] and Mr. O'Connor stood as where Mr. Raine is now sitting [*pointing to him*] and at no part of the time is it even asserted that Mr. Fergusson was in the box of the

solicitors, and consequently it was utterly impossible that he could have prevented the jailer from keeping hold of the coat of the prisoner. . . .

Next came Mr. Cutbush. My learned friends appeared to be soon tired of his evidence; and it seemed to produce an emotion of surprise upon the bench, that a witness, in such a stage of the cause, should give such extraordinary testimony. He said, "*I saw lord Thanet; he was two or three yards from Mr. O'Connor. I observed nothing particular till I saw Rivett striking lord Thanet on the back with a sword.*" Now, as it is admitted on all hands that no such thing ever happened, it affords another instance of the difficulty with which juries can collect any evidence to be relied on in a scene of uproar and confusion.

The evidence of the last witness, Mr. Parker, contains nothing which I need detain you with.

Gentlemen, I have now faithfully brought before you all that is material or relevant in the case of the Crown. . . .

I have therefore no more to ask of you, gentlemen, than a very short audience, while I bring before you the defendants' evidence. — My case is this:

It stands admitted, that the confusion had not begun when the jury returned with their verdict — that there was only a motion towards it when the officers were directed by the court to be silent, and to stand back. The period, therefore, to be attended to, is, the conclusion of the sentence on O'Coigly, when the officers, from their own account of the transaction, believing that Mr. O'Connor intended to escape from them, and giving them credit that such intention could not be frustrated without some violence and precipitation, rushed suddenly through the solicitors' box, where they met indeed with resistance, but a resistance which was the natural consequence of their own impetu-

ity, and not the result of any conspiracy to resist the execution of the warrant.

To establish this truth with positive certainty (if indeed it is not already manifest from the whole body of the proof), I shall produce, as my first witness, Mr. George Smith, whom I before named to you, and who was one of the first persons in their way on their entering the court. He sat as near lord Thanet as I now stand to where his lordship sits before you, and who, upon the principle of this prosecution, should, above all others, have been made a defendant; for he will admit freely, that he endeavored to push them from him with his elbow, when they pressed upon him with great and sudden violence: he will tell you, that at this time Mr. Fergusson was in his place at the bar; that lord Thanet was in the place where sergeant Shepherd described him; that he was violently struck, without having given the smallest provocation, without having made any motion, directly or indirectly, towards the rescue of the prisoner, or even looked round at that time to the quarter where he stood: that lord Thanet, in order to escape from this unprovoked violence, so far from approaching Mr. O'Connor, endeavored to get nearer where the counsel sat, when Rivett, instead of advancing straight forward in pursuit of his object, which was, to arrest the prisoner, leveled repeated blows at him, as he was obliged himself to admit, while lord Thanet lay back in the manner which has been so often described to you, protecting his head from the blows he was receiving.

In the same seat was Mr. Bainbridge, a gentleman educating for the bar, a near relation of the duke of St. Alban's, and a pupil, I believe, of my honorable and learned friend, Mr. Wood; a person who cannot reasonably be suspected of giving false testimony, to encourage violence and outrage against the laws

of his country. Mr. Bainbridge will swear positively, that, when the officers came forward, lord Thanet was in the solicitors' box, and Mr. Fergusson in his place at the bar, where he remained till the witness saw him forced out of his place, and obliged to stand upon the table, *and that he had no stick*. What, then, becomes of Rivett's evidence, who swore he never saw lord Thanet till *after* this period, although it is admitted that it must have been by the tumult, in which he falsely implicated his lordship, that Mr. Fergusson was driven out of his place? This is absolutely decisive of the case: for it will appear farther, that Mr. Fergusson continued in his place after the period when lord Thanet was seen defending himself. . . .

The next witness I shall produce to you will be Mr. Charles Warren, son of the late highly celebrated physician. . . . Mr. Warren was placed at the table, attending in his gown as counsel, and had the most undeniable opportunity of seeing Mr. Fergusson, who sat near him, in his gown also. What Mr. Fergusson did, cannot be matter of *judgment or opinion* in such a witness, but matter of *certainty*. . . . Such extraordinary transactions address themselves directly to the *senses*, and are not open to qualifications of opinion or belief. For the same reason, Mr. Smith and Mr. Bainbridge must both be perjured, if the evidence of Rivett be the truth; and Mr. Warren (subject to the very same observation) will swear positively that he saw lord Thanet severely assaulted, and **THAT HE DID NOT STRIKE**. Is this a mere negative in opposition to Rivett's affirmative oath? Certainly not: for there are some negatives which absolutely encounter the inconsistent affirmatives, and with equal force. . . .

I will then call to you Mr. Maxwell, a gentleman of rank and fortune in Scotland, who lately married a daughter of Mr. Bouverie, member

of parliament for Northampton. He stood under the witness box, which may be as in that corner [*pointing to a corner of the court*], commanding a full and near view of everything that could pass; and he will confirm, in every particular, the evidence of Mr. Warren, Mr. Bainbridge, and Mr. Smith. I will also call Mr. Whitbread, who attended the trial as a witness, who was near Mr. Sheridan, and, like him, did everything in his power to preserve the peace. Mr. Whitbread's situation I need hardly describe to you. He is a man of immense fortune, acquired most honorably by his father in trade, and who possesses almost incalculable advantages, which are inseparably connected with the prosperity and security of his country: yet, from the mouth of this most unexceptionable witness, the most important parts of the evidence will receive the fullest confirmation. I shall also call Mr. Sheridan, who showed his disposition upon the occasion by his conduct, which was noticed and approved of by the judges. This will furnish the defense of lord Thanet and Mr. Fergusson.

As to Mr. O'Brien, it is almost injurious to his interests to consider him as at all affected by any part of the proof: he does not appear to have been at all connected with Mr. O'Connor. . . .

I am sure I could name above twenty, in this very place, upon proceedings for the obstruction of officers in the execution of their duty (proceedings most important to the public), where the evidence has been very contradictory, and where the noble and learned lord, not being able to detect perjury in the defense, has uniformly held this language to juries, and even to the counsel for prosecutions: "This is not a case for conviction; the defendant *may* be guilty, but there is not a sufficient preponderation in the evidence to pronounce a penal judgment."

These are the maxims, gentlemen, which have given to British courts of justice their value in the country, and with mankind. These are the maxims which have placed a guard around them in the opinions and affections of the people, which, I admit, is at the same time the sting of this case, as it deeply enhances the guilt of him who would disturb the administration of such an admirable jurisprudence. But if the courts of England are, on this very account, so justly popular and estimable; if they have been, through ages after ages, the source of public glory and of private happiness, *why is this trial to furnish an exception?* For myself, I can only say that I wish to do my duty, and nothing beyond it. Govern us who will, I desire only to see my country prosperous, the laws faithfully administered, and the people happy and contented under them. Let England be secure, and I am sure no ambition of mine shall ever disturb her. I should rather say, if I were once disengaged from the duties which bind me to my profession,

"Oh! for a lodge in some vast wilderness,
Some boundless contiguity of shade,
Where rumor of oppression and deceit,
Of unsuccessful or successful war,
Might never reach me more!"

To conclude — if you think my clients, or any of them, guilty, you are bound to convict them; but, if there shall be ultimately before you such a case, upon evidence, as to justify the observations I have made upon the probabilities of the transaction, which probabilities are only the results of every man's experience in his passage through the world: if you should think that the appearances were so much against them as to have justified honorable persons in describing, as they have done, their impressions at the moment, yet that the scene of confusion was such that you cannot arrive at a clear

and substantial conclusion — you will acquit all the defendants. . . .

Mr. *Rous*. — My lord, I am of counsel for captain Browne.

Lord *Kenyon*. — When the attorney-general comes in I will put the question to him whether he thinks there is sufficient evidence against him or Mr. Thompson? . . .

Mr. *Attorney-General*. — . . . I am very ready, fairly to say, I should act very improperly if I showed any inclination to convict at all; and, therefore, I give up the prosecution with respect to him also. . . .

Lord *Kenyon*. — Gentlemen of the jury, as far as I can recollect the evidence, there is not sufficient evidence to call upon these gentlemen for their defense; if you think so, you will acquit them.

Mr. *Browne*, Not Guilty; Mr. *Thompson*, Not Guilty.

EVIDENCE FOR THE DEFENDANTS

Mr. *George Smith* sworn. — Examined by Mr. *Gibbs*.

You were present at this trial? — I was.

The row in which the solicitors sat represents that where we are now sitting, and the counsel before us? — It does.

And the place in which the prisoners stand was behind? — Yes.

In what part of the court were you? — Almost during the whole of the trial I sat in the solicitors' seat.

Are you at the bar? — I am.

I believe the prisoners stood in the place allotted for them, three in the front, and two behind? — Exactly.

Who were the three in front? — Mr. O'Connor, Mr. Binns, and Mr. O'Connor; Mr. O'Connor was on the left as he looked at the judges, and on the right as they looked at him; Mr. Binns in the middle, and Mr. O'Connor next the jailer; my seat was directly under the jailer, at the end of the seat.

Do you remember the time when the verdict was brought in? — Perfectly.

Did you observe anything happen at that time? — I recollect that Mr. O'Connor put his leg over the bar, and there was a press behind me, but a very trifling one, to get at him.

This was before sentence was pronounced? — Before sentence was pronounced.

Did that cease? — Yes: silence was called, and that disturbance ceased. The judge then proceeded to pronounce sentence; I was at that time sitting, as I have described, at the end of the seat directly under the jailer; and I leaned against a projecting desk, looking up at O'Connor during the whole of the sentence, so that my back was to the Bow-street officers: that instant that the judge concluded his sentence, Mr. O'Connor put his leg over the bar, and the jailer caught hold of his coat.

At this time did you observe where lord Thanet sat? — At that particular moment I cannot say I saw my lord Thanet, but I know that he and Mr. Browne were both sitting on the solicitors' seat within one of me.

Where was Mr. Fergusson at this time? — I do not know; I did not observe him at that time.

You were proceeding to state what passed after the sentence was pronounced? — At the same moment that Mr. O'Connor put his leg over the bar, before I had recovered myself from the leaning position in which I sat, one of the Bow-street officers, I am not sure whether it was Rivett or Fugion, *set his foot upon my back*. I immediately started up and drove the man off, and asked him what he meant.

How did you drive him off? — With my elbow, and by starting up.

What was his answer? — *He damned me*, and told me he had business, and would press on.

Was there good room for him to get by, or was this a narrow place? — It was so narrow that it was impossible two people should pass

without contrivance; a short struggle followed between the officers and myself, for there were several people who were pressing behind, and I could not get out of the seat where I was without making that resistance.

How did you get out at last? — At last I struggled a great while with my elbows to make room for myself; I got up, stepped upon the division between the solicitors' and the counsels' seats, and from thence to the table; I then turned round immediately, and I then saw the same man pressing upon my lord Thanet, in the same way in which he had been pressing upon me.

You said lord Thanet and Mr. Gunter Browne were within one of you? — Yes.

Did you observe this immediately upon your extricating yourself? — *The instant I extricated myself, I turned round and saw a man pressing upon lord Thanet, with this difference, that when I resisted him, I did not observe that he had any staff or stick, but when I saw him with lord Thanet, he was striking lord Thanet with a stick, but what the stick was I cannot say; lord Thanet stood with a short stick in both his hands, dodging with his stick, and receiving the blows of the Bow-street officer upon that stick.*

Lord Thanet was guarding himself, with his hands up, from Rivett's blows? — Exactly so.

You do not know which officer it was? — I am not certain, I think it was Rivett.

Before this happened, Rivett had had a struggle with him? — I had had a struggle with Rivett in the first instance; and I should state, that during that struggle, Mr. O'Connor, who had endeavored to get away, had effected his escape from the jailer; and the consequence was, that the people pressed forward from the opposite end of the bench, to prevent Mr. O'Connor from effecting his escape; by which means every person who sat in that narrow seat, was placed, if I may say so, between

two fires: for the Bow-street officers were pressing up from one side, and the crowd were pressing up from the other side.

You say, as soon as you got from Rivett, you saw him *instantly engaged in this way with lord Thanet?* — Yes.

Could Rivett, in the interval between the struggle with you, and the struggle you instantly saw him have with my lord Thanet, have got over to the counsels' table, and had a contact with a man who had a stick, and taken that stick from him? — Impossible; I think so at least; the interval was no longer than that which elapsed from my getting from the seat to the division, and from thence to the table.

Which you did as expeditiously as possible? — Certainly; for I felt myself in danger.

When you say impossible, I need not ask you whether you saw the thing happen? — Certainly not.

Had you your gown and wig on? — I had. Very shortly after I got upon the table, a man took up one of the swords, and drew it, and flourished it about over the heads of the people; very shortly afterwards I saw this sword coming in a direction immediately to my own head; I avoided the blow by springing off the table into the passage leading into the street.

Did you at any time see lord Thanet strike this officer, let him be whom he may? — I never saw lord Thanet in any situation but acting upon the defensive.

If lord Thanet had struck the officer, do you think you must have seen it? — Certainly; during the time I had my eyes upon him.

I think you told me you saw the officer first pressing by lord Thanet, and then striking him? — Yes.

And if he had struck the officer, you must have seen him? — Certainly, at that time.

Do you remember lord Romney coming down from the bench? — Perfectly well.

Do you recollect upon lord Rom-

ney's saying the prisoner was discharged, or acquitted, any person making an observation to him? — I remember there was an altercation between lord Romney and myself, in consequence of his saying that the prisoners were not acquitted.

There was a misapprehension between the words acquitted and discharged? — I apprehend so.

However, you were the person that had the conversation with him? — Yes.

Mr. *George Smith* cross-examined by Mr. *Attorney-General*.

You insisted that they were acquitted, and lord Romney insisted that they were not acquitted? — Exactly so.

A *Juryman*. — I wish to ask whether you left the court during the riot? — No, I did not; I jumped off the table in consequence of a blow that I saw coming at my head, and I shortly after returned to the table again.

Did you observe lord Thanet leave the solicitors' box? — No, I did not.

Do you know whether he did, or not, leave the solicitors' box? — I cannot say, for the riot lasted a very short time after I had left the table.

Lord *Kenyon*. — Was the blow aimed at your head? — By no means; it appeared to me that all the blows struck by that sword were struck by a man that did not know what he was about.

Were there any wounds? — I heard there were, but I do not know of any.

Mr. *Bainbridge* sworn. — Examined by Mr. *Best*.

You are a student of the law? — I am.

Were you in court during the trials at Maidstone? — I was.

In what part of the court did you sit at the time of the riot? — When the jury returned, I left my place at the table, and went to the place where the solicitors of the defendants sat, to speak to Mr. Fergusson.

Did you observe Mr. Fergusson dur-

ing this time? — Mr. Fergusson sat directly before me.

Did you observe lord Thanet? — Lord Thanet sat on my right hand, close to me.

So that you had a complete opportunity of observing them? — I had a complete opportunity till the fray began.

Do you recollect the Bow-street officers coming in? — I remember observing the Bow-street officers standing on the right-hand side of the dock.

Do you remember seeing those Bow-street officers at the time the jury pronounced their verdict? — I did.

What did you observe them doing at this time? — I observed two standing with their eyes fixed upon Mr. O'Connor, as the impression struck me.

Do you recollect them after the sentence was pronounced? — Yes, I do.

What did you see them do at that time? — I observed one, whom I had from observation upon the trial known to be Rivett, put his knee upon the bench that came over into the solicitors' seat, and get over, and press directly forward.

You say he pressed forward: in what direction? — He pressed directly on to the bench where the solicitors for the defendants had sat, and the counsel for the defendants had sat.

Where was lord Thanet at this time? — My lord Thanet was on the right hand of me, and in the place where the solicitor for Mr. O'Connor had sat, I believe most part of the day.

Where was Mr. Fergusson then? — Directly before me, IN HIS PLACE.

Was Mr. Fergusson at that time in the solicitors' place, or the place appropriated for the counsel? — Mr. Fergusson was IN HIS OWN PLACE, and the place which he had kept the whole day.

Did you see the Bow-street officers attempt to pass lord Thanet? —

I saw the Bow-street officers attempt to pass lord Thanet; and lord Thanet, upon being pressed upon, moved, upwards, as if to prevent being overpowered or crushed, and got upon his legs.

Did lord Thanet do anything to obstruct this officer? — To my opinion, nothing in the world.

I think you say, on the contrary, he moved up? — He endeavored to get upon his legs; for the pressure of the people upon him was such, that, if he had not got up, he must have been totally knocked under the bench.

At this time did you see whether lord Thanet struck this Bow-street officer, or not? — I never observed lord Thanet strike the Bow-street officer, or anybody else.

From the situation in which you were at this time, if he had struck him, do you think you must have seen him? — Certainly I must.

If lord Thanet, at this time, had been taking an active part in the riot, must you have seen that also? — I must have observed that too.

Did lord Thanet do anything to aid the escape of Mr. O'Connor, or add to the tumult which then prevailed in court? — Nothing in the world, that I saw.

Did you observe Mr. Fergusson at this time? — I did.

Now I will ask you if Mr. Fergusson struck anybody? — I never saw Mr. Fergusson strike anybody; and, if he had struck anybody, I think I must have seen it.

Did it appear to you that Mr. Fergusson encouraged Mr. O'Connor, or at all favored him in his escape? — Not the least, quite the contrary. . . .

Could he [Rivett] have struck him [Ferguson], and wrested the stick out of his hand, without your seeing it? — I think not.

You were there during the whole of this tumult? — I was in court during the whole of the trial.

Was Mr. Fergusson any part of that time in the place allotted for the solicitors? — Never.

Was he ever nearer to Mr. O'Connor than the place for the counsel? — Never; I was between them.

Where did he go, when he quitted that place? — Towards the judges and away from the tumult.

During the whole of this time, did Mr. Fergusson at all appear to encourage the tumult? — Quite the contrary, I think.

Mr. Bainbridge cross-examined by Mr. Law.

You have said that Mr. Fergusson, so far from encouraging this tumult, acted quite the contrary? — Yes.

Am I to understand you, that he endeavored to dissuade them from riot? — I heard him say to Mr. O'Connor, "Be quiet and keep your place, nothing can hurt you."

Was that after the acquittal? — It was after the verdict of acquittal had been given, and before the sentence was passed upon O'Coigly.

But after the sentence was pronounced, did you observe Mr. Fergusson doing anything that was quite the contrary? — He seemed to say, "be quiet." . . .

You have told us, that, during the whole day, Mr. Fergusson kept the same place? — As to the same place. I believe he might have moved to the right; he might have been, perhaps, to the right of Mr. Plumer in the morning; but what I mean is, that he never moved out of the place where the counsel sat.

Then he must have been under your own observation the whole of the day? — Yes.

Did he never appear to be upon the table in the course of that day? — While the jury were retired, he went across the table, and, I believe, went to speak to somebody near the witnesses' box; but at that time people were conversing and walking about, but there was no idea of a riot then.

Will you say, after the verdict was brought in, he was never upon the table? — *He was never upon the table that I know of, till he was pressed upon by the Bow-street officers.*

Did you, during the day, see a stick in his hand, or that he had not had a stick? — I will swear that I did not see a stick in his hand.

And you had him so much under your observation, that you must have seen it? — As much as a person could do sitting in a court of justice; it was quite ridiculous to suppose he had a stick in his hand.

Were you a witness, or concerned in that trial? — No. I went from mere curiosity.

You did not go with Mr. Fergusson? — No.

And you will swear that he never had a stick in his hand? — I will swear I did not see a stick in his hand; and I think I must have seen it, if he had.

If you had him constantly in view, you must? — It cannot be supposed that I had my eyes upon him for fourteen hours.

WILL YOU VENTURE TO SWEAR THAT DURING THE RIOT HE HAD NO STICK? — I WILL.

A Juryman. — Did lord Thanet leave the court during the riot? — Lord Thanet moved, as Mr. Fergusson did; upon being pressed upon, he got upon the bench; and when he moved up, Rivett was above him; and trying to strike him; and Mr. Fergusson then said, "Whom are you striking, sir?"

Juryman. — Whether he saw lord Thanet, during any part of the period near the wicket gate that leads to the narrow street? — I saw lord Thanet, I think, during the whole riot; and I think, instead of being there, he went, when he did move, quite the contrary way, and not at all towards the gate.

Mr. Justice Lawrence. — From Mr. Fergusson complaining of a tumult, it seemed as if he wished to keep everything in order; who was the person that he complained of? — Rivett.

That was before the sentence was passed? — Yes.

How far was Rivett from Mr. Fergusson at that time? — I think

he must have been about three yards.

At that time was he not making use of this motion [*describing it*] and saying, "Keep back, where are you going?" — Yes, and I think Mr. Justice Buller then said, "What is the matter?" Mr. Fergusson then said, "Here is a person making a noise, and will force himself into the court." Mr. Justice Buller then said, "What do you mean?" He then said, "My lord, I have a warrant against Mr. O'Connor." He then told him to keep back.

Mr. Warren sworn. — Examined by Mr. Mackintosh.

I believe you were present at the trials for high treason at Maidstone? — I was.

Were you present the second day of those trials? — I was.

Where did you sit during the evening of the second day? — Just by the witness box, opposite to the jury.

After sentence was pronounced upon O'Coigly, tell us what you observed of the confusion that arose in the court? — After the sentence of death was pronounced upon O'Coigly, the first part of the affray that I recollect was this; Mr. O'Connor endeavored to get out of the dock; he got almost out of the dock on the left side; the jailer who was on the other side of the dock reached across the dock, and caught him by the coat; he detained him for a very short space of time in that situation; the coat tore, or slipped through his hands.

At that time when the jailer had hold of Mr. O'Connor's coat, did anybody reach or step backwards between them? — Nobody.

Then Mr. Fergusson did not? — Certainly he did not. Mr. O'Connor got away, either from the coat being torn, or slipping through the jailer's hands; he got down upon the ground, he soon mixed with the crowd, and I lost sight of him; as soon as he endeavored at first to get away, two persons, who had before appeared to be officers from Bow-

street, with several others, rushed forward to apprehend him. In their endeavor to apprehend him, the first person upon whom they appeared to rush with any great violence, was Mr. George Smith, who was sitting at the end of the seat of the solicitors for the prisoners: he was forced from thence, and came to the place where I was sitting. The next person that I observed forced from his seat was Mr. Dallas, one of the counsel for the prisoners; he came likewise and sat near me; the officers still rushed on towards the end of the counsels' seat, and of the solicitors' seat. At the farther end of the counsels' seat, or near the end of it, Mr. Fergusson was sitting to the best of my recollection.

Had he a stick in his hand? — No stick that I saw.

Had you your eye upon him? and if he had, must you have seen him? — He is an acquaintance of mine, and he was in his professional dress; and if he had, I think I could not have mistaken it. Lord Thanet was sitting upon the solicitors' bench, almost immediately behind Mr. Fergusson. By this time the confusion had become general, and a number of people had got upon the table, from all parts of the Court.

If Mr. Fergusson had brandished a stick, or presented it to Rivett, must you have seen it? — I certainly must.

I need not ask you if you did see it? — I did not see it; Mr. Fergusson had risen up, and lord Thanet had risen up.

Supposing it possible that a stick had been in Mr. Fergusson's hands, and it had escaped your eye, do you think it possible, from time and place, that Rivett could have wrenched it out of his hands before he attacked lord Thanet? — I do not think it possible he could have a stick of any sort.

Was lord Thanet nearer to Rivett than Mr. Fergusson? — I think he was rather; one of the officers, but I do not know which, I do not

know their persons, pressed very rudely, as it appeared to me, upon Mr. Fergusson; I believe that Mr. Fergusson might shake his shoulder when he felt the man's hand upon it; that is all the resistance I saw made on the part of Mr. Fergusson.

What did you see pass between these officers and lord Thanet? — The first thing I observed particularly of lord Thanet was, that he was lying almost down upon his back upon the table, with a small stick or cane, which he held in both hands over his head or face, in this manner; one of the officers was striking him with a stick, and lord Thanet endeavored, with very little success, to defend himself by the use of this stick, which he held in both his hands.

Now, before that period of which you last spoke, did you observe lord Thanet give a blow or any provocation, to this officer? — I never saw him give a blow; I never saw him give any provocation; I never saw him in any other way than I have mentioned, till he left his seat; how he left his seat I cannot tell; they had risen up upon their seats; when they were pressed upon, they rose towards the left-hand side of the prisoner, as the prisoner faced the judges.

Did they go out of sight? — No.

Did they go off that table? — They were not upon that table; Mr. Fergusson was upon the table afterwards, but not on the table at any time that I have yet spoken to — lord Thanet was then lying upon the table. I am not able to say how lord Thanet got from that situation; I do not know that I took particular notice of what passed after, with respect to lord Thanet; Mr. O'Connor was brought into court, and then the riot ceased.

Did you take any particular notice of Mr. Fergusson, between the last time you have been speaking of, and the time of Mr. O'Connor being brought into court? — No, I do not recollect anything more.

I need not ask you if you saw Mr. Fergusson brandish a sword? — No.

Did you see Mr. Fergusson, after the sentence of death was passed, go back to his old place? — I did not.

Were your eyes fixed upon that part of the court? — They were, most particularly; I was placed in a situation in which I could very well see.

So that it was impossible for Mr. Fergusson to have gone backwards from his seat, without having struck your eye? — I think it was impossible.

Did you see Mr. Fergusson upon the table before lord Thanet was beat by Rivett? — I did not.

Mr. Justice Lawrence. — In what part of the court were you? — Under the witness box; I rose from thence, and got upon the table, as other people did.

Mr. Mackintosh. — Did you see lord Thanet or Mr. Fergusson take any part in anything that had the appearance of disturbance or riot? — No, I did not. I saw lord Thanet defend himself; and I have stated, that I did not see Mr. Fergusson do any act at all, except shaking that man's hand off his shoulder.

Do you remember Mr. Dallas quitting his place before he began to address the jury? — I do, perfectly.

And Mr. Plumer also, I believe? — I do not.

Do you recollect Mr. Fergusson leaving his own place in consequence of that? — I am rather inclined to think it was so; but I cannot swear to that.

I understand you to swear most positively that Mr. Fergusson never interposed between the jailer and Mr. O'Connor? — I do most positively swear I do not think he did, and if he had, I think I must have seen it.

Mr. Warren cross-examined by Mr. Garrow.

The dock or bar, by which the Bow-street officers were placed, could only occupy five or six persons? — No more.

Only the jailer and the prisoners?

— It might be three yards long, perhaps.

You stated that after the sentence of death had been passed, and Mr. O'Connor had been left upon the floor, the officer pressed forward to apprehend him; what induced you to think these were officers rushing forwards for that purpose? — I took them to be the persons who had produced the warrant in court. When they had forced themselves up to the end of the solicitors' seat, Mr. Fergusson said, I think, "Here are two men obtruding themselves between the prisoners and the jury." Mr. Justice Buller said, "What are you about? sit down;" and one of them produced a paper saying either that it was a warrant to take up Mr. O'Connor, or a warrant upon a charge of high treason against Mr. O'Connor, or something to that effect; and, therefore, I supposed them to be Bow-street officers, or officers of justice. . . .

Mr. Maxwell sworn. — Examined by Mr. Erskine.

Were you in court, at Maidstone, during any part of the trial of Mr. O'Connor and others? — I was, frequently.

Did you hear Mr. Justice Buller pronounce sentence of death upon O'Coigly? — I did.

In what part of the court were you at that time? — At that time I was immediately to the left of the witness box, rather farther from the judge than the witness box.

Were you elevated above the Court? — I was elevated above the table where the counsel sat.

Did that elevation and position give you a view of that part of the court where the Bow-street officers entered, and where the solicitors for the prisoners sat? — That gave me a distinct view of that part of the court.

Do you remember, when Mr. Justice Buller had finished pronouncing sentence upon Mr. O'Coigly, do you remember any persons rushing forwards, as if to seize Mr. O'Con-

nor? — I remember some of the Bow-street officers, among whom I knew Rivett and Fugion, rushed violently to that place where Mr. O'Connor was.

At the time that those two persons, Rivett and Fugion, rushed forwards in the direction you have described, did you observe where lord Thanet was? — I did; my lord Thanet sat at that time in the solicitors' place.

Did you observe where Mr. Fergusson was at the same time? — Mr. Fergusson sat in his own place, where he had been as counsel for some time, on the bench before the solicitors' bench.

Which of them was nearer to that side of the court where the jury box is, and where Mr. O'Connor was? — I think lord Thanet was rather, perhaps, the nearest of the two; but there was very little difference.

Did you see anything pass between Rivett, the officer, and lord Thanet? — I did.

Describe to my lord and the jury what you saw. — After Rivett had forcibly overturned and driven from their places those who stood between him and Mr. O'Connor, he got to lord Thanet, who was one of the nearest. Lord Thanet, when he was pressed upon, got out of the place where he was, and went from the scene of tumult towards the table.

Was that farther from the prisoners than he was before? — Considerably farther from the prisoners than when he was first pressed upon.

When lord Thanet retired in that manner out of the solicitors' box, over towards the counsels' table, did Rivett pursue his course on towards the prisoners in the line of the solicitors' box, or how else? — He followed lord Thanet, and struck him repeatedly.

Had lord Thanet struck Rivett before he went over from the solicitors' seat towards the table? — Lord Thanet never struck Rivett before or after that.

Had you such a view of the situation in which lord Thanet was placed, and what he did, as to swear merely to your opinion and belief, or do you

swear it positively? — I had such a view, that I swear it positively; by that time I had quitted the place where I was, and got nearer to lord Thanet, and the other persons who were struck.

Were any other persons struck besides lord Thanet? — I saw several blows given, but I cannot say to whom, by the Bow-street officers, and those who followed them.

Do you know whether Rivett struck any person besides lord Thanet? — I do not positively know whether he struck any person or not.

But you swear positively lord Thanet did not strike Rivett at all? — He did not; but merely put himself in a posture of defense, and lying back upon the table.

Had lord Thanet a stick? — He had a small stick, which he held up over his head to defend himself; he was leaning back upon the table, an attitude in which it would have been difficult to have acted offensively.

Did you see lord Thanet subsequent to the time that he was in that situation? — I did.

You say that the officers, and particularly Rivett, rushed into the court, and having passed one or two that were before lord Thanet, attacked lord Thanet; *what length of time might elapse between Rivett first rushing in and the time he struck lord Thanet? — A very short space of time indeed.*

Was it possible that before Rivett struck lord Thanet, he could have gone within the counsels' place, where you have described Mr. Fergusson to be, and have wrested a stick out of his hand before he came to lord Thanet? — Rivett did not go to take a stick out of his hand, for he had no stick in his hand, he did not go up to Mr. Fergusson, but immediately went up to lord Thanet and struck him.

If Rivett should have said here, that he never saw lord Thanet till after he had taken a stick from Mr. Fergusson, from what you observed, is that true or false? — I should certainly

say it was false, without any hesitation.

During the time that you thus observed lord Thanet in the attitude of defense, retreating from the scene of tumult, and pursued by Rivett, where was Mr. Fergusson? — He was in his place, and remained in his place till he was pressed upon, and then he got out of the scene of tumult upon the table.

Did you see him while he was in his seat, and did you see him move from his seat to the table by the pressure that was upon him? — I did.

If, whilst Mr. Fergusson was in his seat, or if while he was pressed upon when he rose from his seat, if in either of these situations he had not only had a stick, but had brandished and flourished that stick, I ask, must you have seen it or not? — I must have seen it; he was so directly before me, that it is quite impossible but I should have seen it; I CAN SWEAR THAT MR. FERGUSSON HAD NOTHING IN HIS HAND, BUT A ROLL OF PAPER IN HIS RIGHT HAND.

And was in his professional dress? — He was.

If Mr. Fergusson had done any one act to encourage the tumult that was undoubtedly then existing, or done any one act inconsistent with his duty as counsel, or committed any one act of indecency or turbulence, must you have seen it? — I must.

Then let me ask you, upon your solemn oath, did he do any such thing? — He did not; on the contrary, he endeavored to keep quiet in the court, by admonishing the people in court to be quiet. Mr. Fergusson said particularly to Rivett, when he was striking lord Thanet, "Do you know whom you are striking? That is not a person likely to begin a riot."

Did you see where Mr. Fergusson went to after he was upon the table? — He got upon the table, and got farther from the scene of tumult; and I do not know whether he sat

down upon the table or not; he went towards the crown lawyers.

Did you see sir Francis Burdett? — I did; he at first stood by me in the witness box; and when the confusion began, he got nearer to the place of confusion at the same time that I did. I saw Mr. Fergusson remove sir Francis Burdett from the scene of confusion, and put him farther from it.

And you saw him also place himself at a distance from it? — Yes.

Did you afterwards see him go upon the table towards the judges? — I did; I saw him till all the violence was over.

Then can you take upon you to swear positively, that neither Mr. Fergusson nor lord Thanet, during the tumult, went towards Mr. O'Connor? — They went in a directly opposite direction.

Do you swear that from your own opinion and belief, or from certain knowledge? — I swear it positively from certain knowledge.

Mr. Maxwell cross-examined by Mr. Adam.

You saw Rivett and Fugion pressing forward? — I did.

Did you know them before? — I knew them from having seen them examined in court upon that trial.

Only from that circumstance? — Only from that circumstance.

During this affray you shifted your situation to another part of the court? — Yes; I got upon the table.

And you say you saw sir Francis Burdett shift his place? — He shifted his place at the same time.

From what part of the court did he come? — From the witness box; he stood on my right hand.

To what part of the court did he go? — He also went on to the table.

Do you mean that he remained upon the table? — I cannot say whether he remained upon the table, but he went there with me.

Did he remain on the table any considerable time? — The tumult was over very soon after that.

The counsel for the crown sat immediately under the witness box? — They sat on the same side.

Round the angle? — Yes.

Therefore, it was necessary, when you and sir Francis Burdett shifted your places, that you should go over the heads of the counsel for the crown, to get to the table? — Exactly so; we jumped from the neighborhood of the witness box.

Do you remember, when sir Francis Burdett jumped from the neighborhood of the witness box to the table, did he not jump immediately from the table into the crowd? — I cannot say whether he did or not; but I saw him standing upon the side of the table, or sitting upon the side of the table, till Mr. Fergusson removed him.

But that was near the conclusion of the affray? — It was. . . .

Lord *Kenyon*. — Did you see Mr. O'Connor go out of the dock? — Yes.

How soon was he out of your sight? — I do not know that he was out of my sight.

Do you know the situation of the wicket? — Yes.

Where were Mr. Fergusson and lord Thanet during the time that elapsed between his leaving the bar and being brought back again? — Upon the table.

Did the crowd coming upon them prevent you from seeing them? — No: I was so situated that I saw them both distinctly; I was a great deal higher than they.

Samuel Whitbread, Esq., sworn. —

Examined by Mr. *Gibbs*.

You were present, I believe, at the time of this trial? — I was in court the latter part of it, after I had been examined as a witness.

In what part of the court were you? — After having been examined as a witness I retired out of the witness box, behind, and came into the court again.

Whereabouts were you when the verdict was brought in? — Considerably behind the witness box.

Had you from thence a perfect view of the court? — Of the lower part of the court.

Had you a perfect view of the dock in which the prisoners were, the solicitors' seat, and the seat where the counsel sat? — I had certainly a view of the whole of that part of the court.

Between the verdict and the sentence we understand some Bow-street people came in, and spoke of a warrant? — There was some tumult, and that subsided upon Mr. Fergusson calling the attention of the Court to the cause of it. He waved his hand and spoke to them; he then turned to the bench, and said, "My lord," or some such word, just to draw the attention of the Court: upon that, Rivett, whom I knew before, said he had a warrant against Mr. O'Connor, and he thought he was going to escape. Mr. Justice Buller then said, "Patience," or some such word; and then sentence was pronounced.

After sentence was pronounced, did you observe O'Connor? — I observed him put his foot upon the front part of the dock, and get out of the dock: having carried my eye after him some time, my eye returned to the bar, and there I saw Rivett violently attacking lord Thanet; he had a stick in his hand: I did not see *him* strike a single blow; I saw many blows struck at him, and he was endeavoring to ward them off.

Did it appear to you that lord Thanet made any attack upon Rivett to provoke this? — No; on the contrary, he was defending himself against a violent attack of Rivett's upon him.

Where was lord Thanet at the time that you observed this? — I think he was close to the table, leaning back upon the table in the act of defending himself, with his hands up, in which I think he had a stick.

Did you see at this time where Mr. Fergusson was? — I did not observe Mr. Fergusson at that time: before the tumult had quite subsided, I

observed Mr. Fergusson upon the table, not far from the judges.

Had you your eyes upon lord Thanet from the time you saw Rivett striking him in this way? — No, I had not, because there was a great deal of tumult behind, and of persons trying to get out at the door behind the bench, and the bailiffs resisting their attempts, which engaged my attention some time.

Did you see Mr. O'Brien during this time? — I do not recollect that I did.

Did you know Mr. O'Brien well? — I knew him perfectly by sight.

If he had been acting in this scene, must you have noticed it? — In a scene of confusion many things must have escaped the observation of every person; but I think it is more than probable that I must have seen such a person as Mr. O'Brien, if he had been active.

Samuel Whitbread, Esq., cross-examined by Mr. Attorney-General.

How long did you remain at Maidstone? — The next morning, I think, I passed you on the road to London.

Mr. Attorney-General. — I beg your pardon, I did not recollect that circumstance.

Previous to the officers approaching the place where Mr. O'Connor was, had you heard that there was to be a rescue? — I had not.

Richard Brinsley Sheridan, Esq., sworn. — Examined by Mr. Erskine.

You were subpoenaed as a witness to attend the trials at Maidstone? — I was.

Were you in court at the time when the jury retired to consider of their verdict, and also when they returned with it? — I was.

And during the remaining part of the time till the tumult ceased? — During the whole of that time.

In what part of the court were you when the jury brought in their verdict? — Sitting with sir Francis Burdett in the witness box; that

box was raised very considerably above the table, so that I had a direct view of everything passing in the court.

Had you then an opportunity of perfectly observing the place where the solicitors sat, and the dock where the prisoners were, and the place where the counsel were? — A most perfect opportunity, without being in the least annoyed or mixed with the tumult.

Do you remember the jailer laying hold of Mr. O'Connor; perhaps you did not see that? — The first that I observed of the tumult was prior to the sentence being passed upon O'Coigly; I did not see Mr. O'Connor make an attempt to go, but I had observed to the high sheriff that I fancied he would come out, for that I had observed at the Old Bailey, that they had left the bar immediately upon the jury pronouncing them not guilty. The riot then commenced, and I observed some men pressing very violently towards the box where Mr. O'Connor was; my attention was taken up with that: Mr. Fergusson then appealed to the court, and said, "Here are two riotous fellows," or something of that sort, "disturbing the peace of the court." Rivett then said, "I have a warrant to apprehend Mr. O'Connor." Mr. Justice Buller desired him to be quiet, and then put on his cap to pass sentence, and everything subsided.

After that did you observe the Bow-street officers rushing in, in the way that we have heard? — The first thing I saw was Mr. O'Connor getting very nimbly over the front of the dock, and going towards the narrow street, and these men rushing after him. Certainly the man who could have thrown himself most in the way of the men, was Mr. O'Brien, if he had chosen to do it.

Are you acquainted with Mr. O'Brien? — I know him intimately.

Is he a strong man? — Certainly he is.

If Mr. O'Brien had been desirous of opposing himself to the officers, and to prevent them from going after him, might he? — He was precisely in the best situation to have done it.

Had you an opportunity of seeing whether he did or not? — He did not, and I am sure he was not there in the subsequent part of the tumult.

Can you take upon yourself to swear positively that he gave no manner of assistance? — Positively.

And Mr. O'Brien had an opportunity of affording the most essential means of escape to Mr. O'Connor, if he had chosen? — I think the whole idea was folly and madness, and that no assistance could have effected it.

But Mr. O'Brien did the contrary? — Yes; he retired behind the box, and I did not see him afterwards. I was very attentive to the whole of it, and was making my observations with the high sheriff, who more than once endeavored to persuade me to leave the witness box, and endeavor to quell it.

Did you see lord Thanet at the time the officers rushed in? — I did not see him till the time he was struck; I saw him struck.

Did he return the blow, or show anything like activity, or a disposition to activity? — I saw him when he was first pressed upon. It was not a tumult merely near the dock, but the whole court was a scene of general tumult, and a scene of panic, and certainly with the least reason — there was a tumult behind us in the witness box; there was a general calling-out not to open the doors, some calling out for soldiers and constables, and there did appear to me a sincere panic and apprehension that there was a planned rescue. I perceived plainly there was no such thing, and endeavored all I could to persuade them so. The officers were beating down everybody, forcing their way and pressing upon everybody. Lord Thanet had a stick in his hand, with which he was parry-

ing the blows, which came amazingly quick; it seemed to me an incredible thing that he was not extremely hurt, and he never returned a blow, but retired from the scene of tumult farther into the court away from the prisoners; sir Francis Burdett was with me; and by this time Mr. O'Connor was stopped, and they were bringing him back again; he had attempted to go towards the gate with the wicket, and I observed everybody to put up their hands and stop him; he might as well have attempted to get through a stone wall; if there had been six or eight persons there who were so disposed, he might perhaps have got as far as the door, but he could not possibly have got farther. I then saw a person upon the table, brandishing Mr. O'Connor's scimitar over the heads of the people; he seemed very much alarmed, and not knowing what he was about; I am sure it must have gone very near several persons' heads, it seemed quite miraculous that he did not do some mischief; in short, it was difficult to discover whether he meant to keep the peace or break the peace. Sir Francis Burdett saw that they had collared Mr. O'Connor, was frightened, and said with great agitation to me, that they would kill O'Connor, and he jumped over the railing; he could not go from where we were without jumping upon the table, and he ran forward; Mr. Maxwell followed him, or went at the same time; they both went towards Mr. O'Connor; I then saw very distinctly Mr. Fergusson stop sir Francis Burdett, and use some action, saying, "You had better keep away, and not come into the tumult at all:" I could not hear what he said, but it appeared so to me.

Did you see Mr. Fergusson from the beginning of this scene, when sentence of death was pronouncing? — I saw him plainly in his place, after the judge had passed sentence of death.

Did you see the crowd press upon

Mr. Fergusson, and did you see him get upon the table? — I did not see him get upon the table; but as the crowd pressed upon him, he was forced upon the table.

Did Rivett attack lord Thanet before he could possibly have attacked Mr. Fergusson and wrenched a stick out of his hand? — He came immediately upon lord Thanet, when the tumult began.

He could have had no conflict with Mr. Fergusson till after the conflict with lord Thanet? — Certainly not.

Do you know Mr. Fergusson? — Perfectly.

If he had been upon the table flourishing and waving a stick, in the manner that has been described, in his bar dress, must you not have seen it? — Yes; it must have been a most remarkable thing, indeed, for a counsel in his bar dress to have a stick flourishing in his hand — HE HAD A ROLL OF PAPER IN HIS HAND.

Does that enable you to swear that Mr. Fergusson was not in that situation? — Certainly.

Do you think if he had taken such a part in the riot, in the presence of the judges, that you must have observed it? — I must have observed it.

Did lord Thanet or Mr. Fergusson ever go nearer to Mr. O'Connor after he had jumped out of the dock, or did not lord Thanet and Mr. Fergusson retire farther from the scene of tumult? — They certainly did. Upon some farther conversation I got over this place myself, and went down, and the first thing I did was to speak to the man with the sword. I told him I thought he with his sword made half the riot himself; and he put it away. I passed lord Thanet, who, so far from staying in the riot, went towards the judges, as if he was going to make a complaint. I then went into the riot, and endeavored to persuade them that there was no such thing as an attempt to rescue O'Connor; and a man that had hold of him, who knew me, said there was; and added,

"These fellows are come down from London; they are Corresponding Society people, and they are come down on purpose to rescue him." One person in particular called to them not to believe me, and I laid hold of him, and said he should go with me to Mr. Justice Buller; I insisted upon his name and address, and he would not give it me. I then turned to the judges, and he ran away. So far was lord Thanet from going towards the wicket, that I passed him going up to the judges; and Mr. Fergusson remained with me, desiring them not to treat Mr. O'Connor so, and generally endeavoring to quiet them; the only moment they were out of my eye was while I was getting over this place.

Richard Brinsley Sheridan, esq., cross-examined by Mr. Law.

You saw lord Thanet distinctly from the time he was struck? — I do not mean with the stick, — I corrected that by saying, from the time he was assaulted and driven from the seat he was in at first.

Can you take upon you to say whether he gave a blow before he was struck? — I said from the time he was pressed upon or assaulted.

You say you saw lord Thanet going towards the judges, as if he was going to complain. Did you hear him make any complaint to the judges? — I did not hear him, certainly. . . .

I ask, as an inference from their conduct, as it fell under your observation, whether you think lord Thanet or Mr. Fergusson, or either of them, meant to favor Mr. O'Connor's escape, upon your solemn oath? — Upon my solemn oath I saw them do nothing that could be at all auxiliary to an escape.

That is not an answer to my question. — I do not wish to be understood to blink any question. . . .

My question is, whether, from what you saw of the conduct of lord Thanet and Mr. Fergusson, they did not mean to favor the escape of

O'Connor, upon your solemn oath? — The learned counsel need not remind me that I am upon my oath; I know as well as the learned counsel does, that I am upon my oath; and I will say that I saw nothing that could be auxiliary to that escape.

After what has passed, I am warranted in reminding the honorable gentleman that he is upon his oath: my question is, whether, from the conduct of lord Thanet or Mr. Fergusson, or either of them, as it fell under your observation, you believe that either of them meant to favor O'Connor's escape? — I desire to know how far I am obliged to answer that question. I certainly will answer it in this way, that from what they did, being a mere observer of what passed, I should not think myself justified in saying that either of them did. Am I to say whether I think they would have been glad if he had escaped? that is what you are pressing me for.

No man can misunderstand me; I ask, whether, from the conduct of lord Thanet or Mr. Fergusson, or either of them, as it fell under your observation, you believe upon your oath that they meant to favor the escape of O'Connor? — I repeat it again, that from what either of them did, I should have had no right to conclude that they were persons assisting the escape of O'Connor.

I ask you again, whether you believe, from the conduct of lord Thanet or Mr. Fergusson, or either of them, upon your oath, that they did not *mean* to favor the escape of O'Connor? — I have answered it already.

Lord *Kenyon*. — If you do not answer it, to be sure we must draw the natural inference.

Mr. *Sheridan*. — I have no doubt that they *wished* he might escape; but from anything I saw them *do*, I have no right to conclude that they did.

Mr. *Law*. — I will have an answer: I ask you again, whether from their conduct, as it fell under your observation, you do not believe they

meant to favor the escape of O'Connor? — If the learned gentleman thinks he can entrap me, he will find himself mistaken.

Mr. *Erskine*. — It is hardly a legal question.

Lord *Kenyon*. — I think it is not an illegal question.

Mr. *Law*. — I will repeat the question, whether, from their conduct, as it fell under your observation, you do not believe they *meant* to favor the escape of O'Connor? — My belief is, that they *wished* him to escape; but from anything I saw of their conduct upon that occasion, I am not justified in saying so.

I will ask you, whether it was not previously intended that he should escape if possible? — Certainly the contrary.

Nor had you any intimation that it was intended to be attempted? — Certainly the contrary. There was a loose rumor of another warrant, and that it was meant that he should be arrested again, which was afterwards contradicted. Then the question was mooted, whether the writ could be issued before he was dismissed from custody? Certainly there was no idea of a rescue. There was no friend of Mr. O'Connor's, I believe, but saw with regret any attempt on his part to leave the Court.

From whom did you learn that there was such a warrant? — It was a general rumor.

From whom had you heard this rumor? — I believe from sir Francis Burdett; but I cannot tell.

At what time was that? — About four or five o'clock.

Have you ever said that the defendants were very blamable; lord Thanet, Mr. Fergusson, or any of them? — Certainly not.

At no time since? — Certainly never.

Mr. *Erskine*. — You were asked by Mr. Law, whether you believed that the defendants wished, or meant to favor the escape of Mr. O'Connor: I ask you, after what you have sworn,

whether you believe these gentlemen did any act to rescue Mr. O'Connor? — Certainly not; and I have stated upon my oath, that every man in the narrow gateway endeavored to stop him: I remarked it particularly; because, there being a common feeling amongst Englishmen, and he being acquitted, I thought they might form a plan to let him escape.

You have stated that you saw no one act done or committed by any one of the defendants, indicative of an intention to aid O'Connor's escape? — Certainly.

I ASK YOU THEN, WHETHER YOU BELIEVE THEY DID TAKE ANY PART IN RESCUING MR. O'CONNOR? — CERTAINLY NOT.

[End of the evidence for the Defendants.]

REPLY

Mr. *Attorney-General*. — Gentlemen of the Jury: At this late hour of the day, I do not think that the duty which I owe the public can require me to detain you any considerable time in reply to the observations of my learned friend. . . .

Now, with respect to the case of my lord Thanet and the case of Mr. Fergusson, gentlemen, I declare to you most solemnly, that I respect the high situation of the one, as I respect the professional situation of the other; but in this case, gentlemen, the question, and the only question, is, "Did they make a riot?" I desire that the question may be put upon its true merits. . . . My learned friend says, "What motive could lord Thanet have?" Mr. O'Connor, who has been represented as an extremely judicious man upon some occasions, was certainly so foolish, as to think such a project as this might have been practicable; but is it in fact imputed to these persons, that they meant to turn Mr. O'Connor loose, in order to subvert the constitution of this country (for so my learned friend states it)?

and to do all this mischief which he is pleased to represent to you, must have been the consequence of Mr. O'Connor's escape? He seems to have forgot, that all I meant to impute (for aught I know, there may be men in the country who know more of it than I do), that all I am charging upon these defendants is, that they meant to rescue Mr. O'Connor from any farther demand that justice might have upon him. Whether Mr. O'Connor was immediately to take himself out of this country, into a situation in which he could do no mischief, or whether he was to remain in this country to do mischief, is a question with which I have no business. . . .

Gentlemen, that there was a riot, is clear beyond all doubt. Now let us see how it is occasioned: Mr. O'Brien knew of this rumor, at the time the application was made to the Court, by Rivett and Fugion. He was aware, that Mr. O'Connor was not discharged. He learned, and lord Thanet learned, and I believe nobody doubts the fact that everybody learned this circumstance, not only that he was not then to be discharged, . . . but it was publicly taught to everybody in court, what was the reason and what the cause for which his discharge was to be withheld from him. . . . Gentlemen, if you please, I will put it so, not to give Rivett any credit, if, upon any other part of the case, he is contradicted; but I should do that with great reluctance, till I am satisfied that he is not worthy of credit. But I will say this, that you may reject the whole of the evidence of Rivett, with respect to lord Thanet and Mr. Fergusson, out of the case, and say, whether out of the negative evidence given on the other side, you can get rid of the facts sworn and deposed to by persons whose characters are out of the reach of the breath of suspicion. . . .

Gentlemen, I will not go into a detail of the evidence, which you will

hear from his lordship; but with reference to lord Thanet and Mr. Fergusson, I cannot part with the evidence given by Mr. Solicitor-General; but I shall first make this observation upon the evidence of Mr. Sergeant Shepherd, to whose credit, honor, and accuracy, we all do justice, that where that evidence presses upon Mr. O'Brien, he says, that "Mr. O'Brien having turned round and looked up at Mr. O'Connor, it made an impression upon his mind;" and also that, as far as he observed, "lord Thanet was defending himself." He judges, therefore, of appearances, both with reference to lord Thanet and with reference to Mr. O'Brien; and what he says of the appearances with reference to Mr. O'Brien certainly throws a great degree of credit upon his accuracy when he speaks with respect to lord Thanet. The same credit is due, I take it, to Mr. Solicitor-General; and you will have the goodness also to attend to the evidence of Mr. Hussey; for if you believe what he states, that when the man was pressing forward to execute the warrant, lord Thanet inclined towards the bar, and put his person in the way; if that fact is proved to your satisfaction, lord Thanet is guilty upon this record. And if other facts are proved against lord Thanet, and similar facts are proved against Mr. Fergusson, you must decide upon all the evidence, and not from what other men did *not* see or observe; you are not to decide upon the eloquence of my learned friend, but upon the oaths of persons who depose positively to facts.

Then my learned friend made an observation upon the evidence of Mr. Solicitor-General. . . . He states upon his oath, that he did most distinctly and cautiously attend to the conduct of Mr. Fergusson and Mr. O'Connor; and then he says this: "I fixed my eye upon O'Connor, and I observed Mr. Fergusson, and other persons whom I did not know, encouraging Mr.

O'Connor to go over the bar." Encouraging is a general word undoubtedly; but it is a word which expresses the impression which facts falling under his eye had made upon his mind; and when he was asked what he meant by encouragement? he describes it to have been by his actions. But he not only gives his evidence in this way as to that particular fact, but he gives it also with a caution, which entitles it to the same degree of credit which Mr. Sergeant Shepherd's evidence derives from its accuracy; for when he comes to speak of a circumstance, with reference to which he is not certain, he tells you, "Mr. O'Connor jumped over the bar, and Mr. Fergusson turned himself round and appeared to me to follow Mr. O'Connor; but I cannot say that he did." He qualifies that apprehension in his mind, by telling you that he may be mistaken, and then he gives you the reason why he doubts whether that apprehension was or was not justly founded; and he finally states in his evidence a circumstance respecting lord Thanet, which I think will deserve a great deal of your consideration. . . .

Whether this noble peer struck Rivett first, which I do not find Rivett say that he did, is of no importance. These men have a certain temper and degree of spirit about them, which might, perhaps, induce them to thrash a peer more than anybody else, if they felt themselves ill-treated; but Mr. Rivett may take this advice of me — I hope, in future, he will not use such treatment if he can avoid it. But what presses upon my mind is, that if lord Thanet, treated in the manner he was by Rivett, had no connection with this project of rescue; if he had not, either from the circumstances that fell under Mr. Sheridan's observation, or from other circumstances, manifested that he meant there should be a rescue, is it the conduct of a man of considerable situation — is it the con-

duct of a man of common sense, instead of making a serious complaint upon the subject? . . . He is perfectly neutral; no complaint is made upon the subject. It appears to me, that if I had been struck two or three times by that officer, the manner in which I would have acted upon that occasion would certainly not have been to have immediately stated that "it was fair the prisoner should have a run for it," but to have made some application to have those punished of whose conduct I had a right to complain. . . .

Then when you have heard this evidence on the part of the prosecution, I mean the evidence that goes to positive facts, it will be for you to decide whether they are not all reconcilable with the negative evidence given on the part of the defendants. . . .

Gentlemen, having said this much, and having endeavored to discharge myself of my duty, you will be good enough to say what is due as between the public and the defendants.

SUMMING UP

Lord *Kenyon*.—Gentlemen of the Jury: . . . I have the authority of lord Hale, one of the greatest and best men that ever lived, for saying, that juries are not to overlook the evidence—that they are not to forget the truth, and to give way to false mercy; but, without looking to the right hand or the left, they are to weigh the evidence on both sides, and then, according to the best of their judgment and understanding, to do justice to the public, as well as to the defendants.

Before I proceed to sum up the evidence, I shall only make one other observation, which was made by Mr. Whitbread in giving his evidence, the tone of whose voice I never heard before. Having gone through his evidence, he gave us this *legacy*, as a clew to direct us in

the decision of this case—"that, in a scene of so much confusion, there are many things which must escape the observation of every individual." Having stated thus much to you, I will now proceed to sum up the evidence; and when I have done that, I shall make some few observations on it.

[His lordship here summed up the evidence on both sides, and then proceeded as follows:] . . .

I have stated the evidence on the one side and the other; and although there is strong contradictory evidence, yet I think there is a great deal of evidence which goes in support of the charge. There were some observations made by the learned counsel for the defendants, which, perhaps, were not altogether warranted. Counsel are frequently induced, and they are justified in taking the most favorable view of their clients' case; and it is not unfair to pass over any piece of evidence they find difficult to deal with, provided they cite, fairly and correctly, those parts of the evidence they comment upon. The learned counsel for the defendants, in his remarks on the evidence, totally forgot the evidence of Mr. Parker. If his evidence is to be believed, and I know no reason why it is not, he certainly gave important evidence in support of this charge—that the defendants evidently appeared to be attempting to stop the officers, and assisting the escape of Mr. O'Connor. The learned counsel for the defendants did not choose to deal with this evidence, though he conducted the cause with all possible discretion, abilities, and eloquence. As I have before observed, there is apparently a great deal of contradiction in this cause. I must again state the observation of Mr. Whitbread, and which was obvious if he had not made it, that, "in such a scene of tumult and confusion, many things must pass which escape the observation of every individual." But there is no

doubt of one thing — one thing is clear: if Rivett had not the scuffle which he swears he had with Mr. Fergusson and my lord Thanet, and if he did not wrench a stick out of Mr. Fergusson's hand, he is palpably forsworn, and grossly perjured. For him there is no excuse in the world. What motive he might have, I do not know; he has no interest; and in weighing the testimony of witnesses, I cannot consider the rank of a person, nor his station. It is clear, if he has not told the truth, he is guilty of perjury. In this scene of tumult, men's minds must have been greatly distracted. It is for you to say what degree of credit you will give to all the witnesses. These are the observations I have to make; and I should retire from my duty if I had not made them to you. . . .

At eleven o'clock at night the jury retired; and after being out about an hour, they returned with the following verdict:

The earl of *Thanet*, *Robert Fergusson*, esq., Guilty; *Dennis O'Brien*, esq., Not Guilty.

Friday, May 3d

Mr. *Attorney-General*. — In this case of the King against Sackville, earl of Thanet, and Robert Fergusson, esq., I have to pray of your lordships the judgment of the Court.

Lord *Kenyon* (to Mr. *Erskine*). — Have you anything to say for the two persons convicted?

Mr. *Erskine*. — The cause having been tried at bar, your lordships are already apprized of everything I could have to offer. I believe lord Thanet and Mr. Fergusson wish to say something to your lordships.

Lord *Thanet*. — My lords, before the sentence is pronounced, I beg leave to address a few words to the Court; not for the purpose of impeaching the veracity of the witnesses for the prosecution, or of arraigning the propriety of the verdict: on those points I shall say nothing.

What I mean to submit to the Court is, a short, distinct narrative of the facts, as far as I was concerned in them.

I attended the trial at Maidstone in consequence of a subpoena. When I had given my evidence, I retired from the court, without any intention of returning, until I was particularly requested to be present at the defense made by Mr. Dallas, the prisoners' counsel. At that time I had never heard of the existence of a warrant against Mr. O'Connor, nor of any design to secure his person if he should be acquitted. The place I sat in was that which Mr. Dallas had quitted, when he removed to one more convenient for addressing the jury. While sitting there, I heard, for the first time, from Mr. Plumer, that he had reason to believe there was a warrant to detain Mr. O'Connor. When the verdict was pronounced, I went into the solicitors' box, to shake hands with Mr. O'Connor, which I did without even speaking to him. Many others pressed forwards, apparently for the same purpose. Upon a call for silence and order from the bench, or from one of the officers of the court, I immediately sat down on the seat under that part of the dock where Mr. O'Connor stood. At that period some confusion arose, from several persons attempting to get towards him, one of whom said he had a warrant to apprehend him, for which he appeared to me to be reprimanded by Mr. Justice Buller, in some few words, which I did not distinctly hear. The moment the judge had passed sentence on O'Coigly, a most violent pushing began from the farther end of the seat on which I sat. From the situation I was in, I did not perceive that Mr. O'Connor was attempting to escape. He was a good deal above me, and I sat with my back to him. I continued sitting in my place, until several persons on the same seat were struck, among whom, I imagine Mr. Gunter Browne was

one, from the complaint he afterwards made of ill-treatment, but whom I never saw before or since to my knowledge. I then began to feel the danger I was in; but the tumult increased about me so rapidly, that I was unable to get over the railing before me. I stood up, however, and used all the efforts in my power to go towards the judges, as to a place of safety; but at that moment, by some person or other, I was borne down on the table, where a man (who as I afterwards found was Rivett) struck at me several times with a stick, which I warded off, as well as I was able, with a small walking-stick. Rivett, as he struck me, charged me with striking him first, which I denied, and called out to him, as loud as I could, that I had not struck him.

I have now detailed, as clearly as I am able, my situation and conduct during the disturbance; and I do most solemnly declare on my word of honor, which I have been always taught to consider as equally sacred with the obligation of an oath, and am ready to confirm by my oath if I am permitted to do so, that I never did any one act but what was strictly in defense of my person. It is not at all unlikely, that, in such a scene of confusion, I might have pushed others, who pressed against me, to save myself from being thrown down; but I most solemnly deny that I lifted my hand or stick offensively, or used any kind of violence to any person. I declare upon my word of honor, that I knew nothing of the existence of a warrant to detain Mr. O'Connor, until I heard it from Mr. Plumer; and that, even then, it never entered into my mind that it was to be served upon him in the court, until some person called out that he had a warrant. I declare upon my word of honor, that the obstruction which the officers met with on the seat where I sat, was perfectly unintentional on my part, and was solely owing to the situation I was in: that I did nothing of-

fensively, but, on the contrary, was violently attacked and assaulted; and that I retired from the scene of confusion as soon as I was able. And, finally, I do most solemnly declare upon my word of honor, that I did not concert with any person the rescue of Mr. O'Connor, by violence, or by any other means whatsoever; that I had no idea of doing it alone; and that I was not privy to any consultation of other persons, either for the purpose of rescuing Mr. O'Connor out of the custody of the Court, or of preventing the execution of the warrant.

As I hold myself bound to state fairly, not only what I did, but what I said, as far as it is in my power to recollect what passed, with the agitation of such a tumult on my mind, I acknowledge that some words may have escaped me, which I ought not to have spoken. I am charged with having said, "that I thought it fair that he should have a run for it." I will not dispute about the exact words. I confess they were extremely inconsiderate. Some allowance, however, I think, may be made for the instant feelings of a man so ill treated as I had been.

My lords, I am not sanguine enough to expect any immediate advantage from these declarations. I know they will not avail me against the verdict: but the truth of them will not be suspected by those who know me; and hereafter, when all the circumstances of this transaction shall be coolly reconsidered, I am confident they will have weight with the public. . . .

Mr. *Fergusson*. — My lords, I have nothing to offer to your lordships, either with respect to the charge itself, the manner in which it was proved, or with respect to my own peculiar situation. . . .

I appear, however, before your lordships, to receive that judgment which your duty calls upon you to pronounce, in consequence of the verdict of a jury. That verdict I do not mean to arraign: it was

given on contradictory evidence, the value and balance of which it was the peculiar province of the jury to weigh and to decide.

But if your lordships' long practice in courts of justice shall have shown you the fallibility of human testimony, — if it shall have shown you, still more, the fallibility of human judgment founded upon human testimony, I hope I may meet with your indulgence, if I here make a solemn declaration of that, with respect to which I alone *cannot* be mistaken.

My lords, upon the occasion which has given rise to these proceedings I was of counsel for one of the prisoners who was tried at Maidstone. I was seated in the place which was allotted for the counsel for the prisoners; and being wholly engaged in the discharge of my duty, I solemnly aver, that whatever might be the previous consultations or conversations of others, with respect to the practicability or impracticability of a rescue, I never had even heard the rumor that a fresh warrant was in existence, until after the jury had retired to consider of their verdict. It was not till after they had so retired, and very shortly before they returned into court, that I learned that circumstance. I was in my place, seated where I had been during the greater part of the day, at the moment when the verdict was delivered: and I do most solemnly aver, that from that moment, until I was pressed upon by the crowd, I did not stir from that seat. I do farther declare, that when I was forced upon the table, I used no violence to any one; that the whole of my endeavors went to allay the ferment, and to remove those of my friends whom I loved and regarded, from the scene of disturbance, in order that they might not be implicated in any charge that might afterwards be brought against those who were the authors of it.

I can, therefore, say, in the presence of this court, and under the eyes of my countrymen — that

which, in the name of my God, I have already sworn — that I am innocent of this charge. . . .

Mr. *Attorney-General*. — My lords, in this stage of the business, I have very few observations to offer to your lordships' attention. . . .

Lord *Kenyon*. — You have not alluded to any particular punishment that you supposed to be annexed to the offense. . . . We wish, on a future day, to have it argued, whether the Court have any discretion in the sentence they are to pronounce? If there is a specific sentence, our discretion is taken away. . . .

Monday, June 10th

Mr. *Attorney-General*. — My lords, I have the honor of addressing your lordships, on the part of the prosecution, in the case of lord Thanet and Mr. Fergusson, and to inform you, that since my last address to the Court on this subject, I have received, and have now in my hand, his majesty's royal command to cause to be entered a nolle prosequi on such parts of this information as have in fact raised any doubt whether the judgment of the court is discretionary. My lords, in obedience to his majesty's royal will and pleasure, I have accordingly caused to be entered a nolle prosequi on the first, second, and third counts of the information. . . .

My duty at present, in obedience to his majesty's commands, is, to pray judgment on the fourth and fifth counts of this information. . . .

Mr. *Justice Grose*. — Sackville earl of Thanet and Robert Fergusson, you, and each of you, have been found guilty of a misdemeanor, by a verdict of a jury of your country, on an information filed against you by his majesty's attorney-general, charging you with a riot, and an endeavor, in open court, before his majesty's justices of Oyer and Terminer, to rescue Arthur O'Connor out of the custody of the sheriff.

in which he had been detained during and after the trial for high treason, and thereby to enable him to go at large. There are some counts, stating it to have been accompanied with violence; but of those I have no occasion to take notice. Other counts charge you with having made a riot and disturbance in one of his majesty's courts of justice, and interrupting and obstructing his justices in the lawful and peaceable holding of that court. . . .

To the nature of your case the Court has paid great attention; and upon the most mature deliberation on the offenses contained in the two last counts of this information, this Court doth order and adjudge:

That you, SACKVILLE EARL OF THANET, pay to the king a fine of One Thousand pounds; that you be imprisoned in the Tower of Lon-

don for the term of one year, and that you give security for your good behavior for the space of seven years, to be computed from the expiration of that period, yourself in the sum of ten thousand pounds and two sureties in five thousand pounds each; and that you be farther imprisoned till such security be given.

The sentence on you, ROBERT FERGUSON, is, that you pay a fine to the king of One Hundred pounds; that you be imprisoned in his majesty's jail of the King's bench for the term of one year; and that you give security for your good behavior for seven years, to be computed from the expiration of that period, yourself in five hundred pounds and two sureties in two hundred and fifty pounds each; and that you be farther imprisoned till such security be given.

393. KNAPP'S TRIAL. W. & S. B. Ives' edition. Salem, 1890, of the first trial and the arguments. Dutton & Wentworth's edition. Boston, 1890, for the added testimony at the second trial.¹

At the Supreme Judicial Court for the Commonwealth of Massachusetts, held at Salem on the second Tuesday in July, A.D. 1890, pursuant to an Act of the Legislature, passed June 5, 1890.

Present.

Hon. ISAAC PARKER, LL.D., Chief Justice.

Hon. SAMUEL PUTNAM, LL.D.,

Hon. SAMUEL S. WILDE, LL.D.,

Hon. MARCUS MORTON, Justices.

The Grand Jury being impaneled and sworn . . .

Friday Morning

The Grand Jury came into Court with the bills which they had found.

The prisoners, John Francis Knapp, George Crowninshield, and Joseph Jenkins Knapp, junior, were then placed at the bar and the following indictment was read by the Clerk . . .

To this indictment they severally pleaded *Not Guilty*. And at the request of John Francis Knapp, and Joseph Jenkins Knapp, Franklin Dexter and William H. Gardner, Esquires, of Boston, were assigned to them as Counsel; and Samuel Hour, Esq. of Concord, and Ebenezer Shillaber, Esq. of Salem, were assigned to George Crowninshield as Counsel at his request.

Tuesday, July 27, was assigned for the trial. The prisoners desired separate trials.

Tuesday Morning, August 3

Present, PUTNAM, WILDE, and MORTON, Justices.

The Attorney-General, Perez Morton, entered a nolle prosequi upon the Indictment which had been found against the prisoners, upon which they had been arraigned; and the following Indictment was returned by the Grand Jury: . . .

John Francis Knapp pleaded *Not Guilty*.

Before the Chief Justice Mr. Dexter suggested that they were indicted only as accessories, and therefore were not obliged to plead not guilty to the commission of a principal.

THE COURT said they need not plead.

The Attorney-General then moved that Mr. Worcester might be permitted by the Court to take part in the case on behalf of the government, stating briefly the reasons.

THE COURT said there could be no objection at all. . . .

Counsel for the Commonwealth — Hon. Perez Morton, Attorney-General; Hon. David Davis, Solicitor-General; Hon. Daniel Webster.

Joseph J. Knapp, jr. and George Crowninshield were then retained. . . .

SOLOMON NELSON, Esq., was appointed by the Court, Foreman of the Jury.

The Clerk then read the Indictment.

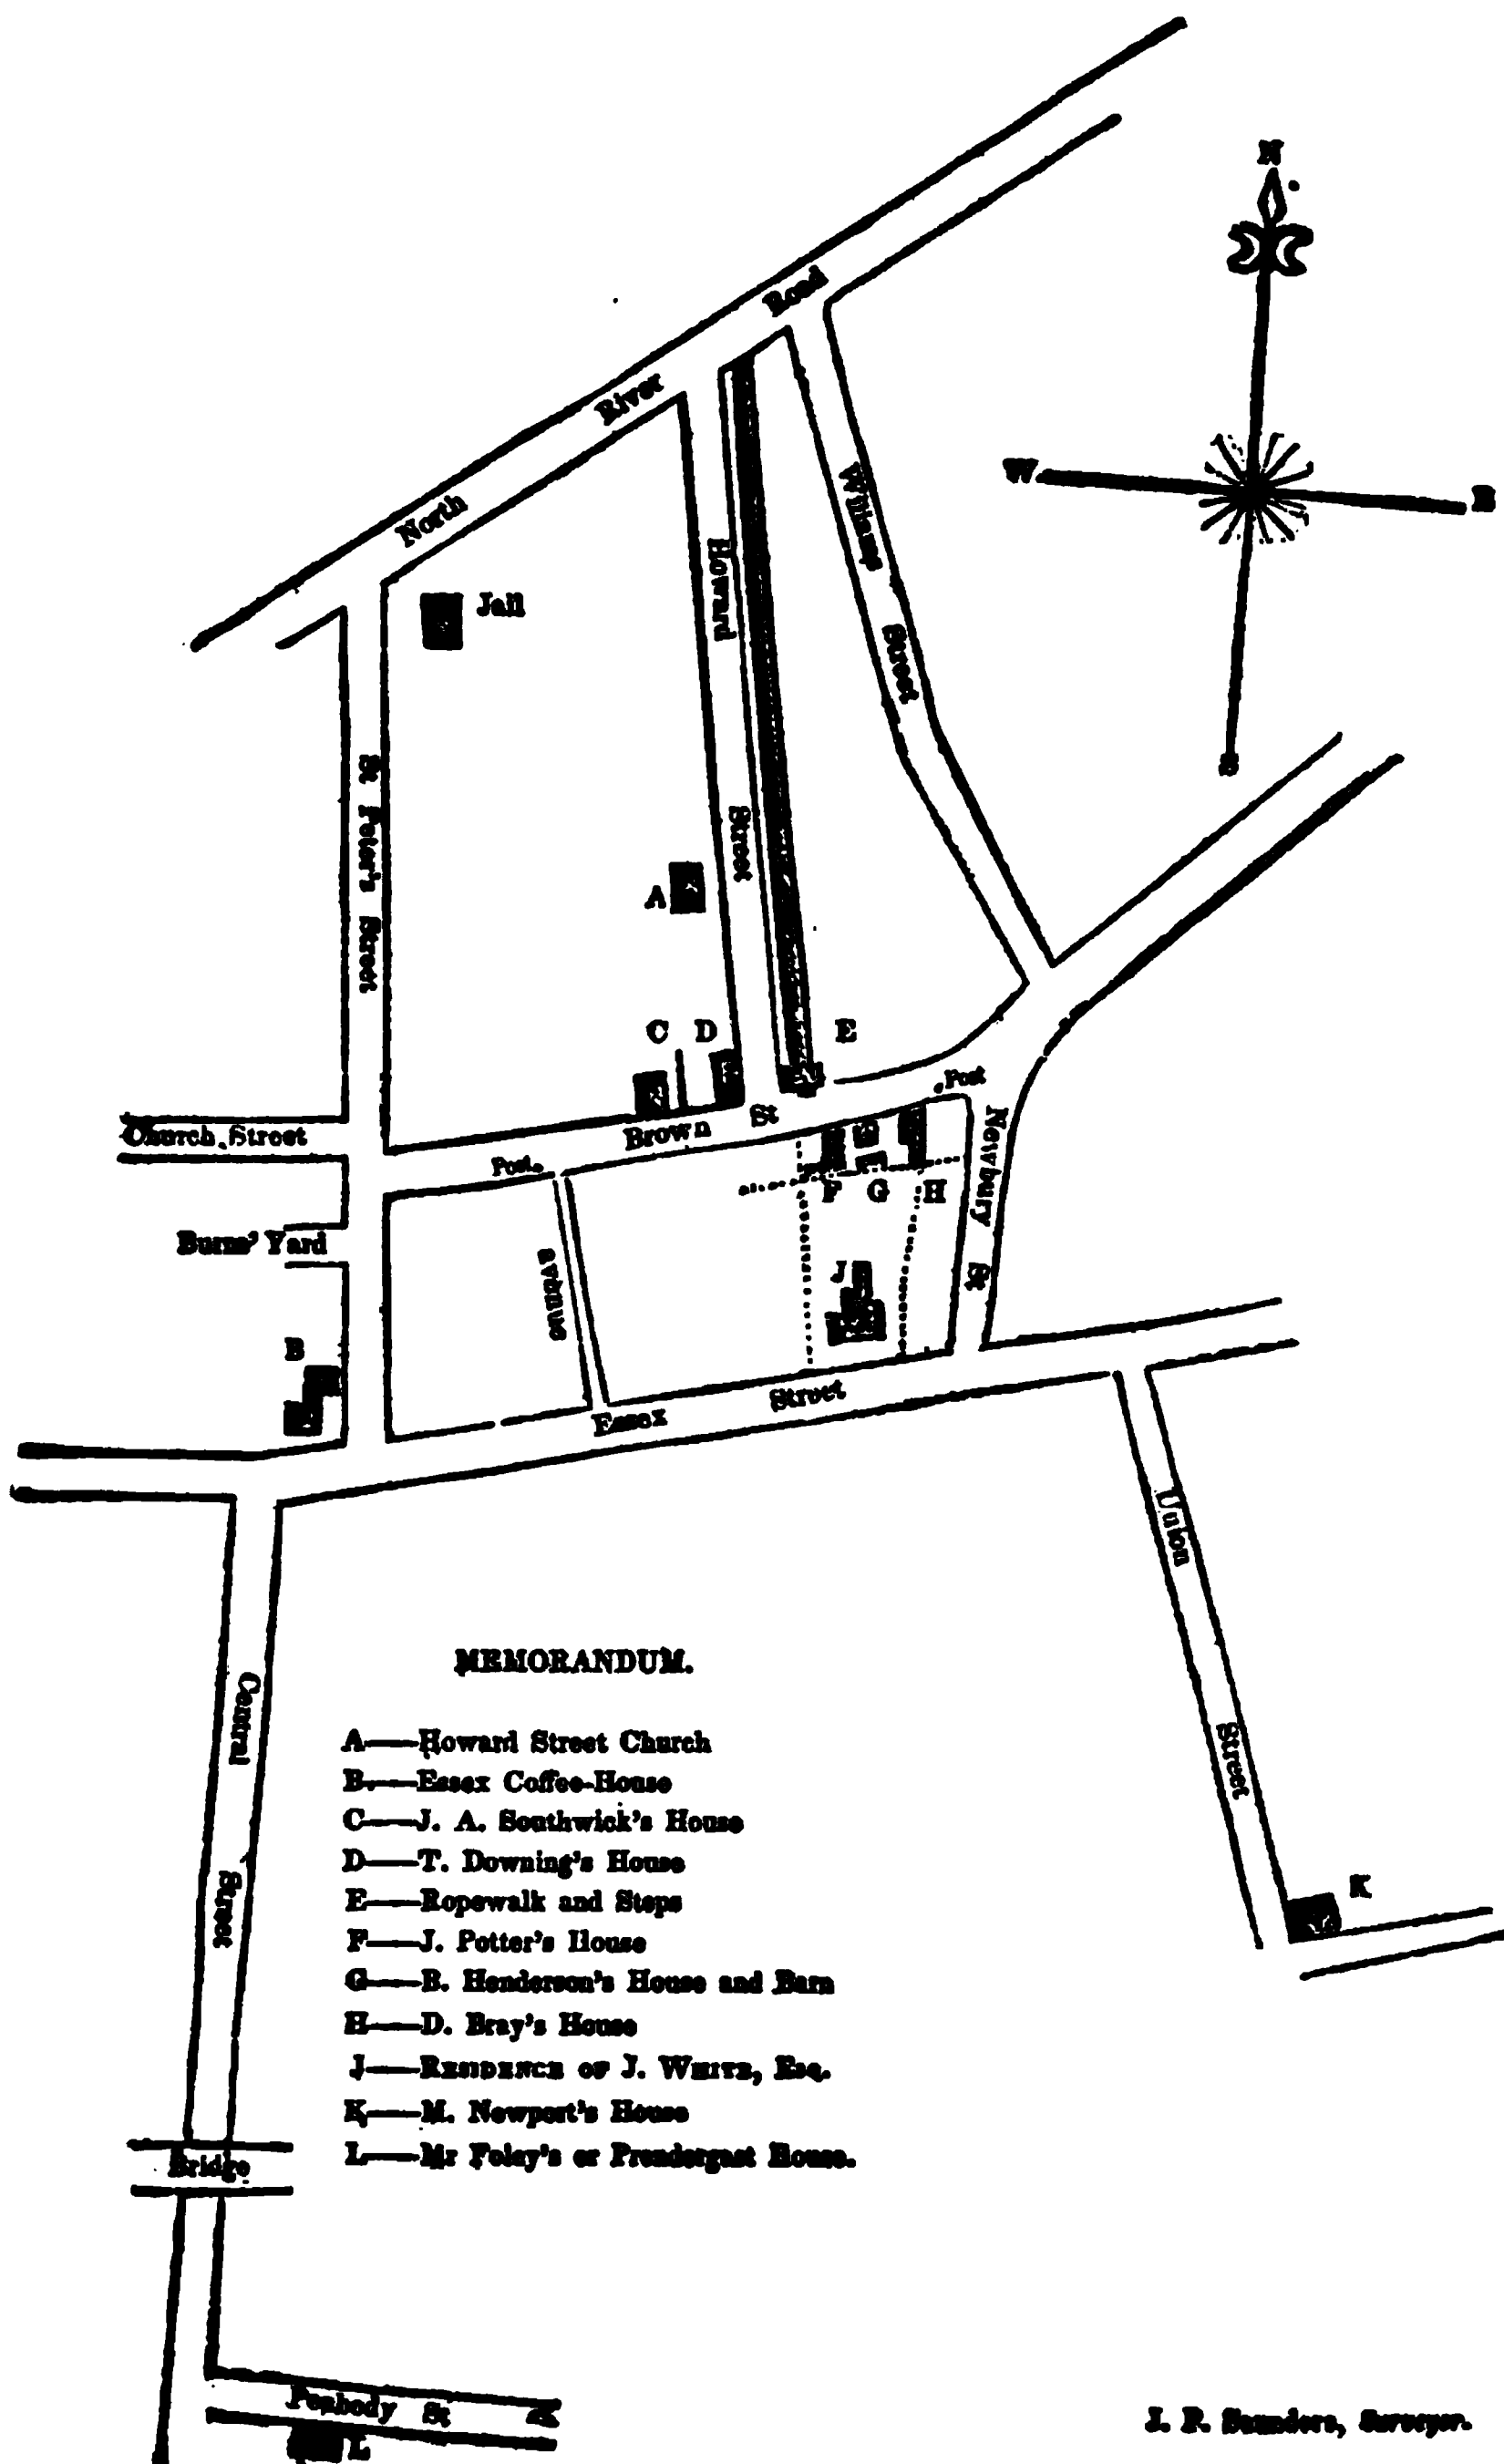

The Attorney-General then addressed the Jury, as follows: *Gentlemen of the Jury.*

The charge against the prisoner at the Bar, is for the murder of the late Mr. Joseph White. . . .

It is not to be wondered at that such a crime should have produced an uncommon excitement among the citizens of the place of its atrocity, for who of them could have felt himself safe in retiring to his rest, unless the authors of this abominable murder were detected and punished? And it affords me satisfaction to say, that much credit is due to the Committee of Vigilance, chosen on the occasion, for their unwearied exertions to obtain that end. . . .

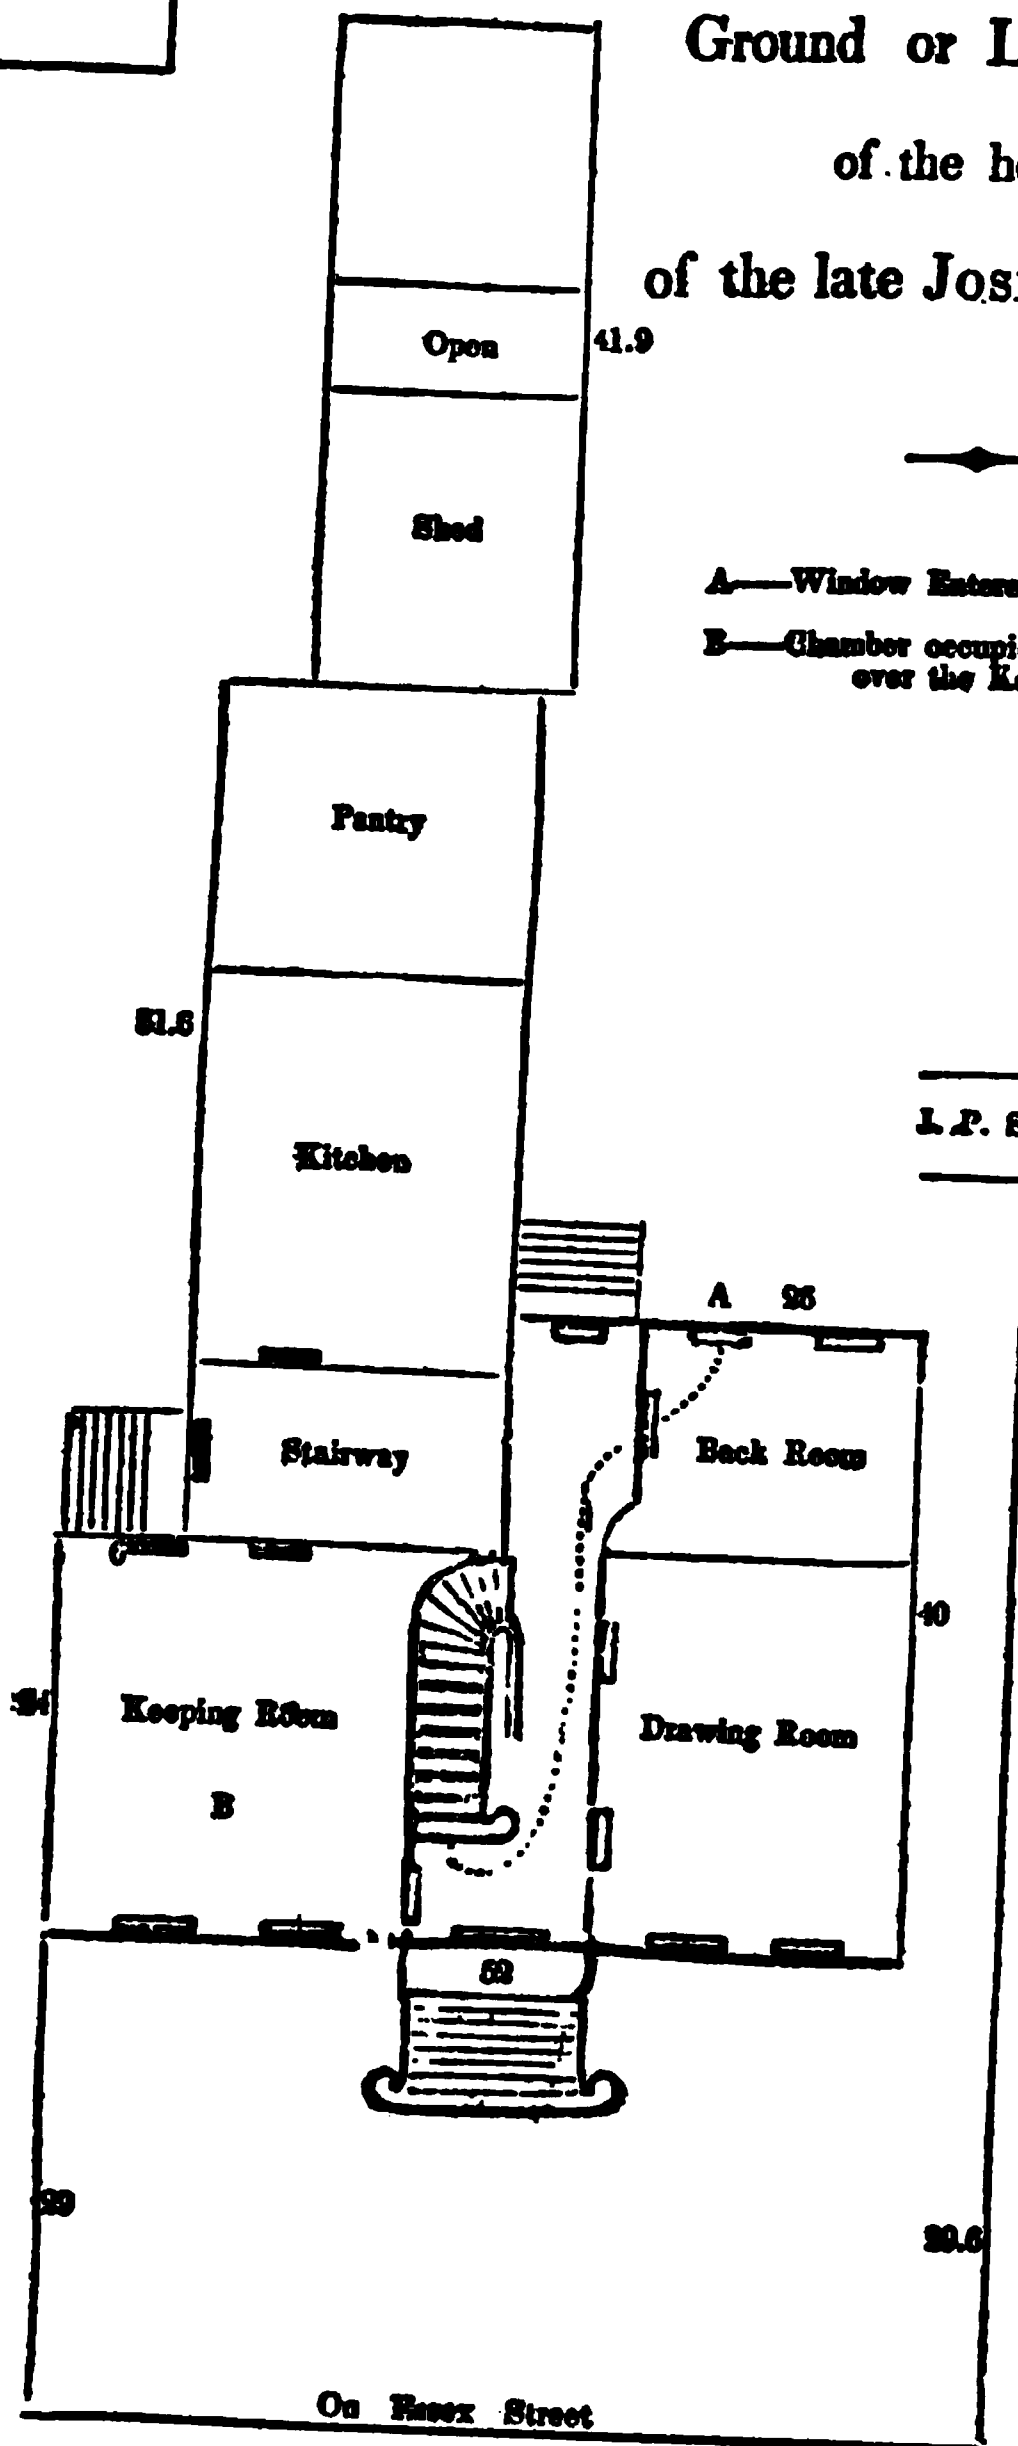

The perpetrators of this atrocious murder remained, for a long time.

veiled in darkness and mystery, notwithstanding the efforts to detect them. The circumstances under which it appeared to have been committed were such as naturally created suspicions against the inmates of the family; for it was found that nothing had been taken away, that no actual violence had been committed in entering the house, that the iron bar, with which the window where the assassin entered was usually fastened, was taken down and carefully placed against the side of the window. . . .

The first suspicion fell upon the son of Mrs. Beckford, who was the niece and housekeeper of the deceased; but on inquiry it was found that he could have no concern in it, not having been in a situation to render it possible.

The breath of scandal, spread, no doubt, as since appears to have been his intention, by the prime instigator of the murder, to cover his own atrocity, imputed this deed of death to the favorite nephew and principal heir of the deceased, Mr. White; but the filial and parental-like affection which was known to subsist between this uncle and nephew . . . soon dissipated this ephemeral slander, leaving, however, on this honorable mind an embittered regret, that any one for a moment, could suppose him capable of so dark and horrid a crime. . . .

But not a conjecture was whispered, that I ever heard, against the real authors of the murder, until a letter was handed to the Committee, under the signature of one GRANT, but really written by Palmer, whom you will have as a witness upon the stand, dated at Belfast, May 12th, postmarked May 13th, directed to J. J. Knapp, not having the addition of junior to it; and, by that means, it was handed to the Committee by the father, for whom it was not intended. We are not now about to give any account of the contents of this letter, but only to say, that in consequence of it, and by some ad-

dress of management by the Committee, *Palmer* was arrested at Belfast, as having some concern in the murder, or as having knowledge of the persons who were the perpetrators, and the two Knapps were arrested, charged with being deeply implicated in the fact. . . .

After the two Knapps were arrested, at the request of several respectable citizens of Salem, I authorized in writing the Rev. Mr. Colman to receive the free and voluntary disclosures of any one of the individuals charged, without naming any one; and giving him authority to say that on condition of his disclosing the whole truth and nothing but the truth respecting the murder, I would call him as a witness on the trial, and that being a witness, he would have the implied pledge of the Government, not to be prosecuted for that offense. In consequence of this authority, Mr. Colman received the voluntary disclosure of J. J. Knapp, jr., in writing: accordingly, to redeem the pledge on the part of the Government, I have called him before the Grand Jury, at this term, as a witness, to give evidence as he has disclosed: but, by the advice of his Counsel, he refused to testify there, saying he was not bound to criminate himself. . . .

It is, however, altogether immaterial, whether the prisoner at the Bar, actually gave the mortal blows, provided he was present, aiding and abetting the person, who inflicted them. He is charged both ways. . . . After proving the murder, I shall move that J. J. Knapp, jr., be brought into Court as a witness. . . .

Benjamin White was then sworn, and testified: He was a servant of Capt. White. On Wednesday morning, 7th of April, about 6 o'clock I came down into the kitchen, and on opening the shutters of the eastern window, saw the back window of the northeastern room open, and a plank put up to the

window. I went into the front room, but saw no appearance of any one having been there. I then went to Miss Kimball's (the maidservant's) room, and told her, and then went into Mr. White's chamber at the back door, and saw that his door, opening into the front entry, was open, and that he was murdered. I then went down, and told Miss Kimball that Mr. White was gone. His face, when I first saw him, was very pale — the bedclothes were turned down. I think I saw some blood upon the side of the bed, or on his flannel. I then went to Mr. Mansfield's door, who lived opposite, and knocked — then to Mr. Deland's, then to Dr. Johnson's, and then to Mr. Stephen White's. . . .

On the afternoon before the murder, I was at the farm, in Beverly, with Mr. White — we were there several hours; came home a little before night, about 5 o'clock. The window which I found open, was up 21 or 22 inches — the shutter, which opened very hard, was open some way, and it was sometimes left open two or three days together — the window was fastened by a screw, and the shutter by a bar. I found this bar standing by the right side of the window. Mrs. Beckford is a niece of Capt. White, and lived with him. She is a middle-aged lady. Miss Kimball, a domestic, and myself, were all who lived in the house with Mr. White — his chamber was over the southwest parlor (the keeping room) — the house faces south, on Essex street, is three stories high — Mr. White's chamber has two doors, one opening from the end entry, and the other from the front entry — it has also four windows, two southern, one western, and one northern, looking into the yard.

Mr. Webster then called *J. P. Saunders, Esq.*, the Surveyor, who swore that the plans of the house and premises were correct. Mr. Webster then explained these to the Jury.

(Witness continued.) — I was at

the kitchen window when I saw the back parlor window up — that room was very little used. The rooms commonly used were the S. W. parlor — Mr. W.'s chamber over that — the maid's over Mr. W.'s. Mrs. Beckford's chamber over the kitchen, and mine over Mrs. B.'s. The chambers on the eastern side were unoccupied, except when strangers were at the house. Mrs. B. was at Wenham on the night of the murder — she went away about 12 o'clock that day. The window which was opened, and at which the plank was put, was the one nearest the back door. Mr. W. went to bed that night rather later than usual, about 20 minutes before 10 — his usual hour was about 9. He was 82 years old and in some measure deaf — the left ear was deafer than the right. . . .

The head of his bed was against the eastern wall of the chamber, near the door which opened into the front entry, so that any one entering that door would come behind Mr. W. if he was lying upon his right side. Mrs. Beckford's furniture was in the back parlor, which was entered. In Capt. W.'s chamber there are shutters to all, and blinds to the front and western windows — I did not notice the state of the windows that morning, but the blinds were open and the room was light enough to see when I entered. I knew that Mrs. B. was going to Wenham, for she had spoken of it two or three days before. I went to bed the night of the murder immediately after Capt. White went. It was about a quarter before 10 o'clock. I went without a light. I left Miss Kimball raking up the fire, and as I went up I looked into the keeping parlor at the clock. There is an avenue and two doors on the west end of the house, and to get at the opened window, one must pass along that end, through the avenue, through a garden gate, round the buildings, and up the garden to it. There are no blinds

to my chamber — there is a shutter at my east window, but none at the west.

Cross-examination. — Mr. White went from the kitchen to his sitting room, and through his room to bed. After he had retired I knew what o'clock it was, because I looked at the clock. No one called at the house on the evening previous to the murder — do not know that Mr. W. sat up late expecting any one. The street door was usually kept fastened all the evening, except the latter part of it, for when Mr. W. came in he used to leave it unfastened till he went to bed. The relatives, Mr. S. White's family and Mrs. Beckford's friends, passed in and out without knocking — I saw Joseph Knapp there once or twice within two months before the murder. Frank Knapp very seldom came there. Mr. W. never kept his lamp burning all night. It was not Capt. White's habit to keep a light or fire in his room during the night — there were shutters to all his windows, and to the north window shutter there is a bar, and this is the only one which has a bar. The weather, when I went to bed, was overcast. The shovel and tongs had been removed from the chamber and there was no poker there — there was one in the room below. There is nothing between my chamber and Capt. W.'s but an entry and staircase — I heard no noise during the night — I don't recollect telling any person that some gentlemen were there or that any one was expected on the day of the murder — I don't know who had been there during the day — did not hear or see Mr. W. after he went upstairs — Miss Kimball had nearly raked up the fire when I went up — I did not hear her go to bed nor see a light in her room when I went up — I saw Frank Knapp a day or two after the murder — he sat up with the body and was in the house some time every day — I sat up with him one night

and don't remember, who else ever sat up with him — he assisted at the funeral. There was nothing missing from the house after the murder, and there was money in Mr. W.'s chamber, about a week before the murder. I found the window which was entered fastened — knew that it was so by putting my finger over and feeling the screw — it had not been unbarred, to my knowledge, before the murder.

Reëxamined by Government. — I had seen Jos. Knapp there within two or three weeks previous to the murder — he usually came when Mr. White was not at home, about four in the afternoon — he married a daughter of Mrs. Beckford — he had free access to all the rooms when the family were out — we usually kept fastened both front and back doors — Joseph came into both. . . .

Lydia Kimball (a domestic) was then sworn. I did not hear any noise during the night — the man came to my door and told me that some one had been into the house, for that the back window was up; I went down into the front room to see if anything had been stolen; told him to go up and tell Mr. White — he came down and told me to be calm — that Mr. W. had gone to the eternal world — he then went to call the neighbors — I did not see Mr. W. till I was called before the Jury of Inquest. Mrs. Beckford left the house on Tuesday, the day previous to the murder, about half past 11 o'clock — she told me, a day or two before, that she was going to Wenham — Mrs. Knapp came down for her. I went to bed that night rather before 10. There are blinds and shutters to my room; the blind on the west side was shut, but all the others, and all the shutters, were open. — In Capt. W.'s room all the shutters were open except one half of the one nearest his bed, which was a front window — that day when I made the bed all the blinds were open, except the

western ones, and I have not seen them since. It was Mr. W.'s usual habit to have all the shutters open but the half one I have mentioned. He usually went to bed about 9.30. I lived with him more than sixteen years. I could generally tell when he was awake, if I myself was so, by a kind of cough or *hem* which he had when awake, which was usually in the latter part of the night — I don't recollect hearing him ever early in the night — I had nothing to do with the room which was entered — it was Mrs. B.'s, and not much used — the chambers over that side of the house were unoccupied. Capt. W. was deaf in his left ear.

Cross-examined. — I think Capt. White went to bed a little before ten, on the night of the murder — the northern window of his chamber was shut and barred in the winter and opened in the spring — I can't say exactly what time it was unbarred this spring — my room is over Mr. White's and has the same number of doors and windows — no one called at the house that day after one o'clock — the gentleman who called then did not say he should call again. Capt. W. did not lock his door usually, but there was a key in it — I generally heard him shut it — I did that night — he usually put his candle on the table between the windows.

Dr. *Samuel Johnson* called and sworn.

I was called about 6 o'clock, to Capt. White's — was told that he was murdered. I went, and entered with Mr. Stephen White. I went to Capt. White's chamber, and found him lying on his right side, or nearly so, and nearly diagonally to the bed. There was a mark of considerable violence on his left temple. I noticed that the bedclothes were laid slantwise, square across the body, and diagonally to the bed. He lay with his feet towards the left lower post of the bed, and his head towards

the right head post. His head was towards the closet, and on the right side, on the pillow; on throwing off the bedclothes, I saw that the back of his left hand was under his left hip, and there was considerable blood on the bed: he also had bled a little from the nose. Nothing further was then done. I told Mr. Stephen White that an inquest should be called. In presence of the Coroner's Jury, the shirt was stripped off, and the body exposed. We found five stabs in the region of the heart, three in front of the left pap, and five others, still farther back, as though the arm had been lifted up, and the instrument struck underneath it. I examined a number of the stabs with a probe, and found that it would penetrate from one to three inches. It was my belief at the time, that either the wound on the head, or the stabs, would have caused death. The wound on the forehead was not very perceptible, except to touch. Upon feeling I could perceive that the bone was fractured. I was convinced at the time, that it was sufficient to cause death. Afterwards, a more minute examination was made; the scalp was removed, and we found a fracture of an oval shape, in the temple, three and three fourth inches long, and two and one half inches broad. A portion of the temple was broken in, some fractures extending upwards, towards the back of the head, and another down, towards the face. Upon opening the chest, it was found that two of the wounds had penetrated the walls of the heart, without reaching the cavity — I have no doubt that either would have produced death. The instrument which gave the blow on the head was probably some smooth instrument, like a loaded cane, that would give a heavy blow, without breaking the skin, and the instrument used in giving the wound in the side was probably a dirk. On the second examination, we found thirteen stabs, six in front

and seven farther back, about three inches from the others, near to the spine. We found three of the ribs fractured, most probably done by the hilt of the dirk. There was no appearance of a struggle, it appeared a case of instant death. I was desired by Mr. Stephen White, to look on and see the iron chest and trunk examined, and also the footprint and window. The window was open. I saw two footprints, both directed towards the wall of the house. There was a plank set up, diagonally, the bottom of it about two feet from the sill. There were no marks of wet feet, but a little dampness on the floor, where it had rained in.

Cross-examined. — The inquest was holden about an hour after I went to the house. The second examination took place thirty-six hours after death. The stabs were grouped; one group of five was within the compass of three inches. On the first examination, the wound on the head was not very perceptible, except to the touch. On the second examination, it was more prominent; there then appeared to be more air in the *cellular membrane*.

The footprints, I believed at the time, were made by the person when he put up the plank; they were not near together, and were those of a right and left foot. There was no appearance of more than one weapon having been used in giving the stabs. The front wounds gaped more than the others, and were three fourths of an inch wide. The first examination (that before the Jury of Inquest was held) was hasty. The head was then lying on its right side, partially, but not fully, and a little back. I suppose the arm was drawn back when the stabs were given, because it covered them when I first saw him. The body was nearly, but not quite, cold, and there was no pulse. The human body retains its heat for some time, if covered up. Mr. White was an old man, but he was rather fleshy.

The blow on the head, by checking the circulation, probably prevented the loss of blood. From all the circumstances, my first opinion was, that it had been done three or four hours. There was, however, nothing to prevent its having been done six or eight hours. My first impression was that he had lost more blood than we afterwards found he had.

The *Attorney-General* then called Joseph J. Knapp, jr., as a witness, and inquired of him, if he was willing to be sworn. He answered in the negative, and the *Attorney-General* was proceeding to inquire the reason, which was objected to by Mr. Dexter.

THE COURT said he was not obliged to state his reasons for refusing. It is only necessary that this should be understood, so that there may be no difficulty hereafter. The Government say they have pledged themselves not to proceed against him if he would testify; he does not testify, and now that pledge is recalled. . . .

Benjamin Leighton sworn.

I have lived with Mr. Davis, at Wenham, at the house where Mrs. Beckford and Joseph J. Knapp jr.'s family live, since the 6th of October last. Knapp's family came there to live a few days after I went. About a week before Capt. White was murdered, I went down to the lower end of the avenue, got over the wall, and sat down by the side of the gate, that is across the avenue. I sat a few minutes, and then heard men talking the other side of the wall. I looked round through the slats of the gate, and saw the two Knapps coming down the avenue. When they came near the gate, Joseph said, "When did you see Dick?" Frank said, "I saw him this morning." Joseph said, "When is he going to kill the old man?" Frank answered, "I don't know." Joseph said, "If he does not kill him soon, I will not pay him;" — then they turned back, and I did not

hear anything more. This was about two o'clock in the afternoon; I had been to dinner. It was the Friday before Capt. White was murdered, I think; it was within the week previous to the murder. They did not know that I was there; I was waiting for Mr. Davis, to go to work. I shall be eighteen years old the 30th of next December. I am under no mistake about the conversation; I am sure of the persons. Jos. J. Knapp, jr., has lived in the house where I lived. John Francis Knapp came to the house frequently. Frank came up to Wenham one evening, after the murder, in a chaise, about nine o'clock; this was about a fortnight or three weeks after the murder. I believe Mrs. Beckford was living there then. There was a gentleman in the chaise at the door; I did not know him, but he was a slim man, not so thick as Frank Knapp. I went to the door when the chaise drove up — Frank got out and went in, and asked if his brother Joseph was at home. Joseph Beckford said he was. Joseph Knapp met Frank at the inner door, and they went into the room together, and shut the door. They were together, I should think, an hour; nobody was in the room with them. Frank Knapp knocked; I went to see who was at the door. The other person sat in the chaise all the time; they did not give the horse anything; they both drove away together, down the avenue; I could not tell which way they went.

Cross-examined.

The house is about fifty rods from the road; I heard the conversation near the gate to the pasture, at the lower end of the avenue. I had just come from dinner; Mr. Davis was in the house at the time. Joseph and Frank were standing by the gate, near the house, as I passed down the avenue — when I got down the avenue, they came down. I was sitting under the wall, to wait for Mr. Davis, and to take a little nooning, I mean a little

rest. I passed them and went down the avenue, went through the gate, and hasped it, and sat down behind the wall. I did not say anything to Mr. Davis about the conversation I had heard. I have been called upon to tell what I knew about it, by Mr. Waters and another gentleman I did not know; they sent for me to come to Mr. Waters's office; I told them I could not recollect, at that time, that I had ever told anything about it. I did not tell them I knew nothing about it. I was in his office in the forenoon and afternoon, and stayed at the Lafayette Coffeehouse at noon.

The gate, where I left the Knapps standing, is in front of the house, and opens into the avenue. I went down the avenue towards the pastures, not towards the road, went out of the avenue over the wall, by the gate. This gate could not be seen from the place where the Knapps stood. The house makes one side of the avenue, which is narrower at that place. The gate, at which the Knapps were standing, is about forty feet from the house. The gate, where I got over, is fifty rods from the house. They could not see me when I got over the wall; the house hides the place, and stands out into the avenue, or the fence retreats. I know they could not see me get over the wall, because I have tried since. I tried, because if they did see me, and knew I heard them, I was afraid they would kill me.

I first saw Mr. Waters a week ago last Thursday: I was summoned by a man from Lynn, and carried to Mr. Waters's office. They asked me if I recollected telling Mr. Starrett anything. I told them I did not. I believe I did not tell them I did not know anything about it. I went to Mr. Waters's office about 11 o'clock, and stayed till 2. Mr. Starrett was there, and they talked with him. They asked me if I knew anything about Frank

Knapp. I told them I did not. I was asked if Richard Crowninshield had been at the farm, and I said I did not know him. They asked me if I had told Starrett anything about it, and I told them I did not recollect telling him anything. I did not then remember that I had told Starrett anything about it, and I told them so. They bothered and frightened me talking to me, and I could not remember. Mr. Starrett told Mr. Waters that I had told him something, but I could not recollect it, and told them so. They said Mr. Starrett and Dr. Kilham were in the shop when I said so. I told Mr. Waters I did not recollect it, but if he would come up the next day, I would tell him all that I knew. I then remembered what I have testified, but did not calculate to tell anything about it. I went to Mr. Waters's office again in the afternoon, about 5 o'clock. From 2 to 5 I was at the Tavern. Mr. Starrett and Mr. Waters were at the office in the afternoon. Mr. Starrett asked me if I could not recollect what I said in his shop. I told him I could not. They said Dr. Kilham and Mr. Starrett were in the shop, and heard what I said. They did not question me any further. I stayed there till sun about an hour high; I was there an hour or more. They did not tell me anything would be done to me, if I did not tell what I knew, but said I must come to Court.

I told Starrett, because I spoke before I thought. I saw Mr. Waters again last Saturday, at Lummus's tavern, in Wenham. He came there with Mr. Choate and Mr. Treadwell. They wanted me to tell what I knew. I told them I had been down to Salem, but could not recollect then; I was in a strange place, and frightened. They talked to me so, that I could not recollect. Then I recollected what I had told Starrett, and told them the same story I have told to-day. I believe they asked me but once. I told them at once

what I knew. They did not tell me they had a warrant against me. Mr. Davis afterwards told me they would carry me off, if I did not tell all I knew; they did not threaten me.

The day I heard the conversation between the Knapps, I was going to splitting rocks. They were on one side of the wall and I on the other. I looked round beyond the wall, and through the slats of the gate. I did not wish they should not see me. They were halfway between the house and the gate when I heard their voices, and looked round to see who they were. They walked down to within three or four feet of the wall. I heard nothing else, that I could understand. They stood by the wall two or three minutes, and then went back. It was after they stopped that I heard what I have testified. I did not tell the conversation to anybody before the murder. I could not think, till after the murder, what it was about. I stayed by the wall till the Knapps had passed out of sight. Mr. Davis came down after I had gone to work.

On the evening when Frank came to Wenham, with another person, it was dark, and the chaise top was up. I could see that the man, who sat in the chaise, was a slim man.

Reexamined. — On the day after the murder, I went into Starrett's shop, and he said, "What is the news about the murder?" I said, they think I don't know anything about it, but I know a little more than they think I do. I spoke before I thought. I was unwilling to say anything more because if they got hold of this, I was afraid they would kill me. Frank used to be round me, with his dirk, and pricking me with it — he did this more than once, and other persons saw it. Thomas Hart saw it. The first time I told the conversation to anybody, it was to Hart, and it was not long ago. I next told it to Mr. Waters. I told Starrett I overheard something, but did not tell him what.

This was when going home from Salem; before this, I had told Hart, down in the field. No threat has been used to make me testify. I was frightened when I was carried to Mr. Waters's office, for I was taken suddenly, and from the field — they carried me by the Courthouse, but the Grand Jury had been dismissed. The officer read the summons to me when he took me.

Cross-examined again. — The first time I saw Francis Knapp have a dirk was after he was attacked at Wenham Pond, after the murder. Starrett did not ask me what I knew, did not ask me what I had overheard. I am afraid now, if the Knapps get clear, they will kill me. I heard there was a reward offered. I told Mr. Starrett before I heard of the reward, but did not tell the conversation till afterwards. I did not know what the reward was.

Rev. Henry Colman, sworn.

I had no personal acquaintance with the prisoner until the 28th of May, when he was examined before Justice Savage. On the afternoon of that day, I went to his cell with his brother, Phippen Knapp, at his (Phippen's) request. When we went in, Phippen said, "Well, Frank, Joseph has determined to make a confession, and we want your consent." I am not able to give the reply of the prisoner, in his precise words, but the effect was, that he thought it hard, or not fair, that Joseph should have the advantage of making a confession, since the thing was done for his benefit, or advantage. I now give his words, as nearly as I can recollect them. He said, "I told Joseph, when he proposed it, that it was a silly business, and would only get us into difficulty." Phippen, as I supposed, to reconcile Frank to Joseph's confession, told him, that if Joseph was convicted, there would be no chance for him (that is for Joseph), but if he (Frank) was convicted, he might have some chance for pro-

curing a pardon. He then appealed to me, and asked me if I did not think so? I told him "I did not know, I was unwilling to hold out any improper encouragement."

Dexter. — We object to any continuation of this confession. It is now in evidence, that Phippen, with a view to reconcile Frank to Joseph's confession, told him, that if he were convicted, he might have a chance of pardon. This was a direct inducement to a confession.

THE COURT said they would hear the Counsel for the Government. . . .

PUTNAM, J. — . . . It is the opinion of the Court that anything said by the prisoner, after what Phippen said to him, is not admissible.

Mr. Colman resumes.

It was just at the close of the interview, that Phippen appealed to me. He had told Frank, more than once, in the course of the conversation, that there might be a hope of pardon.

THE COURT direct the witness to state all that was said in relation to encouragement.

Early in the interview, Phippen said that Joseph had decided to make a confession, etc. (as above), and afterwards repeated this, and appealed to me. Frank then asked me to use my influence, or interest, for him. I told him that I could promise nothing, but that I thought his youth would be in his favor.

I have stated all the encouragement that was given. There was not the least encouragement given to him, either by me or in my hearing, to relate facts within his own knowledge. Soon after this interview, I found the club under the north steps of the church, in Howard Street. I went there on the 20th of May, about 1 o'clock, with Dr. Barstow and Mr. Fettyplace. The steps are of wood — under the lower one there is a rathole — in it I found this club.

Webster. — Who told you it was there?

Dexter. — I object to this question.

The finding of the club is all that can be given in evidence. . . .

Court. — We are very clear that it is competent for the Government to prove that this club was found in consequence of information from the prisoner.

(*Mr. Colman resumes.*) — Frank Knapp gave me precise directions where to find the club, and I found it as nearly as possible, in the place pointed out by him.

John C. R. Palmer called. . . .

Palmer. — I have seen the prisoner at Crowninshield's, in Danvers. The first time, he came on the afternoon of the 2d of April, about 2 o'clock, with a young man named Allen — they came on two white horses. I saw the prisoner in company with George Crowninshield. Did not see them in the house; I saw them from the window of the chamber; they walked away together. I did not see them again till after 4. Richard was with Allen. All four returned about 4. Allen and Frank then went away on horseback. George and Richard immediately came into the chamber where I was.

Dexter objects to asking what agreement the Crowninshields said they had made with Frank Knapp.

Court. — The Government intend to prove a conspiracy — they may begin at either end.

There was then a conversation between us about the proposed murder of Captain White — both George and Richard spoke of it. — George, in the presence of Richard, proposed to me to take a part in this murder. The object of the murder was something that Frank Knapp had told them. The motive held out to me was one third of the \$1000 they were to receive from Joseph Knapp. Richard said it would be easy to meet him that night, and overset Mr. White's carriage, for George said he had gone out to his farm. Joseph Knapp's object in the murder was to have a Will destroyed. George said to me that

I was poor, and in want, and had no funds, and that this would be a good time to supply that want. George said that the housekeeper *would be* away at the time of the murder. Frank came again on that day, about 7 o'clock in the evening, in a chaise, and alone. He stayed then over half an hour. Richard went away with him in the same chaise. I did not see Frank afterwards, till this time, but Richard came home about 12 o'clock that night. I do not know by what conveyance. I left Danvers the next day, which was Saturday. The Will was to be destroyed by Joseph Knapp, who could get the keys from the housekeeper, and have access to the trunk in which it was kept. I understood that the Will was to be destroyed at the time of the murder. This Will Joseph wished to have destroyed, because it gave all Mr. White's estate to a Mr. White, then living at the Tremont House, in Boston. I next saw the Crowninshields at their house, in Danvers, on the night of 9th of April. When Richard went away with Frank in the chaise, as above stated, he said he was going to the Lynn Mineral Spring Hotel. On the 9th of April, I went about 12 o'clock to the Crowninshields' house, and spoke under the chamber window to George, who opened it, and asked who was there. I told him, and asked him to come down. He came down, and asked if any one was with me. I told him no. He then let me in, and asked me if I had heard the news in Salem.

I stayed there a short time, and then went that night to Lynnfield Hotel, where I put up. Next day I went to Providence, and stayed two days. On the evening of the 27th I saw the Crowninshields again at their house, about 10 o'clock. I stayed till 29th. Richard gave me four 5-franc pieces; I asked him to let me have it, and promised to return it. I then went to Lowell, then to Boston, then to Roxbury,

then to Belfast by water, with Capt. John Boyle. While at Belfast, I wrote a letter to Joseph J. Knapp.

"BELFAST, May 12, 1830.

"DEAR SIR—I have taken the pen at this time to address an utter stranger, and strange as it may seem to you, it is for the purpose of requesting the loan of three hundred and fifty dollars, for which I can give you no security but my word, and in this case consider this to be sufficient. My call for money at this time is pressing or I would not trouble you; but with that sum, I have the prospect of turning it to so much advantage, as to be able to refund it with interest in the course of six months. At all events I think that it will be for your interest to comply with my request, and that immediately—that is, not to put off any longer than you receive this. Then set down and inclose me the money with as much dispatch as possible, for your own interest. This, sir, is my advice, and if you do not comply with it, the short period between now and November will convince you that you have denied a request, the granting of which will never injure you, the refusal of which will ruin you. Are you surprised at this assertion—rest assured that I make it, reserving to myself the reasons and a series of facts, which are founded on such a bottom as will bid defiance to property or quality. It is useless for me to enter into a discussion of facts which must inevitably harrow up your soul—no—I will merely tell you that I am acquainted with your brother Franklin, and also the business that he was transacting for you on the 2d of April last; and that I think that you was very extravagant in giving one thousand dollars to the person that would execute the business for you—but you know best about that, you see that such things will leak out. To conclude, sir, I will inform you, that there is a gentleman of my

acquaintance in Salem, that will observe that you do not leave town before the 1st of June, giving you sufficient time between now and then to comply with my request; and if I do not receive a line from you, together with the above sum, before the 22d of this month, I shall wait upon you with an assistant. I have said enough to convince you of my knowledge, and merely inform you that you can, when you answer, be as brief as possible. Direct yours to CHARLES GRANT, jun., of Prospect, Maine."

Dexter.—I object to reading the letter.

PUTNAM, J.—Its bearing upon the prisoner should appear.

Webster.—It was received by his father, and the prisoner, to divert suspicion, caused two other letters to be written.

Court.—Let these first be proved.

Wm. H. Allen sworn.

I put these letters into the Salem Post Office, on Sunday afternoon, May 16th, between 5 and 6, at the request of J. J. Knapp, jr. He gave them to me, and said that his brother Phippen and his father came up to Wenham the day before, and brought an anonymous letter from a fellow down East, and which contained a devilish lot of trash, such as "I know your plans, and your brother's, and will expose you if you don't send me money." He said that they had a good laugh upon it, that he requested his father to give it to the Committee of Vigilance. "What I want to see you now for, is to have you put these letters into the Post Office, in order to nip this silly affair in the bud." He said several other things, but I don't remember all. He said that his mother Beckford was getting old.

Webster reads the letters.

MAY 13, 1830.

"Gentlemen of the Committee of Vigilance:

"Hearing that you have taken up four young men on suspicion of being concerned in the murder of Mr.

White I think it time to inform you that Steven White came to me one night and told me if I would *remove* the old gentleman, he would give me \$5000; he said he was afraid he would alter his will if he lived any longer. I told him I would do it, but I was afeared to go into the house, so he said he'd go with me, that he would try to get into the house in the evening and open the window, would then go home and go to bed and meet me again about 11. I found him and we both went into his chamber. I struck him on the head with a heavy piece of lead and then stabbed him with a dirk, he made the finishing strokes with another. He promised to send me the money next evening, and has not sent it yet, which is the reason that I mention this.

Yours &c.

GRANT.

[This letter was directed on the outside to the "Hon. Gideon Bars-tow, Salem," and put into the Post Office, on Sunday evening, May 16, 1830.]

LYNN, MAY 12, 1830.

Mr. White will send the \$5000 or a part of it before to-morrow night, or suffer the painful consequences.

N. CLAXTON 4th.

[This letter was directed on the outside to the "Hon. Stephen White, Salem, Mass.," and put into the Post Office in Salem, on Sunday evening, May 16th.]

(Allen resumes). — I went to Danvers, with Frank, on the 2d of April, on horseback — on white horses.

Palmer recalled and cross-examined.

On the night of the murder I was at Babb's, the Halfway House in Lynn. I was there from 7 in the evening, till 9 in the morning, and then went to Lynnfield, to meet John Dearborn, of Chester, New Hampshire. We had appointed a meeting there. I expected to go to New York with him to go into business — I had no particular business in view. I first came to Salem three years ago, and from there went to Danvers to

see the C.'s. I had an invitation from George at New York. I came back to Salem last March. I can't tell every place I have lived in between my visits to Salem — at New York part of the time and at home in Belfast. I lived at Thomastown two years. I was there occupied in *cutting stone for the State*. I don't know who employed me in behalf of the State. While in Salem, at the Lafayette Coffeehouse, I bore the name of Carr — *preferred that name at the time* — stayed at the Coffeehouse two weeks. — While at Danvers I lived with the C.'s in their room, apart from the rest of the family. I came from jail to-day. I have been there since June last, and have been visited by Mr. Colman, Mr. Stephen White, my father, etc. I was brought up from Belfast in irons. I made the disclosure from my own wish, and was not compelled to do it. I knew the flannels were stolen in Danvers — saw it in the paper — (he declined answering any more about the flannels). I told Mr. Waters that I did not want *Counsel*. While at Babb's I bore the name of George Crowninshield. I have been told that I should not get the reward and have no expectation of it — perhaps I expected part of the reward when I wrote the letter which I wrote to see if Joseph Knapp was connected with the murder. I was told by the C.'s that it was only a joke when they proposed it, and did not think them serious until after the murder.

Reexamined by Government. — I have never complained of the officers of Government, and have refused a pardon from them in this case.

Wm. H. Allen recalled.

Frank proposed the visit to the C.'s. We first met Dick — he invited us in, and in a few minutes George came in. Dick went to show me the factory and we separated from George and Frank at the house. After going through the factory George and Frank rejoined us, and after talking a few minutes

Frank and I left them and came home. We visited them also once last winter.

One evening, about three weeks after the murder, Frank and I met Dick in Bath Street. I thought they might have something private and was walking away, when F. said "Stop a minute and I'll join you."

Cross-examined. — Dick and I were in the factory fifteen or twenty minutes. Frank did not request to be left alone with George. We were separated one half or three quarters of an hour.

Reëxamined. — Frank's usual dress was a dark frock coat, and a glazed cap with a large glazed star on the top, and a camblet cloak.

Cross-examined. — Glazed caps and camblet cloaks were a common dress. I wore such a one. Wm. Peirce also had a glazed cap, and a Scotch-plaid cloak.

William Osborne sworn.

I keep a livery stable in Salem. Francis Knapp has been accustomed to hire horses of me. The charges on my book against him from April 1, are as follow :

April 1. Horse and Gig to Lynn Mineral Spring. April 2. Saddle horse to Dustin's, in Danvers. William H. Allen had a saddle horse same afternoon. Francis Knapp had a chaise same day, in the evening. I find the charge of horse and gig to Spring altered, the word Spring erased, and ride substituted, I think the alteration was made by Francis Knapp, it is in his handwriting. April 3. Saddle horse to Wheeler's, which is about half a mile from Dustin's, and the same distance from Crowninshield's. Do not recollect the time of day. The last charge on that day is a saddle horse to Francis Knapp, to Wheeler's. April 5. Saddle horse to Wenham. April 6. Horse and Gig to —. This is in my own handwriting. Do not know where he went. No price is put down. Have never ascertained where he went. April 19. Horse and Gig to Wenham.

April 21. Horse and Gig to Wenham, and over that I find the name of Joseph J. Knapp. April 23. Horse and Gig to Wenham. April 24. Horse and Gig to Wenham. This is the last charge on the book that day — there are eleven previous charges. April 25. One half Horse and Gig. April 27. Horse and Gig to Wenham.

Cross-examined. — I make charges when horses are given out. Don't know when Francis Knapp came from sea. He rides considerable. Don't know where they go. I leave a blank till I ascertain. Always trusted him. March 30. Horse and Gig to Wenham. March 29. Half of the charge of Horse and Gig to Spring. March 28. Quarter of charge of Carryall. He hired horses and chaises frequently. Not often hired horses in the evening, but did afternoons. Can't tell much about the time of day by my method of charging. The father of the prisoner failed on the 6th of April. No charge to prisoner from that time to April 19. There are on my book ten charges before his on April 5. I have four white saddle horses, and others used occasionally. I have one horse, called Nip-Cat, of sorrel color, slim, and a smart trotter — rather remarkable.

Thomas Hart sworn.

I live with Mrs. Beckford, at Wenham, and am hired to work on the farm. I went there on the 9th of last April, and was hired by Capt. Joseph Knapp. Mrs. Beckford came there to live about the 15th of April, and Frank Knapp about the 28th.

One Saturday evening, about 25th of April, Frank came there. Mr. Davis and Joseph Knapp had been to Salem, and had returned about half an hour. Frank came about 7 o'clock, knocked, and Joseph Beckford went to the door, and asked him how he came there at that time of night. Joseph Knapp went out with him to the chaise, and remained a quarter of an hour. I think I

heard the voice of a third person in the chaise. They then came into the house, and went into a room by themselves, and stayed about ten minutes. The chaise came a little after 7, and stayed a little more than half an hour. Mr. Davis and Benjamin Leighton were there. It was dark, dull, cloudy weather. Frank had on a camblet cloak, and leather cap. Frank went in where Joseph was, and no one went with him. I was in Mr. Davis's kitchen. Joseph, on the Tuesday after this Saturday, gave me some 5-franc pieces to buy meal with. It had been dark half an hour, I should think, when Frank came. Joseph and Frank were pretty near the chaise, while talking together, and near the N. W. corner of the house. I heard three voices, which all came from where the chaise was. They did not move from that place while talking. F. Knapp has worn a dagger, and I have seen him several times prick Benjamin Leighton with it, while out in the field. And one night after we had gone to bed, Frank came up and pricked Ben through the bedclothes. Ben asked him not to, and he said "lay still, you will not feel it after a little time." . . .

Josiah Dewing sworn.

I came home from sea last spring, and brought from three to four thousand 5-franc pieces. About five hundred were for Joseph Knapp, jr., and were brought from Point Petre, Guadeloupe, and paid to him. So far as I know, all but his went into the bank, as a deposit. The distribution of them was about the 21st of April last, and I have the receipt of Joseph for his portion.

Cross-examined. — I have been a ship master several years. It is nothing unusual to bring home 5-franc pieces. Don't recollect bringing home any lately, on any other occasion.

Daniel Marston sworn.

I know George Crowninshield, and in the course of last spring I re-

ceived from him two 5-franc pieces. This was on Saturday, the day before his arrest.

Cross-examined. — I keep a victualing cellar. Five-franc pieces are not a common currency. I do not often take them — not so often as I do hard dollars.

George Smith sworn.

I attend Mr. Chandler's grocery store. On the evening before the Crowninshields' arrest, I received from some person, and in the presence of George Felton, a 5-franc piece.

Cross-examined. — I have frequently received them from other persons.

George Felton sworn.

I know George Smith — I went into Mr. Chandler's store with George Crowninshield, when he paid Smith a piece of silver. . . .

Nehemiah Brown sworn.

I am the Keeper of the Salem Jail. On the 15th of June, a little before 2 o'clock in the afternoon, I had occasion to go into George and Richard's room, to carry notes. Called at Richard's room, but had no answer. After calling for him a second time, I looked over the top of his door, and saw him hanging at the grate. Called turnkey and went in. He was hanging by two handkerchiefs. Took him down. Called in physicians. They attempted to restore life, but without success. I then sent for a Coroner.

The Attorney-General then read the inquisition on the body of Richard Crowninshield, jr. The verdict of the jury was *felo de se*.

Mr. Brown cross-examined. — The Rev. Mr. Colman visited the cells of the two Knapps. Which first do not know — but both on the same day. Richard Crowninshield's Counsel had constant access to him, when they chose. Richard Crowninshield was usually supplied with newspapers.

Mr. Palfray called again. — I published a number of the *Essex Register* on twenty-first May, containing the disclosure of Joseph J. Knapp, jr.

Cross-examined. — I published an article respecting the finding of the flannels in Danvers. Should think it was three or four days before Richard Crowninshield's death.

Richard Burnham, sworn.

On the evening of the murder saw George Crowninshield, with two others, in Essex Street, near Franklin Building, about sixty rods from Capt. White's house — near Newbury Street. They were going towards the eastward. One of the persons with him was Chase. Did not know the other. It was about eight o'clock.

John McGlue sworn.

On the night before the murder, saw Richard Crowninshield, jr., standing opposite Capt. White's house. Found him standing there. He was not doing anything. I was going up along, on the south side of Essex Street, and when I came up to the brick house next to Dr. Barstow's, I found him standing near a post, he had his head turned up, so as to look up towards Coffeehouse, or that way, so that I could see side of his face. Think that where he was standing was a little higher up than the house of Capt. W. It was about half past eight in the evening. Crowninshield walked up with me, as far as the Post Office. Asked me, if I was going further. I told him no, and he continued on.

Cross-examined. — Lafayette Coffeehouse is west of Capt. White's house, a short distance. Richard Crowninshield, jr., was opposite upper end of the house. He might have been there an hour, for all I know — did not see him till I came up. Do not know whether there was a party of girls opposite. This was Monday night. Richard Crowninshield, jr., was by brick building next to Dr. Barstow's.

Benjamin S. Newhall sworn.

I saw George Crowninshield on the evening of the murder, April 6th, passing down Williams Street. It was a little before 10 o'clock.

There was a person with him, whom I did not know. He had on a glazed cap. Do not know particularly other parts of his dress. He was a little shorter than George.

Cross-examined. — It was between half past 9 and 10 o'clock.

Thomas W. Taylor sworn.

I saw George Crowninshield on the evening of the murder, at from fifteen to twenty minutes after 9, passing by door of my store in Newbury Street which runs down by the Common. A man was with him, whom I did not know. Store in northwest corner of Franklin Building. He was on the east side of Newbury Street. Some person spoke to him at corner of Newbury and Essex streets, and asked him, where he was going. George said, "You know, all the way down town."

Cross-examined. — He was going down towards Williams street, from Capt. White's house. When I first saw him, he was in Newbury Street going towards Williams Street. Do not know whether he came up or down Essex Street.

Joseph Anthony sworn.

On the evening of murder, I saw George Crowninshield going from Essex Street into Central Street. Two other persons were with him. One was Chase; the other I did not know. George had on a short jacket and fur cap. They were talking, as they passed.

Benjamin Horton sworn.

A year ago last spring, I saw Richard and George Crowninshield at Lynn Mineral Spring Hotel. Chase was sitting near Richard Crowninshield. Saw dirk in Richard Crowninshield's bosom. Dick told me it was his *nurse child*.

Prisoner's Counsel objected to the statement of what Richard Crowninshield said. The Court observed, that they could not see but that it might tend to prove that Richard Crowninshield usually wore a dirk, that instrument being alleged to have been used in the murder, and they therefore thought the evidence admissible.

The Witness proceeded. — Richard Crowninshield commonly carried it with him. I examined it, and should think the blade was from *five* to *six* inches long. The handle was bone or ivory. Had a cross hilt about three quarters of an inch long. Called on them about a fortnight after murder, to see if they would say anything about murder. Saw Richard Crowninshield near workshop. He went into the house, when he saw me. Afterwards came out, and we bid each other "Good morning." George came out soon after, and asked, when I came from Portland, and if any kind of gaming could be carried on down there, as he and Dick thought about going down there — said they intended to go down, but meant first to make a *raise* at *Election*. Inquired of me about steamboat. Showed me some false props, they had been making. I agreed to meet them on the next Thursday evening, at Salem Hotel. They were arrested on the following Sunday. I had received information in Boston, that I was suspected of the murder of Capt. White. I immediately wrote a letter to Dr. Barstow about it, but received no answer. Went to Hotel, saw there the two Crowninshields and Chase. They were whispering among themselves. Everybody seemed to look at me with suspicion. I wanted to see if they (the Crowninshields) knew anything, and made them think I would go with them. Said they had good game all winter at their room in South Salem.

Cross-examined. — Mr. White suggested to me the expediency of going out to Danvers, to see the Crowninshields. Went to see if they would tell me who murdered Capt. White, but did not tell them so. Went partly on my own account. Told Mr. White, in Boston, that I thought of going out to Danvers, to see the Crowninshields. I wanted to see if they would say anything about murder. It was after conversation with Mr. Stephen White, but don't

know whether he or I proposed it first.

Don't know how I came to be suspected. Know no cause — heard a check was drawn by Mr. White for \$1000 on a Bank in Boston. I had asked Mr. Stephen White to loan me \$50, which he did. Having occasion to pay Mr. Leavitt \$1.37, I asked him to change this check. He could not, and went into the Bank, at the back door, as the front was shut. I borrowed money of Mr. Stephen White two or three months before the murder. Mr. Theophilus Sanborn said, I had a check of Mr. White for \$1000. On the night of the murder I was at Windham, fourteen miles from Portland.

Cross-examined. — When in Portland saw that a reward was offered. It was Thursday morning, at about 10 o'clock. I was not to have anything, if I obtained information from Crowninshields.

Stephen Mirick.

I live directly opposite to the corner of Mrs. Andrew's yard, on north side of Brown Street. About fifteen minutes before 9, on the evening of the 6th of April, I saw a man standing at a post, directly opposite my shop, on the opposite side of the street. He stood with his arms on the post, and facing the common. I had a fair view of him. I did not know him. He remained there apparently waiting for some one — this led me to be more particular, in noticing him. He stood thus, till the bell rang for 9, changing his situation a little. After the bell rang, I went out as usual and shut my shutters, but did not put up the slide to my door, so that I might see if any one came to meet him. He walked back and forth twice, certainly, if not more. When any one came down Brown Street, he went into Newbury Street, and then turned so as to meet him at the corner; and if any one came down Newbury Street, he went into Brown Street, and turned

to meet him in the same manner. From this post he could see up Newbury and Brown Street, about as far up one street as the other. I stood to see if any one should come to meet him. He remained there till twenty or thirty minutes after 9. I did not see him go away, and he was there when I shut up and went home. He had on a frock coat which came round him very tight, was very full at top and bottom; it was of a dark color. I can't say what he had on his head. I did not observe his face at all. I never saw the prisoner till he was brought before the *Grand Jury*. It is my belief that he was the man at the post. . . .

Webster. — Have you, as you know, or believe, seen that person since?

Ans. — I think I have seen him since.

Webster. — Where have you seen him, and what name did he bear?

Ans. — I think I saw him when he was brought up before the *Grand Jury*, and when he was brought up, once or twice since. I think it was Francis Knapp. Can't swear positively, but I believe it was he.

COURT. — Was this belief derived from personal observation, or from what you have heard from others?

Ans. — From both — that is, from my observation at the time, and from the description of the person seen that evening.

COURT. — From your own observation alone, do you say, it was Frank Knapp?

Ans. — No, I should not. Can't say positively, from my own observation. But the size and height of the man I saw, correspond very nearly to prisoner. His dress is different now.

Webster. — I suppose, we may ask, what description of dress has been given to him.

COURT. — His belief arises from two sources. What he had from others, is not evidence.

Cross-examined. — I saw the pris-

oner when he was brought up to be arraigned, week before last, on Tuesday I think. Don't know what part of the day. The first time, I saw him, was one day, when he was brought in to hear indictment. I was in County Street — the prisoner was in a chaise. There were three chaises; he was in one of them, do not know which. Saw him get out of the chaise at the door. Did not see him, in this room.

He had on a light coat — they were all pointed out to me, as they rode up. Don't know who pointed them out.

Re-examined. — Prisoner at the Bar is the same person who got out from the chaise, and was pointed out to me, as Francis Knapp.

Cross-examined. — I can't say whether I asked which was Frank Knapp. I heard some person, who stood by, say this is such an one, and this is such an one. Believe I did not inquire which was Frank Knapp, or speak to any one.

Peter E. Webster sworn.

I live in Bridge Street, corner of Pleasant Street. My place of business is in Essex Street, nearly opposite Newbury Street. I have occupied for purposes of trade several buildings. Always have more or less property about Branch Meeting-house. Occupy the cellar of it. I went home about half past 9 in the evening of April 6th; from half past 9 to 10. I generally go to Post Office first. I went through Howard Street on my way home. About a quarter of the way down Howard Street, saw two persons — overtook them, at the bottom of street, near new road. They were walking about the middle of the street. This is a narrow street. They were walking down towards river. Passed them at the lower end, where it goes out. I took one of them to be Frank Knapp, and mentioned it once or twice. Did not think anything about it, more than if I had seen anybody else. Have always known Frank Knapp

for a dozen years. When at home generally see him every day or two. He is sometimes at sea. I passed nearest to him, and I supposed him to be Frank Knapp. I then took him to be Frank, and I have never altered my mind. The other person I did not notice. They were walking slowly. I turned to the right. They were going same way. They followed me. When I last saw them, they were about a dozen or twenty rods from the bottom of the street. They did not pass my house. Did not see them, after they got to the rise of the hill. Capt. Knapp, the father, lives in Essex Street, near my store. The prisoner stays at his father's, when at home.

Cross-examined. — I did not see the face of the man. Knew him by his air and walk. Passed within six or eight feet. Did not speak to him, nor he to me. I sometimes speak, and sometimes do not speak to him when I meet him. Both men had dark wrappers, and glazed caps. Night was cloudy, and a little damp. Don't know Richard or George Crowninshield. I know it was 6th April. Took notice of the men, because unusual to see men in that street. Don't know that it is a street where assignations are made. I mentioned it to Mr. Foster, Cashier of Asiatic Bank. Do not recollect how soon. Do not know, whether before the Knapps were taken up, or afterwards. I thought it was Frank, whom I saw there, before they were taken up. Told Mr. Foster one of them was Frank Knapp. The Post Office generally opens at *half past 9*. My usual hour of going to Post Office was a little after 9.

Could not say positively who the person was, without seeing his face. Thought they were waiting for somebody because they walked so slow. I know that night—recollect the appearance of the night on account of the weather. I sometimes go home other way. I did not go that way the night before.

Do not recollect what the weather was the night before. Heard of murder next morning. Sometimes take 5-franc pieces — not very common — take more or less every week.

John A. Southwick sworn.

I live in Brown Street, next house but two to the westward above ropewalk. Mr. Downing's house makes the corner of Howard Street. On the evening of the murder, I left my father's house in Essex Street, about half past 10 to go home; as I passed up by ropewalk, I saw a young man sitting there; as I passed him, he dropped his head. I stopped at Downing's door, then walked back, I think that time, then returned to Downing's house, and then to my own. Dropped his head every time I passed him. I felt very sure it was Mr. Knapp. Passed him three times, when on the steps; he had a brown camblet cloak, and glazed cap. I then took that person to be Mr. Knapp. I was brought up alongside of him, within a few houses of him, from his boyhood. When I passed the third time, I went into my house — my wife was up. One time, when I went in, I spoke to her. The same person was in my mind, all the evening, after I saw him. I came out of my house, and walked to the corner of Downing's house, looking for this person, down Howard Street, when Capt. Bray came up. He asked, what I was out there so late for. Told him I had seen a person on ropewalk steps, and about there, that looked suspicious, or whom I thought suspicious. He said he had seen one also, and pointed up to old Mrs. Shepherd's house, and said, there he is now, on the opposite side of the street, further up. Looked and saw a person standing there. He came down by us, and went to the post nearly opposite Capt. Bray's door, and leaned over the post. When he passed us, we were near Downing's house, on that side. This man passed down on the opposite side. We

walked down some ways, perhaps as far as Dr. Johnson's house. While he was at the post, we went in, at the west end of Bray's house, and went into the house, at the end door. Front door is on the north side of the house, the side nearest post. Went into his chamber. When we went in, only half of one shutter open. I stood back. Mr. Bray watched. In a short time he said, another one has come up. Now they have passed along to the west corner of the house, and that induced him to go to the window to look out. Saw one of the persons running across the street. (Here the witness referred to the plan which had been exhibited to the Court.) He run round ropewalk corner. The other went down towards Common. Thought he went round corner. Then Mr. Bray and I came out, went down Howard Street, round up Williams Street, and back home. We parted in front of Bray's house. Mentioned to my wife, what I had seen. Told her, I had seen a person, that I supposed was Frank Knapp, without making any further observation. Do not recollect dress of person leaning on post.

Cross-examined.—The time, when I first saw this person, was about half past 10. I know, because I knew at what time I left my father's house. It is two or three minutes' walk. My impression is, that I looked at my watch when I was at my father's, and thought it was time to be walking up. It was about half past 10.

The man upon the steps was two or three feet off, when I was nearest to him. I did not speak to him because I had nothing to say to him, and he hid his face. Perhaps I should not speak to him three quarters of the time, when I met him, owing more to his manner than mine; he rather evaded speaking; I don't know that I saw his face; his dress was a camblet cloak, I can swear to it.

I judge it was Frank Knapp, from the general appearance of the man. He was not wrapped up, for I could see that he sat cross-legged. It was a cloudy night, but moon was at the full. I don't recollect its raining; it did not rain then; it was misty at times.

I did not see the man on the steps get up and go away; but it is on my mind that it was the same man I saw at the post. I did not think it important to go out, though it looked suspicious in the man to drop his head when I passed and to be sitting on the steps at that time.

I have no doubt he had on a glazed cap; did not see any fur about the cap. I went out the second time from suspicions expressed in the house, when I told what I had seen. They said in the house, they should like to have me go out, though I had said who I thought the man was. I have not known that Howard Street is a place of assignations for the last six months. I cannot say that I suspected the man was there for that purpose. I cannot say what I suspected him of. When I met Capt. Bray, I told him my suspicions. He said there was a suspicious-looking person on the other side the street by the post. Don't recollect seeing the man by the post till Capt. Bray pointed him out to me. He did this when we were standing by Downing's house. We saw him pass down the street. Can't say whether the man Capt. Bray pointed out to me had a cloak and cap. I thought it was the same I had seen on the steps, because I had seen no other in the street. I had the same suspicions about the man who walked down the street that I had of the man on the steps. Don't recollect stating before the magistrate that I took the person on the steps for Frank K. from nothing but his dress.

I cannot describe the dress of the person who came up and joined the man standing at the post, when we were in Capt. Bray's chamber.

The post might be six or eight feet from the window. I can't swear to the dress of either. My impression is that one of them had on a light coat. Can't recollect the other's dress.

I don't recollect that I have told any person that I could not tell who the person was on the steps. Have no recollection of telling any person that I could not distinguish. I never said the man on the steps was Wm. Peirce, but compared him to Wm. Peirce in size and appearance. I don't recollect telling Capt. Bray that he looked like Wm. Peirce; never told him I thought the man was Wm. Peirce.

I cannot tell how the man running across the street was dressed; I knew it was one of the same persons, because they appeared to be watching, and engaged in the same business.

We were looking out of the window four, five, or six minutes. I can't say the dress spoken of is a common dress, but many young men wear glazed caps and camblet cloaks.

I cannot tell when I was first examined before the Committee of Vigilance, or that I ever was particularly. I have been sent for and questioned about this matter; cannot say whether before or after the Knapps were arrested.

The observation of Capt. Bray, that the man had gone to the west end of the house, was made before I looked. I did not continue to look, but looked away. When I was looking out of the W. window, and saw one of the men running to the eastward, I did not know where he went to.

I never said either of these persons was Crowninshield or Selman or Chase.

I was at Ipswich before the Grand Jury; did not state to them, that I supposed the person, that I saw on the steps, was Frank K. I was sworn to tell the whole truth. I did not say that it was Selman or that it was not. I said I thought that it looked some like Selman.

When I passed the man on the steps, I went halfway to the Common; the first time I passed him I went as far as Downing's corner, then turned and went back halfway to the Common, then repassed him and went home. I was watching the man twenty minutes before I went into the house; stayed in the house a few minutes; Capt. Bray and I watched him five or six minutes; we were in Bray's house six or eight minutes; in going down Howard Street, we went pretty quick the first part of the way; looked over into the burying ground by the Branch Meetinghouse, to see if the person was there; we stayed together perhaps two minutes after we came back, then went home. I did not hear the clock strike after I got home; It was about ten minutes past 11 by the timepiece, when I got home. I have not said that I heard the clock strike 11 that night.

Daniel Bray, jr., sworn.

I live in Brown Street, and in the lowest house on the S. side.

On the evening of the 6th of April I was passing down Brown St. from St. Peter's St. and when I passed the 4th house, I saw a man dressed in a dark full frock coat, dark pantaloons, and shining cap standing at a post. The frock was very full at bottom.

I was on the north side of the street and he on the S. As I passed on I saw another man looking or peeping down Howard Street, who I found was Mr. John Southwick. I think I asked him what he was about there so late. He said that when he went into his house a man was sitting on the ropewalk steps. I turned round and observed, "there stands the man now." (I could see him very plainly up towards Shepard's house — it was so light.) Mr. Southwick then said that he did not like the looks of the man when he went in. I walked on with him close to the ropewalk, and stood so as to get out of the wind, when the man passed along on the south side

and took his station at the post next the bounds between my house and that of Mrs. Andrew. I asked Southwick to go with me into my house, to see what he was about. We passed about twenty feet from him and entered my west door, and went up into my chamber, because the sliding shutters in the room below were closed, and we could not unclose them without noise. I looked out of the window and by pressing my face against the glass, I could see the man at the post, and never lost sight of him while he stood there, which was five or six minutes, when another man came from eastward — in the middle of the road and not on the sidewalk. I saw him when he was 150 or 200 feet off. From my window, I could see down Brown Street, and the Common, so the man must have come through Newbury Street, or we could have seen him sooner. He came up to the post close to the other without bowing, as near as he could get, and stopped. They then went together into the street ten or eleven feet toward the N. W. and stood there not more than a foot apart, and not more than a minute. I could then see them better from the western window. The man that came from the E. had on light clothes — he then ran as hard as he could down Howard Street. The other at the same time started off in the opposite direction, and was out of sight towards the E. I know he did not go up Brown Street, for he turned round and went to the east. When we got into the street we could see no one. We then went down Howard Street immediately, and as soon as we came to the Graveyard, we looked over the fence several times, but saw nothing; we looked over the fence repeatedly. Before we got down to the New Road we saw a light open wagon with a man in it passing along that Road towards Beverly. We went on round through Williams Street and came home. I don't know the prisoner now — but did

know him four years ago. I have seen him since in prison, and at the bar. I can't tell whether he was one of those I saw that night; the size and general appearance agree very well. I had heard the clock strike ten, and should think that it was thirty or forty minutes after when I met Southwick. After the murder I went up on Downing's steps, and could see all the north and west windows of Capt. White's house, and a light in the chamber where he slept — the windows of the room over that, those of the room on the same floor over the kitchen, and those of the room over this. These cannot now be seen because of leaves on the trees.

Cross-examined. — The steps of Downing's house is the only place where I looked from. The windows could not be seen from the ropewalk steps, or from Shepard's post, or from the post near my house, or while walking down under the fence on the S. side. I saw the man before I came to Southwick and it appeared singular that one should be standing there. He did not then tell me that it was Frank Knapp, but he has since told me — I believe after the arrest. I did not then hear Southwick say that the man looked like William Peirce, and believe I did not hear him say so when examined by Justice Savage.

Mrs. Southwick sworn.

On the night of the murder Mr. S. came home after 10, went out again and returned just before or just after 11. I had looked at the timepiece just before.

Capt. Bray recalled by Counsel for Prisoner.

My dress was a dark frock coat, dark pantaloons. Southwick's was reddish pantaloons, and we both wore hats.

Miss Elizabeth Potter sworn.

I live in Brown Street. The evening of the night of the murder, about half past 10, I saw a person standing at the corner of Howard Street, looking down Howard Street. He

turned and looked towards the house, when I opened the door. The house is nearly opposite the rope walk. His dress was light pantaloons, cinnamon drab, I thought, and dark coat; I don't recollect what he had on his head. I know Mr. Southwick and do not think it was he.

Isaac H. Frothingham sworn.

I was in Brown Street on the evening of the 6th of April. I was at Mr. James Potter's, nearly opposite the rope walk. It was about half past 10 o'clock, when I came away; I looked at the clock. When I opened the door, I saw a person walking up the street slowly. He had passed the door when I opened it. He turned and looked over, and remained there after I walked up the south side of the street. He was on the opposite sidewalk, within a few paces of the ropewalk, when he first stopped. He then advanced a little farther, and that brought him to the corner of the ropewalk on Howard Street. I went on the same side of the street, and looking back, thought he was joined by another person. One of them was dressed in a dark coat and light pantaloons and hat. The person who joined him must have come up Howard Street or Brown Street, or I should have seen him. They were standing there the last I saw of them.

Cross-examined. — My first impression was, that it was Mr Southwick; but afterwards came to a different conclusion, because I thought he was too tall, and if it had been Southwick, I thought he would have spoken to me. I thought his pantaloons were of a cinnamon drab color.

Joseph Burns sworn.

I was born in old Spain; have lived here about twenty-five years. My place of business is in St. Peter Street. I keep horses to let — my stable is near the head of Brown Street. I know Francis Knapp. Had a conversation with him in the stable, after the murder, and after the Committee of Vigilance was

appointed. It was just after the Wenham robbery. He came into the stable, and asked if anybody was in the stable besides me. I told him no. He asked me whether I had any loft, or place upstairs; I told him yes. He said "the best way is for us to go up, as I want to say something particular to you." We went up — then he asked me if I knew anything about Capt. White's murder. I told him "no — I wished to the Lord I should, because I would make it known pretty quick." He said the Committee had heard I was out on the night of the murder, till about 10 o'clock; and, said he, "if you saw any one, any friend, out that night in the street, don't you let the Committee know it, for they will try to pump something out of you." He said his brother Joseph was a friend of mine, and he himself too was a friend to me. He said the Committee wanted to pump me, to see if they could catch me, in one thing or another. I then said that I knew all the members of the Committee, and if they wanted me any time, I was ready to answer them to anything. Then I asked Knapp what he thought of the Crowninshields, who were in jail. Mr. Knapp said they were as innocent of that as he and I. I asked him who did it, then? He said Capt. Stephen White must be the one. I said, "Don't you tell me such a thing as that. I know Capt. Stephen White, and have known him ever since he was eighteen or nineteen years old." Then he put his hand under his waistcoat, where he had a dirk, and showed the handle. I said, "D—n you, I don't care for you, nor twenty dirks." Then he said that he was a friend to me, and had come to give me this information, that I need not get into difficulty. I know Joseph J. Knapp, jr., — he used to come to my stable to hire, and to put up horses. He was there on the week before the murder. He sometimes wore a cap, and sometimes a hat.

He usually left one of them there. He wore also a cloak, or surtout, and likewise left one or the other of these. His clothes were sometimes left in the entry, and sometimes in the chaise, and I put them into the entry.

Nathaniel Kinsman called again.

I reside in Brown Street. A few days after the murder, I went out to see from what part of that street I could distinguish the window in the chamber of Capt. White. I could see the window from the southeast corner of Mr. Downing's house, at the corner of Howard and Brown streets. I could see the north window of Capt. White's sleeping chamber, and that of the chamber above. I have no doubt that I might have seen the windows in the chamber of Mrs. Beckford, but my object then was to ascertain whether I could see the window in Capt. White's chamber. There is no building to interfere with the range of the second story. As far west as the next house to Mr. Downing's, which is the one in which I reside, and is eighteen or twenty paces farther up, I could still see the window, and also in all the intermediate space. East of the southeast corner of Mr. Downing's house, could not see it. — There is one passageway from Essex Street to Brown Street. It is not public—it comes through to where the Sun Tavern used to stand, and is nearly as far west as the church. There are two passageways, with a gate to each, which you must open. It would be nearer to go from the ropewalk steps to Capt. White's house by Newbury Street, than through either of these.

Cross-examined. — I could see the windows very plain, without getting upon the steps of Downing's house.

Philip Chase affirmed.

Early after the murder of Capt. White, I heard of a suspicious man's having been seen on ropewalk steps. Thought he might be watching. I went to see if anything could be seen from steps. A little to the

west from the opening of Howard Street, I could see Capt. White's chamber window. I think it was rather more than halfway across Howard Street, that I first saw the window. But on Downing's steps could see it very plain. Don't know how far west of the steps I might have seen it. — Could see range of windows.

Cross-examined. — I don't know which was Mrs. Beckford's chamber, don't know that I examined that. I had no suspicion, of any particular person having been concerned in murder, when I went to look at this window. It was before the Knapps were arrested. I had no suspicions of the Knapps, before I heard of the Wenham robbery.

Mary Jane Weller sworn.

I know George Crowninshield. About three weeks before the murder, he was at my house. It was in the morning. I went into his room where he slept. Mary Bassett and I found a dagger under the pillow of Mary's bed. He had been sleeping with Mary that night. I asked George why he carried a dirk. He said it was because it had once saved his life, and some Salem fellows were going to flog some Danvers fellows. On the evening of April 6, between 10 and 11 o'clock, he came to my house. I heard the clock strike 11 after he came in. Saw him there next morning. I went out and heard of the murder. Then went into George's room and told him. He appeared to be alarmed, and Mary was alarmed. I wanted to go down to Capt. White's to see the body, and asked Mary to go. George was unwilling to have her go. He told me that morning not to say anything about that dirk; he said every scrape was laid to the Crowninshields. He stayed there all day, and did not go away until the evening. The hour he came at, was between 10 and 11. He had been accustomed to come there at dark, and to go away again and come back between 12 and

1. He had stayed there once all day, a very cold day. This time, he said he had a bad headache, and laid abed nearly all day. He asked, if we went down, not to say anything about his being there, and not to say anything about the dirk. Went away about dark, day after the murder. The dirk was about as long as a case knife — it had an ivory or bone handle.

Cross-examined. — *Counsel for prisoner.* — What sort of weather was it the next day?

Witness. — You know, as well as I do. I am not going to answer any such silly questions. I've told my story and I don't want to be made fun of. . . .

Miss Catharine Kimball sworn.

I was at Capt. White's house, on the next day after the murder. I found the key of his chamber door under the sofa covering. It is a common door key. Mrs. Stanley was with me, don't recollect what she did with it. I think, though I am not positive, that Mr. Deland was present.

Benjamin White called again.

The last time Joseph J. Knapp, jr., was at Capt. White's house, before the murder, was Sunday before. Mrs. Knapp was with him. Took tea there. Capt. W. not at home. He took tea at Mrs. Stone's, Chestnut Street. Mr. Knapp did not come, till towards night. Mrs. Knapp came first.

Cross-examined. — The plank, found under the window, came from before the garden gate. It is just beyond the shed. It opens into the yard fronting Essex Street. You go along the yard to garden gate.

Reexamined. — Plank so near doorstep that one might step on it from the door.

Cross-examined. — The small gate was not usually fastened, but generally shut. I was examined by Committee of Vigilance, as if suspected.

Henry R. Deland sworn.

I was at the house of Capt. White on the day after the murder,

after the body was laid out. I saw the key of the chamber on the sofa. We looked for it to fasten the door. Miss Kimball was there. I called at Capt. White's house, on the day before the murder, between half past 12 and 1. Lydia Kimball came to the door.

Hon. Gideon Barstow sworn.

I went with Mr. Colman, on the 29th May, at his request, to the meetinghouse, in Howard Street. Mr. Colman went to the further steps of the house, put his hand under the step, and drew out the bludgeon, and said this killed Capt. White. . . .

Jedediah H. Lathrop sworn.

I live in Beverly on the farm owned by Capt. White. He was there on the day before he was murdered. His young man came with him. It was after dinner. He returned home, about 5 o'clock. The next time before that, he was there on Friday, April 2. He came up in his wagon. He then came up after dinner. Usual hour for dining 1 o'clock. He started to come home about sunset. Generally went through Danvers. Would go across North Bridge. But whether he went that way, on that day, do not know.

Jonathan Very sworn.

I live with Mr. Osborn, and have the care of his stable. I know Francis Knapp very well. One time Francis came to me, and asked me, if I would bring him a horse and chaise behind, or near the Courthouse. He gave no reason for it. I brought the horse and chaise, between the Courthouse and Mr. Chase's. Nobody got in with him. Do not know which way he went. It was between 1 and 2 o'clock. I had just come from dinner. Some grain was brought up from wharf same day. Had been drawing grain. This was the last day of our drawing it. It was on the Friday afternoon before, that we began to draw it. I never carried a chaise to him before.

Cross-examined. — He asked me

to harness Nip Cat, in the chaise, and bring him as soon as I could.

William Osborn called again.

I have with me a bill of the grain, bought of Mr. Hacker. It is dated 2d of the *fourth* month. We began to remove the grain on the same day, and finished drawing it on Tuesday.

Cross-examined. — Am positive, that the day we finished drawing the grain was Tuesday.

William E. Hacker affirmed.

I made an agreement with Mr. Wm. Osborn for the sale of a quantity of oats to him on the 2d of April last, and he commenced taking them away immediately. He took away the last of them on Tuesday, April 6th.

Cross-examined. — I know that the agreement was made on the 2d of April and that they were several days in measuring the oats.

John W. Treadwell, Esq., sworn.

I am cashier of the Merchants' Bank. . . . Mrs. Beckford was a niece of Capt. White, an only sister's daughter, and housekeeper in his family. She had two daughters, one married to Joseph J. Knapp, jr., the other to Mr. Davis of Wenham. Capt. W. had nephews and nieces, children of his late brother Henry. Mr. Stephen W. and family were at Boston last winter at Tremont House.

Cross-examined. — I am one of the Committee of Vigilance. The committee consulted Mr. Choate as Counsel. They did not retain any other Counsel, to my knowledge. They did think proper to take an oath not to divulge their proceedings. I do not know how the expenses of the committee were paid. A letter was received from Mr. Stephen W. offering them \$1000 — to pay expenses, if their investigations should not lead to the detection of the murderers.

William Osborn called again.

I commenced removing the oats, bought of Mr. Hacker on the day I

made the agreement, and finished the Tuesday following.

Cross-examined. — It was on that day that ostler mentioned to me that he carried a chaise to the Court-house for Frank Knapp, and I thought strange of it. The horse he had was *Nip-cat*.

J. C. R. Palmer called again. And inquired of more particularly as to prisoner's visit to the Crowninshields on 9th of April.

George asked me at that time if I had heard of the murder, and said, they had no hand in it. Richard afterwards asked me if I had heard of the "music" in Salem? He said, people supposed they had some hand in it — they said they should leave home. I told him I thought it a bad plan if they were suspected. George told me he took his dirk down to the machine shop and melted it down; for a committee was appointed to examine houses, and it would be a bad sign to have it found. Richard agreed to meet me at Lowell on the 1st of May. He said he had to finish some cloths and could dispose of them and get some money and go to New York. He gave me \$5 — bill on Newburyport Bank.

Cross-examined. — I never have stated that the murder was committed with a hatchet — I said I found a hatchet in the machine shop and threw it into one of two places, did not recollect which. I told Jones I had seen a hatchet and suspected it had been used, because I saw an account in the newspapers that the murder was probably committed with a hatchet — I put it away so that it might be found if called for. It had the handle newly sawed off and had clay on the head of it, but was just like any other hatchet. George said he had melted the dirk because a committee was appointed. I am positive that this was on the 9th of April.

David Starrett sworn.

. . . I heard of the robbery of the Knapps, last spring. There was nothing done to detect the robbers.

I saw the prisoner at my store on the afternoon before the murder, about 4 o'clock. My store is about one quarter of a mile from Joseph Knapp's house.

Abraham True sworn.

I live in Williams Street, pass through Brown Street several times every day. I took particular notice, soon after the murder, of Capt. White's house, and the back windows of the two upper stories are perfectly visible from Brown Street when the trees are not covered with leaves. I am a retail grocer, do not take a dozen 5-franc pieces in a year.

Cross-examined. — The windows are not visible from all parts of Brown Street, but they may be seen from Howard Street and several rods above, westerly. They cannot be seen from the ropewalk steps, but can be seen from a point six or eight feet west of the steps, I should think. The western windows of the front chamber may also be seen.

A majority of THE COURT having decided that the confession of the prisoner could not be given to the jury, Mr. Webster submitted to the Court an application on behalf of the Government for reargument of the question. . . .

After this decision, Mr. Webster stated to the Court — that the question appeared to be not fully settled, and proposed to call the witness and ask him certain questions of a different character from those already proposed to him. He proposed to ask the witness whether the prisoner did *assent* to J.'s confession, suggesting that it would probably appear that he never did assent.

WILDE, J. — That would materially vary the case.

MORTON, J. — It would be most important evidence. My opinion was founded on the supposition that he assented. . . .

Mr. Colman called again.

WILDE, J. — It becomes necessary to ask one question which was not

proposed to you before. The fact the Court wish to ascertain is, whether, before the confession, there was any assent to the proposition made to the prisoner by his brother Phippen Knapp?

Ans. — There was neither assent nor refusal.

MORTON, J. — The fact, upon which my whole opinion turned, that is, the prisoner's assent to his brother's confession, is varied. It is now said that there was no assent. The burden of proof is upon the prisoner to show that the case is within the exception to the general rule. As the evidence now stands, it does not appear that there was any improper influence. There is no evidence of assent.

Mr. Colman goes on.

I had been informed that the murder was committed at a very early hour in the evening — I thought it incredible, and asked the prisoner at what time it was done. He told me between 10 and 11. I had been incredulous about there having been but one person in the house. He told me, that Richard Crowninshield alone was in the house. I asked him if he was at home that night. He said he went home afterwards. I asked him, in regard to the weapon — the place where it was concealed. He told me under the steps [as before], and said that if I went there, I should find it. I asked what became of the dagger or daggers — I am not certain which. He replied that it or they had been worked up, at the factory.

Cross-examined. — The principal part of the conversation was between Phippen and Frank. I went into the cell a little before 7 o'clock and suppose that I came out at half after 7. This was Friday afternoon, 28th of May, I first visited him — I had never spoken to him before. I had some conversation with him at another time at his window. I went immediately from the cell of Joseph to that of Frank. Phippen was not in Joseph's cell

with me. While I was in the latter, some one knocked at the door. — I looked out at the scuttle of the door and saw Phippen—he asked to come in. I told him “not yet.” I had not finished my business with his brother. I went to Boston to see the Attorney-General. I started for Boston about 10 P.M. and arrived at the Attorney-General’s between 12 and 1 o’clock.

I was at Joseph’s cell three times on that day, and again on the day following—once with Dr. Barstow, and Stephen C. Phillips, Esq. I recollect beyond a doubt, which time I went from Joseph’s to Frank’s cell—it was after the third visit to Joseph’s, and the same evening, on which I visited the Attorney-General. Frank was told that Joseph had decided etc. [as before], and nothing more. I did not hear it stated, that Joseph had made a full confession. I never said that I would not mention what Joseph had told me unless Frank consented to the disclosure. I never stated to Frank that there was no chance, if both refused to confess. I never told him that there was evidence enough to hang both. He never stated, that he had no confession to make. I already knew that the club was under the church steps, but *which* steps I did not know, until Frank told me. I don’t recollect telling the prisoner that Palmer was arrested, or that application was made for his pardon. I don’t recollect that it was stated to Frank that Palmer would receive a pardon, though I think it not improbable, that it was stated. The jailer had called and told us that it was time to go, and repeated his call; then Phippen appealed to me, and Frank said, “I suppose you will use your influence,” etc.

I said, this is your deliberate assent (to Joseph’s disclosure), he said, “I don’t see that it is left for me to choose. I *must* consent.” I have stated all that I so well recollect, as to be willing to state under oath. I

think I stated to Mr. Stephen White in Boston, at the Tremont House, and also at the office of Phippen Knapp, when Mr. Dexter was present, that Frank had confirmed Joe’s confession.

Phippen Knapp was present during the whole interview and might have heard it. I didn’t tell Mr. Stephen White that Frank had told me where the club was. I have no recollection of telling any one where it was, till I had found it, except that I spoke of it to Phippen Knapp as we came up from the jail. I told him that I should rely upon his honor that he should not go for the club.

On Saturday, 29th May, a little before 1 o’clock, I found the club. I went to Frank’s cell at the request of Phippen Knapp—his conduct was an example of filial and fraternal affection. At the request of Joseph, when I went out of his cell, I asked his father and brother Phippen to go to him. Frank did not tell me that he knew where the club was, of his own knowledge, or that any one told him it was there. He answered the question directly.

Here the testimony on the part of the Government closed, and the

DEFENSE

was opened by Mr. *Gardiner*, junior Counsel for the prisoner.

Mr. *Gardiner*, in introducing the grounds of defense, which he expected to establish for the prisoner, referred to his situation as being peculiarly embarrassing. . . .

He called the attention of the Jury to the state into which the public mind had been thrown by the publication of the confession of one of the persons implicated. So determined seemed to be the community to establish the guilt of the persons accused, that he might almost say, it was hazardous for him to appear in the defense. The cry of the people is for blood. He considered it truly an alarming state of things, if to be accused was to

be convicted, if rumors, generated by suspicion, were to be the evidence upon which the life of the prisoner was to be put in jeopardy. But he had no fear on this account. He did not despair of a fair trial, even in this case. . . .

The whole evidence of the conspiracy rests on two conversations. One, overheard by Leighton, between the prisoner and his brother, at Wenham, the other heard by Palmer, between the Crowninshields. So far as these conversations tend to anything, it is to disprove the charge. As to the weight of this testimony, he intended to show that these witnesses were not entitled to credit. . . .

The only question is, was John Francis Knapp constructively present? Even if he were in Brown Street, he was not present, except by a mere fiction of law. To make a man liable as constructively present, he must be in a capacity to render assistance, and must be there for that purpose, and must actually assist. . . .

Mr. Gardiner went on to state that they proposed to introduce evidence to show that the man seen in Brown Street was not the prisoner at the bar, but some other person; that the prisoner was in a different place during the evening; and that Brown Street was not a situation in which aid and assistance could be given to the murderer. . . .

The witnesses for the prisoner were then called.

Jona. P. Saunders, Esq.

The distance from Brown Street to Essex Street, through the garden of Capt. White, is about 295 feet.

I have no affidavit, made by J. C. R. Palmer, before me. I saw it last in the possession of Palmer. He had it when I left his cell. It was sworn to before me. I cannot tell in whose handwriting it was; don't know how much it contained. I received it folded, with Palmer's signature, and did not see its contents, but merely administered the oath. I

have never seen it since. I don't know in whose possession it is now.

Daniel Bray, Jr.

I have stated that when I first saw the second man, he was in the middle of the street. I have not examined to see which way he could have come. If he had come from the north side of the arched gate of the Common, I could have seen where he came from, but not if he came from the south side. I could have seen him fifteen feet farther south than I did. There are several paths across the Common, leading to both sides of the arch. I first saw this man 100 or 150 feet off. I could not tell whether he came round the corner or across the Common.

Cross-examined. — From where I was I could see any one come out either side the arched gate. If the man had come round the corner, on the sidewalk, I could not have seen him until he was within four or five feet of the other man at the post. I don't think I saw him when he first came in sight. The post is ten or fifteen feet from the N. W. corner of the house. When the men were standing at the post, the one most westerly was perfectly in sight, the other could be seen by pressing my face hard against the glass. . . .

Joseph Burns.

Frank Knapp's dirk had a plated handle, which looked like silver. I am not certain whether or not it had a guard. It had a crosspiece on the handle. It was not drawn. I don't know how long the handle was.

Wm. H. Allen.

I have known Frank Knapp from childhood, and have been intimate with him. I can't say whether he had a dirk before the Wenham robbery. The first time I saw it was about the time that dirks were selling in Salem. I have no dirk, myself, but I have known a few young men who have had them — this was sometime after the murder. [He identifies the dirk shown him.]

This was Frank's. Mr. Newhall made it for him.

Benjamin Leighton.

Frank's dirk had a gilt handle, with a little jog to prevent its going into the scabbard. The one produced looks like it.

Dudley S. Newhall sworn, and dirk shown him.

I was making this when prisoner came into my shop and wished to purchase it, and I sold it to him on the day before the Wenham robbery. I was making it for my own amusement. It was several days before it was delivered, that he said he should like to buy it. This is not my regular business — I am a jeweler. There was a particular demand for dirks at that time.

William Peirce sworn.

My usual dress at the time of the murder was similar to prisoner's. It was a plaid cloak and a black glazed cap. This was a common dress — almost all the young men wore glazed caps. Before the murder, it was not usual to wear dirks. Since that time many use sword canes, but I don't know as to dirks.

The appearance of my cloak was very different from a camblet one — it was a dark-green color and shaded.

Cross-examined. — I was not on the ropewalk steps on the night of the murder, but I was in Brown Street, for I live there. I don't know what time — I did not stand leaning over a post.

Asa Wiggin sworn.

I am a tailor. Camblet cloaks were the most common last winter. — From the 1st of September to April, I made twenty-four. I did not make any plaid cloaks last winter. I made as many mandarins as I did cloaks.

Israel Ward, jr., sworn.

I am a tailor, and made about fifty cloaks last winter. Two thirds of this number of blue and brown imitation camblet — the other third principally of German camblet. I made also a few of cloth, and two or three of plaid.

Cross-examined. — I have made clothes for the prisoner, and between the 20th and last of January I made him a frock coat, of olive or dark-brown color, single breasted, snug about the body, and quite full in the skirts.

Re-examined. — I have made similar garments for others — probably from the same piece of cloth. I did not make so many mandarins last year as I did the year before — then I made about thirty. The prisoner's frock was made in the fashion of the day.

Stephen Osborne sworn.

I am a hatter, and live in Salem. Within the last year I have sold 1600 or 1700 head coverings — more than 500 caps, of all kinds, within the year ending about three weeks since; and of glazed and leather caps, 200 in all. I know the cap produced, and sold one like it to the prisoner, as much like it as two articles can be. I have sold 200 of the same general appearance as this, men's and boys'. There are other hatters in this town. It was a common article of dress last winter.

Cross-examined. — Of this particular kind I sold last winter from one to three dozen — none of the same kind to boys.

Re-examined. — I have sold from one to three dozen of this kind, but without fur, and the rest of the 200 were of glazed leather, but had not a star like this, on the top.

The counsel for the prisoner here read copies of two warrants against J. C. R. Palmer — one dated the 8th of June, by which he was arrested and committed for further examination, upon the same charge as that against the prisoner; and one of July 10, by which he was committed by the magistrate to answer to the same charge, at the present term of this court.

They then read a copy of a record of the Court of Common Pleas of Maine, of a conviction of Palmer for breaking a shop, with intent to steal — the judgment and sentence.

which was confinement to hard labor for two years, in Thomastown State Prison.

William Babb sworn.

I keep a house of Entertainment, called the "Halfway House," between Boston and Salem. I know Palmer, but from the time he was at my house until last Friday I have not seen him. I am not certain when he was at my house; my impression is, that he came there on the 9th of April, and went away on the morning of the 10th. I heard of the murder on the 7th, in the after part of the day, I think. He never slept there at any other time, unless he got into the house unknown to me. My impression is, that it was after the murder, that he slept there. I am not positive that I had heard of the murder before. I know that it was the 9th, because I had a man (George Green) who "took too much," and I turned him away, and he signed a receipt the next morning. Palmer came out while he was signing and asked for his bill, and said he had no money. It was at this time, I think, and the receipt is dated the 10th.

Green was paid for four days' labor. He worked on the 10th, and left the house on Sunday, the 11th. I am not certain that Green was present. He is now covered up in the earth.

Palmer called himself George Crowninshield, and left with me a plaid silk handkerchief marked with that name, and offered me a note for the amount of his bill, signed George Crowninshield, and said that he should be along in a day or two, and would pay the bill. I asked him if his name was George Crowninshield — he kept his head down very much, and I said, "You don't resemble the family; I know Richard very well — but you may be a younger brother" — he said, "It might be the case." I carried back the note and threw it on the desk, because my wife said that it was good for nothing. I went out,

came back and never saw the note afterwards. I don't know what became of it.

Cross-examined. — The receipt I left at my house. I saw it last Friday. I can't swear that the receipt was dated the 10th, and if it were, I can't swear that this was right. But I am positive that it reads 10th. The time of day was 7 or 8 P.M. when he came there, and it was after 7 in the morning, after the usual time of going to work, that he went away. I can't fix the time any nearer. I don't know which way he came. He went to the east. . . .

James W. Webster sworn.

I live in Belfast (Me.). I have known Palmer these eight years. As to his general reputation for truth I don't know that he has any at all. I have always heard a bad character of him. I have heard perhaps an hundred people say, that he would not be believed at all, in any case in which he was interested. His general character is not good.

William F. Angier sworn.

I live at Belfast and was admitted to the practice of the law about a week ago. I have known Palmer eight or nine years. I have never heard his general character for truth and veracity questioned. . . .

Alfred Welles sworn.

I reside in Boston, and import hardware and fancy goods. I sell arms. I have sold small arms, such as pocket pistols and small dirks, in greater quantities within two months than usual. I have had orders from Salem for quantities — from Mr. Johnson. After the murder I received orders for short dirks from respectable persons here and in Boston, as long as I had any left. My drawers were emptied of these instruments once or twice within two months.

Major Petty sworn.

I live in Danvers, about a quarter of a mile from Crowninshield's. I remember being at work for George Crowninshield, trimming a couple

of trees. I can't tell whether before or after the murder. While at work, Richard and two young men, whom I didn't know, came up to us, I heard the name of one called Allen. I can't say whether the prisoner at the bar was one of them — one was a man about his size, and one of them had a whip, but I don't know how they came. The trees which I was trimming were within eight or ten rods of the house. These young men went towards the house, and George went with them. I can't tell whether they went into the house. The front door was open. I am pretty sure that I saw two on the steps, but I am not sure who went in. They were gone but a short time, and came back to within one and a half, or two rods, of the place where I was at work — all four together. I heard talking, but couldn't hear what was said. I could if I had attended. I think that George and one of the others went a little before the rest, when going to the house, but I should say not a rod ahead — all four came back together. They stayed perhaps ten or twenty minutes, and then started to go to the factory together. The time of day was, as nearly as I can recollect, after dinner. I can't say whether Mr. Allen was the man.

William H. Allen recalled.

The first time I went, I saw a man at work — it was six or eight weeks before the murder.

Petty resumes.

I was not trimming trees in February, merely cutting them away, so that the meetinghouse might be seen. I should say that this was in April. I can fix the time by the work I was then employed on. I did not see the young man any more on that day. There was frost in the ground at this time.

Cross-examined. — This was not in March — I should think that it was in the fore part of April. I don't know whether it was just before or just after the 6th of April. I think I heard George call one of them Allen.

Ebenezer Shillaber, Esq., sworn.

I have had a conversation with Mr. Southwick respecting the man in Brown Street. I inquired of him after the arrest of the Knapps, about the men he saw in Brown Street. He told me he recollected seeing a young man there. That he went into Bray's house with him, and that after having got there they saw another join the first. Mr. Southwick said that he could not see so well as Bray could, he said that he thought that the man who came from Newbury Street was taller than the man who was in Brown Street. . . .

Gardiner. — We propose to ask the witness, generally, what description Mr. Southwick gave to the witness, of the persons whom he saw in Brown Street. . . .

Witness. — I don't recollect, whether Mr. Southwick gave me any description of the persons whom he saw in Brown Street. I asked him whether, for aught he knew, the person who came from Newbury Street might not have been Francis Knapp, and the person in Brown Street Richard Crowninshield? He said he could not tell, but for aught he knew, it might be so. I had no conversation with him about the man on the steps. My only object was to satisfy myself, that it might have been Richard Crowninshield in Brown Street.

Cross-examined. — I was Counsel for Richard and George Crowninshield, when I made the inquiry.

Mrs. Burns sworn.

On the night of the murder of Mr. White, I saw Selman and Chase at my house. It was about 8 o'clock. They came in a chaise. They tied their horse in the yard, and went away. Mr. Burns was not at home. Chase came back again about half past 9 — stopped about five minutes for Selman, then took his chaise and went away. Selman came back about five minutes after Chase had gone, and asked for him. A young man was

with Selman, at the bottom of the yard. I did not know who it was.

Selman said he expected Chase to call for him there. He then went away, and returned in about a quarter of an hour, to see if Chase had called for him. The last time they were there, the young man that was with him left a message to tell Chase, when he should come, that he should be at Pendergrass's. . . .

Cross-examined. — I know George Crowninshield. I did not know the voice of the one who spoke to Selman — he did not speak loud, but in a tone of moderate conversation.

John Needham sworn.

I saw George Crowninshield, on the night of the murder, in South Fields, the first time about 7 o'clock, at the news room, at Pendergrass's. Richard Crowninshield paid the rent for that room. Chase and a young man, introduced to me as Col. Selman, came in, and George a few minutes after. They stayed there about half or three quarters of an hour, and then went away, all together. I saw them again there between 9 and 10 o'clock. Chase then came alone in a chaise, and George Crowninshield and Selman came on foot afterwards. George was there all the time, except about ten minutes, that I was out. Joseph Burns, Austin, and Osborn were also there, and stayed some time. Chase and Selman went off together, in the chaise, and afterward George, Austin, Osborn, and myself came away together. I said that I was going home the nearest way and George said, "I'm going to Mary's, and will go with you." We went by Malloon's Mills. When I got to the gate of our house, at the corner of High and Summer streets, we parted. This was before 11, because I went to bed immediately, and soon after heard the clock strike 11. Mother asked me whom I spoke to at the gate, and I told her George Crowninshield.

Cross-examined. — At this read-

ing room we took many papers, and its general use was for reading. Richard Crowninshield paid for the papers. We had some from Alabama, and the "Truth Teller," from New York. Sometimes we had gambling of all kinds. . . .

There is a game called props. I have never seen any other played. Ours was not a gambling house — a gambling house is a cheating house. — There was some liquor kept there sometimes.

Matthew Newport sworn.

I keep a victualing cellar at the corner of Union and Derby streets. George Crowninshield and Benjamin Selman came there on the night of the murder, between 9 and 10 o'clock and stopped about ten or fifteen minutes. They inquired if John McGlue had been there.

Joseph Fairfield sworn.

I live in Danvers and keep a public house. I saw George on the evening of the 6th of April about 9 o'clock with Chase and Selman at my house. They stopped there about ten or fifteen minutes, came in and took something to drink, two glasses of brandy and one glass of gin. They came and went in a chaise towards Salem.

William Austin sworn.

I saw George Crowninshield on the night of the murder at Pendergrass's about half past 9. I am a tanner and currier. George Crowninshield came about half past 8. He stopped in Pendergrass's shop a little while, then went into his room. I was there with him — when he went away he went towards Marblehead. He came out with me and John Needham. I and Osborn came over the south bridge. Joseph Burns and two others were there that night besides. I did not know who they were. The clock struck 11 just as I got home. I live in Boston Street. I did not know Selman and Chase at that time. It takes me about nineteen minutes to walk home from the "reading room." I have walked it since about

as fast as I did that evening. Chase and Selman went away five or ten minutes before I did. After they went away, Osborn and I proposed to go. George Crowninshield and John Needham came out when we did. They came immediately behind us—as we turned towards the south bridge, they turned up the hill.

Benjamin Selman sworn.

I saw George Crowninshield on the night of the murder. I came over to Salem from Marblehead with Mr. Chase. We went up to the factory and saw George Crowninshield. Chase wanted to see him, and I wanted to see Clark Read in Salem. We went into the factory and saw George between 5 and 6 o'clock. George wanted to go to Salem to see John McGlue, to get some money. He went with us in the chaise. We stopped at the tavern opposite to Dustin's in Danvers, and then came to Salem. George got out at the post office. Chase and I went into Burns's with the chaise. After leaving the horse at Burns's shed, I then came out and met George opposite the post office. George proposed taking a walk. We went to Pendergrass's and stopped near an hour. We got there about half past 7, and stayed till after 8. We then came over into Salem, and went down to the Franklin building on the Common, and Chase found a friend there—a female—and went away with her, and said that he would join me in fifteen minutes at Burns's stable. I then went with George down to Newport's cellar, and stayed there near an hour. George said that he wanted to see Mr. McGlue who owed him some money—'twas 9 o'clock, when we came away, and then came up to Franklin building again. I wanted to see Read, and he said he would go with me. Read's is in Williams Street, he stopped at the gate and waited for me there near half an hour. We then went through Brown Street to

Burns's stable, without stopping in Brown Street. We went to Burns's shed and found the chaise was gone. I knocked at the door and asked Mrs. Burns if Mr. Chase had been there, she said he had been gone fifteen minutes. She did not know where. I went up into Essex Street in front of the Coffeehouse and waited a few minutes, and then went over to Central Street, when the clock struck 10. George then went over the bridge, while I went and told Mrs. Burns that I was going over the bridge; if Chase called, to tell him George was with me.

When I got there, Chase was there with a chaise, and said he had been waiting half an hour for me, and said he had agreed to be there. I took a cigar and stayed till a quarter after 10. We then took our chaise and went home to Marblehead. We left George Crowninshield in the yard and got home five or ten minutes before the clock struck 11. It is four and a half miles from Salem to Marblehead. I have been in jail eighty-five days on suspicion of having been concerned in the murder. I had on a hat and Chase had a glazed leather cap.

Clark Read sworn.

I live in Williams Street. Mr. Selman came to my house just after 9 o'clock on the evening of the 6th. I was just going to bed and was nearly undressed. He stayed there ten or twenty minutes. I went down to the door with him and saw a person there who spoke to me, and who I thought was Chase. At the time he said Chase would be waiting for him, but did not say that he was at the gate.

Nathaniel Phippen Knapp sworn.

Do you know what has been testified in this case.

Ans.—I have been told as to one point, as to finding the club.

I have heard something that Mr. Colman has testified—but only casually in the street, and this was confirmed by Mr. Dexter. The person who told me in the street

was, I believe, Mr. Miller. I can't remember that any other person has told me. Mr. Dexter has told me that Mr. Colman had stated that it was by the prisoner's direction that the club was found. . . .

Mrs. *Sally Needham* sworn.

John Needham is my son, he came home on the night of the murder about fifteen minutes before 11. I heard him speak to some person at the gate. I asked him who he was talking with. He had come into my chamber to light his lamp.

Cross-examined.—I knew the time because I have a watch in my chamber, and heard the clock strike, and I looked at the watch when I went to bed.

(*N. P. Knapp* resumes.)—I was present at a conversation between Mr. Colman and the prisoner, at his cell. I went to the prison with Mr. Colman, and went to my brother Jo's cell. When we came out from there, I went to my brother Frank's (the prisoner's) cell. As I was going in, I observed that Mr. Colman looked anxious to be admitted, and I asked him if he would go in. He said yes, and came in. There was a conversation at the door of Joseph's cell. He said, Mr. Knapp, I wish that you would not disturb the club. I will get a witness, and go and get it myself, for my own security. After we went into my brother Frank's cell, I addressed him in this way—"Mr. Colman says that the committee have evidence enough to convict you and your brother, that the only chance of salvation is for you to confess; that Palmer has applied for a pardon, on condition of being a witness, and that a promise of pardon has been dispatched to him from the officers of Government; that the messenger would pass through town that evening in the mail stage, and that if they did not confess before the mail stage passed through, it would be too late; that if either of them would confess, the committee would stop that message,

and apply for a pardon in favor of him, whichever it might be." I told him, also, that the subcommittee had severally assured my father that Palmer knew every circumstance relating to that transaction, and that the only chance to save his sons was to induce them to confess. I then asked Mr. Colman if what I had related as coming from him was not true? He said yes, and then went on to state, "I have seen your brother (addressing prisoner). I have made him these assurances, and offered him a pardon in case he would be willing to confess. I also assured him that if he committed anything to me in confidence, it never should be revealed, unless he should choose to become a witness. I am authorized by the committee to offer this pardon to either of you." I then said, "Mr. Colman thinks Jos. had better confess, for if you should be convicted after his confession, you would have a greater chance of pardon than he would." I applied to Mr. Colman, and asked him if he did not think so. He said, "yes, undoubtedly—your youth will be very much in your favor—your case will excite great sympathy, especially if it shall appear that you were persuaded to do what you did by your elder brother." He then said, "but I don't insist on the preference, I leave that for you to settle between you." My brother hesitated, and said nothing. Mr. Colman then said, "you know the condition, if you stand a trial, you will both be inevitably convicted—if either of you chooses to confess, he will save himself. If Jos. confesses, and you should be convicted, you will have a good chance of pardon, but if Jos. should be convicted on your confession, his chance would not be so good. At all events, your chance will be much greater than if you stood a trial, and were convicted on Palmer's testimony." He then reminded him that he had but a few moments to choose. My brother then said,

"I have nothing to confess. It is a hard case; but if it is as you say, Jos. may confess if he pleases. I shall stand trial." I recollect nothing more than that. Nothing was said about the club in Frank's cell in my presence and hearing. This conversation in the prisoner's cell was on Friday evening after the arrest on the 28th of May. Mr. Colman stated to me that he had been at Jo's cell that day two or three times. Nothing was said in my presence or hearing about the time when the murder was committed. . . .

My father failed 7th of April. The instrument is dated 7th of April. I was occupied in preparing it on the evening of the 6th. My brother, the prisoner, rode less after the failure. I had cautioned him about it in consequence of the failure. This was after the 7th of April. He was in the habit of riding much. My brother wore a glazed cap, like this in every particular. I remember the dirk—I never saw my brother have any before this.

I was up all night of the 6th of April, preparing, with Mr. Waters, my father's assignment. I went home at half past 1 o'clock. I left my office at some time after 9, with my father. I went to Mr. Waters's house, stayed there till a few minutes before 10, then went with Mr. Waters to his office, in Washington Street. My father went home. A few minutes before 10, went to Mr. Waters's office. We were at his office ten minutes, perhaps. We did nothing but strike a light and get a book. From there we came directly down Essex Street, to go to Mr. Waters's house again; on the way, we stopped at my own house to get my umbrella. It rained when we left Mr. Waters's office, and when I got to the house. When I came out, it had ceased raining. I went to Mr. Waters's house, and stayed there till 1 o'clock. I got from the house, also, a key of one

of the doors, that I might come in from Mr. Waters's house. I went directly home. When I got home, I found my father in the entry—he had just come in himself. I told my father he had better retire, and I sat up all night, and finished my writing. I saw nothing of the prisoner during the night. I saw him the next morning, about 8 o'clock.

Frank's usual hour of going to bed was 10 o'clock. He was the most regular person in the family in this respect. My father's house is in Essex Street, a few rods below Newbury Street. I passed Mr. White's house at a quarter past 10, and saw a light in his chamber. I heard the clock strike ten minutes before we arrived at Mr. Waters's office—stayed there about ten minutes. I believe I called Mr. Waters's attention to the light, but I am not certain. I was in Derby Street or the street above it, when the clock struck 10.

Cross-examined.—When I went to the prisoner's cell with Mr. Colman, I went from my brother Joseph's cell. We went to Joseph's cell together, to make the statements to Joseph, that the committee had made to Mr. Colman, to see whether he would confess. This was on Friday evening, between 6 and 7 o'clock. I had not been to the cell of either brother before. We both went into Joseph's cell, and a conversation was had about confessing. I don't know whether Joseph agreed to become a witness for the State.

It was not positively agreed that he was to become a witness for the State; it was agreed on certain conditions. The conditions were, that he should have the preference. It was not agreed that he should have the preference, unless his brother chose that he should. I understood that Joseph's becoming State's witness depended upon Frank's consent. Mr. Colman said he should go to Joseph's cell at this time, and

I asked him to let me go with him, to which he agreed.

I went into the prison with him. I cannot recollect from what place. When I left Joseph's cell, it was my purpose to go to Frank's cell. I presumed Mr. Colman intended to go out of the prison, but as I entered the door of Frank's cell, I thought he wished to come in, and I asked him to come in. . . .

During this time, we had the conversation concerning the club. I had been in Joseph's cell all the time that Mr. Colman had been there — heard all the conversation between Joseph and Mr. Colman. I was there ten or fifteen minutes; at this time, I presume, I heard all that was said, because nothing was said in a whisper. There was an understanding that Joseph should turn State's evidence, but if Frank did not assent, it should be offered to him. Joseph would not accept that offer unless Frank would assent. I understood he was determined not to assent to Mr. Colman's proposition, unless Frank were willing — don't recollect how it was arranged that Mr. Colman should find that out.

When Mr. Colman told me not to get the club, I was in front of the door of Joseph's cell. I heard nothing said about the daggers, in Frank's cell — do not recollect hearing anything said about its being a hard thing that Joseph should "have the privilege to confess, since the thing was done for his benefit." Frank said it was a hard case — a hard alternative. I will not swear that he did or did not say this. I don't recollect that it was said that it was a hard case, since the thing was undertaken on Joseph's account. I will not swear that it was not said — I will swear that I did not hear anything said about melting up the daggers. There was no secret conversation between Mr. Colman and Frank. I have no doubt that if it had been said "the thing was done on Joseph's account," I should

have heard it. I can swear I did not hear anything said about its being done on Joseph's account. I heard nothing said about its being "a silly business," nor that it would bring him into difficulty. . . .

I will not undertake to swear that he did not say "I told Jo it was silly business, and would only get us into difficulty." I will swear that he did not say that he went home after the murder, — or "afterwards." I can swear that there was no conversation about the time of the murder — that Mr. Colman did not ask him about the time of the murder — that nothing was said about the dirk, and nothing about the club. . . .

My brother, the prisoner, had been an acquaintance of the two Crowninshields three or four years back. He had been to New York with them. . . .

Solomon Giddings sworn.

I reside in Beverly and was in Salem on the night of the murder. I passed Mr. White's house about 11 o'clock and saw and heard nothing which attracted my attention. I was going from the wharves to Beverly, and the clock struck 11 while I was in Essex Street.

William F. Gardner sworn.

I live in the next house to Capt. White's. I passed there twenty-five or thirty minutes after 10 in coming from Mr. Deland's, which is the next house to Capt. White's on the other side and on the corner of Essex and Newbury streets — there was a party there that night, which was just breaking up at that time. I heard no noise, nor anything which attracted my attention. Mr. Deland's windows look into Capt. White's front yard. There were three persons with me.

Stephen D. Fuller, Surveyor, sworn.

The plan made by me is correct. I have been a surveyor fourteen years, live in the city of Boston. The distance from Essex Street to Brown Street through Capt. White's

garden, is about 300 feet. [*Explains upon the plan the various obstructions between Brown Street and Mr. White's garden, and the difference between his plan and that made by Mr. Saunders.*]

Nothing could be seen of Mr. White's house from the ropewalk steps; nor from the post by Mrs. Shepard's house; nor from the post by Capt. Bray's house; nor from any part of the space between the two posts on the south side of Brown Street, except that through a small opening between Mr. Potter's and Mr. Henderson's houses, a part of the rear of Capt. White's house, but not the part in which he slept. Between the avenue from Brown Street to Essex Street, and Capt. White's house there are houses and other buildings; but from some parts of the avenue the upper western windows may be seen.

Charles G. Page sworn.

I saw the prisoner on the 6th of April, about 7 o'clock, P.M., in Essex Street, near the Salem Hotel — Forrester, Burchmore, Balch, and I were together, and he asked us into the Hotel to take some refreshment. We stayed there about five minutes, then came out, and I left them. I am a student of Harvard University. Glazed caps were at that time worn by almost all the students who belong here. Our caps were mostly bought in Boston. Sixteen of my Salem classmates have them. Camblet cloaks are also very common among students.

Cross-examined. — I recollect the night, for on the morning after the murder I was accounting for myself, as was natural, and thinking what company I had been in. I had some doubt as to what evening this was, when I was first called upon. I then did not recollect the circumstances by which I could fix the time, but have recalled them since. I have never said that I did not recollect, but when first called upon I wished time for consideration.

Moses Balch sworn.

I live in Lynde Street. On the

evening of the murder, I think, but I am not positive, I was with the prisoner, and Burchmore, and Page, and Forrester. I first saw him in Essex Street, between 6 and 7 o'clock. I was with him three-quarters of an hour. I saw him again between 8 and 9. He came into Remond's, in Derby Square. Burchmore, I think, and Forrester, and Page, were with me when he came in. We left that place about 9 o'clock, and all went to walk in Essex Street. I left the prisoner at the corner of Court and Church streets, about 10 o'clock, to go home. My impression is that he went down Church Street. I was with him all the time, from 9, until 10. Forrester left us at the corner of the Franklin Building.

I know that dirks were very common after the murder. I know one or two young men who wore them before. I wore a glazed cap at that time.

Cross-examined. — I cannot say positively that this was on the night of the murder. It was either on Monday or Tuesday evening. I cannot tell any nearer. . . .

The Court overruled the objection, and witness resumes.

The evening on which we were walking was dark and cloudy. We were at Remond's, smoking, when Frank came in. Remond's is an oyster house. We were at the Salem Hotel the first part of the evening. When I got home, the folks had gone to bed; so it must have been 10 when I left the prisoner.

Zachariah Burchmore, jun., sworn.

On the evening preceding the murder, I went with the prisoner, and Page, and Forrester, to the Salem Hotel, about 7 o'clock. We stayed there about a quarter of an hour, and the prisoner left us. About an hour after, Forrester, Balch, and I were sitting and smoking at Remond's when he came in — about half past 8. We all went out together just before 9. I don't remember whether

Forrester went out with us, or before. We walked in Essex Street about half an hour, and I left him about half past 9, at Franklin Building, or opposite.

Cross-examined. — To the best of my belief, this was on the night of the murder.

Reexamined. — I am not sure whether it was before or after the murder; but my belief is that it was the same night.

I generally wear a hat.

Cross-examined. — I can only recollect that it was on the evening that we were in the Hotel that I saw the prisoner. I don't remember what the weather was.

John Forrester, jun., sworn.

I took a walk with the prisoner, I think, on the evening of the murder. I met him in company with Balch, Burchmore, and Page, and was introduced to him — this was about 7 o'clock. I was with him about twenty or thirty minutes. We went to the Salem Hotel. He left us, and I saw him again in about an hour at Remond's.

Cross-examined. — It was on the night of the murder, or the night before, or the night after, that I walked with the prisoner and the others. I never walked with them all but once.

Judson Murdock sworn.

I live in Brighton, and keep a public house, and saw a man whose name I have since understood was Palmer, but he then wrote his name J. C. Hall. He came there on Monday, 3d of April, at 9 in the morning, I do not know from where, and stayed till the next day at 3 or 4 P.M. and then went towards Boston on foot. It is five miles from Brighton to Boston — from there to Charlestown five miles — and about thirteen miles to the half-way house.

Joseph J. Knapp sworn.

I am the father of the prisoner, and made an assignment of my property on the 6th of April. I was at home that night a little before ten.

I came from Mr. Waters's house in Derby Street. I saw the prisoner just after 10. He entered my front northern parlor about five minutes after 10, and asked me if he should bolt the door. I told him no, for Phippen was out, and I should wait for him. I told him that I was very glad that he was at home in good season. He asked me if I wanted any assistance. I told him no. I asked how the weather was, and he said that it blew fresh from the east. I asked him if he knew the time, and he told me that it was just 10. He then retired to his chamber, and left me in the parlor. I did not go to bed till after 2 o'clock. His chamber was in the west end of the third story. There is only one staircase up to the third story. My door opens into the entry. To come out of Frank's chamber, one must pass my door. He usually keeps his cap, when in the house, upon the window of the keeping room. I saw it there that night; he threw it there when he came in. No person moved in the house that night, except Phippen, when he came in. I saw Frank again the next morning, between 7 and 8 o'clock, when he came from his chamber. He usually put his boots in the kitchen; I don't know where he put them that night. His usual hour of coming home was about 10; he was very regular. He will be twenty years old next month. My son Phippen was with me until near 10. I left him at Mr. Waters's house. I again saw him about twenty or twenty-five minutes after 10, when he came in to take the key, that he might enter after he had finished his business. He was assisting Mr. Waters in making an assignment of my property, and he rejoined me just after 1 o'clock. He went to bed before I did, and at about 2, immediately after he came in. I did not see either of my sons in the chamber that night.

Cross-examined. — I saw Mr. Michael Shepard that night, at my

son's office, about a quarter after 9 o'clock. I did not see him after that time. When I went home I had come from Mr. Waters's house, about ten minutes before 10 o'clock, and left my son with Mr. Waters. I saw Mr. Shepard again the next day; I am not certain where, whether at his house or in the street. I believe that it was at his dwelling house after breakfast. I had no conversation with him about Frank's being at home on the evening previous. I next saw him the same day, at the Mercantile Insurance Office, but had no conversation with him about it then. I saw him also again in the evening of the same day, abreast of the Asiatic Bank. I then had a conversation with him, and told him that my son was at home before half-past 10 o'clock. We had then no particular conversation, excepting he asked me if he could credit what was in circulation — the arrest that had been made. Joseph and Frank had been arrested then. The Crowninshields had been arrested before. I remembered so as to tell Mr. S. all that happened the night before.

I have mistaken the questions — that conversation took place after the arrest.

I saw Mr. Shepard on the evening of that day at the Asiatic Bank. Nothing was then said about the time that Frank was at home. The first conversation on that subject with Shepard might have been the day of the arrest, or the day after the arrest of Joseph and Frank. I am sure that they had been arrested when I had this conversation with Mr. Shepard, abreast the Oriental Insurance Office. It was on the evening of the arrest, and no other person was present. This was the only conversation I had with Mr. Shepard on the subject. Mr. Shepard introduced it. I told Mr. Shepard that my son was at home in bed before half past 10 o'clock, and that I was at home so as to know when he came in. I told him I

knew that the clock had not struck 10 when I left Waters's house, and that he was at home and had retired before twenty minutes after 10. I told him that Frank came in and asked whether he should bolt the door. I did not tell him that I recollected seeing Frank throw his cap upon the window seat.

I don't recollect any conversation with Mr. J. W. Treadwell, about the time that Frank came home on the night of the murder, and have no knowledge of ever having talked with Mr. Treadwell on the subject; or of having said to him that I did not know what time Frank came home; or of having said, that "they said he came home at half past 10." I did nothing about the assignment till Mr. Shepard went away; he was to be my assignee. We talked about business in the street.

I was sitting up late to prepare a schedule of property. I did not see the assignment till the next day, when I signed it. I was collecting memorandums and papers necessary for the assignment. . . .

James Savary sworn.

I board at the Lafayette Coffee-house. I work for the Salem and Boston Stage Company. I was in the street on the morning of the 7th of April. I went about twenty minutes before 4 o'clock from the Lafayette Coffee-house to the stable in Union Street. I saw some person turn out of Capt. White's yard and come up street towards me. He came as far as Mr. Gardner's yard and then turned and ran. I was then between the two Peabodys' houses. I saw him running down as far as Walnut Street. As far as I can judge he was a man about my size. It was dark and misty. He had on a dark dress.

Nathaniel Kinsman called again.

I have testified to an observation I made of the windows on the second or third day after the murder, I could then see the whole of Capt. White's chamber window distinctly,

paces W. of the S. E. corner
ning's house. I paced off
ance to ascertain.

Crowninshields, 10 o'clock, A.M.,
Phippen came to my office. . . .

A few days after the murder; he
said that on the night of the murder

Mr. Waters, at his house. He went
up with Mr. Waters to his office, and
stayed there till near 11 o'clock.
He could not tell when it was he
saw the light, as he passed Capt.
White's house four times. He spoke
of the interview between himself,
Mr. Colman, and Prisoner. I asked
Phippen why Mr. Colman went to
Frank's cell. He stated that Mr.
Colman was a very intimate friend of
the family, and married Joseph. . . .

Michael Shepard sworn.

I had a conversation with Capt.
Knapp, senior, soon after the mur-
der, while passing from the offices to
my store, and I asked if Frank
associated much with two young
men that I suspected. He said
that he did not, but had kept very
good hours of late, and that on the
night of the murder Frank came
home and went to bed at half
past 10 o'clock — "so Phippen
told me," said he. Capt. Knapp
did not tell me as from his own
knowledge at what time Frank came
home. This was before the arrest
of his sons, and I think before the

arrest of the Crowninshields, and while we were walking from the site of the old Sun Tavern to the head of Union Street.

He did not tell me that he was at home that evening and knew at what time Frank came in. I don't recollect that he told me that he came in at five minutes after 10 o'clock. He did not tell me of the conversation between Frank and him about bolting the door, nor that he heard the clock strike 10 before he left Waters's house.

Cross-examined. — I did not ask him as to his own knowledge concerning what time Frank came in, and don't think that I put any question to him except as to his son's associating with these two young men.

John W. Treadwell called again.

On Friday morning, the 28th of May, I had a conversation with Capt. Knapp, senior. I took him into the private room at the Bank, and told him that I was entirely satisfied of the guilt of his sons, and advised him to go to the jail, and get a confession from one of them if he wished to save either. He said he would go. I then asked him if he knew where Frank was that night. He said no. I then put the question, "At what time did he come home?" He said, "I don't know, but I believe about the usual time," and added that he himself was up that night till very late, arranging his papers.

Mr. Shepard again.

Capt. Knapp was at that time probably a good deal agitated. He had found it necessary to assign his property. I, however, saw nothing unusual. He was a little disturbed and perhaps mortified.

George W. Teal sworn.

I live in Danvers, and attend the Bar at Dustin's. I saw the man now called Palmer there at about 6 o'clock, P.M., on the 9th of April. He stayed there near an hour and a half. It was the day after Capt. White's funeral. I was told to

watch him as a suspicious person. He left there about 7 o'clock.

Stephen Brown sworn.

I lived at the Hotel in Lynnfield last April. I saw Palmer there on Wednesday before the "fast." He came there about 9 in the morning, and stayed until 7 or 8 o'clock on Saturday morning, except that he was away on Friday afternoon.

Cross-examined. — I saw him in the barroom on Saturday morning, and he talked as if he had been at a public meeting in Salem on the night before.

FOR THE PRISONER

Elizabeth Benjamin sworn.

I am a domestic at Capt. Knapp's, senior. On the night of the murder, Frank must have slept at home, or I, who make the bed, should have remarked it. I saw him come down in the morning as usual. I myself went to bed about 9 o'clock. Phippen did not go to bed that night. I found him in the morning writing in the keeping parlor. I got up about 5 o'clock in the morning. . . .

N. Phippen Knapp recalled.

I remember conversing with Mr. Wheatland a few days after the report of the confession. I inquired of him about Counsel for my brothers, and he made some suggestions. . . .

After I came from Waters's, on the night of the murder, I conversed sometime with father, and then went into the cellar to get something to eat, and while I was gone, father went to bed. I then wrote till day-break, copying the assignment.

I never gave any other account of the light in Mr. White's chamber, than I have already given on the stand. I did not tell Mr. Wheatland what took place in Frank's cell, as he stated. . . .

After the conclusion of the evidence, the cause was argued for the prisoner by Mr. Dexter, and for the government by Mr. Webster.

The Jury were charged by his honor Judge Putnam.

deliberating twenty-four the Jury returned into able to agree upon a ver- were discharged from fur- deration of the cause.

dictor-General, on behalf ernment, then moved that e impaneled to try the again upon the same in- . . .

aturday, Aug. 14, 1830, the as again put on trial. The adduced was substantially as before, with the follow- ons:]

THE GOVERNMENT

Jaquith sworn.

day evening, the 2d of ut 10 o'clock, I was pass- Brown Street, from a hich I had been attend- Vestry of the first Baptist in Marlborough Street. got to Capt. Kinsman's aw a group of men stand- ropewalk steps, and one as pointing towards Capt. ouse. As I passed by Mr. gate, I saw that there persons, one sitting down, standing each side of him. who stood on the eastern something in his hand; I tell what it was, but at nt thought it an instru- usic, or something of that I passed, the one that g took it out of the hand er, and put it behind his I passed on. The two anding had on cloaks, or with capes, and the one d on a hat, and a surtout cape. I could not tell nstrument was.

Examined. — I saw no other the street than those three s. I walked fast by them, n. I told of it the next e mentioned it something dred times. I was not to attend on the former is cause. When I first

saw them pointing, I was by Capt. Kinsman's house; when I saw them concealing the instrument, I was by Mr. Downing's house. I know it was Friday evening. I mentioned it the next day. I thought what I saw was an instrument of music. There is a meeting every Friday evening through the year. I always attend.

Lewis Endicott sworn.

I had a conversation with Joseph J. Knapp, jr., in January last, about the time that Capt. White had an ill turn. He said if he had been in town, Mrs. Beckford would not have sent to Boston for Mr. Stephen White, for he could destroy all his own notes. He said that Capt. White had made a will, and that Mr. Stephen White was not executor, but Mr. John W. Treadwell alone; that black and white would not lie; that Mr. Lambert was the only witness. I asked him if he had seen the will; he said he had. I asked him if Capt. White did not keep his will locked up? he said yes; but there was such a thing as having two keys to a lock.

Cross-examined. — He said there was only one witness to the will.

Miss Sanborn and Miss Kimball, on this trial stated that, on the morning after the murder, a cloak was left at Capt. White's house by a young man, whom they did not know, who said, "This is my brother's cloak." It was afterwards proved that this cloak was left by Stephen Stratton, a servant of Mr. White.

Mr. Phillip Chase's testimony. — He had been through Brown Street for the purpose of ascertaining whether Capt. White's window could be seen from the neighborhood of Howard Street, and found that it could be seen distinctly. Witness visited Palmer in prison, in the room directly under Richard Crowninshield. While there a string was let down through the ceiling with a lead pencil — soon after a piece of paper with two lines of poetry,

and a request that if he was acquainted with the poetry, he would complete the verse and send it back. Witness pulled the string, and it was drawn back. Then he heard a shrill whistle, after that, the person above called, in a hard whisper — "Palmer," "Palmer." Thinks Palmer knew who was above him. . . .

FOR THE PRISONER

Daniel Potter sworn.

I have conversed twice with Leighton about the murder, once last Friday afternoon while the jury were out. He then said that Frank Knapp came to Wenham soon after breakfast, on the day that he overheard the conversation that he had testified to. As I questioned him, some one told him to stop. I saw him again two hours afterward. He said Frank was viewing the farm that morning; he said nothing of the conversation that he had heard.

Cross-examined. — I live in Salem; — am a blacksmith. My meeting with Leighton was accidental. I had a bet on the last trial, — on the verdict while the jury was out the first time. I have none now.

Stephen Field, jun., sworn.

I overheard the conversation between Leighton and Potter, as he has testified to it. I had no conversation with Leighton myself. . . .

Stephen P. Webb sworn.

I left Mr. Deland's house, which is next to Capt. White's, on the evening of the murder, at half past 10 o'clock; did not see or hear anything unusual. From the appearance of the pavement, it had rained a little, though it did not rain at that time.

James Savary sworn.

In addition to his former testimony, this witness stated, that he thought the person who came out of Mr. White's yard, was the prisoner; he said, "I mentioned it to a person, that I was carrying to overtake the Boston stage a few days afterward. I also mentioned it to

Mr. E. Maxon, at the Coffeehouse, the morning after the murder."

John Chapman sworn.

The weather on Monday evening before the murder was very pleasant. It was a clear, moonlight night. There was a public meeting at the South Meetinghouse. It was a very full meeting.

Affidavits were read, stating that Samuel H. Knapp, a brother of the prisoner, would testify, if present, that on the night of the murder, the prisoner came home about 10 o'clock and opened the door of the chamber where he was, and spoke to him at ten minutes after 10, and then he spoke to the prisoner, and that he heard the prisoner go immediately to his own room and as he supposed to bed. . . .

Dr. Abel L. Peirson sworn.

On Thursday, 8th of April, I was requested to examine the body of Capt. White. Doctor Johnson, some of my pupils, and several spectators were present. It was the first time that I had seen the body after the murder. The wounds on the head have been correctly described by the other physician. On examination, we found two groups of wounds on the body. There were six stabs, three inches from the left pap, and near together, each of which measured exactly half an inch in length, and gaped about a quarter of an inch, and resembled somewhat the figure made by a parenthesis [()]. About six inches further down, there was another series of wounds, seven in number. These wounds were all mere slits, having the edges together, and not gaping at all. One of them was three quarters of an inch in length: the other varied from half to three quarters. Four or five wounds penetrated the substance of the heart, though none of them reached the cavity. The second group of wounds had a downward direction, nearly at right angles with the first. (The diaphragm was perforated by them.) The fifth, sixth, and seventh

ribs were broken, by the blows which formed the first group of wounds. These two series of wounds differed in so many particulars, that I inferred that they were made by different instruments. The instrument by which the ribs were broken must have been about five inches in length, as the ribs were probably broken by the guard or hilt, and it did not appear to have been long enough to reach so far as the instrument that passed through the diaphragm.

Cross-examined. — I cannot explain satisfactorily the different appearance of the wounds, without supposing two instruments. . . .

Dr. Johnson called again by prisoner's counsel.

I did not observe such a difference in the appearance of the wounds as to lead me to believe that more than one instrument had been used.

Mr. Dexter then addressed the Jury as follows:

GENTLEMEN OF THE JURY:

You have now heard all the evidence on which you are to form your judgment of life or death to the prisoner. He stands before you for that judgment under terrible disadvantages. I will not repeat to you what has already been stated on that subject. I have neither time nor strength to expend on anything but the law and the evidence. You see around you proofs of the power against which the accused has to struggle in his defense. . . .

What, then, is the crime of which the prisoner stands indicted? It is, that he was present, aiding and abetting in the murder. Not that he is guilty of the murderous intent, or that he procured the murder to be committed, but that he was present at the perpetration of it, and gave his assistance to the murderer.

These are the facts of which you are to be satisfied by the evidence you have heard before you can return a verdict against him. But we admit the law to be well settled,

that an actual presence is not necessary to constitute the prisoner a principal. We admit that any place from which actual physical aid can be given in the commission of the murder, is presence within the meaning of the law. . . .

This, then, and this only, is the question that you are to try on the evidence you have heard, and from your own view of the scene of the murder: Was the prisoner, with such intent, under such an agreement, in such a situation, that he could render actual aid at the moment when the murder was committed? With this view of the case, I will now ask your attention to the evidence on the part of the prosecution.

Sensible of the weakness of the evidence of the prisoner's presence in Brown Street (especially as it stood on the first trial) the prosecutors have relied much on the aid of the conspiracy. . . . If, then, as the prosecutors contend, the evidence of Leighton is sufficient to indicate the object of the conspiracy — if the words he so ingeniously overheard can, as is said, mean nothing, but that the two Knapps and Richard Crowninshield had agreed that the latter should murder Capt. White, then all the remaining proof of the conspiracy is superfluous. The only object for which it could legally be used was accomplished at the first step. The Wenham robbery, the robbery of the Knapps' house, the preceding letters of Joseph Knapp to Stephen White and to the committee, and such other circumstantial stuff that has been introduced, may be used to aggravate the general appearance of the whole transaction; but they have no bearing on the case of the Prisoner. The letters may be proof that Joseph Knapp was guilty, but what is that to the Prisoner? He is not to stand or fall by the subsequent and independent acts of Joseph. Why are these evidence against him, more than Joseph's confession given to Mr. Colman?

They are but confessions made after the fact and without the knowledge of the Prisoner. As to the robbery, it may have been real or pretended. But whether real or pretended, what has it to do with the murder of Capt. White? . . . Considering these things as of no weight in the cause, I shall pass by them without further remark. Some other circumstances may be dispatched in the same manner. The conspirators wore daggers — the proof is that the Crowninshields habitually wore them before the murder — and that the Prisoner never had one until long after. And whether he then wore it for murder, or in boyish bravado, you may judge from Layton's account of the manner in which he used it upon him. Pleased with his new weapon, he "pricked me Bull Calf till he roared"; and how much of Layton's testimony is to be ascribed to that, is matter of no great consequence, so incredible is the whole.

So of the 5-franc pieces. The proof is that Joseph received five hundred on the 21st of April — and that George and Richard Crowninshield spent nine between that time and their arrest — nine 5-franc pieces! Richard was to receive, according to Palmer, one thousand dollars for the murder! and we are called upon to account for nine of these pieces, when the whole five hundred would not have been half of the price agreed to be paid. And why should not the whole five hundred have been paid? and if they were, why are not more than nine traced to the Crowninshields? The coin, besides, is no uncommon one — they carry no ear mark — the witnesses tell you they pass currently — commonly — here. They are the regular return from Point Petre; and in large quantities they go into the Bank — in small quantities they go into circulation. But suppose it otherwise, how does this prove Francis Knapp guilty of this murder? Is he shown to

have any of this pernicious coin? All the evidence about them is of the nine spent by the Crowninshields and that Joseph Knapp gave Hart three to buy meal for the family. . . .

One word about George Crowninshield; he has been shown by the government's witnesses to have been in Salem that evening and to have gone to bed at the house of Mrs. Weller about 11. The prosecution has proved an alibi for him and we shall not disturb it. On the contrary we have shown you by evidence, which is unnecessary to recapitulate, that he came to Salem with Selman and Chase on other business, and we have traced him from place to place through the whole evening. It seems to be the object of the government to show that he could not be the man in Brown Street. We agree that he was not; but we think it material to show you also that neither was he anywhere in the neighborhood of Mr. White's house at the supposed time of the murder. The testimony of Selman, corroborated as it is at every step, establishes that fact. Whoever, then, was the man in Brown Street, he was the only one in the vicinity of the house, and that will become a material fact when we consider the purpose for which he was there.

Much use was made on the former trial of the testimony and books of Osborne, the stable keeper. It appears by them, that the prisoner was in the daily habit of riding, and often to Danvers, and to Wenham, early in the month of April. That he went to Danvers on the 2d of April, as testified by Palmer and Allen, and afterwards on the same day hired a chaise to go to the Springs. That on the 6th of April he went to Danvers and after that did not ride till the 19th. We see little that can fairly be inferred from all this but that there was a frequent intercourse between the Prisoner and the Crowninshields, — a circumstance undoubtedly un-

favorable though slight, and between him and his brother Joseph's family, a matter from which nothing can be inferred. Two or three circumstances, however, attending these rides, have been selected as highly suspicious. In the first place the frequency of them just previous to the time of the murder and the interruption of them just after. If the books are examined, it will be found that these rides are as frequent in the months of February and March as in April, making due allowance for the difference of weather. The Prisoner returned from sea in January and he appears to have hired Osborne's horses almost every day from that time until the 6th of April. That evening was marked by the failure of his father, as well as by the murder of Capt. White — a circumstance quite sufficient to account for the discontinuance of his visits to the stable, and also for another fact, somewhat relied upon.

The place, it seems, for which the chaise was hired on the 6th of April, is still blank in the book. Now Mr. Osborne testified that it was the habit of the prisoner to fill out and rectify the charges against him by his own memorandum book; but this he had no opportunity of doing after the 6th until the 19th; and it does not appear that he ever was asked where he had been on the 6th; so too of the entry on the 2d. The chaise was hired for *the Springs*; but those words were afterwards struck out, and *to ride* put in their place, in the prisoner's handwriting. But the first words are not so erased as to be concealed; they are merely crossed out with a single line of the pen; and this was in conformity with the practice permitted by Mr. Osborne, who tells you he had perfect confidence in the prisoner, and suffered him to have free access to his books to make his own charges. One circumstance more, and I have done with these minor points.

It is thought very strange, that on the 6th the prisoner ordered his

chaise brought to the Courthouse, instead of getting in at the stable. A hundred innocent reasons may be imagined for that, while it is hardly possible to think of one in any way connected with the murder. He was much more likely to be noticed if seen getting into a chaise in Court Street, than at the stable, because one was a usual, the other an unusual, thing. The fact that he had a chaise was as much known at the stable; and if he wished to conceal the direction in which he rode, a much simpler expedient would have answered the purpose. Why did he not start the contrary way, and drive round the town until he could escape unnoticed? He may have had an errand in Court Street; he may not have wished to be seen leaving the stable on the day of his father's failure. It is so simple a thing that any reason is enough, and none need be sought for. But the most indifferent acts of the prisoner have been traced out with inquisitorial diligence, and magnified into proofs of crime. Is there anything in all these circumstances inconsistent with the prisoner's innocence? It is not enough that they are consistent with his guilt. Before circumstantial evidence can amount to proof, it must be impossible to explain it without supposing guilt. So far, certainly, all may be as well explained without that supposition. And yet, from the way in which these things have been heretofore insisted on, it would seem that they were looked upon as conclusive evidence. It seems to be enough if the prisoner can be found anywhere or doing anything on the day of the murder, which might, by any supposition, connect him with it. A thousand suspicions, it has been well said, do not make one proof. And what are these but possibilities? There is not one among them that deserves the name of a probability. A thousand such possibilities would hardly make one suspicion.

But one thing that has a little more show of proof, or rather of suspicion, must be disposed of, before we come to the direct evidence of the conspiracy. I mean Mr. Burns's story. Burns is a Spaniard; and although I would not discredit him on that ground alone, I cannot have the same confidence in his oath, I should in that of one of our own citizens. He hardly speaks English intelligibly, and there is some doubt whether he was finally understood as he meant. His story is intrinsically improbable, and he has discredited himself by his own contradictions. He tells you the prisoner called at his stable and asked if he were alone; being assured that no one was there, he wished to be yet more private, and asked if he could speak with him in the chamber. And all this secrecy was to tell Burns, that the Committee had heard that he [Burns] was out on the night of the murder, and that they suspected him — and that if he saw any friends that night, he had better hold his tongue about it, and that Joseph Knapp and the prisoner were his friends; and then follows an idle tale about the prisoner's accusing Stephen White of the murder, and then threatening Burns with his dagger because he would not believe it. Now what possible object could the prisoner have in all this but to bring himself into suspicion? No one had at that time whispered a suspicion against him. Burns had not pretended to have seen or heard anything of him that night, near the scene of the murder. But it may be asked, what motive could Burns have to fabricate this story? It is in vain to deny that there is a sufficient motive. We have seen the operation of it on more than one witness, and that Mr. Burns is above its influence I see no special reason to believe. You observed the manner in which he testified, — how zealously he defended Mr. Stephen White from the aspersions of the prisoner, — and how impossible it

was for the Counsel to obtain anything from him but impertinence by the mildest cross-examination. Such a man as Burns well understands what is the source of favor in this trial. He as well as others sees that the prisoner is a helpless and friendless culprit, pursued by all the wealth and respectability of the town. And can you see in this no motive that could lead such a man as Burns to claim his share in the merit of his conviction?

But be his story ever so probable, you cannot believe it — he swore positively on the first trial that this happened after the Wenham robbery, and on this he has sworn positively that it was nearly three weeks earlier — he has described the prisoner's dagger as totally unlike any one he ever had, and differently at his two examinations. Let him and his story go for what they are worth — I trust that the prisoner is in no danger from them.

I come now to what is called the direct evidence of the conspiracy. It rests on two witnesses, Leighton and Palmer; or rather it rests on Leighton alone, for without his testimony that of Palmer would not be admissible. Palmer pretends only to have had a conversation between the two Crowninshields in the absence of the prisoner. Now to make this admissible against Frank Knapp, a conspiracy must first be established between him and the Crowninshields. For that purpose Leighton overhears the two Knapps tell each other the whole story, while he listens behind a stone wall. Now it may be supposed that this very deficiency in Palmer's story is proof of its truth. Not so. Palmer's story was first told and put in writing to convict Richard Crowninshield, and it would well enough stand alone for that. But when Richard was out of the way, and Frank became the principal, a connecting link was wanting; and to furnish this is Leighton's office.

And what is Leighton's story?

Of all the gross improbabilities that ever were laid at the foundation of a cause, this is the most gross. It is just the clumsiest contrivance of a play, where the audience is informed of what has taken place behind the scenes by the actors telling each other what they have been doing together. If it were told with the utmost consistency, could you believe it for a moment? Why, gentlemen, do but listen to it. He tells you that Frank Knapp came to Wenham about 10 o'clock (and Potter says he told him he came there immediately after breakfast, which would be about 7), — that he and Joseph were together all the morning in the fields, and that after dinner he left them together talking at the gate by the house, while the witness went down the avenue to his work. There was abundant opportunity, then, for them to talk in private about what most concerned them; but after the witness had passed through the gate at the end of the avenue, and taken his place behind the wall, he heard voices in the avenue; without rising, he peeped through the gate, and saw the two Knapps about twenty-five rods off, coming towards him; that they ceased talking until they arrived within three feet of the wall, and then began this dialogue: Said Joseph, "When did you see Dick?" "This morning." "When is he going to kill the old man?" "I don't know." "If he don't do it soon, I won't pay him," — and they then turned up the avenue and walked away; and this is all the witness heard.

Now is anything more than a bare statement of this story necessary to show its falsehood? For what purpose, under Heaven, could the Knapps have postponed all conversation on this most interesting subject till that very time? They had been together all the morning; they were plotting a murder; and Frank had been that very day to see the perpetrator; and yet neither

Joseph had the curiosity to ask, nor Frank the disposition to speak of the matter, until just as they reached the place of Leighton's ambuscade; and there in an abrupt dialogue of one minute's duration, they disclose the whole secret, and walk back again. Not a word more is heard by the witness. The conversation evidently began and ended with these words. Really it is too miserable a contrivance to deserve much comment. But there is a remarkable mistake about this story which stamps it with falsehood. Leighton fixes the conversation on Friday, the 2d of April. And why on that day? Because he knew, as well as every person who has read the newspapers, that on that day Frank did see Richard. But unluckily he fixes him at Wenham at the very hour in which it now appears, from the testimony of Allen and Palmer, that he was at Danvers. Leighton says that Frank came to Wenham at 10, and said he had seen Dick that morning; but it now appears that Frank did not go to Danvers until 2 o'clock, and at that very hour Leighton pretends to have heard this conversation at Wenham. Again, Palmer tells you that at that interview at Danvers, the plan was first proposed to the Crowninshields — that George spoke of it to Richard and himself as what he had just heard from Frank; and yet from this dialogue at Wenham it seems that Joseph was impatient at the long delay of Richard. "When is Dick going to kill the old man?" "If he don't soon, I won't pay him." How are these things to be reconciled? Leighton tells you too that he never mentioned this conversation until after the murder. And why not? Why, forsooth, "he did not think of it." He had heard a plain palpable plot of murder contrived by his own master, and yet he did not think of it! He did not tell it to Mr. Davis when he joined him at his work, nor to Hart who slept in the same room with him; and when he

hinted after the murder to Starrett at two different times, that he "knew something," and had "overheard something about the murder," Starrett had not the curiosity to ask him what it was! He is directly contradicted by Hart, both at the time when he told him of it and as to the circumstances of Richard's supposed visit to Wenham. Hart says he never heard of this conversation until after Leighton's examination at Salem, and that Leighton told him the Committee brought out a warrant to commit him to jail if he did not tell what he knew — facts both of which Leighton denied on the stand. Now what account does he give of the manner in which his evidence was brought out? He says he was summoned to attend court, taken out of the field where he was at work, and carried to Mr. Waters's office — he was kept there forenoon and afternoon, more than four hours, closely questioned and threatened, but he told nothing. Why did he not tell? On the first trial he swore he remembered well enough, but did not choose to tell — to be sure he swore both ways about it, but he finally said he did remember and would not tell; and on this statement a most ingenious argument was built by the counsel in his favor. "He would not betray his employer; improper as it was to deny what he knew, he had fidelity enough to refuse." But on this last trial he takes all that back; he swears positively he did not remember a word about it. Equally regardless of his own oath and the argument of the counsel, he denies the whole. He says it all came into his mind about two days after his return to Wenham — the very words. What brought it to his mind he cannot tell. Now what credit can you give to this boy and his story? But one of the most remarkable improbabilities of it is yet to come. He says he told the gentlemen at Mr. Waters's office that if they would come to Wenham the next day,

he would tell them all he could remember. That was on the 22d of July. Now do you believe if that were true, they would not have gone? When everybody in Salem was inquiring about the murder, and some of the gentlemen at Mr. Waters's office had been doing nothing else for months before, and when they had taken all these pains to extract from Leighton what he knew, do you believe that after such a promise they would neglect to follow him up? And yet he tells you he heard nothing from them until ten days after that time. Then they came to Wenham and he told them all about it. Now, gentlemen, if you had seen as much as we have of the diligence of the Committee and Subcommittee in looking up testimony in this cause, you would not think this the least improbability in Leighton's story. Consider how important his testimony is. Without it, Palmer's, and the whole evidence of the conspiracy, would be useless. It is the very corner stone of the prosecution. And yet it was not thought worth looking after for ten days immediately preceding the trial. Again, we shall be asked, what motive has Leighton to swear falsely? and we answer, Fear, favor, and hope of reward. He was told at Waters's office he should be made to remember — he said he was threatened with a warrant, and he knows of the immense rewards that have been offered. He remembers the pricking with the dagger, and he swears now to you that if Knapp escapes hanging, he expects he will kill him. Under all these circumstances, I put it to your consciences to say if you can take this boy's word against the life of the prisoner. If you disbelieve it, then you must wholly reject Palmer's testimony, and all evidence of what was said and done by any one but the prisoner, or in his presence. There is absolutely no other evidence to connect the prisoner with Joseph

or the Crowninshields in this matter.

But who is this Palmer, this mysterious stranger who has been the object of so much curiosity and speculation? He is a convicted thief. We produce to you the record of his conviction of shop-breaking in Maine. He is an unrepenting thief, for he tells you on the stand he cannot speak of the stealing of Mr. Sutton's flannels in Danvers, committed since his discharge from the State Prison, without criminating himself. Mr. Webster (the witness) tells you his character among his neighbors in Belfast is as bad as it can be. He tells you himself that he has passed in his wanderings from tavern to tavern, sometimes by the name of Palmer, sometimes that of Carr, sometimes that of Hall (the alias of the notorious Hatch), and sometimes that of George Crowninshield. The latter name he gave at Babb's house when he was called on to settle his bill; and whether he settled by a note he cannot remember; but Mr. Babb remembers that he did, and signed that note *George Crowninshield!* And how came Mr. Palmer a witness before you? He was arrested as an accomplice in the murder at Prospect; committed to Belfast jail; brought up by land from Belfast in chains; put into a condemned cell in Salem — remained in jail two months, neither committed for trial, nor ordered to recognize as a witness; but kept for further examination at his own request, until he is brought out and made a free man on the stand. Now what is this man's credibility? If his conviction had been in Massachusetts, he would have been incompetent; he could not have opened his mouth in court. But the crime is the same — the law violated is the same — and the infamy and the punishment are the same in Maine as in Massachusetts — and his credibility is the same. Add to that conviction, his subsequent theft, falsehood, and forgery, and you have

left in him but a bare possibility that he may speak the truth. As to his temptation to testify against the prisoner, you see how he was brought here, under what liabilities he stands, and what is the price of his discharge. He tells you himself that, though a disinterested love of public justice first moved him to inquire into the matter, he thinks he deserves some little pecuniary reward for his exertions; and doubtless he thinks that reward will depend something on the success of them. But what is his story? It is that being himself concealed at the house of the Crowninshields in Danvers, he saw Frank Knapp and Allen come there on Friday, April 2, about 2 o'clock; that Frank and George walked away together, and after their return Frank and Allen rode off — that the Crowninshields then came into the chamber where he was, and George detailed to him and Richard the whole design and motive of the murder as a matter then for the first time communicated. Now perhaps there is nothing intrinsically very incredible about this story, except its too great particularity. If it be false, it is so artfully ingrafted on the truth, that Frank Knapp was there at that time, and had an interview with George alone, that it would be almost impossible to detect it. Palmer too must be allowed the credit of ingenuity, whether his story be true or false. It is impossible for any one in his situation to have testified with a more artful simplicity. And I admit, too, that he has had the good sense to tell no unnecessary falsehood. The only instance in which he has tripped, is his saying that George Crowninshield told him on the 9th of April that he had melted the daggers the day after the murder for fear of the Committee of Vigilance; whereas, that committee was not appointed until late in the evening of the 9th. How that little impossibility is to be disposed of is not very material.

But this conversation is too particular. Like Leighton's it goes too much into all that the case requires. Why should the Crowninshields tell all this to Palmer without first sounding him? He says he rejected their offer immediately. Would they risk detailing the whole plan to him before securing any indication on his part of assent? Nay, after having communicated it to him and after he had refused to have any part in it, would Richard have gone on to execute it? He was not a man to trust his life to the keeping of such a witness as Palmer, who had refused to become an accomplice.

There is one circumstance in which the story is a little too ingenious. George speaks to Richard and Palmer of Stephen White as a certain Mr. White that lived at Tremont House in Boston; and then witnesses are brought in to prove that Mr. Stephen White actually lived there at that time. This is too shallow. Did not the Crowninshields, with their Salem connections, know Stephen White by name? There is not a man in the county that does not know him. This is meant to look like corroboration; but it looks much more like contrivance. Now such a story from such a man deserves no manner of credit unless corroborated by other testimony. Is Palmer corroborated? In the immaterial circumstances of his story in which he had the sense to tell the truth, and no temptation to lie, he is confirmed by other witnesses. But on the only important point he stands alone and unconfirmed. The conversation between him and the Crowninshields rests, and must of necessity rest, on his single statement. But it has been said that his letter corroborates his story. How can that be? Would he be such a fool as to swear now to anything inconsistent with his letter of which we had a copy? The mere fact that his testimony is consistent with his own letter amounts to nothing.

ing. But does that letter contain anything which he might not well have known whether his story be true or false, and which is now confirmed by any other witness? Not a word. It states that he knew what J. Knapp's brother was doing for him on the 2d of April, and that he was extravagant to give a thousand dollars for such a business; and that is all. The rest is but vague and unmeaning menace. Now it is undoubtedly true that Frank Knapp was at Danvers on the 2d of April, and had a private conversation with George; and that Palmer was at Danvers and saw him. And that single fact is the only one contained in the letter which is corroborated by any other witness. That he was there to engage the Crowninshields in this business and that they were to have a thousand dollars, comes from Palmer himself and from him alone. Even Leighton's story, though intended to corroborate it, contradicts it by inconsistency in time, and in the age of the plot. But he says nothing of the thousand dollars. But why should Palmer venture to mention a thousand dollars if that was not the sum offered? And why should he have written the letter at all, if he knew nothing about Frank's business at Danvers? The solution is easy. It supposes, indeed, some skill in Palmer, but we have seen enough of that. Consider when this letter was written. Not until after the arrest of the Crowninshields. If he had really heard this plot laid, why did he not give information of it immediately on hearing of Capt. White's death, and of the immense rewards offered for the discovery of the murderer? He tells you he wrote that letter to bring the matter to light; from a pure love of public justice. Public justice has been rather a hard mistress to Palmer; but he is not the less faithful to her. Now why did not that love of public justice induce him to inform against the Crowninshields and Knapps

before anybody else suspected them, and while public justice had some thousands of dollars to give him to obliterate the remembrance of her castigations? He had the whole matter in his own breast. He had heard every word of the plot. If they were guilty he had information enough to lead to their detection. Yet he waits five weeks after the murder and a fortnight after the arrest of the Crowninshields and then writes this letter to Knapp, demanding money — but in fact, as he tells you, to get evidence against him. Is this credible? But what led him to suspect the Knapps? What was more easy? He probably knew that J. Knapp's mother-in-law was an heir of White — he saw F. Knapp in private conversation with George Crowninshield four days before the murder, and he saw in the papers that the Crowninshields were arrested as the murderers. It required less than Palmer's shrewdness to put these things together. As to the thousand dollars, it may be his own pure invention, — there is no other evidence of it, — or it may be that he heard the Crowninshields say after Frank left them that they expected a thousand dollars without saying from what source. His letter is therefore no corroboration at all. It does not contain a fact proved by anybody but himself except that Frank was at Danvers on the second: nor is Palmer's story on the stand corroborated by any other witness in a single fact, that had not been published in every newspaper in the State, weeks before he testified.

This is the evidence of the conspiracy. I have but two remarks to make on it. If you could believe it on such evidence, the only effect of it would be to show that Frank Knapp was an accessory; and makes nothing said or done by J. Knapp or the Crowninshields evidence against the prisoner. For the very proof relied on to establish the fact of the conspiracy proves equally well

all that of which such acts and declarations are legal evidence; that is, the design and object of the conspiracy.

The most, then, that can possibly be inferred from this evidence, bad as it is, is that the prisoner was an accessory before the fact; and that if he were in Brown Street at the moment of the murder, and in a situation in which he could give assistance, there would be a presumption that he was there for that purpose. We are willing to meet the government on that ground. We deny that he was there; and we deny that the man who was there could by possibility have given any assistance.

Two men were seen in Brown Street at half past 10, of whom one is alleged to have been the murderer, and prisoner the other. But what proof is there that the murder was committed at that hour? If that fails, the whole case fails. Was there anything in the conduct of the men to show it? One man was seen waiting half an hour in Brown Street, and a little before eleven he was joined by another who came either from the common or from Newbury Street; and might as well have come from one as from the other, as he was first seen in the middle of the street. The man that came from the eastward did not run; he walked directly up to the other, held a short conference with him; they moved on together a few feet — stopped again; talked a few moments and then parted; one stepping back out of sight and the other running down Howard Street. Of the two witnesses that saw them, Bray thought they were about to rob the graveyard; Southwick suspected; but what to suspect he did not know, and his wife suspected that he had better go out again to watch them. A murder was committed that night in the next street, and this is all the proof that these were the murderers. A club indeed was afterwards found in Howard

Street; but neither of these men had any visible weapon.

What say the doctors? Dr. Johnson says he saw the body at six and then thought it had been dead between three and four hours — Dr. Hubbard now thinks longer; but says at the time he agreed with Johnson. There is pretty strong proof that the murder was in fact committed about three o'clock.

Savary saw a man between three and four come out of Capt. White's yard and walk up Essex Street; but meeting the witness he turned about and ran down as far as Walnut Street. Walcutt about the same time, and near the lower end of Walnut street met, probably, the same man, coming towards him; on seeing him he turned about and walked the other way. Now which was most likely to be the murderer, the man who might have come either from Newbury Street or from the Common, at eleven, or the man who was actually seen to leave White's yard at half past three, and twice turned back, and once ran away to escape observation? But here we are met with a dilemma on the second trial. What I have stated was the whole of Savary's testimony on the first trial. He was then asked whether he had ever heard of that man since and he said, no. Now he is asked whether he has seen that man since, and to the utter astonishment of every one, after giggling like an idiot, he says he thinks it was the prisoner! And this is seriously taken up by the counsel for the prosecution, and Dr. Peirson is examined to prove that the stabs were made with different instruments. You have heard his reasons for it. His opinion is that some of the lower wounds, being longer than the upper, must have been made by a broader dagger or a sword cane; these lower wounds were oblique and of various lengths, but he thinks that a dagger, however sharp at the edges, driven obliquely into the body, will not make a wound longer

upon the surface than the breadth of the dagger. This seems very much like saying that the human skin may be pierced, but cannot be cut. It is certainly contrary to common observation if not to common sense. Dr. Johnson says he saw no proof of more than one sharp instrument. But for what possible purpose, if Frank Knapp had met the murderer in Brown Street, and heard that the deed was done at eleven, should he have gone into the house again, and stabbed the dead body? Like another Falstaff did he envy the perpetrator the glory of the deed and mean to claim it as his own? or was it for plunder? No — for the money was not taken. The two suppositions that the prisoner was engaged in the murder at half past ten, and that he visited the house at half past three, are totally irreconcilable. We deny that he was in Brown Street, and we will take all the risk of Savary's testimony. This is but one of the many examples of the rapid growth of evidence in a popular cause. Savary's first story was true; he has told it so from the first day after the murder, and it is confirmed by Walcutt; but this last edition of it is as foolish as it is wicked, and needs no refutation or comment to those who saw and heard him on the stand; the manner was as indecent as the matter was absurd. The government must satisfy you beyond reasonable doubt either that the murder was committed at half past ten, or that the prisoner was the man who left the house at half past three. You cannot believe both; and can you say that you are satisfied of either? Is there not a great, a very reasonable, doubt of both? You must not convict the prisoner between the two. You must be as well satisfied of one as if the other did not exist. Which, then, will you take? That he was the man seen by Savary? If Savary were honest and credible, you would have but his opinion from a glance in a

dim and misty night (for it grew more dark and cloudy towards morning); a thing certainly not to be relied upon, standing alone, as it does. Was the murder committed at half past ten? What is the proof of it? and what was the man doing in White's yard at half past three? and why did he run when he was seen? Which acted most like a murderer, the man that came into Brown Street, or the man that ran from the yard? Which was the hour most appropriate to so horrible a deed? That at which a party was breaking up at Mr. Deland's, the next house to White's, or the still hour before daylight, when no person was abroad but by accident? And what is the fair result of the doctors' opinions on the view of the body? All these things concur to fix the murder on the man who left the yard in the morning. If you believe that was Frank Knapp; if you can say on your oaths that Savary's testimony satisfies you of it beyond a reasonable doubt, be it so — but it will satisfy nobody else. I have no fear of it.

There remains, then, only the supposition that the murder was committed at half past ten; and then the question is, Was the prisoner the man in Brown Street? And on this point we have the most deplorable examples of the fallibility of human testimony, and of the weak stand that even common integrity can make against the overwhelming current of popular opinion. The witnesses are four. Webster and Southwick swore the same on both trials; Bray and Myrick have varied most essentially. As it now stands, Myrick and Webster are of little importance; Myrick saw a man in a frock coat who he now thinks was the prisoner, standing at the corner of Brown and Newbury streets from twenty minutes before to twenty minutes after nine. The man appeared to be waiting for some one; and when any person approached his post he walked away

and then turned and met him; he did this several times. Now whether that was or was not the prisoner is not in itself of any importance. It is hardly to be believed that a man who was to be engaged in a murder at half past ten would be seen lingering near the spot for forty minutes at the early hour of nine. It would, if true, be no unfavorable circumstance. For what purpose connected with the murder was he there at that hour? Did the murderers take their measures so ill that one was on the watch for the other in a public corner near the scene of the murder an hour and a half before the time? Besides, where are the persons whom Myrick saw meet the prisoner at the corner? he spoke of several. Why are they not found and produced? It is impossible they should not be found. We have been loudly and gravely called upon to produce the man in Brown Street if Frank Knapp was not he.

It is thought very strange that if it were not he, some friend of justice should not come forward and own himself to be the man, at the risk of taking the prisoner's place at the bar as a principal in the murder. So, too, it was asked, if Richard Crowninshield was not the man that joined him in Brown Street, why don't the prisoner show where Richard was? And yet we are told that the prisoner stood half an hour at a corner, and was met by various persons, but not one of those persons is produced to prove it. When it is the very question, whether it was the prisoner or not, and Myrick tells you himself that others saw him where they certainly would have recognized him. Now it is a principle of law that no evidence is good, which of itself supposes better in existence, not produced. Myrick's evidence, then, is good for nothing until those who met the prisoner at the post are produced. Besides, how did Myrick recognize him? He had never known him — he never knew him

until he was brought up for trial — nearly four months after the night of the murder, and in a different dress. He was then told, by a bystander, which was Frank Knapp. Being asked at the first trial, who he thought the man at the corner was, he said he thought it was the prisoner, not from what he had observed, alone, but partly from what he had heard about him. Now this was obviously no evidence at all. What a man thinks from what he hears, is nothing. What he hears, is no evidence; and still less, what he thinks about it. But at this trial, Mr. Myrick makes another step: he says he thinks it was the prisoner, from his own observation alone, making allowance for the difference of dress. Now how much of an allowance that is, depends on how much of the appearance of a man, seen four or five rods off by a perfect stranger, in a light, but cloudy evening, consists in his dress. It can consist of nothing but dress, figure, and manner. Mr. Myrick's evidence, therefore, amounts to this and no more: "I think the prisoner's figure and manner the same as those of a man I saw four months ago, under the circumstances above described." This is so slight, that the difference in his testimony is not worth mentioning, except to show the growing tendency of the whole evidence.

About the time that Myrick leaves the prisoner in his frock at the corner, Mr. Webster overtakes him in Howard Street, in a wrapper. He passed him without much observation; he did not see his face, but he thinks it was the prisoner. It is of no consequence whether it was or not. The probability, from the change of dress is, that it was not. And this reminds me of a remark made on the last trial, that such differences and sudden changes of dress were to be expected for the purposes of disguise when such business was on foot. With great deference to the learned counsel, it

seems to me highly improbable. What is the evidence on this point? The prisoner is supposed to have had on his usual frock and cap, at the corner, from a quarter before to a quarter after nine; at half past nine to have walked in Howard Street, in the same cap and a wrapper; to have sitten on the steps of the ropewalk, in his own cap and camblet cloak at half past ten, and in five minutes after, to have been seen in the same street, in his frock. Now I agree with the learned counsel that on such an occasion, disguise is to be expected; and further, that it is entirely incredible any one should go undisguised. But what disguise is here? The wrapper does not, indeed, correspond with any known dress of the prisoner; but in every other situation in which he is seen, he is recognized by his usual dress, and by that alone. Now it is incredible enough that a man should, in a light evening, be out in his usual dress, to commit murder in his native town; but that he should think to disguise himself by putting on and off his own cloak, as well known as his own coat, and thus be seen in two of his habitual dresses, is a little too much to ask you to believe. Why not assume one effectual and complete disguise? Or, if he feared being seen too often in one dress, why not put a strange cloak over a strange coat? And why wear his own cap the whole evening? The counsel has said this was a murder, planned with great skill — nothing could be more unskillful than the prisoner's part, if he was there.

But let us come to the more material part of this testimony. Mr. Southwick swears positively to having seen the prisoner on the ropewalk steps at half past ten, in his own cap and cloak — that he passed him three times, and watched him twenty minutes. He has known the prisoner from childhood. He did not speak, though he felt very suspicious of him. That he went into the house and took off his coat

and came out again, and the man was gone. He met Mr. Bray, who pointed out a man standing at Shepard's post, on the other side of the street, in a frock and cap like the prisoner's. Bray and he stopped and observed him till he left Shepard's post, walked down the opposite side of the street, and passed them and stood at the post under Bray's window. They then crossed over and entered Bray's house, passing within twenty feet of him. Southwick says he did not recognize the man in the frock coat, but supposed him to be the same he had seen on the steps, because there was no other person in the street; and because he had the same suspicions of him! — Now this testimony of Mr. Southwick is open to two or three important objections. In the first place, if Frank Knapp were on the steps to aid in a murder, at that moment in execution, and expecting to be joined by the murderer, would he have permitted Southwick to pass him three times and watch him twenty minutes? He knew Southwick as well as Southwick knew him. Southwick says he dropped his head each time, as he passed him, so that he could not see his face. So there is a foolish bird that puts its head in a hole and thinks itself safe if it cannot see its pursuers. Murderers are apt to be more cautious. He says he knew it, then, to be Frank Knapp and told his wife so. But though he thought the man, he and Bray saw, was the same, and both wondered what mischief he could be about, he never told Mr. Bray who he thought it was. Is that possible? Yes, both he and Bray agree in it. But the greatest impossibility of all is, that he should not have recognized the prisoner, if it was he, in his usual dress, while walking down the opposite side of this narrow street. Chadwick tells you it was so light, he easily distinguished Mr. Saltonstall, farther off, the same evening. Now how inconsistent is this story with the

supposition that that was the prisoner. He knew Frank Knapp familiarly, he saw him and recognized him in his cloak on the steps — he saw a man on the opposite side of the street five minutes after, who he, for some reason, not connected with his appearance, thought was the same: and yet, though that man wore the usual dress of the prisoner, and walked down the street by Southwick, when it was light enough to distinguish persons across the street, and though Southwick passed within twenty feet of him to go into Bray's house, he did not recognize him as the prisoner. Again, he thought the man in the frock was the same as the man in the cloak; he knew the man in the cloak was Frank Knapp, yet he and Bray wondered who the man in the frock could be, and Southwick never thought of telling Bray it was Frank Knapp. Now if Southwick's testimony were believed, it not only would not prove that the prisoner was the man at the post, but it would prove almost conclusively that it was not. It is impossible that Southwick should not have known him if it were he, and should not have told Bray if he knew him on the steps. Besides, Southwick is contradicted by Mr. Shillaber — he told Shillaber that "for ought he knew the man in Brown Street might be Richard Crowninshield, and Frank Knapp the other — he could not tell who they were." And how does Southwick explain this? he says Mr. Shillaber's question was, "might not the man that came from Newbury Street be Richard Crowninshield?" A probable question indeed for Richard's Counsel to ask! But one word more with Mr. Southwick. — When Chase and Selman were indicted for this murder, he went before the Grand Jury as a witness at Ipswich — he there swore that the man he saw in Brown Street was about the size and height of Selman, and said not one word about Frank Knapp! On this testi-

mony, and that of Hatch the convict, was Selman indicted and imprisoned as a felon, eighty-five days; until another Grand Jury assembled, and as Hatch's oath was inadmissible, and Southwick had turned his testimony against Knapp, Selman was discharged. Now when was there anything more abominable than this except in form? It is not, to be sure, within the reach of the law, but how is it in conscience? He swears now that he then knew it was Frank Knapp; and yet he indirectly swore then that it was Selman, and what is the contemptible evasion by which he tries to escape! Why, that it is true that he was about the size of Selman, and he was not asked whether it was Frank Knapp! If he tells truth now, he knew then, that by one word of truth he could clear Selman of all suspicion of being in Brown Street; and he willfully *suppressed that truth*. Now why is he a more credible witness than if he had been convicted of perjury? It is said he told his wife it was Frank Knapp. She says so, and it may be true; but it is not the very best corroboration. It is not of one half the weight of the fact that he did *not* tell it to Bray. Still that only goes to the identity of the man on the steps. It leaves the man at the post still nameless, and that is the important question. Southwick does not pretend to identify him. Besides, where was his cloak? It seems that Joseph Knapp left his cloak at Burns' stable in St. Peters' Street, and it is suggested that Frank might have got there the one that he wore. But Southwick swears the cloak was a brown camblet and Joseph's is a plaid. Besides, how could he have gone to Burns' stable without meeting Bray, who came down St. Peters' Street?

Now this, with the addition of a statement from Bray, that he could not tell who the man in Brown Street was, though he was about the size and shape of the prisoner, and wore a cap and full skirted coat, such as

the hatters and tailors say Frank Knapp and a hundred others wear, was absolutely all the evidence on the first trial that the prisoner was in Brown Street. Two remarkable facts have happened since; one is that Mr. Bray, one of the most honest witnesses in the cause, has on this trial, to the same question, answered that he had no doubt the man he saw in Brown Street was the prisoner. Now I have no disposition to accuse Mr. Bray of any intentional misstatement or overstatement; but here is a direct and flat contradiction. One week he says, "I have seen the prisoner in jail and in court, and I cannot say he was the man in Brown Street;" and the next week he says, "I have seen him in jail and in court, and I have no doubt he is the man." And I am interrupted to say that this is no contradiction. Let the gentleman reconcile it as he can; I do not misquote the witness; such is and such was his testimony. Nay more; though he said that he had thought more of it since the last trial, and become more certain — a strange way of correcting an opinion formed on what was seen four months ago — he said too that when he first saw the prisoner in jail he recognized him by his dress and motions. Now there is no reconciling these things, let them be explained as they may. Both cannot be true; which will you believe? That he does or does not recognize him? Mr. Bray is one of the Committee of Vigilance — let that go for what it is worth and no more. But which is most likely to be right? his first testimony, the result of the reflection of three months, before he knew what would be the event of the trial? or that result corrected by the revision of a week, when he knew that the first trial had failed on that very point? I repeat that I accuse Mr. Bray of no wrong. But I cannot acquit him of that subjection to the power of imagination which has brought others

here, as honest as himself, to swear positively to things that never did and never could happen. We shall see that presently. We claim his first as his true testimony. He *cannot* say that it was the prisoner who was in Brown Street. He did not know the prisoner until he saw him arrested on suspicion of this crime. He then went to see him to compare his appearance with that of the man he had seen in Brown Street nearly two months before. Of what value is an opinion, formed under such circumstances? And which of his two statements would it be most safe for Mr. Bray to stand by? Can any man, with such means of judging, say with propriety he has no doubt? The rest of Bray's testimony I need not repeat; I have already stated the substance of it in speaking of the time of the murder, and it is not material on this point.

The other of the two remarkable facts which I have mentioned, is a most wholesome lesson as to the credibility of the testimony in this case, and of the value of circumstantial evidence. It is worth hours of argument, and peals of eloquence. It is a fact, a stubborn fact; and there is no explaining it, nor getting away from it. Miss Lydia Kimball and Miss Sanborn, two elderly respectable females, as credible persons as any that have testified, have, under the influence of the madness that seems to have possessed almost everybody in Salem, testified distinctly and positively to a thing as within their own knowledge, which is absolutely impossible. They both swore that on the morning after the murder, a person whom they did not know, brought into Capt. White's house an old cloak, and left it, saying, "*this is my brother's cloak.*" Miss Kimball can't say it was the prisoner who brought it, for neither of them knew him at that time, but Miss Sanborn thinks he had a cap on. And Miss Katherine Kimball says that Joseph Knapp afterwards

took the cloak as his own. Now here seemed to be confirmation strong. Here was the prisoner, driven by the folly that always attends guilt, carrying into the very house of the murder the disguise he had worn the night before. How perfectly this corresponded with the testimony of Burns that Joseph Knapp left his cloak at the stable, and with the suggestion of the counsel that Frank Knapp had gone there to get it as a disguise! How wonderful is the force of circumstantial evidence! Men may lie, but circumstances cannot! Now what is the fact about that cloak? It was Joseph's cloak; Stratton, Stephen White's coachman, went out to Wenham with a chaise that morning to bring in Mrs. Beckford, and she brought that cloak in with her. Stratton left Mrs. Beckford at Joseph White's, but by accident carried the cloak to Stephen White's in the chaise. And he afterwards folded it up and carried it to Joseph White's house. He was the stranger with the cap, that did *not* say, "this is my brother's cloak," — for how could he say so? he knew it was Joseph Knapp's cloak. Now what becomes of the truth of Miss Kimball's and Miss Sanborn's story, and of the force of circumstances? "Circumstances cannot lie," but women, and men too, that swear to them, may be mistaken — and, with the help of a heated imagination, and a few leading suggestions, may honestly invent the most outrageous fictions. Now this was detected by mere accident. We questioned Lathrop about it — he did not know — but he said Stratton brought Mrs. Beckford in from Wenham. We called for Stratton — he was not to be found — his examination was postponed until the prosecutors had put in their additional testimony. We called for him again, and then the whole matter was distinctly admitted. And this is the way that evidence is got up against the prisoner. And how much more of

equally plausible testimony might be explained away in like manner we shall never know. Not a single fact in the cause is better vouched than this, — few so well; and yet the only material part of it is utterly false.

Now take Bray and Southwick, the only material witnesses; make what allowances for error you think ought to be made, and can you say you are satisfied that the prisoner was in Brown Street?

There is one more piece of evidence that may apply to it; and that will bring me to an inquiry important for other reasons. I mean the testimony of Mr. Colman.

But let us first look for a few moments at the proof of the prisoner's alibi. It is applicable to two different times. The first between seven and ten, and the second after ten. The first depends on the testimony of Page, Balch, Burchmore, and Forrester. Now Page says he knows it was Monday or Tuesday evening; he said on examination he knew it was not Saturday, because he came home from college that day, and spent the evening at home. Burchmore is positive it was on Tuesday; and though uncertain before, has since remembered that he told Wm. Pierce so the day or day but one after the murder. We offer Pierce as a witness to the fact. Balch and Forrester both strongly believe that it was on Tuesday, and all agree it was cloudy, though light, and Monday was fair and bright. Now what is there against this? It is said they have expressed doubts and uncertainty heretofore. This is no contradiction; three of them give now only their belief; but it is a very strong one in all — Burchmore, however, is positive, and he gives a good reason for it — and good proof of his correctness. Here stands William Pierce ready to swear that Burchmore told him so the next day or the day after; we cannot examine him, and the prosecutors will not. We have a right

then to take it as proved by Pierce. But it is said that on the evening spoken of, Frank said he had a horse from Osborne's, and none is charged on that evening, and one is charged on Saturday evening; and this is thought sufficient to overthrow the whole testimony. But he may have had a horse and not be charged with it — or he may have told a falsehood when he said he had one. You remember the purpose for which he said he was going out of town; perhaps he chose to make a pretense of riding the better to conceal his motions; it all depends on the accuracy of Osborne's books; Osborne was not examined on that point. But after all it is of no importance, except to show that Myrick and Webster are mistaken and they are not very material witnesses.

The other branch of the alibi is more important, because it embraces the supposed time of the murder. Capt. Knapp, the father, swears that he went home a few minutes before ten, and that Frank came in and went to bed a few minutes after. And there is a particularity about this account that marks it either as truth, or as willful and cunning perjury; and Capt. Knapp's character is enough to shield him from such a charge. He says he commended Frank's return at the prescribed hour; that Frank asked him if he should bolt the door, and he said no, that Phippen was out; that Frank, seeing him looking over his papers (for he failed the very night), asked if he should help him — then threw his cap on the window seat near his own hat, and went up to bed. Capt. Knapp sat up till after one, and Phippen Knapp returned at that hour, and sat up the rest of the night. Samuel H. Knapp's evidence is that a few minutes after ten the prisoner opened his chamber door, spoke to him, and then went into his own room; and nobody heard him leave the house afterwards. He came down to breakfast as usual in the morning. Now this is im-

peached by testimony of certain conversations and statements of Capt. Knapp and Samuel H. Knapp. It is said Capt. Knapp told Shepard that Frank came home and went to bed before half past ten, "as Phippen told him," — if he said, as I told Phippen, that would corroborate instead of contradicting him. And it is said further that he told Treadwell that he did not know what time Frank came home, but believed about the usual hour. And that Samuel H. Knapp told Webb he did not know at what time Frank came home. Now these are not contradictions: and their apparent inconsistency depends wholly on the accuracy with which these conversations are remembered and reported. Of all kinds of evidence reports of conversations are the most uncertain. You have seen in this very case, that neither counsel, nor the reporters, nor even the judges agree as to the words used by the witnesses on the last trial of this cause, only a week since — although the greatest attention was paid and careful notes were taken. Then what is the probability that accidental conversations which took place two or three months ago, can now be accurately stated? Which is most probable; that Capt. Knapp remembers the facts he states so circumstantially, or that Shepard and Treadwell remember his words? And he is confirmed by Phippen Knapp and Eliza Benjamin as far as they could know.

But there is one piece of evidence that meets all the deficiencies of this case with a wonderful felicity. Whatever the Government cannot otherwise prove, Mr. Colman swears the prisoner has confessed and nothing more. Of half an hour's conversation with the prisoner he cannot remember a word but what turns out to be indispensable to the case of the prosecution. I no more mean to accuse Mr. Colman of willful misstatement than I do Mr. Bray, or Miss Kimball, or Miss Sanborn.

But he is ten times as likely to be mistaken as either of them. The old cloak story was, until exploded, ten times more credible than Mr. Colman's account of the confession — the witnesses for aught we know are equally respectable in character, and the testimony intrinsically more probable. What but the contagion of an unexampled popular frenzy could have so deluded these women? They have not been more exposed to it than others. But Mr. Colman has been living in its focus and breathing its intoxicating air for months. No man in the community has been so much excited by this horrible event as Mr. Colman. No man has taken a more active part in inquiring into its mysteries. Shall he then claim an exemption from the power that has either prostrated the integrity or strangely confounded the memory of witnesses as credible as himself? He had visited Joseph's cell three times that very day before he went into Frank's, and at the last time, passed directly from one cell where he had received a full verbal confession, to the other, where he now thinks he heard what he has testified. To a man, so excited as he was, and is to this day, here is ample cause for confusion and mistake. The witness is a clergyman, and whatever credibility that office may claim for him, I am willing he should enjoy. In my mind it is no more than belongs to any man of honest reputation; and on one account something less, for I cannot think the clerical office so well fits a man to endure and resist the excitement to which the witness has been subjected, as a secular employment. It is the experience of the world, that clergymen, when they mingle in worldly business, are more powerfully acted upon by it than others. Now every material word of his testimony is contradicted by Mr. N. P. Knapp, the prisoner's brother. He went into the cell with Mr. Colman, and must have heard all that was said: he had not

been in Joseph's cell during any part of his confession, and was not therefore liable to any misunderstanding. His attention was early called to it by a dispute with Mr. Colman about the club, and by consultations with counsel for his brother's defense. He has always borne an unsuspected character. Mr. Colman himself testifies to the propriety of his conduct before the trial;—he trusted him with the knowledge of the place where the club was hidden, and depended on his honor not to remove this witness of his brother's guilt; and the trust was not betrayed. Now here stand two witnesses, equal in character, directly opposed to each other on a matter known only to themselves and to the prisoner.

It is said, Mr. Knapp is contradicted by Mr. Wheatland; that is, Mr. Wheatland swears that in casual conversations held some months ago, Mr. Knapp made statements to him contrary to what he now swears. I have already remarked on the value of this kind of evidence. It depends on the thing least of all to be depended on: the accuracy with which words are remembered. The change of a word changes the whole meaning. Make the case your own. Can you pretend to remember casual conversation held with your neighbors three months ago, so that you can now swear to them? And if they should now swear to the facts differently from your present recollection of those conversations, would you charge them with perjury? Or do you think, if we had an investigating committee of twenty-seven, and the whole bar and population of Salem, looking up evidence for the prisoner, we could not find witnesses who have understood or misunderstood Mr. Colman to give accounts different from what he now swears to? With such means any man may be contradicted. But Mr. Wheatland candidly tells you on this trial, that he cannot speak

with certainty as to these conversations, how much related to what was said by Joseph, and how much to what was said by Frank. That one admitted, the whole force of the contradiction is gone. . . .

I have said that Mr. Colman had confessions of the exact facts want the case required and no more. Show that is, and how probable it is. The prisoner makes no general confessions; claims no right, and expresses no hope, to be admitted State's evidence. But to four distinct questions respecting the details of the murder, he gives four direct answers criminating himself. Now what were those answers? That the murder was committed between ten and eleven—a fact as you have seen wholly without other sufficient evidence, but all-important to the case. That Richard Crowninshield was the actual murderer. A thing without the shadow of other proof, except that McGlue saw him the evening before near White's house, and looking away from it. That the club was hidden under a certain step of the Branch meeting house—the only proof that the club had anything to do with the murder—and that the dirk was worked up at the factory—and lastly that Frank was absent from home at the time—to fortify the Brown Street evidence and destroy the alibi. And there is one fact about this last which deserves notice: Mr. Colman, in giving his reasons for asking these questions, said he had heard that the friends of the prisoner said he was at home that night at the time of the murder. This is strong confirmation of the alibi, for Mr. Colman had heard of it the second day after the arrest. But is it not remarkable that so little should be remembered of a half hour's conversation and that so very distinctly? Is it not remarkable, that finding Frank so communicative, Mr. Colman should not have gone on to verify Joseph's whole confession in the same way? He tells you he

has Joseph's confession covering nine sheets of paper, and yet, though Frank answered so freely, he had the curiosity to ask him only these four questions. It is truly incredible.

Now what improbability is there in N. P. Knapp's account of this interview? Not the least. He agrees with Mr. Colman, that Frank said it was hard that Joseph should confess, and he cannot positively swear that what Mr. Colman adds as to its being done for Joseph's benefit, did not follow, because he remembers the first part of the sentence, and he may have forgotten the rest. But he swears that, to the best of his belief, it was not so. As to the four questions and answers, he swears positively that no such things were said; because, if said, he must have remembered them. And is not this a perfectly proper distinction? His account too of the conversation with Mr. Colman, on the turnpike and in Central Street, of the note to Mr. Stephen White, and of all the other circumstances relating to the subject, is perfectly consistent, natural, and credible.

But what is the amount of all these confessions? If true, they prove, indeed, that he knew too much of this guilty deed. But they imply no presence at all; all, but his own absence from home, are facts that he might, and some that he must, have learned afterwards from others. And what does the fact, that he was absent from home, prove? At most it is but a circumstance corroborative of the Brown Street evidence. He may have been there, or he may have been elsewhere. . . .

One point only remains; but it is the great and important one. Believe the Prisoner — if you will believe anything on such testimony as Leighton's and Palmer's — a conspirator and a procurer of the murder — believe him in Brown Street at half past ten, and that the murder was committed at that hour, against the manifest weight of all the evidence but the confession.

Believe the confession too, and the whole of it, improbable and contradicted as it is; and, whatever the Prisoner may deserve in your moral judgment, he stands as clear of this indictment as a principal, present, aiding and abetting, as Joseph Knapp does, who was in bed at Wenham. . . .

Could the man in Brown Street give that help to the murderer, without the hope of which the murder would not have been committed? This is a question of fact for you to try on the evidence and the view. You must be satisfied of this beyond any reasonable doubt, or your verdict of Guilty will be against yourselves. Now, what assistance did the case admit? It was a secret assassination. If the prisoner had been actually present in the room or in the house, that alone would be enough. The mode of assistance would then be obvious. It would have been the part of the accomplice to beat down the strong old man, if he waked before the fatal blow; to murder any one of the inmates who should approach the chamber — give an alarm, or intercept the retreat. But when you find but one accomplice, and him at a distance in another street, you must inquire why he was there. You must be satisfied that he was posted there with some power, and therefore with the purpose, to aid. . . . Could he give an alarm? An alarm of what? You see that he could not know of the approach of danger. If the enterprise had failed, Richard might have been discovered, overpowered, and removed, before his accomplice could have been aware of any difficulty. But if it had been his object to intercept relief, or to give an alarm if he could not intercept it, where would he have been? At that point from which relief might be feared, and where early and certain intelligence of it might be had. Where was that? Certainly in Essex Street. Who would come to the relief? The inmates of Capt. White's own

house or of the adjoining houses of Deland and Gardner, or of the opposite houses, or some casual passenger. Now, against all these, the post of observation was in Essex Street, and near the house. Or if he wanted to watch the adjoining streets, why not stand at the corner of Newbury Street? Why not anywhere but at the places where he was seen during the whole time?

But one thing remains. Could he in Brown Street help the murderer to escape? If he had been waiting with a swift horse, to convey him away, that might do. But one man on foot can no more help another to run away, than one can help another to keep a secret. One could only embarrass and expose the other. Was he then to defend him in his flight? Resistance was not to be depended on or expected; besides, the accomplice was unarmed, and of what avail would he have been in Brown Street, where no force could be expected, unless the alarm had become general? [Much of this argument consisted of reference to the plans and cannot be reported.] Now we call on the Prosecutors to satisfy you of some one mode in which aid could be afforded. On the former trial two ways only were suggested. First, that Richard might have gone into the garden early in the evening, and waited for a signal from Frank in Brown Street to indicate the time when the lights were extinguished in Capt. White's house. And second, that Frank was in Brown Street to see that the coast was clear in Howard Street, that Richard might go there to hide the club. Now these things, absurd as they seem, were really said and insisted on. And they are the best hypotheses that the best of counsel can make for the government. We want no better proof of the utter weakness of the point. If Richard was in the garden under the very windows, would he want Frank to tell him when the lights were put out? He

could have watched every inmate of the house to his bed — he could have traced every light up the stairs until they were extinguished in the chambers. — He could have heard every noise, and know when it ceased in the sleep of those within. As to Frank's watching Howard Street, it would be enough to say that he was watched all the time, and that he did not once look down Howard Street. Frank had been standing from five to ten minutes at Bray's post where he could not see a foot into Howard Street, and then Richard having finished his conference, without any caution or examination, started and ran into that street with the speed of a deer. Did this look like watching? And for what purpose was Howard Street to be watched? That Richard might hide his club in a particular place selected — a club that nobody had ever seen and that could not be traced to him if found.

For what purpose then was the man in Brown Street? We are not bound to prove or to guess. . . .

And now, Gentlemen, as the last question in this cause, you are to say on your consciences, are you satisfied beyond a reasonable doubt that the man in Brown Street, whoever he was, could have given any effectual aid in the actual commission of the murder, and selected that as the most proper place for that purpose. If you doubt about that upon the whole evidence, do your duty, and acquit the Prisoner. . . .

I would urge you not to sacrifice him against law, that those more guilty than himself may be reached through him. His life is in your hands and in the hands of each one of you. May you and each of you give no verdict and consent to none, but such as your hearts can approve now and forever.

After Mr. *Dexter* had concluded his argument, Mr. *Webster* addressed the Jury as follows:

I am little accustomed, Gentle-

men, to the part which I am now attempting to perform. Hardly more than once or twice, has it happened to me to be concerned, on the side of the Government, in any criminal prosecution whatever; and never, until the present occasion, in any case affecting life.¹ . . .

Gentlemen, let us now come to the case. Your first inquiry, on the evidence, will be, — Was Capt. White murdered in pursuance of a conspiracy, and was the defendant one of this conspiracy? If so, the second inquiry is, Was he so connected with the murder itself as that he is liable to be convicted as a *principal*? The defendant is indicted as a *principal*. If not guilty *as such*, you cannot convict him. The indictment contains three distinct classes of counts. In the *first*, he is charged as having done the deed, with his own hand; — in the *second*, as an aider and abettor to Richard Crowninshield, jr., who did the deed; — in the *third*, as an aider and abettor to some person unknown. If you believe him guilty on either of these counts, or in either of these ways, you must convict him.

It may be proper to say, as a preliminary remark, that there are two remarkable circumstances attending this trial. One is, that Richard Crowninshield, jr., the supposed immediate perpetrator of the murder, since his arrest, has committed suicide. He has gone to answer before a tribunal of perfect infallibility. The other is, that Joseph Knapp, the supposed origin and planner of the murder, having once made a full disclosure of the facts, under a promise of indemnity, is, nevertheless, not now a witness. Notwithstanding his disclosure, and his promise of indemnity, he now refuses to testify. He chooses to return to his original state, and now stands answerable himself, when the time shall come for his trial. These circumstances it is fit you

should remember, in your investigation of the case. . . .

And now, Gentlemen, in examining this evidence, let us begin at the beginning, and see first what we know independent of the disputed testimony. This is a case of circumstantial evidence. And these circumstances, we think, are full and satisfactory. The case mainly depends upon them, and it is common, that offenses of this kind must be proved in this way. Midnight assassins take no witnesses. The evidence of the *facts* relied on has been somewhat sneeringly denominated by the learned counsel, "*circumstantial stuff*," but, it is not such *stuff* as dreams are made of. Why does he not rend this *stuff*? Why does he not tear it away, with the crush of his hand? He dismisses it, a little too summarily. It shall be my business to examine this *stuff* and try its cohesion.

The letter from Palmer at Belfast, is that no more than flimsy *stuff*?

The fabricated letters, from Knapp to the Committee, and Mr. White, are they nothing but *stuff*?

The circumstance, that the house-keeper was away at the time the murder was committed, as it was agreed she would be, is that too a useless piece of the same *stuff*?

The facts, that the key of the chamber door was taken out and secreted; that the window was unbarred and unbolted; are these to be so slightly and so easily disposed of?

It is necessary, Gentlemen, now to settle, at the commencement, the great question of a *conspiracy*. . . .

Let me ask your attention, then, in the first place, to those appearances, on the morning after the murder, which have a tendency to show, that it was done in pursuance of a preconcerted plan of operation. What are they? A man was found murdered in his bed. — No stranger had done the deed — no one un-

[¹ At this point Mr. Webster delivered the now celebrated passage upon "the guilty soul which cannot keep its own secret" (*ante*, No. 278). Ed.]

acquainted with the house had done it. — It was apparent, that somebody from within had opened, and somebody from without had entered. — There had been there, obviously and certainly, concert and coöperation. The inmates of the house were not alarmed when the murder was perpetrated. The assassin had entered, without any riot, or any violence. He had found the way prepared before him. The house had been opened. The window was unbarred from within, and its fastening unscrewed. There was a lock on the door of the chamber, in which Mr. White slept, but the key was gone. It had been taken away, and secreted. The footsteps of the murderer were visible, outdoors, tending toward the window. The plank by which he entered the window, still remained. The road he pursued had been thus prepared for him. The victim was slain, and the murderer had escaped. Everything indicated that somebody from *within* had coöperated with somebody from *without*. Everything proclaimed that some of the inmates, or somebody having access to the house, had had a hand in the murder. On the face of the circumstances, it was apparent, therefore, that this was a premeditated, concerted, conspired murder. Who, then, were the conspirators? If not now found out, we are still groping in the dark, and the whole tragedy is still a mystery.

If the Knapps and the Crowninshields were not the conspirators, in this murder, then there is a whole set of conspirators yet not discovered. Because, independent of the testimony of Palmer and Leighton, independent of all disputed evidence, we know, from uncontroverted facts, that this murder was, and must have been, the result of concert and coöperation, between two or more. We know it was not done, without plan and deliberation; we see, that whoever entered the house, to strike the blow, was favored and aided by

some one, who had been previously in the house, without suspicion, and who had prepared the way. This is concert, this is coöperation, this is conspiracy. If the Knapps and the Crowninshields, then, were not the conspirators, who were? Joseph Knapp had a motive to desire the death of Mr. White, and that motive has been shown.

He was connected by marriage in the family of Mr. White. His wife was the daughter of Mrs. Beckford, who was the only child of a sister of the deceased. The deceased was more than eighty years old, and he had no children. — His only heirs were nephews and nieces. — He was expected to be possessed of a very large fortune, — which would have descended, by law, to his several nephews and nieces in equal shares. or, if there was a will, then according to the will. But as Capt. White had but two branches of heirs — the children of his brother Henry White, and of Mrs. Beckford — according to the common idea each of these branches would have shared one half of Mr. White's property.

This popular idea is not legally correct. But it is common, and very probably was entertained by the parties. According to this, Mrs. Beckford, on Mr. White's death without a will, would have been entitled to one half of Mr. White's ample fortune; and Joseph Knapp had married one of her three children. There was a will, and this will gave the bulk of the property to others; and we learn from Palmer that one part of the design was to destroy the will before the murder was committed. There had been a previous will, and that previous will was known or believed to have been more favorable than the other, to the Beckford family. So that by destroying the last will, and destroying the life of the testator at the same time, either the first and more favorable will would be set up, or the deceased would have no will, which would be, as was supposed,

possible to contend further against the proof of the entire conspiracy, as we state it.

What, then, was this conspiracy? J. J. Knapp, jr., desirous of destroying the will, and of taking the life of the deceased, hired a ruffian, who with the aid of other ruffians, were to enter the house, and murder him, in his own bed.

As far back as January, this conspiracy began. Endicott testifies to a conversation with J. J. Knapp at that time in which Knapp told him that Capt. White had made a will, and given the principal part of his property to Stephen White. When asked how he knew, he said "black and white don't lie." — When asked if the will was not locked up, he said, "there is such a thing as two keys to the same lock." And speaking of the then late illness of Capt. White he said, that Stephen White would not have been sent for, if he had been there.

Hence it appears, that as early as January, Knapp had a knowledge of the will, and that he had access to it, by means of false keys. — This knowledge of the will, and an intent to destroy it, appear also from Palmer's testimony — a fact disclosed to him by the other conspirators. He says, that he was informed of this by the Crowninshields on the 2d of April. But, then, it is said that Palmer is not to be credited — that by his own confession he is a felon, — that he has been in the State Prison in Maine, — and above all, that he was an inmate and associate with these conspirators themselves. — Let us admit these facts. — Let us admit him to be as bad as they would represent him to be; still in law, he is a competent witness. How else are the secret designs of the wicked to be proved but by their wicked companions, to whom they have disclosed them? The Government does not select its witnesses. The conspirators themselves have chosen Palmer. He was the confidant of the prisoners.

The fact however does not depend on his testimony alone. — It is corroborated by other proof, and taken in connection with the other circumstances, it has strong probability. In regard to the testimony of Palmer, generally, — it may be said that it is less contradicted, in all parts of it, either by himself or others, than that of any other material witness, and that everything he has told, has been corroborated by other evidence, so far as it was susceptible of confirmation. An attempt has been made to impair his testimony, as to his being at the halfway house, on the night of the murder; you have seen with what success. Mr. Babb is called to contradict him — you have seen how little he knows — and even that not certainly; — for he, himself, is proved to have been in an error, by supposing him to have been at the halfway house on the evening of the 9th of April. At that time Palmer is proved to have been at Dustin's in Danvers. If, then, Palmer, bad as he is, has disclosed the secrets of the conspiracy, and has told the truth — there is no reason why it should not be believed. Truth is truth, come whence it may; — though it were even from the bottom of the bottomless pit.

The facts show that this murder had been long in agitation — that it was not a new proposition on the 2d of April — that it had been contemplated for five or six weeks before R. Crowninshield was at Wenham in the latter part of March, as testified by Starrett. F. Knapp was at Danvers, in the latter part of February, as testified by Allen. R. Crowninshield inquired whether Capt. Knapp was about home, when at Wenham. The probability is, that they would open the case to Palmer, as a new project. There are other circumstances that show it to have been some weeks in agitation. Palmer's testimony as to the transactions on the 2d of April, is corroborated by Allen, and by

Osborn's books. He says that F. Knapp came there in the afternoon — and again in the evening. So the book shows. He says that Capt. White had gone out to his farm on that day. So others prove. How could this fact, or these facts, have been known to Palmer, unless F. Knapp had brought the knowledge? and was it not the special object of this visit, to give information of this fact, that they might meet him and execute their purpose on his return from his farm? The letter of Palmer, written at Belfast, has intrinsic evidence of genuineness. It was mailed at Belfast, May 13. It states facts that he could not have known, unless his testimony be true. This letter was not an afterthought; it is a genuine narrative. In fact, it says, "I know the business your brother Frank was transacting on the 2d of April" — how could he have possibly known this, unless he had been there? — The "\$1000, that was to be paid"; where could he have obtained this knowledge? The testimony of Endicott, of Palmer, and these facts are to be taken together; and they, most clearly, show that the death of Capt. White must have been caused by *somebody interested* in putting an end to his life.

As to the testimony of Leighton. As far as manner of testifying goes, he is a bad witness: — but it does not follow from this that he is not to be believed. There are some strange things about him. It is strange that he should make up a story against Capt. Knapp, the person with whom he lives; — that he never voluntarily told anything; — all that he has said is screwed out of him. The story could not have been invented by him; — his character for truth is unimpeached — and he intimated to another witness, soon after the murder happened, that he knew something he should not tell. There is not the least contradiction in his testimony, — though he gives a poor account of

withholding it. He says that he was extremely *bothered* by those who questioned him. In the main story that he relates, he is universally consistent with himself. — Some things are for him — and some against him. Examine the intrinsic probability of what he says. See if some allowance is not to be made for him, on account of his ignorance, with things of this kind. It is said to be extraordinary, that he should have heard just so much of the conversation and no more; — that he should have heard just what was necessary to be proved, and nothing else. Admit that this is extraordinary; — still, this does not prove it is not true. It is extraordinary, that you twelve gentlemen should be called upon out of all the men in the county, to decide this case; — no one could have foretold this, three weeks since. It is extraordinary, that the first clew to this conspiracy, should have been derived from information given by the Father of the prisoner at the bar; — and in every case that comes to trial there are many things extraordinary — the murder itself in this case is an extraordinary one — but still we do not doubt its reality.

It is argued, that this conversation between Joseph and Frank, could not have been, as Leighton has testified, because they had been together for several hours before, — this subject must have been uppermost in their minds, — whereas this appears to have been the commencement of their conversation upon it. Now, this depends altogether upon the tone and manner of the expression; — upon the particular word in the sentence, which was emphatically spoken — If he had said "when did you *see* Dick, Frank?" — this would not seem to be the beginning of the conversation. With what emphasis it was uttered, it is not possible to learn; and therefore nothing can be made of this argument. If this boy's testimony stood alone, it should be received

with caution. And the same may be said of the testimony of Palmer. But they do not stand alone. They furnish a clew to numerous other circumstances, which, when known, react in corroborating what would have been received with caution, until thus corroborated. How could Leighton have made up this conversation? "When did you see Dick?" "I saw him this morning." "When is he going to kill the old man?" "I don't know." "Tell him if he don't do it soon, I won't pay him." Here is a vast amount, in few words. Had he wit enough to invent this? There is nothing so powerful as truth; and often nothing so strange. It is not even suggested that the story was made for him. There is nothing so extraordinary in the whole matter, as it would have been for this country boy to have invented this story.

The acts of the parties themselves, furnish strong presumption of their guilt. What was done on the receipt of the letter from Maine? This letter was signed by *Charles Grant, jr.*, a person not known to either of the Knapps, — nor was it known to them, that any other person, beside the Crowninshields, knew of the conspiracy. This letter, by the accidental omission of the word *jr.*, fell into the hands of the father, when intended for the son. The father carried it to Wenham where both the sons were. They both read it. Fix your eye steadily, on this part of the *circumstantial "stuff,"* which is in the case; and see what can be made of it. This was shown to the two brothers on Saturday, 15th of May. They, neither of them, knew Palmer. And if they had known him, they could not have known him to have been the writer of this letter. It was mysterious to them, how any one, at Belfast, could have had knowledge of this affair. Their conscious guilt prevented due circumspection. — They did not see the bearing of its publication. — They advised their

father to carry it to the Committee of Vigilance, and it was so carried. On Sunday following, Joseph began to think there might be something in it. Perhaps, in the meantime, he had seen one of the Crowninshields. He was apprehensive, that they might be suspected, — he was anxious to turn attention from their family. — What course did he adopt to effect this? He addressed one letter, with a false name, to Mr. White, and another to the Committee; — and to complete the climax of his folly, he signed the letter addressed to the Committee, "*Grant*" — the same name as that signed to the letter they then had from Belfast, addressed to Knapp. — It was in the knowledge of the Committee, that no person but the Knapps had seen this letter from Belfast; — and that no other person knew its signature. — It therefore must have been irresistibly plain, to them, that one of the Knapps must have been the writer of the letter they had received, charging the murder on Mr. White. Add to this, the fact of its having been dated at *Lynn*, and mailed at Salem, four days after it was dated, and who could doubt respecting it? Have you ever read, or known, of folly equal to this? Can you conceive of crime more odious and abominable? Merely to explain the apparent mysteries of the letter from Palmer, they excite the basest suspicions of a man, who, if they were innocent, they had no reason to believe guilty; and who, if they were guilty, they most certainly knew to be innocent. Could they have adopted a more direct method of exposing their own infamy? The letter to the Committee has intrinsic marks of a knowledge of this transaction. It tells of the *time*, and the *manner*, in which the murder was committed. Every line speaks the writer's condemnation. In attempting to divert attention from his family, and to charge the guilt upon another, he indelibly fixes it upon himself.

Joseph Knapp requested Allen to put these letters into the Post-office, because, said he, "I wish to nip this silly affair in the bud." If this were not the order of an overruling Providence, I should say that it was the silliest piece of folly that was ever practised. Mark the destiny of Crime. It is ever obliged to resort to such subterfuges; it trembles in the broad light; it betrays itself, in seeking concealment. He alone walks safely, who walks uprightly. Who, for a moment, can read these letters and doubt of J. Knapp's guilt? The constitution of nature is made to inform against him. There is no corner dark enough to conceal him. There is no turnpike broad enough, or smooth enough, for a man so guilty to walk in without stumbling. Every step proclaims his secret to every passenger. His own acts come out, to fix his guilt. In attempting to charge another with his *own crime*, he writes his *own confession*. To do away the effect of Palmer's letter, signed *Grant* — he writes his own letter and affixes to it the name of *Grant*. He writes in a disguised hand; but how could it happen, that the same *Grant* should be in Salem, that was at Belfast? This has brought the whole thing out. Evidently he did it; because he has adopted the same style. — Evidently he did it; — because he speaks of the price of blood, and of other circumstances connected with the murder, that no one but a conspirator could have known.

Palmer says he made a visit to the Crowninshields, on the 9th of April. George then asked him whether he had heard of the *murder*. Richard inquired, whether he had heard the *music at Salem*. They said that *they were suspected*, that a Committee had been appointed to search houses — and that they had melted up the dagger, the day after the murder, because it would be a suspicious circumstance to have it found in their possession. Now

this Committee was not appointed, in fact, until Friday evening. — But this proves nothing against Palmer — it does not prove that George *did not tell him so* — it only proves that he gave a false reason, for a fact. They had heard that they were suspected — how could they have heard this, unless it were from the whisperings of their own consciences? — surely this rumor was not thus public.

About the 27th of April, another attempt is made by the Knapps to give a direction to public suspicion. They reported themselves to have been *robbed*, in passing from Salem to Wenham, near Wenham pond. They came to Salem, and stated the particulars of the adventure. — They described persons, their dress, size, and appearance, *who had been suspected* of the murder. They would have it understood, that the community was infested with a band of Ruffians, and that *they*, themselves, were the particular objects of their vengeance. Now, this turns out to be all fictitious, — all false. Can you conceive of anything more enormous — any wickedness greater, than the circulation of such reports? — than the allegation of crimes, if committed, capital? — if no such thing — thus it reacts, with double force upon themselves, and goes very far to show their guilt. How did they conduct on this occasion? did they make hue and cry? — did they give information that they had been assaulted, that night at Wenham? No such thing. They rested quietly on that night — they waited to be called on for the particulars of their adventure — they made no attempt to arrest the offenders — this was not their object. They were content to fill the thousand mouths of rumor, — to spread abroad false reports, — to divert the attention of the public from themselves — for they thought every man suspected them, because they knew they ought to be suspected.

The manner in which the com-

pensation for this murder was paid, is a circumstance worthy of consideration. By examining the facts and dates, it will satisfactorily appear, that Joseph Knapp paid a sum of money to Richard Crowninshield in five franc pieces on the 24th of April. On the 21st of April, Joseph Knapp received five hundred five franc pieces, as the proceeds of an adventure at sea. The remainder of this species of currency that came home in the vessel was deposited in a bank at Salem. On Saturday, 24th of April, Frank and Richard rode to Wenham. — They were there with Joseph an hour or more. — Appeared to be negotiating private business — Richard continued in the chaise. — Joseph came to the chaise and conversed with him. These facts are proved by Hart, and Leighton, and by Osborn's books. On Saturday evening, about this time, Richard Crowninshield is proved to have been at Wenham, with another person, whose appearance corresponds with Frank, by Lummus. Can any one doubt this being the same evening? What had Richard Crowninshield to do at Wenham, with Joseph, unless it were this business? He was there before the murder — he was there after the murder — he was there clandestinely, unwilling to be seen. If it were not upon this business, — let it be told what it was for — Joseph Knapp could explain it — Frank Knapp might explain it. But they don't explain it — and the inference is against them.

Immediately after this, Richard passes five franc pieces — on the same evening, *one* to Lummus — *five* to Palmer — and near this time George passes *three* or *four* in Salem. — Here are nine of these pieces passed by them in four days — this is extraordinary. — It is an unusual currency — in ordinary business, few men would pass nine such pieces in the course of a year. If they were not received in this way, why not explain how they came by

them? Money was not so flush in their pockets, that they could not tell whence it came, if it honestly came there. It is extremely important to them to explain whence this money came, and they would do it if they could. If, then, the price of blood was paid at this time, in the presence and with the knowledge of this defendant; does not this prove him to have been connected with this conspiracy?

Observe, also, the effect on the mind of Richard, of Palmer's being arrested, and committed to prison, — the various efforts he makes to discover the fact — the lowering, through the crevices of the rock, the pencil and paper for him to write upon — the sending two lines of poetry, with the request that he would return the corresponding lines — the shrill and peculiar whistle — the inimitable exclamations of "*Palmer! Palmer! Palmer!*" — all these things prove how great was his alarm — they corroborated Palmer's story, and tend to establish the conspiracy.

Joseph Knapp had a part to act in this matter; he must have opened the window, and secreted the key — he had free access to every part of the house — he was accustomed to visit there — he went in and out at his pleasure — he could do this without being suspected — he is proved to have been there the Saturday preceding.

If all these things, taken in connection, do not prove that Capt. White was murdered in pursuance of a conspiracy — then the case is at an end.

Savary's testimony is wholly unexpected. He was called for a different purpose. When asked who the person was, that he saw come out of Capt. White's yard between 3 and 4 o'clock in the morning, — he answered *Frank Knapp*. — I am not clear this is not true. There may be many circumstances of importance connected with this; though we believe the murder to

have been committed between 10 and 11 o'clock. The letter to Dr. Barstow states it to have been done about 11 o'clock — it states it to have been done *with a blow on the head*, from a weapon loaded with lead. Here is too great a correspondence with the reality, not to have some meaning to it. Dr. Peirson was always of the opinion that the two classes of wounds were made with different instruments, and by different hands. — It is possible, that one class was inflicted at one time, and the other at another. It is possible, that on the last visit, the pulse might not have entirely ceased to beat; and then the finishing stroke was given. — It is said, when the body was discovered, some of the wounds weeped, while the others did not. They may have been inflicted from mere wantonness. It was known that Capt. White was accustomed to keep specie by him in his chamber — this perhaps may explain the last visit. — It is proved, that this defendant was in the habit of retiring to bed, and leaving it afterwards, without the knowledge of his family — perhaps he did so on this occasion — we see no reason to doubt the fact — and it does not shake our belief that the murder was committed early in the night.

What are the probabilities as to the time of the murder? Mr. White was an aged man; — he usually retired to bed at about half past nine — he slept soundest in the early part of the night — usually awoke in the middle and latter part — and his habits were perfectly well known. When would persons, with a knowledge of these facts, be most likely to approach him? most certainly in the first hour of his sleep. This would be the safest time. If seen then, going to or from the house, the appearance would be least suspicious. The earlier hour would then have been most probably selected.

Gentlemen, I shall dwell no longer on the evidence which tends to prove

that there was a conspiracy, and that the Prisoner was a conspirator. All the circumstances concur to make out this point. Not only Palmer swears to it, in effect, and Leighton, but Allen mainly supports Palmer, and Osborn's books lend confirmation, so far as possible from such a source. Palmer is contradicted in nothing, either by any other witness, or any proved circumstance, or occurrence. Whatever could be expected to support him, does support him. All the evidence clearly manifests, I think, that there was a conspiracy; that it originated with J. Knapp; that defendant became a party to it, and was one of its conductors, from first to last. One of the most powerful circumstances is Palmer's letter from Belfast. The amount of this was, a direct charge on the Knapps, of the authorship of this murder. How did they treat this charge, like honest men, or like guilty men? We have seen how it was treated. J. Knapp fabricated letters, charging another person, and caused them to be put into the Post-office.

I shall now proceed on the supposition, that it is proved that there was a conspiracy to murder Mr. White, and that the Prisoner was party to it.

The second, and the material inquiry is, *was the Prisoner present, at the murder, aiding and abetting therein?* . . .

It is not necessary that the abettor should actually lend a hand — that he should take a part in the act itself; — if he be present, ready to assist — that is assisting. . . .

You are to consider the defendant as one in the league, — in the combination to commit the murder. If he was there by appointment, with the perpetrator, he is an abettor. The concurrence of the perpetrator in his being there, is proved by the previous evidence of the conspiracy. If Richard Crowninshield, for any purpose whatsoever, made it a condition of the agreement, that Frank

Knapp should stand as backer, then Frank Knapp was an aider and abettor — no matter what the aid was — of what sort it was, or degree — be it never so little. Even if it were to judge of the hour, when it was best to go — or to see when the lights were extinguished — or to give an alarm if any one approached. Who better calculated to judge of these things than the murderer himself? and if he so determined them, that is sufficient.

Now as to the facts — Frank Knapp knew that the murder was that night to be committed — he was one of the conspirators — he knew the object — he knew the time; — he had that day been to Wenham to see Joseph, and probably to Danvers to see Richard Crowninshield, for he kept his motions secret, he had that day hired a horse and chaise of Osborn, and attempted to conceal the purpose for which it was used — he had intentionally left the *place* and the *price* blank on Osborn's books — he went to Wenham by the way of Danvers — he had been told the week before to hasten Dick — he had seen the Crowninshields several times within a few days — he had a saddle horse the Saturday night before — he had seen Mrs. Beckford, at Wenham, and knew she would not return that night. She had not been away before for six weeks, and probably would not soon be again — he had just come from there — every day, for the week previous, he had visited one or other of these conspirators, save Sunday, and then probably he saw them in town. When he saw Joseph on the 6th, Joseph had prepared the house and would naturally tell him of it — there were constant communications between them — daily and nightly visitation — too much knowledge of these parties and this transaction, to leave a particle of doubt on the mind of any one, that Frank Knapp knew that the murder was to be done this night. — The hour was come and he knew it —

if so, and he was in Brown Street, without explaining why he was there — can the Jury for a moment doubt, whether he was there to countenance, aid, or support; — or for curiosity alone; — or to learn how the wages of sin and death were earned by the perpetrator? . . .

What are the *FACTS* in relation to this presence? Frank Knapp is proved a conspirator — proved to have known that the deed was now to be done. Is it not probable that he was in Brown Street to concur in the murder? There were four conspirators. — It was natural that some one of them would go with the perpetrator. Richard Crowninshield was to be the perpetrator — he was to give the blow. . . .

Aid could not have been received from Joseph Knapp, or from George Crowninshield. Joseph Knapp was at Wenham, and took good care to prove that he was there. George Crowninshield has proved satisfactorily where he was — that he was in other company, such as it was, until 11 o'clock. This narrows the inquiry. — This demand of the prisoner to show, that if he was not in this place, where he was? It calls on him loudly to show this, and to show it truly — if he could show it, he would do it. — If he don't tell, and that truly, it is against him. . . .

The prisoner has attempted to prove an alibi, in two ways. In the first place, by four young men with whom he says he was in company on the evening of the murder, from 7 o'clock, till near 10 o'clock — this depends upon the *certainty of the night*. In the second place, by his family, from 10 o'clock afterwards — this depends upon the *certainty of the time of the night*. These two classes of proof have no connection with each other. One may be true, and the other false, or they may both be true, or both be false. I shall examine this testimony with some attention, because on a former trial, it made more impression on the minds of the Court, than on my

own mind. I think when carefully sifted and compared, it will be found to have in it more of *plausibility* than *reality*.

Mr. Page testifies, that on the evening of the 6th of April, he was in company with Burchmore, Balch, and Forrester — and that he met the defendant about seven o'clock, near the Salem Hotel — that he afterwards met him at Remond's, about 9 o'clock, and that he was in company with him a considerable part of the evening. This young gentleman is a member of College, and says that he came in town the Saturday evening previous, that he is now able to say that it was the night of the murder, when he walked with Frank Knapp, from the recollection of the fact, that he called himself to an account, on the morning after the murder, as was natural for men to do when an extraordinary occurrence happens. Gentlemen, this kind of evidence is not satisfactory — general impressions as to time are not to be relied on. If I were called upon to state the particular day on which any witness testified in this cause, I could not do it. Every man will notice the same thing in his own mind. There is no one of these young men that could give any account of himself for any *other* day in the month of April. They are made to remember the fact, and then they think they remember the time. He has no means of knowing it was Tuesday more than any other time. He did not know it at first — he could not know it afterwards. He says he called himself to an account — this has no more to do with the murder, than with the man in the moon. Such testimony is not worthy to be relied on, in any forty shilling cause. What occasion had he to call himself to an account? Did he suppose, that he should be suspected? Had he any intimation of this conspiracy?

Suppose, gentlemen, you were either of you asked, where you were,

or what you were doing, on the 15th day of June — you could not answer this question, without calling to mind some events to make it certain — just as well may you remember on what you dined on each day of the year past. Time is identical. Its subdivisions are all alike. No man knows one day from another, or one hour from another, but by some fact connected with it. Days and hours are not visible to the senses, nor to be apprehended and distinguished by the understanding. The flow of time is known only by something which marks it; and he who speaks of the date of occurrences with nothing to guide his recollection, speaks at random, and is not to be relied on. This young gentleman remembers the facts and occurrences — he knows nothing why they should not have happened on the evening of the sixth; but he knows no more. All the rest, is evidently conjecture or impression.

Mr. White informs you that he told him he could not tell what night it was. — The first thoughts are all that are valuable in such case. They miss the mark by taking second aim.

Mr. Balch believes, but is not sure, that he was with Frank Knapp on the evening of the murder. He has given different accounts of the time. He has no means of making it certain. All he knows is, that it was some evening before Fast. But whether Monday, Tuesday, or Saturday, he cannot tell.

Mr. Burchmore says, to the best of his belief, it was the evening of the murder. Afterwards he attempts to speak positively, from recollecting that he mentioned the circumstance to William Peirce, as he went to the Mineral Spring on Fast day. Last Monday morning, he told Col. Putnam he could not fix the time. This witness stands in a much worse plight than either of the others. It is difficult to reconcile all he has said, with any belief in the accuracy of his recollections.

Mr. Forrester does not speak with any certainty as to the night — and it is very certain, that he told Mr. Loring and others, that he did not know what night it was.

Now, what does the testimony of these four young men amount to? The only circumstance, by which they approximate to an identifying of the night is — that three of them say it was cloudy — they think their walk was either on Monday or Tuesday evening; and it is admitted that Monday evening was clear — whence they draw the inference that it must have been Tuesday.

But, fortunately, there is one *fact* disclosed in their testimony that settles the question. Balch says, that on the evening, whenever it was, that he saw the Prisoner, the Prisoner told him he was going out of town on horseback, for a distance of about twenty minutes ride, and that he was going to get a horse at Osborn's. This was about 7 o'clock. At about nine, Balch says he saw the prisoner again, and was then told by him, that he had had his ride, and had returned. — Now it appears by Osborn's books, that the prisoner had a saddle horse from his stable, not on Tuesday evening, the night of the murder, but on the Saturday evening previous. This fixes the time, about which these young men testify and is a complete answer and refutation of the attempted alibi, on Tuesday evening.

I come now to speak of the testimony adduced by the defendant to explain where he was after 10 o'clock on the night of the murder. This comes chiefly from members of the family — from his Father and brothers.

It is agreed that the affidavit of the prisoner, should be received as evidence of what his brother Samuel H. Knapp, would testify if present. S. H. Knapp says that about ten minutes past 10 o'clock, his brother F. Knapp on his way to bed, opened his chamber door, made some remarks, closed the door, and went to

his chamber, and that he did not hear him leave it afterwards. How is this witness able to fix the time at ten minutes past ten? There is no circumstance mentioned, by which he fixes it. He had been in bed, probably asleep — and was aroused from his sleep, by the opening of the door. Was he in a situation to speak of time with precision? Could he know, under such circumstances, whether it was ten minutes past ten, or ten minutes before eleven, when his brother spoke to him? What would be the natural result, in such a case? But we are not left to conjecture this result. We have positive testimony on this point. Mr. Webb tells you that Samuel told him on the 8th of June, "that he did not know what time his brother Frank came home — and that he was not at home when *he* went to bed." You will consider this testimony of Mr. Webb as indorsed upon this affidavit — and with this indorsement upon it, you will give it its due weight. — This statement was made to him after Frank was arrested.

I come to the testimony of the Father. I find myself incapable of speaking of him or his testimony with severity. Unfortunate old man! Another Lear, in the conduct of his children; another Lear, I fear, in the effect of his distress upon his mind and understanding. He is brought here to testify, under circumstances that disarm severity, and call loudly for sympathy. Though it is impossible not to see that his story cannot be credited, yet I am not able to speak of him otherwise than in sorrow and grief. Unhappy father! he strives to remember, perhaps persuades himself that he does remember, that on the evening of the murder he was himself at home at 10 o'clock. — He thinks, — or seems to think, that his son came in, at about five minutes past ten. — He fancies that he remembers his conversation — he thinks he spoke of bolting the door

— he thinks he asked the time of night — he seems to remember his then going to his bed. — Alas! — these are but the swimming fancies of an agitated and distressed mind — Alas! they are but the dreams of hope, its uncertain lights, flickering on the thick darkness of parental distress. Alas! the miserable father knows nothing, in reality, of all these things.

Mr. Shepard says that the first conversation he had with Mr. Knapp, was soon after the murder, and *before* the arrest of his sons. Mr. Knapp says it was *after* the arrest of his sons. His own fears led him to say to Mr. Shepard that his "son Frank was at home that night — and so Phippen told him, or as Phippen told him" — Mr. Shepard says that he was struck with the remark at the time — that it made an unfavorable impression on his mind — he does not tell you what that impression was — but when you connect it with the previous inquiry he had made — Whether Frank had continued to associate with the Crowninshields? and recollect that the Crowninshields were then known to be suspected of this crime — can you doubt what this impression was? — can you doubt as to the fears he then had?

This poor old man tells you, that he was greatly perplexed at the time — that he found himself in embarrassed circumstances — that on this very night he was engaged in making an assignment of his property to his friend Mr. Shepard. — If ever charity should furnish a mantle for error, it should be here. Imagination cannot picture a more deplorable, distressed condition.

The same general remarks may be applied to his conversation with Mr. Treadwell, as have been made upon that with Mr. Shepard. He told him that he believed Frank was at home about the usual time. In his conversations with either of these persons, he did not pretend to know, of his own knowledge, the time that he came home. He now tells you,

positively, that he recollects the time, and that he so told Mr. Shepard. He is directly contradicted by both these witnesses, as respectable men as Salem affords.

This idea of alibi is of recent origin. Would Samuel Knapp have gone to sea, if it were then thought of? His testimony, if true, was too important to be lost. If there be any truth in this part of the alibi, it is so near in point of time, that it cannot be relied on. — The mere variation of half an hour would avoid it. — The mere variations of different timepieces would explain it.

Has the defendant proved where he was on that night? If you doubt about it — there is an end of it. The burthen is upon him to satisfy you beyond all reasonable doubt. Osborn's books, in connection with what the young men state, are conclusive, I think, on this point. He has not, then, accounted for himself — he has attempted it, and has failed. . . .

But, Gentlemen, let us now consider what is the evidence produced on the part of the Government to prove that John Francis Knapp, the prisoner at the bar, *was* in Brown Street on the night of the murder. This is a point of vital importance in this cause. Unless this be made out, beyond reasonable doubt, the law of *presence* does not apply to the case. The Government undertake to prove that he was present, aiding in the murder, by proving that he was in Brown Street for this purpose. Now, what are the undoubted facts? They are, that two persons were seen in that street, at several times, during that evening, under suspicious circumstances; — under such circumstances as induced those who saw them, to watch their movements. Of this, there can be no doubt. — Mirick saw a man standing at the post opposite his store, from fifteen minutes before nine, until twenty minutes after, dressed in a full frock coat, glazed cap, etc., in size and

general appearance answering to the prisoner at the bar. This person was waiting there—and whenever any one approached him, he moved to and from the corner; as though he would avoid being suspected, or recognized. Afterwards, two persons were seen by Webster, walking in Howard Street, with a slow, deliberate movement, that attracted his attention.—This was about one-half past nine. One of these he took to be the prisoner at the bar—the other he did not know.

About half past ten, a person is seen sitting on the ropewalk steps, wrapped in a cloak. He drops his head when passed, to avoid being known. Shortly after, two persons are seen to meet in this street, without ceremony or salutation, and in a hurried manner to converse for a short time—then to separate and run off with great speed. Now, on this same night, a gentleman is slain,—murdered in his bed,—his house being entered by stealth from without, and his house situated within 300 feet of this street. The windows of his chamber were in plain sight from this street—a weapon of death is afterwards found in a place where these persons were seen to pass—in a retired place around which they had been seen lingering. It is now known, that this murder was committed by a conspiracy of four persons, conspiring together for this purpose. No account is given who these suspected persons thus seen in Brown Street and its neighborhood were. Now, I ask, Gentlemen, whether you or any man can doubt, that this murder was committed, by the persons who were thus in and about Brown Street? . . .

Every man's own judgment, I think, must satisfy him that this must be so. It is a plain deduction of common sense. It is a point, on which each one of you may reason like a Hale, or a Mansfield. The two occurrences explain each other. The murder shows why these per-

sons were thus lurking, at that hour, in Brown Street, and their lurking in Brown Street shows who committed the murder.

If, then, the persons in and about Brown Street, were the plotters and executors of the murder of Capt. White, we know who they were, and you know that *there* is one of them.

This fearful concatenation of circumstances puts him to an account. He was a conspirator. He had entered into this plan of murder. The murder is committed, and he is known to have been within three minutes walk of the place. He must account for himself. He has attempted this and failed. Then, with all these general reasons to show he was actually in Brown Street, and his failures in his alibi, let us see what is the direct proof of his being there. But first, let me ask, is it not very remarkable, that there is no attempt to show where Richard Crowninshield, jr., was on that night? We hear nothing of him. He was seen in none of his usual haunts about the town. Yet, if he was the actual perpetrator of the murder, which nobody doubts, he was in the town, somewhere. Can you, therefore, entertain a doubt, that he was one of the persons seen in Brown Street? And as to the prisoner, you will recollect, that since the testimony of the young men has failed to show where he was, that evening, the last we hear or know of him on the day preceding the murder, is, that at 4 o'clock P.M. he was at his brother's, in Wenham. He had left home, after dinner, in a manner doubtless designed to avoid observation, and had gone to Wenham, probably by way of Danvers. As we hear nothing of him, after 4 o'clock, P.M., for the remainder of the day and evening, as he was one of the conspirators, as Richard Crowninshield, jr., was another, as Richard Crowninshield, jr., was in town in the evening, and yet seen in no usual place of resort, the

inference is very fair that Richard Crowninshield, jr., and the prisoner were together, acting in execution of their conspiracy. Of the four conspirators, J. J. Knapp, jr., was at Wenham, and George Crowninshield has been accounted for; so that if the persons, seen in Brown Street, were the murderers, one of them must have been Richard Crowninshield, jr., and the other must have been the prisoner at the bar. Now, as to the proof of his identity with one of the persons seen in Brown Street.

Mr. Mirick, a cautious witness, examined the person he saw closely, in a light night, and says that he thinks the prisoner at the bar is the same person — and that he should not hesitate at all, if he were seen in the same dress. His opinion is formed, partly from his own observation, and partly from the description of others. But this description turns out to be only in regard to the dress. It is said, that he is now more confident, than on the former trial. If he has varied in his testimony, make such allowance as you may think proper. I do not perceive any material variance. He thought him the same person, when he was first brought to Court, and as he saw him get out of the chaise. This is one of the cases, in which a witness is permitted to give an opinion. This witness is as honest as yourselves — neither willing nor swift — but he says, he believes it was the man; "this is my opinion," and this it is proper for him to give. If partly founded on what he has *heard*, then his opinion is not to be taken; but, if on what he *saw*, then you can have no better evidence. I lay no stress on similarity of dress. No man will ever be hanged by my voice on such evidence. But then it is proper to notice, that no inferences drawn from any *dissimilarity* of dress, can be given in the prisoner's favor; because, in fact, the person seen by Mirick was dressed like the prisoner.

The description of the person seen by Mirick answers to that of the prisoner at the bar. In regard to the supposed discrepancy of statements, before and now, there would be no end to such minute inquiries. It would not be strange if witnesses should vary. I do not think much of slight shades of variation. If I believe the witnesses honest, that is enough. If he has expressed himself more strongly, now than then, this does not prove him false.

Peter E. Webster saw the prisoner at the bar, as he then thought and still thinks, walking in Howard Street at half past nine o'clock. He then thought it was Frank Knapp, and has not altered his opinion since. He knew him well — he had long known him. If he then thought it was he, this goes far to prove it. He observed him the more, as it was unusual to see gentlemen walk there at that hour. It was a retired, lonely street. Now, is there reasonable doubt that Mr. Webster did see him there that night? How can you have more proof than this? He judged by his walk, by his general appearance, by his deportment. We all judge in this manner. If you believe he is right, it goes a great way in this case. But then this person it is said had a cloak on, and that he could not, therefore, be the same person that Mirick saw. If we were treating of men that had no occasion to disguise themselves or their conduct, there might be something in this argument. But as it is, there is little in it. It may be presumed, that they would change their dress. This would help their disguise. What is easier than to throw off a cloak, and again put it on? Perhaps he was less fearful of being known when alone, than when with the perpetrator.

Mr. Southwick swears all that a man can swear. He has the best means of judging that could be had at the time. He tells you that he left his father's house at half past ten o'clock, and as he passed

to his own house in Brown Street, he saw a man sitting on the steps of the ropewalk, etc. — that he passed him three times, and each time he held down his head, so that he did not see his face. That the man had on a cloak, which was not wrapped around him, and a glazed cap. That he took the man to be Frank Knapp at the time, that when he went into the house, he told his wife that he thought it was Frank Knapp; — that he knew him well, having known him from a boy. And his wife swears that he did so tell her at the time. What could mislead this witness at the time? He was not then suspecting Frank Knapp of anything. He could not then be influenced by any prejudice. If you believe that the witness saw Frank Knapp in this position, at this time, it proves the case. Whether you believe it or not, depends upon the credit of the witness. He swears it — if true, it is solid evidence. Mrs. Southwick supports her husband. Are they true? Are they worthy of belief? If he deserves the epithets applied to him, then he ought not to be believed. In this fact, they cannot be mistaken, they are right, or they are perjured. As to his not speaking to Frank Knapp, that depends upon their intimacy. But a very good reason is, Frank chose to disguise himself. This makes nothing against his credit. But it is said that he should not be believed. And why? Because, it is said, he himself now tells you that when he testified before the Grand Jury at Ipswich he did not then say that he thought the person he saw in Brown Street was Frank Knapp, but that "the person was about the size of Selman." The means of attacking him, therefore come from himself. If he is a false man, why should he tell truths against himself? they rely on his veracity to prove that he is a liar. . . . But suppose that we admit, that he did not then tell all he knew, this does not affect the

fact at all — because he did tell, at the time, in the hearing of others, that the person he saw was Frank Knapp. There is not the slightest suggestion against the veracity or accuracy of Mrs. Southwick. Now, she swears positively, that her husband came into the house and told her that he had seen a person, on the ropewalk steps and believed it was Frank Knapp.

It is said, that Mr. Southwick is contradicted, also, by Mr. Shillaber. I do not so understand Mr. Shillaber's testimony. I think what they both testify is reconcilable, and consistent. My learned brother said on a similar occasion, that there is more probability in such cases, that the persons hearing should misunderstand, than that the person speaking, should contradict himself. I think the same remarks applicable here.

You have all witnessed the uncertainty of testimony, when witnesses are called to testify what other witnesses said. Several respectable counsellors have been called on, on this occasion, to give testimony of that sort. They have, every one of them, given different versions. They all took minutes at the time, and without doubt intend to state the truth. But still they differ. Mr. Shillaber's version is different from everything that Southwick has stated elsewhere. But little reliance is to be placed on slight variations in testimony, unless they are manifestly intentional. I think that Mr. Shillaber must be satisfied that he did not rightly understand Mr. Southwick. I confess I misunderstood Mr. Shillaber on the former trial, if I now rightly understand him. I therefore did not then recall Mr. Southwick to the stand. Mr. Southwick, as I read it, understood Mr. Shillaber as asking him about a person coming out of Newbury Street, and whether, for aught he knew, it might not be Richard Crowninshield, jr. He answered that he could not tell. He did not

understand Mr. Shillaber, as questioning him, as to the person, whom he saw sitting on the steps of the ropewalk. Southwick, on this trial, having heard Mr. Shillaber, has been recalled to the stand, and states that Mr. Shillaber entirely misunderstood him. This is certainly most probable; because the controlling fact in the case is not controverted — that is, that Southwick did tell his wife, at the very moment he entered his house, that he had seen a person on the ropewalk steps, whom he believed to be Frank Knapp. Nothing can prove, with more certainty than this, that Southwick, at the time, *thought* the person whom he thus saw to be the prisoner at the bar.

Mr. Bray is an acknowledged accurate and intelligent witness. He was highly complimented by my brother, on the former trial, although he now charges him with varying his testimony. What could be his motive? You will be slow in imputing to him any design of this kind. I deny altogether, that there is any contradiction. There may be differences, but not contradiction. These arise from the difference in the questions put; the difference between *believing* and *knowing*. On the first trial, he said he did not *know* the person, and now says the same. Then we did not do all we had a right to do. We did not ask him who he *thought* it was. Now, when so asked, he says he *believes* it was the prisoner at the bar. If he had then been asked this question, he would have given the same answer. That he has expressed himself stronger I admit; but he has not contradicted himself. He is more confident now, and that is all. A man may not assert a thing, and still not have any doubt upon it. Cannot every man see this distinction to be consistent? I leave him in that attitude; that only is the difference. . . .

We have offered to produce witnesses to prove, that as soon as

Bray saw the prisoner, he pronounced him the same person. We are not at liberty to call them to corroborate our own witness. How then could this fact of prisoner's being in Brown Street, be better proved? If ten witnesses had testified to it, it would be no better. Two men, who knew him well, took it to be Frank Knapp, and one of them so said, when there was nothing to mislead them. Two others, that examined him closely, now swear to their opinion that he is the man.

Miss Jaqueth saw three persons pass by the ropewalk, several evenings before the murder. She saw one of them pointing towards Mr. White's house. She noticed that another had something which appeared to be like an instrument of music; that he put it behind him, and attempted to conceal it. Who were these persons? This was but a few steps from the place where this apparent instrument of music (of *music* such as Richard Crowninshield, jr., spoke of to Palmer) was afterwards found. These facts prove this a point of rendezvous for these parties. They show Brown Street to have been the place for consultation, and observation; and to this purpose it was well suited.

Mr. Burns's testimony is also important. What was the defendant's object, in his private conversation with Burns? He knew that Burns was out that night; that he lived near Brown Street, and that he had probably seen him; and he wished him to say nothing. He said to Burns, "if you saw any of your friends out that night, say nothing about it; my brother Jo. and I are your friends." This is plain proof, that he wished to say to him, if you saw me in Brown Street that night, say nothing about it.

But it is said that Burns ought not to be believed because he mistook the color of the dagger, and because he has varied in his description of it. These are slight circumstances, if

his general character be good. To my mind they are of no importance. It is for you to make what deduction you may think proper, on this account from the weight of his evidence. His conversation with Burns, if Burns is believed, shows two things; first, that he desired Burns not to mention it, if he had seen him on the night of the murder; second, that he wished to fix the charge of murder on Mr. Stephen White. Both of these prove his own guilt.

I think you will be of opinion, Gentlemen, that Brown Street was a *probable place* for the conspirators to assemble, and for an aid to be. If we knew their whole plan — and if we were skilled to judge in such a case, then we could perhaps determine on this point better. But it is a retired place, and still commands a full view of the house; — a lonely place, but still a place of observation. Not so lonely that a person would excite suspicion to be seen walking there in an ordinary manner; — not so public as to be noticed by many. It is near enough to the scene of action in point of law. It was their point of *centrality*. The club was found near the spot — in a place provided for it — in a place that had been previously hunted out — in a concerted place of concealment. — *Here was their point of rendezvous*. — Here might the lights be seen. — Here might an aid be secreted. — Here was he within call. — Here might he be aroused by the sound of the whistle. — Here might he carry the weapon. — Here might he receive the murderer, after the murder.

Then, Gentlemen, the general question occurs, is it satisfactorily proved, by all these facts and circumstances, that the defendant was in and about Brown Street, on the night of the murder? — Considering, that the murder was effected by a conspiracy; — considering, that he was one of the four conspirators; — considering, that two of the con-

spirators have accounted for themselves, on the night of the murder, and were not in Brown Street; — considering that the Prisoner does not account for himself, nor show where he was; — considering that Richard Crowninshield, the other conspirator, and the perpetrator, is not accounted for, nor shown to be elsewhere; — considering, that it is now past all doubt that two persons were seen in and about Brown Street at different times, lurking, avoiding observation, and exciting so much suspicion that the neighbors actually watched them; — considering, that if these persons, thus lurking in Brown Street, at that hour, were not the murderers, it remains, to this day, wholly unknown who they were, or what their business was; — considering the testimony of Miss Jaqueth, and that the club was afterwards found near this place — considering, finally, that Webster and Southwick saw these persons, and then took one of them for the defendant, and that Southwick then told his wife so, and that Bray and Mirick examined them closely, and now swear to their belief that the prisoner was one of them; it is for you to say, putting these considerations together, whether you believe the prisoner was actually in Brown Street, at the time of the murder. . . .

Now, it is obvious, that there are many purposes, for which he might be in Brown Street.

1. Richard Crowninshield might have been secreted in the garden, and waiting for a signal.

2. Or he might be in Brown Street, to advise him as to the time of making his entry into the house.

3. Or to favor his escape.

4. Or to see if the street was clear when he came out.

5. Or to conceal the weapon, or the clothes.

6. To be ready for any other unforeseen contingency.

Richard Crowninshield lived in Danvers — he would retire the most secret way. Brown Street is that

way. — If you find him there, can you doubt, why he was there !

If, Gentlemen, the Prisoner went into Brown Street, by appointment with the perpetrator, to render aid or encouragement, in any of these ways, he was *present*, in legal contemplation, aiding and abetting, in this murder. . . .

I now proceed, Gentlemen, to the consideration of the testimony of Mr. Colman. Although this evidence bears on every material part of the cause, I have purposely avoided every comment on it, till the present moment, when I have done with the other evidence in the case. . . .

Who is Mr. Colman ? He is an intelligent, accurate, and cautious witness. A gentleman of high and well-known character ; and of unquestionable veracity. As a clergyman, highly respectable ; as a man, of fair name and fame.

Why was Mr. Colman with the prisoner ? Joseph J. Knapp was his parishioner. He was the head of a family, and had been married by Mr. Colman. The interests of his family were dear to him. He felt for their afflictions, and was anxious to alleviate their sufferings. He went from the purest and best motives to visit Joseph Knapp. He came to save, not to destroy — to rescue, not to take away life. In this family he thought there might be a chance to save one. It is a misconception of Mr. Colman's motives, at once the most strange and the most uncharitable, a perversion of all just views of his conduct and intentions, the most unaccountable, to represent him as acting, on this occasion, in hostility to any one, or as desirous of injuring or endangering any one. He has stated his own motives, and his own conduct, in a manner to command universal belief, and universal respect. For intelligence, for consistency, for accuracy, for caution, for candor, never did witness acquit himself better, or stand fairer. In all that he did, as a man, and all he has said,

as a witness, he has shown himself worthy of entire regard.

Now, Gentlemen, very important confessions, made by the prisoner, are sworn to by Mr. Colman. They were made in the prisoner's cell, where Mr. Colman had gone, with the prisoner's brother, N. P. Knapp. Whatever conversation took place, was in the presence of N. P. Knapp. Now, on the part of the prisoner, two things are asserted ; first, that such inducements were suggested to the prisoner, in this interview, that any confessions by him ought not to be received. — Second, that, in point of fact, he made no such confessions, as Mr. Colman testifies to, nor, indeed, any confessions at all. These two propositions are attempted to be supported by the testimony of N. P. Knapp. These two witnesses, Mr. Colman and N. P. Knapp, differ entirely. There is no possibility of reconciling them. No charity can cover both. One or the other has sworn falsely. If N. P. Knapp be believed, Mr. Colman's testimony must be wholly disregarded. It is, then, a question of credit, a question of belief, between the two witnesses. As you decide between these, so you will decide on all this part of the case.

Mr. Colman has given you a plain narrative, a consistent account, and has uniformly stated the same things. He is not contradicted by anything in the case, except Phippen Knapp. He is influenced as far as we can see by no bias, or prejudice, any more than other men, except so far as his character is now at stake. He has feelings on this point doubtless, and ought to have. If what he has stated be not true, I cannot see any ground for his escape. If he be a true man, he must have heard what he testifies. No treachery of memory brings to memory things that never took place. There is no reconciling his evidence with good intention, if the facts are not as he states them. He is on trial, as to his veracity.

The relation in which the other witness stands deserves your careful consideration. He is a member of the family. He has the lives of two brothers, depending, as he may think, on the effect of his evidence; — depending, on every word he speaks. . . . Compare the situation of these two witnesses. Do you not see mighty motive enough on the one side, — and want of all motive on the other? I would gladly find an apology for that witness, in his agonized feelings, — in his distressed situation; — in the agitation of that hour, or of this. I would gladly impute it to error, or to want of recollection, to confusion of mind, or disturbance of feeling. — I would gladly impute to any pardonable source, that which cannot be reconciled to facts, and to truths; but, even in a case calling for so much sympathy, justice must yet prevail, and we must come to the conclusion, however reluctantly, which that demands from us. . . .

Again. We know that Mr. Colman found the club the next day — that he went directly to the place of deposit, and found it at the first attempt, — exactly where he says he had been informed it was. Now Phippen Knapp says that Frank had stated nothing respecting the club — that it was not mentioned in that conversation. He says, also, that he was present in the cell of Joseph all the time that Mr. Colman was there — that he believes he heard all that was said in Joseph's cell — and that he did not himself know where the club was — and never had known where it was, until he heard it stated in Court. Now, it is certain that Mr. Colman says, he did not learn the particular place of deposit of the club from Joseph — that he only learned from him that it was deposited under the steps of the Howard Street Meeting-house, without defining the particular steps — it is certain, also, that he had more knowledge of the position of the club, than this — else how

could he have placed his hand on it so readily? — and where else could he have obtained this knowledge, except from Frank? (Here Mr. Dexter said that Mr. Colman had had other interviews with Joseph, and might have derived the information from him at previous visits. Mr. Webster replied, that Mr. Colman had testified that he learned nothing in relation to the club until his visit. Mr. Dexter denied there being any such testimony. Mr. Colman's evidence was then read from the notes of the judges, and several other persons, and Mr. Webster then proceeded) — My point is, to show that Phippen Knapp's story is not true, is not consistent with itself. That taking it for granted, as he says, that he heard all that was said to Mr. Colman in both cells, by Joseph, and by Frank — and that Joseph did not state particularly where the club was deposited — and that he knew as much about the place of deposit of the club, as Mr. Colman knew — why then, Mr. Colman must either have been miraculously informed respecting the club, or Phippen Knapp has not told you the whole truth. There is no reconciling this without supposing Mr. Colman has misrepresented, what took place in Joseph's cell, as well as what took place in Frank's cell.

Again. Phippen Knapp is directly contradicted by Mr. Wheatland. Mr. Wheatland tells the same story as coming from Phippen Knapp, as Mr. Colman now tells. Here there are two against one. Phippen Knapp says that Frank made no confessions, and that he said he had none to make. In this he is contradicted by Wheatland. He, Phippen Knapp, told Wheatland, that Mr. Colman did ask Frank some questions, and that Frank answered them. He told him also what these answers were. Wheatland does not recollect the questions or answers — but recollects his reply — which was, "Is not this *premature?*" — I think

this answer is sufficient to make Frank a principal. Here Phippen Knapp opposes himself to Wheatland, as well as to Mr. Colman. Do you believe Phippen Knapp against these two respectable witnesses — or them against him?

Is not Mr. Colman's testimony credible, natural, and proper? To judge of this, you must go back to that scene.

The murder had been committed — the two Knapps were now arrested — four persons were already in gaol supposed to be concerned in it — the Crowninshields and Selman and Chase — another person at the eastward was supposed to be in the plot — it was important to learn the facts — to do this, some one of those suspected must be admitted to turn State's Witness — the contest was, *who should have this privilege?* . . . He then went to Joseph's cell, and while there it was that the disclosures were made. . . . He was incredulous as to some of the facts which he had learned — they were so different from his previous impressions. He was desirous of knowing whether he could place confidence in what Joseph had told him — he therefore put the questions to Frank, as he has testified before you, in answer to which Frank Knapp informed him,

1. "That the murder took place between 10 and 11 o'clock."

2. "That Richard Crowninshield was alone in the house."

3. "That he, Frank Knapp, went home afterwards."

4. "That the club was deposited under the steps of the Howard Street Meeting-house — and under the part nearest the burying ground, in a rat hole, etc."

5. "That the dagger or daggers had been worked up at the Factory."

It is said that these five answers just fit the case — that they are just what was wanted, and neither more or less. True they are — but the reason is, because truth always fits — truth is always congruous, and

agrees with itself. Every truth in the universe agrees with every other truth in the universe, whereas falsehoods not only disagree with truths, but usually quarrel among themselves. Surely Mr. Colman is influenced by no bias — no prejudice — he has no feelings to warp him — except now he is contradicted, he may feel an interest to be believed.

If you believe Mr. Colman, then the evidence is fairly in the case.

I shall now proceed on the ground that you do believe Mr. Colman. . . .

The defendant said, "he told Joseph when he proposed it, that it was a silly business, and would get us into trouble." — He knew, then, what this business was. . . .

He knew the daggers had been destroyed — and he knew who committed the murder. How could he have innocently known these facts? Why — if by Richard's story, this shows him guilty of a knowledge of the murder, and of the conspiracy. More than all he knew *when* the deed was done, and that *he* went home *afterwards*. This shows his participation in that deed — "went home afterwards" — home, *from what scene?* — home, *from what fact?* — home, *from what transaction?* — home, *from what place?* This confirms the supposition that the prisoner was in Brown Street for the purposes ascribed to him. . . . Then comes the club. He told where it was. . . .

Joseph Knapp was an accessory, and accessory only — he knew only what was told him. But the prisoner knew the particular spot in which the club might be found. This shows his knowledge something more than that of an accessory. . . .

Gentlemen — Your whole concern should be to do your duty, and leave consequences to take care of themselves. . . .

A sense of duty pursues us ever. It is omnipresent, like the Deity. If we take to ourselves the wings of the morning and dwell in the uttermost parts of the seas, duty performed, or

duty violated, is still with us, for our happiness, or our misery. If we say the darkness shall cover us, in the darkness as in the light, our obligations are yet with us. We cannot escape their power, nor fly from their presence. They are with us in this life, will be with us at its close, and in that scene of inconceivable solemnity, which lies yet farther onward — we shall still find ourselves surrounded by the consciousness of duty, to pain us, wherever it has been violated, and to console us so far as God may have given us grace to perform it.

The Prisoner was then inquired of by the Court whether he had anything further to add to the defense made by his Counsel, to which he replied, "I have nothing more to say."

Judge PUTNAM charged the Jury: GENTLEMEN OF THE JURY, The Prisoner at the bar stands accused by the Grand Jury of this County of the crime of murder — as principal in the second degree. . . .

If the abettor at the time of the commission of the crime, were assenting to the murder — and in a situation where he might render some aid to the perpetrator — ready to give it if necessary — according to an appointment or agreement with him, for that purpose — he would, in the judgment of the law, be present and aiding in the commission of the crime. . . .

The murder having been proved, the next question is if the Prisoner were, in the sense of the law as it has been explained and declared, *present aiding and abetting*. The Government contends, that the evidence proves that Richard Crowninshield, jr., was the perpetrator of the deed; so that the question is narrowed — and you are to consider if the Prisoner were present, aiding and assisting Richard Crowninshield, jr., to commit the murder? . . .

The first witness who was called to prove the conspiracy was Leighton, who swears to a most remark-

able conversation between the prisoner and his brother Joseph. He seems to have heard just enough to prove the fact, and it seems not to be susceptible of much, if any explanation. But you saw, that his appearance and manner of testifying was somewhat extraordinary, and that he has not been consistent in regard to his knowledge upon this matter. You are the judges of the credibility of the witnesses who are permitted by the rules of the law to testify in the case. It does not appear that this witness had ever been impeached on account of his general bad character for truth. But if the facts and circumstances which he relates, were so unlikely to take place and so improbable as to induce you to doubt of their truth, you will not depend upon them. The contradictory statements he has made upon the matter will also be taken into your consideration. If, however, you believe the conversation to have been as he swears it was, it goes very clearly to fix the conspiracy upon the prisoner, his brother Joseph, and Richard Crowninshield, jr. [States Leighton's testimony.]

It is for you to consider under what circumstances these words were uttered. Would a conversation of this nature have been delayed so long? They had been together for some hours before, walking about in the fields. This seems to be the beginning of a conversation upon that subject, which must have been uppermost in their minds. Would it have been so long deferred?

It is contended on the part of the Government that nothing which was said before or after, can take away the force of the words. They must refer to Capt. White and to Richard Crowninshield, jr., and to the thousand dollars. Consider the excuse which the witness offers for his contradictory statements. "He was frightened, and could not recollect anything about it." This was most extraordinary conduct.

But it is contended for the prisoner that one part of the story cannot be true — that he heard their conversation when they were twenty-five rods off. You must judge whether the witness was mistaken merely in regard to the distance. But he swears that he was within a few feet when they had the conversation which is so material in this case. In that he cannot be mistaken. If he speaks the truth he was near enough to hear distinctly what they said. If they did not speak the words, the witness must be corrupt or perjured. But what motive is there to induce him to give this evidence if it be not true? If he has been bribed, who bribed him? He has been in the employment of the brother of the prisoner, and still remains upon the farm.

The next witness is Palmer, who from his own account and the other evidence is probably one of the most corrupt of men. He has been convicted in Maine of an infamous crime, and would be an incompetent witness in that State. But his conviction there does not render him incompetent here. He is a legal witness, whose credibility is to be weighed by the Jury. [States his evidence.] This story seems hardly credible, and would be disregarded if it were not confirmed by other evidence in the case. The murder has been committed. It is proved that Mr. White was at his farm with and horse wagon and returned in it alone, at the time that Palmer swears it was proposed to upset him and kill him. The housekeeper was to be absent. It is proved that she was absent at the time of the murder. It does not follow, that because a man is of infamous character, he *cannot* speak the truth. If his testimony is corroborated by other facts proved, it may be believed, notwithstanding it comes from an infamous source. There is evidence, that the Prisoner said, that the thing was done for Joseph's benefit. You will judge whether

that statement does not strongly support the testimony of Palmer. The frequent visits of the prisoner to the Crowninshields are of the same tendency. Do you believe he went there for social intercourse, or that he was there, procuring the murder to be committed. The declaration which Mr. Colman swears the prisoner made, that the thing was done for Joseph's benefit, is urged as strong proof of the conspiracy, and that the prisoner was one of the conspirators. The prisoner said, "I told Joseph, when he proposed it, that it was a silly business, and would only get us into difficulty." To what thing did the prisoner refer unless to the proposal to murder Mr. White. Before he made that statement, that subject had been distinctly presented to his mind. He was informed that Joseph had determined to make a confession, and wanted the prisoner's consent. They both knew to what subject that confession was to relate. And it is to be recollected that this declaration was before any suggestion had been made to the prisoner of any benefit or favor from any course which the prisoner might pursue.

There are various other circumstances proved in the case, tending to establish the points now under consideration, to which I would refer you without particularly stating them. . . .

This leads you to the question — Was he present, and if so, with what intent?

The Government contend upon the evidence that the prisoner was in Brown Street at the time that the murder was committed; viz. at about half past 10 o'clock, and that he had been near to that part of Brown Street which opens into Howard Street, for some hours before, on that evening. They contend that he was either at the corner of Brown and Newbury streets, or in Howard Street, or in Brown Street a little to the westward of Howard Street, from about half past 8

o'clock, until the perpetrator met him in Brown Street after the murder, between half past 10 and 11 o'clock, when, after a short interview, they separated. [States the evidence given by Mirick, Webster, Southwick, and Bray.]

Upon the point now under consideration the jury should recollect the difficulty of identifying persons, especially in the evening. It was for the Government to prove the fact of *presence*. It is but fair that the prisoner should have the advantage arising from the difficulty of proving in the night time, that he was in the places where they contend he was seen by these witnesses. The state of the weather and atmosphere is however to be considered; some witnesses, Mr. Chadwick, and Mr. Saltonstall, speak of it. The moon was obscured by passing clouds, yet it was so light that Mr. Chadwick recognized the two Messrs. Saltonstalls about three rods off, and Mr. Saltonstall thinks persons of your acquaintance could be seen and known at considerable distance. Consider also the opportunity which the witnesses had of knowing the prisoner. They did not hear him speak, but Mr. Webster says he knew him well and passed him within six or eight feet, that he thought at the time it was the prisoner, judging from his walk and appearance. He thinks now that it was the prisoner, but will not swear positively to the fact.

But the dress of the person described by Mirick and Bray, is not like that worn by the person seen by Webster, or Southwick. Mirick and Bray describe him as wearing a dark frock coat and glazed cap, corresponding with the dress usually worn by the prisoner. Webster says he had a cloak or wrapper on, and Southwick says that the prisoner had a cloak on, when he was in Brown Street on the steps of the ropewalk.

The Government suggests that the prisoner could easily change his

apparel, for the purpose of disguising his person, when engaged in such a criminal design.

Mr. Southwick speaks of the identity of the prisoner with considerable confidence. But there is a fact proved in the case which has a strong tendency to impair the weight of his testimony. He was a witness before the Grand Jury at the last term of this Court, when there was an inquiry as to the supposed guilt of Mr. Selman, and Mr. Southwick stated that the person whom he saw upon the steps was about the size of Selman. That might be so. But the witness knew as much about the matter then as he does now, and did not state to the Grand Jury that it was Frank Knapp who was on the steps. His evidence then had a tendency to prove that it was Selman whom he saw on the steps. You will judge whether this ought not somewhat to detract from the testimony which he has now given. If he then thought it was the prisoner, how could he as an honest witness leave the impression on the Grand Jury, that it was Selman. If his testimony on this trial were not confirmed by the declaration that he made at the time to his wife that it was the prisoner whom he saw on the steps, the Jury probably would not be disposed greatly to rely upon it. But she states, that he did tell her when he came into the house on that evening that "it was Frank Knapp."

It has been contended in behalf of the prisoner that the testimony of Mr. Bray is so much stronger upon this than upon the former trial, as to be considered contradictory. The appearance of the witness, and his manner are to be considered by the Jury. He states now that he has no doubt but that it was the prisoner whom he saw, and he did not say so before; but it should be recollected that the question was not put to him before. He does not now undertake to swear positively as to his identity. He says he has re-

flected upon the subject since his former evidence, and he gives you the reasons which have induced him to form the opinion which he has expressed.

But the Counsel for the prisoner contend that all these witnesses who are called to prove that he was in Brown Street, must be mistaken, because (as they say), the prisoner, was in another place, and they refer you to the testimony of four young gentlemen, viz.: — Messrs. Balch, Burchmore, Forrester, and Page, as well as to Mr. Knapp, sen., and Samuel and Phippen Knapp, to prove the alibi. [States their evidence.]

The time embraced by the four witnesses is from about seven until near ten, and by the three last, from at five minutes after ten, until he went to bed; and if they are not mistaken in the night, and the father and his sons who have testified are not mistaken in regard to the facts of which they speak, the alibi would seem to be proved.

The burthen of proof is upon the party who would establish the alibi. You must determine whether it was on the evening of the murder that these young men were with the prisoner — or on some other evening near that time. There is one fact mentioned by Balch, upon which the Government much rely, to show that it was not on the 6th, which was the night of the murder, but on the 3d, the Saturday night before. He stated, that the prisoner told them that he was going to ride out of town on horseback, and was going to Osborn's to get his horse. And when he came back he said he had been out of town, and that it was "about a twenty minutes ride." There is a charge for a ride on horseback on the 3d — but none on the 6th. I would refer you to the testimony of the young men, and particularly to their cross-examination, and have the whole to be weighed by you.

In regard to the testimony of the father — can you doubt that he is

mistaken? I refer you to the testimony of Mr. Shepard, and of Mr. Treadwell upon this point. He stated to them that he did not know at what hour Frank came home on that night. He spoke to Mr. Shepard, not of his own knowledge — but of what "Phippen had told him." Does he know more about it, than he did when he had the conversation with those gentlemen? You must consider the testimony of Samuel Knapp in connection with the contradictory evidence given by Mr. Webb; and the testimony of Phippen Knapp in connection with the contradictory evidence in the case, to which I will now more particularly refer you

If you believe Mr. Colman, there is evidence from the prisoner himself, that he was not at home at the time of the murder, but *went home afterwards*. That he knew who was the perpetrator — the weapons which he used — the particular place of concealment of one and destruction of the other, and the time when the deed was done. — Did the prisoner bear a part in it? Could he know these circumstances without having his knowledge from the perpetrator? Did they come into town upon that evening each to perform the part which had been assigned to him? From whom could the prisoner have been informed before he went home on the night of the murder, that it had been committed? The Jury will compare the evidence arising from the confessions of the prisoner (if they are admitted under the rule before stated) with the other testimony in the case, and determine whether he was in Brown Street as the Government contend that he was — and if so, with what intent he was there? It has been contended on the part of the prisoner, that if he were there, he was not in a situation in which he could render any aid or assistance to the perpetrator at the time of the murder. This is a matter of fact for the Jury.

It is proved that the part of the house occupied by the deceased as his sleeping chamber could be distinctly seen from Brown Street, and the distance of Brown Street from the house of the deceased, and the means of communication with it by the streets or otherwise, have been stated by the witnesses. The Jury must judge upon the evidence if the prisoner was there performing his part according to an agreement with the perpetrator, ready to afford him assistance if necessary — by watching — giving notice in any way of the approach of danger, or assisting in the escape, or rendering any aid or assistance which would strengthen the arm and heart of the perpetrator. . . .

You must decide upon the evidence as you have heard it within these walls — you will shut out from your minds everything you may have heretofore read or heard upon this subject — recollecting that all reasonable doubts upon any matter incumbent upon the government to prove, are to weigh in favor of the prisoner — with these remarks I leave the prisoner with his Country and his God.

The cause was committed to the Jury at 1 o'clock, P.M., on Friday, August 20, and at 6 o'clock they returned a verdict of GUILTY.

On Saturday morning the prisoner was placed at the bar. . . .

Judge PUTNAM then inquired of the prisoner if he had aught to say why sentence of Death should not now be pronounced against him :

He replied, "I have only to say, that I am innocent of the charge alleged against me."

Judge PUTNAM then addressed him as follows :

"JOHN FRANCIS KNAPP,

You have been indicted for the crime of Murder — and upon your arraignment have pleaded that you were not guilty — and put yourself upon God and your Country for trial. . . . The truth has prevailed — and the jury of your country have established your guilt — the Court is satisfied with their verdict, and you come now to receive the Sentence of the Law. . . .

"It only remains for us to declare the sentence of the Law — which is, and this Court doth accordingly adjudge,

"That you be carried from hence to the prison from whence you came — and from thence to the place of execution — and there be hanged by the neck until you shall be dead. And may God of his infinite grace have mercy upon your soul."

The prisoner was remanded, as soon as the sentence was pronounced, and the Court was adjourned *sine die*.

APPENDIX

LIST OF TRIALS USEFUL FOR STUDY

The following select list of trials is meant to include a few which are specially profitable because (a) they are fully reported, with counsel's arguments; (b) they have a stirring plot, and, being more or less open to debate as to the verdict, their interest is a sustained one; (c) they were tried by eminent counsel and thus afford good models; (d) they are accessible in the book market of to-day; and (e) they are among the most famous of their time in legal annals. American cases fulfilling all these requirements are rare, except in Massachusetts.

England, Ireland, and Scotland.

R. *v.* ANNESLEY, 17 Howell's St. Tr. 1093 (murder); CRAIG *d.* ANNESLEY *v.* ANGLESEA, 17 Howell's St. Tr. 1139 (ejectment, involving kidnapping and disputed identity); R. *v.* HEATH, 18 Howell's St. Tr. 1 (perjury); R. *v.* ANGLESEA, 18 Howell's St. Tr. 197 (assault). These four, in the years 1742-1743, belong together; read first page 1443, Vol. 17; then in the above order. One of the strangest romances in history, and a great mystery is left unsolved; read the following critical discussions: *John Paget*, "Judicial Puzzles" (1876; reprinted from *Blackwood's Magazine*, 1860); *Andrew Lang*, preface to "The Annesley Case" (Notable English Trials Series, 1912; this preface contains a full account of the sources and discussions, but this edition of the trial itself is unfortunately unsuited for study because it omits most of Mrs. Heath's Trial, *supra*, without which the testimony cannot be weighed).

R. *v.* SQUIRES & WELLS, 19 Howell's St. Tr. 262 (larceny; really kidnapping); R. *v.* ELIZABETH CANNING, 19 Howell's St. Tr. 283 (perjury). These two, from the year 1754, belong together and form the most singular problem of evidence in the records of the 1700s; read the following critical discussions: *Courtney Kenny*, in the *Law Quarterly Review*, 1887, Vol. XIII, p. 368; *John Paget*, "Judicial Puzzles" (1876; reprinted from *Blackwood's Magazine*, 1860), p. 90; *N. W. Sibley*, "Criminal Appeal and Evidence" (1908), p. 162.

SPENCER COWPER'S TRIAL, 13 Howell's St. Tr. 1105 (1699; murder of a spinster; the accused was a well-known lawyer, later a judge, related to the poet); read the following critical discussions: *John Paget*, "Judicial Puzzles" (1876; reprinted from *Blackwood's Magazine*, 1860), p. 109; preface to Cowper's Trial (in the Notable English Trials Series, 1912).

THE STAUNTONS' TRIAL (Notable English Trials Series, 1911),¹ ed. J. B.

¹ This series, critically edited in the best style, is published by Wm. Hodge & Sons, of Edinburgh, and sponsored in the United States by the Cromarty Law Book Co., of Philadelphia. It is to be continued in other volumes, and its service will be even greater than that of the Notable Scottish Trials Series.

Atlay (1876; murder by starvation; one of the strangest stories in criminal annals, and a trial conducted by the most eminent practitioners of the modern English bar; Montagu Williams led the defense).

WILLIAM PALMER'S TRIAL (Notable English Trials Series, 1912), ed. Geo. H. Knott (1856; murder by poisoning; the most famous one of its kind in England in the 1800s; Sir J. Stephen calls it, "as a whole, one of the greatest trials in the history of English law;" the expert testimony is its special feature).

MRS. MAYBRICK'S TRIAL (Notable English Trials Series, 1912), ed. H. B. Irving (1881; husband-murder by poisoning; the accused was an American; her counsel was Sir Charles Russell; the trial judge was Sir J. F. Stephen; this case aroused international interest, and competes with Palmer's for the description of the most famous poisoning case of the century).

CHANTRELLE'S TRIAL (Notable Scottish Trials Series, 1906),¹ ed. A. Duncan Smith (1878; wife-murder by poisoning; the most notable modern case of its kind in Scotland).

OSCAR SLATER'S TRIAL (Notable Scottish Trials Series, 1910), ed. Wm. Roughead (1908; murder for money; a most astonishing verdict of Guilty, which enlisted the interest of Sir A. Conan Doyle, in 1912, to secure the release of the convicted man).

MRS. M'LACHLAN'S TRIAL (Notable Scottish Trials Series, 1911), ed. Wm. Roughead (1862; murder for money; known as the Sandyford Mystery; it gave rise to popular factions, and agitated a generation).

FRANZ MULLER'S TRIAL (Notable English Trials Series, 1911), ed. H. B. Irving (1864; murder in a railway compartment; the first railway murder, which revealed the dangers of the European compartment system; famous for the accused's detection through exchanging hats with the victim; one of Serjeant Ballantine's prosecutions, exhibiting his methods of examination.)

MADELEINE SMITH'S TRIAL (Notable Scottish Trials Series, 1905), ed. A. Duncan Smith (1857; murder of a lover by arsenic-poisoning; one of the permanent mysteries of criminal annals).

WM. LAMSON'S TRIAL (Notable English Trials Series, 1911), ed. H. L. Adam (1882; murder by poisoning, by a doctor; an instructive poisoning trial).

MONSON'S TRIAL (Notable Scottish Trials Series, 1908), ed. John W. More (1893; murder for insurance money; the accused a tutor, the deceased a rich pupil; on a shooting excursion, the latter is killed; known as the Ardlamont Mystery, and enshrined in wax by Mme. Tussaud).

United States.

JOHN W. WEBSTER'S TRIAL (Little, Brown & Co., Boston, 1850), ed. Geo. Bemis (1850; murder of Dr. Parkman, by Professor Webster, of the Harvard University Medical School; the most notable American trial of the 1800s).

EMIL LOWENSTEIN'S TRIAL (Wm. Gould & Son, Albany, 1874), ed. Gould (1873; murder for money; one of New York's best-known cases; tried by Nathaniel C. Moak and D. C. Herrick as counsel).

¹This series, also published by Wm. Hodge & Sons, Glasgow and Edinburgh, is an enterprise of great value, filling a long-felt want for the student of trials.

JAMES M. LOWELL'S TRIAL (Dresser, McLellan & Co., Portland, Me., 1875), ed. H. M. Plaisted (1875; wife-murder; known as the Mystery of the Headless Skeleton; tried by eminent counsel of the Maine bar).

THOS. W. PIPER'S TRIAL (State Printers, Boston, 1887), ed. the Attorney-general (1875; murder of a little girl by a sexton in the church belfry; the jury disagreed on the first trial; eminent counsel were on both sides).

JOHN C. BEST'S TRIAL (State Printers, Boston, 1903), ed. the Attorney-general (1901; murder by shooting; a good example of a trial for assassination motivated by hostility).

MUDGETT'S (alias HOLMES) TRIAL (Geo. T. Bisel, Philadelphia, 1897), ed. Bisel (1895; murder; the accused, whose character and history are set forth in No. 98, *ante*, was one of the monsters, occasionally arising, who murder wholesale; his killings ranged between Chicago, Indianapolis, Toronto, Detroit, and Philadelphia).

HERSEY'S TRIAL (A. Williams & Co., Boston), ed. J. W. Yerrinton (1860; murder of the victim of seduction; one of the leading American poisoning cases, well argued).

TREFETHEN'S TRIAL (State Printers, Boston, 1895), ed. Albert E. Pillsbury (1892; murder of the victim of a seduction; one of the best-known and best-tried Massachusetts cases, with distinguished counsel).

SARAH J. ROBINSON'S TRIAL (State Printers, Boston, 1888), ed. the Attorney-general (1886; murder of a whole family by poisoning; the best-known modern American poisoning case).

JOHN O'NEIL'S TRIAL (State Printers, Boston, 1901), ed. the Attorney-general (1897; rural murder and rape; a good example of circumstantial evidence).

DURRANT'S TRIAL, ed. Peixotto (San Francisco, 1895; murder in a church belfry; a remarkable instance of a guilty man successfully passing the ordeal of cross-examination; published under the title "The Crime of the Century").

LIST OF AUTHORS OF EXTRACTS REPRINTED

[The Compiler desires to express his special thanks to the following authors and publishers for assent to the reprinting of some of the longer extracts in this work : *Hans Gross*, professor in the University of Graz, author of "Criminal Psychology" (translated by Dr. H. M. Kallen, of the University of Wisconsin); and author also of "Criminal Investigation" (translated by Messrs. J. and J. C. Adam). *Hugo Münsterberg*, professor in Harvard University, author of "On the Witness Stand." *Charles C. Moore*, Esq., author of "A Treatise on Facts, or The Weight and Value of Evidence," and the *Edward Thompson Co.*, publisher of the same. *Arthur C. Train*, Esq., of New York, author of "Courts, Criminals, and the Camorra," and of "The Prisoner at the Bar." *Guy M. Whipple*, professor in Cornell University, author of "Manual of Mental and Physical Tests," and Messrs. *Warwick and Yorke*, of Baltimore, publishers of the same. *The Boston Book Co.* and *Lawyer's Coöperative Publishing Co.*, publishers of the American edition of "Wills on Circumstantial Evidence." *Francis L. Wellman*, Esq., of New York, author of "The Art of Cross-examination" and "Day in Court."]
